They made love in the impersonal comfort of Leon's room on the top floor, high above the darkened Valley of Kidron and the illuminated walls of the Old City, locked together in silence and the moonlit chiaroscuro, the white sheets thrown back across their feet as their limbs intertwined. Kate lay beneath Leon, legs raised, arms around him, feeling herself dividing in two, one part surrendering to sensation, the other divorcing itself from the sweat and flesh, surveying the act from a distance. To touch and be touched: possess and be possessed: these were needs that could not be denied and sought to circumvent the void within. Desire howled like the wind, but like the wind it passed away, always leaving in its wake the great silence that had to be filled again. Kate dreaded that silence, feared the challenge of its emptiness, sought the brief obliteration of her Self in the thickets of singing nerves. To touch and be touched: the sensuality of the skin; her Self, which refused to be obliterated, split in two and broke free. One part of her surrendered, willingly gave in to sensation, but her other Self, more frightened, held in check by the past, drifted somewhere above the moonlit bed and gazed down in cool judgement. Kate turned her head aside, her hair streaming across her face, eyes wide, reflecting stars and pale moon, her arms and legs holding Leon, both breathing in spasms.

Breathing also in desperation. What was causing it in Leon? He had brought her to this room in urgent silence and now seemed to be lost in her. Not the Leon she knew, no smile, no stinging wit, he filled his mouth with her breast and thrust himself deep inside her with a voiceless intensity that repudiated what she had said to him. He bit her lips and swallowed her tongue, his breath sour with cigars and whiskey, and she turned her head aside and felt his eyelids on the stem of her neck. Not Leon, someone else, a faceless assailant in the darkness, someone trying to drain himself of despair in the well of her body. Kate looked down and saw the tableau, coiling limbs, sweating skin, then her divided Self became one again and she felt the cool air.

Leon made love like a stranger, with a fierce, demanding hunger, straining above her body, pressing down on her breasts and stomach, his eyes closed, his black hair disarrayed, his spine pale in the moonlight. She saw him and turned her head, raising her legs, pulling him in, feeling nothing but the urge to draw him out of his strange, throttled anger. She was crushed by

his ferocity, some threat emanating from his pores, and she gasped and held him tighter with arms and legs and let him pour himself into her. He groaned and dropped his head, his body quivering like a reed, then just lay between her legs, breathing harshly, his cheek pressed to her breasts.

Kate sighed and stroked his head, stared at the window and saw the stars, shivered and closed her eyes and wondered who she was addressing as the night, with its ominous silence, lay its dark hands upon her.

'You can't have me,' she said.

6

‘So,’ the Prime Minister said, ‘I’ve finally met Rashid Idriss. An interesting man, very calm… Indeed, he seemed almost gentle.’

‘Don’t be fooled by his beautiful brown eyes, Shlomo. That Lebanese gentleman is as sharp as any Arab alive.’

The Prime Minister grinned and nodded, raised his glass and drank some beer, wiped his lips with the back of his free hand, then glanced down through the darkness. They were sitting at a small table on the patio of Moshe’s house on the summit of the hills of Talpiot, the lights of Jerusalem far below them, the Dome of the Rock and the El-Aqsa mosque still visible as impressive black globes above the floodlit walls of the Old City. Moshe stared down but saw little, his thoughts focused elsewhere, then he looked back at the Prime Minister, small, almost gnomic, his eyes too large for his moon-shaped face, and watched him having another sip of beer, his lips pursed and moist.

‘He seemed like a reasonable sort of chap, Moshe.’

‘A very British way of putting it, Shlomo.’

The Prime Minister chuckled, perhaps remembering his English acquaintances, old enemies and friends of long ago, when he had fought with the Palmach.

‘Rashid’s astute,’ Moshe said. ‘That’s why he seems reasonable. As he said himself: he has to accept that we’ll remain here. What he resents is our greed.’

‘Ah, yes,’ the Prime Minister murmured. ‘Jewish greed…’

Moshe took a cigarette from his tunic pocket, lit it, inhaled, and then blew a thin stream of smoke to the air, thinking of what the Prime Minister had said. As both a sabra and a soldier, Moshe had lived for years with the belief that Israel, to survive, must retain Jewish autonomy and guarantee the security of her borders with constant military vigilance. What this meant, in

effect, was that the country needed to be ruled by a military rather than a political consciousness, and that support for the military had to be constantly psychologically reinforced. However, in recent years Moshe had begun to wonder just where this philosophy was leading: the need for constant alertness had led to conscription and censorship, an unconstitutional use of internal and external security organisations and, perhaps inevitably, the increasing withdrawal of legitimate Arab rights with a parallel increase in Jewish authoritarianism. Rashid was right: the Jews were sowing the seeds of their own suspicions; and Israel, which had been founded on the principle of Jewish freedom, was now accepting that the end was justification for the means and embracing a thinly disguised form of totalitarianism in which religious and political suppression were unavoidably endemic to the system… Now, when Moshe thought of the Jews of the Holocaust, he also thought, with undeniable shame and guilt, of the Arabs of Palestine.

'Yet what can we do?' the Prime Minister said. 'Only our so-called greed will protect us. If we give the Arabs an inch, they'll take a mile… We must hold on to Israel.'

'That doesn't solve the problem of the West Bank.'

'Please, Moshe, don't remind me…' The Prime Minister rubbed his eyes and then blinked and glanced around him, obviously exhausted by his journey from New York, his present problems defeating him. 'At least,' he said eventually, 'we have talked to the enemy… and as usual it solved absolutely nothing.'

'I don't like it, Shlomo; it disturbs me.'

'What disturbs you?'

'What Rashid knows. The West Bank is our Achilles' heel - that's no secret anymore - but Rashid knows *too* much for my liking.'

'He has people on the inside.'

'*Jewish* people, Shlomo. We simply have to accept that it's happening and do something about it.'

'We *can't* do anything about it. We can't use force against our own kind. Even now, if we tried to remove those fanatics from the West Bank, we'd have hundreds of their supporters in the streets, all armed to the teeth.' The Prime Minister shrugged wearily, drumming his fingers on the table, a cool breeze blowing over the patio and whipping his white shirt. 'So, Moshe, what do we do? Do we invite a civil war? Do you want me to order you, my Chief

of Staff, to use your conscript troops against fellow Jews? No, obviously you don't. We both know what would happen. And yet, if we don't do something soon, the situation will worsen. There's no answer. *No* answer!'

Moshe sighed and stood up, glancing around at the dark hills, then walked to the wall of the patio and stared at Jerusalem. The land fell through the darkness and swept back up to the Old City, sacred to the three great monotheistic religions - the world's spiritual centre. Down there, cramped together within the lime-stone walls of the Old City, were the Wailing Wall, the golden-domed Mosque of Omar, and the Church of the Holy Sepulchre - the most sacred sites of all to Jew, Arab and Christian respectively. Small wonder that for centuries Jerusalem had been ravaged by a succession of bloody wars and that that violence, which had started so long ago, was not finished yet. Moshe shook his head sadly, wondering where it would end, then turned back to face Ben Eleizer, feeling the trap closing in upon him.

'Rashid Idriss was right,' he said. 'He has us whipped, and he knows it. World opinion has turned against us, the West Bank problem is becoming explosive, and if Jew should openly move against Jew, the Arabs will swoop in from all sides. That's all the Russians and the Americans need: a convenient war of intervention. And if that happens, Israel as we know it will cease to exist.'

The Prime Minister looked up slowly, his large eyes unblinking, and Moshe, feeling cold, shivering slightly, knew at what cost his old friend was concealing his fears for the future.

'What we need is a miracle,' Ben Eleizer said. 'Nothing less will suffice.' He grinned sardonically and raised his hands, slapped them lightly on the table, then pushed himself to his feet, rising wearily, awkwardly. 'This wind is too cold for my liking. Let's continue inside.'

Moshe nodded and waved one hand, letting Ben Eleizer enter first, then he followed and closed the sliding glass doors behind him. The central heating was off, but the living room was warm, and as Moshe faced the room he felt both comfortable and desolated, surrounded by the bric-a-brac of his past and the tales they could tell. The furniture was functional, a haphazard collection of bits and pieces, obviously purchased without thought of compatibility or style - simply there to be used. There were a lot of books, scattered about the room as haphazardly as the furniture - Jewish and military histories, current affairs and foreign politics - on chairs, on the table, on the

cluttered shelves, many open and marked. Most revealing were the numerous photographs, very few taken recently: an adolescent Moshe in the fields of a kibbutz, his hair tousled, his grin wide and charming; the same young man a few years later, dressed formally and looking grave, his arm linked with the arm of his new bride, both afraid of the camera; then a series of family snapshots - his wife a quiet, dark beauty, his son and daughter more outgoing - on vacation in Cyprus, camping out in the Negev, swimming in the sea at Eilat, a birthday party in someone's garden; then a much older Moshe, rarely smiling, eyes haunted, usually feigning amiability, socialising with Golda Meir and Menahem Begin and Teddy Kollek, acting the diplomat with Harold Wilson and Henry Kissinger and Rashid Idriss. Moshe's history was on those walls - as was the continuing history of Israel - but when he looked at the photographs, when he studied his late wife and children, he did not look for long.

'Another beer, Shlomo?'

'I'd prefer a vodka, Moshe. Another beer would put me to sleep, and I can't face my bad dreams.'

Moshe went into the kitchen and returned with a bottle of Maccabee, a half-full bottle of Keglevich vodka and two glasses containing ice cubes. After pouring a considerable amount of vodka into one of the glasses, he passed the glass to the Prime Minister, opened his own bottle of beer and then went back to where he had been standing previously, close to the sliding glass doors that led to the patio. The Prime Minister, who had often been here before, sat in the chair behind Moshe's small desk and raised his glass on high.

'*L'chayeem*!'

'*L'chayeem*!'

They both drank, then the Prime Minister, after rubbing his tired eyes, grinned at Moshe and put his feet up on the desk. Amused by the Prime Minister's informality, Moshe returned the grin.

'I don't think young Lieutenant Frankel was very pleased at having to escort our Arab friend back to the border.'

'No, Shlomo, he wasn't.'

'Well, he's had a busy day. First meeting me at the airport, then going to check on that bombing in the Mae Shearim quarter, then escorting Rashid back to the border. Still, I've heard good things about him.'

‘He’s good,’ Moshe said.

‘And?’

‘Lieutenant Frankel is an intensely serious young man who probably, secretly, despises us.’

‘A Zionist?’

‘Yes.’

‘So are we.’

‘Not to that extent. Frankel is an Orthodox Jew with the Talmud in his hip pocket. For him, there’s no such place as Palestine, no such people as the Palestinians. The Holy Land belongs to the Jews and is no place for Arabs.’

‘The West Bank?’

‘It’s possible. He may sympathise with them. At the very least, he doesn’t see any problem there. He’d solve the problem by simply removing all the Arabs and supporting the activities of Kash and *Gush Emunin*. I doubt that he has time for our procrastinations.’

‘A representative sabra.’

‘That’s it.’

The Prime Minister sighed, topped up his vodka, and continued to lie back in the chair, his feet on the desk.

‘Do you think Rashid was right about the bombing in the Mae Shearim quarter? That the bomb was actually planted by a Jew?’

‘I doubt that he’d invent it.’

‘And what do we know so far?’

‘Not nearly as much as our good friend, Rashid. Lieutenant Frankel was the first man on the scene, and he took the survivors straight to the Hadassah Medical Centre. Naturally they were still in a state of shock. And according to Lieutenant Frankel, he was given a hard time by that psychiatrist, Kate Hirschfield.’

‘Mayer Hirschfield’s daughter?’

‘Yes.’

‘An interesting woman. I knew her father and mother well. Her mother died some time ago, and her father’s death, about ten days ago, was a considerable blow to the World Zionist Organisation and the Foundation Fund in particular. That man did an enormous amount of work to bring funds into Israel; and his daughter, from what I hear, has performed remarkable psychiatric work at the Medical Centre. Of course Hirschfield was a Zionist

with the immigrant's dedication, and I believe his daughter quarrelled with him over that.'

'Did you know that she also sleeps with Leon Halcomb?'

'I *have* heard that rumour… But I don't believe her love life should concern us.'

'No, perhaps it shouldn't. But I find it offensive that a woman whose father did so much for Israel should so blatantly sleep around with a drunken anti-Semite like Leon Halcomb. That man has done more to turn the world against us than any other single journalist enjoying the hospitality of this country. I shudder to think of what he's already written about your unfortunate remark to the General Assembly, but I don't doubt that he'll have made the worst possible use of it. And it angers me to think that that woman, with her background, could insult the memory of her father by openly flaunting her relationship with such a *momzer*.'

'Americans have their own morality in these matters.'

'Unfortunately that's so.'

The Prime Minister chuckled sardonically and had another sip of vodka while Moshe, removing his glass from his mouth, wiped his wet lips with the back of his hand. The land below was dark, the lights of Jerusalem shining magically, the illuminated walls of the Old City dreamlike and entrancing. Moshe thought of his wife and children, of how much they had loved this land, and then, with the old pain whipping through him, he put the glass to his lips again.

'So, what was this problem with Miss Hirschfield?'

'Not much, really,' Moshe said. 'Apparently Lieutenant Frankel, unable to interrogate the survivors immediately, asked her to give him all the tape-recordings of her forthcoming psychiatric consultations with the victims and was told, in no uncertain terms, to get the hell out of there. The highly principled lady, less principled about whom she sleeps with, refused to betray the confidentiality of her patients.'

'That's no problem, Moshe. We can make the request an order.'

'I believe Lieutenant Frankel already has.'

'Naturally. He would.'

Moshe was just about to turn away from the window when something in the distance caught his attention. Startled, not too sure of what he was seeing, he blinked, looked again, and saw a strange light in the dark sky just beyond

the Old City. The light appeared to be pulsating, winked out, winked on again, moving too slowly to be an aircraft and hazed in a dark cloud. Yet even as he saw this, there was an indistinct rumbling sound that seemed to emanate from below the house…and then, as the rumbling became louder, the floor started vibrating.

Moshe jerked his head around, saw the Prime Minister in the chair, cursing as his vodka splashed on his shirt and kicking his feet away from the desk. 'What…?' the Prime Minister exclaimed, glancing up, his eyes startled, placing his glass down on the desk as the vibrating grew stronger and the rumbling down below seemed to spread out in no fixed direction. 'Last night!' Moshe said quietly, remembering the inexplicable earth tremor and turning his eyes back to the window, his gaze fixed on Jerusalem. 'What on earth…?' he said, trailing off.

As the rumbling continued and the floor vibrated beneath his feet, Moshe stared through the darkness at the east side of Jerusalem and saw the strange, shapeless light spreading out through clouds of dust that were being swept up from the Valley of Kidron and then whipped into a dense, swirling mass. Amazed, Moshe placed his free hand on the glass of the sliding doors, his other hand shaking from the vibrations of the floor, splashing the beer over his wrist. Blinking, he tried to ascertain what the distant light was, saw it spreading out, shrinking, then spreading out again, diffused in the whirlwind of dust that rose higher and advanced across the summit of the Mount of Olives. The light in the middle was bizarre, expanding and contracting, moving across a sky now blotted out by the swirling dust, dropping lower and then spreading out again through the storm that by now had enveloped the Mount of Olives. Moshe felt the shaking glass, the floor vibrating beneath his feet, heard the rumbling and then the sudden squeaking of a chair on the floor. 'What is it? *What's happening*?' The Prime Minister's voice was shrill. Still looking down, Moshe saw the other lights winking out, first one, then another and yet another, as the swirling black cloud swallowed the houses on the Mount of Olives and raced on towards the walls of the Old City. Moshe kept staring, mesmerised, his fingers outspread on the shaking glass, the floor vibrating beneath him, the rumbling filling his ears, watching as the diffused light shot out through the swirling dust, briefly illuminated the summit of the Mount, then shrank with startling speed and disappeared, leaving nothing but darkness.

The rumbling sound faded away, the floor stopped its vibrating, and then the ringing of the telephone on the desk shattered the silence. The Prime Minister cursed, grabbed the telephone, snapped his own name, but Moshe didn't turn around, keeping his eyes fixed on Jerusalem, seeing the domes and minarets and lights disappearing as the swirling dust enveloped the Old City and gradually swallowed it. Moshe just stood there, disbelieving, transfixed by what he was seeing, as Jerusalem, the Golden City, the very heart of *Eretz Yisroel*, was devoured by a storm without precedent and then simply… vanished.

Moshe broke free from his trance, turned away from the glass doors. The Prime Minister put the phone down, looking up, his jaw slack, his eyes stunned as he started to speak with a strained, breaking voice.

'An unidentified flying object has disappeared below our radar's ground clutter, directly above the Chapel of the Ascension. It appears to have crashed.'

7

Kate stubbed her cigarette out, swung her legs off the bed, and then, still naked, feeling cold, walked across the room, through the moonlight, and stopped at the window. She saw the darkened Valley of Kidron, the white stones of the Arab graveyard, the Old City, its ancient walls bathed in floodlights, the Dome of the Mount and the El-Asqa mosque as black globes silhouetted against the starry sky. The air was cool and fresh, the breeze barely perceptible, as she took a deep breath and looked up to where the mysterious star had been that morning.

The star was not there. That particular area was covered with dark cloud. It was a single, large cloud, almost circular, nearly black, surrounded by a clear, vitreous sky and a mosaic of normal, familiar stars. She stared at it, mesmerised, feeling inexplicably nervous, trying to still the speculations that filled her head with uncomfortable clarity. It was a cloud, a normal cloud, a single cloud in a clear sky, but her imagination, stirred by the early morning's events, was obviously running away with her…Yes, that was it; put it down to imagination… But the tension remained with her, and she knew that she would have to go out there, to resolve the matter once and for all.

She looked up at the black cloud, a perfectly normal cloud, and shivered and turned away from the window and proceeded to dress herself. The room was very quiet, enough to let her hear her heartbeat, and she also heard Leon's even breathing, saw his pale form in darkness. His back was pressed to the headrest of the bed, his head tilted to the right, his hands folded primly on the white sheet that covered his loins. Kate dressed quickly, automatically, combed her long, tangled hair, then slung her bag over her right shoulder and walked up to the bed. Leon was snoring softly, his chest rising and falling. She leaned over and kissed him on the forehead and then left the room.

Once outside the hotel she did not immediately look up at the sky, but instead, refusing to accept that the fear was creeping back, went to the

observation point which, during the day, offered a breathtaking view of the Old City. Standing in the small amphitheatre, a growing wind tugging at her clothes, she lit a cigarette, her hands cupped, her eyes squinting, then inhaled and stared across the Valley of Kidron to see the black shape of the Dome of the Rock. It was too dark and distant to see the whole of the Temple Mount, but even in the alluring, blue-tinged darkness of the evening, she could see the eastern city wall, the scattered stones of the Moslem graveyard, and the dark breast of Mount Zion, crowned by the conical roof of the Dormition Abbey. She looked and was held and then tore her gaze away, thinking of the unknown star, of her recurrent dream and possible imaginings, and wondering what it was that now clung to her with such relentless tenacity.

This land was not her land, but it was a haunting land, resonant with the voices of its history and its place in men's dreams. She knew that this was so and that somehow it was affecting her; that it was slyly, insidiously creeping into her and making her part of it. This possibility, which would have pleased her father, did not please her at all, insulting her faith in logic and making a mockery of her profession, challenging the physician to either heal herself or accept that her logic was meaningless. I'm a psychiatrist, she thought, and believe only in the mind. This being so, what now frightens me and jerks me awake at nights? She had asked the question before and had not yet found an answer; now, as the night pressed its threatening hands upon her, she thought of the shock of her father's death, of the subsequent dreams and the unknown star, and wondered if this land, which both repelled and fascinated her, was somehow forcing her to face up to her buried past and return to the faith rejected in adolescence. That would explain the dreams, she thought, but what of the manifestation? The question immediately filled her with shame at what she viewed as her surrender to mysticism. You believe in logic, she thought, so don't accept the impossible. Thus resolved, she took a deep breath, raised her eyes defiantly, saw the black cloud and kept staring at it, determined to erase the matter from her mind... and then she saw the impossible.

The black cloud was breaking apart, thinning out in the middle, gradually taking the shape of an enormous smoke ring, a hazy light beaming through it. She stared at it, amazed, unable to repudiate the ridiculous, as the cloud became a dark, ragged ring around a large, brilliant star. That star should not have been there, was too large to be real, and yet it beamed down on the

summit of the Mount with remarkable brilliance.

'Oh, my God,' Kate said quietly.

She inhaled on her cigarette, held the smoke in her lungs, let it out slowly, reluctantly, her eyes fixed on the luscious star. It was there, large and brilliant, ringed impossibly with cloud, and much as she tried to will it away, it would not disappear. She felt her heart pounding, grew hot and claustrophobic, her reason slipping away in defeat before the incomprehensible. It was a star, had to be, could not be anything else… and yet, as she stared at it, disbelieving, forced to accept it, the star, or what she thought was a star, seemed to suggest something magical.

She dropped her cigarette, ground it flat beneath her shoe-heel, then turned right and started walking downhill, feeling tense and unreal. She looked down the dark path, looked up at the star, looked down and then looked up again, a silent prayer on her lips. The star was still there, big and brilliant, ringed with dark cloud - an unnatural sight, at once ominous and beautiful, like a huge eye staring down upon her… An eye? What was she thinking? Was that a logical response? Yet as she walked the narrow road where it began curving uphill again, she could not shake off the feeling that the star was observing her, following her as her feet kicked up the stones.

Where was she going? She'd hardly given it a thought. Now, thinking about it, confused but still walking, she wondered why she was moving in that direction for no obvious reason. She stopped and looked up, saw the star and moved on again, her will dissolving, an unfamiliar impulse pushing her forward. The dust drifted up around her, did not settle down again, and then she realised that the breeze had become a wind that was growing in strength.

The wind tugged at her clothing and then started moaning, sweeping across the dark Valley of Kidron and whipping up more dust. She glanced down the slopes of the Mount, saw scattered buildings, holy sites, domes and minarets floating in the darkness, blacker than the night. Something took hold of her heart - a sense of grief and desolation, a tormenting, overwhelming feeling that she no longer had roots - and she almost stopped again, changed her mind, not knowing why, and tore her eyes from the valley below and kept moving uphill.

This land was not her land and it would never give her peace: she decided this and made her decision as the wind closed about her. It was time to leave Israel, to resurrect her lost Self, to mould a new woman from the ruins of the

old by returning to her roots in the *goldeneh medina*. America - home - where being Jewish was incidental, a mere accident of birth, without importance, devoid of moral complexities. Why should she stay here? This land was not her land. She had been brought here in the wake of her father's religious faith and had never reconciled herself to it, even despising her father because of it. Why should she stay here? There was nothing to keep her here. Both of her parents were dead, she had no other family, and the victims of Israel's endless war now made her heart break. No husband. No children. Only the grief of her early loss. She sought relief from that grief in constant work and the oblivion of sex: one virtue, one vice, neither unique to Israel, both available in the less involving pastures beyond the Mediterranean. So why should she stay here? She had nothing but bad dreams here. Each night she suffered more, whether awake or asleep, and it was possible that the sickness of her patients was now poisoning her mind. No, she would not stay. To do so would be suicidal. The decision had to be made and she was making it… She would definitely leave Israel.

The wind was now much stronger, but hot, almost clammy, making her shield her eyes with her right hand as the dust swirled around her. At first she did this automatically, more annoyed than frightened, but then she suddenly wondered where the wind had come from, and the fear slithered through her. She passed the colonnaded courtyard of the Church of the Pater Noster, wondered again, briefly, just what she was doing here, and then glanced up at the unknown, cloud-ringed star and froze where she stood.

With the ring of clouds around it, the star looked like an enormous eye, a dark eye with a silvery-bright iris, fierce and unblinking. It had that - stunning brilliance - but it also had something else: a strange, majestic stillness and splendour, a mysterious beauty. She looked at it and shivered, closed her eyes and looked again, judged the star against the mass of stars behind it and then knew what was bothering her… The other stars were more distant, part and parcel of the night sky, but the unknown star was different, much larger, too bright, separated distinctly from the sky as in a three-dimensional photograph… Yes, that was it: it was too close to the Earth; it had not been obscured by the lone cloud but hidden *inside* the cloud… Kate licked her dry lips, tried to reject her own reasoning, blinked and looked up at the star again and then felt her heart pounding… No, she was not imagining it. There could be no doubt about it: the light of the star was illuminating the

extraordinary ring of cloud surrounding it, its rays shining clearly through the cloud to beam down on Jerusalem.

Kate took a step backward, letting out an involuntary groan, putting a hand up to her mouth and keeping it there, her eyes fixed on the brilliant star. She could not believe what she was seeing, kept looking, had to believe it, and then, faced with the impossible made actual, her reasoning started to falter. She groaned again and bit her lip, clamped her hand on her mouth, shook her head from side to side in denial, trying to hold down her panic. The moaning wind began to howl, unnaturally violent, too warm, as her hand moved from her mouth to shield her eyes and she took a step forward.

The wind was beating against her body, howling around her, racing on, whipping up clouds of dust and shaping the dust into dark streams that moved in immense, circular motions. Yet what she saw was worse, more bizarre and inexplicable: an enormous cloud of dust, swirling furiously and roaring, rising up from the Valley of Kidron, spewing soil and stones, moving inexorably towards the Garden of Gethsemane like a ravenous beast.

Kate stood there, scarcely breathing, the wind and dust hammering at her, her right hand shielding her eyes, her heart pounding, her sense of reality crumbling. The spiralling column was awesome, dividing the sky, obscuring the stars, even darker than the darkness of the night, but glowing strangely within. Then Kate raised her head, trying to find the unknown star, thought she saw it, then lost it, saw instead a stream of dust, black, dense, swirling wildly, sweeping out from the roaring column in the valley and hiding the unknown star from view.

Kate started running, hardly knowing where she was going, instinct driving her to find a hiding place before the storm devoured the summit of the Mount. She shielded her eyes with her hands, kept her gaze fixed on the ground, her feet kicking up the stones on the road as the dust swept around her. The wind continued howling, the dust hissed on all sides, and the roaring, now advancing towards her, grew louder each second. The sound was terrifying, encouraging her to keep moving, yet forcing her to turn her head and look again at the extraordinary phenomenon. The roaring column was rising higher, mushrooming above the valley, spreading out to obliterate the sky and devour the Old City. The southern wall disappeared, then the Dome of the Rock, then the dust enveloped the Antonia Tower, swept across the Moslem Quarter and spread out until all of East Jerusalem was

completely obscured.

No stars. No Old City.

Kate sobbed and turned away, kept her head down, watched the road, moving forward as the howling wind pummelled her and the dust swirled and hissed. She saw some Arab houses beyond a strip of waste ground, some Arabs hurrying through the violent storm, waving hands, shouting desperately. Then she heard the snorting of camels, was whipped by dust as she looked ahead, shielded her eyes and stumbled forward and saw the walls surrounding the Chapel of the Ascension. The camels were in panic, tugging frantically against their ropes, snorting loudly, looking enormous and bizarre in the thick, swirling dust.

Kate stopped and glanced left, saw the houses beyond the waste ground, lights flickering on and off in the windows, the dust sweeping across them. Someone ran across the waste ground, white robes whipped by the wind, calling out, arms waving, disappearing, a ghost in the stricken night. Kate glanced across at the Old City, saw nothing but swirling dust, a dark mass spreading out and advancing towards her, blotting out the whole world. She gasped and clenched her fists, felt a blast of hot air, was enveloped in a cloud of hissing dust and then pushed forward again. She let the wind carry her toward the bucking, braying camels, was lashed by flying branches and stones and heard the rattling of rolling cans. Then she passed the panicking camels, hugged the wall of the mosque. Eventually reaching the forecourt, she rushed through the open door.

Now she knew what she was: a creature stripped of all pride, its only instinct that of survival, past and future superfluous. She thought of this briefly, experienced a spasm of shame, then lurched forward, fighting against the wind and dust as the darkness deepened around her. Seeing the circular walls of the modest Chapel of the Ascension, she wanted to go inside, to find peace and shelter, but the howling became a roaring, something crashed down nearby, and then the ground began to shake, started rumbling and cracking, and then long, jagged cracks appeared in front of her, criss-crossing the courtyard.

The ground rumbled and cracked open just in front of her feet. She jumped back as the jagged cracks grew wider and snaked across the small courtyard. Gasping, she turned around, sensing the danger she was in, heading back towards the entrance and the open road beyond, wanting to be

clear of the walls of the mosque tower if the earthquake worsened. Already the courtyard stones were cracking, groaning and spitting cement, while beyond, filling the sky above Gethsemane, the column of dust had become an immense, swirling dark mass that filled her whole line of vision. A terrifying sight, extraordinary, unprecedented, it froze Kate where she stood, paralysed her, drained her mind, until something out there, something different, made her concentrate again.

That dark mass contained a glowing, a shapeless, pulsating white core, striations of pale light that spread out from the murky depths and appeared to move forward with the swirling dust. Kate blinked and looked again, wondering if she was hallucinating, covering her eyes with her hands and looking up as the demented wind pummelled her. No, she was not imagining it: there was light in that howling dark mass: a pulsating core of light buried deep in the storm and emitting striations of weaker light in every direction. The light was in the sky, inside the vortex of the raging storm, moving forward with the fiercely swirling dust and illuminating the darkness.

'No!' Kate shrieked. '*No*!'

She moved forward and stopped again, no longer sure what she should do, terrified to move ahead into the roaring dark storm, no longer keen to take shelter in the chapel as she had originally intended. Then the ground snapped and split, shook violently and growled, and then a jagged crack shot across the courtyard, from one side to the other. Kate gasped and stepped back, stared at the walls surrounding her, heard them cracking and saw the jagged lines forming a dust-spitting jigsaw. She jerked her head back, looking directly above her, and saw more cracks darting down the dome of the roof as a pillar broke in two and started collapsing. She returned her gaze to the front, saw the walls of the courtyard also collapsing, the howling dark mass everywhere, raging across the road outside, and then the roaring wind reached her, slapped her back, dragged her forward, picked her up and slammed her down to the ground and sent her sliding across it.

She did not feel fear or pain, dissolving into the experience, hardly aware that she was choking in the dust and being lacerated by sharp debris. She was only aware of the noise, a shocking bedlam, all around her, inside her head, spreading out and returning as the wind when she rolled onto her back. She rubbed her eyes and looked up, saw a dull light expanding, growing brighter and then suddenly flaring out with a blinding ferocity.

A shriek. Her own voice. Shocked, she closed her eyes and jerked her head around, pressing her cheek to the rubble as the ground shook beneath her. Then she opened her eyes again, dazed, disbelieving, and watched the Chapel of the Ascension rising up, ballooning outward, cracking apart and then collapsing with a catastrophic roaring, clouds of dust billowing up while the ground heaved and shuddered beneath her. Kate sobbed and clenched her fists, wanting something to cling to, then she closed her eyes and saw streaming stars and drifted into the void.

Shalom, she thought. *Peace*.

8

The dust that swept around Kate's prostrate body also swept with extraordinary force around Moshe Eitan's jeep as the driver, wearing goggles, raced it past the wall of the Old City which, even this close, was obscured by the roaring dark mass that seemed to have originated in the Valley of Kidron, travelled up the slopes of the Mount of Olives and was now coiling back in a great arc to cover Jerusalem. Moshe was sitting beside the driver, with a lieutenant and sergeant in the rear, all of them wearing protective goggles against the fine, swirling dust. The jeep passed the Dung Gate, leading into the Jewish Quarter; both the gate and the wall were nearly invisible in the howling dark storm.

'I don't believe this,' Moshe muttered.

Nor could he believe it; too much had happened too quickly: first the unidentified flying object that appeared to have crashed on the Mount of Olives, now this storm of unprecedented fierceness, so sudden, so inexplicable, springing up out of nowhere, following an unnatural course, and covering the Old City and the Mount of Olives as if trying to devour them. Moshe glanced up to his left, saw the towering mass of the Temple Mount, the Dome of the Rock now no more than a black globe soaring high above the obscured Turkish wall, the storm raging around it. Moshe didn't know what was happening, couldn't think of an explanation, and he felt the muscles tightening in his stomach as the tension took hold of him.

'It's getting worse!' the driver shouted.

'It doesn't matter,' Moshe replied. 'We've got to get to the summit of the Mount of Olives and find out what's happening there.'

They were now heading north, along the east wall of the Old City, the ground on their right sloping down to the Valley of Kidron, uncommonly dark, the clouds of dust still boiling skyward and sweeping over the Garden of Gethsemane and up the obscured slopes of the Mount of Olives. Moshe

glanced to his left, saw the Dome of the Rock behind the wall, heard a subterranean rumbling, and then felt the jeep shaking violently before careening sharply across the road. The men in the rear bawled, their weapons clanging together, the driver cursing and slamming his foot down, bring the jeep to a screeching halt as the ground growled and shook and became a jigsaw of gaping cracks that ran out from the centre of the road towards the low wall.

The driver cursed and smacked the steering wheel, licked his lips and glanced at Moshe, his eyes hidden behind the rubber-framed goggles, beads of sweat on his forehead. Moshe pushed himself upright, shook his head and turned around, staring beyond the men in the rear at the other two jeeps, which had also braked to a halt at the side of the road. The men were shouting and gesticulating, pointing at the jagged cracks in the road, and then the ground growled again, shook and heaved in short, sharp spasms, and Moshe heard a roaring, a gasp of horror from the driver, and he jerked his head back and looked up through the dense, swirling dust.

Even through the murk, he could see the ugly cracks appearing above the double arches of the magnificent Golden Gate; and then, as he looked on, hardly believing what he was seeing, the Byzantine structure shook violently, spitting pulverised mortar, a web of jagged cracks appearing, lumps of stone falling down, and then the whole walled-in section collapsed in clouds of billowing dust, leaving the entrance to the Temple Mount clear for the first time in centuries.

Moshe stared at the tumbling rubble, momentarily paralysed, while beside him the driver bowed his head and started murmuring a prayer. Moshe was similarly affected, both shocked and outraged, watching the rubble of the Golden Gate tumbling down the sloping ground, over the wall below and onto the road. The sergeant in the rear cursed loudly, the lieutenant answered with a throttled groan, and then Moshe broke free from his reverie and turned to the driver, punching him lightly on the shoulder and ordering him to start the jeep again. The driver raised his head, his eyes hidden behind the goggles, then licked his lips and opened his mouth to shout.

‘The gate!’

‘I said *move*!’

‘But the gate… the *Golden* Gate!’

‘Damn it!’ Moshe snapped. ‘It’s too late for that. We’ve got to get to the

summit of the Mount of Olives. Now start the jeep and *let's go*!'

The driver did as he was told and the jeep roared into life, churning up more clouds of dust and shooting off on squealing tyres, heading into the storm. Moshe turned to look back, saw Lieutenant Gonen and Sergeant Rifkin both staring at the gaping hole in the Golden Gate, neither saying a word. Moshe raised his right hand, waving the other two jeeps forward, then he looked straight ahead as the jeep turned away from the Old City, passing the road that led up to St. Stephen's Gate and heading for the Garden of Gethsemane. They entered the Jericho Road, passed the Tomb of the Virgin, and then headed up the crude, narrow track on the lower slopes of the Mount of Olives.

Here the earthquake was stronger, the ground heaving relentlessly, splitting open in thin cracks that seemed to originate from the summit of the Mount and run back down towards the Old City. The jeep bounced over the cracks, its wheels squeaking in protest, throwing Moshe and his men from side to side, backwards and forwards. Also, the storm was worse, much louder, the dust thicker, rising from the far end of the Valley of Kidron, sweeping over Silwan and up the slopes of the Mount of Olives, back down over the Garden of Gethsemane and on towards the Old City. The storm's course defied logic, as did its singular ferocity, and now the air was filled with uprooted cacti and bougainvillaea, the olive trees bending and shedding their greenery above the walls of the Basilica of the Agony. Moshe saw this through his goggles, through the distorting murk of the tempest; he realised that he was sweating, that the wind was unnaturally hot, and as he wiped the sticky dust from his face his bewilderment increased.

Higher up, the storm was terrible, the spiralling dust-clouds almost solid, a dark mass blotting out the moon and stars and streaming back down the slopes. Moshe saw the clouds of dust, a darker mass, perhaps more dust, then a light - a very faint, pulsating glowing - in the depths of the storm. Lieutenant Gonen bawled something, his hand falling on Moshe's shoulder, shaking him, another hand passing his face to jab at the sky with an index finger. So, Moshe was not alone - he was not hallucinating - and he kept looking up, saw the light passing over the road, high up, in the sky, in the eye of the storm, first dull, then growing brighter, striations wavering through the clouds of dust, then suddenly flaring out in a brief, dazzling flash that swept over the whole area and just as suddenly winked out, returning the night to its

former darkness.

'*Riboyne Shel O'Lem*!' the driver exclaimed.

'What was that?' Sergeant Rifkin shouted.

'Don't stop!' Moshe bawled, hardly aware of his own voice. 'Damn it, keep your hands on the steering wheel! Put your foot down! Let's move it!'

The jeep kept going forward, bouncing dangerously on the steep track, the ground heaving and splitting open in spasms, the dust still swirling furiously. Moshe kept scanning the black sky, wondering what the light had been, seeing nothing but the extraordinary storm, feeling an odd kind of fear and awe. It was a different kind of fear - not the healthy fear of the trained soldier - and he cursed and tried to keep his wits about him as the storm raged and howled. The jeep kept grinding uphill, passing low limestone walls, then turned right, past the Mount of Olives Hotel, and screeched to a halt in front of the walls of the adjoining mosque. The jeeps behind did likewise, their engines spluttering into silence, but Moshe remained where he was, as speechless as his men, staring beyond the ruins of the tower of the mosque to the remains of the Chapel of the Ascension: now a mound of dust-covered rubble.

There was nothing to say. A chapel that had stood there for centuries had been destroyed in an instant. Moshe clambered out of the jeep, his body pummelled by the wind, hearing wails of despair from nearby houses, the camels braying in panic. The ground beneath his feet was steady, no longer rumbling and cracking, but the wind, which had diminished a little, was still too fierce for comfort. Moshe turned to the other men, saw them climbing out of their jeeps, their faces turned towards the ruins of the ancient chapel, their heads shaking from side to side. Then they gathered around Moshe, perhaps instinctively seeking comfort, aware that what had happened would particularly affect the Arabs and Christians, though they, too, were shocked by the event. Moshe studied them, looked away, stared at the ruins and shook his head, forcing himself back to reality and what had to be done.

'Okay,' he said, 'let's go.'

They scrambled over the rubble, smacked by wind, whipped by dust, and then spread out and made their way into the ruins. The walls of the courtyard had collapsed and the steel doors were buried in stones, so they advanced across the widely scattered rubble into more devastation. Hulda's tomb and the chapel had both been destroyed completely and were now merely two

mounds of debris, one large and one small. The men stopped between the two, looking around them, still stunned, lashed by the raging storm, almost deafened by the howling wind, all of them temporarily forgetting just what they were here for.

'No wreckage,' Moshe said, not bothering to shout against the wind, speaking more to himself than to his men. 'No wreckage… No sign of an aircraft.'

The remark drew their attention and made them look at him, but for a moment they seemed unsure of what to do, each locked in his private dream. Moshe felt it in himself - a hapless grief and disbelief - so he turned away from the rubble of the chapel to look down on Jerusalem. The storm seemed to be abating there, the dust thinning out and settling, the Dome of the Rock reappearing as a black globe in spiralling clouds of dust; then the Al-Asqa mosque and the Church of the Holy Sepulchre with the lights of the New City behind it. The Old City had survived - for that he quietly said his thanks - but then the storm raging around him snapped him back to attention and he turned again to survey the rubble that towered above him and stretched across the dark, windswept courtyard. Sighing and wiping the dust from his goggles, he waved his men forward.

'Spread out,' he said. 'We're looking for metallic debris. Obviously it wasn't an aircraft that crashed, but it had to be… *something*. If you see anything unusual, don't touch it: just tell me about it. Okay, let's go.'

The men didn't move immediately, but simply stood there indecisively, slightly stooped against the wind, their bodies rocking, the dust hissing and whistling around them. Moshe knew what they were feeling - being Jewish made little difference - but he turned his flashlight on and started walking, examining the ground at his feet. Eventually his men did the same, spreading out across the courtyard, moving around the cone-shaped rubble of the Chapel of the Ascension with their flashlights beaming down at the ground, searching for debris.

Moshe was not a religious Jew and sacred sites did not move him, but as he searched for the missing debris of whatever had crashed here, as the wind howled about him and swept the dust from the broken stones, as the broken stones, rolling, revealed nothing underneath, he felt something draining out of him and leaving him hollow. These ruins brought back other ruins, another time, another place… the torn dress of a girl, the smashed toys of a boy, a

tangled web of female hair stained with blood, sightless eyes staring sunward… He felt a choking anguish, the resurrection of buried grief, and was shocked that this terrible night had opened up that old wound. The pain was like a fist clenched around his racing heart, more cruel than the howling wind and stinging dust, draining the blood from his head. He stopped, feeling dizzy, blinking behind the dusty goggles, then cursed softly and started forward again, his torch shining on rubble… The other rubble had been different: not windswept, but still; not hidden in the darkness of night, but bright and sun-scorched. The bloody hair had been dark, the eyes dark, drained of life, and her lips, when he touched them with his lips, had been cold and unyielding… Moshe remembered and closed his eyes, saw his dead wife and children… Instantly, he opened his eyes again, retreating rapidly from the horror of that distant day and concentrating once more, with relief, on the windswept ground at his feet.

'Not a thing, sir.'

'Pardon, sergeant?'

'There's nothing here, sir. No aircraft could possibly have crashed here… nor anything else.'

No, not a thing. The whole night was a mystery. Moshe nodded at the sergeant, hardly seeing him, scarcely hearing him, and then walked on, skirting the rubble of the collapsed chapel, his torch still aimed at the ground. No memories, just the present, deadening the pain with activity, the beam of his flashlight on the rubble, the rolling rubble revealing nothing, no indication of what it could have been that crashed down on the chapel… The earthquake? Probably. No other possible explanation. Yet what had flown down beneath the radar's ground clutter and disappeared above the summit of this ancient, holy site? Moshe wiped sweat from his brow, spat the dust from his mouth, cursed the raging wind's demented howling and wondered why he felt hot… It was the wind that was hot, too hot, unnaturally so, and suddenly he felt haunted and claustrophobic, divorced from himself. What was happening to him? *The dead eyes staring sunward*. Moshe advanced around the rubble, returning to where he had started, saw the lights of the Old City reappearing above the rubble, then heard one of his men shouting and looked around, facing into the beating wind.

' - *here, sir! Over here*!'

One of the men was kneeling down, his left hand raised and waving, his

flashlight on the ground at his booted feet, beaming into the rubble. Moshe felt a pang of dread, something cold sliding through him, his mind filled with intimations of change that could not be defined. He licked his lips and stopped breathing, felt the pounding of his heart, listened intently to the wind, as if willing it to speak, and looked through the dust at that dark hand raised skyward, a snake's head weaving, simultaneously seductive and dangerous. A mere moment passed this way, perhaps two or three seconds, but a distant time unfolded, revealed its horrors and passed on, and only then did Moshe jerk himself free and force himself towards the kneeling man. The man stared up at him, teeth gleaming, eyes hidden by the goggles, then he lowered his head and pointed at the ground near his dust-covered boots.

'It's Kate Hirschfield. The doctor.'

Moshe knelt in the rubble, shone his torch on the woman's face, heard a groan and saw her licking her parched lips and staring upwards, eyes blinking repeatedly. Large eyes, deep brown, brown hair whipping across her face, long hair, thick with dust, her tanned face smeared with dust, her lips full and too wide, almost too wide for the face, at odds with the short nose, the nostrils slightly flared, framed by high cheekbones that emphasised the brown eyes and lent the face a taut, aggressive beauty. No, not beauty, at least not in the classical sense; but something else was there, certainly maturity and intelligence; and beneath that, behind the dark eyes, in the curve of the too-wide lips, was a suppressed sensuality, a finely controlled tension, a strength of spirit made luminous by its own inhibitions: an attractiveness based on some part of her that was just out of reach.

Something took hold of Moshe and wrenched him out of himself, hurling him brutally into his past and then hauling him back again. He stared down at the woman, shining his flashlight on her face, feeling anguished, disorientated, dissolving into her being; and then he reached out to place his free hand on her forehead and brush the hair from her face. The woman licked her lips, blinked her brown eyes, glanced around her, shook her head slowly from side to side and then looked up at him.

'Am I alright?'

'Yes, you're alright. You can probably sit up now.'

She sat up slowly, carefully, pressing her hands to the ground, the wind still whipping her long hair across her face as it howled all around them. The other men were moving towards them, shadowy forms in the dark night, and

Kate blinked and stared at them, her head moving left and right, one hand brushing the hair back from her forehead, the other opening and closing. Sitting up, she looked slim, almost bony, her breasts small, her legs long in loose slacks, the grey blouse now tattered and hanging free. She turned her head to look at Moshe, her gaze dark and direct, a quiet, sardonic smile at her lips as she pushed his flashlight away from her eyes. Moshe thought of another time, another place, a skein of dark hair; and the recollection, conjured up by Kate Hirschfield's presence, invited pain and despair, the resurrection of buried grief, and filled him with an unutterable longing that cast him adrift.

'What happened?' he asked.

Kate blinked and opened her mouth, started to speak and then stopped, her eyes filming over with fear and confusion, glancing up, moving left and right, studying the dark forms all around her, then returning to Moshe, staring at him, hardly seeing him, a sort of blindness in the gaze that was reflecting the light from his torch. Moshe raised his right hand, saw it shaking in the wind, the wind fiercer, much louder, almost smacking them both sideways as the ground began to rumble, first vibrating, then heaving upwards, much worse than before, more jagged cracks criss-crossing the courtyard and making the rubble dance as if alive.

'*Another earthquake*!' Kate said.

Moshe grabbed her right wrist, stood up and pulled her with him, saw large stones tumbling down the sloping rubble of the chapel as the ground shook with extraordinary violence and gave off a bass rumbling. The other men were already moving, running back towards the road, when the rubble of the chapel started rolling across the courtyard, the ground cracking beneath the large mound, unleashing a dreadful roar, then heaving upwards through the centre of the rubble and pushing it aside.

Moshe thought he saw light, couldn't believe it and turned away, his hand firmly on Kate's wrist as he pulled her with him, following his men towards the open road. The ground beneath them was shaking terribly, a relentless, rhythmic vibration, then the roar became deafening, a blast of hot air engulfed them, and Kate groaned as Moshe hauled her from the debris of the collapsed courtyard walls.

They stopped near the waste ground, neither looking at the other, both transfixed by the strange light that cut through the murk around them and

illuminated the faces of the other men, all frozen, their goggles glinting, their jaws slack, saying nothing, simply staring in stunned silence beyond Kate and Moshe, their gaze obviously fixed on the source of the heat and noise that had turned the raging storm into something demoniac.

Moshe and Kate both turned around, looking back where they had come from, and then stood there, just as frozen as the men around them, not believing their senses.

The centre of the courtyard was erupting as if in slow motion, the ground roaring and breaking apart, heaving up through the middle of the rubble of the chapel and exuding striations of brilliant white light. Blocks of stone screeched and cracked, poured down the slopes of the parting rubble, rolling in waves of smashed rock and powdered cement across the devastated courtyard. The ground below continued heaving, roaring hideously and spitting light, the earth thrusting up through the rubble of the fallen chapel as if being forced up by a giant fist. The wind howled and the dust swirled, forming billowing black clouds, spreading out and rushing down to meet the light streaming up from the heaving earth. A fierce heat came from the courtyard, the brilliant radiance eradicating the darkness - and in that stark chiaroscuro, in the unreal, dazzling clarity, the rubble of the chapel rolled away and another mound of earth appeared, the loose soil emitting smoke and then also rolling away to reveal a large, glowing, rectangular object.

The downpouring light vanished, winking off like a light bulb, and simultaneously, miraculously, the wind ceased its demented howling and the silence rushed back to rule the night.

No one said a word. The event had made speech redundant. The ground had stopped its terrible shaking, the spiralling dust was settling down, the stars reappeared in a clear dark-blue sky, and on a ragged mound of earth, where the Chapel of the Ascension had formerly stood, obviously buried in the earth but rising above the upturned soil, a large object of unknown origin, rectangular, glowing brilliantly, filled the darkness with heat and white light, illuminating the witnesses.

Moshe reached out for Kate’s hand.

9

They all stood there for some time, too stunned to think coherently, staring across the rubble at the extraordinary object that had emerged from the earth where the Chapel of the Ascension had stood for centuries. The storm had gone completely and now the night was calm and quiet, but eventually doors creaked open in the few houses beyond the waste ground and hesitant, fearful voices started calling to one another as the Arabs emerged from their homes to survey the devastation wreaked by the storm. Then a shout of surprise or horror, a woman's wail of fear or grief, as dazed eyes came to rest on the ruins of the chapel and that mysterious, awe-inspiring, glowing object.

Moshe, hardly aware that Kate's fingers were locked in his, stared through the subsiding dust and saw the stars reappearing in the sky beyond the high mound of rubble. He tried to focus on the large object, but did not find it easy - his vision distorted by the dazzling light, his senses stripped by the evening's events - but eventually, forcing himself to remember just what he was here for, he was able to bring himself back down to earth and gather together his scattered thoughts.

The object was huge, perhaps fifty feet long, its straight sides and flat top surmounting the arched rim of the rubble and giving off the blinding sheen of white-hot metal. The heat was intense, reaching as far as the waste ground, making the illuminated nocturnal air shimmer and distorting the stars beyond. Indeed, the object could have been a mirage, a holographic photograph, its linear contours distorted by its own radiant heat, bending and wobbling like jelly, its edges hazed by the fierce silvery brightness. For this reason it was difficult to judge its true shape and size, but from where Moshe was standing, about two hundred yards away, the object appeared to be rectangular and was either sitting upon or buried in the upturned soil. If, as Moshe thought, the object was buried in the soil rather than sitting upon it, it would not necessarily be rectangular; but either way it looked solid and was obviously

white-hot, made featureless by the radiance of that heat, its light illuminating the surrounding darkness.

Moshe turned to look at Kate, saw her dark eyes staring back at him, and then realised that she was holding his hand. Startled, embarrassed, he pulled his hand from her grasp and looked away, remembering other dark eyes, dulled by death, staring sunward, a skein of equally dark hair in the dust, a light breeze playing through it. His men were standing all around him, hardly aware of him, saying nothing, removing their goggles and squinting against the eerie light pouring over the rubble. The Arabs were moving across the waste ground, shocked that their mosque had been destroyed, their dark faces now clear in the moonlight, their shadows stretching out behind them to form bizarre, shivering shapes. Moshe studied them carefully - some were pointing excitedly, others wailing with grief - then he looked again at Kate, felt a spasm of longing, turned away and smacked the palm of his left hand with his right fist, stinging himself back into action.

'Lieutenant Gonen!'

'Yes, Major-General.'

'I want your men to move all civilians out of this area and then block off both ends of the road - there, at the far end of the Mount of Olives Hotel; and there, in front of the Church of the Pater Noster. When you've done that, ring the relevant people, tell them we have an object of unknown origin and nature up here, and ask them to send us a physicist, a specialist in esoteric weapons and explosives, a geologist, and anyone else who might have a specialised knowledge about what could have occurred here. I also want any information you can obtain from meteorology and Air Defence about the earthquake and the reported unidentified. Also, we'll want a decontamination unit to check if that object is radioactive, and a bomb disposal unit at the ready should our weapon's specialist decide that that… *thing*… is likely to explode. Finally, I want some representatives of Shin Bet up here. You got all that?'

'Yes, sir.'

'Okay, get to it.'

Lieutenant Gonen turned away and walked towards Sergeant Rifkin, while Moshe, feeling as if he was dreaming, turned back to Kate. The fierce wind had been reduced to a constant light breeze that was brushing her dark hair from her neck. Her back was turned to Moshe, her slim form shivering

slightly, silhouetted in the brilliant, eerie light, her shadow touching his feet. Moshe wanted to go to his jeep and call through to the Prime Minister, but the sight of Kate Hirschfield magnetised him and made him feel helpless. He thought of his dead wife and children, of the grief he had suppressed, studied the woman, slim and silent, bathed in that unreal light, and felt himself dissolving all around her, melting into her being. Embarrassed even as he felt this, he had to will himself to tear his eyes from her and concentrate instead on that strange object.

The object was still white-hot, its edges hazed in the shimmering heat waves, but the edges seemed straight and beneath their dazzling whiteness was a darker colour that suggested a solid surface. This possibility was staggering, since the intensity of the heat, Moshe surmised, was enough to melt the toughest of metals. Rubbing his stinging eyes, he looked again at the object, trying to ascertain if it was shaped like an enormous plate or actually had back and sides. He was convinced that it was box-shaped, something like a large room, but he couldn't be sure because the iridescent heat waves were diffusing the object and illuminating the rubble on all sides of it.

At that moment, Kate took a step forward, her right hand covering her eyes, the wind rippling her loose blouse and slacks, her shadow stretching out behind her. She took another step forward, stopped again, shook her head, then offered a muted groan and started walking as if in a trance.

Moshe was briefly startled, and just stood there, transfixed, as Kate brushed the dark hair from her eyes and hurried towards the ruins across the road. Then Moshe came back to his senses, feeling the scalding waves of heat, and rushed forward to grab Kate by the elbow and jerk her back to him. She tripped on a stone and came towards him in a spin, and as he reached out to grab her with his free hand, she swung her fist at his face. He ducked just in time and the blow merely glanced off his cheek as Kate hissed something incoherent and then pulled away, trying to make her escape. She was surprisingly strong, leaning forward, dark eyes gleaming, but Moshe tugged her back to him and slapped her face without thinking about it. She straightened up, shocked. Raising her shaking right hand, she touched her stinging cheek, blinked and licked her lips, then lowered her hand to her side.

'You hit me,' she said.

'Yes,' Moshe replied. 'I'm sorry. I didn't think you knew what you were doing, so I had to do something.'

‘Yes… of course.’

‘You were heading straight for that thing on the rubble. It could have burned you… or blinded you.’

‘I didn’t realise…’

‘No.’

‘I’m sorry. I don’t know what came over me.’

The light pouring around her had a dazzling intensity that turned her face into a featureless mask and bathed Moshe in a suffocating heat. Aware that the heat was already burning his skin, he took Kate by the elbow and walked her towards his men who were clearing the civilians, mostly Arabs, out of the area and blocking off the road at both ends of the devastation. Looking beyond the houses at the far end of the waste ground in front of the destroyed chapel, Moshe saw that the lights of the Old City had reappeared, the walls and domes clearly visible, the dark sky drenched with stars. This relieved him a little, but his thoughts were elsewhere, concentrated on the feel of Kate’s flesh between his fingers, spread thinly on the bone of her elbow, as he guided her forward. He noted that she was silent, her head lowered, her body shivering, the light breeze blowing her hair around her face in languorous motions. He flicked his eyes towards her, looked away, feeling guilty, remembering his wife’s blood in the dust, the dust covering her brown hair. He felt disorientated, strangely removed from what was happening; thought of what he had said a few hours earlier about Kate Hirschfield and wondered what was happening to him now. The light of the object illuminated the road, fell across the emptied Arab houses, and he saw his men holding the civilians back just beyond the parked jeeps.

‘What happened?’ he said.

‘I’m not sure,’ Kate replied. ‘The ground was cracking open, then a noise, the roaring storm… another noise… a light in the storm, spreading out, all around me…’

‘Around you?’

‘Above me. It came out of the sky. I swear, it seemed to come from the sky and then spread out, or explode, all around me… I fell down… was *thrown* down… heard a roaring, a dreadful noise… then the chapel either exploded or collapsed, and after that I passed out.’

‘You just saw a light?’

‘Just a light.’

‘Nothing else?’

‘Nothing else.’

Her voice was like an echo, strangely hollow, repeating his words, and then he saw her raising her head, her dark eyes staring blindly. (*The dead eyes staring sunward*.) Moshe felt haunted and unreal, an old pain whipping through him, as he reached the first jeep, which was parked outside the range of the object’s far-reaching light. It was darker here, cooler, the breeze soothing scorched skin. Lieutenant Gonen put the telephone down and turned around, looking weary.

‘Everything’s been arranged. The men you requested are on their way already. I also asked them to send up some floodlights.’

‘Floodlights, lieutenant? Are you serious? The light from that damned object is almost blinding!’

‘I don’t think it’s going to last long, sir. It’s becoming dimmer already.’

This was true. Looking back on the mysterious object, Moshe noted that the white-hot glow was dimming, the brilliant light already fading from the middle of the road, darkness creeping back over the houses and deepening around the ruined courtyard of the chapel. The object itself was less dazzling, the air around it no longer shimmering, and the dark sheen of its surface was emerging like streaks of black paint on fluorescent glass. The edges still looked ragged beneath the distorting white-hot glowing, but it was now perfectly clear that the top and sides of the object were straight. Whether or not the object was shaped like an enormous plate or was merely one side of a three-dimensional object was still an issue of doubt; but since the rays of light were now mainly beaming upwards, it was evident that the object was tilting back a little and thus effectively hiding any possible farther right-angled surface.

‘Well, lieutenant, what do you think it is?’

‘I don’t know, sir. I just can’t make it out. However, judging by the way that upturned soil has been pushed back, I’d say that it’s as deep as it is long.’

‘Box-shaped.’

‘Yes, sir.’

‘That’s a pretty big box, lieutenant.’

‘Precisely.’

‘What about the earthquake - or earth tremor?’

‘A member of the Weizmann Institute, helpfully resident in Jerusalem, is

coming to talk to you.'

'And the unidentified?'

'A real mystery.' Lieutenant Gonen shrugged his shoulders and rubbed his eyes with his fingertips, either weary or bewildered, or both, his jowls displaying his advancing years. 'They had an unidentified on the screens for no more than a few seconds and it disappeared below the radar's ground clutter, right over this area. Whatever it was, it didn't ascend again, and it certainly hasn't been seen since. However, that unidentified was picked up by the radar at precisely the same time as the first earth tremors were recorded on the seismometers, so it's thought that there may be a connection. Air Defence also pointed out that although the unidentified was the first and only one observed, there *has* been inexplicable interference on the radar screens throughout the past two nights.'

'There was a tremor last night.'

'That's right… with simultaneous radar interference.'

Moshe sighed dejectedly, ran his fingers through his hair, then glanced over the lieutenant's shoulder at the men forming a barricade across the road. It was dark where the men were and it made them look ominous, their rifles held on high as they kept the jostling civilians from entering the area. The Arabs were unusually quiet, doubtless in a state of shock, most straining to see the object that had emerged from the earth and destroyed not only their mosque but one of the chapels most sacred to Christians. Above the people were the stars, shining brightly, perfectly normal, and Moshe looked up and then dropped his gaze and fixed his eyes on Kate Hirschfield. She was leaning against the jeep, biting her lower lip, her dark eyes gleaming, her brown hair fluttering gently against her face with its taut, repressed beauty.

'Are you alright?' Moshe asked.

'Yes.'

'Are you sure?'

'I'm a psychiatrist.'

'That wouldn't necessarily help at the moment; you could be in shock.'

'I'm just confused, major-general. I'm not sure what's happening to me. I've been seeing things I just can't believe, but now I have to accept them.'

'You mean that thing over there?'

'That… and something else. I heard you talking about the radar, about an unidentified flying object, and I think I might have seen that as well.'

She offered a tentative, self-mocking smile, dropped her gaze to the ground, then, raising her eyes again, she stared at the glowing object, spread her hands in a gesture of bewilderment and returned her gaze to Moshe. He was drawn to her brown eyes, to their secretive depths, to something that was just out of reach and refused to reveal itself; and he felt that he was drowning, slowly losing his senses, his beating heart proclaiming his confusion and recollected despair. He rubbed his eyes, his head down, in retreat, then he looked at those brown eyes again and felt the strength draining out of him.

'Yes?' he said.

'It's crazy.'

'You're a psychiatrist; you should know.'

'It was a star, major-general. I saw it last night and tonight. It looked like a star, was too large to be a star, and was obviously very low in the sky. I first saw it last night, just before that minor earth tremor; I saw it again tonight, just before that terrible storm. It looked like a star, but I don't believe it was one: it was too low in the sky, an unnatural circle of cloud surrounded it, its light was beaming right through that cloud and it appeared to be *moving*. Whatever it was, it fascinated me. In fact, it nearly hypnotised me. I was in the Intercontinental Hotel, having a drink with a friend, and then, for no reason, I found myself walking up to here with the star practically following me. Then the storm came up. It started directly below that star. Then, when I reached here, and just before I passed out, I saw that light in the very heart of the storm, coming down right on top of me… Maybe I'm going crazy - I just might be - but that's what I remember.'

'Do you know the sky, Miss Hirschfield?'

'Yes, I do… But I can't explain that… *thing*.'

She stared directly at him, a steely light in her eyes, hair fluttering across high cheekbones and full, sensual lips. Moshe thought of Leon Halcomb, of this woman in his bed, and his revulsion, which came instantly, was made more complete because it was wedded to his own desire for her. His feelings astonished him, made him feel that he was crazy, more so because they were inseparable from the events of the whole evening, which were, by their nature, overwhelmingly more important than any individual consideration. He had despised this woman on principle, without knowing her, on hearsay; but now, standing face to face with her, he was lost in her dark gaze. It was incomprehensible, a product of aberrant reasoning - and what had happened

here, on the summit of the Mount of Olives, made such feelings seem no less than insane. Moshe tried to break free, to concentrate on what had happened, but the mysterious object, which grew dimmer with each second he stood here, seemed no more than the instrument that had brought him to this singular meeting.

'Major-General?'

'Yes, lieutenant.'

'I was wondering if we could send one of the men to walk around the courtyard to have a look at the other side of that object and possibly ascertain what it is.'

'No, lieutenant, I don't think so. He'd have gone too close to it. God knows what it is, but it just might be radioactive - and I don't think it's worth taking that chance. I don't want anyone to go near that thing without a lead-suit on, so we'll just have to be patient and wait for the decontamination unit to arrive.'

'It's getting really dim.'

'Yes, it is. We might even be able to see what it is without going near it.'

The dazzling white light had now disappeared completely and the object had become a red-hot rectangle surrounded by darkness. No longer obscured by the fierce, shimmering heat waves, it was obviously solid, its edges perfectly straight, its base nearly buried in the upturned soil and rubble, its surface dark beneath the dimming red-hot sheen. Judged from this distance, it appeared to be about fifty feet long and twenty feet high from the lowest point of the irregular rubble. The sky beyond it was now black, serene, drenched with stars; and the object, thrusting up to that sky, looked infinitely mysterious.

'I still can't see any sides, major-general.'

'I think it has them, lieutenant. As you just said yourself, the shape of the rubble suggests depth, so I think it might be as deep as it is long.'

'If so, it's a pretty enormous box.'

'Or a tomb,' Kate said quietly.

Moshe and Gonen stared at her, wondering what she had meant, then the lieutenant glanced at Moshe and shrugged his shoulders and looked down at the ground. Moshe kept his gaze on Kate, drawn again to her hidden depths, but was distracted by the growling of trucks beyond the crowd of civilians. The trucks ground to a halt, their headlights beaming through the darkness

and illuminating the spectators, mostly Arabs in flowing robes and *keffiyes*. When the sergeant barked an order, some of his soldiers broke ranks, stepping forward to force the Arabs aside and make way for the new men. The first to appear were members of the decontamination unit, bulky and bizarre in their loose white lead-suits, carrying their gas-masks in one hand, Geiger counters in the other. Leading them was Professor Paul Madsen of the Weizmann Institute, a featureless silhouette in the glare of the headlights, regaining his features only when he stepped around the jeep and stopped before Moshe. Wiping sweat from his pink, ageing face, his eyes widening in disbelief, he stared past Moshe at the large, unknown object thrusting up from the earth.

'Ai-ai-ai!' he exclaimed.

'That's it, professor. Don't ask me what it is - I've no idea - but I've let no one near it.'

'Very good. But how did it get there?'

'We still haven't a clue. It appears to have been buried beneath the chapel, but we can't be too sure of that.'

'You're not too sure?'

'No. It's all very confusing. Something unidentified might have descended over the chapel. That object either pushed itself up or was *drawn up* by something.'

'Now you're confusing me.'

'We'll discuss it later.'

'Any noise from the object?'

'No, not a sound.'

'Okay, we'll go over there.'

When Madsen nodded to the three men behind him, they all put on their metal helmets and breathing apparatus. Looking like astronauts and walking just as awkwardly, they moved off, making their way across the road towards the ruins of the courtyard. Turning his back to the jeep, still standing close to Kate, Moshe followed the progress of the men as they spread out through the ruins. He glanced once at Kate, saw her shivering and folding her arms, leaning back against the vehicle, her spine curved, her hair hanging almost to her waist. Moshe thought of another time, another place, a distant horror, then he silently cursed and looked straight ahead, his gaze following the men in white lead-suits. They were advancing slowly, carefully, holding their

Geiger counters in front of them, skirting around broken pillars and smaller mounds of rubble, gradually closing in on the huge object that surmounted the ruins of the chapel. The object was cooling rapidly, its red-shot sheen growing darker, now reduced to a mosaic of dull red patches on a vitreous black surface. Moshe looked on, feeling uneasy, aware of Kate's close proximity, suddenly imagining that she and the object were somehow related. This thought came and went as he studied the object, as he blinked and strained to see through the darkness and surrendered to disbelief. The edges of the rectangle had become invisible, merging in with the black sky, and as the men clambered up the rubble, lead-suits gleaming in the darkness, the red patches faded further, became pinpricks and vanished; and then, to the amazement of Moshe and those around him, including Kate, the men in white finally converged near the top of the piled-up rubble and were framed by a stark, total blackness.

The object had disappeared.

10

Lieutenant Gonen cursed loudly, Kate bit her lower lip, and Moshe felt himself falling down through a well without bottom. The unreal was now real, the impossible a fact, and he closed his eyes and tried to get a grip on his scattered senses. He was a practical man, quick-witted and highly adaptable, but nothing in the extremities of his experience had prepared him for this. He clenched his fists, shook his head and tried to think, then opened his eyes again and looked across at the men in the rubble.

'It's still there,' Lieutenant Gonen said.

'No, it's not,' Moshe replied.

'I can see it. It's even blacker than the sky. There are no stars where the object is resting - there's just a rectangular blackness.'

Gonen was right: obviously the men of the decontamination unit were moving about in front of something solid, inching carefully along the convex rim of the rubble, past a blackness devoid of stars. The object was still there, a blackness painted on black, a black rectangle blotting out the stars and stretched across the high rubble. Moshe heaved a sigh of relief, glanced briefly at Kate, noted the odd, remote glitter in her eyes and then reached for the telephone.

He talked to the Prime Minister while leaning into the jeep, his elbows digging into the front seat, beads of sweat on his forehead. The situation defied description and left him short of words, and as he heard Ben Eleizer's startled gasp, he glanced across at the Arab onlookers. They were unusually quiet, almost reverentially so, massed between the trucks and the jeeps, the soldiers pressing them back with raised rifles. Other men had arrived, two in plain clothes, some in army uniforms, all looking left and right, shaking their heads, as they approached the jeep. Moshe kept talking to Ben Eleizer, trying to explain, answering questions, but he hardly heard the sound of his own voice, his thoughts circling elsewhere. Eventually he rang off, promising to

keep Ben Eleizer informed, then he straightened up again, glanced warily at Kate, and then turned to the plain-clothed men, both of whom were members of Shin Bet, the internal security service.

'I can't see any object,' one of the men, Levi Shapiro, said. He was in his early thirties, had auburn hair and hazel eyes, and was wearing a white shirt and tie, his jacket over his arm. 'All I see is the wreckage of the chapel and those men in white boiler suits with their Geiger counters.'

'It's there,' Moshe replied. 'Those men are standing right in front of it. You'll see it if you look more carefully. It's blocking out the stars.'

'He's right,' the other man, Irwin Jordache, said. Too big for his tight grey suit, he had a shock of electrified, greying black hair over a battered, unsentimental face. 'I can see it… A very large, rectangular hole where the stars should be.'

'Is it *invisible*?' Shapiro asked sceptically.

'It's very black,' Moshe explained.

'Nothing's *that* black, surely.'

Moshe shrugged. 'We'll know soon enough, Levi. Those men are checking it out.'

They all looked at the distant men and saw them framed in the rectangular black hole, a space darker than the night, devoid of stars, a doorway to eternity. Moshe shivered at the sight of it, feeling as if he were dreaming, then he noticed that Kate was shivering as well, her eyes gleaming unnaturally. He wondered what she was thinking and how the experience had affected her, then he turned away, more disturbed than ever, and faced the men from Shin Bet.

'What about the earthquake?'

'Unaccountable,' Shapiro said. 'Apart from the damage up here, it destroyed a lot of buildings all over Jerusalem and badly damaged parts of the wall of the Old City. We just don't understand it. There was no prior warning of it at all. It was more like an explosion than an earth tremor - a subterranean explosion.'

'That doesn't make sense.'

'Nor does that thing over there. Something came down below the radar's ground clutter and then disappeared. That's impossible as well if, as you say, nothing crashed here.' Shapiro glanced at Kate, as if seeing her for the first time, let his appreciate gaze roam up and down her slim, shapely body, then

turned back enquiringly to Moshe.

'Kate Hirschfield,' Moshe explained. 'From the Hadassah Medical Centre. She was here when the chapel either collapsed or exploded, and she thinks she saw the unidentified flying object.'

'Oh?' Jordache said, casting a sceptical look in Kate's direction.

'Yes,' Kate confirmed. She moved back and sat sideways in the jeep and covered her face with her hands.

'What did it look like?' Jordache asked.

Kate didn't reply. She just sat there in the jeep, leaning forward, shivering visibly, hiding her face in her hands, the breeze brushing her long hair. Moshe watched her, entranced, letting her presence filter into him, wanting to know what was going through her mind, what she saw with her closed eyes. Jordache also studied her, but more objectively, with professional interest, and Moshe, unable to tolerate his objectivity, looked across at the men on the ruins.

'They're coming back,' he said quietly.

The men of the decontamination unit were making their way back down the rubble, ghostly white in the moonlit darkness, the enormous black rectangle above them, a framed void in the starry sky. Moshe studied that great space, could not believe that it was solid, kept looking and thought he saw a tunnel leading out to the infinite. His rational self was outraged, refusing to accept what it was seeing, but he still found himself searching the sky for a star that should not have been there. No such star was in the heavens. Moshe lowered his gaze to the men in white. They were coming back across the courtyard, moving laboriously, looking almost spectral in the night, their flashlights turned down.

Kate raised her head, brushed the hair back from her face, her eyes glinting with the light of obsession as the men came towards her. She rubbed her cheeks and licked her lips, smoothed her hair down with one hand, then stood up and leaned against the jeep, a clenched fist to her mouth. Her eyes flicked towards Moshe, recognised him, slipped away, then settled on the men in the white lead-suits as they crossed the dark road. Professor Madsen was in the lead, removing his helmet from his head; he stopped in front of Moshe, threw his helmet into the jeep, wiped the sweat from his face with the palm of his hand, then shook his head from side to side, expressing his bewilderment.

‘You won’t believe me,’ he said.

He didn’t say anything else immediately, but merely stood there gazing around him, his eyes gleaming and reflecting the headlights of the trucks, his white lead-suit covered in dust and smeared with reddish-brown soil.

‘What *is* it?’ Kate asked.

Moshe took note of the unnatural glint in her eyes, the moonlight falling over her face, one hand, briefly removed from her lips as she spoke, now back there again. She seemed singularly distracted, locked in a private dream, her gaze fixed on the rectangular blackness dominating the rubble. Perhaps, as with Moshe, that perfect blackness had chilled her soul, making her think of a tunnel leading to the infinite and the unknowable. Moshe drank her in, feeling soothed by her proximity, then he returned his attention to Professor Madsen, who seemed slightly dazed.

‘It’s a cube,’ Madsen said. ‘There’s no other way to describe it. It’s about twenty metres long, about the same depth and height, and seems absolutely solid from top to bottom. Don’t ask me what it’s made of. I can’t really say, though it certainly seems to be some kind of stone. It has a perfect, matte-black, non-reflecting surface that makes it practically invisible in the dark. It was cold when we reached it - and obviously went cold incredibly fast. It was red-hot in patches as we climbed up that rubble, but the last of the red patches disappeared just as we reached it. No heat. None at all. We couldn’t see a damned thing. We hadn’t bothered to use our torches because the red glowing was bright, but the instant the last red patch faded out, we were faced with pure darkness… Not darkness: a total blackness. It looked like a black hole… so black it pulled my eyes out of focus and destroyed my sense of direction. God, it was frightening! I’ve never seen anything like it. The blackness seemed to go on forever. Nothing solid. A void.’

Moshe gazed across the road, automatically, hardly aware of it, straining to see the surface of the object that was nearly invisible. There was just a rectangular blackness framed perfectly by the stars, the edges of the rectangle defined by how they cut through the stars - a large space, unreal and disorientating, mysterious and frightening.

‘Then we turned on our torches. You could see it with the torches: you could see a perfect circle of stone where the beams of the torches fell upon it…but you still couldn’t see anything, not a hint, outside that circle of light. It definitely wasn’t metal. I’m convinced it was stone. Matte-black, non-

reflecting, diamond-hard, not remotely like any stone I've ever come across… Then we walked around it - a weird experience; pretty frightening. We knew it was there, but it looked like a black hole and we were frightened to even lean against it, in case we fell into it… It's buried deep in earth and rubble. The whole thing is smeared with mud. That suggests that it's been pushed up from the ground, that it was buried down there. God knows for how long…'

He stopped talking and shook his head, staring at each of them in turn, clearly embarrassed by what he was saying, hardly able to credit it himself. Moshe glanced again at Kate, saw her staring across the road, oblivious to the people around her, her thoughts circling elsewhere. The moonlight fell on her face, emphasising her isolation, and Moshe, wondering what was happening to him, wanted to reach out and touch her.

'There's hardly any rubble at the back, so we checked that side carefully. The cube is tilting in that direction because there's no earth to support it, so at that point you can see near to the bottom. If it's stone, it's pretty damned smooth and would have to be man-made. I've never known stone that smooth before, so I can't work it out. Anyway, I examined it, hammered on it with a rock, tried to score it with a blade. I didn't make a dent or a scratch. That stone was solid, but the cube had a hollow ring. So it might be hollow. I wouldn't swear to it, but it might be. Then I ran my fingers around the surface area and thought I felt some fine cracks. Two vertical, one horizontal, the size and shape of a large door. The cracks were *extremely* fine, very easy to miss, so there's no way I could check how deep they were.'

'A *door*?' Shapiro queried.

'Maybe that,' the professor replied. 'Or a removable panel. No hinges, no locks, no sign of a way of moving it. And those cracks were too fine to allow that section to swing in or out at an angle. If those cracks go right through it, it would mean an incredibly precise fit and the panel would have to be pushed out or pulled in like a piece in a jigsaw. So, it might be hollow and it might have an entrance, but don't ask me how we're actually going to open it.'

'It's hollow,' Kate said, almost hissing like a cat. 'I know it! *Damn you, it's hollow*!'

Taken aback, they all stared at her, wondering why she was so convinced, were faintly embarrassed by the intensity of her outburst. She looked at them

and through them, as if not really seeing them, then shivered and turned away and once more stared intently across the road, her gaze fixed on the immense, rectangular blackness. Moshe watched her for a moment, wondering if she was cracking, then Professor Madsen's voice broke the silence, sounding hoarse, not too steady.

'There's no radioactivity, no form of radiation, so we won't have any problems when it comes to examining that thing properly. However, we're going to need a bulldozer to clear away the rubble around it - and the sooner we get those floodlights here the better, because that matte-black is completely disorientating and plays tricks with your vision.'

'What I can't understand,' Irwin Jordache said, 'is how that thing got there in the first place.'

'Don't ask me,' the professor said.

Moshe felt very strange, far removed from himself, some part of him floating away in the darkness and embracing the object. It was blacker than the night, too black to be real, a solid with the appearance of a void: neither shape nor dimension. He shook himself from his reverie, glanced around him, trying to focus, and saw the men in the moonlight, the soldiers beyond the jeeps, the Arabs massed under the stars, their eyes wide, disbelieving. Then he looked at Kate, the brown hair and brown eyes, one fist in her mouth, her body shivering, her gaze fixed on the middle distance. Moshe studied her at length, wondering why he was drawn to her, *knowing* why, remembering his wife's hair in the dust, refusing to accept the truth of this. Then he heard a rumbling sound, saw Kate turning rigid, and he looked across the dark, destroyed courtyard as the ground shook beneath him.

The rumbling came from the distant object, from the rectangular blackness, and was accompanied by the sliding of rubble as the ground heaved again. The men around Moshe looked startled, were gasping and shouting, and the Arabs beyond the soldiers moved back a little, their massed voices hysterical. The object remained invisible, but more stars disappeared as the dark line of its upper edge shifted slightly, moving up towards the sky. It had obviously tilted forward, its back edge lifting higher, the rubble along its front sliding away as it settled back down again. Then the rumbling stopped abruptly, the ground was still, silence reigned… Then a single, sharp explosion came from the far side of the object, and Kate, letting out a peculiar cry, ran across the dark road.

Moshe was frozen for just a second, his soldier's instincts betraying him, hearing a voice calling out Kate's name, his own voice, sounding stricken. Kate did not respond, but continued running across the road, her long hair flapping wildly about her shoulders as she reached the ruined courtyard. Moshe cursed and jumped forward, leaning into the jeep; he grabbed a torch, straightened up and spun around and then followed Kate. He saw her in the courtyard, wending her way through the rubble, a slim figure being swallowed by the darkness as she hurried towards the object. He called her name again, flicking his torch on, beaming it downward, but Kate didn't look back, refused to stop, so he had to keep chasing her.

He didn't know why he was doing it, but he felt a great fear, as if something in the object, or in the night's bizarre events, was a threat to the landmarks of his past and hopes for the future. His past was what sustained him, both in pleasure and in pain, but as the darkness devoured him, as that distant figure led him, he felt that his future was dependent upon what they would both find. His boots ground the broken stones and kicked up the fine dry soil while Kate, now at the start of the piled rubble of the chapel, stopped and glanced up, scanning the huge, black rectangle, then turned right and made her way around the high mound, trying to get to the back of it.

Moshe cursed softly when Kate vanished, swallowed up by the darkness, but he ran to the bottom of the high mound of rubble, his torchlight beaming ahead of him. Glancing up, he saw the object, a rectangular blackness directly above him, then he turned and followed the curved base of the rubble, his throat dry, his heart pounding. The rubble towered high above him, sloping down to his feet, but as he circled behind the ruins, as the darkness deepened, the top of the rubble dropped lower, came level with his shoulders, disappeared and left him staring at nothing: a complete, chilling blackness.

He stopped, disorientated, his senses streaming away from him, his eyes straining to adjust to a void defying shape and dimension. He felt disembodied, his mind adrift in the Nothing, black painted on black to infinity, all around him, above him. Then he clenched his left fist, raised the torch in his right hand, pointed it straight ahead and saw black stone at the end of the beam of light. He glanced up and saw more blackness, a dizzying Nothing high above him, its angled edge cutting through the stars, which filled the sky sweeping over it. Moshe gasped and held his breath, let it out, lowered his gaze, moved the beam of the torch to the right, watched it bend

and stretch farther. The beam now stretched out a long way, exposing black rock farther back, and Moshe sensed that he was seeing another wall set back deep in the base of the huge cube.

Kate was possibly inside.

Moshe put his left hand out, watched it disappearing into blackness, spread his fingers and felt a hard surface, very smooth, icy cold. He kept his hand on this surface, moved it right and then followed it, his torchlight travelling ahead of the moving hand to find the edge of the entrance. Then his foot kicked something. He glanced down and felt dizzy. He was standing on the edge of a rectangular black hole that made him lose all sense of direction. He raised his foot and dropped it gently, his heart pounding, still feeling dizzy. His boot stopped on the blackness, on something solid, and he let his breath out. It was part of the matte-black stone, a panel-shaped block of stone, and then he realised that the explosion, whatever its nature, had blown this section of stone off the object to expose its interior.

Moshe called out Kate's name, heard a cry from inside the blackness, kept his hand on the invisible surface and shone his torchlight to the right. The beam bent and travelled farther, moving deeper into the object's interior, and Moshe moved to where the beam of light was bending and found the edge of the opening. He moved on past the edge, put his hand out, felt nothing, then stepped forward into the cool, complete blackness and lost all sense of direction.

'Kate, where are you?'

'I'm here!'

There was no 'here' or 'there', no left or right, so their voices rang out and reverberated from no clear direction. Moshe was guided by his torchlight, a circle of light framing stone, then the light bent and travelled on farther and illuminated Kate's face. Large eyes, dark and deep, staring at him, wandering off; a choked sob as she moved away from him and her face disappeared. Moshe called her name again, heard his own voice reverberating, heard the echo of her footsteps, her choked sobbing as she stumbled through darkness. He walked into a wall, cursed aloud, found the edge, moved around it and shone his torchlight on the back of Kate's head, then advanced to grab her by the shoulder and pull her close to him.

'Hold my hand, Kate! *Hold it*!'

She broke free and ran forward, moving out of the beam of light, was

devoured instantly by the blackness and cried out in despair. Moshe walked into another wall, pulled his head back, looked up, saw a blackness so deep it made him dizzy, slipped sideways, moved forward. One wall, then another, slipping sideways, stepping forward, passing through invisible chambers filled with darkness and a stark, chilling silence. No ceiling, no floor, none to see, just to touch: the interior of the enormous, freezing cube was honeycombed with empty rooms. Then he suddenly heard Kate breathing, shone his torchlight on her brown hair, felt her warmth as he stepped up beside her and took hold of her arm. She was standing dead still, her eyes wide, looking ahead, and he followed her gaze and saw starlight pouring down through the blackness.

Moshe kept hold of Kate's wrist and stepped into the starlight, glanced up and saw the stars in a frame of black ceiling, then followed the starlight down, saw stone walls, a large chamber, a stone bed supporting the vision that would haunt him for the rest of his days:

A bearded man in a white shroud.

Kate returned to herself, tumbling back down through the dream, hardly knowing where she was nor how she had come here, only aware of falling light, swept by fear and exultation, hearing a sound, someone's voice, her own voice sobbing brokenly, seeing the man in the white shroud, his face pale and serene, ageless even beneath the beard, his hands folded on his chest, either unconscious or dead, not real, her only truth, as she looked and beheld him and turned away from his radiance, sobbing brokenly, triumphantly, her shaking hands clutching Moshe, her dishevelled hair trailing across her shivering lips as he rocked her from side to side.

'Oh, my God!' Kate cried. 'Help me!'

PART TWO:

NATIVITY

… And when she saw *him*, she was troubled at his saying, and cast in her mind what manner of salutation this should be.
-*Luke*, 1:29

11

‘How long do you intend keeping me here?’ Kate said, swinging her legs off the bed, straightening out her white smock, and lighting a cigarette with sharp, nervous movements, the smoke making her squint. There was a bed and small cabinet, a writing desk and chair; the walls were white and bare; there were bars on the window, and the doors, also white, had a sliding grill that could only be opened from outside. ‘One of my own rooms, damn it. Locked up in my own ward! Your sense of occasion, if I may say so, is execrable - and I’ve now been here for two days. When, if ever, major-general, will I get out of here?’ She spoke with deliberate harshness, trying to get a response from Moshe, but sitting by the desk, his hands motionless, he remained impassive.

‘Just a few more days,’ he said. ‘It’s for your own good, Kate. You were in a state of shock, you slept for twenty-four hours, and like me, you had burn marks on your face and hands.’

‘I didn’t see any burn marks.’

‘They disappeared before you woke up. Nevertheless, although the inside of that object was extremely cold, we both had what appeared to be burn marks.’

‘They took skin scrapings?’

‘Yes - *and* blood samples. In the event, both were perfectly normal - a fact that merely deepens our confusion.’ He gazed steadily at her, his grey eyes unrevealing; but something about him, perhaps his lack of movement, convinced her that he was a man who felt most comfortable when not expressing too much emotion. He was leaning slightly towards her, his uniform badly pressed, his hair carelessly combed, his large body all muscle and bone, thick arms covered in dark hairs. Very physical, Kate thought. Not your Jewish intellectual. She studied him thoughtfully, noting the stone in his grey eyes, the small scar just below his left cheek, the broken nose and

webbed lines. A face carved from granite, like the body… perhaps even his soul.

'So they want to run more tests on me?'

'Yes, Kate, on both of us.'

'Radioactivity?'

'There was none.'

'Whether there was or wasn't, we were guinea pigs.'

'That's one way of putting it.'

Moshe offered a slight smile, but the humour didn't reach his eyes, which were, she noted, behind the coolness, perpetually weary. 'We couldn't take any chances, Kate. We had to try further tests. We didn't know what that object was, nor where it came from, so we had to cordon the whole area off and run instrument checks. The locals, mostly Arabs, were placed in quarantine, you and I were brought here, and then our scientists moved into the area to examine the object.'

'And?'

'I don't think you're going to believe this… The object disintegrated.'

Kate was shocked, her aggression swept aside, the hand holding the cigarette wavering as it went to her mouth. His face blurred and then changed, became another face, elsewhere, bearded and washed clean of experience, radiant with innocence. Not Moshe but the other, the face bathed in moonlight, the bearded man in the white shroud in that place which resembled the void. She closed her eyes and remembered, saw the dream within a dream, then shuddered and opened her eyes again and saw Moshe's face. The cigarette, which was wavering before her mouth, was now gratefully inhaled.

'Disintegrated?' she said, her exhalation like a sigh, the smoke drifting lazily before her. 'You mean, it just…?'

'Disappeared.' Moshe shrugged and lifted his left hand off the desk and then let it drop again, his fingers outspread. 'We still can't explain it. There's no rational explanation. The object seemed to be made of stone, some sort of perfect, matte-black stone, hard as a diamond and unquestionably solid… and yet it disintegrated. Apparently it happened quickly, about four hours from start to finish, and no one really knew it was happening until it was half gone. It was still dark at the time - a few hours before dawn - but because of the invisible effect of that matte-black surface, and because the floodlights were a

long time in coming, it must have been disintegrating for a couple of hours before someone noticed that the stars that had been blocked out by the object were gradually reappearing. Then the floodlights arrived, another half hour to set them up, and then, with the floodlights on, the scientists on the scene saw that the object was disintegrating, literally ageing before their eyes, cracking apart into pieces so fine they were like flakes, which, when they fell off, turned to dust. In short, the object simply disintegrated.'

'Nothing left?'

'Only dust.'

'And?'

'No one in the Weizmann Institute has managed to get to bed yet, but so far their analysis has only produced perfectly normal Judean dust. The problem, of course, is that no known dust can be transformed into a solid, perfect matte-black material. Nonetheless, that's all we're left with: a handful of dust. Up there, on the Mount of Olives, where the Chapel of the Ascension and mosque once stood, there's nothing but terrestrial rubble and dust - that, plus a great hole in the rubble - a hole filled with perfectly normal, commonplace soil.'

Kate shuddered, inhaled smoke and closed her eyes, saw darkness, the blackness, a black painted on black, an absolute Nothing defying shape and dimension, the interior of the object as a void that eluded the senses. Why had she gone in there? What had lured her on? Now, behind closed eyes, reliving the experience with frightening clarity, she saw the striations of moonlight pouring down from above and illuminating the white-shrouded, recumbent figure. That singular image: a bearded man in a white shroud, his face ageless and blank, as pure as the face of a newly born child, radiant with innocence. That vision had stunned her, laying waste to her senses, and even now, as she opened her eyes to stare at Moshe, she could hear her own voice, that cry of terror and exultation, and remembered how Moshe held her in his arms as she begged him to help her.

'The more you tell me, the less I understand,' she said.

'We all feel the same way,' Moshe responded.

'But it really happened.'

'Yes.'

'Like a dream…'

'That also.'

‘And that man… the man we found inside… Was he really…?’ The question hung on her lips, uncompleted, frightened of answers, retreating from the incomprehensible and what it might represent.

‘Human? Yes. Alive? More or less. He’s still being examined, so I can’t tell you too much, but I gather he’s flesh and blood, about thirty years of age, yet with a face that’s remarkably unlined. His heartbeat is too slow and sometimes erratic, his pulse is regular if practically undetectable, and his body temperature is quite a bit below normal. His EEG is recording a slight but definite electrical flickering, just above a flat tracing, so his brain is obviously registering *something*, though not very much.’

‘You’re describing a man on the verge of death.’

‘That’s right… except that his temperature, though low, isn’t dropping as it should; and the EEG reading, if almost flat, isn’t diminishing. In short, his condition, which by normal standards should be deteriorating, appears to be steady.’

‘That’s impossible.’

‘It *should* be,’ Moshe said, ‘but that’s what we’ve got here: that man, whoever he is, should be dying right this minute, but instead all his functions remain steady and he just goes on living.’

‘It sounds like a form of suspended animation.’

‘Something like that. We still can’t believe it ourselves, but the facts suggest a bit of a miracle.’

His grey gaze was level, revealing little, yet oddly comforting, as if veiling an emotion, a warmth, that he was wary of offering. Kate stared back, confused, thinking of Moshe and the other, that bearded man lying on a bed of stone, his pale face serene. The confusion was in her mind, in her recollection of what had happened; she possibly felt drawn to Moshe - a public figure, but a stranger to her - because he had shared that extraordinary experience with her and was therefore part of it. But a part of what? she wondered. How do we define the inexplicable? It’s still a dream, the impossible made manifest, defying credulity. This thought made her shudder again, glancing about her, hardly focusing; then she stubbed her cigarette out in the ashtray and folded her hands on her lap.

‘I’m trying to grasp it,’ she said, struggling for words, ‘but it’s just too incredible to comprehend.’

‘You’re not alone,’ Moshe said. ‘We *all* feel that way.’

‘So what do you remember about it?’

‘You mean, when we entered it?’

‘Yes. I can’t remember much about it… just the darkness… that terrifying nothing…’

‘Unfortunately, I didn’t see much more than you did. I kept bumping into the walls, so I assumed there were lots of rooms, but apart from that, I only saw the man in the moonlight. That was the only window - the one letting the moonlight in to fall on that man’s face. The rest was absolutely solid. And it was really very cold - so cold it could have frozen us both - and so, as soon as we found that man lying there, I dragged you back out.’

‘But the burn marks…?’

‘We’re back with the impossible again. We were both covered in red patches and it should have been frostbite, but it wasn’t… Something definitely burned us.’

‘They faded too quickly to be burn marks.’

‘They were burn marks of *some* kind.’

Kate closed her eyes for a moment, opened them and stood up. She went to the window, took hold of the iron bars, started to pull and push herself to and fro, as if exercising. She felt confused and frustrated, nervous, yet strangely exultant, all her preconceptions of life, of reality and logic, swept aside by the knowledge that none of this made sense, that the laws of man and nature were being defied with each fresh revelation.

‘Go on,’ she said quietly, pulling and pushing against the bars, wanting to feel the reality of flesh and bone, the surge of her blood. ‘Keep talking. I’m listening.’

Moshe sighed, sounding weary. ‘The scientists and weapons experts went in after we left, wearing heavy protective clothing and carrying torchlights. This was just before the object started to visibly decompose, so they were able to have a pretty good look at it. It was like a mausoleum, pitch-black and soundproof, with seven square-shaped chambers of various sizes. Six of the chambers were empty and had remarkably smooth stone walls - but no decorations nor markings nor windows; no hint of who had made them, nor when. The seventh chamber - the one in which the bearded man was found - was similar to the others, but had a solid stone base upon which he was lying, and a single, square opening in the ceiling - which was, of course, the top of the object.’

‘An opening or a window?’

‘It appeared to be an opening. It was letting in fresh air. The object disintegrated before they managed to inspect the opening, but they suspected that it was the same as the entrance: a block of stone, fitted with remarkable precision, possibly blown off by the same explosion that blew off the main door when the object was finally exposed to the world.’

‘Which suggests that the object was man-made.’

‘Well, it was certainly made by *someone*.’

Kate stopped pulling and pushing against the iron bars, straightened up, shivered slightly, then ran her fingers through her dishevelled hair and turned back to Moshe.

‘What made that object finally surface?’

‘We think that the unidentified - as represented by that light in the storm - was some form of energy that created the storm, drew the object out of the earth, then somehow or other vaporised. There’s certainly no indication that the object *ascended* again.’

‘Some form of energy?’

‘Yes.’

‘Is that possible?’

‘Theoretically *none* of this is possible… Not even that man lying in the adjoining room.’

Kate sat on the edge of the bed, lit another cigarette, inhaled deeply and blew the smoke out, her face raised to the ceiling. Again, when she closed her eyes, she saw the man in the white shroud, his face pale and serene, unlined, inexpressibly beautiful. It was the beauty of innocence, of a soul untouched by life; the face of a man still a child, before the wounds of experience. A vision of the impossible, of the dream offered and withdrawn at birth, the flesh too pure and smooth to be human, absolutely unblemished. She thought of this with grief and wonder, shuddered visibly and opened her eyes, saw the ceiling, all white, painted by human hands, then lowered her gaze to stare at Moshe, feeling drawn to his silence. He was leaning forward in his chair, the shirt tight on his broad shoulders, his large hands folded together on the desk, his face webbed with the experience so lacking in the man in the white shroud.

‘How do you feel?’ he asked.

‘I’m not sure,’ Kate replied. ‘Frightened, dazed, disbelieving, overawed,

almost childish. I think of him all the time, day and night, in my dreams, as an image that can't be shaken off and is larger than life. Who is he? Where did he come from? How could he survive down there? The questions swim around my head like goldfish in a bowl, going round and round endlessly. I'm not used to this sort of thing. It affronts my sense of rationality. I feel that I'm dreaming, that I can't waken up, that if I don't waken up I'll go mad, trapped inside my own skull. Did it happen? Yes, it did. He's actually lying next door. I keep thinking of him lying next door and I want to go in there. I want to see him and touch him.'

'Your requests have been noted.'

'But consistently ignored. Why won't you let me go in there? Why are you keeping me here?'

'I told you: we want to run more tests.'

'That shouldn't prevent me from seeing him.'

'We are, as you must realise, running tests on him as well, but as soon as we're finished you can see him.'

Kate stretched her spine, exhaled a stream of smoke, and tried to glean some facts from the unrevealing eyes gazing at her. Moshe Eitan, she thought. This is the man who despises Leon. This is the famous major-general who has devoted his life to Israel and is reputed to be a man with few weaknesses. She put her cigarette to her lips and gazed at him through the smoke, both repelled by and drawn to his remoteness and air of quiet strength. He was a strong, physical presence, his face a parchment of harsh experience, but she imagined him changing and becoming the other: the man in the white shroud. The other, she thought. That's all I can think to call him. And why, when I look at Moshe Eitan, do I think of the other?

'You were with me,' she said.

'What does that mean?'

'You were with me when I found him. I keep thinking there was a reason for us being there - and that, also, is irrational.'

'Maybe,' Moshe said. 'Maybe not. Why did you go in there?'

'I can't remember. I just had to. I hardly knew I was doing it. I felt that I was dreaming - or that I was someone hypnotised - and something, some fierce conviction, just pushed me onward. Why do you ask?'

'Because that's what it seemed like at the time - as if you were hypnotised.'

‘It was the star,’ Kate said, staring at Moshe and seeing the other. ‘I saw the star the night before. Then, when the earthquake came, my room was filled with pulsating light and I didn’t know where that light was coming from. I connected the two together and couldn’t shake them from my thoughts. Then, the following evening, when I saw the star again, I was sure it wasn’t really a star and was fascinated by it. More than fascinated… I was almost hypnotised… and it led me to the chapel.’

‘It *led* you?’

‘Yes. That’s what it seemed like. And the light that came down through the storm was pulsating - just like the light that filled my bedroom.’

‘How do you feel about the man in the white shroud?’

‘I feel that he’s mine.’

She felt embarrassed the instant she uttered those words, her blushing cheeks confirming the fact, and she glanced at Moshe and then turned away, shrugging her shoulders forlornly. She inhaled on her cigarette, wondering how she could be so foolish, then exhaled the smoke and sighed at the same time, trying to focus her thoughts. It was no longer easy; her concentration was gone; when she tried to apply logic to what had happened, her thoughts spun and scattered. Why had she said that? What had she meant by it? Looking at Moshe, she thought of the man in the white shroud and felt enmeshed in them both.

‘Don’t ask me to explain that,’ she said, ‘but that’s what I feel.’

Moshe nodded and smiled, the merest hint of amused acceptance, then raised his hands in a rabbinical gesture and pushed his chair back. Standing upright, he was tall and very broad, all muscle and bone, and his face, lined and scarred, yet oddly handsome, was carefully composed.

‘Do you mind staying here?’ he asked.

‘Just a few more days,’ Kate said.

‘We’d like you to stay a bit longer - ’

‘I won’t.’

‘ - because we want you to look after that man next door.’

Kate jerked her head up in surprise, wondering if she had heard correctly; when she saw the serious expression on his face, she knew that she had.

‘You want *me* to look after him?’

‘Yes.’

‘Why?’

‘Various reasons,’ Moshe said. ‘One: you’re a psychiatrist and that could be useful should that man actually return to his senses.’

‘And you think that’s possible?’

‘Yes, Kate, we do. On the one hand, we can’t explain that coma he appears to be in; on the other, we can’t find a thing physically wrong with him. By normal standards we would have to accept that he’s close to death, but remarkably he’s not degenerating: his condition is constant.’

‘That doesn’t mean it will improve.’

‘It has to go one way or the other: either he dies or he revives.’

The thought of either possibility was shocking to Kate, making her tremble and blush, her heart pounding, as she inhaled on her cigarette. Her feelings were mystifying, almost mystical in their intensity, yet she now had to accept that her whole being was inhabited by the presence of that man in the adjoining room. He’s mine, she thought. I know it. It’s ridiculous, but I can’t deny it. She tried to cast the vanity aside, to confess to its transparent duplicity, but the beating of her heart, her charged emotions, defeated her efforts. To never discover who he was or where he had come from would be a loss akin to the loss of an unborn child, the crushing of overwhelming expectation, the foetus torn from a bleeding womb. She knew the feeling well, was still scourged and haunted by it, and now, as she recollected that serene, ageless face, she knew that his loss would make her future a void of despair.

What, then, if he revived, if he opened his eyes and spoke, if he drew the veils away from the unknown and revealed his true nature? Kate shuddered at the very thought - the possibilities were too immense - and she stubbed her cigarette out, lay back on the bed, covered her eyes with the palms of her hands and saw his face in the darkness.

‘Well,’ Moshe said eventually, his voice muted and oddly tense, almost desirous as it floated somewhere above her in a fine web of fear, ‘will you stay a bit longer?’

‘Yes,’ Kate said. ‘He’s mine.’

12

Moshe left the room, trying to keep his face composed; closed the door quietly behind him and then took a deep breath. He stood there for a moment, pressing his back to the door, thinking of Kate lying inside and letting the thought cleanse his secret wounds. Here the light was bright and harsh, the corridor bland in its muted tones. Glancing distractedly about him, Moshe thought of Kate Hirschfield and smiled. The sinner, he thought. The woman I condemned. The American with the morals of a whore has the soul of the lost. He pursed his lips and shook his head, disbelieving his pain and joy, trying to separate what he felt for Kate from the events of the past few days. Unprecedented events, momentous and extraordinary, they should not, by the laws of common sense, have left him room for such sentiments. He shook his head again, his heart beating, his skin tingling, seeing her face in the darkness, illuminated by his torchlight, feeling the warmth of her body against his own, his ears filled with her haunted cry. The past and present merged. (*The dead eyes staring sunward*.) He felt fear, an onrushing love and grief, as he turned to the side.

Two army guards were standing outside the door of the adjoining room, their Uzi sub-machineguns slung across their shoulders, their sunburnt faces turned towards Moshe, at once respectful and casual. Moshe gave them a nod and they nodded in return. He glanced along the corridor, observed the nurses and medics, sighed, feeling almost adolescent, then approached the guards.

‘Anything happening in there?’

‘No, major-general. The doc’s who were examining him have left and they said he was sleeping.’

‘Sleeping?’

‘Unconscious. Out like a light. They told us to report any movement and the room’s wired for sound.’

‘They don’t want anyone to go in.’

‘But they want to hear him if he moves. The mike’s wired to a room in the doctors’ quarters. It’s our men in that room.’

‘Do you know who the patient is?’

‘No, sir. We weren’t told.’

‘But you were told how important this is?’

‘*Ken*. We were told.’

Moshe went to open the door and then stopped, undecided, remembering the black object, the total darkness inside, the image of a gateway that might have led to eternity, the illuminated face of a man who should not have existed. Moshe felt oddly haunted, not frightened but uneasy, cast adrift on the tide of disbelief that now constantly washed over him. So, he just stood there, unable to open the door, wanting to go inside, to avoid what was in there, thinking of the man in the white shroud, and of Kate, who had found him. He tried to reason and failed, not accepting his own deductions, remembering Kate on the dark road, her eyes fixed on the black object, her whole body straining towards it as if it possessed her. Yes, it had possessed her, and now she possessed him; and as he stood there and thought of the man in the white shroud, as his hand turned the door knob and let it go again, he realised that he had pursued Kate as if chasing his very future, and that now, as she lay there, as the man in the white shroud also lay there, his belief in his independence was crumbling and leaving him helpless.

‘You’re going in, major-general?’

‘No. I’ve changed my mind. Maybe later.’

He nodded and walked away, feeling guilty and disorientated, ashamed of what he felt was a weakness that had long been discarded. Turning left where the corridor ended, passing another two armed guards, he entered the hospital lobby, the reception area, and there, to his dismay, was confronted by a smiling Leon Halcomb. The journalist was wearing a grey suit, his shirt and tie immaculate, his black hair neatly combed, his face flushed, his eyes bloodshot but sharp. He grinned mockingly as he stepped in front of Moshe, one hand raised in the air.

‘*Shalom*, major-general!’ he said. ‘A few words for the hard-working press.’

Moshe stopped walking, feeling angry, not bothering to conceal his distaste. ‘How did you get in here?’ he asked.

‘I’m a *journalist*, major-general.’

‘You might describe yourself that way, Mr. Halcomb. I’d have other words for you.’

Leon shrugged and grinned. ‘Freedom of speech is all,’ he said. ‘However, not everyone shares your opinion - and I *do* have some friends left.’

‘One of whom let you in here.’

‘Correct.’

‘If I find out who he is, he’ll be in trouble.’

‘I must protect my sources.’

Moshe had never failed to be repelled by the mixture of extended youthfulness and dissipation in Leon Halcomb’s face; now he felt the urge to erase it with the back of his hand.

‘What do you want this time?’ he said.

‘I want to know what happened to Kate Hirschfield.’

‘You mean you want to see her.’

‘Correct.’

‘You can’t. She’s still in a state of shock. As I told you at the press conference, she was there when the chapel collapsed; she was in shock and now she’s under observation.’

‘You mean she’s unconscious?’

‘I didn’t say that.’

‘Then just let me talk to her for a minute.’

‘No.’

‘Why not?’

‘Because she’s not in a fit condition to talk.’

‘I’m one of her most intimate friends, major-general.’

‘So I’ve heard.’

‘Do I sense disapproval in that remark?’

‘Kate Hirschfield’s private life is not my affair.’

‘Well, I’m glad to hear that. However, knowing Kate well, I can’t imagine her being that shocked by the collapse of an ancient Christian chapel.’

‘She was caught in the eye of the storm and thrown about quite a bit. She was knocked unconscious and is still badly bruised. Believe me, she’s in shock.’

‘No visitors at all?’

‘No visitors.’

‘I just want to look in her room and check that she’s really there.’

‘Are you calling me a liar, Mr. Halcomb?’

‘Alas, I lack such boldness. I merely suggest that you may have good reason for keeping her locked up.’

Leon made the last remark with his bloodshot eyes unblinking, his smile mischievous and mocking, advertising that he wasn’t impressed by rank or authority. Moshe required no such respect and was not perturbed by the lack of it; but Leon, with his neat clothes, arch mannerisms and cynicism, always outraged Moshe’s belief in the importance of moral conviction. Who was Leon to be so superior? He had little to win or lose. Like a parasite, he could live off the problems of Israel and then, if the situation became dangerous, fly back home to safety. Did the man believe in anything? Moshe seriously doubted it. Like too many from the West, Leon had led a cushioned life, had never known the constant threat of extinction, thought of life as a game. But life could never be a mere game to those who lived in Israel; and Moshe, who devoted his life to the preservation of the Jewish homeland, despised Leon for his cheap mockery of Israel’s predicament.

‘Good reasons?’ Moshe said, treading carefully. ‘Just what do you mean by that?’

Leon took a small cigar from his breast pocket and then, glancing around at the nurses and milling patients in the busy lobby, sighed forlornly and put it away again. ‘There’s a rumour circulating to the effect that the chapel and mosque weren’t destroyed by that earthquake, but by something that actually crashed on the Mount of Olives.’

‘Nonsense. The chapel and mosque weren’t the only buildings damaged by the earthquake - as a good look around Jerusalem will tell you. Most of the buildings on the Mount of Olives were severely damaged, and even parts of the Old City, including the Golden Gate.’

‘But the chapel and mosque were *completely* destroyed.’

‘The major turbulence happened to be in that area.’

‘Just the earthquake?’

‘Yes.’

‘Then why is that whole area cordoned off? And why, major-general, before you suggest the hazards of falling rubble, have all the people in that area been evacuated?’

‘The ground was badly cracked and the cracks remain; they’re deep and

dangerous.'

'Like the falling rubble, yes?'

'I'll answer your questions; I won't listen to your sarcasm.'

'Sorry. Where are the evacuees now?'

'I gave that information during the press conference: they have to be rehoused.'

'Admirable, certainly, but where are they at the moment?'

'You probably know that already.'

'Correct. They're being held here in the hospital. Why here, major-general?'

'Some are in shock and have to be treated, and we'd rather not separate the families. Also, we happen to have that new ward still available, so it was convenient to house them here until such times as alternative accommodation becomes available.'

'And where might that be?'

'We don't know yet.'

'A refugee camp?'

'Definitely not.'

Leon grinned. 'You *do* realise, major-general, that certain Arabs are already using this as yet another example of Israeli determination to remove all Arabs from this area? You are, after all, intending to rehouse Arabs whose homes weren't damaged by the earthquake.'

'Those houses are located directly opposite the chapel and were certainly damaged. I understand the Arab suspicions, but in this case they're wrong: those houses and the surrounding area are now dangerous.'

'Certain Arabs would say otherwise.'

'Which Arabs? All the Arabs from that area are in this building and have spoken to no one.'

Moshe realised that he had made a mistake when he saw Leon's tight smile, and he silently cursed himself for his stupidity in falling into the trap. He glanced briefly around the busy lobby, saw the diverse citizens of Israel - the Arabs in their flowing robes, pious Jews in black frockcoats, others, culled from the four corners of the Earth, wearing more casual clothing - and then thought of the man in the white shroud and what he might mean to them. The possibilities were frightening, so he forced the thought aside and concentrated once more on Leon Halcomb.

‘As you say,’ Leon said, ‘those Arabs have spoken to no one… A lot of journalists would like to know why.’

‘I’ve just told you - ’

‘Shock.’

‘Correct.’

Leon grinned at Moshe and shook his head from side to side, his disbelief clear in the gesture. ‘All right, major-general, we are at an *impasse*: I can’t talk to Kate, I can’t talk to the Arabs, and you insist that nothing crashed on the Mount of Olives. Would you therefore be willing to comment on the unidentified light that was observed by many people as it hovered inside the eye of the storm?’

‘We have no record of any unidentified.’

‘Why, then, were there numerous landing-and-take-off delays at Ben Gurion airport at approximately the same time as the storm commenced?’

‘As far as I can ascertain, the radar was temporarily malfunctioning due to electrical interference of the kind that often preludes a heavy storm.’

‘What kind of electrical interference?’

‘Ionisation of the atmosphere.’

‘A normal occurrence.’

‘Correct.’ Moshe had had enough and he glanced openly at his wristwatch, but Leon, who was familiar with such tactics, merely smiled in response. The smile angered Moshe again, but he held himself in check. Instead, he suddenly thought of Leon and Kate in bed together, and this image, which burned itself into his mind, both shamed and revolted him. He felt himself flushing, with embarrassment as much as anger, and he realised, with a shock, that his normal contempt for Leon was now coloured by unfamiliar jealousy. This realisation was humiliating, sweeping through him and rocking him, making him despise not only Leon, but his own lack of sense. He thought of the man in the white shroud, of Kate lost in the object’s darkness, and his world, which before had been orderly, threatened to plunge into chaos. Reeling inwardly, his emotions in collision, he tried to keep his voice steady.

‘Any more questions before you leave?’

‘I’m leaving?’

‘That’s right.’

Leon shrugged and scratched his nose with his index finger, grinning

slightly but more flushed than usual, as if concealing his anger. ‘All right,’ he said, ‘I’ll go. But let me put this on the record. I don’t believe that Kate’s in that ward because she’s still in a state of shock. Even if she *was* in such a state, that would hardly be reason for refusing to let her friends visit her. I have, furthermore, been informed that there are two armed guards on constant attendance at the room adjoining Kate’s, and that they’re there to guard someone else. I also have statements from a couple of witnesses who testify that they saw a light in the eye of the storm and that the light appeared to descend over the summit of the Mount of Olives. Finally, I have unofficial verification that the flight delays at Ben Gurion airport were caused by an unidentified blip on the radar screens just before the storm’s commencement, and that the blip, when it disappeared off the radar screens, was located over the vicinity of Jerusalem. I don’t believe you, major-general. You’re obviously covering up *something*. And believe me, I’m going to find out what it is. Put *that* down in your records!’

He stared directly at Moshe, no longer smiling, his anger apparent, then he turned and walked along the crowded lobby to leave by the front door. Moshe watched him go, expressionless, not moving, but inside he was boiling, his emotions in chaos, thinking of what Leon had said, of the man in the guarded room, of the terrifying possibilities in this unique situation - and then, helplessly, shamefully, his personal interests taking precedence, he thought of Kate and Leon in bed together, their limbs intertwined. This vision burned into his mind and remained there like a scar, making him realise that his logic, which he had always held so dear, was now contaminated with possessiveness and childish jealousy.

No, he thought, this can’t happen.

13

Leon drove down the Judean Hills towards the sun-baked Jordan Valley, his left hand on the steering wheel, a cigar in his right, the wind sweeping around the car and through the windows to whip his dark hair. He passed outcroppings of rock, isolated olive trees, stone villages unchanged since biblical times, children shouting, goats braying. Such scenes hardly touched him, were mere shadows in his mind, his thoughts focused on what had happened on the summit of the Mount of Olives and on why Kate was apparently involved with it.

Moshe Eitan was hiding something and that meant it was serious - more serious than the destruction of an unimportant Arab mosque and one of the sites most sacred to Christians. Also, Moshe was taking unusual chances. The loss of the chapel had appalled and shocked the whole Christian world, and already an international scandal was brewing because the Israeli government, offering vague generalities about danger, were refusing to let representatives of the Christian church inspect the ruins. Indeed, that very morning Msgr. Pio Lazzari, the Papal See's Apostolic Delegate in Jerusalem, had lodged a formal complaint with the acting Ashkenazi Chief Rabbi of all Israel, Istvan Latinavots (Kate's good friend, Leon thought grimly, and disapproving of me) and, since no response had so far been forthcoming, Leon realised that something other than the destruction of the chapel, something truly extraordinary, was behind it.

Coming out of the hills and driving across the Jordan Valley, he surveyed the surrounding wilderness, its bizarre, barren beauty, then glanced up at the sky, his eyes protected by sunglasses, and saw the shimmering anvil of God, that merciless white void. That great emptiness offered nothing, no pity, no mercy, and Leon, in his secret, choked bitterness, thought it mirrored his life. He threw his cigar through the window, wiped the sweat from his brow, tried to work out what was happening to Kate and what Moshe was concealing.

First an unidentified flying object, then rumours of a crash, then someone other than Kate in a guarded room, surrounded by secrecy. An object, a crash, someone brought down from the Mount, someone rescued from the destruction that Kate had been witness to; and Kate, like that someone, also placed under guard because of what she had seen. A crashed aircraft? A satellite? No, the destruction would have been even greater. But only the chapel and the mosque had been destroyed, so the explosion must have been minor. What explosion? Any explosion would have been heard for miles around. So no explosion… Then… W*hat*?

Leon couldn't work it out. It just didn't make sense. What had Kate witnessed and whom were the soldiers guarding in the adjoining room? He glanced through the window, saw the huts of refugee camps, now derelict, the doors swinging in the wind, barren earth on all sides. The good old days, he thought. Rough justice and vengeance. The camps moved behind him and he looked straight ahead and saw the road cutting through the empty plain leading to Jericho. The town soon came into view, a lush oasis in the desert, first the excavated remains, then the small Arab settlement, open-front shops and stalls, fruit piled high in the streets, tourists mingling with the Arabs in flowing robes and *keffiyes*, children playing or begging. He drove past citrus groves, parked the car beneath some palm trees, climbed out and gratefully entered the shaded garden of the restaurant, smelling the orange blossom, seeing gardenias and bougainvillaea, then Lieutenant Paul Frankel sitting at a table, dressed in grey slacks and an open-necked white shirt. The lieutenant looked up when Leon approached the table, his dark eyes not surprised.

'Ah,' he said, 'you've arrived.'

'What does that mean? Am I late?'

'No. I wasn't sure of the time, so I thought to come early. You want something to eat?'

Leon sat down, lit a cigar, inhaled and then leaned back in the chair, glancing casually around him. The garden was cool and colourful, the Arab waiters in white robes, most of the tables crowded with tourists, all eating and drinking.

'I couldn't eat,' Leon said. 'It's too hot for food. I never eat lunch in this damned country. A chilled beer would be fine.'

Lieutenant Frankel raised his right hand and called the waiter over, gave the order in Arabic and watched the waiter departing, then smiled at Leon and

bit into his *felafel*. Some mashed chick peas fell out of the pita bread and littered his plate.

'That snack looks like a challenge.'

'It's very popular, Leon. Alas, as you say, it's a challenge and not good for the dignity.'

'I believe you had some problems with Kate Hirschfield - that she, also, wasn't good for the dignity.'

Paul removed the pita bread from his lips and looked up, his dark face flushed. 'She told you?'

'No. A friend in the hospital told me. This friend told me that you wanted some information and that Kate wasn't helpful.'

Paul put his bread down and sat back, dabbing at his lips with a napkin. His dark face, thin-moustached and too solemn, looked decidedly uncomfortable. 'That woman is more eager to bed anti-Semites than to help defend the country she lives in.'

'I'm not an anti-Semite; I'm anti-Zionist. And Kate, if not sharing your uncommon zeal, does valuable work for this country.'

Paul shrugged and spread his hands in the air. 'Forgive me,' he said with irony. 'I keep forgetting I'm a Jew. We Jews, as is well known, are all fanatical and offer mercy to no one.'

'I'll accept that jibe as straight comment. It describes, if not all Jews, at least your own good self.'

The Arab waiter returned, placed the glass of beer on the table, bowed slightly and returned to the bar. Leon picked the glass up, drank, then set the glass down again.

'So,' Paul said. 'What do you want this time?'

'You don't like dealing with me,' Leon said.

'Naturally, I don't.'

'Why? Because I'm anti-Zionist?'

'Yes, that's part of it. Unfortunately, in politics, we sometimes have to put our scruples aside.'

'And that, of course, is the other side of it.'

'Yes, you might say that.'

Staring down at his plate, Paul had the look of a sulky boy, his feelings hurt, his pride outraged. Studying him, Leon wondered just what it was that made him talk, that made him shift from one side to the other, trading out of

his left hand. Conviction, certainly; lack of faith in the old regime; the genuine belief that his elders had gone soft and would give up part of what they had earned to appease world opinion. Paul was an Orthodox Jew, a hard-line Zionist, a true believer; and his fear, patriotic in the extreme, was that his leaders, older men, men like Ben Eleizer and Moshe Eitan, would, in their acceptance of internationalism, betray the promise of Israel. So, there was that - he wanted to bring down the government - but behind that, in some dark part of his nature, there was something less noble. Now, looking at him, studying his handsome, humourless face, Leon was certain that Paul's weakness was vanity: the need to be recognised. Religious, dedicated, he was nonetheless all too human, and unable to admit that this was so, he had excused it with politics. Leon smiled, having seen it all before, knowing that nothing was sacred.

'Why did you want those tapes off Kate?' he asked.

'*I* didn't want the tapes; Shin Bet did.'

'They wanted to find out who planted the bomb in the Mae Shearim quarter?'

'Naturally.'

'And you already knew.'

'I didn't say that.'

'No, you didn't say that. But since what you say suggests that you weren't interested, why get angry with Kate?'

'Because the woman's contemptible – and please forgive me if she's your mistress. Also, because I was ordered to get the tapes and her refusal made me look like a fool.'

Leon chuckled and shook his head from side to side, not believing his ears. 'You're priceless,' he said. 'You're willing to have fellow Jews murdered for your beliefs, but can't stand the slightest blow to your pride. I should frame you and hang you on the Wailing Wall.'

Paul flushed with anger - or with the hatred of outraged pride - then he spread the fingers of both hands on the table, his thumbs curling under it. 'At least I believe,' he said. 'That makes me a human being. But you… What do you believe in, Leon? I think nothing. You have no reason to live.'

'What is there to believe in? Love, honour, patriotism, eternal life? I've seen all those beliefs on parade and they're no more than crutches.'

'And your nihilism has made you strong? No, Leon, it has not. You've

discarded your wife and children, you can call no place home, and you drink to deaden the pain of your loss, disguising your despair with cynicism. Show me it doesn't matter, Leon. Stop drinking. Face yourself without *that* crutch.'

Leon felt himself recoiling, deep inside, in his depths, and the shock of this retreat was unexpected, springing out of some buried faith. Certainly it was true: he had repudiated all belief; had discarded his wife and children, travelled the world as a voyeur, and gradually picked up a bad drinking habit that kept his tongue oiled. But had he ever believed in anything? Yes, long ago. And if now he truly believed in nothing, why the flurry of guilt? Pondering this, he thought of Kate in the hotel, before the storm; remembered that she had accused him of experiencing life from a distance, safe in his supposed objectivity, shielded by wit. He had wanted her desperately then, and had taken her with blind ferocity, not making love but exacting vengeance, perhaps pleading for clemency. Now, analysing it, recalling the intensity of his passion for her, he was struck by the nakedness of his need to make her accept him… *Accept* him? With what? With love instead of mere lust? If so, then her words, which had suggested a hollow man, had drawn from him some long buried need for simple human respect… Acceptance and love: both were based on belief. Was it possible that the hollow man had cried out for his barren soul to be filled? Leon wondered this and shivered, feeling a ghost pass over his shoulder; then he blinked and stared at Paul, at his handsome, humourless face, and grinned while picking up his glass of beer, avoiding the question.

'*Shalom*,' he said, sipping some of the beer and then setting his glass back on the table. 'By which I mean peace. Now tell me what's happening.'

Paul glanced down at the table and then looked up again, his brown gaze revealing embarrassment, his hands flat on the table. 'I take it you're talking about Kate Hirschfield?'

'Yes.'

'She's being held in the hospital.'

'I know that.'

'Then you also know that she's connected with what happened on the summit of the Mount of Olives.'

'I'd assumed that, naturally. What I can't figure out is why they're holding her in that hospital and why there are guards on the room next door.'

'I'm sorry,' Paul said, 'I can't help you there.'

‘You don’t know?’

‘I’m afraid not.’

Leon leaned forward to examine Paul more closely, noting his embarrassment, his shifting gaze, his fingers rising and falling. The Arab waiter came towards them, seeing Leon’s empty glass, but Leon shook his head, indicating, ‘No,’ and the waiter retreated.

‘They haven’t told you?’ Leon said.

‘No,’ Paul replied.

‘Why?’

‘I’m not sure. I think very few people, *very* few, know just what’s going on.’

‘If they didn’t tell you, it must be something very special, something unusually delicate… Or extremely dangerous.’

Paul shrugged his shoulders, then raised his hands and let them fall in a gesture of defeat. ‘There are rumours - I can’t call them more than that - but they come from strong sources.’

His hurt pride was obvious, brightening his eyes, pulling his lips down, and Leon, observing it, understood him more fully, realising just how dangerous he might be in the weakness of vanity. Resentment was in that face - perhaps the bitterness of rejection - and Leon, who knew ambition when he saw it, knew that it could not be thwarted. Moshe Eitan and Ben Eleizer had left Paul out in the cold, and that slight, combined with Paul’s lack of faith in their sense of purpose, could only intensify his need to bring them down. The irony was superb and filled Leon with grim humour: this dedicated Zionist would destroy his fellow Jews to prevent them from betraying their ideals… What he wanted was Judgement Day.

‘Okay,’ Leon said, ‘I’ll settle for rumours.’

Paul picked up his glass of *Arak*, had a sip and set the glass down, dabbed at his lips with his napkin, then spread his hands on the table. ‘The following facts are known,’ he said quietly, his eyes flitting from left to right. ‘In the early hours of the morning of September 14, just before the commencement of the first mild earth tremor, an unidentified blip was recorded on the radar screens and located high in the atmosphere above Jerusalem. That blip disappeared before our aircraft could get off the ground - and almost immediately after the earth tremor had subsided. The following evening, September 15, the blip reappeared, this time just prior to the commencement

of the major earthquake and the storm that caused havoc on the Mount of Olives. In this instance, the blip was tracked as it descended over Jerusalem, until it disappeared below the radar's ground clutter in the general vicinity of the summit of the Mount. That blip was not recorded again, which means it never ascended.'

Paul finished off his *Arak*, put the glass back on the table, licked his lips and glanced left and right, then looked straight at Leon.

'There the facts end,' he said. 'Here the rumours start… According to certain sources, various inhabitants of Jerusalem phoned in, shortly after the first mild earth tremor had ended, to report that their homes had been bathed in a brief, brilliant light whose source was not known. According to the same informants, various people, including Moshe Eitan and his men, had observed, during the second earthquake, a brilliant light that was located in the eye of the storm, advanced with the storm, then exploded over the summit of the Mount of Olives, before disappearing. Reportedly, that explosion of light - which occurred at the peak of the storm - also occurred just as the Chapel of the Ascension either collapsed or exploded. However, since the resultant devastation apparently stretches no farther than the chapel grounds, it is believed that nothing crashed on the Mount and that the chapel either collapsed or was somehow crushed.'

'Nothing crashed?'

'It doesn't seem possible.'

'So it wasn't any kind of aircraft or weapon?'

'No.'

'The earthquake could explain the collapse of the chapel. Why do they think it might have been crushed? That word suggests that something *crashed down* on it.'

Paul shook his head from side to side, obviously confused. 'The stories get mixed up,' he said. 'They conflict and confuse… No, nothing crashed: there was only an explosion of brilliant light. A crash, *any* crash, would have caused wider devastation, and reportedly that isn't the case. But the conflicting stories at least agree on one point - that brilliant light was the unidentified - and assuming that this was so, and that it was picked up by the radar, we can surmise that it was some kind of unknown force - a force that could have either crushed the chapel or pulled it apart. One suggestion is that the light, by somehow burning up the atmosphere, created a brief but

powerful vacuum which, to put it crudely, *sucked* the chapel out of the earth and then spat it back down again.'

Leon slumped back in his chair, feeling a trickle of fear course through him, his mind swirling with infinite possibilities beyond the believable.

'So,' he said, 'Kate was there when it happened.'

'Correct.'

'And where *was* she when it happened? I mean, precisely.'

'She told Moshe Eitan - this conversation was overheard - that she was standing inside the circular courtyard, close to the door by the tower of the mosque.'

'That's not very far from the chapel.'

'No.'

'Accepting your hypothesis of a brief but powerful vacuum, could Kate have survived such an experience?'

'Yes. It would depend on where the vacuum was localised and how widespread it was. Try to imagine the vacuum as the beam of a torch, emanating from the broader light that covered the whole area and only focusing on the chapel itself. If such were the case - if the vacuum was like a funnel which fitted only over the chapel - then Kate, outside that area, well away from the edge of the vacuum, would have been badly hammered by the air swirling around it, but otherwise, theoretically speaking, could have survived.'

'Which, of course, she did.' Leon looked at his cigar, which had been resting, unsmoked, in the ashtray. He stubbed out the charred butt and then leaned forward, resting his chin in his cupped hands. 'What about the hospital? Why are Kate and the local residents locked up there? And who's in that guarded room?'

Paul shrugged, letting his hands rise and fall, his brown eyes soft and wounded. 'When Moshe Eitan and his men arrived at the Chapel of the Ascension - hoping to locate what they then thought was an object that had crashed - they found Kate lying in the rubble and brought her back down. However, an unusually long period of time elapsed between when Kate was found and when she was actually brought into the hospital. While I don't know exactly what caused the delay, I *do* know that Moshe Eitan was also brought back with Kate and that both of them, for at least the next two days, were placed under intense observation. More interestingly, a source at the

hospital claims that an hour or so after Kate and Moshe arrived at the hospital, *a second* ambulance, surrounded by an unusually heavy guard detail, also came down from the Mount of Olives and went around to the back entrance. Whoever, or whatever, was inside that ambulance was taken to the room beside Kate's room. Now that room is under guard night and day; it's wired for sound and under surveillance, with no less than Moshe Eitan personally responsible for it. As for Kate, I can only assume that she saw something, but what she saw, I don't know.'

'Do you know why they're still guarding that whole area on the summit of the Mount of Olives?'

Paul shrugged again, lowering his gaze, glancing sideways, his hands rising and falling in a gesture that signified his bewilderment. 'All the soldiers on that detail are sworn to secrecy, so we're talking in whispers now. Whispers are confusing, more so when they're passed on, so I'm not sure about this; it could just be some nonsense.'

'Tell me.'

'There's nothing up there now. The bulldozers are shifting the rubble. But when I say they're shifting the rubble, I mean something more than that… Apparently they're filling in a very large hole where the Chapel of the Ascension originally stood. Not a crack in the earth: a very large, square-shaped hole. And according to the whispers, that hole contained something… something that was buried in the earth and finally exposed during the storm.'

'Anything else?'

'No, nothing else. That's all I could get.'

Leon leaned back in his chair, feeling dazed and confused, hardly able to comprehend what he had heard, let alone piece it together. He shook his head from side to side, puffed his cheeks, emptied his lungs, then took a deep breath and leaned forward, preparing to stand up.

'Why are you telling me all this?' he asked.

'Because I want to know what happened. Since I've obviously been excluded, they won't let me learn much; but you, with your contacts of a less restricted kind, might be able to find out more than me. I have to know what they're hiding.'

'Why?'

'You know why, Leon. You know my position. This government is weak and frightened of internal conflict, so sooner or later it will weaken further

and try to surrender the West Bank. We, my own kind, those who cling to the dream of Zion, simply can't sit back and let that happen.'

'And you think that what occurred on the Mount of Olives could help to prevent that?'

'I can't answer that yet. I have to know what happened first. At the moment I only know that what they found on the Mount of Olives was obviously of considerable importance. They're trying to hide it completely - from Jew, Muslim and Christian - and that means it's very big, very sensitive, almost certainly threatening.'

'So if it's threatening, you can use it.'

'Yes, I can use it.'

Leon pushed his chair back and stood up, still feeling dazed and a little fearful, unable to shake off the feeling that this might be a dream. Yet it wasn't a dream: Paul's intense gaze told him that. Remaining in his seat, having to stare up at Leon, Paul looked younger than his age, innocent, incorruptible, not as dangerous as Leon knew him to be.

'Tell me,' Leon said, 'I have to know… How does a pious Jew with such ambitions manage to sleep at nights?'

'By praising our Lord the One,' Paul replied.

Leon nodded and then left the restaurant, breathing gratefully of the orange blossom, brushing the purple bougainvillaea aside and walking under the palm trees. There were children near his car, Arab children, dark and beautiful, and he gave them some coins, watched them rushing away excitedly, then slipped into the car and drove off down the street. It was a long street, busy, filled with restaurants and gardens, and he passed the tourist buses, a profusion of date palms and citrus groves, and then put his foot down and accelerated almost viciously, letting the air whip his face as the town of Jericho disappeared and the Jordan Valley, with its magnificent, desolate grandeur, spread out all around him.

The sky was a white haze, casting down its fierce heat, burnishing the hills and plains in golden light, enclosing the silence. Leon wanted that silence, wanted time to speculate, content to be a prisoner in his car while the earth slid past eerily. To here Moses had led his people; here Joshua had fought his battles; here, also, John and Jesus had wandered, sanctifying the Promised Land. But Leon felt removed from this - like his belief, it was mere history - and as the land moved around him, as the wind whipped his face, he

thought only of what Paul had said, of what Kate might have witnessed, and tried to fit the pieces together in his head and view the parts as a whole. What had happened on the Mount of Olives? Who had been brought down with Kate? Why were Kate and the others in the hospital locked up like prisoners? He tried to work it out, to be objective, mathematical, but suddenly, with the fierceness of the sun's relentless splendour, he was gripped by a passion that overrode mere curiosity and made of the mystery a magnet drawing him closer to Kate.

The recent events were a mystery, unexplained, the lock unbroken, yet to Leon they now seemed like a curtain rising up on his buried past. Kate had spoken that same night - before the storm defied nature - had exposed him as a man in retreat from his own frailty, afraid to reveal his fear of life and its brutal reprisals. Paul had merely echoed her words, perhaps unwittingly, striking back; but now, as he pressed his foot down, as the car raced on, as the parched plains rushed past and the Judean Hills loomed before him, Leon remembered the ghost that had passed over his shoulder when, facing Paul, he had thought of Kate's words and realised that his denial of the need for love was really fear of accepting it.

The ghost had told him that, but what ghost had it been? Not one ghost, but all the ghosts, that parade of the damned, the faces that had floated past him in Londonderry and Con Thien, in other nameless villages lost in flames in forgotten countries, the dark, stricken faces of the women and children, the faces of all the boys who had grown old and died on their feet. He had retreated from that dying, embracing the horror as solace, casting off the pain of emotional commitment and instead taking comfort in nihilism. Yet nihilism is a commitment - a willed belief in the negative - and Kate, understanding this, recognising the duplicity of it, had consciously or subconsciously forced him to accept that his nihilism was a contradiction in terms. Now he saw it and was lost, wanting something new to cling to… Not something: someone… Wanting Kate, who alone had recognised him, to give shape to his life.

14

‘Come in,’ Kate said, and the rabbi opened the room door, breathing heavily, feeling the weight of his abundant flesh, silently suffering his old age. He saw Kate on the bed, lying flat on her back, her hands on her forehead, her long dark hair falling over her brown arms. She opened her eyes when he entered, the closing door drawing her attention, and he noticed that she looked ill and sleepless, smiling wearily, without humour.

‘Jozsef Latinavots,’ she said. ‘My good friend, the acting Chief Rabbi, come to offer me solace.’

‘Do you need it?’

‘Not religion,’ she replied. ‘I could do with a stiff drink.’

Jozsef sighed in despair, long familiar with Kate’s intransigence, but wondering, as usual, why this strong and wilful woman refused to embrace the peace of belief. He glanced at the chair beside her and she nodded and he sat down, automatically touching the skullcap on his head and rubbing his beard with the rough fingers of a former kibbutz labourer. Kate was still lying down, obviously too weary to move, wearing only a white hospital smock, her legs crossed, her feet bare, no longer young but still exceptionally attractive, staring at him with her dark eyes strangely haunted.

‘Who sent you?’ she asked.

‘Major-General Eitan.’

‘Why?’

‘He seemed to know we’re old friends - he’d met your father once or twice - and I assume he thought I might be able to comfort you.’

Kate smiled and closed her eyes, her hands still on her forehead. ‘Major-General Eitan is a considerate man,’ she said. ‘Particularly when he’s keeping me a prisoner.’

‘Hardly that, Kate.’

‘No, perhaps not.’ She opened her eyes and turned her head on the

pillow, no longer smiling. ‘Did he say I was disturbed?’

‘No. He merely said that you were under observation and might like to see someone. He felt that I, being a rabbi and a friend of the family, should be that person.’

‘Obviously he doesn’t know me all that well.’

‘No, obviously not. On the other hand, regardless of our differences of opinion, I still have great regard for you, Kate.’

‘Admit it, you love me.’

‘That, also, I agree. Perhaps I think of you as my daughter. I’ve known you, after all, since you first came to Israel, a young woman, but resentful; and watched you mature and draw away from your father, embittered and mocking his faith, cheapening yourself to outrage him. Yes, I love you, Kate - I loved you then and I love you now - but my love springs from sadness and despair that you should so waste your life.’

‘I don’t cheapen myself, Jozsef.’

‘You are blasphemous and promiscuous. You flaunt your reputation as a woman of easy virtue, advertising your contempt for the Torah and those who obey it.’

‘I didn’t believe, Jozsef, and wasn’t capable of hypocrisy. As for my virtue, each culture has its own, and I come from America. I’m a mature woman with physical needs - and I won’t repress them.’

Jozsef felt himself blushing, embarrassed by her bluntness, and he turned his head aside to fix his gaze on the white-painted wall. ‘Your lack of faith has always disturbed me, Kate, particularly in view of your parents. When I think of them - their belief, their contributions - I must confess, it bewilders me… I blame it on your profession. You treat psychiatry too literally. You’ve made a deity out of your logic and denied your true nature, burying yourself in your work, not out of devotion but desperation, and behaving promiscuously as if to prove that your mortal body has no spiritual centre. You are lost, Kate - and suffering.’

Now Kate turned away, rolling herself towards the wall, her hands spreading out to cover her whole face, like a child with a bad dream. Jozsef watched her, disturbed, sensing some change in her, and reminding himself of the recent, extraordinary event and how it might have affected her.

‘Yes,’ she said, ‘it’s my profession. My life was shaped by definitions. If emotions surfaced, I felt compelled to analyse them, and in doing that I

stripped them of their mystery and reduced them to the commonplace. The spirit *couldn't* move me, Jozsef: I refused to recognise it. Spiritual emotions, logically speaking, were reactions to various stimuli, explainable in physiological or psychological terms. These were concretes, Jozsef. I could not deal with abstractions. Thus, by my logic, I was mortal - and the soul had no credence.'

She was still turned to the wall, her face covered with her hands, but her voice, though muffled and difficult to hear, sounded unusually tense. Jozsef felt inexplicably moved, waiting for something, not knowing what it was, but sensing that Kate was in turmoil, thrashing about in the dark.

'Is that why you deny your faith?'

'No, Jozsef, it's not. I didn't just deny my faith - I despised it - and all other faiths with it.' Her voice was now shakier, filled with bitterness and resentment, and Jozsef leaned forward in his chair, wanting to reach down and touch her. 'Religion!' she continued. 'The great opium for the masses! With religious faith men can be united against the free choice of others. I saw religious faith as selfishness, as a separating wall, as something dividing men against men and closing their minds to the faithless. My father was such a man - the worst kind: a convert. He spent his life amassing wealth, legally taking from the poor, making very mortal deals and breaking very mortal people, and living, as those in banking do, for material success. And yet, he was still a Jew - a closet Jew, growing older - and so, when he was wealthy, when the boredom set in, he looked for something to revive him, didn't find it in his family, and then turned to the religion he'd ignored, drowning his conscience in piety.'

She stopped talking and shivered, shaking her head from side to side, still covering her face with her hands as if to blot out the past. Jozsef watched her, feeling stricken, definitely shocked and a little wounded, remembering that her father was the friend he had greatly respected.

'You poor child,' he said. 'I never realised you felt so strongly… But surely you can see that your father's past way of life had no bearing on what he later contributed to Israel… All the charities… all that work… that selfless devotion to Zionism… Surely, Kate, he was a better man for it, giving all he had earned.'

'His gave *part* of what he earned. He used the rest for further investments. Money makes money - and what his money made in interest was

considerably more than he so ostentatiously donated to Israel. He *bought* respectability, Jozsef. He salved his conscience without sacrifice. Oh, yes, he had his virtue - he religion absolved him from all sin - but his contribution to Israel, that great abstraction you all worship, was paid for by his indifference to his wife and daughter, those less worthy beings.'

Jozsef sat up straight again, instinctively drawing away from her, startled by her venom, deeply wounded by her words, ashamed because he wanted to close his ears and retain his former respect for his old friend. 'I do realise,' he said, 'that you didn't want to come to Israel, but surely…'

Kate rolled onto her back, pulling her hands from her face, and lay there, breathing harshly, staring up at the ceiling.

'No, I didn't want to come. Nor did my mother. We may have been Jews, but we weren't Israelis. We were *American* Jews, Jozsef, and typical of that breed: hardly aware of what we were, rarely thinking about it, only reminded of it at weddings or the Bar Mitzvahs of friends' children, perfectly happy with our simple *goyish* pleasures and American freedoms. No, my mother didn't want it, Jozsef - and, God knows, neither did I - but my father, in the selfishness of his new religion, never asked our opinions. What age was I then? Twenty-two or twenty-three? Certainly too old to turn my back on my previous upbringing and change myself, virtually overnight, into a Marjorie Morningstar.'

She stared angrily at him, then looked away, raising her eyes once more to the ceiling, the dark depths out of focus. Jozsef, feeling the need to defend his old friend, leaned forward again.

'I understand your resentment, Kate, but let me just say this: your father, if not a perfect man, since few of us are, was always very concerned for your welfare.'

'You really think he cared, Jozsef?'

'Yes, Kate, I do.'

'He didn't give a damn, Jozsef. He hacked our roots out with an axe, determined to cut us off from our past and make us walk in his shadow. First the holidays in the Catskill Mountains, that revered centre of Jewish resorts; then active involvement with the United Israel Appeal; then our *goyish* pleasures were curtailed, our gentile friends were pushed out, and then my mother and I had to keep our mouths shut and listen as he unveiled his plans for our future. You understand, Jozsef? His religion had made him whole.

And so no longer happy to give mere financial support, he suddenly wanted to become the real thing: an important Zionist in Israel. Well, he got what he wanted - with no arguments accepted: he ended up in King George Boulevard, raising funds for the WZO, right here in the heart of *Yerushalayim*, next door to your Rabbinate. As for myself and my mother, we came with him - but he gave us no choice. Then my mother died - and believe me, she died of loneliness - and after that, I despised my father, and despised his damned religion, and finally despised *all* religions and their insular ethics.'

'Enough, Kate!' Jozsef snapped. 'That's blasphemy! You will not use such words in my presence!'

'Blasphemy?' Kate replied, finally turning towards him, propping herself up on one elbow and looking straight at him. 'Blasphemy against God or my father? And which is worse, Jozsef?'

'Stop it, Kate! I understand your rage, but I won't take much more of this!' He own rage pulled him upright, pushing his chair back, turning away from her, then he walked to the door and just stood there, his whole body trembling. 'I can't stay if you talk like that. You *know* I can't listen. I came here to help you, to listen, but I won't take your blasphemy. I fear for your health. This strange event has sickened your mind. Moshe Eitan asked me to come because he thought I might comfort you; he explained that you were obsessed with that man in the next room - just lying here, restless, wanting to see him - and he thought I could help you. That's what I'm here for. I would ask you to be calm. I would like to know why you're waiting for that man to miraculously open his eyes.'

There was no immediate reply, so he turned back to face her and saw her sitting upright on the bed, eyes wide, lips parted.

'So,' she said, 'you know.'

'Of course,' he replied. 'I was informed. I am still the Chief Rabbi. When a sacred site - any site of such importance - is destroyed, I am personally responsible for communicating the proper facts to the relevant authorities.'

'And you were told how we found that man next door?'

'Yes, Kate, I was told.'

'And?'

'And *what*?' Jozsef looked at her dark eyes, very large, now too intense, then turned his gaze away, feeling oddly confused, his soul filled with

intimations of chaos and inchoate, nameless fears. ‘If you mean, what do I think about that man, I can’t answer that yet. A mystery, certainly. Perhaps even miraculous. I prefer to think of rational explanations, but the mystery remains.’

‘Who *is* he, Jozsef?’

‘You know I can’t answer that.’

‘What about the building, the *object*, that came out of the ground?’

‘I don’t know. Perhaps a tomb. Who knows what it might have been? It disintegrated too quickly to be properly examined; there’s nothing left to be scientifically analysed.’

‘A tomb? Is that your answer? But what kind of a tomb? What kind of tomb disintegrates so quickly? And how long was it buried there?’

‘These questions are ridiculous. I can’t possibly give you the answers. Only science can do that.’

‘Science has failed in this instance - and that man is beyond it.’

Jozsef turned away again, seeing the door, his only hope, wanting to make his escape, both from Kate and from his own troubled conjectures, ashamed even as he thought this, understanding his mortal weakness, clenching his fists to feel the comfort of flesh, mutely begging for clemency.

‘He’s a human being, Kate. A mortal man, flesh and blood. The examinations, every analysis, confirm this: he is perfectly normal.’

‘Then how did he get there? What made that tomb materialise? Did something come out of the storm and deposit it there? And if so, what was it?’

‘I don’t know, Kate. *They* don’t know.’

‘No, damn it, they don’t know. They only know that something descended from the heavens - a light, an unknown force - and that whatever it was, it destroyed the Chapel of the Ascension and either deposited that object or pulled it right out of the ground.’

‘It was nothing physical, Kate. That light was obviously some form of energy. It might have destroyed the chapel, but it couldn’t have left anything behind it. The earth showed all the signs of an upheaval. It’s been examined. We *know* that.’

‘An upheaval,’ Kate replied, her eyes unnaturally bright. ‘Then the ground was either forced up or sucked up - and either way that means the object was buried there.’

‘Yes, Kate, I agree: it was buried there. But what does that mean? We don’t know. We can only conjecture.’

‘How *long* was it buried there?’

Jozsef turned back to face her, suddenly feeling his age, some part of him dissolving and pouring back down through his past: his childhood in Poland, the years of study in various *Yeshivot*, then arrival in *Eretz Ysroel*, burying the dead of the IDF, then the National Religious Party, studying the Talmud, learning diplomacy, pushed forward as Ashkenazi Chief Rabbi of Tel Aviv, righting wrongs, making mistakes, learning humility with the Batei Din; until now, an old man, shaped by sixty years of theology, he stood, the Ashkenazi Chief Rabbi of all Israel, like a child in an orphanage. His past flew by in a second, without warning, almost mocking, vaporising as if to confirm that all his learning was useless. He was naked, defenceless, unprepared for Kate’s questions, finding nothing in the well of his experience with which to answer them properly.

‘I don’t know,’ he said.

‘No,’ Kate said, ‘you don’t know. He came out of that ground and he’s alive. And your religion, Jozsef, can’t explain that.’

‘Nor can science,’ Jozsef said.

‘I agree,’ Kate replied. ‘Neither science nor religion can explain how that man can exist.’

Jozsef truly felt his age, more than ever at that moment, thinking of Israel, of his years spent in studying it, of how it was divided now as it had been at its beginning, as divided as it was when Joshua brought down the walls of Jericho, when the Philistines slew King Saul, when King David conquered Jerusalem, when Jeroboam and Rehoboam split the kingdom in two and the ten lost tribes of Israel were scattered to the four corners of the Earth. The land’s history was its curse - it was the focus of disparate yearnings - and now Jozsef, in his age and sorry wisdom, saw it threatened once more.

He looked at Kate and felt the pain, the gentle torment of irony, realising that she believed in logic and was seeing that logic shattered while he, accepting the Torah and thus believing in miracles, was now faced with the possibility of a miracle that could well destroy Israel. This thought also came and departed, vaporising like his past; or, perhaps, rather than vaporising, being crushed by his fear of accepting it. So, feeling weak, deeply sickened by his mortal doubts, he stumbled to find a very mortal path upon which he

might tread with care and safety.

'We know nothing about him,' he said. 'There have to be rational explanations. It's pointless to speculate at this moment; much worse to imagine things.'

'Not imagine… *believe*!'

Jozsef glanced up, startled, wondering if he had heard correctly, his heart beating to the rhythm of inchoate panic, making his skin burn. Then he saw her big brown eyes, somehow changed, illuminated from within, her lips trembling like those of a mute attempting to talk, vainly fighting to express all the words that had never been uttered. His burning skin turned to ice, numbed by waves of chilling shock, as he recalled what Kate had said about her lack of religious faith and realised that she had used the past tense… *I didn't believe… The spirit couldn't move me*… She had spoken as if it was behind her and no longer of consequence. Jozsef suddenly understood, the truth hammering home brutally, and he felt his senses sliding away as he walked to the bed. He grabbed Kate by the shoulders, felt the bone beneath her skin, started shaking her violently from side to side as if exorcising her.

'Is *that* what you think?' he said, his voice harsh and filled with rage. 'Is *that* your form of conversion? Do you think to find atonement in this madness conceived by the devil? No, child, I won't let you! I won't turn my back on this! This blasphemy will die on your lips and be purged from your mind. Is it wings you're after? Is your vanity so outrageous? How dare you even let the thought live while your body still breathes! Do you hear me, my child? I will break your very bones! You are sick and the sickness is your guilt, but this isn't the answer. Do you hear me, my child? Are you listening? *Don't blaspheme in this manner*!'

He threw her against the wall and she tumbled to the bed, rolling over until she lay on her back, breathing harshly, dishevelled. She lay thus for a long time, staring up at the ceiling, then eventually turned her head to look straight at him, her eyes cold and defiant.

'He's mine,' she said. 'I don't know what that means… But I know that he's mine.'

Jozsef shuddered and turned away, drained by fear and despair, all his learning dissolving to dust and leaving him helpless. He reached out for the door handle, then stopped, flushed with shame, remembering who he was, what he was, and taking faith from this knowledge. He glanced back at Kate,

saw the drawn face, the white smock, then bowed his head and moved his parched lips, murmuring words that were part of him. He prayed for understanding, for the revelation of truth, for the forgiveness of his own mortal weakness and doubt; and, most of all, in the sorrow of his love, he prayed for the salvation of Kate's lost soul.

15

Kate lay on the bed, hardly aware of Jozsef's departure, studying the white sheen of the ceiling, drawn into it, drifting through to the white sky. She closed her eyes and searched for peace, swam in darkness and streaming light, her heart beating in rapture and fear, one reflecting the other. Her exhaustion was absolute, a draining of mind and spirit, yet sleep, in which peace might be found, ever more frequently eluded her. She was losing herself, slowly, the life dripping from her body, and yet, beyond reason or logic, she felt the beating of fresh life.

She opened her eyes again, looked around her, saw the window, the golden light of late afternoon, a streak of blue sky. Not white: blue; a few thin, drifting clouds; the beating black wings of a lone bird, drifting on high. It disappeared almost instantly, knowing the freedom denied to her, and she smiled, feeling the dryness of her lips, before closing her eyes again.

Her body was hollow, drained of life yet strangely radiant, charged with something other than her blood, the radiance spreading out languidly. She tried to think of what she had been, to apply logic to the past few days, but her thoughts, slipping in and out of shadows, merely teased and confused her… Leon, so intense, his pale body above her, making love with a violent desperation that mere words could not ease… Then the eye of the storm, a large star, a brilliant light, something drawing her forward against her will, filling her up with its presence… No rational explanations; just the urge for revelation… In Leon's confession, unspoken yet displayed, was the love she could not feel for him in return, the reflection of her fear of commitment because of what she had lost… The dream, that first evening, the bloody foetus in the Pool of Siloam: someone's child - her child - the life that was aborted so brutally before it saw light… And then that alien star, that great eye shining down upon her; her conviction that her past was being measured and held to account.

She kept her eyes closed, searching for logic, failing to find it, having to accept that what had happened on the Mount of Olives had changed her completely. She bled for the rabbi, that loving man, her caring friend; but his words, now that faith had enslaved her, could have no effect upon her. No logic could restrain it, no stern advice deflect it; her faith was in the awakening of her flesh and its response to the other. He lay parallel to her, the wall between them soon to fall, and as she weakened, so she felt Him stirring and returning to life…

It was darkness beyond measure, black painted on black, above and below and all around, without end, filled with silence. It was nothing, a void, but He was it, and it was Him: an impulse, a pulsation that existed where nothing could be. He was forming out of time, out of the infinite frozen moment, a consciousness flickering on and off and then dividing the darkness. He saw light and *was* the light, illuminating His own birth, Himself originating existence and then, being it, swelling out to give form to His own coming.

Existing, He was the light, illuminating Himself, expanding and pushing back the darkness and arousing its forces. He reached out and touched, and withdrew and considered; then sensed the manifestation of thought, which evolved from His being. In thought was dimension: time and space: the conceivable. He conceived and saw the web of time and space around which was the darkness. Beyond the darkness could be nothing: all that would be, must be within it. He therefore stretched Himself forth, expanding time and space, pushing the darkness back and thus creating from Himself all that had been or ever would be.

He existed and was All, blossoming out of the Nothing; and the darkness, now aroused from eternal slumber, saw the light which divided it. Divided, it was wounded, incomplete, without Oneness, and it closed in to make itself whole and heal the scar on the Nothing - that, which being nothing, had been perfection.

Blessed with thought, He was being - time and space; that which *is* - and in consciousness, which ordained time and space, He was bound to exist. Having originated that which is, being Himself the light of being, He accepted the imperfection of His creation and resisted extinction. The forces of darkness were His womb, offering existence or denying it, and thus conflict, the war between light and darkness, was the pulse that sustained Him.

The Whole was a white hole, a burning light expanding, the light spreading out all around Him and dissolving the darkness. The be whole, He became, stretching defiantly through the Nothing, creating positive and negative, past and future, eternal present; reaching out from the womb of darkness to touch the flesh of the Beyond, giving impulse to the impulse of life and ordaining her future.

'He's awakening,' Kate said.

She opened her eyes and jerked upright, her heart pounding, her body wracked, shook her head and saw Moshe by the door, his hand still on the handle. He stared at her, obviously startled, possibly hiding his embarrassment, then he walked in and closed the door behind him, and then stood there, his eyes veiled. She looked at him, feeling frightened, wondering what was happening to her, then tilted sideways and pressed her shoulder against the wall, trying to calm her conflicting emotions.

'A nightmare?' Moshe asked.

'Yes,' she said. 'Something like that. I've been having an awful lot of them lately. You should know: you've been watching me.'

He nodded, not offended, his gelid gaze revealing nothing, and she felt like getting up and slapping his face, just to see his reaction. This urge faintly amused her, almost bringing back her old self, but looking up at his face, at that strong, granite mask, she understood that it might be a mistake, inviting nothing but scorn.

'He's awakening, did you say?'

'No,' she lied. 'I didn't say that. I don't know. What difference does it make? I was having a bad dream.'

His lips curved, without humour, the smile not reaching his eyes, and she noticed that his body barely moved, his hands steady on broad hips. He was obviously suppressing something, keeping himself in firm control, and she studied him, wondering what he thought of her, finding nothing to help her.

'I thought you said that.'

'Think what you like,' she said. 'If what you think is as inaccurate as what you say, there won't be a problem.'

'I don't think I understand.'

'Neither do I, major-general. You informed the rabbi that that man next door obsessed me - which is true - but you forgot to tell him who asked me to

stay here.'

'You admit that you're obsessed?'

'I don't think that's the point. The point, Moshe Eitan, is that you *asked* me to stay, whereas the rabbi thinks you're keeping me locked up because I'm out of my mind.'

'I simply thought you might like a visitor.'

'And simply suggested that I needed help.'

'There was a reason,' Moshe said. 'I had a reason that I can't quite explain.' She noticed his drooping eyes, the slight pursing of his lips, the way his hands moved, fingers parting, spreading out on his hips. 'Let me try to explain,' he said. 'It's something to do with you and that man in the next room; with how you seemed to have an instinct about that object and what was inside it. You were drawn to that object; your body kept straining towards it. You actually said it was a tomb - an accurate description - before you went anywhere near it. That, plus the star. The star was obviously the light we saw. But what made you follow the star and end up at the chapel? So, I was intrigued. Your behaviour here has intrigued me more. Superficially you were logical – remarkably so, considering your experience – but beneath it, in some way I can't explain, you seemed to be drifting away from us, becoming more agitated, more restless and sleepless, your conversation, whether awake or asleep, dominated by one subject: that man from the Mount.'

'I found him. I almost sensed that he was there. I want to know who he is.'

'No, it's more than that. His presence seems to have taken you over. I'm not sure just what I mean by that; only you can explain it. I wanted to ask you, but it didn't seem appropriate - your behaviour was too oblique; you seemed frightened and secretive - and so I tried the rabbi, who'd been wanting to see you anyway. I said you were obsessed because I thought that might encourage him to ask the sort of questions I couldn't ask - and because I thought that he, being a rabbi, might draw the truth out of you.'

'I'm not the kind to be intimidated by a rabbi.'

'I never thought that for a second.'

'So what *did* you think?'

'I thought that him being an old friend, as well as a rabbi, you might give him your trust and confide in him.'

‘You should have just asked.’

‘Yes, maybe. So what can you tell me?’

‘There’s nothing I can tell you. I just feel things. I feel that I’m tied to that man. He’s already a part of me.’

Her words pushed the door back, revealing His graven image, the face that had materialised from the darkness in a pillar of light. The light, which had divided the darkness, had given life to her emptiness. Still leaning against the wall, her ear close to that white sheen, she tried to hear the sound of his stirring, but heard only silence. Perhaps she was mad; she could not ignore the possibility; more than once she had thought that this was so and longed to be cured. Yet now, even as she thought this, she rejected it with fervour, some part of her, once hidden but gradually taking her over, insisting that what she was feeling was a reality that could not be ignored: that in some way beyond her comprehension she was tied to the other.

‘His shroud,’ she said, the thought spring from nowhere. ‘Did you touch it?’

‘It was more like a robe – and we removed it.’

‘Why?’

‘We had to remove the robe in order to examine him. Also, we wanted to analyse the robe itself.’

‘What sort of analysis?’

‘Ultramicroscopic and radiological testing. They might tell us what the robe is made of, where it was made, and how old it is.’

‘You shouldn’t have touched it,’ Kate said.

She regretted the words immediately, not really knowing what she had meant, wondering if His voice had reached out through the silence of sleep. He lay there, awakening, a light growing in the darkness, drawing from her body and mind the strength He required. This concept was extraordinary, defying logic and common sense, yet it gripped her and refused to let her go, both exalting and frightening her. His presence was within her, taking from her and giving to her, and she wondered, with increasing joy and dread, what His nature might be.

‘*Why* should we not have touched it?’ Moshe was staring straight at her, his face thoughtful, almost gentle, his grey gaze concealing an emotion that she could not define. A solid man, she thought. Withdrawn but strong-willed. She took comfort from this knowledge, but was still uneasy with him, sensing

something other than mere curiosity in the way he talked to her.

'I just said it,' she replied. 'I don't know why. It just doesn't seem right.'

'It's only a robe, Kate.'

'I know that.'

'You're not religious.'

'No, I'm not religious; not that way… I don't know why I said that.'

She curled her legs beneath her, feeling weak and a little dizzy, as she usually felt when her menstrual blood was flowing and her body disgusted her. A woman's body could be her prison, administering punishment at regular intervals, inflicting pain and secret humiliation, turning flesh into stone. Sexual desire was not much better: a grossly physical appetite; a hunger that obliterated consideration and destroyed common sense. She had always mistrusted her body, quietly abhorring the demands that it made upon her; yet now, as she weakened, so it conversely seemed to be filling up with a warmth that both moved and bewildered her. Thinking this, she looked at Moshe and remembered how they had both found Him; she wanted Moshe to reach out and embrace her as he had done that first day. But he made no such move, merely stood there, staring at her, his eyes strangely tentative and veiled, as if sheltering a private dream.

'You think there's a bond between you?'

'Yes,' Kate said, 'I do. I can't help it; that's what I feel… and the feeling grows stronger.'

'And the dreams…?'

'About him.'

'What sort of dreams?'

'It was always the same dream.' The words now came easier. 'I was dreaming about what had actually happened: the total darkness inside that object, the awful blackness of it, my feeling that the emptiness was boundless, beyond space and time… Then that pillar of light, his face radiant in the light, that bearded and remarkably composed face with its terrible beauty… Why do I use those words? Because he's not like you or me; because apart from how we found him, apart from the knowledge that he was buried there, apart from the fact that he's still alive, he's someone quite different… I *know* he's normal flesh and blood - the examinations proved that – but his face, though superficially like that of a normal human being, is also somehow inhuman in its purity: its lack of human contrasts. Beautiful,

yes: a terrible beauty… its perfection is frightening.'

'I'm not sure what you mean.'

'It's a void… a void waiting to be filled.'

She glanced nervously at him, wondering what she was suggesting, then dropped her eyes and studied her hands, the fingers tugging the white smock.

'You said it *was* always the same dream. Why use the past tense?'

'Because the dream changed last night, and I re-live it when I close my eyes; wide awake, but experiencing the dream as if I was sleeping. I think it's about him, about what's inside his mind: I dream about a light growing out of a perfect darkness, and the light seems to represent him and the birth of his consciousness. That light, which I see in the dream, I also feel in my body… There's something tying us together, a sort of umbilical cord… He's reviving, awakening, and I know that as sure as I'm sitting here. That man, that being next door, will soon be awake.'

Moshe went down on one knee and took hold of Kate's wrists, gently tugging her clasped hands apart and then drawing her towards him. His grey eyes, close to her face, were protective and calming; and he stared thoughtfully at her, as if coming to a decision, and then, for the very first time, he offered a tentative smile.

'Yes,' he said, 'you're right. We think he's reviving. His temperature is rising, his slow heartbeat is quickening, and the EEG is starting to flicker. Not much in either case, but enough… he's returning to normal.'

The dream folded in upon her, enclosing her in silence, filling her with fear and exaltation and stripping her senses. She closed her eyes and saw the darkness, the void of the unknown, then a light, blossoming up from her depths, illuminated her being. She started to tremble, felt Moshe holding her wrists, and then, licking her lips and opening her eyes, was reassured by his presence.

'I have to see him,' she said.

He lay naked on the bed, sensors attached to his chest and wrists, his head wired to the EEG machine, which was flickering feebly. Sunlight poured through the window, a rich gold turning grey, illuminating the marble of pure white skin and his startling face. His body was long and lean, the stomach flat, the muscles hard, skin smooth and absolutely unblemished, almost translucent. His hands were by his sides, palms turned up, webbed with fine

lines, the fingers hairless and thin, not scarred, the delicate hands of the unborn.

Kate looked and was captured, her eyes drawn to his face, that mask of inhuman composure and impossible serenity. That face was the light, drawing it in and then reflecting it, turning it back upon Kate and making her burn. The face was a cipher, offering nothing, revealing all, at once innocent and wise, extremely young and very old, too blank to be real, too vivid to be forgotten, defying, in its terrible beauty and repose, definition and logic.

Kate was captured and held, her heart breaking with grief and love, seeing the child in the man, the man in the child, ascetic lips, sunken cheeks, the dark beard flecked with grey, the nose aquiline, the closed eyes with long lashes, forehead smooth, dark hair matted. A mature man. A child. One dissolved into the other. The face was a contradiction: a blank page, the map of history, a void waiting to receive and be received and thus fill itself up.

Kate sobbed and stepped forward, spread her fingers and reached down, touched his forehead, his eyes, his nose and lips, felt the shock of his living skin. Then she frozen and remained there, her fingers at his lips, the unknown opening out and drawing her in past that point where she could ever hope to return as what she had been.

She removed her hand and stepped back, shaking her head from side to side, and then, in her expectation and exaltation and dread, turned around and saw Moshe in the doorway, his eyes fixed upon her.

‘Oh, please God,’ she said, ‘hold me!’

16

‘So, gentlemen,’ Ben Eleizer said, spreading his hands in an oratorical gesture, ‘the man from the Mount is awakening and decisions are called for.’

‘Not *quite* awakening,’ Leonard Rosenberg said, scratching his chin with a pencil, his head down and his gaze focused upward, looking over his spectacles. ‘Physiologically speaking, he’s almost certainly returning to normal, but that process could reverse or possibly cease at any point – and either way there’s no guarantee that the patient will actually regain full consciousness.’

‘My point, dear doctor, is that either way we look at it, we still have a living creature on our hands.’

‘Quite so; I’ll support that.’

Ben Eleizer sighed and smiled slightly, sardonically, then glanced across the table, first at Moshe and then at Rabbi Latinavots, before returning his gaze to the table, as if examining his knuckles. ‘And the man is perfectly normal,’ he said. ‘Can we take that as read?’

‘Yes, Shlomo,’ the doctor said. ‘Perfectly normal. Very much a flesh and blood human being – and in excellent shape.’

‘So,’ Ben Eleizer said, still studying his knuckles, ‘where did he come from?’

They all glanced at one another, each foiled by the incomprehensible, each wrestling with his private, conflicting views of what the answer might be. Moshe lowered his gaze, feeling oddly embarrassed, aware that the unprecedented nature of this event had forced him to admit to the irrational and the possibility of miracles. Thus, his embarrassment, the reawakening of self-consciousness, a feeling of foolishness at what he was contemplating even as his every instinct, religious and secular, rejected it.

‘We’ve discussed this before,’ he said. ‘We still can’t answer the question. We might learn something if that man regains his senses or if

analysis of his robe reveals something. Meanwhile there's no rational explanation.'

The rabbi gave a sigh, obviously relieved at Moshe's response, well aware of what all of them were thinking and not wanting to face it.

'Fine,' Ben Eleizer persisted. 'We don't know anything about him. We only know there was an object, that the object defied known science, that it had to have been buried there for centuries, and that that man was inside it… Now what does that *mean*?'

'I pass,' said Rosenberg. 'I can only repeat that he's a human being. How he managed to stay alive, I don't know – it just doesn't make sense.'

'Some cryogenic process?'

'No,' Rosenberg replied. 'His blood is absolutely pure. He hadn't been tampered with, he was wearing a simple robe, and there wasn't another thing in that room except for the stone bed.'

'So he's been sleeping there for years.'

'That's impossible,' the doctor said. 'I simply cannot accept that. He could not have survived very long in his condition, so the object must have been planted in the ground just before it was found.'

'Fine,' Ben Eleizer said, 'that makes sense… But what planted the object?'

'It *had* to be the unidentified.'

'That's equally impossible,' Moshe intervened. 'That unidentified reached ground level and then simply disappeared; it was therefore some form of energy; nothing mechanical or physical… and believe me, nothing *crashed* on the Mount of Olives.'

'Thus,' Ben Eleizer said, 'it must have been buried there *before* the Chapel of the Ascensions was constructed… a small matter of centuries.'

Moshe looked at each man in turn, first Ben Eleizer, then the rabbi, then the doctor, Leonard Rosenberg, and, finally, General Yaankov Meshel, the present head of the Intelligence Committee, which co-ordinated the activities of the three Israeli Intelligence services. The general was leaning forward, his elbows resting on the table, a cigar between the fingers of his right hand, his face hard and aggressive.

'Moshe is right,' he said. 'We've discussed all this before. It's pointless to continue the conversation without adequate knowledge. At this moment we have to discuss that unidentified and how to explain it.'

‘We *don’t* explain it,’ Ben Eleizer replied. ‘We simply continue our denials, sticking to our story of unidentified atmospheric phenomena.’

‘A temporary measure,’ the general said. ‘It won’t hold water for long. That unidentified was also picked up by reconnaissance satellites and foreign radar as it flew from east to west and blinked out here. We could use atmospheric phenomena if it wasn’t for the storm; but the destruction of the chapel and mosque - and the widespread devastation around Jerusalem - has encouraged speculation about a crash. We can’t dampen that speculation and it makes for embarrassment. Both the Russians and the Americans are convinced that we’re hiding some hardware.’

‘Naturally,’ Ben Eleizer said. ‘They both think something crashed here - and each side thinks it belongs to the other and wants to know what it is.’

‘Right,’ the general said. ‘They’re worried about what we might have here. They’re asking a lot of questions and applying considerable pressure; and now the journalists, including Leon Halcomb, are starting to bang on some doors.’

‘What’s so special about Leon Halcomb?’

‘He seems to know more than the others do. He knows it wasn’t a normal accident, he suspects that something was found up there, and, worst of all, he seems aware that we brought someone down from there and are keeping him under guard in the hospital.’

Ben Eleizer glanced at Moshe, his gaze oblique, his eyebrows raised, and Moshe, understanding the unspoken question, shook his head from side to side.

‘No,’ he said, ‘not Kate Hirschfield. She hasn’t spoken to anyone. She didn’t leave that room until today - and she was watched all the time.’

‘Today?’ the general asked. ‘Why today?’

‘Because I took her next door to let her see that man from the Mount.’

The general stared at Moshe, at Ben Eleizer, then back at Moshe, not trying to conceal his amazement at what he had heard.

‘She found him,’ Moshe explained, ‘and the circumstances were very strange. Now she seems to be affected by his presence in a very odd way.’

‘Of course, Moshe: she *found* him.’

‘No, Yaakov, it’s more than that. There’s an almost psychic connection between them. Kate seemed to know that the object was hollow, she seemed to sense that someone was in there, and since we’ve kept her in confinement

she's developed an instinct for that man - and even knew, without us telling her, that he was reviving.'

'I don't believe in psychic connections,' the general said. 'You should address that to the rabbi.'

Moshe saw Jozsef's discomfort, his hand reaching up to touch his skullcap, as if consoling himself.

'Well, Jozsef?'

'I don't think so. I'm afraid I cannot accept that. The woman has not been happy, this event has badly shaken her, and now she has succumbed to this obsession that that man is her saviour.'

'A *saviour*?' the doctor said.

Jozsef shrugged, his face forlorn. 'This is a very delicate matter. I'm not at all sure of her motives, so permit me to speculate… The Chapel of the Ascension is one of the most sacred of all Christian sites. It was built over the rock upon which, according to the Christians, Jesus last stood before ascending to Heaven.'

'Kate Hirschfield is *Jewish*,' Ben Eleizer said.

'Correct,' the rabbi said, 'but she is also without faith – or, more accurately, in revolt against her faith. Nonetheless, still Jewish to her soul, that faith has to be replaced with another. So, we have the earthquake, an extraordinary storm, and Kate is right there when that object comes out of the ground beneath a chapel that's been standing for centuries.'

'A *Christian* chapel, Jozsef.'

'Of course, Shlomo, but it doesn't matter: the object is a miracle, beyond rational explanation - and the man inside, an even greater miracle, possibly buried for centuries. So, she is seduced, overwhelmed by the inexplicable, and faced with what appears to be the supernatural, surrenders her reasoning. The man becomes a miraculous being, possibly a Messianic figure, someone who is above normal men and has made her his chosen one.'

Something cold slid through Moshe, a chilling portend of the future, the feeling that the rabbi's words, dropped reluctantly from his lips, might mean more than even the rabbi could at present consider. He thought of Kate in the stranger's room, her body quivering like a reed, her eyes filled with dread and exaltation as she fell into his arms. Holding her, stroking her hair, he had felt, just like Kate, a mixture of childish awe and fear, swept away from his former self on the tide of a future that was, since the arrival of the man from

the Mount, a path leading to infinite possibilities, all of which stunned the imagination and opened the door to the unknown. He glanced again at the rabbi, sympathising with his plight, understanding that he, too, was grappling with nameless fears, now faced with implications more threatening than he dared to admit.

'A Messiah,' Ben Eleizer said.

'I merely speculate,' the rabbi replied.

'Your speculations, Jozsef, lead us into more disturbing possibilities… The destruction of the chapel has already shocked the Christian world, but what will be said if they find out about the man we brought down from there?'

Ben Eleizer had raised the subject that they had all avoided so far and now Moshe felt the tension in the room, an almost palpable reluctance to face the issue and try to resolve it. He shared that reluctance and could not be proud of it, but the reasons were complex and not related only to politics; rather, they sprang out of the soil of faith itself – a faith not only fundamental to the spirit of Israel, but also to the ineradicable beliefs of each individual. Those beliefs were now endangered – or, at the least, exposed to doubt - and the questions that would ultimately be raised could only lead to more questions: a confusion that could break the mind and spirit and render faith obsolete. This was what they were avoiding, but Ben Eleizer, a supreme realist, had thrown down the gauntlet and now Moshe felt compelled to pick it up.

'It's not only the Christians,' he said. 'It's also the Jews and the Moslems. We can no longer pretend that the destruction of a Christian chapel was the only thing that happened that night. The Chapel of the Ascension was destroyed, the Golden Gate was smashed open, and many of the graves in the Moslem graveyard on the slopes of the Mount of Olives were exposed by the cracks caused by the earthquake. These are the salient facts of this matter, and they can't be ignored.'

'I don't know what you mean,' Rosenberg said. 'I'm a doctor and I know little about theology, which is what you're suggesting.'

'So, Moshe,' the general said, stubbing out his cigar, his face hard but no longer aggressive, now carefully composed, 'just what are you driving at?'

'An unholy trinity,' the rabbi said. 'Moshe is right: we have to face it. What has happened embraces the three great monotheistic religions and could

lead to the most extraordinary reactions.'

'I'm listening,' Ben Eleizer said. 'I'm wide-awake. Please clarify this matter.'

The rabbi was reluctant, perhaps unable to utter the words, so Moshe, less committed to Judaism, broke into his silence.

'Christianity views itself as the fulfilment of Judaism, as the messianic prophecy come to life in the person of Jesus Christ; ergo, only Christ can be the true Messiah. To put it another way, whatever we Jews preach, teach, believe in and accept was actually fulfilled in Jesus; and the Second Coming of Christ, in which the Christians believe, will not only inaugurate the conversion of the Jews, but ordain the Christian world as the New Israel.'

'That's blasphemous,' the rabbi said.

'It's what they believe,' Moshe replied. 'And what matters at the moment is not just what *we* believe, but what the Christians and Moslems also believe.'

'What you're suggesting,' Ben Eleizer said, 'is that the Chapel of the Ascension was built over the rock upon which Jesus, according to the Christians, ascended to Heaven - and that that man from the Mount, whose materialisation seems supernatural, might be taken up by the Christians either as the resurrected Christ or as a sign of His Second Coming.'

'Yes,' Moshe said. 'The Son of - '

'That belief is anathema to both Jews and Muslims,' the rabbi interjected quickly, preventing Moshe from using the forbidden word. 'For both, there is no such thing as the Trinity – only the One.'

'But certain Muslims,' Moshe replied, 'particularly many of the Sufis, also believe in the Second Coming of Christ.'

'A belief condemned by the Orthodox,' the rabbi said.

'True, Jozsef… But the Muslims also believe in a Day of Salvation. Remember that the two main forces in Islam are the Sunnis and Shi'ites. The Shi'ites follow Ali, Muhammed's son-in-law, believing that he and his eleven successors, all Imams, or leaders, had the correct hereditary succession from Muhammad and were therefore infallible and free from sin. They also believe that the twelfth and last Imam disappeared and went into hiding, waiting to return on the Day of Judgement. The Mahdi is the hidden Imam: a spiritual being who will appear at the end of time to restore peace and justice to mankind and establish the full power of Islam over the nonbelievers -

namely, in the case of Israel, the Jews.'

'This is beginning to sound worse every second.'

'Yes, Shlomo. And it would be best not to ignore the fact that the Muslims also accept Jesus: not as a divine being or the Son of the One, but as one of the righteous individuals - or one of the prophets - selected by the One to be a channel between Him and His people. They might therefore view this man as the resurrected prophet - or as a sign of something even more dangerous.'

'Obviously you're referring to the Muslim graveyard.'

'Yes. The Muslims believe that the resurrection of souls will begin at the Moslem graveyard on the slopes of the Mount of Olives - and since the earthquake devastated the graveyard, opening up many of the graves, there are whispers in certain quarters, by which I mean Arab sectors, that the Day of Judgement is at hand. It therefore stands to reason that if they learn about that man, they might will convince themselves that he's the hidden Imam, the Mahdi, returned to Earth to inaugurate the Day of Judgement.'

'And if they did, it would encourage them to try and re-establish Islam over the Christians and Jews of the Holy Land.'

'Exactly,' Moshe said. 'And this danger from the Arabs is unfortunately compounded by the destruction, or opening up, of the Golden Gate.'

'I don't understand,' Rosenberg said.

'You should,' the rabbi retorted, as last feeling free to talk. 'American or not, you are a Jew and your ignorance is shameful.' He sighed, shaking his head from side to side, too distraught to be angry. '*I believe with a perfect faith in the coming of the Messiah*,' he said, quoting the great medieval Jewish thinker, Maimonides, '*and though He tarry, I will wait daily for His coming.*'

'No Jew would accept the destruction of a Christian chapel or Moslem graveyard as a sign that that man is the Messiah. That, Jozsef, would *surely* be blasphemous.'

'Not Christian or Arab, Leonard. Naturally, what I refer to is the Golden Gate… According to Jewish tradition, it is through the Golden Gate that the Messiah will enter Jerusalem when He ushers in the Redemption. The Golden Gate has therefore been walled-in for centuries, but that extraordinary storm destroyed the wall and thus opened the gate. This could, by itself, be explained as a freak of nature, but knowledge of that man from the Mount

could complicate matters. Please remember your learning, Leonard. For us Jews, the Messiah is the personality who will, through the power of the Most High, redeem Israel and inaugurate the sovereignty of Judaism. A descendent of the House of David, he will *not* be a supernatural being, nor will he be divine; rather, he will be a person of normal flesh and blood, but one with divine gifts or supernatural abilities. I risk blasphemy as I speak, but now the words must be spoken: that man from the Mount is very much flesh and blood, but his survival, at least so far, would appear to be supernatural - and we cannot ignore what might happen should this news be released.'

He lowered his eyes and said no more, perhaps regretting what he had already said. Moshe, looking around at each of the others in turn, felt the waves of disbelief washing over them and turning to fear. The fear was secular and religious, based on politics and faith, both of which were now being threatened by what remained unexplained. The unexplained was the event itself, what it had produced and might yet produce: that man of unknown origin and the inexpressible possibilities inherent in his return to the world of the living… his abrupt welding of the past to the present, perhaps to reshape the future. Moshe stared through the window, saw the sky above the Knesset, bright blue, flecked with white clouds, all too real, despite what he was feeling - distinctly unreal. Weary, confused, longing to be out there in the real world, he returned his gaze to the room, glanced at each of the men in turn, and saw General Meshel shrugging his broad shoulders and pursing his lips.

'Pure speculation,' the general said.

'But relevant,' Moshe responded. 'If word of that man from the Mount gets out, it could lead to bad trouble.'

'True,' Ben Eleizer said. 'So we have to keep him secret. We stick to our story of atmospheric phenomena - and ensure that Kate Hirschfield keeps her mouth shut.'

'Kate Hirschfield is no problem,' Moshe jumped in quickly, her image suddenly floating before him, resurrecting his buried pain, returning him to that which had been lost and giving life to helpless need. 'We're keeping her in the hospital for another week or so in the hope that that man will revive. If he does, she'll be useful.'

'How?'

'She's a psychiatrist. The man may be in a state of shock. His mental

condition could in many ways be delicate, and if so, we'll need her.'

'She's obsessed,' the rabbi said.

'That's why she'll stay silent.'

Moshe noticed the flush on the rabbi's kindly face, understood his grief and anger over Kate, and felt sorry for him.

'And Leon Halcomb?' the general asked.

'An anti-Semite,' Leon Rosenberg replied. 'If he learns anything, he'll be a happy man and we'll be in trouble.'

'He's convinced we brought someone down,' Ben Eleizer said, 'someone other than Kate Hirschfield, and I'd like to know who gave him the news.'

'It's not news,' Moshe said quietly. 'It's probably more like a whisper. Someone probably told Leon about the second ambulance, but that doesn't mean much on its own. Unfortunately, the whisper had to come from inside - so we have to face the fact that his informant was Jewish.'

That silenced the conversation, made them glance at one another, each looking both guilty and outraged, wondering who had betrayed them.

'There are other matters,' the rabbi said, his abundant flesh making him sweat, one brown hand reaching up to touch his skull-cap before slipping back down to stroke his grey beard. 'The Christian world, already shocked by the destruction of the chapel, is now incensed by our refusal to let their Jerusalem representatives - the formal caretakers of the chapel - examine the ruins and decide what to do about them. I have, as you know, received from the Papal See's Apostolic Delegate in Jerusalem, Monsignor Pio Lazzari, a formal complaint about this matter, and it places me in a delicate position. I have hesitated about replying to the complaint. Now I must either give him permission to take back control over that site or pass the matter into the hands of our security - which would, of course, be embarrassing.'

'There's *no* problem,' Ben Eleizer said. 'That hole has been filled in. We bulldozed the rubble back to where it belongs, so the site can now be opened to official visitors, including the press. The Vatican is only interested in the chapel and can't ask us about unidentifieds; you can therefore reply, passing the site back to its Christian caretakers, and you won't be asked questions on matters that don't relate to the Rabbinate.'

'In other words, I don't lie,' the rabbi said. 'I simply erase the full facts from my thoughts.'

'That's right,' Ben Eleizer said.

Moshe felt the rabbi's discomfort, the ambiguity of his position, perched, as he now was, on the painfully cutting edge that divided the whole truth from a form of deceit. Not the plain dishonesty of a deliberate lie, it was, nonetheless, a deception based on omission, morally questionable under any circumstances, more so for the rabbi. He knew what the rabbi was thinking and did not envy him his dilemma; already, the presence of that man from the Mount was forcing them to alter their own judgements and accept compromise.

'That only leaves the Soviets and Americans,' the general said. 'They both think we've captured some dangerous hardware; and since each thinks it belongs to the other, they're both waiting for answers.'

'We simply stick to our original story,' Ben Eleizer said. 'The site is now open and they're welcome to inspect it; when they do, since there's nothing to find, they might even believe us. Let them come and go home again; they'll find nothing but rubble - no scorching, no radioactivity - just the rubble left behind by an unusual earthquake that also affected other areas around Jerusalem. That's not a major problem and the opening of the site will simply help it. Our major problem lies with the Christians and the Arabs and our own Jews - how they might react if they find out about that man from the Mount.'

He looked at Moshe for confirmation, and Moshe felt sick to his soul, thinking of Kate in the hospital, of her dark, haunted eyes, of the rapture and dread that had made her turn away from that man and throw herself into his own arms. Moshe felt frightened and possessive, at once jealous and resentful; more resentful of that man than he had been of Leon Halcomb, more ashamed than he had ever felt before: humiliated by his own brimming selfishness. He glanced at Ben Eleizer, at the rabbi, then through the window, his gaze drawn to the clean sweep of the sky where the sun had dominion. Then, putting his head down, keeping his hands flat on the table, he heard his own voice as if coming from far away, distanced by expanding webs of guilt and the shame of betrayal.

'I agree,' he said. 'We don't have a choice. We must keep that man buried.'

17

The sun was sinking when Leon showed his press card to the guard at the wooden barrier that blocked the road, preventing entrance to the devastated area. The guard nodded at him, unsmiling but polite, then raised the barrier and let him walk through. Leon knew the area well, normally living in the hotel above it, but now, as he advanced, the sky darkening over Jerusalem, he felt totally disorientated and unreal, as if in a dream.

The ruins were quiet and ominous, dust drifting above the piled rubble, making an eerie hissing sound that complimented the barren scene. The tower of the Arab mosque, the Chapel of the Ascension, and the tomb of the prophetess Hulda, which adjoined the chapel courtyard, had originally filled the space between the Mount of Olives Hotel and the road that passed the Church of the Pater Noster; now that area seemed empty, strangely desolate and haunting, the piles of rubble blending in with the strip of waste ground at the opposite side of the road, beyond which, partly obscured behind a stone wall and trees, were the equally desolate, evacuated Arab houses.

Moving to the left side of the road, his feet kicking up stones, Leon stepped carefully over the rubble of the fallen wall of the chapel courtyard and stopped near the remains of Hulda's tomb. A steel door lay in the rubble, painted light blue, covered in dust: the door that had led into the grounds of the Arab mosque, at the centre of which stood the Christian chapel. Ridiculous, Leon thought. There's no sense to this country. He stepped forward and saw shards of glass, pulverised mortar and drifting dust, parts of the Arabic inscription on the broken stone of Hulda's tomb, the television aerials that had been swept across the road from the small collection of modest homes beyond the waste ground.

Leon stopped and looked around him, knowing that Kate had been found here, trying to recall the courtyard walls, the small, dome-shaped chapel; trying to visualise the storm sweeping over it with extraordinary ferocity. His

imagination failed him, quietly defeated by the desolation, but the breeze, hissing eerily around his feet, made him shiver unnaturally.

What was he looking for? The earth scorched by an unknown force? The tracks of a bulldozer that had possibly pushed the rubble back over a hole of mysterious origin? Yes, he was looking for signs, but his heart wasn't really in it; he had known from the moment that permission had been granted to come here, that such permission would not have been granted if there was something to see. Moshe Eitan was not that stupid, and his men had been here for a week: scientists and engineers and security officers, then finally the bulldozers. Not guards, Leon thought. Not your ordinary foot soldiers. They were not protecting people from the dangers of the ruins, but keeping them out while the chosen few thoroughly examined this site and then used the bulldozers to push the rubble back where it belonged… He glanced back at the road and saw evidence of the earthquake: the cracks formed a jigsaw that covered the whole area and had possibly undermined the Arab houses… Fair enough, he thought: a good excuse for removing civilians…but those cracks are only wide enough to break a careless ankle and would certainly not account for the week-long banning of the press and the representatives of the Christian church from the site… So, there was a mystery - something covered up or removed - and now Leon, watching the shadows growing darker on the rubble, thought of Kate in the hospital near Ein Kerem and wondered why she was part of it.

To think about her made him hurt, the pain emanating from a sense of loss, the conviction that he had to steal her soul in order to regain his own. Perhaps that's why he had come here, even knowing that he would find nothing: not just to see the ruins and try to imagine what might have happened, but in the hope that up here, where the mystery had begun, he might palpably feel her presence all around him and take small comfort from it. He smiled even as he thought this, shaking his head in self-admonishment, realising that the intensity of his feelings for Kate had reached a pitch that was almost religious. Yes, he thought bleakly, my soul has become religious: from nihilism to commitment is the leap of a religious impulse; and now, in my inanity and weakness, even this sacred site, which before meant little to me, is wrapping its history around me and drawing me into it.

The darkness was descending, casting its shadow on stone, and he looked at the rubble piled before him at eye level and realised that it was the Chapel

of the Ascension. Could it be possible? Was the sacred rock buried down there? Had a man called Jesus, in the process of changing history, stood on this spot (his countenance like lightning, his raiment white as snow) before ascending to sit by God's right hand? Leon seriously doubted it, but the imagery clung to him, surrounding him and drawing him in and revealing itself as Kate's dark eyes. He thought about her and tried to be her, trying to imagine her experience, stepping forward, stepping back, gazing around him at the gathering darkness, looking beyond the chilling ruins to the Church of the Pater Noster where, it was believed, Jesus Christ had taught his disciples the Lord's Prayer… *Thy will be done in earth, as it is in heaven… For thine is the kingdom, and the power, and the glory…* and, Leon thought, the vain dreams of all men who could not accept their fleeting mortality. He shivered and turned away, looking back from whence he had come, seeing the Mount of Olives Hotel, a glass-windowed cube of limestone, the guard standing at the barrier across the road, his Uzi sub-machinegun pointed skyward.

'The real world,' Leon said, speaking aloud to hear his own voice, hoping to jolt himself back to the objectivity he had lost when he drove towards the hills of Judea and saw Kate's face before him. 'Liberty and democracy become unholy,' he added, 'when their hands are dyed red with innocent blood.'

Such was Israel's dilemma, the source of its shame and glory, holding the Torah in one hand, a gun in the other, shedding the blood of the innocent, its enemy's and its own, in an unholy bid to preserve the Holy Land and ensure the dominion of Zion. Such a war might never end, and even now was continuing; and the mystery of the Mount, shrouded in secrecy and deception, almost certainly had to be tied not only to religious matters, but to very delicate political concerns.

Leon tried to work it out, but his reasoning failed him, confused by the return of his restless emotions and the conviction that the mystery, which revolved around politics, contained within its secular intrigues a much more personal dimension; that it had, at the very least, ripped the veils from his own shame and was now, in some inexplicable manner, binding him tighter to Kate.

The darkness was deepening, turning the air to the colour of lead, and the stolen words did not remotely help him as he walked towards the barrier. His objectivity was gone, swept away by guilt and need, and as he left the silent

ruins, glancing around him, feeling defeated, he also felt that the mystery of the Mount was somehow stealing his rational self. His past stretched out behind him, a white wake on a black sea, travelling back to the mists of lost dreams and the shadow of failure. His need for Kate was buried there, blossoming out of his arid history, a need growing from the soil of discontent and impossible hopes. He had betrayed his inner life and now drifted towards ruination, slowly drowning in alcohol and debt, his strength and will disappearing. Yet he now wanted Kate and took hope from that need, as if in some blinding and inexplicable light her dark eyes had reflected the possibility of his future redemption.

He passed through the barrier, murmuring his thanks to the armed guard, and turned around in front of the hotel to look back at the ruins. They were now surrendering to dusk, sinking back into darkness, and he wondered what it was he had hoped to find when he climbed up the steep hill. Some evidence of a crash - not a crash; something else - simply something that would help him to solve the mystery of what happened that night. He had not seen Kate since then, the seven days had seemed endless, and now, thinking about her, feeling lost and unreal, his sudden pain again confused his intentions. He had come to discover the truth that was being hidden by Moshe Eitan, but as he studied the ruins, glanced at the guard, thought of Kate, he was overwhelmed by the conviction that the mystery of the Mount was, apart from politics and the schemes of mortal men, a riddle that was drawing him closer to his own fractured image.

He removed his gaze from the ruins and walked away from the hotel, turning down towards the Garden of Gethsemane and its dark, silent slopes. The sky was now black, the stars bright and multitudinous, and he hastened down the crude, narrow road, between the walls of rough stones. Here, in Gethsemane, Jesus had wept over Jerusalem; here the sweat of His agony had fallen to the ground as blood; and here, also, He had been betrayed and given birth to the Christian world. To remember this surprised Leon, casting him back to his Christian childhood, the days when he had believed all he read and held it close to his heart. Those days were long gone, their religious teachings undone, but now he marvelled at how deep his roots went and at their will to survive. He had tried to uproot them, to cast them over the wall, but as he hurried down the road, the dark slopes still and quiet, he felt the tide of his history at his unprotected back, pressing down upon his shoulders like

the mystery he was still trying to solve.

An unidentified light had descended over Jerusalem, exploding over the summit of the Mount of Olives and then disappearing… A light - not a crash - a light that rushed down and vanished, leaving in its wake a heap of rubble, possibly even a large hole… A light - nothing physical - possibly some kind of force, a burst of mysterious power that had caused a vacuum and pulled the chapel apart… What light? What kind of force? What sort of power could that be? And, if such a power had actually materialised, where had it come from?

He thought again of Kate, his imagination now set free; saw her standing in the darkness, the wind howling around her; saw the light rushing down and devouring the air and then brutally sweeping her off her feet. The vision filled his mind and blinded him, made him stop, almost dizzy, then he blinked and looked across the darkened slopes and heard a voice from below.

At first he thought he was imagining things, and shook his head, almost amused, but then he heard the voice again, masculine and harsh, obviously coming from farther down the path, on the lower slopes of the Mount. The man was obviously shouting, his voice passionate and angry, sounding barbaric and unearthly in the night, echoing over the dark slopes. Leon listened, strangely moved, unable to understand the words, and then, surprised at his own expectancy, he hurried on down the narrow road.

It did not take very long and he soon saw who was shouting: a man in his late fifties, tall and emaciated, Caucasian, his skin burnt dark by the sun, beardless but with unwashed white hair that blew around his wild features. He was facing the Basilica of the Agony, standing upon the low stone wall, looking down on a crowd of people, Arab and Jew and Christian, his arms raised and his black coat flapping loosely as he bawled his message. He was clearly some kind of preacher, certainly Christian and possibly mad, and as Leon, intrigued, stood behind the crowd and watched him, he stared fiercely up the slopes that led to the summit of the Mount, jabbing at the summit with his index finger, his voice hoarse and outraged.

‘They will not let us go up there!’ he shouted at the crowd below him. ‘They will not let us go up there to see because they have denied Him! For He said, Let there be lights in the firmament of the heaven, to divide the day from the night! And let there be lights in the firmament of the heaven to give light upon the earth - *and it was so*! And He made two great lights - the

greater light to rule the day and the lesser light to rule the night - but they will not let us go up there to see, *for up there was the light*!'

His right hand cut through the air, slashing down through the darkness, balling into a fist at his stomach as his body shook violently. Leon recognised the words, here distorted but still eloquent, and he felt the chill of dread, some cold and fathomless presentiment, as the old man threw his hands up in the air and started shouting again.

'They will not let us go up there to see because His light filled the dark void! Because He said, Let there be light - and there *was* light! And He saw the light and it was good; and He divided the light from the darkness. And He called the light Day, and the darkness He called Night; and up there, above the rock where He last touched the earth, *He made the light and darkness one and announced His returning*!'

He threw his hands out to the sky, his body curved, his black coat flapping, and the breeze, shivering through his long white hair, made it dance on his head. Leon watched, disbelieving, feeling the urge to walk away, but then the old man turned sideways, facing the slopes of the Mount of Olives, his finger jabbing at the summit as his voice raged defiantly. And Leon almost lost his senses, the familiar words shattering reason, ricocheting in his brain with intimations of revelations, vaporising even as he sensed them and leaving him drained.

'Listen! Let me speak! I will not be silenced! *They will not let us go up there to see, but I will not be silenced*! In Him is life and the life is the light of men, and that light shone in darkness *and the darkness did not comprehend it*! I come here as witness, to bear witness to the light, that all men through Him might believe and find the joy of redemption! He was *not* that light but was *of* it and will bear witness to it! *No*! I am not Him! I am not worthy of him! For He cometh unto His own and His own receiveth Him not! *No*! I am not Him! I merely come to bear witness! I am the voice of one crying in the wilderness, Make straight for the way of the Lord who will soon come before you to make Himself manifest to Israel… *Do not deny Him*!'

Leon turned away from him, hurrying down the hill, torn between revulsion and excitement, feeling touched by some madness. The stones rolled before his feet, tumbling down the dark slope, and then he stopped, hardly knowing what he was doing, and looked back up the ancient path. The old man was still preaching, his voice harsh and obsessed, towering over the

silent people, the wind whipping his white hair, his hands raised above his head, fingers outstretched to the sky, while the stars, illuminating the darkness, swam around him in glory.

18

Kate felt weaker every minute, more light-headed, her body emptying, her thoughts drifting like smoke in the night, slowly turning and gradually vaporising. She stared down at his face, at his closed eyes, his greying dark beard, at that mask of inhuman composure and impossible serenity. Her body glowed when she saw him, lighting up from within, the warmth reaching out to touch her cold skin and make amends for her failing strength. He was taking that strength from her, draining her to fill himself, and as his white chest rose and fell, his hands motionless by his sides, she was torn between rapture and fear, wondering what would become of him.

She did not think of herself, but of the future now ordained, aware of its ambiguity and challenge, her whole being expectant. It was all in his face, in the terrible beauty of its repose, that image of the space where the moon eclipsed the sun and the darkness reappeared as the void beyond which there was nothing. She had seen it and dreamt it, when asleep and when awake, behind her closed eyes or looking at his face with its prismatic blankness. The dream of history was in that face, and yet its radiance denied history, obliterating definitions and judgement, at once nothing and everything.

Kate studied him a long time, almost dreaming, twice removed, only aware that he was coming to life as her strength drained away. She reached down and felt his pulse, placed her hand over his heart, put her fingers to his lips to feel his breath, stroked his forehead, stepped back again. The past had been and gone and now returned to meet the future; between the past and the future was the present, out of which he had called her.

Suddenly frightened, she turned away and lay down on her own bed, which was situated, parallel to his bed, at the opposite side of the room. She closed her eyes and breathed deeply, trying to still her beating heart, staring up at the white ceiling, feeling light, almost floating, her thoughts drifting to and fro and then dissolving into blankness and silence.

In silence was the truth, the one reality, beyond logic: the void that contracted as the light spread through the darkness and made itself manifest in her draining body. She no longer doubted the issue, but now accepted it in wonder, her mind ruled by the languor of her flesh as exhaustion crept over her.

She slept and awakened, hearing murmuring and movement, turned her head and saw the doctors in white jackets, leaning over his still form. They were checking his heartbeat, his pulse and his breathing, bending forward to study the EEG screen where a white line was flickering. Kate watched them, feeling nothing, her thoughts circling and returning, her body floating somewhere beneath her as if made of thin air. The men in the white jackets seemed unreal, far away, their voices muted, their hands rising and falling through striations of sunlight in which, like the basic matter of life, motes of dust were at play.

She turned away and closed her eyes, letting her body drift freely, ignoring the doctors as they left him alone and surrounded her bed. Her wrist was picked up and checked, the cold stethoscope touched her breast, there were whispers about her weakening condition and its mysterious cause. She felt amused but didn't smile, the amusement fleeting and remote, dying away like a light being withdrawn and fading out in the distant night. Then they moved away, still whispering, and the door opened and closed, after which, feeling grateful and at peace, she heard the hymn of his breathing.

She slept and awakened, licking her parched, shivering lips, feeling even weaker than before and unable to sit up. She could still hear his breathing, felt his presence all around her, and she wondered what would happen when he awakened and her strength was all gone. This thought came and departed, a mere whisper in her mind, and she raised her hand and spread her long fingers, watched them shaking and falling. She was too weak even for that, her body hollow, without feeling, as it had been after the bloody abortion all those years ago. Lost, but not forgotten, the relentless spectre of her dreams: the foetus turning in the Pool of Siloam at His feet, His arms raised in forgiveness. Now, she sighed, her strength gone, the light shrinking in the darkness. Hearing the door opening and closing, she opened her eyes and saw Moshe looking down at her.

'*Shalom*,' he said quietly.

She could not immediately answer, feeling dizzy and unreal, her thoughts

circling like birds in a mist, resplendent in silence. Moshe loomed large above her, his shirt tight on broad shoulders, his eyes, which were usually unrevealing, now strangely gentle. She kept looking at him, taking comfort from his rugged face, noting the scar on his left cheek, the broken nose and lined skin, understanding that in some way she was drawn to his remote, private nature.

'How are you feeling?' he asked.

'Weak,' she replied. 'My body feels totally drained and I can't think clearly.'

'Any pain?'

'No.'

'The doctors are baffled by your condition. As far as they can tell, there's nothing wrong, yet you're fading away.'

Kate smiled. 'It doesn't matter. He's recovering…that's what matters. You shouldn't worry about what happens to me; he's the one you should think about.'

'I worry,' Moshe said.

'I thought you didn't approve of me.'

'I'm not talking about approval,' Moshe said. 'It's the caring that matters.'

'And you care for me?'

'Yes, Kate, I care.'

'I'm surprised to hear that.'

She smiled again and raised her hand, reached out to him, but then let the hand drop, not really knowing what she was doing or what she was feeling, too tired to define it. Looking at Moshe, she saw the other, a different face, the same face, first Moshe and then the man from the Mount and then Moshe once more. He was gazing down at her, not smiling, his eyes gentle, trying to suggest the words his tongue refused to utter, his meaning felt if not stated. She studied him calmly, drawn towards him, drifting into him and becoming him; and then, being of him and within him, gazed out of his grey, wounded eyes. She saw herself on the bed, her wasted body in the white smock, her cheeks hollow and her shivering lips dry, her long hair dishevelled.

'I'm fading away,' she said.

'Yes,' Moshe said, 'you are.'

'Am I dying?'

‘No, I don’t think so. I think you’re feeding that man.’

‘He’s reviving?’

‘Yes.’

‘That’s important.’

‘I know it is.’

‘Moshe Eitan, the famous warrior and Zionist and private person, is not as harsh as his reputation would suggest.’

He smiled reluctantly, the humour reaching his eyes at last, and then she drifted up again, leaving her exhausted body behind, and dissolved into the mystery of his flesh and examined his grief. She saw dead eyes staring sunward, a skein of dark hair covered in dust, a woman and two children spread-eagled, the desert sky as white heat. As it was everywhere, so here, too, there was blood, now drying and matting the dusty hair and smearing the limbs of the children. His grief was lacerating, tearing the skin from her own wounds, and she shrank and retreated to herself, staring up from the narrow bed.

‘Don’t grieve too much,’ she said.

‘I’m not grieving,’ he replied. ‘I’m concerned that you should be in this condition and I’m wondering what caused it.’

‘You know what,’ she said.

‘I know it’s him; I don’t know how.’

‘It’s not me you’re concerned with - it’s him; you’re wondering where he came from.’

‘Not only that, Kate.’

‘You’re also wondering *who* he is.’

‘Yes,’ he agreed, ‘both those questions bother me. But you bother me, also.’

‘Why?’

‘That should be obvious.’

‘Nothing is ever obvious.’

‘It’s the concern of one human being for another. It’s not all that uncommon.’

He was no longer smiling and his gravity touched her heart, as did his hesitation to express his true meaning, his need to couch it in clichéd generalities. She thought of the dead eyes staring sunward, the woman and children spread-eagled, and wondered why that vision, with its connotations

of Moshe's past, should have come to her at this particular moment. His great tragedy had been widely publicised, but she had never known the precise details; and now, growing weaker, her thoughts increasingly fractured, she was convinced that the dead eyes staring sunward were the eyes of his family. Yet how could she know that? What had happened to her mind? As she weakened, so her mind seemed to expand to take in past and future. The other lay in the bed opposite, breathing evenly, reviving, and as He came back to life, taking His strength from her, so He seemed to be compensating her with unusual powers.

'There's no need for concern,' she said.

'Concern is natural, Kate.'

'I feel frightened for him; not for myself. I even feel strangely happy.'

'Happy?'

'All warm.'

'Your temperature's dropping.'

'I feel warm.'

'You're not warm, you're cold. Your skin is cold to touch. Your heartbeat is slow, your circulation is all wrong, and you haven't been able to eat for two days. There's no reason. We're worried.'

'Don't.'

'You should sleep.'

'I'm *always* sleeping.'

'Then sleep a bit more.'

She smiled and closed her eyes, oddly comforted by his presence, and let herself drift towards the light that rose out of the darkness. The light grew like a white flower, its petals unfolding, stretching out in every direction to divide the darkness and reduce its domain. Then the light warmed her, surrounded and enveloped her, and she felt her spirit expanding across the void to explore the unknown. Past and future were as one, the frozen moment of His birth, and His growing, which flowered around her in majesty and silence, was the sign that she would soon be renewed.

'All right,' she promised, 'I'll sleep.'

'Good,' Moshe replied.

'Don't stay away for too long. I think he'll soon waken up.'

'No, I don't think so. I think it's too early. His pulse and heartbeat are improving, but they're still much too slow; and his temperature, though rising

steadily, is still even lower than yours.'

'Have you made an estimate?'

'A few more days.'

'No,' Kate said, 'you're wrong.'

She opened her eyes when she heard his sigh, saw him shrugging his broad shoulders, reaching up to touch the small scar on his cheek, as if reminded of former pain. He was looking steadily at her, his grey eyes grave, studying her with a muted intensity that said more than words could. She realised this dimly, in some distant recess of her mind, but her feelings at that moment all belonged to the other who, breathing evenly in the adjacent bed, was dominating her senses.

'So,' Moshe said, 'I'll go.'

'Yes,' she replied. 'I'm fine.'

'Don't forget to ring the bell if you need anything.'

'Don't worry. I won't.'

He leaned forward instinctively and then stopped himself. He straightened up again, pursing his lips, then nodded, gave a hesitant smile and turned away and walked out. Kate watched the door closing, feeling oddly desolated, then she turned her head and looked across the room at the one in the other bed.

He was lying flat on his back, a sheet covering his lower body, his hands by his sides, the sensors attached to his wrists and chest, wires running from his head to the EEG machine, his profile silhouetted in the striations of sunlight pouring obliquely through the window above him. He looked like a dead man, horizontal, straight, but his chest rose and fell as he breathed in and out, and Kate, hearing the sound of his breathing, felt herself straining towards him.

She closed her eyes and put her head back, trying to slip into his mind, saw the darkness, then light, a spot of light growing larger, a pulsating light that soon became a sun obliterating the Nothing. The Nothing was her own body, the void created by His need, but now the light, which was He, giving birth to His being, flared out to touch the darkness with glory and return her to wholeness.

The darkness rolled back, the seas parted, the land appeared, the herb yielded seed and the tree yielded fruit, and the moon and the sun shared the heavens to let the stars shine. Out of the whirlwind came His voice, giving substance to the silence, and the seed, which was scattered on His breath,

brought the years and their seasons. He wept over His creation, moved by pity and love, and His tears formed the clouds and shed rain upon the stones of the Earth. The waters were abundant and the skies received the living, and the dry land grew green and fed the beasts both in darkness and light. To be whole, He became, and cast Himself around the firmament, and saw that His creation, which was good, was devoid of His image. And He breathed and raised the dust, and into the dust He breathed His life, and His image rose up and was touched with the wonder of innocence. In this innocence was dread, the isolation of singularity, and He, observing the reflection of His own anguish, split His image in two. She sprang forth from the other, to the fierce and blinding light, the female to His male, the plurality of His Oneness, and then He came out of the whirlwind and touched her to give life to the living.

Kate experienced great joy, a transcendental exultation, and felt the life pouring back into her body as the other awakened to sunlight. She opened her eyes and saw the ceiling, a white sheen, a shimmering sky, then she drifted up and merged and returned to find her body renewed. She turned her head and saw him moving, raising his right hand and clenching his fist, flexing his fingers to feel his coursing blood and confirm that he was. The hand dropped and he was still, breathing deeply, his head unmoving, still silhouetted in the sunlight pouring obliquely from the window above him.

Renewed, Kate sat up, her heart pounding, her blood warm, released from the languor of exhaustion, her skin alive and receptive. She felt triumphant and fearful, filled with love and trepidation, and as she swung her long legs off the bed, her thoughts collided and scattered. The room expanded and contracted, the light flared up and died, and she blinked and licked her lips and walked towards the burning orb of the sun. The sun was the light, a stream of gold above his head, illuminating the contours of his face as she reached out to touch him.

He stared at her, not startled, his eyes silvery-grey and neutral, reflecting light and her miniaturised image in some space beyond knowing. His serenity was absolute, a beginning and ending, couched in the acceptance of being and brooking no doubts. Kate looked and was enslaved, transported out of her self, surrendering to the imperative of his presence and embracing his will. She gazed down and was frozen, no longer able to act, simply waiting, with the patience of the lost, for his words to reveal her.

‘*Be*,’ he said, and thus became, his voice the signature to his birth, a whisper resonant with innocence and wisdom, at once a statement and order. ‘*Fore*,’ he said, after a pause, his lips shivering with the effort, as if the word was an indecipherable hieroglyphic, barbaric and strange. ‘*Abra*,’ he added, staring at Kate, destroying the myth of her maturity, the word conjuring up the mysteries of her childhood with its promise of magic. ‘*Ham*,’ he said, raising his right hand, studying his fingers, looking puzzled, as if the word, ricocheting in his head, had led him into confusion. ‘*Was*,’ he said, dropping his hand, his silvery-grey eyes focused inward, gazing back along the years to some beginning in the mists of lost time. ‘*Was I*,’ he continued, speaking slowly, savouring the words, tentatively knitting them together in search of sense, being foiled, almost sighing. ‘*I*,’ he said, isolating it, inching along the blade of meaning, letting the word drop like a pebble on ice, ringing lightly in Kate’s ears.

‘Before *Abraham*… was I,’ he said, trying to place the emphasis, raising his head and then letting it fall again, as if too weak to move. ‘Before Abraham *was*… I,’ and then he seemed to sigh again, the ages whispering as they glided through the silence of his interminable pause.

He closed his eyes and licked his lips, breathing evenly, his hands at rest, confused and yet perfectly calm, accepting one for the other. He lay thus for a long time, relaxed, all too human, his body coloured by rays of golden sunlight, his bearded face strangely ageless. Then he looked up at Kate, his silvery-grey eyes hypnotising, drawing her in to distant moons and wheeling stars and unsung planets, then reached up and touched her shoulder, his fingers exploring flesh and bone, and then took a deep breath, experimenting with his lips, and eventually, triumphantly, yet perhaps with a hint of sadness, gasped the words of revelation and faith and ineradicable commitment.

‘*I am*,’ he said.

PART THREE:

MINISTRY

‘Think not that I am come to destroy the law, or the prophets; I am not come to destroy, but to fulfil.’

- *Matthew*, 5: 17

‘… and upon this rock I will build my church; and the gates of hell shall not prevail against it. And I will give unto thee the keys of the kingdom of heaven; and whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven.’

- *Matthew*, 16:18

19

Having spoken, he fell silent, his brow furrowed in thought, as if his words, springing out of the vast silence of his gestation, had unlocked the door to human doubt. His confusion was obvious, rippling across his prismatic blankness, shadowing his impossible serenity and etching fine lines in his face, thus humanising his extraordinary composure and rendering him mortal. He blinked and gazed at Kate, his silvery-grey eyes growing dimmer, still magnetic but less alien that before, the pupils shrinking to normal size. Then he stared around the room, pursed his lips experimentally, raised his right hand, then his left, turned them slowly, flexed his fingers, taking in the geometry of flesh and bone before letting them fall again.

Kate stared at him, speechless, both exultant and disbelieving, his words echoing in her mind and fading away to leave a threatening silence. Why threatening? She wasn't sure. It was something in his silence; something forcing her to concentrate on his face and its subtle metamorphosis. The same face, yet different, altered almost imperceptibly, his skin neither white nor dark, his features faintly Semitic, the dark beard flecked with grey, the eyes now also grey, his serenity finally shattered by awareness and unspoken questions.

Studying him, Kate felt dazed, her emotions in turmoil, trying to reconcile her excitement and fear and get a grip on her senses. She shook her head from side to side, her thoughts spinning and colliding, only aware, as she reached out for the bell above the bed that her heart was beating dangerously fast. His eyes followed her shaking hand, saw the bell, returned to her; and her hand, which was dangling in the air, seemed to freeze of its own accord.

'No,' he said, speaking quietly, his voice gently commanding, slipping through the silence like the blade that hypnotises its victim. She heard the voice, or felt it, and her hand dropped away, still shaking as it hung by her side, the fingers opening and closing. She stared at him, confused, wanting to

protect him and frightened of him, feeling even in the warmth of her concern that his presence was dangerous.

'Who are you?' she asked, and her fear disappeared immediately, giving way to a feeling that might have been maternal love as he blinked, glanced about him and again looked confused, shaking his head from side to side and stroking his beard.

'I don't know,' he said, his voice soft and oddly resonant, speaking English with an untraceable accent, his words clear and precise.

'Do you know where you are?'

'Where I belong,' he replied. 'I only know that I am where I belong and that time will reveal me.' He looked directly at her, his steady gaze compelling, while the early evening light, growing dimmer, sketched dark stripes on his face. 'You have been with me a long time,' he said. 'What is willed, will be done.'

'What is… *willed*?'

'It was willed.'

He turned away, as if startled, as if someone else had spoken, his eyes widening and framed by the sunlight fading over his face… A grey light, on grey eyes, the eyes merging with the light, disappearing until his head dropped lower and the pupils contracted. He was still lying down, his upper body pale and lean, his lower body covered by the white sheet, his hands clasped on his stomach.

He glanced along his own body, saw the sensors on his chest and wrists, furrowed his brow in puzzlement, sighed, almost smiled, then used his right hand to tug the sensor off his left wrist, reversed the procedure to remove the sensor from his right wrist, then tugged the sensors off his chest and raised his hands to his head as if about to remove the EEG wires. His hands stopped in mid-air, hovering just above his forehead, then his brow creased in thought and his hands started shaking, moving away and then coming back again, the fingers outstretched and searching. He sighed, took a deep breath, then removed the metal cap, stared at it and shuddered a little and then threw it away. It struck the far wall and then bounced on the floor, ringing out like a bell, and Kate felt her body twitching with shock before his gaze returned to her. He studied her for a very long time, breathing evenly, calmly.

'No fear,' he said eventually, his voice hollow, almost echoing, an ethereal sound that writhed through the silence to reach out and touch her. 'In

my dreams, which were many, was this one recurring lesson: the darkness will roll back to reveal the light and there is no need to fear. Now, I am confused, and my words are not my own, and in my ignorance I only know one thing: that I do not know what fear is.'

Kate opened her mouth to speak, but no sound came out immediately; instead she licked her lips and rubbed her eyes, feeling renewed, but unreal.

'You remember nothing?' she managed to say.

'The long darkness,' he replied. 'The light grew out of darkness and the dreams were mere fragments that comforted.'

Kate thought of her own dreams, which had blossomed as her body weakened, filling her with the love and fear that now bound her to the man on the bed. He was breathing deeply and evenly, his gaze focused on the ceiling, his fine-boned hands resting by his sides, not moving at all.

'I feel weary,' he said. 'I have slept a long time. My body is weak and my mind is no more than an empty shell. Who speaks? My voice sounds strange. The fragments float in a darkness. The Teacher of Righteousness is with me and once showed me the way.'

'The Teacher of Righteousness?'

He glanced at her in confusion, his brow furrowed, his face more human, his lips shivering with the effort of speaking the very words that confused him.

'Yes,' he said, 'the Teacher of Righteousness. He came before me and showed the way. In the darkness of the caves, which in darkness I could see, were the scrolls revealing the lineaments of the life that gave shape to my own.' He closed his eyes, his brow furrowed, slowly raised his pale hands, spread his fingers and placed them around his head and gently rocked it from side to side. 'My head is empty,' he continued. 'Filled with light, containing nothing. I speak words that come out of the Nothing and mean little to me.' He stopped rocking his head, removed his hands, opened his eyes, glanced at Kate and then stared up at the ceiling, his ascetic lips moving. 'I cannot plan my words and my speech belongs elsewhere; it comes forth from the emptiness inside and must be a foundation. The Tower of Babel, reaching heaven, scattered words across the Earth; and those words, of which I drank, remain with me as light to the darkness. The foundation is language, that which bridges the incompatible, and my words, which I do not understand, will in time weave my meaning.'

Kate listened and then leaned upon the mystery of his speech, drawn in on the ambiguity of his words and their haunting, faintly familiar resonance… Familiar? Yes. It was the resonance of her childhood memories: the words, often alien and obtuse, that had been preached in the synagogue. She was startled, a little frightened, unable to accept what she was hearing; but he drew her eyes towards him, his silvery-grey gaze luminous, and she felt herself surrendering to his will as the fear fell away again.

'Where am I?' he asked.

'In Israel,' Kate replied.

'What is Israel?'

'A country… a place… You don't know this at all?'

'This is part of the Earth,' he said. 'I know that the Earth is but part of the whole. I also know that the Earth, which abides and will endure, is where I have walked and will walk until the darkness descends again.'

'You've been here before?'

'Yes.'

'You remember?'

'I *know*. I stand upon the rock of my faith and have no cause to question it.'

He moved his head slightly, surveyed the room, closed his eyes, murmured something and then opened his eyes again, staring up at the ceiling.

'How do you feel?' Kate asked.

'Feel?'

'I mean your body.'

'My body is whole,' he replied, 'but of little importance.' He spread the fingers of both hands, pressed them down on the bed, and then, with what seemed to be a great effort, pushed himself upright. He shook his head from side to side, shrugged his shoulders, stretched his spine, then sat there, his arms angled behind him, his body pale in the darkening light. 'Flesh and blood,' he said. 'Feeling.'

Kate took a step forward, wanting to reach down and touch him, but then, having made that one step, remained where she was. She felt remote from herself, both fearful and excited, all her senses concentrated on the face of the man on the bed. A contradictory face, at once gentle and imperious, the face of an ancient prophet or warrior, beautiful and fierce. The early evening light

was grey, the room darkening, growing colder, and Kate shivered, feeling lost and ineffectual, wondering what she could say to him. This problem, unexpected but real, was soon solved when he looked at her.

'Where did you find me?'

'You remember nothing?'

'No.'

'You were in some sort of tomb on the summit of the Mount of Olives. That tomb - or whatever it was - appeared to have been buried there, but we don't understand how it got there.'

'I must see it,' he said.

'You can't see it,' Kate replied. 'It disintegrated, leaving nothing but dust. Now there's nothing to see.'

He did not seem perturbed. 'Dust to dust,' he murmured. 'Life rose from the dust and returns to it when we pass on to the other side.'

'The other side?'

'The real world.'

He swung his legs off the bed and placed his feet on the floor, his toes, marble white, the nails long, curling down to the tiles. 'Cold,' he murmured and leaned forward, rocking slightly to check his balance, letting his feet take the weight of his body, his toes rising and falling. The room was growing darker, shadows gathering in the corners, but the light from the window, now a dim haze, slanted down onto his shoulders. He stood up slowly, carefully, as if checking that he could do so, and the white sheet fell to the floor with a rustling sound. Kate saw only his eyes, now closing, now opening, silvery-grey and wandering around the room, unnaturally bright and intense. He stared at her, his brow furrowed, as if trying to recognise her, then ran his hands lightly down his face and gazed up at the ceiling.

'I remember little,' he said, 'but the fragments are enough, increasing with each passing moment and giving shape to my thoughts. I am calm and unafraid. I speak these words before I know them. My coming was prophesied in the scrolls in the dark caves, the rituals of my drama rehearsed by the Teacher of Righteousness. I know the name, but not the man. His face is blank, his source a mystery. He was there before I came into being, long ago, in a strange land.'

'What land?'

'That is unknown. The sun shines on parched soil. A land of great beauty

and desolation, where man's spirit abides.'

'How long ago?'

'I do not know where or when. I know of a time before my own, but in my mind they are one. My memories are like clouds, now obscuring, now revealing, offering isolated glimpses of things that do not make sense to me… A people called the Essenes, the curled edges of ancient scrolls, a *drachma*, a *denarius*, a pinnacle of stone, the presentation of a child in the Court of the Gentiles, when his keepers, male and female, offered a winged creature as a sacrifice.'

He lowered his gaze to look at Kate, his brow furrowed in confusion, as if uncertain of what he was saying, wondering where his words came from. Kate shivered, feeling cold, frightened by what she was hearing, but hypnotised by the glittering brilliance of his eyes and his noble bearing.

'You mentioned the Court of Gentiles,' she said. 'Do you know what that was?'

'No. I can only see it. The recollection is very clear. The sun shines on the sloping stone and colonnades, making everything bright. There is a barrier. The Court of Women. I do not know what such names mean. The Court of Women or the Court of the Israelites… perhaps one and the same.' He closed his eyes and shook his head, pressed his right hand to his brow, removed the hand and let it fall to his side and then looked straight at her. 'The Court of the Israelites,' he said. 'And you say I am in Israel… The child of whom I speak was myself, the presentation near here.'

Kate's feeling of unreality deepened, increasing her fear and awe, unravelling all the teachings of her past and leaving her naked. She stared at the wall above his bed, wanting to press the alarm bell, but his gaze, at once calm and commanding, seemed to paralyse her. She felt her senses sliding away, releasing her buried primal self, and she stifled the scream rising from her centre and cloaked it with faltering words.

'A… presentation?'

'A sacrifice.'

'What kind of sacrifice?'

'The child, being myself, was of age and was confirmed in His presence. The sacrifice... relates to this.'

Again he stopped talking, doubt rippling across his face, while the light, growing darker each minute, turned his body to stone.

‘I think my keepers were my parents. I was wrapped in swaddling clothes. They carried me up some steps to the just and devout one who confirmed the uniqueness of my birth. And the prophetess, also, serving then in the temple, looked upon me as the light of redemption and offered thanks to the Lord. And the priest took one of the birds to the lower corner of the altar, wrung its neck and sprinkled its blood on the altar and then put it aside. A second bird was then slaughtered, but also gutted and salted, its blood sprinkled on the top of the altar, its carcass thrown to the flames.’

Kate thought of distant times, of temples baked by the sun, of men in robes sacrificing birds upon an altar of flames. This vision filled her mind, briefly obliterating his features, pushing back the walls of the room to let the past live again. The sky was a white haze, the land harsh and awesome, and the great walls of stone materialised like a mirage in the wilderness. Surveying it, she was part of it, her shadow etched on the temple floor, and she held the precious child to her breast while the altar flames flickered. The child was father to the man, the man destined to change history, and she closed her eyes and opened them again to see the one who was full grown.

He was standing in the same place, his gaze slipping away from her, and the walls of the room moved back in to reinstate some reality. Kate stared at him, speechless, unnerved by what he had made her witness, then was calmed by the sound of his voice, strangely distant yet resonant.

‘I do not know what that means, but I remember my own infancy. Between the events of that day and my thirteenth year there is nothing at all. My thirteenth year was my true beginning. I know this because I utter it. I see the priests in the shadows of the colonnades of the temple, and know that in their presence I waxed strong in spirit and wisdom. I forsook my father and mother, learned detachment and concentration, and assumed my responsibilities as a student of the affairs of the Most High.’

He turned away from her, examined the door of the room, and then took a step forward, very slowly, as if learning to walk. His second step was also hesitant, his third taken with greater confidence, then he advanced to the door of the room and turned around and walked back to her. He stopped in front of her and took a deep breath, looking down at his own feet, raised and lowered his arms and walked away and turned back to her again. His eyes, gleaming unnaturally in the deepening gloom, drew her into their depths; in those depths there was fire and decomposing flesh and the bleached bones of

history.

‘At first you knew nothing,’ Kate murmured dreamily, ‘but now you’re remembering things…’

‘Mere fragments,’ he replied. ‘They pass through my thoughts like clouds. My infancy, my thirteenth year in the temple, then my first great temptation. Between these, there is nothing but the darkness and the silence of passing time.’

‘Your parents?’

‘I don’t know.’

‘And the Teacher of Righteousness?’

‘I don’t know… Someone who lived before my time and prophesied my coming.’

‘This awakening?’

‘No,’ he said. ‘My former awakening… in that time I now speak of.’

Kate started losing herself, retreating into her mind, gazing out of the long tunnels of her eyes at the creature before her. His face was now more human, etched with lines of experience, gaunt, almost primitive, yet inexplicably civilised and noble, touched with strange beauty. He was a normal human being, a creature of flesh and blood, but his genesis and the speed of his recovery had contradicted such facts. Staring at him, Kate felt childish, returned to innocence, filled with wonder, overwhelmed and frightened and excited, cast adrift from the rational world. The mystery of his presence teased her, threw her from one shore to another; then, drowning in quiet desperation, she sank down through her deepest fears.

‘What else do you remember?’ she asked, hardly hearing her own voice.

‘I see a ribbon of water. A line of people stretches to it. I wade in the water and am dazzled by the sun, and the man with the face of a prophet takes hold of my shoulders. He immerses me in the water, shouting words I cannot hear, and I rise up as the heavens open out and a white dove appears.’ He fell silent and closed his eyes, looking back into his past, obviously trying to weave some meaning from his words, but bowing his head in defeat. ‘I do not know what this means, but I know that it was willed; and after it - how long I cannot say - I was tempted and tested.’

Kate started to speak, but immediately forgot what she wanted to ask, the sound of his voice emptying her mind and letting him pour himself into it.

‘I see myself in the wilderness, refusing to turn stone to bread; on a

mountain with the desert at my feet and the evil one whispering. He, who is my opposite, wishes to tempt me but fails; he then guides me to a pinnacle of the temple beneath the sun, where, to test my powers, he commands me to throw myself down and let the angels protect me. I refuse to tempt the Lord as the evil one tempts me; and after this, turning away from his seductions, I embark on my calling.'

Fascinated, Kate stared at him, hardly aware of his nakedness, her gaze drawn to the glittering of his eyes and their invincible calmness. He was not returning her gaze, but instead was looking inward, his brow furrowed as he tried to survey the voids between his sparse recollections. Then he raised his eyes again, looking at her and into her, his power flowing out all around her to render her helpless. She held her breath and clenched her fists, feeling fear and love at once, wanting desperately to press the bell and call for help, but unable to do so.

'You still don't know who you are?'

'No,' he replied. 'The words offered tell all there is to know for the present; perhaps time, if not obstructed, will reveal more… I have patience. You must practice it.'

He looked directly at her, his heavy-lidded eyes unblinking, growing brighter in the deepening gloom and resembling cats' eyes. Kate shivered, more confused, no longer sure of his nature, thinking of good and evil, of purity and amorality, and wondering what the voids in his recollections might eventually reveal.

'The words uttered,' he continued, 'were uttered before I knew them, but already I am learning to express my thoughts and colour the voids. Soon I will be full-grown, my body and spirit as one; and then, by the grace of the Most High, I will learn of my purpose. In the meantime, until time itself reveals me, you will stand by my right hand.'

An imperious request, offered quietly and implacably, it cut through Kate's confusion and doubt to leave only fear. She tore her eyes from his face and stared blindly at the wall, thought of Moshe and then raised her right hand to press the alarm bell. Yet even as she made this move, her fingers wavering in the gloom, she was bathed in a wave of heat, her raised arm became numb, and she thought she heard his voice inside her head, a sound stripping her senses. She stepped back, her heart pounding, wanting to scream but simply gasping, the breath drawn from her lungs by the wave of

heat that seemed to pour from his body. Then the light flared up around him, a shimmering haze distorting his features, and Kate blinked and it faded away, taking with it the burning heat. Kate gasped and licked her lips, trying to control her pounding heart, then fearfully, helplessly, as if no longer in charge of herself, she dropped her hand and was drawn again to his eyes, mesmerised by their brilliance.

'What is that?' he asked.

'It's a bell… to call those listening.'

'Those listening?'

'Our voices are being recorded. They can hear us in another part of the hospital. But they won't come in here until I ring the bell. They want to talk to you, also.'

'They are men of authority?'

'Yes.'

'That is good. With such men I can give and receive and eventually find revelation. What is willed, will be done.'

The brilliance faded from his eyes and the room returned to normal as he stepped back, gave an audible sigh and then nodded at her. The fear fell away from her and was replaced with a rapidly growing, protective love as inexplicable as the paralysis that had preceded it. She was transported out of herself, her will now his will, and she stepped forward and saw in his gaunt face a terrible weariness. He covered that weariness with his hands, bowed his head and murmured something, then moved away to sit on the edge of the bed, leaning forward and taking deep, even breaths. Kate was overcome with emotion, with a desperate, inchoate yearning, and she turned aside, too shaken to say anything, and finally managed to press the bell.

She stood there for some time, keeping her finger on the bell, thinking of the bright star, the storm advancing towards her, the black monolith rising out of the rubble, Moshe embracing her in that ultimate darkness as their hearts beat together. She also thought of the stranger's recovery, of her own weakening as he grew stronger, of her dreams about his life growing out of the void and her belief that a bond existed between them and might never be broken. And then she thought of his mesmeric powers, of the light and heat that had emanated from him, and she shivered, feeling fear and love at once, and wondered what was still to come.

Footsteps could now be heard racing along the corridor outside. They

stopped right by the door. Kate looked up as the door opened and Moshe entered the room, his eyes, also grey, very bright and intense as he stared at her, nodded, then studied the man on the bed, obviously shaken by the revelation of his recovery. The man raised his head, spread his hands out in the air; then, his face still gaunt with that terrible weariness, and yet, in contradiction, almost radiant with inner peace, quietly offered the words that gave substance to his being and separated him from all other men.

'My name is Joshua,' he said.

20

Leaving the hospital in the early hours of the morning, walking away from the room in which the miraculous had occurred and his own world, once orderly, had exploded, Moshe felt his heart beating and electrifying his blood, while his thoughts, uncontrollable, swirled around the image of Kate, her brown eyes reflecting rapture and fear before the man from the Mount. Moshe stopped once and took a deep breath, blinked his eyes and glanced around him, seeing the spacious reception area, now quiet, nearly empty, trying to will himself to accept that it was real and not part of a strange dream. A medical orderly passed him, his white smock rustling in the silence, and Moshe bit his upper lip and then walked on, heading for the exit.

Kate's face floated before him, making his heart race all the more, drawing his buried self out of its tomb and resurrecting his lost hopes. He thought of his wife and children, of how their deaths had affected him, and understood that the appearance of the man from the Mount was, with its mystery and terrifying implications, tearing him from the rock of his former self-discipline and leaving his emotions, long hidden from further wounding, exposed and responsive to Kate's presence.

He walked through the swinging doors and stopped again on the top step, breathing deeply of the chill morning air and gazing up at the cloudy sky. There were no stars up there and the silence was complete, but he felt, as he had never felt before, that the void was alive. Reality was the dream, the illusion masquerading as truth, and the very presence of the man from the Mount had made logic redundant. What manner of man was he? What had kept him alive? Moshe remembered the ringing bell, his urgent race along the corridor, the door opening to reveal Kate's haunted eyes, the naked man just behind her. After that it became unreal, a confusion of noise and motion, people coming and going as if in a dream because no one could grasp it. Moshe recalled it vaguely, still too dazed to take it in: the startling words on

the tape-recording, the interrogations leading nowhere, the man's ambiguous recollections and invincible calm as Kate, like someone caught in a trap, retreated into herself. Once Moshe reached out to touch her, ignoring the doctors and security men, and this recollection - of his fingertips at her pale cheek - had a pure, vivid clarity. All else was but a dream that would surely soon dissolve: the security men taking over, the man facing them with frightening self-containment, the door finally shutting him in as Kate was escorted along the corridor and laid down on a bed in another room. Moshe had stood beside her bedside, looking down at her closing eyes, wanting to drown in her lips, on her body, and walking out with reluctance. Was it logical? No. But it had exploded his last defences. Confusion and fear, love and yearning and pain, had rolled over him to sweep him away from the chains of his past.

Moshe knew what was happening to him, but he didn't quite know why. It had started on the Mount of Olives when he first laid eyes on Kate and saw, in the stricken rigidity of her features, his wife and children in death. A nightmare and dream, an ending and beginning: the ending of his self-willed emotional isolation and the beginning of his obsession with Kate and her buried pain. So, it was happening and he had to accept it; but now, as he stood and watched the dark clouds in the black sky, he could no longer ignore the nagging possibility that Kate's helpless involvement with the man from the Mount, was, like his own helpless involvement with Kate, preordained and impossible to break.

Moshe lit a cigarette, inhaled deeply and blew the smoke out, then walked down the steps and turned left towards the small, modern synagogue. Still shaken by what had happened, his every thought including Kate, he was startled out of his reverie when a dark figure emerged from beneath the Marc Chagall windows of the synagogue. Moshe froze where he stood, his body tensing for action, but then, as the shadowy figure advanced, he recognised Leon Halcomb.

'Not you again,' Moshe said.

Leon stopped just in front of him, swaying slightly and steadying himself, removing a silver hip flask from his lips and grinning laconically. He had obviously been up all night and was clearly very drunk, his tie loose, his face sagging with exhaustion, his bloodshot eyes blinking repeatedly.

'An early-morning call,' he said, grinning, 'but I've been waiting for

hours.'

'What for?'

'A few answers.'

'You're drunk.'

'That's very true.'

'I'm not accustomed to talking to drunkards, particularly at this time of the morning. Go to bed, Leon. Sleep it off.'

Leon winked and cocked his head, waving one hand in refusal, leaning forward and then straightening up again, trying to keep his eyes open.

'Unpleasant, major-general. Not sociable. I'm only doing my duty, after all.'

'What duty?'

'The journalist *par excellence* never sleeps. You should know that by now.'

'This is ridiculous. Get out of my way, Leon.'

'No.'

'If you don't move, I'll have you arrested.'

'Kindly have me arrested.'

Moshe sighed and shook his head, feeling contempt rather than anger, then, recalling the relationship between Kate and this man, let the anger and bitterness wash through him. He tried not to think about it, to retain his objectivity, but a vision of Leon and Kate coiled together sprang to life in his head. He looked at Leon and then lowered his eyes, trying to obliterate the image, then shook his head from side to side, shame and guilt whipping through him.

'All right,' he said wearily, raising his head. 'What is it this time?'

'The same as always,' Leon said.

'You know that's not possible.'

'Why?'

'We have our reasons.'

'Either let me see Kate or give me a reasonable explanation. Damn it, Moshe, you know you've no right to hold her, and I'll soon have to use that fact.'

'Any mention of Kate in your column and you'll be out of this country.'

Leon visibly stiffened, his shoulders straightening, his hip flask motionless, the hand holding the flask near his lips, his eyes staring across it.

Moshe saw his eyes clearly, even through the starless night, and realised that Leon, though drunk, had not lost his wits. For a moment Moshe almost admired him - or at least respected his tenacity - but then, when Leon grinned, offering the blade of his mockery, Moshe felt his detestation returning like phlegm in the throat.

'Are you threatening to deport me?' Leon said dryly.

'Something like that,' Moshe replied.

'Then you must be holding Kate against her will.'

'No, Leon, we're not.'

'She can't still be in shock.'

'I'm not at liberty to discuss her condition.'

'Nor, may I assume, are you willing to expand on your rather curt answers.'

'You assume correctly.'

Leon grinned and lowered his eyes, studying the darkness around his feet, nodding his head as if talking to himself and then looking up again.

'This is a very strange business,' he said softly. 'I just can't work it out.'

'I'm not sure what you're getting at, Leon.'

'I'm talking about that incident on the summit of the Mount of Olives and, in particular, about the people you brought down from there and placed under guard in this hospital.'

'We've discussed all this before. There's nothing more to add. The destruction was caused by some unknown phenomenon and those people, including Kate, are being kept under observation for that very reason.'

'Then why all the secrecy? Why can't I even *telephone* Kate?'

'She was caught in the eye of the storm. She was therefore confused. We don't want her, or the others, to speak to the media until we've sorted out just what happened. We would not, after all, wish to cause undue panic because of honestly reported misinterpretations.'

'That sounds very pedantic, major-general.'

'It wasn't intended that way.'

Moshe glanced past Leon's head at the cars beyond the garden, saw the darkness over the valley below, the soaring hills farther on. He felt exhausted and unreal, his thoughts slipping and sliding, and he knew, as he returned his gaze to Leon, that he would have to be careful. Leon's head was tilted sideways, shoulders slumped, but his eyes remained bright. He raised the hip

flask to his lips and had a drink, licked his lips and then sighed.

'What about the belief of the Americans and Russians that something actually crashed on the Mount of Olives?'

'Nothing crashed and you know it. If anything had crashed on the Mount of Olives, Kate wouldn't be alive right now.'

'It could have been something small,' Leon insisted. 'Perhaps a satellite exploded and part of it - a very valuable part - destroyed that church on the Mount.'

'You've been reading the wrong newspapers,' Moshe replied.

'Really?'

'Really. There was no sign of scorching or radioactivity - and that site is now open for inspection.'

'And the bulldozers?'

'What about them?'

'Why did you need them, if not, as some have claimed, to cover up a large hole in the ground?'

'There was no large hole in the ground. The rubble of the ruins had fallen across the road, and we simply used the bulldozers to push it back.'

Moshe kept his gaze steady, challenging Leon's laconic grin, trying to force the image of Kate from his mind and control his emotions. Her body. Her naked body. Leon naked between her raised legs. He was shocked that he could think this, visualising it with such clarity, and his shame at the strength of his possessive outrage caused his heart to beat quicker. This is lunacy, he thought. An unforgivable childishness. The man from the Mount is alive, his resurrection could change history, and I can't keep that thought in my head because of Kate Hirschfield. He put his hand up to his face, closed his eyes and rubbed his forehead, then opened his eyes again and looked at Leon, wondering how he could lose him.

'Well,' Leon said, 'we can only hope that you come up with a rational explanation pretty soon, because apart from my personal interest in getting Kate out of there, the lack of an explanation is already starting to cause you embarrassment.'

'You've lost me again, Leon. Absolutely.'

Leon nodded and grinned, obviously amused by Moshe's denial. He put the hip flask to his lips, had a drink, lowered the flask, then wiped his lips with the back of his hand and kept his gaze steady.

‘You know exactly what I mean, Moshe Eitan. You know exactly what the Chapel of the Ascension, the Golden Gate and the Muslim graveyard mean to certain Christians, Jews and Moslems respectively. It’s no secret at all that the Christians are extremely disturbed by the destruction of the Chapel of the Ascension and are demanding a coherent explanation. Nor is it a secret that the opened graves in the Muslim graveyard have encouraged a lot of Moslems to believe that their Day of Judgement is at hand - and that last week there were moderately violent demonstrations by some of those Moslems. Finally, word of mouth has it that the recent embarrassing clash between Netorei Karta zealots and your own conscript troops started because the zealots wished to worship at the Golden Gate - now collapsed, therefore open - and were incensed that that area, like the Muslim graveyard, had been cordoned off. Word of mouth, frequently reliable, also insists that those zealots are convinced that the opening of the formerly sealed Golden Gate is a sign that the Messiah will soon be coming to usher in the redemption.’

‘Pure hypothesis,’ Moshe said.

‘Is it? I wonder. Such scenes are increasing rapidly around Jerusalem - in tandem with the rumours. This suggests, Moshe, irrespective of what you might say, that what happened on the Mount of Olives, if left unexplained much longer, could lead to bad trouble in Jerusalem.’

Moshe felt his heart racing, but he kept his gaze steady, trying to look more assured than he felt, a distant fear creeping towards him.

‘I’m tired of all this,’ he said. ‘It’s four o’clock in the morning. I think I’d like to go to bed and forget this whole business.’

‘You sleep alone?’ Leon asked.

‘What was that?’ Moshe said, startled.

Leon took a step forward, tilted his head and grinned mockingly, his eyes glinting in the moonlit darkness, his gaze steady and sharp.

‘I just wondered,’ he said. ‘You’ve been a bachelor for a long time. Not a thing has been revealed about your personal life since the death of your family. Interesting, yes? Moshe Eitan, the Jewish hero. Idolised by half the women of this country, but has no private life. No woman has told her tale, no pleasant vice has been reported, and Moshe Eitan, the macho warrior and *folks-mensh*, seems as pure as the driven snow. Give me a story, major-general. A real exclusive for the masses. The real man behind the public image, naked and unafraid.’

The rage took hold of Moshe with sudden, shocking force, blinding him to all but Leon's face as it wavered in moonlight. He balled his fists by his sides, clenched them tight but kept them there, trying to fight the enormous tension in his body and the urge to do violence. He saw Leon staring at him, grin mocking, eyes observant, and he wrenched himself back to common-sense and slowly unclenched his fists.

'My private life is my own,' he said.

'Do you actually have one?' Leon responded.

'Your anti-Semitism is becoming obscene, Leon, but you've no right to ask that.'

'I'm not anti-Semitic, Moshe. I'm against Zionism; there's a difference. If I were anti-Semitic I wouldn't be concerned for Kate Hirschfield.'

'You're concerned only for yourself. She's your mistress, as is well known. Your concern is for your own empty bed, so let's leave it at that.'

'That's *my* private life,' Leon said.

'Then kindly keep it to yourself.'

'I just thought, given your celibacy, that you'd like to hear about it.'

'Keep your filthy mouth shut!'

Moshe regretted the words immediately and recoiled from his own vehemence, stepping back and then a little to the side, as if about to move off. Then he stopped, suddenly numb, feeling Leon's eyes upon him, and turned his head to look directly at him and gauge what he was thinking. Leon was leaning slightly forward, his brow furrowed in concentration, the mocking smile no longer on his face, his ascetic lips tight. Moshe watched him, feeling cold, the distant fear now surrounding him, and then Leon, as if realising something, straightened up and nodded.

'Is that it?' he said. 'Two motives disguised as one? One motive is the mystery of what happened on the Mount of Olives; the other, more touching, is that the great Moshe Eitan has romantic designs on Kate Hirschfield. Don't tell me it's true, Moshe!'

Moshe started to walk away, feeling torn by rage and guilt, but Leon, moving forward quickly, grabbed hold of his elbow. Moshe tugged his arm loose and looked around to see Leon's flushed face.

'It's true, isn't it?' Leon said.

'Don't be ridiculous,' Moshe replied.

'Damn it, Moshe, it's written all over your face; her very name gets you

jumping.'

'You're drunk, Leon. You're talking nonsense.'

'Damn you, Moshe, tell the truth! You can hardly bear to hear her name mentioned - especially by me.'

'That's enough. I'm going home.'

'I want to see her.'

'You can't.'

'Two motives instead of one, Moshe. I know it! *That's what you're hiding*!'

Moshe hurried away, whipped on my Leon's voice, something breaking and crashing down inside him, leaving him damaged. His rage gave way to guilt, a shameful acceptance of the truth, and he marched across the garden towards the parked cars with his heart pounding furiously. Then he heard Leon's voice, ringing out of the night behind him, loud and precise and filled with rage, almost out of control.

'You won't get her, major-general! You hear me? *You won't get her*! And don't pretend you're just performing your duty! *You won't keep her that way*!'

Too ashamed to face Leon, Moshe didn't look back, but instead kept walking towards the cars parked above the valley's vast darkness. He climbed into his own vehicle, slammed the door and drove off quickly, relieved when the hospital fell far behind him and the darkness surrounded him. The clouds were thinning, letting moonlight filter down, illuminating the desolate, silent land on both sides of the car. He drove slowly and carefully, too disturbed to go faster, still shaken by what Leon had said and by his own urge to deny it.

Yet he could not deny it, and was haunted by Leon's words, having to accept that he had lost his heart to Kate and was helpless before her. Leon had seen it in his face (and doubtless heard it in his voice) and now, as he headed up the hills towards Talpiot, Moshe was shocked that he could so little conceal the love and pain he was feeling.

He glanced down at Jerusalem, now sleeping, couched in darkness, and shivered, thinking of what the storm had brought and what it meant to the future. The public or private future? In his mind they were the same. He could no longer separate his love for Kate from his personal history; nor could he divorce it from the events on the Mount of Olives and his own

emotional involvement in those events. And this confusion, aroused by his extraordinary experiences with Kate, was what Leon had sensed and laid bare.

Moshe pulled into his driveway, climbed out of the car, glanced down at the darkened domes and minarets of Jerusalem, then looked thoughtfully at his house. A light shone in the living room, beaming out over the patio, and Moshe, knowing who was inside, thought of Leon and trembled. My private life, he thought. What ever made him think of that? He recalled Leon's words, his invidious suggestiveness, and was lacerated with shame and trepidation as he approached the building. Does Leon know? he wondered. Or was it just jealous spite? The questions coiled like thorns around his heart as he opened the front door.

He locked the door behind him and walked through to the living room, feeling burdened with the weight of Leon's words and his own guilt and shame. Leah was sitting in an armchair, drinking a Sabra, her long legs crossed, her dark hair falling onto her dark dress and the curve of her breasts. She glanced up when he entered, smiled sleepily, waved one hand, her fingers tanned and thin, devoid of rings, her fingernails bright with polish. Dark eyes, like his wife's eyes, like Kate's eyes, dark as death, each face blending into the other and stripping his senses. He stopped just in front of her, tried to smile and failed dismally; instead he reached out and stroked her hair, then let his hand fall away.

'You're late,' she said.

'I was held up at the hospital.'

'I'll have to charge you extra for that.'

'You always do,' he replied.

My private life is my secret shame, he thought, and Leon somehow sensed it; now, on top of my jealousy and rage, I'll have to live with his knowing. Yet why do I do it? Why not someone who cares? Why must it always be someone who treats it as trade? He glanced around the room, surveying the photographs of his family, concentrating on his wife with her dark hair and dark eyes, wounding himself by looking back down at the whore and accepting what he was doing. No involvement, he thought. The denial of emotion. A pathetic charade involving dark hair and dark eyes, but no involvement other than that: their flesh bought but not yielding. Now he knew what he was doing, had been doing all those years, and as he draped his

jacket over the settee he saw Kate there in front of him.

'What do you want, Moshe?'

'The same as always,' he replied.

'You won't solve the problem that way,' Leah said. 'My hands won't make her go away.'

'It's all I can do, Leah.'

'I doubt that, major-general. You won't betray your late wife by coming inside me; you'll just put her to rest at last.'

He smiled at that, but shook his head from side to side, saying nothing but feeling the anguish swelling deep inside him. She was wrong: he couldn't do it. He hadn't been able to do it for years. He had loved and his love had been so true that his wife's death had numbed him. An emotional and physical paralysis, a retreat from further wounding; he had wrapped himself in ice and drifted away past all hope of returning. Now he looked down at Leah, his secret whore, almost an old friend; saw his wife and then Kate, one face superimposed on the other, and understood that what he was seeking in Kate was his own resurrection.

His emotions swelled up and threatened to burst his beating heart, grief and love and inextricable guilt bringing tears to his eyes. He undressed quickly, letting his clothes fall to the floor, then sat in the chair and started trembling as if with some fever. Leah stared at him, startled, opening and closing her lips, then she undressed and knelt on the floor and placed her hands on his thighs. He tried to smile but couldn't manage it, so closed his eyes and put his head back, concentrating on the softness of her lips and the artful play of her fingers. Then Kate entered his mind, her dark eyes revealing death, the dark eyes of his wife staring sunward, gazing into eternity. He opened his eyes and looked down, seeing himself in Leah's fingers, thinking of what Leon had said, of the wounds Kate had exposed, of the destruction inherent in his need to view her as his manifest destiny. That belief was a charade, an infantile self-deception, a subterfuge for the more basic need to lose his guilt in Kate's body.

Understanding this, Moshe broke, groaning aloud and then sobbing, letting the waves of pain pour out to leave him spent in the relative peace of acceptance. He sobbed a long time, quietly, without shame, and then stood up, waved a hand in rejection, and entered his bedroom.

He lay down and closed his eyes, drifting languidly in the darkness, then

sat up when he heard Leah's footsteps, the door opening and closing. He then reached for a cigarette, lit it and inhaled, blew the smoke out as he climbed off the bed and returned to the lounge. The room was empty and silent, chilled by memories of grief, and eventually he looked around him, studying the photographs of his family, and accepted that he had turned the room into a mausoleum for the shards of the broken past.

My wife and children were killed, he thought, and the pain was too great; my emotions, stripped bare at that moment, turned as cold as the dead. He shuddered again as he remembered (*the dead eyes staring sunward*), then inhaled too deeply on his cigarette, still aware of his beating heart. I had to live with it, he thought, and the pain was unendurable; so fearful of ever suffering like that again, I turned away from involvement. He blew smoke to the cold air, watched it drifting away, dissolving in the air like his will, disappearing forever.

What he faced was the truth, the revelation of his self-defeat, the knowledge that he had suppressed the very emotions that give men dignity and instead filled the wastelands of his scorched soul with patriotism and duty. No love had been admitted, no potential pain invited, and his physical needs, divorced from his emotions, had been coldly appeased. The occasional whores had been necessary, preventing the humiliation of self-abuse, but their hands, while drawing the seed from his loins, could not obliterate the shame of a transaction that ignored deeper feelings. Now those feelings had returned, arising out of his hidden depths, resurrected by the miracle of the man from the Mount, then given new life and commitment in the mirror of Kate's eyes.

The miracle of the Mount had indeed introduced him to Kate, but his feelings for Kate were not miraculous. He loved her and wanted her with him in the most Earthly way.

Moshe took a deep breath, stubbed his cigarette out, straightened up and glanced around the room in which his hopes had been buried. He shook his head from side to side, silently admonishing himself for his stupidity, then walked around the room, took his family photographs down, and then, feeling sadness and joy at once, locked them up in a cupboard. Finally, still naked, hardly aware of the cold, his thoughts filled with Kate and the possibility of redemption, he stood on the patio and looked down on Jerusalem, which, like the dream of his lost years, was emerging from darkness.

Jerusalem the Golden. His home. What would become of it?
He wept again before dawn broke.

21

The Range-Rover braked to a halt in front of an old villa high in the hills above Tyre, near the southern border of Lebanon. The villa was the headquarters of the local Fatah command, and Leon, examining it, was struck by its modesty, not failing to note its peeling yellow walls and loose, broken tiles. Below the mountain clearing were the sun-scorched valleys of citrus trees, above it loomed the encircling, snow-capped mountains. The clearing itself was surrounded by Cyprus trees and filled with trestle tables and long wooden benches. The tables were covered with clean plates, mugs of coffee and bottles of beer; and the Arabs who should have been sitting there, Lebanese and Palestinian, were gathered together at the far end of the clearing, listening to their leader, the renowned Rashid Idriss.

Climbing out of the Range-Rover, the dust drifting lazily around him, Leon felt the fierce heat, experienced a fleeting spasm of nausea, and silently cursed himself for having drank too much the previous evening in Beirut. The drinking, excessive even by his normal standards, had followed a restless sleep during which he had dreamt of Kate in the storm over the Mount of Olives, her long hair streaming out in the wind as she drifted magically away from him. Now, as he placed his feet gingerly on the ground and heard Rashid Idriss propagating the Palestinian cause, he understood that the dream, which refused to leave his head, was the product of his increasing frustration at not seeing Kate for so long. She was still locked up in the hospital, well protected by Moshe Eitan; and Leon, standing between his two Fatah commando escorts, realised that his negative feelings about Moshe were not based solely on political differences.

Moshe's most immediate enemy, Rashid Idriss, was still giving his speech to the Arabs gathered in front of him under the Cyprus trees at the far end of the clearing. His audience consisted of Palestinian refugees, the more committed aristocrats of Beirut, uniformed Fatah commandos and dark-eyed

Arab children, some ragged, some beautifully dressed. All of them were listening with the attention of the devoted as Rashid, exceptionally youthful for a man in his early forties, eloquently harangued Zionist Israel, praised the tenacity and courage of his own fighters, and implored those in a position of strength - the sophisticated and wealthy Lebanese - to support the Palestinian cause. His voice, which in normal speech Leon had found to be strikingly quiet, was now surprisingly loud and impassioned, almost messianic.

'We must not give in!' he cried out in summary. 'Without a homeland we are nothing! Our people are of the desert and the mountain and the river; and, by the will of Allah, will remain so when the Zionists are dust. To this end, and for the sake of our children, we must continue the fight. Those who carry the guns must fire them, those with wealth must lend their support. We must not be divided, one Arab against the other, while the Jews increase their expansionist activities. Palestine belongs to the Palestinians. *Revolution until victory*!'

When Rashid raised his balled fist in a dramatic gesture, the Arabs around him cheered and applauded. The Fatah commandos, including those at each side of Leon, then started to chant 'Revolution until Victory!' while raising and lowering their weapons in unison. Stepping down from the bench upon which he had been standing, Rashid disappeared into the jostling mass of excited men and women, many of whom were obviously attempting to embrace him or kiss the back of his hand.

Familiar with such scenes of politically based adulation, but in no way moved by them, Leon lit a cigarette, inhaled deeply, and then cast his eyes around the clearing. The smell of chicken stew and boiling rice led his wandering gaze to the Arab women, wearing aprons, who were stirring the contents of some large, steaming cauldrons near the encircling trestle tables; beyond the tables, beneath more Cyprus trees, were the Range-Rover, Mercedes Benz and BMW cars that had brought most of the people up from Beirut or the nearby refugee camps. Looking back at the tables, Leon saw the Arab women setting down jugs of coffee and tea, bottles of beer and plates for the food, while those around Rashid Idriss, hugging one another and talking excitedly, moved away to take a place on the long wooden benches.

Emerging from the tight circle of his most trusted men, Rashid, wearing his Fatah uniform, his eyes shaded beneath a peaked cap, walked up to Leon and stopped just in front of him with his right hand outstretched. When they

shook hands, Rashid stepped back and offered Leon a modest smile.

'So, Mr. Halcomb, you made it to our little gathering. I hope you enjoyed your short stay in Beirut and were not led astray.'

'And why should I be led astray?' Leon asked, sensing the seriousness behind Rashid's gentle mockery.

'I am told you're a man not averse to pleasure - and Beirut, for such a man, could be a temptation.'

'I was tempted only with thirst… and that was well satisfied.'

'Good,' Rashid said. 'I had hoped to meet you sooner than this, but…' He raised his hands in apology… 'I was unfortunately delayed.'

'That was a nice speech you made.'

'A bit theatrical, but necessary.'

'One of the benefits of formal education.'

'Quite so, Mr. Halcomb.' Rashid turned slightly sideways and indicated the only empty table. 'Come. You will sit with me. We will eat and then talk. I'm very glad you accepted my invitation and there is much to discuss. But first, a little Arab hospitality - if your stomach can stand it.'

Taking note of the last remark, Leon flushed and inhaled on his cigarette, his stomach less unsettled than before but still not in good shape. Saying nothing, he followed Rashid across the clearing and sat beside him at the trestle table. It soon became clear to him - after the Arab women had served the chicken stew and rice - that no one else would be joining them at the table. Confirming this supposition, Rashid indicated that Leon should start eating.

'You live humbly,' Leon said, gazing down at his steaming stew.

'To lead the people one must be *of* the people,' Rashid replied. 'My formal education hasn't made me forget that I'm an Arab. I eat as my people eat, and drink as they drink. A man needs food only for sustenance; all else is pretension.'

Leon nodded and smiled, then they both started eating, washing the chicken stew down with beer and talking only of small things. The stew was simple but delicious, settling Leon's upset stomach, clearing his head and making him feel more alert, his curiosity aroused. Aware that Rashid would not invite a Western journalist to this place for a routine interview, he wondered just what was forthcoming; and, also, why he had been singled out in particular. Rashid studiously avoided the issue until the meal was finished,

when, with a gentle sigh, he turned around to face Leon, his liquid brown gaze clear and steady, his lips forming a slight smile.

'You enjoyed the meal, Mr. Halcomb?'

'Yes. May I smoke?'

'Of course. Your pleasure is my pleasure.'

Leon lit a cigarette and inhaled gratefully, leaning back against the hard wooden bench. The other tables were completely full, the people leaning towards one another, drinking and waving their hands excitedly, their voices rising and falling. Around the clearing, at various points beneath the trees, armed commandos kept watch.

'I'm told that you've been trying to arrange an interview with me for some time,' Rashid said. 'This is true?'

'Yes,' Leon said.

'Why? I can't tell you anything that I haven't already told the press. My views, as you well know, have been widely publicised.'

'If you know that I've been trying to arrange a meeting,' Leon said, 'then you'll also know that I want something other than a redundant interview.'

Rashid smiled in acknowledgement of that truth. 'Correct,' he said. 'I was told it was something else. I was also told that you refused to discuss it with anyone but me personally.'

'Correct again,' Leon said.

Rashid's smile revealed genuine amusement combined with sly mockery. 'So,' he said, 'you're after something else. What might that be?'

'What I want is something that could give me an exclusive and be of considerable value to your cause.'

'Your concern for the Palestinian cause is touching. Now what do you *want*?'

The sudden change of tone was enough to convince Leon that Rashid, with his dark poet's gaze, could be pure steel at the bargaining table.

'What I want,' Leon said carefully, 'instead of a redundant interview, is the opportunity to present an intimate portrait of your men by travelling with them, let's say for a month, as they move around the country. More precisely, I want to travel with you, wherever you go.'

He kept his gaze steady as Rashid leaned back a little, no longer smiling, and studied him with those calm, thoughtful eyes for a considerable period of time. Eventually, when the silence became too much, he offered another

slight smile.

'And why should I let you, Mr. Halcomb, enjoy such a privilege when I've denied it to every other Western journalist?'

'You read all the Western newspapers, Rashid; you must know what I've written.'

'I assume you're referring to your anti-Zionist tirades.'

'Quite.'

'You're not the first Western journalist to take a stand against Zionism. Indeed, such a stand has become increasingly popular and may well be a profitable stand for a journalist to take.'

'I was attacking Zionism when the Western media was spitting on the Arab world. You know that, Rashid, as you also know that I gave a great deal of space to Arab grievances when no one else would.'

Rashid smiled again, raising both hands in the air as if begging forgiveness; nonetheless, a hint of mockery was still present.

'Yes,' he said, 'that's true, and your efforts have been appreciated; but I still must say "No" to your request.'

'Why?'

'Let me answer your question with another question. Do you really think you can explain the Arabs by travelling with them?'

'Yes.'

'But you've already expressed our grievances in your columns.'

'That's right,' Leon said. 'But the West isn't interested in those grievances because they don't trust the Arabs.'

'They don't trust the Arabs because they don't understand the Arab mentality.'

'Correct.'

'And you do?'

'Also correct.'

'Wrong,' Rashid said. 'You assume too much, my friend. You may sympathise with us, but you don't understand us; for this reason, when you try to explain us, you simply cause more distrust. How can you understand us? Even our poetry baffles you. We come from the boundless deserts, from bitter, harsh lands, from the places where no white man can endure let alone comprehend. You do not understand us. You define us by Western standards. And such standards, created out of your own needs, have no relevance to us.

Customs alone do not separate us; nor do language and politics; God's anvil, the desert, serenely beautiful and merciless, has shaped us in a manner that defies your relentless Western scrutiny. In your eyes we are cruel - to ourselves and to others - but our cruelty, which you view as barbarism, is the desert's quick justice. There are no laws in the desert - the rule of law is the white man's sword; in the desert, which respects no human need, there is only the burning sun. Life or death is all that matters; survival is all; we spring from the wandering nomads whose one enemy was nature and who found, to their cost, that there was only safety in numbers, with the individual subordinated to the whole. How can the white man judge us? He believes in freedom and mercy. But for us, who live where human life is cheap, freedom and mercy are dangerous. Such concepts are a Western luxury - life is easier in the West - but such concepts, if practised by the Arabs, could bring about our destruction. No, Mr. Halcomb, you don't know us at all. You may sympathise with us - and even try to accept us - but as long as the wind blows on the desert, you will not understand us.'

There was a sudden cacophony, blaring from loudspeakers in the trees, and from under the trees came a detachment of armed commandos, all marching in time to the music. Rashid turned away to watch them, nodding his head in approval, as they marched around the clearing, passing the diners at the tables, and eventually stopped in front of him, presented arms and then stood at ease. The diners all applauded, standing up, their hand raised above their heads; and then, at a nod from Rashid, the commandos broke ranks and went to join their families at tables still laden with food and drink. The music was still playing, extremely loud and discordant, when Rashid turned back to face Leon, who saw the steel in his brown eyes.

'Did you study them?' Rashid said. 'Did you notice how young they are? All Arabs, Mr. Halcomb, not one of them over twenty, and yet all of them have killed and will kill again without what you call conscience. That, also, is a Western luxury, a romantic notion of protected children; but *my* children know only one thing: that the homeless are lost. To dispossess the Arabs is to rob them of their pride; and an Arab without pride values nothing except getting it back. Homeless, they are lost and thus have nothing to lose; stripped of pride, their whole life becomes meaningless - and other lives, equally so. Thus, they will fight and die, and then their sons will replace them, one generation after the other until the Jews yield. How can you

understand? Nothing matters to you that much. You, with your ephemeral Western values, are divorced from such passion.'

Leon picked up his glass and had a long drink of beer, a nervous pulse beating in his stomach as he put the glass down again. When he raised his eyes, he saw Rashid leaning forward, his brown eyes wide and intense, beads of sweat on his forehead.

'Let's talk about Western values. What are *your* values, Mr. Halcomb? You say you want an exclusive and that it could be of value to our cause. In other words, my journalist friend, you are trying to convince me of your sincerity while helplessly admitting to your own selfish interests. But our cause means nothing to you. It's your exclusive that matters. It's true that you defended us while your fellow journalists reviled us; equally true is that by doing so, you became a controversial figure who was able to command a much bigger fee. Where were you before you defended us? On the fifth column of some back page. In defending us you got what you needed: a great deal of attention. And yet now you need an exclusive. Why is that, my friend? It's because the Arabs are no longer being reviled by your fellow journalists and your lone stand is no longer quite as profitable. In short, Mr. Halcomb, you need something that will set you back on your feet.'

Feeling his cheeks burning, Leon lit a cigarette, his hand shaking when he put it to his lips and inhaled deeply on it. He blew the smoke out slowly, squinting through it at Rashid, trying to control his face while his emotions collided in some dark pit where fear had dominion. He tried to speak but felt choked, his planned denial drowning in bile, rising up to his throat from the nausea in his stomach and emerging through his lips as a whisper devoid of conviction:

'That's not true,' he said feebly.

'Yes, it is, Mr. Halcomb. Did you think I would let you come here without having you checked out? I know all about you. You're a man with some problems. Your column is no longer popular, your income is falling dramatically, you drink far too much for your own good, and your reputation is crumbling. Also, you're a romantic, an idealist with no beliefs; and your cynicism, once directed at others, is now aimed at yourself. Idealists are pathetic: in the end, they can't face life. Your contempt for yourself is now evident in your work and represents your increasing sense of shame at your lack of commitment. No, Mr. Halcomb, it's not the Arabs you care for; what

you care for is an exclusive that will pull you out of debt and hopefully bury your feelings of failure in material success. You are, in short, a desperate man who thinks the Arabs can help him. All right, Mr. Halcomb, I will help you - but the price will be high.'

Holding the cigarette near his lips, Leon started shaking again. He lowered his hand to the table, nicked the cigarette, glanced around him, feeling sweaty and ill and bewildered, the truth making his ears ring. Failure based on disillusionment, desperation based on fear: the truth in Rashid's words hammered home and shattered all his defences. Kate had seen it as well - the defeat in his cynicism - and now, recalling the intensity with which he had made love to her, he understood that her revelations had stripped him down to the very bones of his terror. It was the terror of lost faith and a consequent loss of will; and finally he would have to pay the price, no matter how high.

'All right,' Leon said, his voice sounding hollow with defeat. 'What do you want from me?'

Rashid's face moved away a little, the slight smile still on his lips, his brown eyes still direct, though much softer, almost benign.

'I want to know what happened on the Mount of Olives,' he said. 'And I want to know what was brought down from there.'

Leon suddenly felt claustrophobic, sensing the trap closing in on him, as if his life, with its succession of failed hopes, was narrowing down to oblivion. He had reached middle-age and had little impetus left; his only remaining motivation was the fear of insecurity, and now Rashid, understanding the full extent of that fear, was about to push him close to the edge where decisions are made.

'Unknown atmospheric phenomenon,' he said. 'That's the official explanation – and very possibly it's all that they know.'

'I'm sorry,' Rashid said, 'but I cannot accept that.'

'Why?'

'There's been too much talk about something discovered on the Mount of Olives. Such talk is usually based on some kind of truth. It's said that the Jews cordoned off that area and worked throughout the night with bulldozers, obviously trying to cover up *something*. Also, it's known that the Arabs who lived in that area were evacuated from their homes and are still being held by the authorities without explanation. Finally, my sources tell me that you,

Leon Halcomb, have been spending a lot of time at the Hadassah Medical Centre, trying to find out why Kate Hirschfield has been held there under guard since the night she was brought down from the Mount. It's clear from all this that something strange is going on - and like you, I want to find out what it is.'

'And you want me to get you that information.'

'Correct. That's our deal.'

Leon thought about Kate and felt sick to his soul, aware that if he did what Rashid wanted, he would never forgive himself. He glanced up at the bright sky, blinked and stared about him, saw the commandos beyond the crowded trestle tables, heard singing and laughter. Lighting another cigarette, he saw that his hand was shaking, and understood, as he turned back to Rashid, that he was shaking with shame.

'They won't let me in to see her,' he said, trying to delay the issue, but realising, even as he spoke, how lame his words sounded.

'So,' Rashid replied, 'they won't let you in to see her. But sooner or later, they will have to release her and then you can talk to her.'

'That doesn't mean she'll tell me what happened,' Leon said, still trying to wriggle off his bed of thorns. 'If, as you seem to think, the Israelis are trying to keep the facts hidden, they won't release her without swearing her to secrecy.'

'You weary me, Mr. Halcomb. Why do you make excuses? The woman is your mistress, she obviously trusts you, so if you promise to keep your mouth shut, she will almost certainly confide in you.'

'I gain her confidence and then I betray her.'

'It's your choice, my friend.'

Leon saw Rashid's brown eyes, their liquid, limpid depths, and felt his will slipping away with the remains of his pride. He inhaled on his cigarette, felt nauseous and almost choked, coughed and stubbed the cigarette out and wished his heart would stop beating. The people around him had grown silent while an Arab sang a mournful song, his guitar weaving intricate refrains around his high, tragic voice. Leon listened and was captured, thinking of when he had last seen Kate, and was suddenly torn between his desperate need for her and the thought of betraying her. The pain welled up inside him, almost bursting his heart, and then he tried, even knowing that he was lying, to deny the inevitable.

‘I won’t do it,’ he said.

Rashid studied him a long time, his gaze calm but thoughtful, then he shrugged and opened the fingers of his right hand, as if releasing a dove of peace.

‘Fine,’ he said. ‘It’s your choice. Only you can decide. I leave the offer open should you happen to change your mind later on.’

‘I won’t,’ Leon said.

‘Perhaps not,’ Rashid replied. ‘But then we never really know what we’ll do until we have to decide. Only you can decide what is most important to you: the respect of Miss Hirschfield or your whole future. No information, no exclusive. The choice is all yours, Mr. Halcomb, and soon you must make it.’

Leon put his head down and closed his eyes to survey the darkness, trying to lose himself somewhere in the void at the back of his head. The sound came out of that darkness, first a sibilance, then a screeching, then a roaring that erupted all around him and tore through his mind. The air was sucked from his lungs in a terrible, soundless rush, and he opened his eyes to see the earth spinning over and slamming down on his face. Pain exploded from his head and stabbed through his body as he choked on dirt and stones and felt the ground shaking against his belly. More screeching, more roaring, waves of heat and raining soil, then something slammed into his spine and stopped his movement as he opened his eyes again. He saw mushrooming soil, sheets of flame in boiling smoke, a screaming woman racing after a burning child, bodies spinning and breaking. Above the smoke something glinted, a Phantom jet climbing high, looping over and swooping back towards the clearing at high speed.

The ground erupted again, spewing soil and vegetation, human screams daggering out of the explosions as the flame and smoke blended. Leon grabbed hold of a tree-trunk, tried to stand and collapsed, looked about him and saw Arabs running to and fro through the murk. A man jack-knifed to the ground, a shredded woman shrieked and writhed, a bloody child stood with his thumb in his mouth, the smoke swirling around him.

Leon tried to stand up again, heard a roaring, felt the blast, was jerked away from the tree and pulled around and found himself facing Rashid, his brown eyes, unnaturally bright, filled with anguish and rage, almost unreal as they floated in the smoke that grew darker each second. Rashid was shouting at him, jabbing his finger towards the trees, and then he grabbed him by the

shoulder and pulled him forward through the bedlam and chaos. Leon followed, or tried to follow, his spirit willing, the flesh weak, but he was picked up in a maelstrom of light and noise and then hurled back to earth. There was no fear at all, just the familiar disbelief, and he rolled across the ground automatically, his hands over his ears. The ground shuddered and rumbled, then the rumbling became a roaring filled with shrieking and hissing and spitting and dull thudding sounds. Leon lay on his belly, opened his eyes and stared ahead, saw a man rising out of the streaming smoke, his arms outstretched and pleading. Ringed with fire, he became a torch, a flaming figure staggering forward, some sound that was not remotely human coming out of his melting lips. The smoke swirled and devoured him, passed on across the clearing, left behind it a smouldering black rag that sank to the ground. The bloody child still stood alone, sucking his thumb and staring blankly, then a white-robed figure swept him away as flames licked at the empty space. Leon lay there, stretched out on his belly, staring into the chaos.

Death. Devastation. The Israeli jets shrieking. People screaming and bawling and falling down and waving fists at the sky. It only took a few minutes, but seemed to go on forever, the jets shrieking overhead, the ground erupting and roaring, the smoke swirling around the Arabs as they raced to and fro, tripping over the fallen bodies, grabbing hold of one another, weeping and screaming and cursing, the villa blazing behind them.

Leon lay there and watched, the smoke stinging his eyes, feeling bruised and exhausted and filthy, only saved by his outrage. The anger defeated fear, gave him someone to hate, and eventually, as he watched the Israeli jets flying away, also gave him the justification that he needed for what was to come. The jets disappeared, leaving drifting smoke and silence, and Leon climbed to his feet, shaking his head, clearing his ears, then heard broken sobs, children crying, people groaning, and turned his head, when a hand touched his shoulder, to see Rashid's brown eyes.

'We are cruel?' Rashid said. 'The Arabs are cruel? Take a good look around you, Mr. Halcomb, and then tell me what justice is!'

Leon saw the smoke thinning out above the clearing, drifting away from the smouldering trees and blazing villa, making the blue sky look grey. The clearing itself was a shambles of broken tables and chairs, countless shards of glass glinting from the charred, blackened soil in the hellholes. Here a dismembered head, there the bright splash of intestines, all around the

blistered flesh and shivering limbs of the mortally wounded. A woman wailed and rocked her child, a bloody bundle in her arms; a man sat up and looked at his mangled legs and then screamed and fell back again. Blood flowed and congealed, soaked the ground, dried on hot stones, and the boy with his thumb in his mouth gazed about him with blank eyes. Leon stared and saw it all, the pure horror, his excuse, then he turned back to Rashid, his stomach heaving, and heard the shame in his own voice.

'I'll do it,' he said.

22

He was not a supernatural being but a man of flesh and blood, yet unmistakably one with divine gifts or supernatural abilities. Kate, in her fear and love, had understood this from his awakening, but as the days passed and his empty mind was filled she had the proof to contend with.

He learned remarkably quickly, never forgetting what he heard or read, sublimely calm as he sat like a prisoner in his room - asking and answering questions, reading books by the dozen, letting the facts of contemporary life colour the darkness of his mind - or lay on a table in the laboratory, being examined by physicians and psychologists, his silvery-grey eyes bright and undisturbed, his bearded face in repose.

He still called himself Joshua and remembered the Teacher of Righteousness, but other than what he had told Kate, his past was an empty page. He had told her all he knew and could not fill in the blanks, knew nothing about his own resurrection and seemed to care little. He existed; it was enough. ‘I am that I am,’ he said. The statement was startling for many reasons, not least for its arrogance, and it led to a further flurry of examinations by a variety of specialists.

The hypnotists tried and failed, unable to capture his mind, but then, almost amused by their perplexity, he put himself into a deep sleep. No fresh memories were unveiled, no hidden secrets revealed; in his trance he merely repeated, word for word, the fragments passed on to Kate. He then awakened of his own accord, obviously refreshed, smiling slightly, and mesmerised the hypnotist sitting above him by simply waving his hand.

‘What do you see?’ he asked.

‘What you described,’ the hypnotist replied. ‘I see the scrolls in the dark caves, the Teacher of Righteousness, yourself as a child being presented in the temple; and now… Yes, I see you… You look like a mature child, perhaps thirteen or fourteen years old, sitting in the shadows of the

colonnades, having words with the priests.'

'You are seeing what's in my mind?'

'I'm seeing what you remember… Baptism in the water, a white dove, meditation in the wilderness, your temptation… You're now a grown man.'

'You may wake up now.'

The hypnotist awakened and retreated in confusion, taking with him his very frightened colleague and saying nothing to Kate. Joshua sat up on the bed and stared at her, smiling slightly, making her feel the love and fear as a single emotion that defied human reasoning. She wanted to walk out of the room, to be alone with her thoughts, but his eyes, with their silvery-grey neutrality, seemed to drain her of will.

'Love and fear are the same,' he said, as if reading her mind, 'for love is the surrender of that self which we need to protect us. If you cannot forget the fear, you must accept it and learn to feed off it.'

The linguists were also foiled, pacing back and forth, muttering, making tape- recordings of his voice, analysing his speech patterns, trying to trace his accent back to its time and source, but becoming hopelessly lost. The Tower of Babel was in his speech, a veritable multitude of voices; he spoke every known language with a casual, startling fluency, his accents fitting the region requested with infallible accuracy. The linguists were stunned, unable to believe their own findings, knowing no more at the end than they had at the beginning, having to confess that his origins were a mystery, his time indefinable.

'What do you hope to find?' he asked them. 'There is only one voice. It is the voice of each and every individual and belongs to the whole. I do not select my speech. I speak in the tongue of the one addressing me. I speak without thought or calculation and let the words build their own shape.'

'You speak every known language.'

'There is only one language.'

'You have every possible accent at your command.'

'There is only one accent.'

He glanced at Kate as they left, offering nothing, demanding nothing, quietly forcing her to travel down through her Self to some point beyond nakedness. Stripped bare, she was defenceless, a throbbing core of raw emotion, pulsating and then spreading out to become pure sensation. There was beauty and terror, the primal scream of inchoate rage, ecstasy and pain

and redemption as she blossomed inside herself. Darkness gave way to light, a mere pinprick growing larger, then she blinked and saw the sunlight pouring in on his hair and beard.

‘You are everything,’ he said, ‘and without you, there is nothing. Through ourselves we make the universe manifest - and without us it cannot be. You must not be frightened of this. You must accept your fleeting grace. You are here, we are here, in this room and outside it, as we were in the past and are now and will be in the future. This concept must not destroy you; it must give you strength and faith. In me, and in yourself, you must believe and thus find your true nature.’

The psychologists crowded around him, wearing white coats and bland smiles, speaking softly as they tried to find the key to the hieroglyphics in which his nature was couched. They examined his learning and thinking, his intelligence and personality, his motivation and emotion and behaviour, his group dynamics and sensation-perception and possible psychoneuroses. He understood them and responded, teasing their lust for the unusual, playing tricks with their mazes and one-way mirrors and sound-wave generators, producing images on their spectroscopes and distortions on their colorimeters, spending days in the black silence of the anechoric room and emerging without the slightest sign of change, his silvery-grey eyes unblinking. The psychologists stopped smiling, but started rubbing their furrowed brows, utterly baffled by this apparently human creature who defied normal laws.

‘We have a ghost on the spectroscope. An image that shouldn’t be there. You were photographed in that chair and we saw that you didn’t move; yet here, in the photograph, standing right beside the chair, is a figure that shouldn’t exist.’

‘I briefly left my mortal shell. It seemed natural to do so. It is good to be released from the flesh, though it cannot last long.’

‘The electroencephalograph went crazy; it contradicted itself. It gave a normal alpha reading of approximately eleven cycles, yet it also showed extraordinary, almost violent activity in the deeper levels of the reticular formation. That just doesn’t make sense.’

‘I felt peace and excitement. I meditated and felt joy. I was calm, yet my spirit soared aloft to embrace sun and sky.’

‘You spent five days in the black room. You made no sound or

movement. You hadn't changed in the slightest when you emerged. What happened in there?'

'Nothing.'

'You weren't affected?'

'I didn't know that was expected. I was conceived out of darkness and silence and returned to it willingly.'

'You're not human.'

'I am.'

'Perhaps physically; not otherwise.'

'I only know that I am as you were - before your weakness stole from you.'

'*My* weakness?'

'The weakness of Man… his flight from the Whole.'

The last psychologist departed, the light of terror in his eyes, and then Joshua turned his gaze upon Kate where she stood by the window. She stared back, her thoughts colliding, feeling divorced from her body, torn by love and the fear of an awareness beyond what she had known before. She kept staring, trying to think, concentrating on his appearance, wondering why he had insisted on the white robe that now draped his lean body. He was a tall man, starkly handsome, at once gentle and imperious. The child in her saw a father, the woman in her saw a son, and somewhere between the two, lost in time, was the ghost of her former self. He had insisted that she stay with him, offering no explanation, and yet now, in her resentment, desperately yearning to be free, she understood that without his consent she lacked the will to walk out.

'I have patience,' he told her. 'You must practice the same. I do not know why I want you here with me, but I know it was willed. You were called and came to me, giving energy and light, and now, as I evolve out of ignorance, you will act as my beacon. What I bring, you have been seeking; what you offer is my reward. You and I, we are one and the same and but part of the Whole.'

The parapsychologists soon took over, using the notes of the failed psychologists, experimenting to learn the extent of his powers and understand how they worked. They strapped him into an electroencephalograph-and-cardiograph harness, checked his resting physiology, and discovered that he had a magnetic field surrounding his body that was only eight times less

powerful than that of the Earth; and that his brain-wave patterns could, at his conscious bidding, generate fifty times more voltage than normal. When this happened, windows cracked, tables shook, test tubes broke, while those standing close to him developed headaches or nausea and dizziness.

'How did you gain such power?'

'All men have such power. All men are of the earth and the sky, but refuse to have faith. What is willed, will be done; transcendence lies in faith. Rejecting faith, man rejects his hidden strengths and squanders his riches.'

'Your powers are very unusual.'

'They are commonplace, but ignored.'

'You're suggesting that you're just a normal man?'

'There are no normal men.'

He proved his point by displaying his aura without using colour-glass screens, standing radiantly before them like a thermographic photograph, his figure suddenly shimmering in a phosphorescent orange and red surround, his hair and beard black, his nose yellow, his ears green, striations of light spreading out from his fingers to disappear some distance away.

'I am normal,' he said. 'You have seen all this before. I merely show you what you see with your cameras and once saw with your eyes. You are blind and I give you sight. You lost your vision when you lost your faith. What I radiate, you radiate also, but your eyes now reject it. I am flesh and blood. Normal.'

Refusing to believe him, they continued to experiment, testing his psychokinetic energy, his eyeless sight and thoughtography, first placing him in a restraining jacket, then in a Faraday cage, then inside the thick steel walls of a radiation counting chamber from where, with stunning ease, he reproduced his thought images on the photographic plates in another room. He stared at objects and made them move, described objects when blindfolded, removed the blindfold and stared at some papers and set them on fire. All of this he did calmly, with a quiet, weary patience, until finally, both excited and fearful, the parapsychologists gave up.

'You're unbelievable,' one of them said.

'Believe and you will see.'

'Your physiology is normal, but that's all; otherwise you're a miracle.'

'Such a word has no meaning.'

Alone again, Kate was stricken, finally feeling fear for him, realising the

full extent of his innocence and what it might lead to. He knew not where he had come from, nor why he was here, and his ignorance about the world, particularly when combined with his paranormal powers, could lead to a multitude of dangers. Kate thought of this with grief, with a stabbing, maternal love, her fear of the unknown giving way to fear for his future. Then she thought of herself, of the horror expelled from her bleeding womb, and the guilt that had haunted her for years rose like smoke in her mind. Choked with shame and remorse, wanting to cleanse herself of sin, and wanting, even more, to nurture this full-grown child to manhood, she walked across the sunlit room and raised her hand and touched his chest with her fingers.

'I'm real,' he said. 'You know that.'

'I just wanted to confirm it.'

'You worry for me and resent me at the same time, wondering when I will free you.'

'I can leave anytime.'

'You may wish to, but you won't. You see your life in the mirror of my eyes and are starting to question it.'

'You frighten me.'

'No. You are reflected in my eyes. You look into me in order to see yourself, and that brings on the fear.'

'What fear?'

'Your past shame.'

'I did nothing to be ashamed of.'

'You lie to yourself in order to kill the pain, but it won't go away. Admit what you now deny, for in shame there is repentance. Stop dreaming of the child in the pool of blood and let the healing bring new life.'

Kate gasped and stepped back, covering her face with her hands, terrified by his knowledge of her thoughts and their tormenting persistence. She felt his hand on her head, his fingers outspread through her hair, his palm pressing down on her skull with a gentle insistence. Her knees bent and touched the floor, the stone cold against her skin, and obeying his command she bowed her head and then opened her eyes again. She saw the curve of her own breasts, the white blouse stretched across them, her legs, pressed together, in blue denims, her hands on her thighs. Then her clothing seemed to melt, turning to liquid and vaporising, and she saw her naked skin as a jigsaw of shadow and light. She tried to scream but heard nothing, tried to

move but was helpless, and then, as her body became translucent, she surrendered to wonder. Her flesh was shifting sand, the sand alive with sound and colour, eddying and swirling and parting to reveal further wonders. Her enzymes were the stars, her blood cells the great moons, her haemoglobin streaming out like crimson mist across the cosmos within her. Her beating heart was the pulsating sun, her blood was oxygen and fire, and her consciousness, the manifestation of all that was, traversed time and the infinite. In that void there was nothing, and being nothing, nothing to fear, and she saw it and touched it and embraced it and returned to her mortal shell. She blinked and shook her head, saw her blue-denimed legs, her breasts heaving beneath the tight white blouse, no longer shivering with panic. Then she raised her eyes, studying his strange, ascetic face, feeling his hand slipping away from her head and seeing it fall to his side. She stood up, shakily, not too sure that she would make it; made it and stepped back again, opening her mouth, saying nothing.

'I am that I am,' he said. 'That which is, has its purpose. The questions on your lips will not be asked because there cannot be answers. I have patience; you must practice it. Time alone will reveal our meaning. I am, as you are, a stranger in a world filled with strangeness. Nothing is without its reason. Your own shame has shaped your life. Your shame is what leads you to repentance and the need to affirm. To affirm is to live. Not exist, but embrace. We embrace the pain and doubt to find faith and once more stand in grace. Your pain and doubt are your unanswered questions and I cannot assist you. I am that I am - that is all. There is no other answer.'

The security men returned, having despaired of the specialists, and sat in chairs facing the bed upon which Joshua was resting. He gazed at them with interest, neither amused nor resentful, simply waiting with the patience of the innocent for their words to reveal him. The security men were nervous, both shaken by the inexplicable, their eyes wandering from Joshua to Kate and then back again. Kate watched them from the other bed, saying nothing, feeling frightened, wondering what they would do when they finally had to accept the unacceptable.

'Tell us who you are.'

'I cannot answer that question.'

'You can't or you won't?'

'I can't. I don't know.'

‘And you don’t know where you came from?’

‘You already know all that I know.’

‘According to what you told us - and if we accept that it’s true - we’d have to assume that you’re two thousand years old.’

‘You assume; I do not.’

‘You deny it?’

‘I do not assume it.’

‘We want to know how you were buried on the Mount of Olives and you refuse to co-operate.’

‘I do not refuse to co-operate. All your questions teach me something. Like you, I would like to know the answer, but my mind is a blank.’

‘We refuse to believe that.’

‘You must believe what you believe. You must accept or reject as you feel, but I cannot assist you.’

‘Who sent you?’

‘I don’t know.’

‘What’s your mission?’

‘I don’t know.’

‘We just can’t believe that. We think you’re trying to bluff us. You have a remarkable brain, you speak every known language, your rate of learning is too fast to be natural, and you are, given the circumstances in which you were found, too calm and collected to be innocent. Who taught you all you know? Who trained you in parapsychology? And why, if you honestly don’t know who you are or where you came from, are you not even remotely disturbed?’

‘Why should I be disturbed? What is willed, will be done. You will show me who I am in due course, so there is nothing to fear.’

‘*We* will show you who you are?’

‘It is you who seeks to know.’

‘And you?’

‘I am merely a witness. Let events take their course.’

‘We could keep you here forever.’

‘If you do, it was intended.’

‘We could probably have you shot as a spy.’

‘Every death has its meaning.’

The security men departed, shaking their heads in disbelief, but Kate stayed where she was on the bed, trying to order her thoughts. She no longer

feared him, but now she was frightened for him, aware that his innocence was being misconstrued as some dangerous ploy. The security men were suspicious, the chief rabbis were nervous, and the full facts about him, if disclosed to the general public, could be misconstrued in even more dangerous ways, perhaps leading to havoc. Yes, she was concerned, and now she studied him with woe, thinking of how his ignorance about himself could be used and abused. The Jews might claim him as their Messiah, the Muslims as their Mahdi, the Christians as their Christ in His Second Coming. Should such come to pass there would be unavoidable conflict, with each side assuming the mantle of religious sovereignty. Understanding this, Kate trembled, turning away from his face, aware that his eyes were fixed upon her in merciless scrutiny. Then she thought about his strange powers, his ability to work miracles, and wondered what would happen if his serenity was turned into anger.

'You show nothing,' she said.

'There is nothing to show.'

'You don't show what you're feeling inside, and I find that disturbing.'

'I show what I feel. What you see is what I feel. If what I show is less than you expect, you must examine yourself.'

'I don't understand that.'

'You have feelings I lack. You have anger and fear and grave doubt, and in me they are missing.'

'Why?'

'I don't know. Perhaps because I am unformed. With time we gather experience and feeling, but my time is still short.'

'You don't relate to people.'

'I am watching and listening. I am taking in what they say and do - and will soon learn their meaning.'

'Meaning isn't feeling.'

'Without meaning there *is* no feeling. Men rarely mean what they say; how they say it means more. They speak with their bodies, not only their tongues, and the manner in which they gesture when they speak reveals more than their words do. I watch and I listen, and take in what is revealed, and in this way I learn what feelings are and what they resolve.'

'You're talking about logic.'

'Without feeling there is no logic. Logic is the purest expression of

controlled emotion; lack of feeling is madness.'

'I can't accept that.'

'That's why you are torn. You have tried to separate your reason from your feelings, and now you are paying the price. You are divided within yourself, emotionally crippled and confused, afraid that by surrendering to feeling you will lose your integrity.'

'What integrity?'

'I think you know: the integrity of your mind. You view logic separated from feeling as the ultimate virtue.'

'And that isn't so?'

'No, it is not. The mind and emotions are one – and divided, they fall.'

'And yet you feel nothing.'

'I feel what you feel. Through you I am learning to respond to conflicting emotions.'

'You have not displayed emotions.'

'I only know them through you.'

'Knowing is not the same as feeling.'

'That will come if required.'

The door opened and Moshe marched in, followed closely by two guards, both of them carrying Uzi sub-machineguns and looking uncomfortable. Moshe stood there in the middle of the room, his large hands on his hips, staring first at Joshua and then at Kate, as if searching for words. Kate returned his stare, feeling a sudden rush of emotion, seeing something in his eyes, a quiet despair, that made her want to console him. He kept his eyes upon her, as if signalling a message, a pained plea for forgiveness or understanding for what was to happen. Then she realised that she was standing, had stood up without knowing it, her heart beating in the conviction of trouble, her throat dry, her legs shaky. She just stood there, staring at him, then at Joshua and back again, until she saw him lowering his eyes to the floor and slowly looking back up, his face pale in the sunlight.

'I have to take him away,' he said. 'We're handing him over to Shin Bet. They're not satisfied with what he's told us, so they want to personally deal with the matter. I'm sorry, Kate. I can't do a thing about it. I simply have to deliver him.'

'Shin Bet?' Joshua said. 'What is this?'

'Internal security and counter-intelligence,' Kate explained. 'They're not

as patient as doctors.'

She saw Moshe grimace, his cheeks turning red, and her anger, which had rashly boiled up, quickly turned into sympathy. Torn, she turned away and covered her mouth with her hand, took a deep breath and turned back again, concentrating on both of them.

'You will take us?' Joshua said.

'Not both of you. Only you.'

'I will go, but she must be by my side. What is willed, will be done.'

'I'm sorry,' Moshe said, 'but you have to come alone. Your insistence on having Kate with you has made them suspicious.'

'Suspicious?'

'They think you're using her, that you've some hold on her, that somehow or other you're tied together and have to be separated.'

'We will go together.'

'I'm sorry, but you won't.'

'I am merely a witness. Let events take their course. But I tell you, we will go together. Kate must stay by my side.'

Moshe shrugged and stepped back. Instantly, the two guards advanced upon Joshua, aiming their sub-machineguns at him. Alarmed, Kate stepped forward, something cold cutting through her, the cold inexplicably making her burn as she tried to reach Joshua. He was still on the bed, staring up at the gun barrels, but his face, which before had been serene, now looked almost anguished. He shook his head from side to side, closed his eyes and leaned forward, then his whole body started to tremble as if with some fever. Kate opened her mouth to scream, smothered the scream with her hand, saw an egg-shaped, silvery haze forming around his body as his head emitted dazzling beams of light. One of the soldiers stepped back, his weapon clattering to the floor, while the other, falling to his knees, was diffused in the shimmering haze. Kate screamed when Moshe stepped forward, trying to warn him away, but a roaring drowned her voice as the room began to shake and the walls, suddenly webbed with lengthy cracks, spat plaster and dust. Moshe stumbled and fell, his hands slapping on the floor; then he pushed himself back to his knees and lowered his head and covered his ears with his hands. Kate started moving forward, her head filled with the roaring, then was blinded by the light and thrown back by some invisible force. She felt the wall against her shoulder, a sharp pain in her back, then fell onto the bed and

looked up and saw a whirlpool of light. Moshe was still on his knees, a dark form angled backwards, his body jerking as if being whipped, the light swirling around him. The light seemed to come from Joshua, spinning out of some source within him, roaring and screeching about the room and tearing plaster from brick. Kate could hardly see Joshua, only a shadow shaking violently, a shadowy form in a maelstrom of light and sound, an explosion of energy.

Another figure materialised, rising awkwardly from the floor, lifting his arms in the eloquence of entreaty and then jerking backwards. He struck the floor and rolled over, slapped forward by the light, reached up and grabbed Moshe by the shoulder and dragged him down with him. They were swept away together, plaster raining upon them, then stopped in a tangle of arms and legs at the wall by the door. The light raced through the door, carrying lampshades and bed sheets, then the door shrieked and broke loose from its hinges and vanished into the corridor.

Kate clung to the bed, dazzled by the light, almost deafened by the terrible roaring, a fierce wind tugging at her. She saw Joshua on the bed, a diffused form in white fire, the light streaming from some source within him and racing out through the door. He was burning, disintegrating, melting into the maelstrom, while one of the soldiers, screaming dementedly, was swept out of the room. Moshe was still by the wall, wrapped around the other soldier, both of them being pummelled by the wind as if by a hurricane.

Kate groaned and closed her eyes, felt the bed shaking beneath her, gripped the mattress and hauled herself forward and huddled against the wall. She tried to blot out the roaring, to resist the clawing force, but her head started splitting in two as her body was hauled back. Her fingers dug into the mattress, trying to use it as an anchor, but her body, stretching out to its limit, eventually made her let go. She felt as if she were being devoured, sucked into an enormous throat, and then, when the roaring seemed to be all around her, she cried out and fell down.

She hit the floor and rolled over, coming to rest on her back, and then lay there, not moving any farther, as the roaring receded. Still motionless, she looked up, saw the maelstrom settling down, the light retreating from the walls and then shrinking to a globe around Joshua. There was a distant rushing sound, like water pouring down a faucet, then the light around Joshua flared up and shimmered briefly and finally disappeared into his body.

Kate stared at him, mesmerised, then managed to look the other way; she saw Moshe and the soldier rolling apart and lying flat on their backs, both gasping for breath. Her heart went out to Moshe, a love she scarcely recognised, then she turned her head in the other direction and again looked at Joshua. He was in the same position, bent forward, not moving; then he put one hand down, tugged aimlessly at his white robe, then raised his head and stared directly at her, his face human and anguished.

'It was rage,' he said quietly.

23

Hardly feeling like a human being, let alone the Ashkenazi Chief Rabbi, Jozsef lowered himself into his chair at the crowded committee table just as Moshe was finishing his summary of the recent events. Making himself comfortable, though still sweating too much, Jozsef nodded at Ben Eleizer, silently apologising for being late, then looked at the people seated around the table, none of whom seemed too happy. Moshe and Kate were side by side, the former addressing the table, the latter rubbing her closed eyes with her fingers, both drawn, almost haunted. Leonard Rosenberg, the Medical Director, and General Yaakow Meshel, the head of the Intelligence Committee, were sitting together at the opposite side, Leonard doodling distractedly on a sheet of paper, the general staring grimly at Moshe. To Jozsef's surprise, Lieutenant Paul Frankel was also present, his dark, handsome face expressing shock at what he was hearing.

'So,' Moshe summarised, glancing at everyone in turn, 'those are the up-to-date facts of the matter. The subject is now open for discussion.'

'This is extraordinary,' Paul Frankel said.

'A constructive start,' Ben Eleizer responded. 'We appreciate your shock, Lieutenant Frankel, but please try to control it.'

Paul glared at the Prime Minister, then blushed and lowered his eyes, a slight tremor running through his body as he picked up a pencil and started fiddling nervously with it.

'For a start,' Ben Eleizer added, 'perhaps someone can tell me why Lieutenant Frankel, a relatively inexperienced officer, should have been invited to sit in on this meeting.'

'I felt that Shin Bet should be involved,' General Meshel explained.

'I asked for Military, not Internal, Security to handle the matter.'

'I wasn't satisfied with their results,' Yaakow replied, glancing at Moshe, 'so I felt that Shin Bet should be given a chance.'

‘And Lieutenant Frankel?’

‘Although he is, as you say, a relatively inexperienced officer, he is also, unquestionably, one of our most successful interrogators.’

Jozsef glanced across at Paul and saw his flickering smile, a helpless demonstration of pride as he lowered his eyes again. Ben Eleizer clasped his hands beneath his chin.

‘Shin Bet wants that man,’ he said, ‘but Shin Bet has already failed. In insisting that he be separated from Kate, his first contact, they encouraged him to practically demolish the room with his remarkable powers.’

‘No one could have anticipated that, Shlomo.’

‘And are you still going to try and separate them?’

‘I don’t think we should attempt that for the moment,’ Moshe said. ‘We have no way of dealing with such abilities; we don’t know what he’s capable of.’

‘And naturally we still don’t know who he is or where he came from.’

‘No, I’m afraid not. At least nothing other than tentative speculation based on what he remembers.’

Ben Eleizer sighed and rubbed his face with his hands, removed his hands and looked up again, this time directing his attention to the rabbi.

‘So, Jozsef,’ he said, ‘you have heard the tape recordings. What is your assessment of this man?’

Feeling his cheeks burning, Jozsef lowered his eyes to the table, unable to utter words that might verge on the blasphemous. He felt sweaty and ill, infinitely wearied by age, all his learning reduced to dust in his mind, blowing through it and blinding him. Raising his eyes, he glanced at Kate, his heart going out to her, now accepting that what she was enduring was what tortured him also.

‘I am lost for words,’ he said. ‘The situation is without precedent. I’m a rabbi - a man of faith, not of reason - but the facts overwhelm me.’

‘Precisely what *are* the facts?’ Ben Eleizer asked.

‘It’s unlikely,’ Moshe said quickly, ‘that Shin Bet will get much further than we have. The man has been examined by physicians, psychologists, parapsychologists and linguists; and apart from ascertaining that he possesses extraordinary powers, we know no more now than we knew when he first spoke to Kate.’

‘Those powers are really very unusual, Moshe. One might even describe

them as miraculous - if not downright inhuman.'

'Not necessarily,' Moshe replied. 'The man is flesh and blood, physiologically a human being, and his powers, though certainly extraordinary, could be explainable in human terms.'

'I find that hard to accept,' Leonard Rosenberg said.

'I'm talking about parapsychology, Leonard. We know that powers such as this man has demonstrated have also been demonstrated, to an admittedly much lesser degree, under laboratory conditions in various institutions. The Russians and Americans are particularly interested in this field; and subjects like Ted Serios, Nelya Mikhailova and Rosa Kuleshova have been confirmed as advanced psychokinetic personalities.'

'Don't suggest that he's a secret agent,' Kate said sarcastically. 'We both know that's ridiculous.'

Moshe flushed with anger. 'I'm not suggesting any such thing,' he said.

'We are talking,' Rosenberg said, 'about a man who can see when blindfolded, who can transfer his thought images onto photographic plates, who can make objects move and shatter glass without touching it, who can hypnotise his hypnotist and speak every known language and adopt every accent down on record. Not to mention the devastation he caused by simply feeling angry.'

'I appreciate that, Leonard, but I'm merely pointing out that if this man's abilities have, to a lesser degree, been demonstrated by other human beings, then extraordinary or not, he could still be a normal human being.'

'Human, yes,' Leonard muttered. 'Ordinary? Definitely not.'

'Let's accept that he's basically human,' Ben Eleizer intervened. 'Have we analysed his ambiguous statements and, if so, do we now have some idea of what they mean?'

'*I'll* tell you what they mean,' Kate said, leaning forward, her face pale and drawn, her eyes shadowed, her whole body tense. 'Since your code-breakers are likely to invent something that doesn't exist, I thought I'd give you the simple facts and let you make your own minds up.' She stared down at her notes. 'The first thing to bear in mind is that although he remembers little, he's convinced that he's been on Earth before. He doesn't know where or when, but certainly his recollections are of biblical times; while the land as he describes it - great beauty and desolation, the sun shining on parched earth - is remarkably similar to Israel.'

‘It’s also remarkably similar to Africa or Spain,’ General Meshel said, ‘but we’ll ignore that minor point for the moment.’

‘No,’ Kate responded. ‘I’m afraid your sarcasm is out of place. He mentions a people called the Essenes, a *drachma*, a *denarius*, the Court of Gentiles and the Court of the Israelites… Not Africa or Spain, General Meshel, as I think you’ll agree.’

‘Such descriptions could have been learnt overnight from a school history book.’

‘We’ll have to accept - at least for the sake of our hypothesis - that his recollections are genuine.’

‘With reluctance, my dear.’

Kate nodded, her pale cheeks flushed with anger, then she returned her gaze to her notes.

‘Few Christians,’ she said, ‘would have trouble in translating these statements. His first memory is of the presentation of a child, himself, in a temple that included the Court of the Gentiles, the Court of Women and the Court of the Israelites - all of which were, of course, part of Solomon’s Temple, now the Haram es-Sharif, the noble enclosure, on top of the Temple Mount in Jerusalem. In discussing this presentation, he first mentions the Court of the Gentiles and then talks of the sacrifice of two birds. He was, according to his recollection, wrapped in swaddling clothes and taken to the temple by his parents. He clearly states that he was carried up some steps to a “just and devout one” who confirmed the uniqueness of his birth, that a prophetess serving in the temple offered thanks to the Lord, and that a priest then sacrificed the two birds, sprinkling the blood of one on the lower corner of the Altar, burning the other on top of the Altar. Whether or not this actually happened to Joshua, we *do* know that in the period he recollects, the first born male, after being circumcised, would have been presented in the temple, that his parents would have had to enter the temple via the Court of the Gentiles, that there they would have purchased two pigeons for sacrifice, that they would then have passed through a barrier and climbed some steps to the Court of Women, gone through a gate and then on as far as the step marking the end of the Court of the Israelites, where the priest would have sacrificed the two birds in the manner described. Indeed, such a ritual has its roots buried deep in the history of Israel and its details are minutely prescribed in the Mishnah. Also, according to St. Luke, this happened to the

child Jesus - and according to Joshua, it happened to him.'

'This strikes me as blasphemous,' Paul said. 'We should not have to listen to it.'

'Go on,' Ben Eleizer said.

'He claims that between his presentation in the temple and his thirteenth year, he has no memory of anything at all. This is particularly interesting in that there are no written records of Jesus' life between *his* presentation and his thirteenth year - and, indeed, this whole period of Jesus' life is an absolute mystery.'

'This is Christian doctrine,' Paul said angrily. 'We are all Jews in here.'

Ignoring him, Kate continued: 'According to Joshua's next statement, he is sitting in the shadows of the colonnades of the temple, learning from the priests, thus assuming the responsibilities of a student in the affairs of the Most High. Here, I need only point out to you that just as we Jews celebrate the *Bar Mitzvah*, when the thirteen-year-old male assumes the responsibilities of adulthood, so, too, in the time of Jesus, did the thirteen-year-old male assume his responsibilities by going to the temple to be taught by the priests. He would neither communicate with, nor return to, his family until his teaching had ended - and here, again, in recalling his own teaching, Joshua states that he had forsaken his parents to go to the temple. Likewise, according to the New Testament, Jesus forsook his father and mother, and went, at the age of thirteen, to be taught in the temple.'

'Your parallels are singularly disgusting,' Paul said, 'and should be erased from the minutes of this meeting.'

'His next statement is this,' Kate continued as if in a trance. '"I see a ribbon of water. A line of people stretches to it. I wade in the water and am dazzled by the sun, and the man with the face of a prophet takes hold of my shoulders. He immerses me in the water, crying words I cannot hear, and I rise up as the heavens open out and a white dove appears."' She raised her head to stare at everyone in turn, her glance almost defiant. 'At the risk of offending you, I must speak like a Christian and point out that that statement has striking parallels in *Matthew* 3:16, *Mark* 1:10, *Luke* 3:22 and *John* 1:32 - all describing John's baptism of Jesus Christ.'

'I must protest!' Paul exclaimed.

'Protest denied,' Ben Eleizer said. 'We're not necessarily accepting what Kate says, but we must hear her out.'

‘His next three recollections are visions of temptation,’ Kate continued, ‘and each of them is recorded in the New Testament as relating to Jesus. First, in the wilderness, he is tempted to turn stone to bread; next, on a mountain, he is offered the world for his soul; and finally, he is taken to the pinnacle of the temple, where he’s tempted to throw himself down and let the angels protect him. For those of you unfamiliar with the New Testament, I will simply point out that all three incidents are recorded in *Matthew* and *Luke*, where they describe Christ’s temptation by the devil. Joshua recounts exactly the same temptations, but calls his tempter “the evil one”.’

‘Luckily our man calls himself “Joshua”,’ Ben Eleizer said, not without a certain note of relief.

‘Unfortunately,’ Kate said, ‘“Jesus” and “Joshua” represent the same name. “Jesus Christ” is merely the Greek translation for the Hebrew “Joshua the anointed”. And our Joshua’s very first words - “Before Abraham was, I am” - have long been attributed to Jesus.’

A sudden, shocked silence descended upon the table as each of them took in what they had heard and tried to grasp its full import. Jozsef studied them each in turn, his heart beating too quickly, his spirit plunging into some cavern where fear limned the darkness. Jesus the Jew, he thought, that most remarkable and ambiguous man, who divided the Jewish world into Jews and Gentiles and branded the Jews as the killers of Christ, the Earth’s most despised race. Then, of course, there was the irony - the Christians worshipped a Jewish prophet - but beneath that, like the thorns beneath the rose, lay the nightmare of vengeance. Two thousand years of persecution - the endless blood of the Crucifixion - as the Christians, avenging their Jewish Christ, tried to obliterate Judaism. Jozsef thought of it with woe, with a fresh, frightening clarity, and wondered, even as he glanced across at Kate’s dark, haunted face, how he could possibly handle this extraordinary event.

‘Let me get this straight,’ General Meshel said slowly, his voice no longer harsh with cynicism, his gaze directly on Kate. ‘Can I take it that you’re suggesting this man is the resurrected Jesus Christ?’

‘I’m not willing to suggest anything,’ Kate replied. ‘I’m merely pointing out that his fragments of recall are all remarkably similar to the known facts on Jesus Christ, that all our tests have proven that he’s not consciously lying to us, that he thinks he’s called Joshua, which simply means “Jesus”, and that like the original Jesus, he’s a normal human being, albeit one with unusual

powers of the kind shared by few men.'

'Hypnotically induced amnesia and the implantation of his few recollections could conceivably have been arranged in a Soviet or American military laboratory. As for his extraordinary powers, they could be the result of intense parapsychological training in some similar environment.'

'No,' Rosenberg said. 'No kind of hypnosis could defeat our psychological tests, let alone account for Joshua's unprecedented command of every known language. Nor could any kind of parapsychological training account for the manner in which Joshua devastated his room. Human he may be, but natural he is not; he's a very rare kind of human being, beyond rational analysis.'

Jozsef clasped his hands together and started cracking his knuckles, a sound that seemed shockingly loud in the room's stricken silence. Embarrassed, he stopped immediately and placed his hands back on the table. Ben Eleizer stared at him, automatically, scarcely seeing him, then sighed and looked down at the table, as if deep in thought. General Meshel was studying Kate, his eyes narrowed, no longer cynical, his right hand tapping a pencil up and down, his left holding a smouldering cigarette. Leonard Rosenberg was leaning back, his hands clasped behind his head, shaking his head from side to side in disbelief. Moshe and Kate both looked haunted, glancing uneasily at one another, their eyes locking and then breaking apart before meeting again.

Then Jozsef glanced at Paul Frankel and immediately felt more uneasy, aware that the young lieutenant was an extreme Orthodox Jew - perhaps even more extreme than he was willing to show - and disturbed by the intensity of his gaze as he leaned towards Kate.

'You claim that you're willing to suggest anything,' Paul said, 'but in fact your every word suggests that you believe this man to be the resurrected Christ of the New Testament.'

'I don't know *what* I believe,' Kate replied. 'I'm just very disturbed. The facts are almost beyond comprehension, but they can't be disproved.'

'Neither his recollections nor his seemingly magical powers constitute proof that he's the Christian Jesus - and even if he were, it shouldn't disturb us, since we're Hebrew, after all, not Christian.'

He turned to Jozsef for support, his dark eyes glittering intently, and Jozsef, even against his every instinct, faced the issue that was normally

avoided by Jew and Christian alike. There was the Jesus of the Jews and the Christ of the Christians, and this division, ironic in the extreme, was also destructive. Christianity and Judaism had sprung from the same root, but neither religion was willing to recognise the fact. And nor was either religion, in the duplicity of self-righteousness, willing to accept the Jewish background of the man called Jesus. Yet Jesus was a Jew, immersed in scripture, taught by rabbis - not, in Jewish eyes, the Son of God, but most certainly a prophet. Judaism and Christianity therefore had much in common, but were divided over the interpretation of this one man and his extraordinary impact on history. Now there was the man called Joshua, another Jesus of mysterious origins, and already, like his remarkable predecessor, he was causing dissension. Whether resurrected or not, whether the same man or another, his very presence on the soil of Israel could lead to terrible consequences. Jozsef thought of this and trembled, glanced at Paul and felt despair, suddenly wishing that Jew and Gentile could be one as they had been in the beginning. Then, lowering his eyes, trying to keep his voice steady, silently praying for guidance and understanding, he let his words find their own way.

'I'm afraid we must be disturbed,' he said, 'since Kate omitted one recollection. This man, Joshua, also made mention of the Teacher of Righteousness, of scrolls in dark caves, of how the Teacher of Righteousness went before him and showed the way, and the scrolls revealed the lineaments of the life that gave shape to his own. Presumably, then, the scrolls showed the path he would have to follow, and revealed it through the actions of a predecessor, the Teacher of Righteousness.'

'You're talking about the Dead Sea Scrolls,' Paul said.

'Correct,' Jozsef said. 'The Dead Sea Scrolls, discovered by a Bedouin shepherd in the remote caves of Qumran, revealed a prototype for Jesus a century before his birth, this man a leader of the Jewish sect known as the Essenes - which Joshua also mentioned. No matter: the Dead Sea Scrolls revealed that the Essenes had developed a curious hybrid of Judaic creed that diverged from both Saducee and Pharisee Judaism, still managed to resemble both in certain ways, but bore a distinct resemblance to the future Christianity, including a protocol for seating foreshadowing the Last Supper and a ritual foreshadowing the Christian communion. The central figure of this sect was a mysterious figure known as the Teacher of Righteousness. Viewed by his disciples as the suffering servant of God and the instrument of

salvation for mankind, often called the *nezer* - the Nazarene - and believed to be the "shoot" of the House of David and the rock upon which the future church would be built, he was also destined, like the later Jesus, to be slain at the hand of a "wicked priest". The name of the Teacher of Righteousness is not known, but after his execution, about 65-53 B.C., his disciples, convinced that he would reappear amongst them, settled in the area around Qumran and awaited his return, doubtless also then writing the Dead Sea Scrolls and preparing themselves for Judgement Day.'

Jozsef slowly raised his head, feeling weary and confused; he glanced at Paul and then looked across at Kate, drawn to her haunted face. Her eyes, dark and luminous and passionate, made him feel less self-conscious.

'As you can see,' he continued, 'the resemblance between the Teacher of Righteousness and the later Jesus Christ is rather remarkable. More important, however, is that the discovery of this curious sect and their leader shattered the myth of the originality of Christianity and confirmed that it had evolved out of Judaism. While this dismayed the Christians, it also dismayed us Jews, since we now had to face the fact that many of the Christian rituals reviled by us had been conceived and practised by Jews two centuries before Christianity existed. Therefore, this man Joshua - whether or not he is the resurrected Jesus or another man altogether - could be claimed quite legitimately by Christian and Jew alike…and the resulting conflict between our two religions would be catastrophic. And, it should be noted, there is no question at all that Joshua believes his future course was foreshadowed by the Teacher of Righteousness.'

'He also states,' Kate added quickly, 'that his last recollection is of his final temptation - and that after it, he turned away from further temptation to embark on his calling. We can take it, then, that he believes he's on Earth for some undefined purpose.'

Jozsef watched her gaze shifting to each man around the table, and he felt his love and sorrow rising up as if to sweep him away. Yet he also felt exultant and helplessly grateful, sensing that his lost child had been found and returned to the fold. She, who had lost faith, was finding it again; and no matter the basis of that faith, it was something to build upon.

Thinking thus, he was stunned, his exultation draining away, abruptly turning back into confusion and the sharp blade of doubt. For, indeed, what was he accepting? That this man was the Chosen One? That this man, in his

mystery and power, was the tool of conversion? Jozsef glanced at Kate and trembled, again swept by love and sorrow, wanting to reach out and take her in his arms and then pray for salvation - not just her's, but his own.

'So,' General Meshel said, 'we have circumstantial evidence, but not quite enough to prove our case. No matter what you say, we're still left with a man whose origins simply cannot be ascertained. And I, for one, really can't accept that he lived in Jerusalem two thousand years ago.'

'Which brings us to Joshua's shroud,' Moshe said. He leaned forward and placed his elbows on the table and then raised his hands. 'Shortly after finding Joshua,' he said, 'we removed his shroud, or robe, and sent it in a sealed container to the Weizmann Institute for analysis. While a proper, scientifically verifiable report will take another year to complete, we feel that the results obtained so far are well worth reading out at this meeting; and since Leonard has been in charge of the programme, he'll give you the details.'

Letting his chair fall forward, Rosenberg leaned over the table, glanced nervously at Jozsef, then lowered his head and started reading from his notes, his voice sounding shaky.

'So far, tests on the shroud have included ion microprobe analysis, X-ray fluorescence work, X-ray transmission work, spectroscopic examination, infra-red thermography, radiological testing, and incomplete radiocarbon dating. The basic material proved to be linen. To ascertain the precise nature of this linen, selected threads were removed from under the shroud with microscopy pincers and examined under the microscope, then viewed under polarised lights for the best possible contrast. The fibre showed no signs of disintegration. The style of weave was revealed to be a three-to-one herringbone twill of the kind common to Palestinian, Roman and Egyptian linens during the first century A.D., albeit in silks rather than linen, this suggesting a fairly costly manufacture. Also found were traces of cotton, the fibre corresponding to the species *Gossypium herbaceum*, which is characteristic of the Middle East. A more precise estimate of the geographic origins of the material was obtained through the analysis of particles of dust removed from it, particularly a one-by-one examination of various pollen grains. Electron microscope examination of such grains revealed typical halophytes: plants common to the desert region of the Jordan Valley and specifically adapted to live in a soil with a high content of sodium chloride,

such as that found almost exclusively around the Dead Sea. Tentative dating of the linen was obtained with a carbon-14 test - a technique used most successfully on the linen wrappings of the Dead Sea Scrolls - and from these still incomplete tests we've obtained a dating plus or minus two hundred years. This tentative dating places the linen in either late B.C. or early A.D. Our preliminary assessment, therefore, is that the shroud, or robe, originated in the Middle East, was certainly worn in the area around Palestine, and was almost certainly woven at least eighteen centuries ago, possibly earlier.'

No one said anything for a considerable period of time, all too stunned by what they had heard to fully accept it. Jozsef closed his eyes briefly, sinking down through his mind, trying to reason through the chaos caused by panic - and failing dismally. He opened his eyes again to see Moshe's veiled gaze, Kate's haunted expression, then concentrated, with increasing trepidation, on Lieutenant Frankel. Paul was leaning across the table, staring at everyone in turn, his eyes bright but slightly unfocused, as if staring inward.

'It's a miracle,' Paul said. 'We can no longer doubt it. But it doesn't mean we have to accept that this man is the original Jesus Christ. Jesus Christ was crucified - the Turin Shroud was the proof of that - so this man should have scars on his hands and feet, like those shown in the Turin Shroud.'

'No scars,' Moshe said wearily. 'No scars at all.'

'Then he isn't Jesus Christ,' Paul replied with some intensity. 'Jesus Christ, as we know, was a zealot who was crucified, and clearly this man wasn't crucified.'

'There could be reasons why the scars no longer show. They could, after all, have been erased with passing time. They could have just faded away.'

'If we're to accept that this man is nearly two thousand years old, if we're to accept, as the tests show, that neither he nor his shroud were damaged, then we must also accept that the condition we found him in was the exact same condition he was in when he was buried, in a manner defying our comprehension, in that tomb on the Mount of Olives. In other words, if he'd been crucified, the scars would still be there.'

'Very good,' Ben Eleizer said, 'but it doesn't solve our problem. I still want to know what we have here.'

'Was he circumcised?' Paul asked.

'Yes,' Leonard replied.

'A Jewish prophet,' Paul said fervently. 'Perhaps even the Messiah. He's

not a supernatural being but a man of flesh and blood, yet unmistakably one with divine gifts or supernatural abilities. Such will be the Messiah and such is this man – and his presence here, combined with the opening of the Golden Gate and the fact that he was brought down from the Mount of Olives, surely testifies that he *is* the Messiah and that the Age of Redemption is at hand.'

'No!' Jozsef cried hoarsely. 'I will not permit this! You're abusing Jewish folklore and tradition to fortify your delusions!'

'*My* delusions?' Paul retorted, his resentment finally breaking loose. 'You do not believe in the coming of the Messiah as revealed in the Torah? No, Jozsef, probably not; your blasphemous modernism is well known. Your liberal view of Judaic creed has been noted and has caused much resentment.'

'I do not encourage fanaticism or antiquated religious bigotry - neither that of the Netorei Karta zealots nor that of *Gush Emunim*. That I attempt to interpret the Talmud with an open mind isn't blasphemous - it's sensible.'

'It's – '

'Gentlemen, gentlemen,' Ben Eleizer said firmly, 'this is no time for theological debate - we must consider the facts.'

Jozsef was grateful for the interruption, feeling ashamed of his angry outburst, but understanding, as he settled back into his chair, that the young lieutenant was dangerous. A wave of grief passed through him, an intimation of tragedy, and he found himself thinking yet again of Jewish conflict and separatism. Lieutenant Frankel, a zealot, far too pious for his own good, was unfortunately one of an all too common breed that could not be ignored. Never before and not now - most assuredly not now - since public knowledge of the man from the Mount could lead to public disorder. And if fanatical Jews and Christians could adapt this man, then so, too, could the Muslims.

'So,' Ben Eleizer said, glancing sceptically at Paul, 'we have a man who might be approximately two thousand years old and carries in his head recollections that suggest the life of Jesus Christ. He has no scars at all, which at least suggests that he wasn't crucified, but he certainly possesses abnormal powers and thinks he's here for a purpose. What do we do, gentlemen, to make our speculations concrete? Wait for another year in the hope that the completed shroud tests will, given the wonders of science, produce all the answers? I think not. We need something else.'

'I want to take him out,' Kate said. 'I want to show him around Jerusalem. I want to see how he reacts when we take him to some of the locations where

Jesus was reported to have walked. That may or may not prove something, but we've little to lose.'

'He might run away,' Moshe said.

'No,' Kate replied, 'he won't. He doesn't know what he's here for or what he's supposed to do, so he simply does that he's told and lets events take their course. Also, he's convinced that it's through me that he'll find what his mission is, so he'll go wherever I take him and return without argument.'

'He didn't let events take their course,' Leonard said, 'when Moshe attempted to separate him from you.'

'True,' Kate replied. 'But again, what he did was designed to keep me close by his side.'

'We'll need witnesses,' Ben Eleizer said.

'I'd like Moshe to come with me.'

'I'd like Shin Bet to be represented,' General Meshel said, 'so you can also take Lieutenant Frankel.'

'I'm a Jew,' Paul replied. 'Some of those sites are forbidden to me. My beliefs would not permit me to enter Christian houses of worship.'

Jozsef noticed Paul's sharp glance, a blend of contempt and accusation, and he felt his anger rising again at the young man's self-righteousness. He tried to control it, unwilling to let rage blind him, determined to stay as calm as possible and get at the truth. He looked at Kate and then Moshe, saw them staring at one another, suppressed emotion rippling across both their faces and erasing their weariness. Seeing that, he felt better, oddly comforted and energised, and he turned his head again to speak to Paul, his gazed fixed, his voice steady.

'This is an important matter,' he said, 'for Jew and Gentile alike; and may also be of considerable importance to the Muslims. If, as you say, this man might be the Messiah, it's your duty to confirm or deny after seeing the evidence. You may enter the Christian sites if not entering to worship and if, in the witnessing of what transpires, you return with the truth.'

He kept his gaze fixed on Paul, finally saw him nodding tentatively, then turned away and glanced blindly around the table, feeling strangely excited. The silence was uneasy, a mute sigh that filled the room, only broken by the moaning of the wind outside the Knesset. Jozsef pondered on his feelings, trying to analyse his excitement, failed and then experienced deep shame at his abrupt lack of despair. He was behaving unnaturally, perhaps even

immorally; letting his curiosity threaten the very tenets of his faith, and possibly hoping, in hypocritical fashion, that Paul's belief in the Age of Redemption might be coming true. Feeling hot, he wiped his brow, lowered his eyes and studied his hands, then raised his eyes again and looked across the polished wood of the long table. Moshe and Kate had shifted slightly, their bodies turned towards one another, their eyes locked in some silent communication that involved pain and yearning. Startled, slightly shocked, feeling almost like a voyeur, Jozsef coughed into his clenched fist and moved his eyes until he found the Prime Minister.

'So be it,' Ben Eleizer said.

24

He said nothing as they drove along the Hebron Road, passing the Kibbutz Ramat Rachel and the Mar Elias Monastery and then descending into a biblical panorama of orchards and fields where the black-garbed Arabs tended their sheep and goats. Nor did he say anything when they stopped the car and showed him Shepherd's Field, where the angel had announced the birth of Jesus to the shepherds tending their flock. Nor did he say anything when they drove on to Bethlehem, stepped out into the noisy Manger Square, and walked past the taxis and tour buses to the Church of Nativity. Finally, he said nothing when they stood in the Grotto of the Nativity, but merely gazed at the star on the floor, glowing golden in the candlelight, returned the curious stares of the few tourists and their guides, then went to examine the Chapel of the Manger. Seeing nothing recognisable, obviously getting no reaction from it, he shook his head from side to side in a negative gesture and let them lead him back out.

They all remained silent as they drove back around Jerusalem, then headed north across the beautiful plain of Esdraelon, Moshe following the winding road as it ran up through fruitful forests and then fell down to the natural amphitheatre in which Nazareth nestled. Joshua maintained his silence as they drove through the modern town, his silvery-grey gaze curious but registering no shock as they passed cars and buses and donkeys and carts, along streets lined with cafés and shops, filled with Christians and Moslems. They stopped and disembarked outside the Roman Catholic Church of St. Joseph, but again, although he gazed at it with interest, he did not seem perturbed.

'It means nothing to you?' Paul asked.

'No,' Joshua replied.

'Then you cannot have been the son of the carpenter, Joseph.'

'I never claimed to be,' Joshua said.

Leaving the church, they led him to the Basilica of the Annunciation, first taking him through the Upper Church with its modern mosaic panels, then down to the dark and shadowy grotto in the lower church, lit only by flashes of colour from its small windows. There he stood for some time, the surrounding pillars casting shadows upon him, his head leaning into the beams of light and then moving back again, his eyes lost in the darkness. Finally, he stepped back, letting the gloom dissolve his features, and spoke, his voice hollow in the cave, unnaturally quiet, almost spectral.

'There is nothing of me here. I feel something nearby. I think of the great Via Maris, which linked nation to nation. There were pilgrims and merchants and soldiers near the foot of the hill. That is all I can see.'

'The great highway,' Kate explained, speaking for the first time. 'It ran between Egypt and the nations of the North and the East, passing a short distance from Nazareth and then travelling across the Plain of Esdraelon. It existed during the time of Jesus Christ.'

They left the Basilica and took him to the Greek Orthodox church, down the small stairway, then along an ancient, marble-lined passage to the well at which it was believed the archangel first appeared to Mary and the boy Jesus would have come to collect water. He stood for some time, staring down at the well, his noble brow furrowed in concentration, his hands opening and closing. Then his hands closed, became tightly clenched fists, and a tremor ran visibly through his body and then passed away. Kate watched him and felt dizzy, closed her eyes and saw two shadows, a woman and a boy bending over, their hands dripping water. She shivered and felt fear, opened her eyes and saw his face, turned towards her and offering a glance that calmed her immediately.

'You saw it?' he said.

'Saw what?' Moshe asked.

'A woman and child,' Kate replied. 'Possibly just in my mind. I closed my eyes and seemed to see them by the pool for a second or two.'

'And you?' Moshe said to Joshua.

'It was in my mind,' Joshua replied. 'She rolls back the stones of my past and releases the shadows.'

'Who were they?'

'I don't know.'

'You don't think the child was you?'

‘I have no idea who the child was; I saw little, felt nothing.’

‘Let’s get out of here,’ Kate said.

‘Why, Kate, are you frightened?’

Kate shivered. ‘Maybe. I feel strange. I want to leave here right now.’

They left and headed back towards the town centre until they arrived at the Greek Catholic church, said to be the site of the synagogue attended by Jesus. Once there, he lowered his head, closed his eyes and started shaking, then opened his eyes again and stared at Kate with a hard, bright intensity. Kate instantly felt faint, closed her eyes and saw more shadows, felt a wave of anger coming towards her and pushing her backwards. Then she felt Moshe’s hands, resting lightly on her shoulders, holding her upright as she opened her eyes again and looked straight at Joshua. His eyes, with their silvery-grey luminescence, seemed calm but unnatural.

‘I might have been here,’ he said. ‘A great anger was directed at me. There was much debate and anger near this place, and I feel I was part of it.’

Kate turned to Moshe and Paul, her lips dry, her heart racing. ‘According to St. Luke,’ she said, ‘when Jesus taught in the synagogue, he so angered the townsmen that they dragged him away and attempted to throw him off the brow of a nearby hill. The traditional site of that hill is now located at Djebel-el-Qafse, approximately a mile from here. The anger that Joshua sensed - and that I sensed - could have come from that incident.’

‘A Christian myth,’ Paul said, ‘with no basis in fact. You’ve recently studied the New Testament in detail and now remember your reading. You are, in short, trying to convince yourself regarding your own dubious parallels.’

‘But Joshua felt it as well,’ Moshe said quietly.

‘Perhaps,’ Paul said. ‘But how do we interpret it? It seems certain that he lived in the times of which he speaks, but not necessarily as the Son of the One: more likely a prophet.’

From Nazareth they drove through a sweeping wasteland of rocky gorges and parched hills, the sun blazing down mercilessly on an ever bleaker landscape, until they arrived at the verdant green of the palm trees and fruit orchards of Jericho; then they drove on to the Wadi Qelt gorge and the towering, spectacular cliffs where Christ was said to have spent his forty days in meditation. Taking Joshua to the walled enclosure on the summit of the Mount of Temptation, where Jesus was said to have been tempted by the

devil, they all stood there in breathless silence, awed by the stupendous panorama stretched out below them - the barren wilderness shimmering under the sun and rolling away to the horizon - then glanced uneasily at one another, neither willing to speak, and eventually turned their eyes upon Joshua, wondering what he would do.

He stood near the edge of the cliff, the wind blowing his white robe out, his long hair whipping wildly around his face as he gazed down on the magnificent desolation of the hills and valleys of Jordan. Kate stepped forward to touch him, then stopped, feeling frightened; closed her eyes and felt the presence of evil as a palpable force. She clenched her fists and started trembling, her heart pounding too fast, then heard a whispering that seemed to surround her and was filled with pure malice. A spectre. A presence. An invisible, malignant force. There were visions of torture and pain and the most pitiless hatred. A scream rose up from her centre, bubbling into her throat, and she shook her head frantically from side to side, trying to stifle her terror. Then someone's hands grabbed her, Moshe's hands, large and firm, and she opened her eyes to see the broad sweep of the wastelands shimmering under the sun. She blinked and stared at Joshua, saw his silvery-grey eyes, their serenity drawing her out of herself and leading her back to calm pastures.

'What was it?' she asked.

'You nearly walked off the edge,' Moshe said. 'You closed your eyes and started to walk forward and nearly fell off.'

'It was the Evil One,' Joshua said. 'As he was, so he is. He stretches around the firmament like a cloud, dividing darkness from light.'

'You saw him?' Moshe asked.

'No,' Joshua replied, 'I felt him. The Evil One exists by wind and fire and is part of the Nothing.'

They left the Mount of Temptation and drove on through the wilderness towards the sleepy Arab village of El-Azariye, or Bethany, where they stopped at the modest tomb of Lazarus, close to the nineteenth-century Franciscan church. Joshua went down the stairs and stood in front of the shrine, his white robe looking spectral in the gloom when Kate walked up behind him. They both stood there for some time, neither saying a word, hardly aware of the tourists murmuring piously around them, some of them mistaking Joshua for an Arab and averting their shocked eyes accordingly.

Joshua shivered again, and Kate closed her eyes and drifted, the darkness rolling back across the curtain of her eyelids to reveal dark-shawled women kneeling low in lamentation, their hands rising and falling in prayer above a man in the shadows. Kate felt terrible grief, then was filled with exultation; heard the cries of surprise and disbelief and then opened her eyes again. She saw Joshua staring at her, his eyes unnaturally bright, and then she hurried out of the tomb and let him find his own way out.

'Well?' Paul enquired.

'He knows the place,' Kate replied.

'That doesn't necessarily mean he was the Christ.'

'I never stated such,' Joshua said.

They drove him to the Jordan River where it ran east of Jericho and stood on the traditional site of Christ's baptism. 'Let it be now,' he said, his face radiant in the light, while Kate, her feet cleansed by the flowing water, felt the shock through her body. The water came up to her ankles, but she felt submerged in it, first struggling in darkness and cold and then emerging to light. Something fluttered above her head, a white bird travelling east, and the heavens opened out in her mind and filled her spirit with warmth. She opened her eyes and saw Joshua, felt the tears on her cheeks, raised her right hand and wiped the tears away and then turned to Moshe. He was standing close to her with Paul just behind him, the former concerned, the latter looking bewildered, neither moving at all. Kate smiled, or felt that she was smiling, and lowered her hands to her sides.

'You were crying,' Moshe said.

'Yes,' Kate agreed.

Joshua stepped forward and touched her with his hands, his fingers light on her shoulders. 'Tears of joy,' he said. 'The waters carry the joy with them. It was here that the prophet called my name and ordained my deliverance. What was willed, will be done.'

'What *was* willed?' Kate asked fearfully.

'It was willed and will be repeated. The seasons come and go and repeat themselves; and just as it is with the seasons, so it is with mankind.'

Kate felt a great fear that only deepened in intensity when they arrived at the deserted caves of Qumran by the banks of the Dead Sea. They stood in the Wadi Qumran, the ancient cliffs towering above them, the caves pock-marking the cliff face like dead eyes, a lunar silence surrounding them.

Joshua gazed along the cliffs, his eyes scanning the dark caves, then he turned and looked across the Dead Sea, as if searching for something. The sun beat upon the smooth sea, cutting through the cloud of haze, the hills of Judah sweeping down to the western shore on the opposite bank. Joshua turned back to the caves, stepped forward and stopped again, bowed his head and covered his face with his hands, as if silently weeping. Kate walked across to him, feeling only his great love, seeing nothing but the radiance of his face where the sunlight exploded. In that dazzling light he changed, becoming someone much darker, a man wise and burdened beyond his years, knowing what was to come. Kate reached out to touch him, her fingers spread and shaking slightly, and felt the burning skin of his forehead, a slight shock bolting through her. Dazed, her body hollow, she removed her hand and stepped back, then noticed, as a cloud covered the sun, that Joshua seemed perfectly normal.

'It was not I,' he said. 'But here my coming was prophesied. Here the Teacher of Righteousness told the tale of the trial to come. He was here before my time, and before my time he knew me, and his life, a mere prelude to his death, precisely mirrored my own. He was here and is here in my head with the light shining out of him. I must leave this place and never come back because the trials begin again.'

'The trials?'

'Those which will come in the near future. For myself. And for you.'

The fear clamped around Kate as she turned towards Moshe, letting him hold her hand and lead her to the car, his silence offering her solace. In her fear was a desperate love, the pain of yearning and helpless need, and as she sat down in the back of the car, she wondered who had aroused it. Almost certainly Joshua, but not him alone; beyond Joshua, in some realm where the past and present met, she was being tormented by the need to express a more common commitment. Joshua slid into the seat beside her while Paul clambered into the front, then Moshe closed his door and turned on the ignition and drove off too quickly. Kate studied his broad shoulders and the nape of his neck, then turned her head and studied Joshua's profile as sunlight passed over it. A remarkable profile, at once noble and oddly primitive, it belonged to every race and every creed and refused to divide them. Kate sat back in her seat, closed her eyes and drifted away, letting the droning of the car soothe her ragged nerves in an impermanent peace.

They drove back to Jerusalem and up to the summit of the Mount of Olives, disembarking near the Intercontinental Hotel and walking across to the amphitheatre with its breathtaking view of Old Jerusalem. Joshua studied the lovely sheen of the golden Dome of the Rock, let his eyes wander across to the silver dome of the Mosque of El-Aqsa, then finally fixed his gaze on the majestic, conical roof of the Dormition Abbey.

'Zion,' he said. 'I know it as Mount Zion. Beyond that, I know nothing at all. That hill is Mount Zion.'

Kate glanced at Moshe and saw him looking at Paul, whose brown eyes, like stones in the darkness, reflected pale light. Obviously shaken, Moshe turned away, murmured something and then walked on, and they followed him down the short, sloping road and back up to the waste ground. The ruins of the Chapel of the Ascension were desolate and strangely ominous, a fine dust drifting languidly across the rubble and settling over their shoes. Joshua studied the ruins at length, walking back and forth in silence, while Kate, recalling the night of his discovery, visibly trembled. Joshua noticed and walked up to her, stopped in front of her and put his hand out, touching her cheek lightly with his fingers and offering a gentle smile.

'No fear,' he said. 'There is no reason to fear. What was done has been done and cannot be undone, and has, like you and I and our brothers, a reason for being. I know it was here, and that my coming was preordained, but I still do not know what came before and perhaps never will. You were called and you came and now the fear grips your heart, but beyond the fear is love and redemption, which exist by our faith. No fear. You must not have fear. Let your faith fill your heart.'

'You remember nothing else?'

'No,' he said. 'Nothing else.'

'Naturally not,' Paul said. 'The famed ascension is pure myth. You were, and probably still are, a prophet. By my faith, I believe this.'

They both stared at him in silence, as if staring at a stranger, then Joshua turned away, his body visibly trembling, and walked across the sad ruins. They followed him, walking carefully, kicking up stones, and then entered the Pater Noster Church, blending in with the tourists. Here, set into the tiled walls, were the words of the Lord's Prayer, written out in sixty-two different languages. Joshua glanced left and right, taking in every language, and then murmured the words to himself, as if reciting from memory. Paul shivered

and turned away, his brown eyes displaying confusion, and they followed him through the colonnaded courtyard, back out to the sunshine.

They did not return to the car, but instead walked down the narrow road to the Franciscan church of Dominus Flevit. Joshua instantly changed, his eyes becoming moist, and then, for the first time, his head turning away from them, he covered his face with his hands, bowed his head and wept.

'For Jerusalem,' he said, his voice as hollow as the wind. 'For the days shall come upon it that its enemies shall surround it and not leave one stone upon the other nor let the dust settle.'

He dried his eyes and walked on, leading them down the stony path, then stopped at the Basilica of the Agony, his eyes widening in shock. There were Arabs with camels, Jews hawking souvenirs, and the tourists were queuing up with their money, all hoping to purchase a piece of history. Joshua did not respond immediately, barely able to accept the scene, then he stared across at the Old City, returned his gaze to the crowd before him, and eventually uttered an indistinct imprecation and reached out to a hawker. His hand chopped down through the air, then swept viciously sideways, sending postcards and assorted souvenirs flying off the small stall. The hawker looked up in shock as his customers jumped clear, then Joshua turned, his rage almost demoniac, and walked away like a blind man. Ignoring the mosaic scene of Christ praying in Gethsemane, he walked on into the garden without speaking to anyone. Kate followed him in, Moshe and Paul hurrying after her, and saw him standing quietly, surveying the cacti and bougainvillaea, then dropping to his knees beneath the branches of a gnarled olive tree, one hand reaching out to touch the trunk, his tears falling silently.

Kate suddenly felt incorporeal, as if the blood was draining out of her, but she walked forward, ignoring Moshe and Paul, to lay her hand soothingly on Joshua's shoulder. He shivered as if with fever, shaking his head from side to side, but probed the tree trunk with the fingernails of his right hand, digging deep for the truth.

'It's an olive tree,' he said. 'Such trees never die. When an old trunk is decrepit, it sprouts new wood and thus always renews itself. This tree existed when I walked here, when my tears turned to blood, and it lived through the silence of my great sleep and will witness my passing. It is, like the sun and the moon, more lasting than memory. It endures. We pass on.'

His body shook as he wept again, his head turned away from Kate, then

he stifled a final sob and stood up and dried his eyes with his hands. He stared at Kate as if haunted, then at Moshe and Paul, kept his gaze fixed on Paul for some time and then trembled and walked away. They all followed him out, Kate's heart racing again, something inside her reaching out to Moshe, as if begging for help. He was walking beside her, his head bowed, shoulders slumped in despair, and her rioting emotions converged in the well of his quiet strength.

They entered the Grotto of Gethsemane, which Joshua viewed without reaction, then went under the Crusader arch and descended the stairs to the Orthodox Church of the Assumption. At the bottom, in the gloom, surrounded by hundreds of votive lamps, a dull gleaming illuminated the sepulchre and the scent stung their nostrils. Joshua studied the milling tourists, the fat priests in black robes, saw the boxes being extended for coins and turned his gaze back on Kate.

'I came here,' he said, 'without knowing why I came; and now that I am here, I am lost, feeling nothing within me.'

'It's for Mary,' Kate explained. 'The virgin mother of Jesus. It's supposed to be the site of her burial and assumption – though the Dormition Abbey, which you seemed to recognise, claims a similar honour.'

'This is a temple for the gathering of coins. I feel nothing but anger here.'

They walked up Jericho Road and turned left into the Old City, passing under the great arch of Lion's Gate, at the beginning of the Via Dolorosa. Here the tourists were numerous and the Arab touts highly vocal, many of them no more than children, their eyes dark and beautiful. Joshua looked upon them with kindness, at the Via Dolorosa with suppressed revulsion. Kate led him into the grotto beneath the Church of St. Anne, where Mary, the mother of Jesus, was presumed to have been born. He studied the grotto with detachment, obviously receiving nothing from it, and then was shown the adjoining excavations of the Pool of Bethesda, where Jesus was said to have cured the crippled man. Again, there was no reaction, so Kate led him away, walking him along the narrow, shabby Via Dolorosa to the El-Omariye School, the first step along the Stations of the Cross.

In the courtyard of the school, opposite the Franciscan monastery, Joshua reached out and held Kate by the shoulder to let his tension pass into her. She closed her eyes and saw a bowl, two hands emerging, dripping water; heard the words of condemnation in her head before they led her away. She opened

her eyes and saw Moshe, staring at her with great intensity, the Chapel of the Flagellation behind him, its refurbished walls dark. Joshua looked at her and held her, his fingers digging into her shoulder, and she closed her eyes again and lowered her head, gazing into herself. There was the humiliation of mockery, the sudden stinging of the whips, then she felt the thorns biting into her head and heard the baying of vengeful crowds. Held tightly, she was led away, wanting to weep, unable to do so; turned a corner and stumbled to her knees, opened her eyes and glanced up. Moshe and Paul were staring at her, looking down with startled eyes. Between them, on the wall of the Polish chapel, was the relief of Jesus bearing the cross. Clinging to Joshua, she stood up and saw him studying the relief, his face displaying tension and bathed in sweat, his silvery-grey eyes too bright. He turned his head and stared at her, his eyes growing slightly darker, then they all continued along the Via Dolorosa until they arrived at the Armenian Catholic Church, the fourth Station of the Cross. Here Joshua closed his eyes, the tears shining on his cheeks, while Kate, feeling the anguish of a mother, trembled helplessly beside him. She reached out and touched Moshe, fingers outspread on his face, desperately wanting something human to cling to, feeling the warmth of his lips. Then they walked on, and stopped again at the Franciscan oratory, where Kate, as if unburdened of a terrible weight, straightened her spine and breathed deeply. Joshua likewise seemed relieved, but then shuddered and walked on, his right hand resting lightly on Kate's shoulder, keeping her close by his side. They came to the Church of St. Veronica, but did not venture inside, satisfied when Kate reached out, automatically and blindly, to gently wipe the sweat from Joshua's face with the palm of her hand. At that moment, there was love, an outpouring of grief and warmth, but then they walked to the crossroads of the Via Dolorosa and Khan ez-Zeit, and there, where the clamour of the bazaar filled their ears, Kate blacked out momentarily and slid to her knees, her hands clinging to Joshua's white rob, her head shaking from side to side in protest. Joshua looked down with pity, placed his hand on her head, and then, as the passers-by looked on with interest, gently tugged her back to her feet and placed his hand on her shoulder. Kate glanced at Moshe and Paul, saw them staring at one another, turned away when she saw Moshe glancing at her, his grey eyes concerned. Moshe turned away then, leading them farther along the route, and they soon came to the stone relief on the wall that marked the eighth Station. Here Kate

began to sob, uncontrollably, bitterly, and the passers-by, Jew, Christian and Moslem, gathered around to observe them. Joshua moved away from Kate, his hand dropping from her shoulder, and then, his eyes surveying the curious crowd, he spoke loudly and forcefully.

'Do not grieve for her,' he said. 'Instead, grieve for yourselves. Grieve also for your children and the days they will surely inherit. For the day is coming to Jerusalem when the barren shall be beholden, when wombs that never produce child and breasts that never give milk shall be blessed instead of cursed for their sterility. It is then that you will beg for the mountains to fall upon you, for the hills to cover you up, and for the green tree, which refuses to die, to shed its leaves and turn dry. Jerusalem, your Golden City, will fall, and only faith will redeem it.'

Paul gasped and stepped back, covering his mouth with his hand, his dark eyes showing fear and stunned reverence, a spasm lancing his body. He glanced at Kate and then at Moshe, saw people scattering in embarrassment, then turned his gaze back upon Joshua, who was staring straight at him. Paul stood there, transfixed, licking his lips, and then stepped up to Joshua.

'What made you say that?' he asked.

'It seemed fitting,' Joshua replied.

'And you still do not know who you are?'

'I only know I was called.'

Paul sobbed and turned aside, wiping his eyes with his fingers, and they followed him up the Via Dolorosa to the Ethiopian Convent, the ninth Station of the Cross. Inside, it was gloomy, the monks striding back and forth, and Kate wiped her eyes and bit her lower lip, her gaze fixed on Joshua. She felt nothing in this place, only the heartbreak of her love, and her feelings, pouring out into the gloom, became one with the silence. Joshua watched her, clearly curious, a gentle smile on his lips, then he touched her cheek lightly with his fingers and led her back out.

The Church of the Holy Sepulchre was on the Hill of Golgotha. When Joshua entered through the Crusader portal and glanced around the exotic interior, seeing the artefacts and hanging lights of the numerous sects that shared the church - Syrian and Armenian, Coptic and Abyssinian, Roman Catholic and Greek Orthodox - and then saw the workmen's scaffolding, their clutter of ladders and tools, he stopped, briefly foiled by the sight, momentarily frozen. The holiest of holy sites to all Christian denominations,

it was filled with chattering tourists and black-frocked priests and their acolytes, long queues forming to view the final Stations of the Cross, coins dropping into strategically placed boxes, cameras clicking incessantly. Joshua stood there for some time, just inside the busy entrance, taking in the golden chapels and illuminated paintings and religious figures, then he turned to face the nearby Stone of Unction and visibly trembled.

Kate walked up to him and held him, her hand resting on his shoulder, and then closed her eyes and dropped down through herself to where his anguish was buried. There was thunder and lightning, the pouring rains of grief and loss; and the pain, more appalling than endless night, was a fuse to redemption. She entered into his pain, travelling through it to freedom, letting the darkness drain the agony away as light flared in the distance. Then she moaned a protestation, felt shame and affirmed again, and the light, spreading out through the darkness, swept around her and soothed her. The peace of understanding, the glorious warmth of acceptance: her tears flowed between the banks of the River Jordan and made her one with the Holy Land. Kate opened her eyes again, saw the high-domed Rotunda, the hanging lamps shedding their light on Joshua's eyes and making them luminous.

'We must leave here,' he said. 'I cannot stay in this place. In here is the anguish and glory of the mystery to come. It is too soon to know, and my way must be in innocence; and this place, in which pain and death reside, is the end of my journey. I feel it; and my body is breaking; but the time is not yet come. We must leave on the instant.'

They walked along the Rehov HaYehudim, between the Jewish and Armenian quarters, left the Old City by way of the Zion Gate and continued on to Mount Zion. Beneath the gold and polychrome mosaics of the sanctuary of the Dormition Abbey, in the crypt where the Virgin Mary was said to have spent her last days, Joshua stared at the effigy of the mother of Jesus and again showed no visible response.

Retracing their footsteps, they crossed to the opposite side of the abbey and entered the Coenaculum above the Tomb of King David. A small and humble room with Crusader archwork and Turkish prayer niche, it seemed fitting as the setting for the Last Supper, oddly desolate and sad. Joshua gazed around the room, his hands motionless by his sides; and yet even as he shook his head in a negative gesture, Kate surrendered to grief. She closed her eyes and drifted away, then returned in another time, saw the breaking of

bread, the cup passing from mouth to mouth, the bare feet of the twelve apostles being washed by the one on his knees. The grief and sadness overwhelmed her, being torn from love and faith, and she opened her eyes again and saw that Joshua was perfectly calm.

'No,' he said, 'it wasn't here. Yet what you felt was the reality. What you felt was the manifestation of the need of those who have come here for centuries. There was a parting of love and sorrow, a final partaking of bread and wine; but what happened did not occur here, but somewhere over the valley.'

He walked out of the Coenaculum, moving quickly and decisively, and they followed him back through the Zion Gate and then down the untended slopes of the Kidron Valley. He seemed to know where he was going and looked neither left nor right as he led them up the side of the inconspicuous Mount Ophel to the mosque above the Upper Pool of Siloam. Standing on the edge of the slope, a breeze making his white robe flap, he gazed down at the long, narrow pool with a peculiar intensity. Kate was standing just behind him, between the silent Moshe and Paul; and thinking of her recurrent dream, and of what it represented, she was unable to move to the edge and gaze down at the water.

'He knew it was here,' Paul whispered. 'He came here deliberately. And according to the New Testament, this is where Jesus Christ healed the blind man.'

'Also,' Moshe replied, 'according to the New Testament, Jesus made clay with his spittle and healed the man by rubbing it in his eyes. That was not a ritual prescribed by Jewish tradition.'

'That means little,' Paul said fervently. 'Jesus the prophet was a Jew. The Jews, according to the Mishnah, used this very water for purification both in the ancient ceremonial of the Red Heifer and for the water poured out before the Lord at the feast of Tabernacles. In fact, this pool represented the spring of David's Jerusalem and thus was central to Jewish concerns. He was Jewish. So is Joshua.'

His passion disturbed Kate and made her turn away from him, again thinking of how dangerous Joshua could be in his innocent passivity. Her eyes fell upon Joshua's face, noting his concern and confusion, and she quickly averted her gaze, feeling torn, though not understanding her feelings. Then Joshua glanced over his shoulder, waved a hand to beckon her forward,

and she did as she was bid, moving tentatively to the edge, aware that Moshe and Paul were close behind her, both breathing too heavily. Joshua looked directly at her, smiling slightly, his silvery-grey gaze consoling.

'Admit what you have denied,' he said, slightly amending a previous statement. 'Stop dreaming of the child in the pool of blood and let the healing bring new life.' He pointed down at the pool with his right hand, the index finger extended. 'Look - and will the blood. Do not turn away from it. Let the water turn to blood and accept your shame and then put it behind you. In this way you will heal yourself.'

The fear gripped Kate and choked her, almost making her gag, but she forced herself to lean slightly forward and look down at the pool. It was a long, narrow pool, its water exceptionally clear, springing out from an arch beneath the mosque, still fed, as it had been for centuries, by Hezekiah's underground channel. There were a few ancient column drums thrusting out of the water, but otherwise the pool was perfectly normal, reflecting the masonry work above it.

'Will the blood,' Joshua repeated. 'Make it flow. Cleanse yourself and be set free.'

Kate looked down and saw the water, her own rippling reflection, a thin line of light dividing her face and emphasising the shadows. She looked down and was mesmerised, saw her reflection and then looked up, saw herself high above, looking down, her eyes widening in disbelief. The water rippled and swirled, formed a languid, graceful whirlpool, and out of the vortex, as if bubbling up from a blocked faucet, was a flower of rich blood. The blood spread out through the water, was drawn into the coiling current, spread out farther and moved around the darker red of its centre. Then the darker red changed, growing larger and more irregular, becoming a foetus turning slowly in the eye of the bright, bloody whirlpool.

Kate gagged and almost choked, feeling the terror searing through her. She turned her hands into fists and kept staring as her fear turned to shame. Not shame, but something else - perhaps a murderous sense of loss - almost certainly the knowledge that fear itself was the greatest destroyer. She kept looking at the Pool of Siloam, at the bloody foetus in its bed of blood, and she sobbed and out of blind weeping eyes beheld the truth she had buried.

In shame was redemption and from that she gained new life; she looked down and was set free, becoming the foetus and looking up, seeing herself

high above, looking down, her eyes clear with renewed faith. The ripples contracted, drawn back in to the vortex, then the blood, first gurgling and then sighing, became a bubbling red flower. The petals of the flower folded inward, became a red bud in the water, then the red bud sank below the surface and soon disappeared.

Kate looked down, entranced, gradually awakening to rejuvenation; saw the clear, unblemished water, her own rippling reflection, a thin line of light dividing her face and emphasising the shadows. After a long time she looked up to see Joshua, Moshe and Paul, forming a semicircle around her, only Paul's eyes averted.

'I saw it,' Moshe said. 'We all saw it. You didn't imagine it.'

A choked sob broke from Paul and he fell to his knees, leaning across Joshua's feet, his hands covering his face.

'Not the Christ of the Christians,' Paul said, sounding choked, 'but the Jesus of the Jews. Not a supernatural being but a man of flesh and blood, yet unmistakably one with divine gifts or supernatural abilities. Such will be the Messiah and such have you proven yourself to be. Not the Son of the One, but His messenger. Indeed, you *are* the Messiah!'

Kate saw Moshe's grey eyes, drawn by love, bound with fear. Her heart turned like a leaf in the wind and flew out to be captured.

25

‘It’s been a long time,’ Leon said. ‘Nearly two months. I just want you to know that I’ve been faithful, doubtless due to senility.’

Kate smiled wanly but did not reply, still looking uneasy, her body long and angular in the bikini, her gaze fixed on Eilat. Leon navigated out of the lagoon, gradually leaving the marina behind, slipping past the yachts and small boats, the wind surfers and scuba divers, staring across the brilliant blue of the water to the Moab Mountains and Aqaba. He only looked at Kate occasionally, feeling as uneasy as she obviously did, well aware that their long separation had, more than expected, made them feel unfamiliar with each other. He wanted to believe that this was so, but felt a little uncertain; in his depths he sensed that Kate had somehow changed and was no longer close to him. This possibility, in his mind but inadmissible, sent a chill rippling through him.

‘You were very quiet in the car,’ he said.

‘I’m sorry. I didn’t mean to be. It’s just that I’ve been so long in that damned hospital, it feels strange being out at last.’

He believed half of the statement and decided not to question it, his every nerve alive to the tension that almost palpably came off her. He was standing in the open cockpit, at the navigating controls, and Kate was sitting beside him on one of the companion seats, her knees bent, her feet up, her long hair blowing freely in the wind, her eyes hidden behind a pair of sunglasses that emphasised her high cheekbones.

‘You don’t look well,’ Leon said.

‘I don’t feel so good either. Two months of air-conditioning is enough to make anyone look ill. That’s why I suggested coming here, instead of sitting in some bar. I wanted clean air and wide open spaces and the salt of the sea.’

‘I’m disappointed,’ Leon replied. ‘I had assumed it was nostalgia. We’ve spent a lot of time together on this boat, which is why I still treasure it.’

‘You can afford it, Leon.’

‘Not any longer, my pet. If something doesn’t break soon, I’ll have to leave here and look for real work.’

Feeling guilty and furtive, understanding what he was doing, recalling Rashid and the bargain they had made, he turned his head to look down at her. She was leaning into the hull, her breasts pressed against the railing, her face turned towards the mountains of Moab beyond the languid blue water. Her indefinable beauty tugged at him, breaking his heart, stirring his loins, and he turned away and looked straight ahead, trying to keep his voice casual.

‘I thought they were keeping you a prisoner.’

‘No, Leon, they weren’t.’

‘Major-general Moshe Eitan said you were suffering from shock and were therefore being kept under observation. I refused to believe that of my Kate, but the great man insisted.’

‘I can’t talk about it, Leon.’

‘Was it shock?’

‘Just a little.’

‘So why won’t you talk about it?’

‘I’m sorry. I can’t.’

‘Security reasons?’

‘Yes, Leon. You know that.’

‘I’m still a journalist, Kate.’

Leaving the lagoon, he entered the Red Sea proper and headed south towards Coral Island, relieved that the bustling port was now behind him, appreciating the cooler air. Glancing down at Kate, he saw her windblown hair, her curved spine and broad hips; and the tension, which he felt almost physically, was clear in her posture.

‘You haven’t recovered yet,’ he said.

‘I recovered a long time ago. I was kept in the hospital because they didn’t want the matter discussed.’

‘You mean what happened on the Mount of Olives?’

‘Don’t play innocent, Leon. You’ve been grilling Moshe Eitan ever since it happened, so you believe there was something. Unfortunately, you want to know more and I can’t help you there.’

‘The whole world is curious about it.’

‘What was reported was the truth: the authorities still don’t know what it

was - and neither do I.'

He didn't believe that for a second and her flushed cheeks showed the lie, before her face, automatically and primly, turned away from him.

'Was something brought down from there?'

'You've already asked Moshe that.'

'Eitan has obviously relayed all our conversations straight to you; the pair of you must have talked a great deal.'

She turned towards him, then, her eyes hidden behind the sunglasses, the wind blowing her hair across her lips, which were certainly not smiling. She studied him in silence for some time before turning away again.

'Yes,' she said, 'we talked a lot. We were forced together a lot. It was a security situation, after all, and Moshe was in charge.'

'A dedicated man,' Leon said.

'No sarcasm, Leon, please.'

'I'm sorry,' Leon replied. 'It's just that I got drunk one night, confronted the major-general, and ended up receiving the distinct impression that he was particularly fond of you.'

Kate refused to reply, but continued staring out to sea. Leon reached down and picked up his glass of gin and had a long, cooling drink. Straight ahead was the Red Sea, a clear, alluvial blue, barren mountains rising up to white clouds in an equally blue sky. Over there, at the base of the mountains, was the Jordanian city of Aqaba.

'Well, is he fond of you?'

'I don't want to discuss this, Leon.'

'I want to know why he kept you in that hospital if nothing was found up there.'

'What's more important to you? What Moshe feels for me or what was found on the summit of the Mount of Olives during the storm?'

It was a clever, mean question, cutting through to the bone, and Leon felt himself flinching with shock. What was more important to him? A future with Kate or his future in general? If he denied Rashid what he wanted, he might still have a future with Kate, but his future in general would be in danger. If, on the other hand, he decided to betray Kate, he would gain the world but possibly lose his soul. Now, thinking about this, his heart briefly lurched, his indecision placing him on that ledge where fear strips the nerves bare.

‘I don’t know what you mean,’ he lied.

‘Yes, you do,’ Kate said. ‘We came on this trip because we haven’t seen each other for two months, but already you’re starting to ask me questions that you know I can’t answer.’

‘Does that anger you?’

‘Yes. You’re trying to use me and I won’t let you. They let me out on the grounds that I kept my mouth shut, and whether or not what I know is important, I won’t break my promise.’

Leon had another drink while keeping the boat on an even course, glancing across the glittering water to the southern outskirts of Eilat, seeing the small, glass-bottomed boats above the coral reefs, people swimming and diving.

‘Okay,’ he said. ‘I take your point and I’m sorry. I’m a journalist and I can’t help myself, but I promise to try. The subject, quite obviously *verboten*, will be mentioned no more.’

‘Fine,’ Kate replied, turning towards him and glancing down, not smiling as she picked up her glass and had a long drink. Finished, she put the glass down and bent her neck across the railing, exposing her face to the sun, her long hair hanging free. Her body, long and lean, still sun-tanned, was a magnet to Leon’s eyes.

‘You’re still beautiful,’ he said.

‘My lower half,’ she replied. ‘I’m too thin and my breasts are too small, but my legs have some merit.’

‘Such legs drive men wild.’

‘Don’t get wild, Leon. Please.’

‘You sound as if you really mean that.’

‘I don’t know what I mean.’

She didn’t smile when she said it, and that made him more uneasy, more convinced that she had definitely changed in some as yet unknown way. He glanced at her closed lips, at her almost gaunt cheeks, let his eyes roam down to her breasts, then on down her long legs. No, she wasn’t beautiful, at least not obviously so, but her sensuality and attractiveness were of the kind that few men could ignore. Understanding this, he studied her, thinking of sex and feeling love, his emotions rampaging over physical desire and making him suffer real pain. He looked away, had a drink, put the glass back on the shelf, saw the rock of Coral Island ahead and tried to keep his voice steady.

‘You mean you’re not sure about me?’

‘I don’t know, Leon. I’m tired. I spent an awful lot of time in that hospital, and it wasn’t all pleasant.’

‘All right,’ he said. ‘I promise not to ask you about the hospital. I simply want to know why it changed you and how it affects me.’

‘Why should it affect you?’

‘You admit, then, that you’ve changed?’

‘I don’t know what you mean when you suggest that I’ve changed, but since you seem to believe that it’s true, how would it affect you?’

‘I believe we had a relationship.’

‘We had sex; that’s not a relationship.’

‘I thought we were friends in *and* out of bed.’

‘That’s still not a relationship.’

Leon sighed, exasperated, still not used to her intransigence, but also feeling, as he had not felt before, that she was slyly eluding him. He poured himself another drink, filled Kate’s glass and glanced at her, wishing she would remove the sunglasses and let him study her eyes. As if reading his mind, she put her hand up to the sunglasses, slid them slightly down her nose, then changed her mind and slid them back up. Leon offered another sigh and returned to the open cockpit; he had a sip of gin, then put the glass down, feeling worse every minute. Coral Island was just ahead, the rock supporting a Crusader fortress, the remains blending in with the barren island and looking beautifully desolate. He manoeuvred the boat between the island and the beach not far away, then continued his southerly direction towards the Fjord, which was where he intended dropping anchor.

‘So,’ he said lightly, ‘we didn’t have a relationship. We simply had regular sex and were good friends, which is something quite different.’

Kate had another sip of her drink and then raised her head. ‘Please, Leon, don’t get upset. You never made claims before.’

‘You claim something when you share a bed.’

‘Not necessarily something permanent.’

‘What happens if I want it to be permanent?’

‘Don’t, Leon. Just stop this.’

She turned her head away again, watching the island falling behind them, then stared across the glittering blue sea as if thinking of far-off things. Leon watched her, feeling gloomy, a grey cloud smothering his thoughts,

something ominous and darkly confused, based on how Kate was reacting to him. She was hesitant, distant, distracted and too tense, the latter tightening the skin on her face to make her look older. He thought of what had happened on the Mount of Olives, and of her long time in the hospital, and then, as something twisted inside of him, he thought of Moshe Eitan.

'There it is,' he said, keeping his voice neutral.

'Pardon?'

'The Fjord. One of Israel's natural wonders. Norway with sunshine.'

It was indeed a majestic sight: a great bay shaped like a horseshoe, the blue water as clear as glass, showing coral and exotic flora, surrounded by towering mountains, barren and sun-baked, tumbling down to sandy coves and a beach that thrust out towards the boat. Kate had seen it before, but she looked up nonetheless, sliding her sunglasses a little way down her nose to look over the top of them, then pushing them back up again. The beach was clean and deserted, almost white in the dazzling sunlight, and the silence, once the engine had been turned off, was almost ethereal.

'It's beautiful,' Kate said. 'It will *always* be beautiful. It's places like this that make you never want to leave Israel.'

Startled, Leon stared at her and took note of her expression, a combination of suppressed fear and yearning, intangibly haunting. He turned away and dropped the anchor, trying to distract himself from his thoughts, but then, straightening up again, he felt compelled to pursue the matter farther.

'I don't believe my ears,' he said. 'This can't be Kate Hirschfield talking. The Kate Hirschfield I knew hated Israel and wanted to leave.'

'I changed my mind,' Kate replied. 'I saw things differently in the hospital. And it's not that I'm too old to leave, but that I really belong here.'

'What made you change your mind?'

'I can't explain that, Leon.'

'Moshe Eitan?'

'No, Leon, not Moshe; it was more than just Moshe.'

It was an impulsive admission, stating at least one part of the case, and Leon, after he really took it in, felt deeply wounded. He glanced around the magnificent bay, which had once overwhelmed him, but his gaze, instead of being drawn to the mountains, was focused inward. There was pain to contend with, a growing desperation and need, and he began to understand

that if it was possible to have Kate, he would gladly cast his future to the winds and ignore Rashid Idriss.

'Shall we eat?' he asked.

'Just a little bit,' Kate replied.

'This place used to make you laugh and throw your clothes off and make love; and after, you'd eat like a pig, if with the grace of a lady.'

'I'm just tired, Leon. I told you.'

'This trip hasn't been successful.'

'I'm honestly not as miserable as I look. Let me tend to the hamper.'

She put the trestle table up and started unloading the hamper while Leon, not encouraged by her words, uncorked a bottle of wine. He kept glancing furtively at her, ashamed as he did so, but unable to control the temptation to read her mind from her face. She laid the table efficiently, with feigned enthusiasm, and he noticed that her tension had increased and was making her hands shake. He thought again of Moshe Eitan, recalled shouting after him, burned with shame at the recollection of his own words, wondering if they were true or false. The table was quickly set and Kate pulled her chair up. They both sat at the same time, then Leon poured the wine; they raised their tumblers and touched them together in salutation.

'Cheers,' Leon said.

'*L'chayeem*!'

He noticed the use of Hebrew, but passed no comment about it, since the lunch, prepared by Kate, was certainly Jewish, if not strictly *kosher*: a small selection of *pates*, a roast leg of lamb, pimentos, cucumber, fresh tomatoes and olives, a cheese spiced with paprika, another spiced with assorted vegetables, fruity yoghurt and pastries and bread sticks. Nevertheless, they both ate in a desultory manner, without real enthusiasm, but the first bottle of wine soon disappeared and Leon uncorked another. This bottle was soon half-empty, but Leon, to his surprise, still did not feel even remotely relaxed. He studied Kate and noticed that far from being drunk and at ease, her tension seemed to be increasing every minute and her hands still visibly shaking.

'Are you alright?' he asked.

'Yes,' she replied.

'You keep staring at the mountains and the sea, but you don't seem impressed.'

‘I’m sorry,’ she said. ‘I’m not giving you a good day. I’m tired. I really am tired. I can’t get used to this freedom.’

‘What are you thinking about?’

‘Nothing. Not a thing.’

‘As a psychiatrist, you should know that that’s impossible, so what are you thinking about?’

‘I can’t explain it,’ Kate said.

‘The hospital?’

‘Yes.’

‘In that case, I can ask no more questions; now you’ll have to start talking.’

‘I’m sorry. I’m truly sorry.’

‘So am I, but it doesn’t help. Normally, by this time, we’d both be lying on that deck, but I can’t see it happening today.’

‘No, Leon, it won’t.’

‘Why?’

‘I can’t explain it.’

‘The hospital?’

‘Yes.’

‘Moshe Eitan?’

‘Please don’t ask that question.’

The pain was unexpected and shockingly real. Feeling feverish and confused, he poured another glass of wine, had a sip and tried to keep himself calm. Looking around him, he saw the mountains, the blazing anvil of the sun, the sea as blue as the sky above it, still and silent, without shadows. He sipped more wine and then turned back to Kate, still hoping for the return of the warmth that had once been between them. There wasn’t a sign of it.

‘It’s Moshe,’ he said finally.

‘No,’ she said, ‘not *just* Moshe. If you’re concerned, nothing happened between us. It isn’t *just* him.’

‘I don’t understand, Kate.’

‘I can’t tell you, that’s all.’

‘Either it’s Moshe or it isn’t. If not Moshe, it’s something else. You’ve changed and you hardly recognise me, and I have to know why.’

‘Why?’

‘Because I care.’

‘Not that much.’

‘That much.’

‘You never cared that much and you never will. I can’t tell you. I won’t.’

She pushed her chair back and stood up, then sat down on the companion seat, and Leon, standing up automatically, followed her into the cockpit. She removed her sunglasses and glanced restlessly left and right, displaying fear and indecipherable yearning, then covered her face with her hands.

Leon stood there, feeling choked, torn by unfamiliar confusion, unable to grasp what was happening but desperately wanting to help her. He thought of what he had promised Rashid, of his own plan to betray Kate’s trust, and his shame, like a hot blade in butter, cut through him with ease. Seeing the state of her, he was lost, his future not worth a damn, his every impulse concentrated on the need to win her over and shelter her. To betray her was inconceivable, the very negation of his reasoning, so he reached out and placed his hand on her shoulder and tried to draw her back to him.

‘I missed you,’ he said, covering his shame with a simple truth. ‘I really missed you more than I ever thought I could - and I hope you believe that. I thought about you a lot. I could hardly stop thinking about you. It was as if, when we were in bed together just before that dreadful storm, something chained up inside me broke loose from its bonds and demanded, as it couldn’t have done before, your complete recognition. You understand what I’m saying? I’m trying to say I love you. I couldn’t say it before because I couldn’t trust myself, because my suitcase, as you so notably pointed out, was my life’s shabby symbol. I thought I’d move on again, another suitcase, another room, still retreating from the failures of my past, afraid of failing again. I always lacked commitment, Kate, could never give of myself. I had a strict Catholic background, believed passionately and then lost faith, but what I never lost was the need to replace that with another. I tried communism and socialism, read Engels and Marx, was disillusioned and then read Adam Smith and became an English Conservative. Alas, that also soured, becoming a web of contradictions, and my bitterness, curling my insides like poison, left me beached on the bleak shores of self-contempt. Unable to stand daily trivia, I left my wife and family: packed the oddments of my life in a suitcase and went looking for hideaways. Thus, Vietnam, Northern Ireland, International Terrorism and the Third World, my beliefs constantly switching, first the Left and then the Right, never able to take a firm stand

and thus haunted by my own moral cowardice. *Was* I cowardly? Oh, yes! Not physically, but morally. Most certainly I was haunted by a sense of failure and the need to believe. So, I became a cynic, knowing prices, not values; and when I met you, and felt what you made me feel, I could scarcely believe it. I thought I'd run again - pack my suitcase and just walk out - but then, in the hotel, just before that storm, when you said you were only drawn to me because of my inability to commit myself - it was then I suddenly realised that I might actually lose you, and that I valued you and wanted to fight for you. Yes, Kate, it was then, at that precise moment, that I understood the full extent of my commitment to you and wanted to show it. But I was foiled by that storm. The storm stole you away from me. And in the days since then I've lived with the conviction that the storm had said, *Show it*! I'm trying to show it now. I'm trying to say it loud and clear. I love you, Kate. I really and truly love you. Please believe me. Accept it.'

Falling silent, he stepped closer to her, his heart racing with tension, as if everything kept locked up for years was about to burst out of him. He saw her trembling and leaning forward, hiding her face in her hands; and then, as he knelt before her, sliding his arms around her and pulling her into him, her felt her shaking in aching spasms as she quietly, brokenly wept. Then at last he did burst, his suppressed emotions pouring out of him - pouring out like water from a dam to wash Kate away. She responded in kind, her deepest fears surfacing, and his exultation spiralled out of his pain to cleanse him of pain. He clung to her, and she to him, and he rocked her to and fro, holding on to her as if to a child, desperately wanting his love to heal her sorrow and unite them once more.

'I have to tell someone,' she sobbed. 'I can't bear all this confusion. It's all been like a dream, or a nightmare, and I can't grasp the truth of it. I have to talk to someone. Not someone who was involved. I have to talk to someone without beliefs of the kind that he represents. You have to promise not to repeat it. You have to swear to that and stick to it. If you love me, if you truly care for me, you'll give me your word on that. I want your promise. *Your promise*!'

'I promise,' Leon said, truly believing it at that moment, his heart breaking with sorrow and concern, no other thought in his head. 'Who's *he*? Is it Moshe?'

Then she told him about Joshua, her words tumbling out like stones,

forced along by the babbling brook of her confusion and falling brutally on Leon. He listened, disbelieving, trying to grasp it and failing, the immensity of what she was telling him almost shattering his reason. He sat back to stare at her, concentrating on her lips, trying to gauge from their rapid, demented movement, if the words added up. She kept talking, breathing harshly, letting her words cleave the air, mentioning Moshe and Paul Frankel and Joshua as if talking of dreams. Then he looked into her eyes, into their dark, tormented depths, and, seeing fear and yearning combined, understood that she was speaking the truth. The mystery of the Mount, the descending object that did not exist, the bulldozers pushing and piling the rubble over the hole where the black obelisk had emerged from the ruptured earth - all the pieces now fit.

Leon stood upright, then stepped closer to Kate, his hands reaching out to her head with its dark, tangled hair. He pressed down on that hair, lightly, reassuringly, then slid his fingers over her face to wipe the tears from her cheeks. He felt stunned by disbelief, rocked by terror and jubilation, and his faith, once a dried-up riverbed, now flowed out to embrace her. He bent over to kiss her head, his lips as dry as that riverbed, and remained that way, paralysed, perhaps dazed, for a very long time.

'It's alright,' he whispered.

'I know,' she said, also whispering. 'I feel better for having let it out, and now I think I can face it.'

'*We* can face it,' Leon said, as if the miracle had joined them. 'We can go away and simply forget it and let them work it out.'

Then he realised what he had said, what it was he really wanted, and he removed his lips from her head and straightened up to look down upon her. She was returning his gaze, her upturned eyes wide and wet, almost luminous with gratitude and relief and a terrible trust. He thought of what she had experienced, then of Joshua and what he meant, and he realised that even at World's End personal need would prevail. The Messiah, the Mahdi, the Christ of the Christians - in the end it mattered little who Joshua really was, since in the end his very presence was stupefying. The human mind could not grasp this, and failing to grasp it would turn inward, rejecting the more terrifying possibilities and searching for a private peace. Now Leon wanted that peace, not believing in Judgement Day, more concerned with the reality of flesh and blood and his inviolable rights. The irony was excruciating, as stupefying as Joshua's mysterious presence on Earth; so Leon, even

understanding this truth, once more reached for Kate's redeeming love.

'Don't stay here,' he said. 'You can't take this situation. Neither of us has to be involved. It's not real. We don't need it.'

'*I* need it,' Kate replied.

'I don't understand, Kate.'

'There was never enough between us, Leon. This is where I belong.'

She raised her eyes to his face, silently pleading for understanding, and Leon felt the winds of loss sweeping through him to destroy all his hopes.

'You mean Joshua?'

'No, Leon, not just Joshua. I mean more than that.'

And then her words came back to him, ringing out like bells of doom, brutally forcing him to face what he had missed in the drama of Joshua… The other participant was Moshe Eitan, who had been present from the beginning; who had, whether willingly or not, been drawn into Kate's dream and had since, in Leon's absence, been the rock upon which she had stood.

'You mean Moshe?'

'I think so.'

He turned away from her, his heart beating against his chest, his senses flying out like the wind to scatter all he had gained. He hardly knew what he was doing, saw the anchor, heard the engine, then the boat was heading out of the Fjord and back into the Red Sea. The majestic mountains fell behind and the empty beach disappeared, leaving only the broad expanse of glittering water dividing Jordan from Israel. Kate was silent by his side, now calmer, perhaps resigned, and he felt his thwarted love clamping around him to crush the life out of him. He was dying, suffocating, his dreams turning to dust, and as the boat passed Coral Island and headed back to Eilat, he felt his hatred rising up to fortify him and give him something to cling to.

He had lost her to Moshe, completely, irrevocably, and now he was alone, his whole future in the balance, owing nothing to no one but himself, but with much to avenge. He spoke no more to Kate, but instead stared straight ahead, then glanced across at the Moab Mountains, at the distant town of Aqaba, and knew that he could now betray her trust without feeling a damned thing.

He would sell the story of Joshua.

He dropped Kate off at the hospital and they parted in fraught silence, his car churning up the stones as he left and drove back to Jerusalem. Kate stood

there for some time, looking around her in a daze, then eventually she turned away and entered the hospital and went straight to her room. She undressed and lay down, her body rigid on the bed, her eyes dry and her heart beating quickly as darkness descended. Sleep came in due course, carrying her along a silent stream, taking her out to where the mountains and valleys offered solace and hope. The air shimmered and flashed, revealing the mirage of her dilemma: the faces of Moshe and Leon and Joshua materialising like grey clouds. She melted into the rock, became one with the parched earth, and let her pain, which before had been unbearable, drift away with the shifting sands.

The room door was pushed open and she awakened to morning light, flooding the room and burning into her eyes as she pushed herself upright. Moshe was standing above the bed, his lips tight, his grey eyes hard, his body visibly trembling with rage and, possibly, shock. He was holding a bunch of newspapers, most of them foreign, and he threw them over the bed, over her, one by one, as if wanting to bury her in rubbish.

'There's no by-line,' he said, his voice harsh and contemptuous, 'but we've no reason to doubt who blew the story. Joshua's on the front page of every newspaper we've received, and our telephones haven't stopped ringing. That bastard, Leon Halcomb, your good friend, has told the whole world about it. Now just watch it explode!'

He walked out and slammed the door, leaving Kate with her shame, and she rolled over to stare at the wall and try to live with her guilt. What she learned at that moment, in terrible wonder and grief, was that if the world exploded and history changed forever, she, a mere woman, would go with it, thinking of only one thing: her betrayal by Leon and, by lieu of that, her equally destructive betrayal of Moshe.

She closed her eyes and wept brokenly.

26

The flashlights exploded as Moshe and Ben Eleizer emerged from the crowded Press Room and sat behind the long table on the wooden dais in front of the gathered reporters. Moshe and the Prime Minister sat together with Paul Frankel on Moshe's left side and Rabbi Latinovats, obviously uncomfortable, seated at the other side of Ben Eleizer. Gazing down upon the jostling reporters, temporarily dazzled by the flashlights, Moshe saw Leon at the very back of the room, his face weary and thoughtful. Moshe quickly looked away, trying to hold down his automatic rush of rage, as Ben Eleizer leaned towards his microphone, his face deceptively bland.

'Good afternoon, ladies and gentlemen,' he said, his voice carefully modulated and untroubled. 'Since Lieutenant Frankel has already given you the unclassified facts on the discovery and subsequent investigation of the man known as Joshua, I need only add here that this conference is to be treated as an informal question-and-answer session, and that we will answer, to the limits of discretion, as honestly as possible. Now the first question, please.'

Most of the reporters shot their hands up and started shouting for attention. Shading his eyes against the popping flashlights of the many cameras, Ben Eleizer pointed to a female journalist in the front row and let her question bring back a semblance of order.

'Why the need for discretion, Prime Minister? And why are certain facts of this matter still classified?'

'I think you'd agree that we should not, given the sensitivity of this matter, release information that has not been verified or substantiated.'

'Can we assume from that statement that this man is still under investigation?'

'You can.'

'And will the full details, or results, of that investigation be released to the

media?'

'At this stage any answer to that question would be deemed improper.'

'Why?' Leon called out from the back of the room.

'I don't have to tell you, Mr. Halcomb, that the world-wide reportage on this subject to date has already led to a lot of wild speculation of the kind that is not particularly helpful.'

'By wild speculation, do you mean - ?'

'That world reportage,' another journalist interjected, 'was based on a syndicated article that was published without a by-line. Are we to assume that it didn't originate from one of your sources?'

'You assume correctly.'

'You didn't want that information released?'

'No. We felt it was premature. It's not our belief that a case such as this should be opened up to public discussion before a full investigation has been completed.'

'Do you know who released the information?'

'We believe we know the individual involved, but unfortunately we can't verify it.'

'Are you suggesting by the use of the word "unfortunately",' Leon said, 'that you would, if you could prove your case, take retaliatory action against the journalist involved?'

'Yes,' Moshe replied, trying to keep his face controlled. 'We try, as much as possible, to respect the freedom of the Press, but we won't encourage journalists to abuse that freedom with such underhand methods.'

'Do you know the journalist's source?' another reporter enquired.

'No,' Ben Eleizer said.

'It was obviously inside information,' the same reporter said. 'Does that worry you much?'

'We're naturally shocked,' Paul said, 'that this leak came from the inside, and the matter is now under investigation.'

Another journalist picked up on Leon's interrupted question. 'By wild speculation, do you mean the world-wide debate on whether or not this man is some sort of messianic or Christ-like figure?'

'Precisely,' Ben Eleizer said.

'Such speculation should bother the Rabbinate more than the government. Why does it bother you?'

‘That question, coming from a journalist, is surely superfluous. It’s no secret that already some of the more extreme Jews, Moslems and Christians are adopting this man as their saviour. The Jews are claiming him as their Messiah, the Moslems are suggesting that he might be the returned Mahdi, and the Christians are discussing him in terms of the Second Coming of their Christ. While it is not the function of this government to involve itself in anything other than secular matters, it *is* of great concern to us that such views are leading to dissension, increasingly violent, between Jews, Christians and Moslems, and that thousands of people are now clamouring to come to Israel in what can only be termed a mass religious fervour.’

‘Reportedly thousands of Diaspora Jews are already pouring into Israel, and are having no trouble in getting in.’

‘Israel has always been open to those Jews who wish to come here. We cannot, and will not, revoke that right.’

‘The Christians are protesting that they’re not being given the same privilege - that they are, in fact, having considerable trouble in getting into Israel.’

‘We simply cannot handle the numbers involved - and the Jews, in all cases, must be given priority.’

‘What about the Arabs, Prime Minister?’

‘What about them?’

‘Is it not true that no Arabs at all are now being allowed into this country?’

‘Unfortunately, we were forced to take that measure.’

‘Why?’

‘We cannot admit Arabs whose sole interest in wishing to come into Israel is to inflame insurrection by spreading the news that this man is the returned Mahdi. Many of the recent riots in the streets of Jerusalem have been caused by extremist Muslims who are claiming that we’re holding their Mahdi prisoner and that his presence here is a sign that the sovereignty of the Moslem religion must now be established at any cost.’

‘By all-out war, if necessary.’

‘Correct.’

‘But isn’t it also true,’ Leon said, ‘that many of those riots were started by extremist Jews, such as the Netorei Karta zealots, who are making similar claims for your prisoner - namely, that he’s the Jewish Messiah who will

inaugurate the sovereignty of Judaism and establish the true Promised Land?'

'He's not a prisoner,' Moshe said, 'but a man under investigation. As to your main point, yes, unfortunately that's true – but those riots wouldn't be happening had not the news of this man been prematurely and unofficially released.'

'Would the major-general care to comment on the widely held belief that the Israeli government is admitting thousands of Diaspora Jews into this country - while keeping the Arabs out - because they're concerned that another Arab-Israeli war might break out and they want to build up their human resources to combat it.'

'Our intelligence sources have reported no increased signs of aggression on the part of the Arabs,' Paul lied, 'and it's not our belief that the violence on the streets of Jerusalem will incite those Arabs outside Israel's borders.'

'The riots in the streets of Jerusalem,' another reporter said, 'are reaching epidemic proportions and have already involved Jews, Arabs and Christians. Many of the rioters, when interviewed, claimed that they were demonstrating for the release of the man you're now holding. Would you care to comment on that?'

'What sort of comment do you want?' Moshe responded.

'Do you intend releasing that man?'

'That would depend on the results of our investigations.'

'What are you trying to prove, major-general?'

'We're trying to ascertain just who, precisely, this man is.'

'The man has recollections of biblical days, he speaks every known language, he can apparently work miracles, and according to reports his shroud has been dated to approximately the time of Jesus Christ. What more do you need to know?'

'Much of that information has been exaggerated.'

'That hardly answers the question, major-general.'

'To answer the question would be improper before all the tests have been completed.'

'And when might that be?'

'Possibly another year.'

'That's ridiculous, major-general, and you know it.'

'The man may be suffering from amnesia and his so-called biblical memories could be fragments from his former education. His command of

every known language is admittedly a remarkable phenomenon, but it could still be a human phenomenon for all that. His much-exaggerated ability to work miracles could be explained in terms of highly developed parapsychological abilities. As for the shroud, the published reports of its authenticity are premature, and a full analysis will require another year.'

Some of the journalists laughed openly, others shook their heads cynically, and Leon, still standing at the back of the room, merely offered a tight, knowing grin.

'So you intend keeping him prisoner for another year?' another reporter asked.

'Not necessarily,' Ben Eleizer said. 'We're hoping to find out through interrogation who this man really is.'

'Is the Prime Minister stating that he doesn't believe in the resurrection theory regarding this man?'

'I'm stating that the evidence received so far doesn't constitute proof of such a theory.'

'What other possibility could there be? Do you mean your man could be a foreign agent?'

'That possibility has to be considered.'

'But do foreign agents normally come with such abilities?'

'There's a first time for everything,' Ben Eleizer said.

The journalists laughed at that, obviously appreciating some light relief, but then Leon took a step forward and raised his hand.

'Yes, Mr. Halcomb?'

'In an official statement, the Vatican has rejected any possible theological interpretation of Joshua - '

'That is correct,' Rabbi Latinovats said too quickly.

'- but unofficial sources claim that the Vatican has sent a secret communiqué to the Rabbinate, asking if it would be possible for Joshua to be interrogated by the Sacred College of Cardinals in Rome. Would the Chief Rabbi care to comment on that?'

'You are as aware as anyone in this room,' Jozsef said, 'that the Rabbinate would not be able to comment on *any* secret communiqué.'

'You are admitting, then, that such a communiqué has been received?'

'I am not. I am saying that if such had been received, I would not be able to mention the fact.'

‘That sounds like an admission.’

‘It is not. It is simply a statement of fact.’

‘Let us assume, then, that the communiqué is hypothetical. If such a communiqué were received, what would be the reaction of the Rabbinate?’

‘The Rabbinate would have no secular, theological or legal grounds for preventing this man from speaking to anyone.’

‘So you’d be willing to hand him over to the Vatican?’

‘It’s not a question of the Rabbinate either holding him here or handing him over to anyone. Jurisdiction over this man is in the hands of the security services.’

‘Regarding the riots in Jerusalem - ’ someone began.

‘Would the Chief Rabbi,’ Leon continued stubbornly, ‘be willing to state the Rabbinate’s view, theologically speaking, of this man?’

Jozsef looked even more uncomfortable, cracking his knuckles and blushing. Moshe, staring directly at Leon, felt a cold, clean contempt. In the event, Jozsef managed to give his statement in a calm, measured tone.

‘The Rabbinate’s view, as of this moment, is that this man represents a secular, rather than a religious, matter. Since the most extensive physical, psychological and forensic tests have failed to prove conclusively that this man is anything other than a normal human being, we must reject the various claims being made on his behalf.’

‘Is it not your view,’ said another reporter, ‘that he *is* the Messiah?’

‘No.’

‘Yet the Rabbinate has *not* formally stated that view,’ Leon said. ‘A surprising omission in view of the recent riots by extreme Orthodox Jews.’

‘The Rabbinate cannot deny what it does not recognise. Until proven otherwise, this man is a man like any other, and a formal denial would therefore be superfluous.’

‘Would the Chief Rabbi not agree that such a statement is superfluous in view of the recent riots by certain members of his own Jewish community? It is, after all, the function of the Rabbinate to give moral and theological guidance to its community. Surely, then, a formal denial from the Rabbinate would put an end to the rioting.’

‘The Rabbinate condemns the rioting, but is in no position to offer a formal denial of a claim that it has not officially published.’

‘Semantics!’ someone yelled.

‘Exactly,’ Leon said. ‘Are you claiming that the Rabbinate has not even discussed this extraordinary event?’

‘The Rabbinate has not formally discussed the event.’

‘But it *has* discussed it *informally*?’

‘Individual members have naturally stated their points of view.’

‘Hypocrites!’ someone yelled.

‘The Vatican and the World Council of Churches,’ Leon continued, ‘have taken a similarly cowardly stand: they refuse to make a formal declaration about the matter, but discuss that same matter in secret communiqués.’

‘I cannot speak for the Vatican or the World Council of Churches.’

‘To get back to the riots in Jerusalem,’ another woman said, ‘would either the Cabinet or the Rabbinate be willing to officially request that the Vatican and the World Council of Churches put out a statement formally condemning those rioting in Jerusalem in the name of this as yet unproven saviour?’

‘Since the Rabbinate has not been officially involved with this man, it cannot put out an official statement of any kind.’

‘And the Cabinet?’

‘The Cabinet,’ Ben Eleizer said, ‘has given the army complete freedom in the curtailing of the riots and is drafting up new laws to deal with offenders. Since it is the function of the Cabinet to deal with secular rather than religious matters, obviously it can do no more than that.’

‘Has the Prime Minister any comment to make about the fact that in taking such action he has pitted Jew against Jew?’

‘The Prime Minister,’ Ben Eleizer said, ‘would like to state that he deeply regrets these unfortunate events.’

‘What about the West Bank?’ Leon said.

‘What about it?’ Moshe replied.

‘It’s a known fact that the West Bank has become an armed fortress controlled by the fanatics of Kash and *Gush Emunin*, and that both groups, in their determination to rid Palestine - ’

‘Israel,’ Moshe said.

‘ - Palestine of all Arabs, have made it clear that they would like to topple the present government and replace it with an ecclesiastical Cabinet devoted to Zionism.’

‘That’s a statement,’ Moshe said, ‘not a question.’

‘Would the major-general care to comment on what course of action he’s

likely to take now that both groups of Jewish fanatics are demanding the release of your prisoner, Joshua - ’

‘He is not a prisoner.’

‘ - and, even more embarrassing, claiming that he’s the Messiah and that His coming is a sign that the sovereignty of Judaism is at hand and that Israel must therefore be purged of all non-Jews?’

‘The theological claims of such groups are of no concern to the Defence Forces.’

‘The claims of those groups must be of concern to the DF when those groups are arming themselves to the teeth to fight not only the Arabs but your own conscript troops.’

‘That scenario, if I may say so, is purely hypothetical and worthy of a notoriously antagonistic journalist.’

‘I apologise for my antagonism,’ Leon responded, ‘but surely the experienced major-general must be aware that his own troops have already been forced to take retaliatory action against a group of Kash fanatics who tried to storm the Hadassah Medical Centre and spirit your famous prisoner away.’

‘The isolated action of a group of political thugs is hardly proof of a major Jewish insurrection.’

‘Possibly,’ Leon said, ‘but what has the major-general got to say about the fact that his troops have dramatically increased their so-called security raids on such Jewish strongholds as Ramallah, Nablus and Kiryat Arba - all on the West Bank - and have, during such activities, been resisted with gunfire and hand grenades?’

‘We have always had trouble with the West Bank, as you know, but we believe that situation can be contained.’

‘You haven’t had armed resistance before.’

‘That matter,’ Ben Eleizer said, ‘is indeed of grave concern, but may not be related to this man, Joshua.’

‘It’s related to Joshua because both Kash and *Gush Emunin* are openly claiming that he’s the Messiah.’

‘I do not think - ’

‘Could someone else get a question in here?’

‘Of course,’ Ben Eleizer said, obviously relieved, his bland façade momentarily cracking before hastily reinstating itself. ‘We’re delighted to

give attention to the *Observer* of London.'

'Thank you, Prime Minister. I'd just like to follow up on the remarks made by my expatriate colleague, Mr. Halcomb, by asking Lieutenant Frankel, member of Shin Bet and an Orthodox Jew, what his reaction, both personal and political, is to this situation.'

Paul flushed beneath his dark skin, lowered his eyes and then looked up again, his fingers spreading out on the table as if trying to grab it for protection.

'Since I am here as a representative of internal security and counterintelligence, I'm afraid I must keep my personal views out of it.'

'And your political views?'

'My political views are the views of the serving government, since my sole function is to serve the government in office.'

'Your view, then, is that this man is still something of an unknown quality and must therefore be treated as a possible subversive or enemy agent?'

'Correct.'

'Is it not true, Lieutenant Frankel, that you're an extreme Orthodox Jew with a rather strict view of Zionism?'

'I've never tried to hide my Zionist beliefs.'

'Can you therefore, in the present situation, with Jew fighting Jew, keep your political and personal views apart?'

'That question,' Jozsef intervened, 'is already too personal and has little bearing on this matter.'

'Are you not disturbed, Rabbi Latinovats, that at a time such as this, with Jew, Moslem and Christian all fighting together - and all over this man of unknown origin - that a member of Shin Bet, the internal security service, should hold the sort of views that have led to a lot of criticism of your own more liberal preachings as Ashkenazi Chief Rabbi?'

'Judaism is a coat of many colours - and hopefully will always remain so. The fact that Lieutenant Frankel has views different from my own in no way reflects upon his activities on behalf of Israel.'

'Lieutenant Frankel has long been noted as one of the brighter stars in the Shin Bet firmament; nonetheless, since he's a relatively young officer, the fact that he has recently been put in charge of security regarding the man, Joshua - and, indeed, is representing Shin Bet at his conference - has led a great number of people to think that this is a purely diplomatic move,

designed to pacify the more extremist Orthodox Jews. Does the Chief Rabbi have any comment regarding this?'

'Such a question should not be directed at the Chief Rabbi,' Ben Eleizer said smoothly, 'but at Lieutenant Frankel's superior officers in Shin Bet.'

'There are no such officers present at this conference. Perhaps Major-General Eitan would care to comment.'

'I'm afraid not,' Moshe said. 'As an officer of the IDF, it's not my duty to comment on decisions regarding the deployment of members of Shin Bet.'

'If I may change the subject a little,' Leon said, his voice ringing out loud and clear, 'is it not true that the Soviet and American governments are both disturbed by the possibility that the riots in Jerusalem - whatever their reasons - could spread throughout Israel and encourage the surrounding Arab states to exploit the situation?'

'Another hypothetical situation,' Moshe replied.

'Not quite so hypothetical, major-general. The United Nations is already alarmed at the increasing violence in Jerusalem and is convinced that it's going to explode elsewhere. Indeed, if we may forget Israel for a second, there have also been less violent demonstrations in many other countries - notably those with a deeply religious culture - and the United Nations therefore has, according to Reuters, stated its concern over the rioting in Jerusalem and demanded clarification on the situation. Ergo, it's not so hypothetical to add that the Soviets and Americans have expressed similar thoughts and are concerned about certain troop movements along the Syrian, Lebanese and Jordanian borders.'

'We cannot comment on any movement along those borders.'

'Would you be willing to comment on the widely held belief that if the Israelis fail to control their more fanatical and increasingly violent Jews of the West Bank, and if, because of that, the Arabs decide that the time is ripe to sweep into a divided Israel, the Soviets and Americans, overtly to maintain peace in the Middle East, covertly to ensure the continuous flow of Arab oil, will have to take sides in the issue in a so-called War of Intervention and thus subsequently carve Israel up between them?'

'No,' Moshe said, 'we wouldn't care to comment.'

'Is the major-general speaking on behalf of the Prime Minister and his Cabinet?' another journalist asked.

'Yes,' Ben Eleizer said.

‘You refuse to accept the possibility that this could all happen because of the man you’re presently holding?’

‘Let me just say this,’ Ben Eleizer replied. ‘The riots in Jerusalem are the results of religious fervour encouraged by exaggerated media reports about the man we are holding, but they will die away, as all riots do, with the passing of time. The problem of the West Bank, which has been with us for years, has merely been inflamed by the same highly irresponsible media reports and doubtless will be resolved in due course. As for the Arab situation, I need only point out that to date not one Arab leader has offered a formal comment regarding the man Joshua, and the movements along our borders, while not to be ignored, are certainly not as dramatic as has been suggested. Finally, let me just add that there is still no absolute proof that this man is anything other than a normal human being, that time will doubtless prove him to be just that, and that this whole situation, unfortunately inflamed by the media, will gradually become less controversial.’

Ben Eleizer nodded at Moshe, as if to signal that the conference was over, but Leon’s voice, again ringing out loud and clear, made him stay in his chair.

‘Since the Chief Rabbi has refused to either admit or deny the existence of any communiqué between the Vatican and the Rabbinate - or, indeed, between the Rabbinate and the World Council of Churches - would you, Prime Minister, care to comment on the widespread rumour that both the Soviets and the Americans are demanding their own unbiased examinations of the man you are holding, particularly in view of the fact that you have consistently denied that anything solid crashed on the Mount of Olives?’

‘We do not comment on rumours, widespread or otherwise.’

‘Would you state, categorically, that neither the Soviets nor the Americans have made any such request?’

‘I would not make any comment on any rumour.’

‘What would your reaction be to such a request?’

‘The man is of unknown origin but was found in Jerusalem, so until such time as his nationality can be ascertained we must treat him as an Israeli citizen. There would therefore be no justification whatsoever for handing him over to any foreign power.’

‘Would you consider the Vatican to be a foreign power?’

‘I believe we’ve already covered that, Mr. Halcomb.’

Leon smiled, but said no more, merely letting his gaze slip towards Moshe; but Moshe, determined to keep his feelings neutral, kept his eyes off Leon.

‘One final question,’ Ben Eleizer offered.

‘It’s been a fortnight since the news of this man’s discovery was broken,’ a female journalist said, ‘and in that short time there have been violent clashes between the various religious sects in Jerusalem, less violent demonstrations in many other countries, an enormous upsurge of interest in numerous occult, UFO and other esoteric organisations, a mass migration of Diaspora Jews into Israel, a total blocking of most Christians, including tourists, and all Arabs into this country, and a build-up of Arab troop movements along the Syrian, Lebanese and Jordanian borders. Do you not think, given these extraordinary events, that the man you’re keeping under surveillance should be exposed to the public, at least by means of the media?’

‘No,’ Ben Eleizer said. ‘I’m afraid we cannot agree with that. We cannot release this man until we are fully satisfied regarding his origin and nature - and until we understand how he came to be here. Violent demonstrations will not help; we simply will not release him. Ladies and gentlemen, thank you.’

Moshe raised his eyes and looked along the room, but Leon had vanished.

27

The taxi driver refused to take her along Jaffa Road, but instead headed away from the smoking rooftops of the Mae Shearim quarter by driving along Agrippas and turning right into King George V Street. The normally busy street was unusually quiet, many of the windows boarded up, and the few lights bleeding into the darkness seemed bleak and forbidding. Kate glanced through the rear window and saw the smoke over Mae Shearim, a red glowing fanning above the rooftops where the flames were still burning. The sound of gunfire made her twitch, then she shivered and turned away, glancing through the window on her left to see the soldiers around the heavily guarded entrance to the Plaza Hotel. There were few tourists left, but the hotels were filled with recent immigrants, most of whom were enamoured with the Messiah and oblivious to the armed guards. Thinking of this, Kate shivered again, feeling haunted with guilt, then she wondered what she might say to Moshe, and the pain bit inside her. The taxi turned left at Keren Hayesod and King David Street, crossed the road and then stopped outside the King David Hotel, directly facing the floodlit YMCA and its magnificent, oriental tower.

After paying the driver, she slipped out of the vehicle and stood for some time on the pavement, looking up and down the broad boulevard on which the trees cast their shadows in the lamplight. The dark smoke was still billowing in the starlit sky above West Jerusalem; the gunfire, sporadic and distant, was eerie and chilling. She could not believe that it had happened, so brutally and quickly, and she shook her head sadly from side to side and walked up to the hotel. The armed guards at the swinging doors checked her identification, then nodded, their young faces solemn, and let her walk through.

The enormous lobby was packed with soldiers, many on cots or in sleeping bags, the furniture pushed back against the walls beneath the large

Victorian paintings, weapons glinting in the bright light of the chandeliers hanging down from the ceiling. Some of the soldiers were sleeping, others playing cards or reading books, while the women volunteers, notably all Jewish, were wending their way between the prostate bodies, serving simple food and drinks.

Kate crossed the lobby, feeling the eyes of the soldiers upon her, and made her way to the terrace overlooking the Oriental Gardens. Most of the tables were taken, both with soldiers and determined clientele, and she saw Moshe near the edge of the room, framed by the gardens. She almost turned away and walked back out, the panic seizing her instantly, but instead she stopped briefly, nodded at him, and then walked over to him. He was drinking a beer, the glass small in his big hand, but he placed the glass back on the table and gave her a pained smile.

'*Shalom*, Kate.'

'*Shalom*.'

She did not sit down immediately, but stood there, feeling paralysed, the guilt and shame turning her flesh to stone and draining her mind. Moshe raised his left hand and pointed at the chair opposite, his face terribly weary, his eyes dull, his hand visibly shaking.

'It's alright,' he said. 'Sit down.'

'You look completely exhausted.'

'I am. I haven't slept for two days. Now please, Kate, sit down.'

She sank gratefully onto the chair, placing her shoulder bag on the table, glancing around her at the soldiers and civilians, thinking of how things had changed so much in such a short time. Eventually, when Moshe's silence became unbearable, she returned her gaze to him.

'The lobby looks like a battlefield,' she said. 'Are they all riot-control troops?'

'Yes,' Moshe said.

'I saw the light of the burning buildings in the Mae Shearim quarter, and also heard isolated gunshots.'

'The Arabs are particularly incensed at the messianic claims of the Mae Shearim quarter since those same Arabs naturally believe Joshua to be their Mahdi. In all fairness to them, the situation was doubtless exacerbated by the fact that the Jewish fanatics of Kash and *Gush Emunin* have been similarly terrorising the Arabs in every major town on the West Bank.'

‘Do you think the situation can be contained?’

‘No, I don’t. I think the situation is getting out of hand. During the past few days we’ve had fighting in Bethlehem, Nazareth, Tel Aviv and Netanya. I can’t spare enough troops to deal with it.’

‘And you can’t use your border-patrol troops?’

‘No. Contrary to what we normally say, or wish to believe, the mass fervour that’s gripped every religion in Jerusalem is now spreading out beyond her borders. Apart from the fact that a great many Arabs, both inside and outside Israel, are convinced that the Mahdi has returned, the less religiously inclined are viewing the riots in our streets as a sign that Jerusalem is about to fall. Small wonder they’re massing around our borders and preparing for war. So, no, I can’t use my border-patrol troops. In fact, I have to take troops from the streets to swell the thinning ranks of those protecting our borders.’

‘You sound really weary.’

‘I’m weary. I don’t know what to do.’

He called a waiter over, ordered a beer and a gin-and-tonic, then sat back and rubbed his eyes with his fingers, shaking his head wearily from side to side. Kate watched him, wanting to beg his forgiveness. He leaned forward and placed his large hands on the table, staring at her, not smiling.

‘So,’ he said, ‘how have you been?’

Kate shrugged. ‘Not so good. I’ve had a lot on my mind. I don’t think I have to elaborate on that. You must know what I’m talking about.’

‘Why did you do it, Kate?’

‘An answer would be an excuse. At least any answer would *sound* like an excuse, which is probably the same thing.’

‘You must have trusted him a lot.’

‘Yes, I suppose I did. Although I’m not at all sure if it was that… if that even came into it…’ Her voice trailed off, dying to a whisper, a sibilance that arched through the air to form a question mark. ‘No,’ she said, ‘it was something else. Trust didn’t even come into it. What I mean is that I didn’t think about it, one way or the other. I just had to tell someone - someone I hadn’t experienced it with - and Leon, also the person closest to me, happened to be there at the right time. I just let it out, trying to get rid of the doubt and pressure, and remember exacting his promise not to tell anyone, as if that would absolve me.’

‘Then he told the whole world.’

‘Yes, Moshe, he did. He told the whole world and it shocked me because I was the guilty one.’

‘You trusted him.’

‘You trusted me.’

‘I don’t think it’s the same thing.’

‘Why? Because I’m just a silly woman and you’re a sensible man?’

Moshe winced. ‘I didn’t mean that. Why are you always so defensive? I simply meant that he was your lover and that that sort of trust is different from the trust I had in you.’

‘Why different?’

‘It’s a trust based on love - and love doesn’t ask questions.’

Kate almost flinched with shock, as if she had been slapped, then was further shocked by what she was feeling and by its mindless intensity. What she was feeling was resentment and an almost childish hurt because Moshe, either deliberately or innocently, had disowned any such feelings for her. Understanding this, she almost laughed, feeling the hysteria bubbling up to her throat, a bitter and self-mocking humour that luckily died on her lips.

‘You think I loved Leon?’

‘I naturally assumed so.’

‘You mean, you assumed from the knowledge that Leon was my lover that I had to be in love with him?’

‘I’d have thought that was a natural deduction, Kate. After all, it was more than a one-night stand.’

‘You mean a woman has to be in love to take a lover?’

‘Yes, I suppose so.’

She had to smile at that, amused by his impossible innocence. ‘Lord,’ she said, ‘what a good Jew you are: so puritanical and moral. What does a woman do with a man like you in this day and age?’

She saw the trace of a smile, but he quickly hid it by picking up his glass and having a sip of his drink. He set the glass back on the table and examined it thoughtfully.

‘You think I’m old-fashioned?’ he asked.

‘The thought’s crossed my mind occasionally.’

‘And you, of course, are an emancipated lady of this wonderful day and age.’

‘You disapprove,’ Kate said.

‘I’m not a rabbi,’ Moshe replied.

‘Nevertheless, I can sense your disapproval and I’d like it explained.’

He shrugged and looked away, gazing around the other tables, his attention obviously focused on the other soldiers as they tried to relax.

‘They’ve had a bad time,’ he said. ‘They’re patrolling the town in shifts. They haven’t had a decent sleep for days and the work isn’t pleasant.’

‘Because they’re fighting and arresting fellow Jews?’

‘Yes,’ he said. ‘It eats at them.’ He turned back to face her. His eyes were slightly bloodshot, weary and filled with a sadness that tore at her. ‘So,’ he said, ‘the lady wants an explanation for my supposed disapproval.’

‘Yes,’ Kate said, ‘I do.’

‘I don’t really disapprove. I simply don’t understand. Maybe I’m prejudiced, maybe I *am* old-fashioned, but I just don’t understand how a woman like you can be so casual about whom you go to bed with. I just find it bewildering.’

She felt a flicker of anger that made her lips tighten, but the impulse to stand up and slap his face was also the impulse to touch him tenderly.

‘I have physical needs,’ she said, ‘of a perfectly normal kind, and I see little value in frustrating them. As for being casual about it, I don’t think that’s quite true, since I felt a great deal for Leon Halcomb.’

She saw the shifting of his gaze, a helpless sign that she had hurt him, and she felt an equally helpless satisfaction combined with faint hope. She had a drink and put her glass back on the table, trying to keep her hand steady.

‘So,’ he said, ‘you felt a great deal for him, but you didn’t quite love him.’

‘That’s it, Moshe. Precisely.’

‘You sound almost defiant.’

‘Why should I be?’

‘Because you think I’m attacking you over this, but believe me, I’m not.’

‘Admit it: you disapproved.’

‘I found it difficult to comprehend. On the other hand, you’re a very attractive woman, so perhaps I *am* prejudiced.’

She felt her hope growing, like the blossoming of a rose, but her fear, like the thorns around that rose, still threatened to strangle her. He was so unrevealing, so hesitant and withdrawn, and her anger at his inability, or refusal, to express himself also drew her inexorably towards him and made

her want to release him. It was very much a feminine attitude, but she wasn't too comfortable with it.

'Do you mind if I smoke?'

He shrugged indifferently, then picked his glass up and had another sip of his drink while she lit a cigarette with nervous movements, feeling confused and resentful. She inhaled and then blew the smoke out and kept her gaze on his thoughtful face.

'Just how attractive do you think I am, Moshe?'

'*Very* attractive, Kate.'

'And did you expect me to lead a celibate life?'

'Well…' He hesitated. 'Not quite.'

'So if you didn't expect me to be celibate, what did you imagine my private life was like?'

'All right, Kate, I get the message.'

'No, Moshe, I don't think so. I seriously doubt that you get anything. Like most men, you have a double set of standards, one for men, the other for women, and your disapproval, which you pretend not to feel, simply can't be disguised.'

'You're becoming angry, Kate.'

'Damned right, I'm becoming angry. Tell me this, major-general - and please give me an honest answer… How would you respond if I made it perfectly clear that I thought you were an attractive man?'

'Why? Do you?'

'Damn it, I didn't say that. I merely asked how you would react if it were true.'

'I'm sorry,' he said. 'My reaction was perfectly natural. We male chauvinists are like that.'

'It was mockery without malice, offered quietly and dryly, but Kate felt an unreasonable resentment that made her want to strike back at him. Her response was automatic, purely emotional and instinctive, and she realised, with a trace of self-mockery, that she wanted to capture him. He was wary, uncertain, unable to express what he was feeling, and the irony of this was a mirror to her hapless dilemma. He wanted her as she wanted him, but there were walls to be knocked down.

'You haven't answered my question, Moshe.'

'No,' he said, 'I didn't answer it.'

‘Well?’

‘I think my vanity would be touched - another natural reaction.’

‘And if I invited you into my bed?’

‘Please, Kate, that’s enough.’

‘I want an answer.’

‘I would find the offer hard to refuse. I think you know that damned well.’

‘Fine,’ she said. ‘An honest answer. We’re getting somewhere at last. And do you think, major-general, that in taking me to bed you would later disapprove of yourself?’

‘No, Kate, I don’t think so.’

‘Then why on earth disapprove of *my* private life?’

‘All right, Kate, I get your message. Loud and clear, as they say. And I have, incidentally, taken note of the fact that you always call me “major-general” when you’re angry.’

She looked away in disgust, or perhaps in feigned disgust, feeling more like an adolescent than a grown woman and thus resenting him even more. The soldiers were coming and going, all weary and much too young, and the smoke from their cigarettes filled the terrace, making everything hazy.

‘I’m sorry,’ Moshe said, after a lengthy silence. ‘Believe me, Kate, I really am sorry, and this time I mean it. Your point has been taken and you’re absolutely correct: I disapproved of your affair with Leon Halcomb, and I’d no right to do so.’

‘Just my affair with Leon?’

‘Yes, Kate, I’m afraid so. I’m not quite as old-fashioned as you seem to believe, and your former private life didn’t interest me.’

‘Why, Leon?’

‘Various reasons, not all easy to explain. I knew about you before I met you and I was, rightly or wrongly, annoyed because you’re a Jew and Leon is a notorious anti-Semite.’

‘He’s not an anti-Semite; he’s anti-Zionist.’

‘Maybe, maybe not, but it hardly made any difference: you happened to be the daughter of one of our more prominent and respected Jews, and so your very public affair with Leon Halcomb was, at least to me, a blatant insult to your father’s work with the WZO.’

‘I thought my father was a hypocrite, Moshe, and I wanted to punish him. That’s not why I had the affair with Leon, but it *is* why I flaunted it.’

‘Yes, Kate, I know. At least, I came to understand it, particularly during your stay in the hospital, when you were locked up with Joshua. My attitude changed then - towards you; not towards Leon - and my disapproval, for want of a better term, became something more personal.’

She wanted him to continue, but instead he looked away, obviously uncomfortable and trying to distract himself by studying his troopers. She knew how exhausted he was, and how serious his problems were, and yet she couldn’t resist her ruthless desire to make him state what he felt. Following his gaze and also studying the troopers, seeing their young, weary faces, she suddenly remembered, with stinging guilt, what was happening because of Joshua, and that she, in her inexcusable weakness, had been personally responsible for it. To know this was almost unbearable, a wide-awake nightmare that refused to go away, but much worse was the knowledge that even in her shame and guilt her feelings for Moshe were taking precedence over everything else and obliterating the terrible weight of her crime. Jerusalem was in flames, Jew was pitted against Jew, the Arabs and Christians were rampaging through the streets - and she, Kate Hirschfield, who had sparked it all off, was more concerned with her feelings for this man who might suffer in her stead. Now her shame was even greater, her guilt shocking in its intensity, and yet, as Moshe turned back to face her, she couldn’t resist leaning towards him.

‘Just what are you trying to say, Moshe?’

‘I don’t know. I’m not sure. I think I’ve probably said too much already - and it makes me uncomfortable.’

‘Why?’

‘I’m not sure what we’re talking about. I don’t think you know your own mind. We met under extraordinary circumstances, have shared some remarkable experiences, and your feelings for me, like my feelings for you, might have nothing to do with anything other than the highly charged emotional atmosphere of those experiences.’

‘Does that matter?’

‘Yes. Because I’m not as strong as you think I am. There are things in my past that have marked me in strange ways and made me mistrust my own feelings. I confess, Kate, I’ve wanted you, and hated Leon for having you; and now, because of Leon, because of what has been done, I can’t rid myself of the feeling that in you all I’m after is vengeance.’

‘Do you know what you’re confessing, Moshe?’

‘That’s what I’m not sure of.’

‘We’re actually discussing how you care for me and how I care for you.’

‘I didn’t want to discuss it.’

‘I want to be in your bed, Moshe.’

‘Not now, Kate. Not at this time. We can’t commit ourselves now.’

‘Not commitment: just bed.’

‘That’s not enough. Not for me.’

‘Forget about Leon and my past, and just take me to bed.’

‘No, Kate, I can’t do that.’

She stubbed her cigarette out, feeling juvenile and defeated, humiliated by her blatant, shameless candour, wanting to walk away from him. But she knew that she couldn’t do it, not now, possibly never, because what she had experienced with him, irrespective of what he said, was as binding as a ring on the finger - and possibly more so. She raised her head to stare at him, trying to read his veiled grey eyes, but he simply turned his head and looked away, surveying the crowded, smoke-filled terrace with its mass of exhausted troops.

‘Do you know where Leon is?’ she asked abruptly.

‘He’s vanished,’ Moshe said. ‘Like a puff of smoke. We haven’t seen him for weeks.’

He stared steadily at her, taking note of her obvious discomfort, and she felt, with resentment and pleasure, that he was reading her mind.

‘Yes,’ she said, ‘I still care for him. I’d be a liar to say otherwise. But it still doesn’t concern you and me; in that sense, it’s all over.’

When he nodded thoughtfully, his eyes drooping with weariness, she felt a resurgence of hope and helpless relief. He reached out for his glass of beer, picked it up, set it down again, then ran his finger around the rim in a distracted manner.

‘How’s Joshua?’ she asked him.

He shrugged. ‘The same as always. Inhumanly passive and patient. He’s virtually a prisoner, the whole world is crying out for him, and he sits there in his room, surrounded by guards, simply waiting for something to happen. We still don’t know who he is - and I don’t think we’ll ever find out - but though he knows no more than us, he’s convinced that he’s here for some purpose and that his time will come soon.’

‘That’s why he finally let me go,’ Kate replied. ‘He said that I’d served my purpose, that I’d guided him from the darkness, and that now he was ready to face whatever was coming.’

‘And how did you feel about that, Kate?’

‘Strange. Confused. I think I felt almost maternal. Like a mother watching her child grow away from her: at once wounded and proud.’

She found herself gazing down at the table, embarrassed by what she had said, one part of her torn by her feelings for Leon and Joshua, the other part wanting to capture Moshe and hold him close to her.

‘You two had a strange relationship.’

‘Yes, it was eerie,’ Kate replied.

‘You seemed to be able to read his mind.’

‘And he, mine,’ she said.

She raised her eyes again, suddenly feeling remote, and saw Moshe leaning across the table towards her, his gaze now intense.

‘What was the blood in the Pool of Siloam?’ he asked. ‘Joshua told you to *will* the blood. He told you to admit what you’d previously denied, to accept the shame and then put it behind you. What did he mean by that?’

Kate stared down at the table, then glanced blindly around her, seeing nothing but the agony of her past and the guilt she had buried. Joshua’s words filled her mind, his voice reverberating spectrally, and she recalled the foetus turning in its pool of blood to release her from guilt and set her free. She felt that freedom now - not shame or the former guilt - and so she turned her eyes back upon Moshe, relieved to be telling him the truth.

‘My abortion,’ she said. ‘The guilt I tried to ignore. He was telling me to free myself from guilt by accepting that guilt.’

His eyes flickered with shock, but he held it in check, trying to honour the pact they had made without uttering a word. She wanted to reach across the table and take his hand, but she didn’t dare do it.

‘Let me explain,’ she said. ‘The great irony of my life is that my first real position was as a psychiatric consultant in a legitimate New York abortion clinic. A good Jewish girl, I was relatively innocent at the time, and what I saw in that clinic - what very few men have to see - was enough to put me off men for life.’

‘I thought abortion was routine,’ Moshe said dryly. ‘At least in New York.’

‘The operation, dear Moshe, may well be routine, but the psychological repercussions, for both patients and staff, create a problem that has yet to be solved. Think of what it means to be a woman working in an abortion clinic: young and emotional, almost certainly romantic, she’s brutally exposed to the real blood and marrow of sex and its impersonal, almost surgical terminology: not violins and roses and the light touch of a lover, but the Pill and the Diaphragm, the Intra-Uterine Device, the vaginal jellies and creams - the whole messy business coupled with the lesser known possible side effects, such as benign tumours or gallbladder disease, migraine or heart disease, vaginal or cervical cancer, heavy bleeding or perforation of the uterine wall - the part of sex that few men understand or are willing to acknowledge. How easy for the man to have his moment of idle pleasure and then treat it as a casual encounter; not so casual for the woman who discovers that she’s pregnant and then pays for her moment of pleasure with menses extraction, vacuum aspiration, dilation and curettage, hypertonic saline or intra-amniotic prostaglandin abortion, dilation and evacuation or, if she’s particularly unlucky, hysterotomy or hysterectomy. The aftermath of careless passion - the dilating of the cervical canal, the injection of saline solution into the amniotic sac, the uterine wall scraped and the foetus and placenta removed, either sucked out or pulled out with forceps - flesh and blood, love’s reality. God, yes, it’s unpleasant - a far cry from love’s romance - and if the women survived it physically, a great many were wounded emotionally; and some of the nursing staff, who saw more than their patients did, just couldn’t take it. It was the late abortions that did it, that gave rise to thoughts of murder: when the foetuses had perfect shape, when the salines were born alive, and they were dumped into a bucket of formaldehyde or left to die on the operating tables. A lot of us couldn’t take it - we suffered nightmares and even crack-ups - and for me the experience separated love from sex, making the latter seem at best a dangerous pleasure, at worst a crudely primitive physical impulse… Yet ironically, once it made me feel that way, I went out and got myself pregnant.’

Moshe was staring steadily at her, neither sympathetic nor disapproving, his face, with its square, granite good looks, concealing what he felt. Yet his eyes, bloodshot and weary, lined with age and lack of sleep, were unable to hide his brimming shock at what she was telling him.

‘I had trouble sleeping,’ she continued. ‘I kept dreaming of foetuses: giant

foetuses in the cupboards, at the foot of my bed; foetuses wriggling in buckets of formaldehyde or on smooth, shiny tables. I lost a lot of sleep and I wanted someone with me, but sex, as it hadn't been before, now seemed squalid and frightening. *Physician, heal thyself*: the good psychiatrist, I decided to do so: I decided to take a lover not to satisfy desire, but to prove that I was still a normal woman and that sex was a good thing. That's no way to choose a lover, much less soothe emotional stress, and the man I found was what I deserved: a stud always on heat.'

Moshe visibly winced at that and she wished she hadn't said it, not wanting to hurt him more than necessary, but not wanting to soften the blow either. He glanced down at the table and then looked up again, obviously finding it painful to listen, but determined to do so. If not courage, it was a form of honesty that deeply moved her.

'I'm sorry,' she said, 'but that's the only way to describe him: a stud always on heat, an unemotional, selfish animal, a brute who prided himself as a sexual athlete, but knew nothing of feelings. Perhaps I picked him because it was easy - because he made it easy for me - but whatever, he ended up in my bed the first night we met. If he was good, I hardly knew it - I never judged men that way - but certainly, when I went to bed with him, I scarcely thought of the consequences. I had only one thought, which was to rid myself of fear, but my work in the clinic, instead of frightening me off pregnancy, had given me some peculiar aberrations: the Pill made me nervous, I couldn't bear an IUD inside me, the thought of inserting a diaphragm filled me with repugnance, and any other form of contraception seemed clinical and messy. He was angry when he found this out, though promised not to come inside me; but it was clear, shortly after he started, that he wasn't happy with me. I knew he was going to do it and I begged him to stop, but he just called me a stupid bitch and held me down with both hands and then, hardly knowing the word "rape", pushed even deeper inside me. He wasn't trying to excite me or make me forget myself: he was punishing me, as only men can, for trying to deprive him of the satisfaction of coming inside me. So, he came inside me - as far into me as he could manage - and when he did, I knew as surely as I was breathing that I was going to be pregnant.'

She kept her eyes on Moshe's face, determined not to release him, knowing that she had to tell it all and let him take it or leave it. So far he had not averted his gaze, and his large hands were steady.

‘I never saw him again,’ she said, ‘since my lack of precautions had clearly annoyed him; but he left me with a child in the womb and too much guilt to bear. My father was, at that time, returning to Orthodox Judaism; and apart from my disgust at what I felt was his rank hypocrisy, I knew that to tell him about the baby would have made life impossible. Cowardice? Yes. And I despised myself for it, while hating the man who’d made me pregnant and also loathing my father for unwittingly forcing me to opt for an abortion. Nevertheless, I delayed it, wanting the baby, frightened of having it; until, by the time I finally decided to go through with it, I was seventeen weeks gone and required a second-trimester abortion. I was given the saline infusion fairly early in the morning, spent most of the day convinced that my insides were falling out, and sometime late that evening I had a miscarriage, the foetus was expelled, and I looked down to see it lying on the bed in a pool of blood. I didn’t make a sound. I was too horrified to scream. I propped myself up on my elbows and just stared at that bloody foetus as it lay there on the bed between my legs, looking as if it was still alive. The nurse refused to take it away until the placenta came out - which took another thirty minutes - and during all that time, the longest nightmare of my life, I just lay there, supporting myself on my elbows, staring hypnotically at the poor little creature that I felt I had murdered. Then, when the placenta came out and they finally took the foetus away, I fainted with horror and shock.’

She kept her eyes fixed on Moshe, refusing to let him look away, aware that what she was telling him could destroy his feelings for her, equally aware that she did not wish to have him under false pretences. He gazed back steadily, not trying to avoid her eyes, and she thought of their first meeting, of the black obelisk on the ruins, of the beam of light pouring down through the darkness, onto Joshua’s face. She and Moshe had been united then, in fear and incomprehension, but now, she was convinced, they were united by something deeper and truer. It was love of a very Earthly kind - and it would break or endure.

‘I changed after that,’ she said. ‘I divorced my mind from my body, separating my physical desires from my emotions and thus dividing my nature. I did this because of guilt and shame, denying them both by trying to bury them, using sex as the means of obliteration; keeping emotion, which would have reminded me of what I’d lost, well clear of my various affairs. That’s what I eventually found with Leon: a lack of commitment that made

me feel safe; in Leon I found a remote, dry affection that never seemed threatening. It wasn't love, Moshe - at least not as you imagined it - and when Leon mistook what I felt for love, I had to let him go, also. As for Joshua, he understood that I was divided and unhappy, that I wouldn't be able to live with myself until I accepted my guilt and shame; so he made me draw the past from my mind, face it squarely; and, in facing it, find freedom…You understand, Moshe? Now I'm free. And being free, I want you.'

She fell silent and stared at him, her gaze focused on his lips, waiting, for what seemed like an eternity, for his reply to emerge. The eternity came and went, stretching out and then dilating, and she felt a brief fluttering of panic at what his response might be. He seemed unreal at that moment, out of focus, hazed in smoke, but his presence percolated through her and made her part of him. She waited quietly for his decision, trying to control her desperation, but then a shadow fell upon him, briefly obliterating his features, and she glanced up to see a young soldier leaning over the table. He handed Moshe a written note, and Moshe read it, his lips tightening, then rubbed his forehead wearily with one hand and raised his eyes to look at her.

'I'm wanted urgently at the Hadassah Medical Centre,' he told her, 'and I think you'd better come with me… They're going to release Joshua from custody. They're setting him free.'

28

The Jeep turned left off Keren Haysod and went along Derekh Azza, heading away from the flaming rooftops of the besieged West Jerusalem to the quieter environs outside the city. Yet even here there were soldiers, passing their jeep in crowded trucks, the latter all heading back towards the city and its dark, smoke-filled sky. They heard the sound of an explosion, behind them and far away, and Moshe winced, thinking of what was going on and wanting to be in control of it. He turned his head to look at Kate, saw the lamplight on her dark eyes, her long hair blowing out in the wind to reveal her angular features. She obviously sensed his attention and her eyes turned towards him, one hand brushing the hair from her forehead, the other pressed to the seat.

'What did the note say, Moshe?'

'Nothing very informative. Just that they had to release Joshua and they wanted me up there.'

'The violence is getting worse.'

'That's right. Every minute. I suspect that's why they have to release Joshua; because they just can't contain it.'

'And they think that releasing Joshua will help?'

'Well, it's Joshua they're fighting over. The Jews and the Moslems and the Christians all want to lay hands on him.'

'That's what I mean,' Kate said. 'I think what they're planning is dangerous. What are those people, now fighting each other, going to do when Joshua's let loose?'

'It might pacify them.'

'Why should it do that? Indeed, what do they expect of him? He can't be Jesus Christ and the Messiah and the Mahdi all at once, yet those warring groups all want to lay claim to him. What happens if he picks one group over the others? I don't think they'll accept that.'

Moshe studied the neck of the driver in front of him, then turned to look

back on Jerusalem as if fell far behind them. He saw the towering office blocks, darkly outlined against the red sky, skeins of smoke drifting across the few lit windows, isolated yellow flames flickering dimly, as pretty as candles. Joshua had prophesied it and now it had come to pass: Jerusalem the Golden, his home, was being set to the torch. Moshe shuddered and turned away from that eerie sight, scarcely able to credit it.

'It's like the end of the world,' he said.

'It's only Israel,' Kate replied.

'Israel is the centre of the world - and if it falls, the world breaks.'

'You think this will spread farther?'

'It's already spread, Kate. There have been demonstrations in an awful lot of countries, some of them violent.'

'Not as bad as this.'

'Not yet, but it might come. Joshua, whoever or whatever he is, has set the spark to men's dreams.'

He covered his face with his right hand, closing his eyes and trying to think, a desperate fear churning up from his stomach and filling his mind. It was an unfamiliar fear, divorced from thoughts of physical danger, arising from an increasing feeling of helplessness before the intangible. The jeep growled and shook beneath him, slightly comforting in its reality, but it wasn't enough to shake him out of the coils of the nightmare surrounding him. He was a soldier, a man of concretes, a man who knew the rules of war; but this extraordinary situation, which had exploded around Joshua, defied every tenet of his teaching and left him adrift. He felt Kate beside him, her thigh pressed to his, her warmth like a beacon to his senses, luring him in. He wanted her there and then, in the jeep, beneath the stars, but no sooner had he felt this than his thoughts vaulted back to the real world. Death and destruction by the bullet and the bomb. Would Joshua's release put an end to it or fan the flames farther?

He glanced briefly at Kate, wanting to reach out and touch her, wondering why he couldn't say the words that were perched on his lips. The wind was rushing through the jeep, blowing her hair around her face, and she raised a hand to brush it away and let it fly out behind her. He wanted to reach out and touch it, to lose his fingers in it, to wipe it like a rag across his face, cleansing himself with its softness. The desire was voluptuous, slightly decadent in its nature, and so, shocked, he turned his face to the front and

surveyed the road ahead. The jeep was turning towards the hospital, the land dark on both sides, but he glanced up at the sky and saw the stars in their remote, glittering brilliance.

'Are you alright?' Kate asked.

'Yes,' he said, 'I'm fine.'

'You seemed very strange there for a moment.'

'I'm just tired. My mind's drifting.'

It was the truth as subterfuge and he used it without guilt, simply surprised at Kate's instinctive response to what he was feeling. She knew him, as he knew her. They had been drawn together through Joshua, and now they were bound up in a drama that transcended them both. He wondered if they could hold together, alone, without Joshua, and his doubts, like the spectral mist in a dream, swam around his pained love. He glanced out of the jeep, trying to let the night dissolve him, and there, at the beginning of the sloping road, were the first of the security checkpoints.

'I don't believe it,' Kate said.

'You'll have to,' he replied. 'Now we know why they want to release Joshua: clearly they don't have a choice.'

The security checkpoint was new, with a wooden barrier and armed troops; both sides of the road winding up to the hospital were lined with even more troops, all heavily armed. The soldiers were not facing the road but the grassy slopes on either side, their weapons pointed at the hundreds of people - Jew, Christian and Moslem - who had obviously come to demand the release of Joshua. They were chanting in unison, 'We want Joshua! We want Joshua!', their clenched fists moving up and down, also in unison, many holding large, burning candles. It was a virtual multitude, covering the fields on both sides of the road, and every one of them was looking uphill at the linear buildings of the Hadassah Medical Centre.

When the driver stopped at the first road block, a young sergeant approached the jeep, saw Moshe and nodded in recognition; he did not salute but merely glanced nervously about him before returning his attention to Moshe.

'Major-general,' he said, nodding again, the term of address both casual and respectful, his youthful face not too happy.

'Any trouble?' Moshe asked.

'Not yet, sir. They're refusing to leave until we release that man, but more

are arriving every minute.'

'How many are here at present?'

'We think close to a thousand, sir. There's been a few fist fights, some of the soldiers have been abused, but apart from that, they're just lighting candles and waving their fists.'

'But you think it'll get worse.'

'Almost certainly. They're getting angrier each minute.'

'Thank you, sergeant. Now let us through.'

When the roadblock was raised, the driver headed uphill, towards the hospital, passing the stiffened spines of the soldiers on either side of the winding road. The massed people were still chanting, their fists rising and falling, their raised faces illuminated by the pale moon and starlight, and by the hundreds of candles flickering in a light breeze. The jeep kept moving uphill, past the soldiers and chanting masses, then inched through the car park that overlooked the dark hills and finally stopped at a second road block near the synagogue and hospital entrance. Here the soldiers had set up spotlights that were beaming over the crammed car park; the soldiers, heavily armed and at the ready, were grouped in front of the solid mass of trucks that filled the hospital grounds. Another sergeant approached Moshe, recognised him and nodded; then Moshe and Kate disembarked from the jeep and entered the building.

Moshe gazed along the lobby and saw another group of soldiers, some sitting on the seats, others on the floor, women moving amongst them to serve them with drinks and food and magazines. Some nurses and medical orderlies were present, obviously waiting for the anticipated trouble, and stretchers were piled up along the walls with heaped blankets and first-aid kits. Joshua was at the far end of the room, standing upright, wearing his white robes, anachronistic with his long hair and beard, yet undeniably dignified. Close by were Ben Eleizer, General Meshel and Lieutenant Frankel, the three of them in serious discussion, heads nodding, hands waving.

Moshe turned to look at Kate and saw her staring at Joshua, her eyes oddly luminous and intense, filled with love and sorrow. She trembled and closed her eyes and then opened them again, staring again at Joshua and then turning to Moshe, one hand reaching out for him. He caught her hand in its downward motion, squeezed her fingers, felt her warmth, then let the hand

gently fall away while his spirit sank into her, drowning.

'Are you alright?'

'Yes,' she said, 'I'm fine. I just feel that I'm losing him.'

'You never really had him, Kate.'

'I know… but that just makes it worse.'

He nodded and took her elbow and then walked her across the lobby, occasionally nodding at a soldier he recognised, but not saying a word. Paul looked up when he approached, his handsome face tense, his brown eyes taking in Kate before moving away again. Ben Eleizer, looking diminutive beside the barrel-chested General Meshel, offered a slight, grateful smile, obviously glad to be seeing him.

'Ah, Moshe,' he said quietly, 'you received our message.'

'Yes, Shlomo.'

'How were things in Jerusalem?'

'Bad and getting worse.'

'We should send in the tanks,' General Meshel said. 'We'd clear the streets in no time.'

'I do not think it wise,' Ben Eleizer said, 'to show the world Israeli tanks blowing holes in Jerusalem. I think it wiser simply to let Joshua go.'

'And you think that'll stop them?' Kate asked.

'Who invited this lady here?' Ben Eleizer responded, looking directly at Moshe.

'I think she could be of assistance,' Moshe said. 'We don't know how Joshua will react, and Kate might have to talk to him.'

'I doubt that, Moshe. We've already told him we're letting him go. He simply gave us his silvery-eyed blank look and nodded his head.'

'He's agreeable?'

'We assume so.'

'And which side is he going to support?'

'We asked him that, but he simply stared at us and offered a slight smile. I don't think he comprehends the situation, but I can't be too sure of that.'

'You tried explaining the situation to him?'

'Yes, Miss Hirschfield, we tried. He just nodded in a rather judicious manner and then turned to the wall.'

'He's looking at us right now.'

'Yes, Miss Hirschfield… perhaps because you're here.'

Kate ignored the sarcasm and merely glanced at Joshua where he stood, as steady as a rock, with his back to the wall. He saw her staring at him and responded with a gentle smile, then turned his silvery-grey gaze on Moshe, looking at him and into him. Still disturbed by the man's very presence, Moshe stepped closer to Kate.

'I repeat,' Kate said, speaking to the Prime Minister, 'do you think this will stop them?'

'I take it you mean the release of Joshua?'

'Precisely.'

'You've seen the riots in Jerusalem and those people massed outside. I don't think I have to elaborate on the reason: we must give them that man.'

'If he sides with one group, one religion, over the others, you'll have even worse riots.'

'Maybe,' Ben Eleizer said, 'but we have to try something. The riots in Jerusalem have encouraged similar riots in other parts of Israel and, indeed, in various other countries. As for the Moslems, while no Arab leader has openly expressed support for the view of Joshua as the returned Mahdi, there can be little doubt that the Arabs are massing along our borders in order to exploit our internal problems - and are just waiting for those problems to get out of control. Nor can we ignore the fact that the United Nations, the Americans and the Russians are all openly discussing the necessity of military intervention should the Arabs decide to cross our borders and head for Jerusalem. So, as you can see, we have to bring order back to Jerusalem; and the only possible way of doing it, short of sending in the tanks, is to give them the man they're all clamouring for. We're not saying it will work, but we have to try. We have no other options.'

'And what if it doesn't work?'

'Then we send in the tanks,' General Meshel said.

Moshe caught Kate's frightened glance and lowered his gaze, ashamed to look at her, knowing that the tanks would be unavoidable if the rioting continued.

'Has it occurred to any of you that someone might try to kidnap him?' Kate said. 'After all, a gang of Kash fanatics has already tried to do that right here in this hospital; and as they tried it when he was here, they'll almost certainly try it when he's unprotected.'

'We have reason to believe that won't happen,' Paul Frankel said,

addressing Kate for the first time.

'What reason?'

'We believe his remarkable powers will protect him.'

'He might use his powers to protect himself from violence, but if anyone tries to spirit him away, I think he'll go with them.'

'And why would he do that?' Ben Eleizer asked.

'Because he doesn't know what he's here for, or what he's supposed to do, so he'll simply let events take their course. The sight of a gun might well make him use his powers, but if someone, or some group, simply asks him to come with them, I think he'll passively do so, in the belief that it's preordained and part of his fate.'

'He wasn't very passive with the members of Shin Bet when they tried to separate him from you.'

'That was a different matter, General Meshel. Both those soldiers were carrying guns. And at that time, Joshua was convinced that I had to stay with him.'

'I still don't think anyone will try to abduct him,' Paul said, 'or attempt any violence against him.'

He was addressing Kate, but he glanced quickly at Moshe, his gaze at once nervous and evasive. Moshe recalled him at the Pool of Siloam, after the blood had materialised, falling to his knees in abject worship, convinced that Joshua was the Messiah. Although he was trying to hide it, that conviction was still with him; and now, observing his restless, evasive gaze, Moshe was certain that he was becoming more fanatical and would have to be watched.

'Why not?' Moshe said, keeping his voice calm and level, determined not to show his suspicions and latent contempt. 'What Kate says seems reasonable to me.'

'Not necessarily,' Paul said, glancing at everyone in turn, then finally forcing himself to look directly at Moshe. 'The fact that Joshua has been viewed variously as the Christ of the Christians, the Jewish Messiah and the Moslem Mahdi is the very fact that could keep him from all harm. It's true, as Miss Hirschfield says, that should Joshua side with any single group, or religion, over the others, those disowned may well be outraged. On the other hand, if Joshua takes no side - and so far he hasn't done so - then each of those individuals, in the conviction of his own religion, will assume that Joshua is his personal saviour and consequently won't lay a hand on him. In

short, he'll be sacred to each and every individual - and will therefore be safe.'

'The fact that they thought him their Messiah didn't prevent them from storming this hospital.'

'I'm aware of that, Prime Minister,' Paul replied. 'However, interrogation of the captured Kash members revealed that they truly believed Joshua to be the Messiah and were merely going to locate him in Hebron, where all believers could have contact with him, while the military, in all likelihood, could be kept out. They didn't intend holding him prisoner; on the contrary, they were simply going to keep him there for a few days, let the news of his freedom spread throughout Israel, and then either let him stay there, well protected by them, or leave to travel wherever he wished to go.'

'Assuming, in both cases, that he's definitely Jewish and will therefore either stay gladly in Hebron or go travelling to inaugurate the sovereignty of Judaism.'

'Correct.'

'And the Moslems and Christians?'

'Lieutenant Frankel is right,' Kate said. 'While Joshua's recollections suggest a peculiar mixture of Judaic and Christian history - and could just as easily be interpreted in favour of Moslem history - his reactions to the most well-known religious sites were non-conclusive and even contradictory; and Joshua himself has never suggested that he's one thing or the other. Given this, if he continues to make no claims for himself and retains his undeniably ambiguous form of speech - an elliptical form of speech that can be interpreted in just about any light - then, as Paul says, each individual religion will claim him as its own and no single individual will dare to touch him.'

'Peace on Earth,' Ben Eleizer said.

'It might work,' Moshe added quietly.

'We simply don't have a choice,' Paul said fervently. 'We have no options left.'

Again, Moshe found himself staring at Paul, trying to penetrate the veils of his brown eyes and see what he was thinking. He would not quickly forget the sight of Paul on his knees, head bowed over the feet of the man whom he thought was the Messiah. Paul was an Orthodox Jew, an extremist, a true believer; and now, with a Messiah to follow, he would not be stopped easily. This bothered Moshe, but what bothered him even more was the fact that

Paul had not, since that fateful day, made his new belief known.

'Is it not true,' Moshe said, 'that you, Lieutenant Frankel, believe this man to be the Jewish Messiah?'

Paul stared at him, startled, then blushed and looked at Joshua, who returned his stare with grey-eyed equanimity, hardly moving a muscle. Paul shivered, licked his lips and lowered his head, then turned back to Moshe.

'Yes,' he said, almost whispering, 'I do. By my faith, I believe this.'

'And you're willing to let Joshua go down there, amongst the Moslems and Christians?'

'Yes,' Paul replied. 'In my faith, I am willing. If, as I believe, he's the Messiah, then no harm will come to him.'

'And if he's the returned Mahdi or Jesus Christ?'

'He is not.'

'But if he *is*?'

'Unless he specifically tells me otherwise, I refuse to believe otherwise. Until he specifically denies it, he *is* the Messiah.'

'Fine,' Ben Eleizer said. 'Lieutenant Frankel is a believer. If, as we believe, the others are equally adamant, and if, as we hope, Joshua takes no particular side, we might just have the odds in our favour. It would seem, then, that our fate lies with Joshua's decision - but, alas, he's not forthcoming on that matter.'

Kate instantly left the group and walked up to Joshua, who lowered his gaze to look down upon her face when she stopped just in front of him. Moshe glanced at Ben Eleizer, who smiled sardonically and shrugged, then they all went and gathered around Joshua where he stood by the wall. He did not look at any of them, but instead kept staring at Kate, his silvery-grey eyes uncommonly bright and observant, his lips curved in an almost imperceptible smile that showed warmth and affection.

'You willed the blood,' he said, 'which took courage and faith; now, in your eyes, is the light of redemption and faith.'

'Yes,' Kate replied.

'That is all you need to say. You must hold to your faith as to the root of a tree, and let the seasons bring what they will. You will not break or fall.'

'I have to talk to you about something.'

'I understand there is a problem.'

'Do you understand what's happening outside and what people expect of

you?'

'The situation was explained to me. There is little I can do about it. If they wish to send me out there, it is my time, but I cannot give reasons.'

'They think of you as their saviour.'

'They must believe what they believe. If, by simply being, I give them faith, I might thus save their souls.'

That remark filled Moshe with dread, but he noticed, with a glimmer of hope, that Kate did not seem perturbed.

'You mean, you think you're their saviour?'

'I would not presume such. I merely state that if they believe in me, that belief may redeem them.'

'Redemption through you?'

'Not through me: through their faith. It matters not how they come to faith. Faith itself is what matters.'

'There are Moslems, Christians and Jews.'

'I do not recognise such. Those are names for the religions of men, but such religions are false. There is only the one religion: the worship of the One. The religions of men divide - they do not unite - and as such they debase Him.'

'Some think of you as the Mahdi.'

'I neither confirm nor deny it.'

'Some think of you as the Messiah.'

'I neither confirm nor deny it.'

'Some think of you as the resurrected Jesus Christ.'

'I am Joshua and can say no more than that. I am what I am.'

Kate nodded and stepped back, turning her head to glance at Moshe, and he saw, in the luminous darkness of her eyes, the calm of acceptance. She looked at General Meshel, then at Paul and Ben Eleizer, and the latter, after failing to out-stare her, finally spoke to Moshe.

'Well, what do you think?'

'I think you have your answer.'

'It says neither one thing nor the other.'

'That's just what we want.'

Ben Eleizer raised an eyebrow, his scepticism obvious, then, when Moshe refused to add any other comment, he surrendered with an ambiguous smile and turned to Paul Frankel.

‘Right,’ he said. ‘Let’s get Joshua out of here. Let’s find out what happens.’

‘I want to go with him,’ Kate said.

‘So do I,’ Moshe said.

‘We’ll *all* go with him as far as the end of the car park,’ Ben Eleizer said. ‘No one goes any farther than that. *Oy vay*, let’s get moving!’

At a nod from Kate, Joshua left his position near the wall and began walking along the crowded lobby, followed first by Kate, then by Moshe and Paul, with Ben Eleizer and General Meshel in the rear. The nurses and medical orderlies stopped what they were doing as Joshua walked quietly past them. Likewise, the soldiers lounging by the walls or sitting on the floor fell silent as they watched him, taking in his biblical attire and strangely primitive, noble face, then filling up with awe before looking away to study, with the relief of familiarity, Moshe and the others coming up behind him. Moshe nodded at some of the soldiers, understanding what they were feeling, but was relieved when he and the others finally made it through the lobby and stopped on the steps outside the hospital, where the darkness, though divided by the spotlights, still offered some solace.

More armed soldiers were massed in front of the entrance, forming a cordon across the road, and the spotlights, moving back and forth repeatedly, were focused on the lawn behind the synagogue and the car park beyond it. Army trucks were coming and going, roaring and clattering, but even this noise could not entirely obliterate the rhythmic chanting from the fields below the car park. Joshua gazed at the synagogue, then raised his eyes to look above it, as if willing himself to see the crowds who were chanting beneath the glittering, star-bright sky. He glanced briefly at Kate, his lips shadowed, his eyes in moonlight, then turned away and started forward without saying a word.

They all followed him around the synagogue and across the moonlit lawn, taking the shortcut directly to the car park above the mountainous valley. Here the sound of the trucks was weaker, the rhythmic chanting louder; and the spotlights, weaving back and forth eerily, illuminated the crammed cars. Moshe kept his eyes on Kate, inexorably drawn to her slim form, wanting to reach out and stroke her long hair when the wind made it shiver. She was walking beside Joshua, looking deceptively small beside him, her blue denims and suede jacket at odds with his white Arab robes. A spotlight

picked them out, passed across them, leaving darkness, then they arrived at the soldiers guarding both sides of the road that snaked down from the car park. Some of the soldiers stared at them, recognised them and stepped aside, allowing them to walk off the lawn and onto the road.

'We stop here,' Ben Eleizer said.

From where they stood they could look down and see the people massed on the grassy slopes at both sides of the road. They were all staring uphill, the candles flickering above their heads, those empty-handed raising and lowering clenched fists to the loud, rhythmic chanting. 'We want Joshua! We want Joshua!' they chanted in unison, their joined voices forming a hollow, bass chorus that reverberated ethereally. The scene was bizarre - the hundreds of flickering candles, the stars glittering above, the candlelight and starlight both illuminating the hundreds of faces in the darkness - and was not, in Moshe's view, made any the less bizarre by the sight of Joshua standing above it all like some biblical prophet. As if reading Moshe's mind, he turned around to stare at each of them in turn, but finally let his gaze settle on Kate.

'I am free to go?' he asked.

'Yes,' Kate replied. 'But please, Joshua, be careful.'

'What is willed, will be done.'

He walked off down the road, between the two lines of soldiers, his body erect, his white robes whipping out behind him, his feet kicking up stones. The crowds saw him and stopped chanting, their voices trailing off in confusion, their raised fists gradually sinking to their sides as they took in his presence. The sudden silence was eerie, giving life to a rising wind, and the hundreds of faces, illuminated by candlelight and starlight, moved slowly around as they followed the man walking down the guarded road. Joshua went slowly, steadily, repeatedly glancing left and right, as surprised by the watching people as they were by him, and finally stopping about halfway down the road, with crowds on both sides of him. The crowds started surging forward, instinctively impelled towards the road, ignoring the soldiers' raised weapons, pushing the soldiers aside and rushing between them, until eventually they were leaving the grassy slopes *en masse* and reaching out to touch Joshua with hungry hands.

Moshe felt the rising wind and then noticed the dark clouds gathering, materialising impossibly from the clear, starlit sky to form an ominous black mass directly over the road. He stared at it, startled, recalling the storm over

Jerusalem, and then looked down and saw Joshua's white robes flapping out in the sudden wind. The people around him had stopped moving, obviously as startled as Moshe had been, and were staring wildly from Joshua to the sky and then back again. Some fell to their knees, stretching their arms out in worship, while others stepped back even farther, moved by fear and confusion. The wind started howling, whipping Moshe and rushing past him, moving in a circular motion that took in all the others. He saw Kate just in front of him, her hair whipping out behind her, then bolts of lightning tore viciously through the boiling clouds and were followed by thunder. Moshe glanced up, disbelieving, waiting for rain that didn't come, then he looked down the road and saw Joshua as a shimmering white dream. The people were still gathered around him but had moved away from him, beaten back by both the wind and their fear of what they were witnessing. Joshua stood with arms raised, his robes billowing out behind him, the lightning daggering out of the clouds and disappearing in a whitish haze that coiled down like a faucet through the darkness and surrounded his body.

Kate sobbed and turned to Moshe, pressing her face into his shoulder, and he held her in his arms and stroked her hair as the wind howled about them. Paul entered his line of vision, stepping forward as in a trance, his jaw slack and his brown eyes enlarged as he looked down at Joshua. Following his gaze, Moshe saw the storm, a minor tornado over the road, Joshua standing untouched in the vortex, the crowd outside the swirling dust. Kate sobbed and clung to Moshe, her warmth negating the wind's fierce cold, and he felt himself dissolving into her body as the storm raged below. The dust was swirling around Joshua, just outside the shimmering white haze, while he stood there, his arms still outstretched, his robes whipping around him. Then the thunder roared again, the lightning flashed and disappeared, the white haze around Joshua faded away into darkness, and the wind seemed to sigh as it expired to let the swirling dust settle.

Kate raised her head again, glanced at Moshe and then turned around, her spine pressed to his body as she leaned wearily against him and they both stared down the dark, silent road. Joshua was standing in the starlight, lowering his arms to his sides, his shoulders slumped as if something had been drained out of him and had now left him spent. He bowed his head for a moment, raised it again and looked about him as the crowd, now completely silent and awed, gradually moved in to touch him. Their hands fluttered like

birds, touching lightly and then retreating, and Joshua straightened his shoulders, as if finding his strength again, and then, with the confidence of one accepted, moved on down the road. Moshe watched him disappearing, being swallowed up by his flock, and then, when the last of the worshippers had disappeared, realised that his hands were on Kate's shoulders - feeling flesh and blood, her coursing blood, and wanting her desperately. He looked at Ben Eleizer, at General Meshel and Paul; then, suddenly embarrassed, dropped his hands, knowing what would become of him.

'A reprieve,' Ben Eleizer said.

29

‘Peace in Israel,’ Jozsef said. ‘At least for the moment. He has given everyone a little of what they need and they are temporarily satisfied. Regarding how long it will last, your guess is as good as mine, but for the time being each has claimed him as his own, and he has taken no sides.’

They were walking along the Sea of Galilee, on the northern shore, facing Tiberias, the sun blazing down on the limpid blue water and the greenery surrounding them. Kate was wearing a pair of slacks and an open-necked blouse, her face scrubbed and healthy, her eyes clear, her long hair hanging loose. Jozsef studied her with fondness but could not forget the heat, his abundant flesh sweating too much, his breath emerging in spasms.

‘I’m too old for this,’ he said, mopping his brow with a handkerchief. ‘The Chief Rabbi, in the responsibility of his station, rarely gets such good exercise.’

‘We could have driven,’ Kate replied.

‘I thought the walk would do us good. A noble thought, if rather too ambitious, as I’m now finding out.’

Kate didn’t look at him, but she smiled to herself, her gaze focused on the bleached grandeur of the Golan Heights in the distant heat haze. Jozsef followed her gaze and remembered the Yom Kippur War, when the guns of the Syrians had fired from those very same mountains. He had been much younger then, without doubts, his faith a rock; now that faith, in its complexity and mystery, was being put to the test.

‘Is he clever or innocent?’

‘What do you mean?’ Kate said.

‘He moves from Jew to Christian to Moslem, and gives each what they want.’

‘He gives them nothing,’ Kate said. ‘He neither confirms nor denies. He simply lets them define him as they wish because he knows nothing else.

Joshua is passive, an empty well to be filled; from that well they can draw what they need and depart feeling better.'

'He's avoiding the issue.'

'For him there is no issue; he doesn't know who he is or where he came from, and he thinks they can tell him.'

'They all tell him he's their saviour.'

'He neither confirms nor denies that. Not knowing who he is, he has to listen to what they believe of him.'

'Messiah, Christ and Mahdi - all three rolled into one. He believes, at the very least, that he's been called and is one or the other.'

'He believes he's been called, but certainly not in the sense you mean; he doesn't think of himself as Moslem or Christian or Jew, but as someone with an undefined purpose that will soon be revealed.'

'It doesn't matter what Joshua thinks; what matters is what *they* think... and each assumes that he's come to inaugurate the sovereignty of his personal religion.'

'And you think it will explode?'

'Yes. Sooner or later, it has to.'

He glanced across the blue water and saw the town of Tiberias, its white-walled buildings nestling in the lush green of the hills of Galilee. They had taken the ferry from there, stopping for lunch in the Kibbutz Ein Gev, and now, though well replenished with St. Peter's fish, Jozsef was feeling exhausted. The sun was fiercely hot, beating out of the azure sky, and he rubbed his stinging eyes and looked at Kate, wondering what she was thinking.

'Do you want to rest?' she asked.

'No,' he replied. 'We're nearly there. If I sit down, I'll never stand up again, so we'd better keep walking.'

Kate smiled again, glanced sideways at him, then let her gaze roam across Yam Kinneret, her cheeks no longer hollow with tension, her bare arms brown and healthy. Jozsef thought of her in the hospital, her face drawn, her eyes wild, and his relief at the positive change in her made him feel slightly younger. Nonetheless, he couldn't stop thinking of Joshua and the dreams he was nourishing.

'He performs miracles,' he said. 'At least people say he does. I've yet to meet anyone who's actually *seen* him perform a miracle, but everyone knows

someone who has, which amounts to the same thing.'

'What about me, Jozsef? And Moshe and the Prime Minister? All of us, and more, have seen just what Joshua can do.'

'A form of parapsychology. I'm talking about miracles: the healing of the sick and the lame and the blind, the conversion of the masses through magic: we have not witnessed that.'

'His extraordinary powers, in human terms, are magical - and magic makes miracles.'

Jozsef gazed across the water, looking again at Tiberius, seeing the motor launches racing back and forth, towing people on water-skis. Jesus had avoided the town, but his presence was all around it - in Tabgha and Migdal and Capernaum, and right here on Yam Kinneret. Here he had gathered his followers - Simon, Andrew, James and John - and here, also, he had filled the empty fishing-net and walked on the waters. A Christian myth, possibly, but like most myths it was rooted in fact; and those bronzed young water-skiers, to a primitive eye, would likewise be walking on water and appearing miraculous.

'Magic,' Jozsef said. 'I sometimes think you might be right. Joshua has been all over Israel, reportedly often in separate places at the same time - and no one knows how he gets there. Also, he speaks to everyone, rich and poor, Jew and Gentile, and was recently found meditating in the eastern corner of Solomon's Stables which, according to Christian tradition, is the Pinnacle of the Temple where Jesus was brought by Satan during his final temptation.'

'What's so unusual about that?'

'Because, dear Kate - and I merely repeat the widely spread story - when Joshua was thus engaged, those around him in Solomon's Stables felt a dreadful, searing cold, experienced feelings of horror and dread, and heard a terrible hissing and wailing which they thought was pure evil. This was, of course, exactly what you experienced on the Mount of Temptation and it could well be some form of mesmerism. However, according to other reports, all conveyed to us by those present, at precisely the same time as Joshua was supposed to be in Solomon's Stables, he was also seen by numerous worshipping Arabs at Abraham's altar in the El Haram es-Sharif; was, at the same time, observed by other Arab and Christian pilgrims studying the Rock in the Mosque of Omar - from which Mohammed is said to have ascended to heaven - and was also, simultaneously, observed at the Wailing Wall by

worshipping Jews. I repeat, Kate: all at the same time - and with numerous witnesses.'

'Has anyone asked him about this?'

'I believe Lieutenant Frankel did so. Joshua merely replied that he had been sleeping at the time mentioned, but that he had, during his sleep, experienced those incidents as dreams of particular intensity.'

'Jew, Christian and Moslem...'

'An unholy trinity,' Jozsef said. 'He cannot unite Jew, Christian and Moslem by being the saviour to all of them.'

They passed the ghostly stones of the excavated remains of Capernaum, including the ruins of the synagogue built over the one in which Jesus had preached, and then began the uphill climb to the Mount of Beatitudes. Jozsef had to stop and rest, sitting gratefully on an angled stone, mopping the sweat from his face with his handkerchief and shrugging forlornly.

'I'll never make it,' he said.

'A short rest and you'll be fine. You'll soon feel as good as you look in your sports shirt and snappy pants.'

Her good humour pleased him and he smiled in return, thinking back on how she had been in the hospital and amazed at the recent change in her. It was based on her experience with Joshua - he knew that without a doubt - but he wondered at the nature of the faith she had obviously regained.

'What about you?' he said. 'You've been closest to Joshua. Can it be that he's returned you to the faith that you renounced years ago?'

She smiled at him and turned away, looking back down the hill, surveying the blue water, the blue-hazed mountains, the dazzling blue of the sky. The great lake, which could be treacherous, was exceptionally still and quiet, the water-skiers now far away, their white wakes forming jigsaws.

'Faith?' Kate shrugged lazily. 'Yes, a kind of faith. Not Orthodox Judaism, nor the Christianity you feared, but certainly a belief in the Almighty and His ultimate benevolence. Perhaps faith in faith itself - the simple acceptance of being - the belief that no matter what His nature, He brings light to the darkness. I needed that faith, Jozsef. I think all human beings do. To live without faith, believing yourself to be ephemeral, is to live with a fear of extinction beyond what we can bear. Lack of faith is extinction, the kiss of death to the living, and I think that in turning my back on Judaism I invited that torment. That's how Joshua brought me redemption - he gave

me back faith in my own future - and in doing that he forced me to accept a private and separate peace. Not Judaism, Jozsef, and not Christianity - for those and all other religions are divisive and binding. What he gave me was freedom - the joys and terrors of personal choice - and now, without the strictures of a religion created by men, I can still feel that my faith is untarnished and that my life has its meaning. I don't need Judaism any longer... Faith itself is enough.'

Deeply moved, Jozsef turned his head away, fixing his gaze on the lush vegetation at both sides of the track. But if moved, he was also embarrassed, remembering his accusations of blasphemy, and now, in the shimmering light of Kate's conviction, he hardly knew what to say. His own belief was something different, a faith grown from solid roots: all the law codes and commentaries of the Talmud and its sweeping guidelines. He had faith, but it was ordered, perhaps too literal to be pure, hemmed in by the *Mishnah* and *Gemara*, bound by man's moral needs. His faith was like a rock, but his beliefs had been moulded gradually, hammered out on the anvil of a discipline imposed from outside him. For most men this was necessary, bringing order to moral chaos, but it did, in certain ways, remove from them the burden of personal choice. Kate had now chosen that burden, taking her faith from within herself, led into it by the man known as Joshua, but now left on her own. For that Jozsef had to admire her - if also fearing for her - and he sensed, more importantly, that the challenge she had faced might soon shake the roots of the three great monotheistic religions and render their laws and rituals obsolete. This possibility, given the needs of the mass of men, did not offer him comfort.

'Perhaps you're right,' he said, turning back to look at her, seeing the sunlight flashing around her tall figure and blotting her face out. 'Perhaps faith itself, without discipline imposed from outside, if held firmly and closely to the heart, will purify and sustain. For some this has been so, but alas not for many, and the majority need the guidance of moral laws, no matter how imperfect those laws might be. This is the function of the theologist - in mosque, church or synagogue - and the religions of men, the Almighty's imperfect creatures, are necessary to the mass of mankind, no matter their differences. Are the religions of man divisive, pitting brother against brother? Alas, we must accept Joshua's judgement, for indeed this is true. Yet what would we do without them and the moral laws they impose

upon us? Born in ignorance, and into moral chaos, we need signposts along the way. Man's religions serve that purpose, imposing order on moral confusion, and no matter how imperfect they may be, they represent a foundation. Some don't need that foundation, but the majority do, and until man himself becomes perfect we can't let it go.'

'And Joshua? Where does that leave him? Will he destroy your foundations?'

'That question remains open and is not without its terrors, for either he will bring us together or he will tear us apart. Is Joshua good or evil? Innocent or calculating? If innocent, is his innocence as dangerous as the forces of darkness? I admit, I feel shame, for myself and for the Rabbinate, for the Vatican and the World Council of Churches and our long, cowardly silence. Yet what can we say? How can any of us survive Joshua? The Christians await their Christ, the Jews their Messiah, the Moslems their hidden Imam, the Mahdi - but all of these are abstractions. Were they ever more than symbols, the graven imagery of our hopes, the very necessary humanisation of a spiritual quest? We all wait for Judgement Day, for revelation and redemption, and the bridge between man and his Creator must be instantly recognised. The Torah isn't a history - nor is the Bible and the Koran - these works represent man's attempt to give shape to a Deity beyond our powers of conception. How do we recognise Judgement Day if we can't recognise Him? We cannot, so we have to build a bridge between the human and spiritual. That bridge is theology, the great works of religious thought, all the words that give shape to an abstraction and render it human. Thus Christ, the Messiah, the Mahdi of the Moslems - the recognisable bridges between man and his Creator, the images that shadow our lives and reflect our poor vanity. Yet Judgement Day is in the future - it was *always* in the future. Thus the image of our Saviour, or the Almighty's messenger, is in truth just as unrecognisable as the darkness of Judgement Day. Will Judgement Day ever come? And if so, how do we recognise it? Given this, how do we recognise a Christ or Messiah or Mahdi? Do you understand, Kate? Do you comprehend my shame? Neither the Rabbinate nor the Vatican nor the World Council of Churches are equipped, whether willing or not, to pass judgement on Joshua. How do they accept or deny him? On what grounds can they do so? Let the rain turn to flames, let the earth turn to dust - these are mortal men faced with a question that they simply can't answer. So, they must stay silent. The

foundations must not be shaken. If our religions are to crumble it must not be from within, but from some force beyond our control – either the Lord's or the devil's. So, we must wait, as we have waited for centuries; as Joshua, in his innocence or wisdom, also patiently waits. Like Joshua, who knows not what he is or where he came from, we are passive and await the revelation that won't require answers.'

He stood up as Kate walked towards him and stopped just in front of him. She stared at him, smiling slightly, a soft blush on her cheeks, then leaned over and kissed him on the forehead with a shy, touching tenderness. He didn't move, feeling lost, love and trepidation blinding him, then she turned without a word and walked away and he followed her uphill.

It was a long, arduous walk, made no easier by the heat, and they said no more until they reached the summit with its hospice and chapel. The chapel was baroque, eight-sided and domed, standing over three hundred feet above the Sea of Galilee which, shaped like a lute and surrounded by blue-hazed mountains, glittered and reflected the glory of the dazzling, azure sky. Jozsef looked down in wonder, his spirit soaring like a bird, understanding why Israel, with its violent, bloody history, could still make men cling to the dream of paradise here on Earth.

'Why did Joshua come here?' he said. 'Did it mean something to him? Did he know about the Sermon on the Mount and the choosing of the Apostles?'

'No,' Kate said. 'Some Christians brought him here. When he arrived here, he seemed to recognise the place and decided to stay a while.'

'He's been here for two months?'

'All over Galilee,' Kate said. 'He's been wandering all over, collecting more and more followers, talking and listening and, as you pointed out, healing the sick, the lame and the blind.'

'He invited them to join him?'

'No, they just remained. People seem to know where he's going to be, and they simply get up and follow him.'

'All kinds?'

'Jews, Christians and Moslems - all wanting his blessing.'

'Does he bless them?'

'He answers them – that's all. I think they see what they need to see and hear what they need to hear.'

They didn't enter the chapel which, inside, on the eight sides of its dome, listed the beatitudes stated by Jesus. Instead, drawn forward by the murmuring of nearby voices, they passed the Italian hospice and continued across the Mount to where the land started sloping downhill again. There, on the grassy slopes, the Sea of Galilee far below them, was Joshua with his large group of followers, including the Franciscan nuns from the hospice. There were over a hundred people, some sitting, others standing, all forming a close-knit circle around the white-robed Joshua who, also seated, his arms wrapped around his knees, was tilting his head, first left and then right, obviously listening and talking to the people who kept coming up to him. The sun, blazing out of a flawless sky, bathed the scene in a brilliant light.

Jozsef felt strange, as if time had suddenly stopped, and the murmuring of the people around Joshua made this moment seem even more unreal. He mopped sweat from his forehead, felt the aching of his muscles, and then saw that Kate was looking down the hillside, her gaze fixed upon Joshua. Jozsef thought of her in the hospital, her face tense, her eyes wild, but now, as he studied her, he saw something quite different: not obsession, but an almost maternal love, a calm acceptance and trust.

'Are we going down?' he asked.

'Yes,' she said, 'that's what we came here for. I want to hear what he has to say. I want to know if he's changed.'

When she started down the slope, Jozsef hurried after her, feeling the eyes of Joshua's followers upon him and becoming self-conscious. There was no antagonism - simply a quiet curiosity - but he sensed a kind of muffled hysteria behind those beatific eyes. It was almost like a dream, something vivid but unreal, and he was glad when he reached the white-robed Joshua and could kneel beside Kate. The grass was warm to the touch, its physical reality reassuring - then he looked into Joshua's silvery-grey gaze and was instantly disorientated. Calm eyes - inhumanly so, their depths draining his senses. Now, they stared at him, recognised him and turned away, fixed themselves steadily upon Kate, becoming darker and softer.

'Kate,' he said simply, his voice resonant and warm, touched with a candid affection of the most human kind. Kate did not reply, but merely offered a bashful smile, her brown eyes fixed steadily upon him, her hands on her knees. 'I haven't seen you for a long time,' he said, 'but I'm glad you came.'

‘How are you?’ Kate asked.

‘As I should be,’ he replied. ‘The light blossoms in the darkness and my head fills with the knowledge of men.’

‘Does that knowledge make you happy?’

‘I am not as I was. I talk and I listen, and by giving I receive, and what fills my head is the pain and bewilderment of Man. Lost, he is bewildered; without faith, he suffers pain; and his anguish and confusion are reflected in his greed and suspicion. Now I take it into myself, experiencing men and becoming Man, my strength weakening, my soul flirting with temptation, my heart breaking in silence. There is something coming towards me - something dark and destructive - a wind of desolation that will cover Jerusalem and clear away to leave me to my fate. Yes, desolation: Jerusalem’s suffering and shame; the manifestation of the sickness of men, a boil bursting to heal itself. And then, only then, when the healing has begun, will my penance and the suffering of Jerusalem ordain the redemption. No, I am not what I was - but I am what I will be.’

Sweating profusely, Jozsef froze, the cold coming from within, a chill that went beyond the merely physical and clutched at his heart. He glanced at Kate but couldn’t focus, looked at Joshua and regained his sight, saw himself twice reflected in those grey eyes, their depths luring him in.

‘Jerusalem?’ he heard himself whispering, his voice as dead as a tomb. ‘I don't know what you mean by that.’

But in truth he did know, and felt the shame of his cowardice, his refusal to accept the blinding terror that Joshua’s words had encouraged. He tried to tear his eyes away, but Joshua held him, his gaze implacable, his voice frightening in the calm of its acceptance, letting truth have its day.

‘Jerusalem the Golden must fall to rise again; and my blood, which will signal its shame, will also herald its redemption.’

Jozsef tore himself away, hardly knowing what he was doing, and found himself heading back up the hill with his heart pounding madly. He heard Kate calling his name, her voice sounding far away, but he didn’t have the strength to look back and see the face of the future. She caught up with him quickly, her hand clutching his left arm, and he turned his head away to hide his fear and then saw Moshe above him. Moshe was standing by his jeep, wearing full battle dress, his hand on the pistol at his hip, his face grim and forbidding. Jozsef stopped just in front of him, feeling Kate by his side. He

saw Kate and Moshe looking at one another, and felt the tension between them.

'I've come to say goodbye,' Moshe said. 'I might be gone for some time. We think the Arabs are going to attack, and it might be today. It all started with the *Hajj* - the Muslim's annual pilgrimage to Mecca - and has something to do with the Black Stone that's housed in the Ka'bah, the stone placed there by Abraham. The Arabs have started claiming that the Black Stone in the Ka'bah is made from the same substance as the black stone of our Mount of Olives obelisk. Ergo, Joshua is the Mahdi - and the Arabs now support that - and they've sworn to recapture the Temple Mount before the week's out. They've been massing all night along the Syrian and Jordanian borders, and we think they're ready to launch their attack, probably starting from Syria. I have to leave now.'

He looked at Kate, and she at him, the tension palpable between them, and Jozsef sensed that there was something left unspoken, some question unanswered. He felt dizzy, disorientated, caught between them and Joshua, and his thoughts, dominated by his beating heart, seemed to fly to the wind. Then he heard a distant rumbling, a faint, familiar sound, and turned around, following Moshe's startled gaze, to see the smoke on the Golan Heights. The smoke rose in separate columns, ballooning up and drifting sideways, almost black against the blue of the sky before dissolving to dirty grey. Kate gasped, Moshe cursed, and Jozsef looked down the hill, and saw Joshua staring at him, his silvery-grey eyes clear, affirming that the destruction he had prophesied was the war that was starting.

The planes suddenly screamed overhead.

30

Dearest Kate:
Already the war is over, perhaps the shortest war in history, a mere twenty-four hours from start to finish and the dust not yet settled. Is it possible that it really happened, that it could begin and end so quickly, or was it simply some mass hallucination engendered by Joshua? It might have been better had this been so - if all of us had just gone mad - but now, in the cold light of sanity, we must count up the cost: the Americans in the United Arab Republic, the Soviets in Jordan and Syria, and both 'benefactors' trading off prerogatives in the guise of containment. Zion, that forlorn dream of Orthodox Jews, is now wrapped up in chains.

Have you personally survived it all? Perhaps I've no right to ask. My shame drove me east, out of the Garden of Eden, and my tongue was so tied to my throat that I didn't dare tell you. I am staying for the time being in Damascus - possibly just to be alone and study the mirror without pride, certainly also because I would not be comfortable in Jerusalem after what has occurred. Time seems to be endless and requires a lot of filling; and my mind, once so lively with malice, has become a blancmange. I walk below the minarets, through the fig trees to the desert, and too often, with a hip flask in my pocket, spend hours in the unprofitable contemplation of that implacable Nothing. Other hours are whiled away in exploring the covered 'Street called Straight', looking mindlessly at silks and leather, gold and silver filigree work, in the bazaars that cross the city from east to west. I walk and I walk, a man obviously in a trance, through the gardens and orchards of the Barada River, trying to convince myself that nothing has changed. Alas, the camel trains have been replaced with a noisy stream of trucks, the only authentic history is in the Qasr al-'Azm Museum, and in the Marjah Square, between the fashionable shops, the government offices are filled with men who talk of Israel as if it is lost. Only 4% of the population are Jews, which

may account for this view.

Is Israel lost? My head is too muddled to think about it. I walk about Damascus with a hip flask in my pocket, and the days dissolve slowly but surely into the dream of the evenings. The traditional house with patio and fountain is no longer being built (though still to be found in the Old City), French and Italian styles are now much in evidence, and my own dubiously Mediterranean villa is in the Al-Akrad quarter on the slopes of Jabal Qasiyun - considerably less grand than the ambassador's houses in Abu Rummanah, but suitable to my sinking station in life and my late drinking habits. I am rambling already, because I'm drinking as I write, and the night, which is hotter than hell, seems to suffocate clear thought.

I don't know quite what to tell you, but I have to tell you something - if not for your sake, certainly for mine, since I now sink into the well of self-pity and need my memories for comfort. When I fled from Jerusalem (running from Moshe Eitan's contempt?) I went travelling around Lebanon, Syria and Jordan with Rashid Idriss and his bunch of merry men. We sometimes stayed in good hotels, but mostly slept in trucks and tents, nestling down in that wilderness which only the Arabs know and arising in the brilliant light of dawn to a crystalline silence. I now remember the murderous heat, the merciless glare of the sun, the silence that haunted my thoughts and made them dwell on the Void. The desert takes what it wants and gives nothing back in return, and in learning this I came to understand what makes Arabs so hard. I was not hard, and they knew it and accepted it, either amused or contemptuous of my weakness in their pitiless world. That world is unique, a shimmering dream on the shifting sands, and it makes a man travel through himself to where the truth spills its guts.

The Arabs only know black and white, truth and untruth; they have no time for the doubts and introspection that haunt Western man. My moral confusion amused Rashid, made him mock my indecision, and he frequently interpreted my political greyness as self-indulgence and cowardice. 'We believe,' he said, 'simply because we believe; we do not need to justify.' Whether right or wrong, the remark made me feel weaker, separated from the inner core of my being and refusing to face myself. Anger, outrage, the lust for vengeance and domination: these are weaknesses which we in the West try to hide while the Arabs, either wisely or ruthlessly, accept them and use them. We view this as cruelty, but the Arabs view it as truth; and after a few

weeks with them, as if changing my skin, I came to view myself as a hypocrite of the most awesome kind, and my lack of commitment, both personal and political, as abdication based on cowardice and self-deceit. We do not cleanse ourselves by wiping the blood from our hands; we have to accept that there are causes and effects, and make some sort of stand on that basis. I now know, and can never forget, that I refused to admit this.

Can I live with this truth? Not too well, I fear. I drink constantly - as I am drinking right now - to kill the shame that eats at me. In my moral cowardice I lost myself, and in losing myself I then lost you, and during those nights in the desert, lying awake with that awesome silence, I learned to face these facts with no little amount of pain and came to understand that they were more important to me than the possibility of Judgement Day.

Judgement Day - Joshua - the terrible challenge of revelation - all the nightmares and glories suggested by his presence on Earth. I lost you because of Joshua, because he showed us both the truth, and now Israel itself might be lost to the Americans and Russians. Intervention is a foul word, a mere excuse for expansionist greed, and now Israel, through the stupidity of threatening the Arabs with atomic weapons, is surrounded by the two superpowers who think of nothing but oil. Israel is trapped, and now the nightmare has trapped me, and here in Damascus, the crossroads of the Middle East, I slide down the tunnel of drink into the dark tomb of witchcraft.

Witchcraft - Joshua - the unexplainable in human form, the revelation that the more we discover the less we will know. God or the devil? Reality or unreality? Does Joshua represent the ultimate truth or the final illusion? He started this war - the war that could have been the last one - and he did it without saying a word, without raising his finger. A fantasy? No: the Arabs were also obsessed with him. Rashid Idriss refused to discuss the matter in public, but in private, throughout the Moslem world, in Bedouin tents and sheikh’s palaces, the Man from the Mount was an issue that grew larger each day. Did Joshua encourage it? No, he said nothing. But like the ghost horse that races through the night, his silence was everything. He neither affirmed nor denied, leaving a blank slate to be filled, and eventually, as all silence must be filled, the wind of heresy was everything.

Joshua the Mahdi, the twelfth and last Imam, now returned to spread the word of Muhammad, but being held by the Jews. Rashid tried to control it by

threatening punishment for those who discussed it, but the whispering was carried on the wind and obviously travelled to Mecca. From wishful thinking to reality - man imposes what he wills - and before long there were rumours about the Black Stone in the Ka'bah - rumours that would fan the flames of Islam and make Joshua the Mahdi.

It was the time of the *Hajj*, the annual pilgrimage to Mecca, when Muslims from all over the world flock to Saudi Arabia to share the supreme moment of their lives: to make seven circuits of the Ka'bah in the Sacred Mosque and see the Black Stone once kissed by Muhammad. It's the greatest spectacle in the world - over a million and half people in one place at the same time -but it's no time for the spreading of rumours about the return of the Mahdi.

At first Rashid was amused, not believing the stories, but gradually even he, with his Western education, succumbed to the magic of Islam and its timeless seductions. Each day a thousand million people throughout the world turn five times in prayer towards the city of Mecca, their thoughts focused on the Ka'bah, the first House of God built by Abraham and his son Ishmael. Standing in the immense courtyard of the Sacred Mosque around which Mecca was built, and covered in the *Kiswah* - the enormous black cloth embroidered in gold with verses from the Koran - the Ka'bah is also the site of the sacred Black Stone, first placed there by Abraham and later kissed by Muhammad after he drove the idolaters from the temple. The Black Stone has never been seen by any non-Muslim, but reportedly it's composed of some totally unknown substance and imbued with mysterious powers. Consequently, your Joshua, possessed of his own mysterious powers, became part and parcel of a startling new story regarding the Black Stone of Mecca.

For the whole world, including the Muslims, one of the most intriguing aspects of the story of Joshua was the large black obelisk, or tomb, in which he was found. From what substance had it been made that it could have been so completely black and then disintegrate into normal dust shortly after its appearance? Now, according to the Muslims, there were two new revelations: Joshua's tomb had been made from the same substance as the Black Stone - and the Black Stone had recently started to give off strange glowings and show holographic images from the life of Muhammad and his followers. Ergo, Joshua was the returned Mahdi, and the Black Stone was calling him to Mecca.

Rashid's amusement turned to intrigue and then to concern when the whisperings about Joshua and the Black Stone gradually turned into shouts. The Black Stone was calling Joshua, demanding his return to Mecca, and the Muslims, becoming increasingly obsessed, wanted to do something about it. Rashid was losing control - his men wanted to capture Joshua - and eventually he decided to go to Mecca and check it out for himself. As I said, non-Muslims aren't normally allowed into the city, but Rashid, with his considerable authority, obtained permission for me to go with him. That journey, which now seems like a dream, was a journey into the Self.

We flew out from Beirut and landed at Jeddah to join the thousands of other pilgrims as they were channelled through the airport and onto the government buses that would take them to Mecca. There, in the *Madinat al-hujjaj*, while passing through Customs, we were surrounded by the mass of pilgrims, all wearing their white *Ihrams*, all constantly repeating, *Labbaika-Allahumma, Labbaik!* - Here I am, O God, at Thy command, here I am! The numbers were enormous and totally overwhelming: 50,000 pilgrims a day were passing through Jeddah airport alone, thousands more were coming in by sea and overland, and even more thousands were landing at the airports of Medina, Dahran, Riyadh, Jizan and Najran - well over a million, all to perform the *Hajj*, all in the state of *Ihram* - body and soul dedicated to God - all repeating the *surahs* from the Koran, and all, in this terrifying year, whispering feverishly about Joshua, now their very own Mahdi.

I think Rashid changed then, possibly swept up in the fervour, his Western education turning to dust in that immense, white-clad mass. He had always been a moderate, both in politics and religion, but there, in the *Madinant al-hujjaj*, in that extraordinary religious atmosphere, his eyes took on the gleam of a man who had just found himself. Now he knew what he was - a true Arab and Muslim - and in truth, as I stood there, as that mass fervour gripped me, I felt that I was being stripped of my Westernised modes of thought and returned to some primal state of grace and inchoate, elemental truth. Belief or unbelief - no grey areas in between - at last, as I studied the pilgrims swarming around me, I understood a little of what that meant in its deceptive simplicity.

From Jeddah, crossing the Hejaz, we drove the forty-five miles to Mecca, arriving in the early morning light, just before the Dawn Prayer. The road was filled with cars and buses, thousands of pilgrims walked alongside

it, and the dust, like the clouds of the Apocalypse, fell over us constantly. Then Mecca and the Sacred Mosque, more thousands gathered outside, all preparing to pray, being guided by the *muezzins*, whose voices were amplified through the hundreds of unseen loudspeakers that cover the city. It was an awesome, haunting sight, the sound of the *muezzins* making it more so, their voices ringing out above the pale blue light of dawn as the thousands of worshippers, all wearing white *Ihrams*, knelt down on their prayer mats on the ground around the mosque, bowing and prostrating themselves in unbroken chains.

In any gathering of one and a half million people there can be no less than 150 deaths a day. Thus, at the end of the *salam* - the salutation denoting the end of prayers - an *imam* led the kneeling multitudes in the funeral prayer, the *salat al-janaza*, after which it was time to enter the Sacred Mosque through the Door of Salvation.

The experience was extraordinary, a feast for all the senses, at once a spectacle and an intimate drama, a strange and beautiful catharsis. The inner courtyard of the Mosque was huge, containing half a million worshippers, its arched portals and balconies serenely attractive above us, its eight minarets soaring to the sky in the dawn's light blue haze. The Ka'bah was in the middle, a great cube draped in black cloth, the words from the Koran embroidered in gold and dazzling the eyes. Bizarre, unreal, it appeared to melt into the dawn, to be suspended rather than sitting on the ground, its beauty springing from its very simplicity and relative lack of adornment. Already the worshippers were moving around it, shoulder to shoulder, their heads raised, crying, 'God is great! God is great! There is no other God but God!', their hands reaching up to touch the sacred stone as they made the seven circuits that formed the circumambulation. It looked like a human whirlpool - a white whirlpool in blue light - and that half million voices, murmuring prayers or crying to God, emerged into a single bass rumbling that seemed to come from the earth.

Being a non-Muslim, I wasn't allowed near the Black Stone, but Rashid in the course of the circumambulation was able to see it. He was away a long time, making his seven circuits of the Ka'bah, and when he returned the sun was high in the sky, the heat vicious and clammy. He appeared to be transformed, his brown eyes shining brightly, his expression one of helpless exultation and passionate yearning. I asked him what he had seen, but

initially he refused to comment, merely filling his flask with water from the holy Zamzam well, and then leading me on the *sa'y* - the required walk between the hills of al-Safa and al-Marwa along the air-conditioned, marble-paved *masa* - during which, as we passed holy men and cripples and praying women, he spoke once before returning to the silence of his obviously exalted thoughts.

'In the Black Stone I saw only the sun's reflection,' he said, 'but that light, which kept changing like a prism, filled my soul with contentment. That contentment was the product of redemption and belief in the future. I thought instantly of the El Haram es-Sharif in Jerusalem, and understood that we would have to get it back to ordain the Day of Salvation. The Black Stone, if it showed me nothing else, showed me what I must do.'

That's when the war started - though I wasn't to know it then - when Rashid saw whatever he saw in the Black Stone and vowed to recapture Jerusalem and the lost Temple Mount. No, I didn't know it then, though I saw the change in Rashid, who looked every minute, in a way I can't explain, more and more an authentic, vengeful Arab, born and bred in the desert: a religious leader rather than a politician-warrior, a man shedding his old skin.

This change was also manifest in the thousands of worshippers around us, most of whom, in normal circumstances, would have been quiet in reflection, but were now, after their circumambulation, unusually excited. Perhaps excitement is the wrong term: it was more than that - it was a fever. Who knows what they saw in the Black Stone - or what they imagined they saw? It only matters that they took from it what they wanted at that time, and that the images it reflected, if existing only in their minds, were enough to fill their heads with thoughts of Joshua and his return as the Mahdi. Thus, they were in a state of fervour, a million worshippers breaking loose, and as we travelled on to Arafat, through the darkness of that same evening, I was caught up in this fervour myself, and felt my old Self dissolving.

The second stage of the *Hajj* is the Standing at Arafat where, on the Mount of Mercy, where Muhammad preached his last sermon, the pilgrim must worship before the sun rises on the new day. Again, the scene was extraordinary, almost defying the senses: a veritable city of tents, with perfectly straight streets and avenues, containing over a million worshippers and spread across the immense plain hemmed in by the mountain range of the *Ta'if*. Both sexes were represented, all social classes and races mixed, and

they covered the whole plain and the Mount of Mercy itself, packed so closely together that their *Ihrams* and the tents formed a shifting white sea that filled the starlit darkness with murmuring. The murmuring ceased just prior to dawn as the million faces turned towards Mecca, their heads bowed in prayer and silent worship and self-abnegation. Then the sun came up, the heat like a furnace, and then noon came and went and the sun eventually set again, and the *maghrib*, the final prayer, was spoken by everyone. After that, with considerable haste, in emulation of the Prophet, the *ifidah*, the race to Muzdalifah, commenced.

For the pilgrim, Arafat is not the final station of his spiritual journey but the station marking the birth of the New Man - one who has been 'cleansed' and is now actively committed to God. Here, by the Sacred Monument, the *Mashar al-Haram*, he is required to remember God as He who guided the people along the 'straight path', which symbolically starts from Arafat. Rashid was, by this time, almost certainly a New Man - suddenly stripped of his Western influences, more completely a native Arab - and as he prayed by the Sacred Monument and collected stones for the ritual at Mina, I felt that he was taking unto himself the burning rage of his people. Yes, there was anger, slowly rising from religious fervour, spreading out through that extraordinary mass of pilgrims with their thoughts of the Mahdi. Rashid sensed it and grabbed it, taking it unto himself, and as we headed for Mina, again driving through the darkness, I heard him muttering to his lieutenants about Joshua, his hands waving excitedly.

It was a slow drive to Mina, over a rugged mountain pass, following the road that the Prophet took for his Farewell Pilgrimage, passing the lights of the tents and shacks on either side, and eventually leading to the luminous *al-Khayf* Mosque and the largest camp-site ever witnessed by human eyes.

By now there were over two million pilgrims, their tents swamping the village of Mina, spreading across the central plain and right up to the encircling hills with the pilgrims like white ants between them. Here, over a period of three days and three nights, the stones gathered at Muzdalifah would be thrown at the sacred pillars. This ritual would then be followed by the great Feast of Sacrifice - and here, during these rituals, the former calm of meditation would erupt into the frenzy of hatred that would lead to the war.

The Sacred Pillars are said to mark the three places where Satan appeared to Abraham and his family, and attempted to dissuade them from

obeying the divine command - and the ritual stoning of the pillars, or the 'throwing of the pebbles', is referred to as the 'stoning of Satan'. There has always been an element of violence in this ritual, and the subsequent Feast of Sacrifice, for which two million animals were to be slaughtered, adds to the stoning a further element of blood and death which, in this instance - given their obsession with their 'captured' Mahdi, Joshua - possibly led to the forthcoming cries for war.

I don't know how it happened, by what magic or osmosis, but sometime during the last of the three nights that great mass became one. One mind, one body, one eruption of blind emotion, one voice that suddenly turned into a roar that rose to the starlit sky. I had seen the anger building - in the throwing of stones and the slaughtering of animals - and as accidents occurred and human blood was shed, the anger joined them together. I was on a hill with Rashid, overlooking the enormous camp-site, gazing down on that swarming mass of white-clad pilgrims and their city of tents. I was no longer myself, but someone else, a naked stranger, divorced from the protective cynicism of my past and forced to face my own failures. Rashid likewise had changed and was now a stranger to me, his cultivated Western manners obliterated and replaced with blind fervour. He was giving a speech to the Arabs around him, saying that Joshua was in Jerusalem, that he had been seen by Abraham's altar in the El Haram es-Sharif, and that his presence there was a sign that the Muslims must recapture the Temple Mount. Rashid was fiery and eloquent, his voice raging over the gathered pilgrims, and then a blazing torch appeared, and then another, and another, until eventually the dark hill had become a sea of yellow fire and the separate voices had become one voice, first chanting, then roaring, rising up from that sea of fire and from the city of tents below it, filling the darkness of the desert with the cry that set the torch to the Middle East: *Jerusalem! Jerusalem!*

What am I writing, Kate? Am I telling stories or asking questions? I think I'm writing this letter to myself - to make what happened seem real. It was not real at the time - or, at least, it never seemed real - and with each passing day, every drink, it grows more like a dream. It sprang out of whispered rumours, began and ended so quickly, and now, in the threatening silence of its aftermath, it seems never to have happened.

Were you there when they bombed Jerusalem? Did it wound you beyond

repair? Or did you, intelligent lady, simply hate me for what I had done? These questions are not asked lightly, though my pen pretends to mock; for in truth, behind that pretence, is a shame that I can't seem to shake off.

I betrayed you, Kate, and in doing so betrayed myself, and now, as I write, as the bottle gradually empties, I am forced to confess that I can no longer deny my criminal guilt. I betrayed your trust and then I went with the Arabs, first to Mecca and then to the Golan Heights for twenty-four hours of penance. A brief and bloody war, perfectly normal otherwise - the jets screaming overhead, the shells exploding in fiery patterns, men screaming and dying in their own blood, the sand swirling around them - and of course I was there, thinking only of myself, sometimes hugging the earth, sometimes running for my life, now frightened, now excited, mostly just very weary, perhaps longing for the bullet that would cleanly put an end to my shame. Then, suddenly, it was over, the sparring partners separated, the Soviets and Americans, the world's so-called friends and benefactors, surrounding Jerusalem with their guns, driving their tanks through Jerusalem, and waving the flag of truce while preparing to trade off prerogatives, getting ready to carve up the Middle East in the name of World Peace.

Jerusalem is in chains and I, also, am in chains, imprisoned in the cell of my Christian guilt and hypocritical soul-searching. I am staying in Damascus to hide away from my sins, and to unravel the various lessons I learned on the journey to Mecca.

The Arabs are cruel but in their cruelty is justice: the refusal to pretend that Man is more than he is; the acceptance of our logic as no more than the mask that hides the face of our still primitive emotions. We aspire to cultivation, to reasonable thought and self-control, but the Arabs, in that wisdom which was gleaned from the desert's savagery, understand that the mores of civilised men are a transparent veil. No logic explains love, or the murderous impulses of hatred, or that impulse, supreme above all others, for the need to have faith. In the West we cannot accept this - it threatens our sense of order - but the Arabs, evolving out of the murderous desert, find their faith in blind passion. You, Kate, are an American, and I, Leon, an Englishman, and both of us have lived with the misconception of logic as Truth. The Arabs would have despised us for it, as we came to despise ourselves, but then you - alas, through Moshe - finally surrendered to your emotions while I, through my exposure to Arab 'truth or untruth', was forced

to face the fact that my renowned cynicism was, beneath its surface of jaded wit, no more than a coward's refusal to take a stand one way or the other. I learned this through the Arabs, and indirectly through Joshua, and now, in this sorry wisdom, but still hopelessly Westernised, I am compelled to view myself as one divorced from his inner being: that centre where Man grows or quietly dies and which the West has long lost.

We civilised souls are lost, our sense of truth destroyed by logic, and as one of the lost, now trapped by guilt and shame, having lost myself before losing you, I assume that I am waiting, with fear and fascination, for my own, highly personal Judgement Day.

I loved you, Kate.

Leon

31

‘The American tanks are moving out of Jerusalem,’ Kate said, standing just outside the doorway and glancing around the lounge with a mixture of curiosity and shyness. She had just arrived, unannounced and unexpected, so Moshe, at once embarrassed and pleased, simply stood there and stared at her. ‘Well,’ Kate added, still standing inside the doorway, ‘did you hear what I said?’

‘Yes, Kate, I heard you. I’m just surprised to see you here. I mean, I didn’t expect to find you on my doorstep. Come in. Take a seat.’

She smiled and slipped past him, her shoulder sliding across his chest, then he closed the front door and followed her in, feeling childishly hesitant. She was standing in the middle of the lounge, wearing a loose shirt and denims, looking slim, casually elegant and attractive, her face sun-tanned and healthy. She glanced around the room, then through the glass doors to the patio. When she turned back to face him, she was smiling nervously, her right hand on her shoulder bag.

‘So,’ she said, ‘I’m in your house at last.’

‘You’re very welcome,’ he said.

She nodded, still smiling, then removed the bag from her shoulder, draped it over the back of an armchair and looked at him again.

‘You knew about the tanks?’ she asked.

‘Yes,’ he replied, ‘I knew. The Americans only came in to stop the fighting in Jerusalem, and now that the dust has settled down they have no cause to stay.’

‘I thought, once in, never out.’

‘I think they were hoping for that,’ he said, ‘but neither the Russians nor we are keen to stand by and see that happen. So they’re leaving Jerusalem, but the situation still stinks: the Americans are keeping their troops in the area, forming a protective flank along the United Arab Republic, and the

Russians have done likewise in Syria and Jordan. Now, with a legitimate excuse, they're starting to trade off prerogatives, the Russians acquiescing in the American occupation of the Arab peninsula and the United States agreeing to the introduction of Soviet forces into Syria and Iraq. This, they both claim, will put them in a position to proceed along the road to a so-called "Final Settlement" of the Arab-Israeli and Israeli-Palestinian question. It stinks – but we're bound to it.'

'The Prime Minister should never have threatened to use our atomic weapons against the Arabs.'

'Correct,' Moshe said. 'That *was* a bad mistake. It was this, more than anything else, that gave them the excuse to intervene. And, of course, those bastards in the United Nations then backed them up, while the governments of Japan and Europe, practically down on their hands and knees, diplomatically displayed their pleasure in the *rescuing* of their precious Middle East oil from the vile, greedy Arabs.'

Kate smiled at his anger. 'Not everyone agrees, Moshe. China has accused the Russians and the Americans of having engineered the whole thing for their own, quote, imperialist purposes, unquote, while the governments of the predominantly Hindu countries have taken a similar stand. So, dear Moshe, you still have some friends left.'

'Israel has no friends. It's too valuable for that. Now sit down, Kate, while I pour you a drink.'

'Gin and tonic?'

'It's coming.'

He went into the kitchen and poured her a gin and tonic, then opened a bottle of beer for himself and returned to the lounge. She was sitting in an armchair, one long leg crossed over the other, the denims stretched tight on her thighs, the curve of her small breasts clearly visible where her shirt was unbuttoned. Desire seized him instantly, almost mindless in its intensity, and he felt the heat rising to his cheeks as he passed her the drink. Her brown eyes focused upon him, looking upward, large and melting, making him feel that he was falling towards her, into the blacks of her pupils. He controlled himself and straightened up, then took the armchair facing her, watched her putting the glass to her lips and taking a small sip of her drink. When she lowered the glass again, he drank some beer and tried to look at his ease.

'And how long do you think the present peace will last?' Kate asked.

‘That’s the million dollar question,’ Moshe replied. ‘The Soviet and U.S. intervention was only part of the reason for the Arabs’ cessation of hostilities; the other was that various Arab representatives, such as Rashid Idriss, were guaranteed access to Israel in order to speak personally to Joshua. As it is, Joshua is further helping the situation by materialising, mysteriously, amongst Moslems, both inside and outside Israel, giving everyone a little of what they need without actually committing himself to anyone. Jews, Moslems and Christians – all are still claiming him as their own – and luckily, since he’s now free to walk amongst them all, they’re all happy with their individual beliefs. But how long this lasts is the moot question: the Arabs still want Jerusalem back, and we won’t let them have it.’

‘So you think that sooner or later they’ll try it again.’

‘Yes. Obviously they still view Joshua as the hidden Imam, or returned Mahdi, which means they think the sovereignty of Islam is at hand. Sooner or later they’ll want the El Haram es-Sharif, which means taking Jerusalem.’

Kate was staring thoughtfully at him, as if studying him intently rather than just listening to him, and he suddenly felt that this conversation, no matter its relevance, was a subterfuge for that more personal matter that had yet to be resolved. The possibility made him uneasy, even slightly embarrassed, still foiled by his inability to accept her and forget what was haunting him. He glanced at her long legs, at the curve of her small breasts, wanting to touch her and lose himself in her, but held back by the shame of his private life and the fears it had given him. Now a mature man, but feeling more like an adolescent, he felt himself retreating behind his eyes, sinking into self-consciousness.

‘It’s uncanny,’ Kate said, ‘but Joshua prophesied that war - just before the bombs fell on the Golan Heights.’

‘Yes,’ Moshe replied, ‘and that disturbs me even more. According to Rabbi Latinovats, what Joshua actually said was that Jerusalem would fall to rise again, and that his blood, which would signal its shame, would also herald its redemption. Well, Jerusalem hasn’t fallen and Joshua has shed no blood, so those parts of his prophecy haven’t materialised yet. On the other hand, it’s worth noting that when we escorted Joshua around the religious sites, he wept for Jerusalem, saying its enemies would surround it; and later he said that the whole of Israel would be laid barren. If we’re to assume, as it seems, that Joshua can foresee the future, we must then assume that the

recent war, which has left Jerusalem and Israel intact, was *not* the war that Joshua has three times prophesied. That war, Kate, is the war that will come if this situation explodes again.'

'It may never happen, Moshe.'

'I think it will, Kate. If it doesn't start from outside - through the Arabs' lust for West Jerusalem - it could start because of the actions of our own zealots.'

'You mean their recent attempts to set up an ecclesiastical Cabinet.'

'Correct. Kash and *Gush Emunin* and the Netorei Karta zealots are claiming that Joshua's presence in Israel is a sign that the sovereignty of Orthodox Judaism is at hand - and that the way to ordain it is to replace Ben Eleizer's Cabinet with a purely ecclesiastical Cabinet composed of the most Orthodox members of the community; and, much worse, with the Defence Forces and all other religious and political parties subordinated to a newly elected Israeli Rabbinate. So far, both the government and the presiding Rabbinate have refused to lend their official support to any claim that Joshua is the Jewish Messiah; but if the zealots get into power, they'll immediately make that very claim and use it as the reason for removing all non-Jews from Israel and inaugurating the pure Zionist State - a situation that would lead to another Arab-Israeli war.'

Feeling restless, he stood up, holding his glass of beer in one hand, aware that he was telling her what she already knew and knowing exactly why he had said it. He was uneasy with silence, with her thoughtful, steady gaze, aware that she had come here uninvited and understanding just why. She knew that he wanted her, as she wanted him, and her instincts, at once ruthless and honest, had made her come to him. He was hesitant, perhaps frightened, haunted by Leon's accusation; and now, recalling that night when he had taken down all his family pictures, he also recalled what had happened with the whore and quietly recoiled within himself.

'You seem nervous, Moshe.'

'Yes,' he said, 'I am. I keep thinking about what's happening in Israel, and it keeps me on edge.'

He looked directly at her, not finding it easy, every nerve in his body reaching out to be touched by her presence. She was staring up at him, her face framed by her dark hair, the sunlight pouring over her brown eyes and making them luminous. He saw himself in those eyes, his miniaturised form

twice reflected, mere ghosts in the space that she inhabited, his real self still to follow.

'You look well,' he said.

'That hardly constitutes a compliment.'

'I'm pretty slow with compliments,' he said, 'but you look very nice.'

'Just tell me I'm beautiful.'

'That might be a lie. Beauty is in the eye of the beholder - and I can't trust myself.'

'That's a beautiful compliment.'

'A mere accident of speech.'

'Some accidents make you feel more alive - and that's how I feel now.'

He had to look away, a little shocked by her candour, beginning to feel that his inhibition was puritanical, if not based on cowardice. He stared through the glass doors, across the patio to Jerusalem, its ancient walls and modern buildings clearly visible on the hills in the distance. Jerusalem the Golden, the centre of the world, the symbol of all that he had gained and lost in the past. Thinking of this, he glanced about him, at the walls of the living room, seeing the lighter patches of white where the photographs had been before he had taken them all down and hidden them away. He wanted to put the past behind him, to plant new roots in Kate, but that memory of the dead eyes staring sunward lay like ice on his racing heart.

'We know where Leon is,' he said, turning back to face Kate, aware that he was staring intently at her to gauge her reaction. 'He's been travelling with Rashid Idriss and is now in Damascus - reportedly not too healthy and drinking too much.'

'Yes,' she replied, 'I know. He sent me a letter. It was a very long letter, very strange, and he didn't sound happy.'

She glanced down at the floor, obviously upset by the recollection, her hair tumbling over her shoulders and across her white shirt. Moshe stared at her, entranced, wanting to reach out and touch her, but held back, in yearning and fear, by the words still unspoken. She raised her eyes again, smiling wearily, one hand rising and falling.

'You have to forget him, Moshe. Don't let him stand between us. We were lovers, but I never pretended to love him, and now it's all over.'

The pain came and then departed, sharp but mercifully brief, and he knew that she was speaking the truth and offering herself to him. He was shaken

and deeply moved, filled with sad, shameful triumph, finally accepting that his love for her was, in its very strength, as selfish and possessive as the sun that drained the desert of life. His gain was Leon's loss, his joy Leon's sorrow, but he knew that with all the sympathy in the world, he would not change positions.

'Go out onto the patio,' he said, 'and watch the sun going down. I'll get you another drink.'

Standing upright, she handed him her glass, smiling slightly, ambiguously, then nodded, pushed the glass doors apart and went outside, onto the patio. He watched her leaning against the low wall, facing Jerusalem, her back turned to him, and he wanted to press himself against her spine and her long, slender legs. The desire was voluptuous, a mixture of love and primal lust, and he turned away, startled, suddenly flustered, and went into the kitchen. He poured the drinks automatically, hardly aware of what he was doing, his need and suppressed emotion building up, threatening to shatter him totally. Then he picked the glasses up, took a deep breath and released it in a sigh as he left the kitchen again. He crossed the living room in silence, seeing her spine, the long legs, then she turned around and smiled and reached out to take the glass from his hand.

'That's a lot of gin,' she said.

'I'm sorry; I wasn't thinking.'

'Are you trying to get me drunk?'

'No, I'm not.'

'No,' she said, 'not your style.'

She had her back to the wall and turned away to lean against it, the both of them facing Jerusalem and the hills all around it. Moshe thought of that first night, of how the storm had erased Jerusalem, and of how, not much later, that same storm had introduced him to Kate. Large eyes, very brown, brown hair whipping across her face, long hair, thick with dust, her tanned face smeared with dust… the face of an unknown woman, though also the face of his wife when her body was spread-eagled in the dust, her dead eyes staring sunward. He remembered both days and would never forget them, still dreaming, as he did, of one face superimposed upon the other in that fierce, howling storm. He had died when he found his dead wife, his pain numbing his senses, the later years filled with grief buried in work until Kate resurrected him. Now, he wanted life, the pain and joy of love's commitment,

but his shame, which had wrapped his flesh in thorns, still had to be exorcised.

'Do you know about my wife?' he asked.

'Yes,' she replied. 'I do. I read all about it in the papers, so you don't have to tell me.'

'It was during the Yom Kippur war,' he said, his voice sounding distant, emerging from some dark cave in his soul to shred the very air with his suffering. 'We were living in a kibbutz . My wife and children were working the fields when the Arabs came out of the hills and cut them down with Uzi sub-machineguns. I wasn't there at the time, but I did hear the shooting, and by the time I got there, running all the way from our house, the Arabs had fled. I loved my wife, Kate, and still love her in my memory, thinking only of the children she gave me and of the love she showered on them. I loved them and treated them well, but my real commitment was to the Army; for all my attempts at care and consideration, I loved the Army even more. It was ambition, certainly, but it was also dedication; I truly believed that a man without a purpose was hardly a man. My wife took a different view: she thought love was life's prime commitment; the love of a man and woman for one another, their shared love for their children. It was our only source of disagreement, sometimes bitterly so, but always, irrespective of what she thought, the Army came first and foremost with me. Then, when they were murdered, when I found them in that dusty field, when I looked down and saw their dead eyes staring at me, I felt a pain so deep and lacerating that the lie became manifest: no commitment to an abstraction, to an ideal or cause, should stand above the more enduring commitment of one individual for another. And that's where I failed.'

He had another sip of his drink, not daring to look at Kate, his gaze fixed on the vast, sinking sun and the hills' shifting shadows.

'Yes,' he said, 'I loved them - certainly a lot more than I knew - with an intensity that I only fully understood when I saw their dead eyes. How I hated the Arabs then, thinking of them as bloody murderers, but I hated myself even more for not protecting my family. Oh, I knew it wasn't my fault, that it could have happened anytime, but what I couldn't forget was the fact that I'd put them in second place. True, I'd shown them love, but it was a distant, distracted love, not as selfless as my love for the Army and, of course, for Israel. And so I came to hate myself and shouldered the blame for what had

happened; and then ironically, with that self-deception unique to us human beings, I gave myself even more fully to my country, burying my guilt and shame in patriotism: the commitment to an abstraction, to an ideal or cause, that drove me even deeper into myself, away from love's dangerous pleasures.'

He had another sip of beer, licked his lips and glanced at her, saw her profile outlined against the darkening, blood-red sky, her gaze fixed on Jerusalem. The top of her shirt was open, revealing her curving skin, and he wanted to touch that skin with his lips, press his cheek to her breasts. It was physical desire and emotional need combined, the yearning to lose himself, to surrender his former self and be renewed in the well of her body. Seized by this emotion, he turned away to fix his gaze on the distant hills.

'So,' he said, 'the memory haunted me - the dead eyes staring sunward - and I travelled deeper into myself and built a fortress from hard work. The Army became my life, my bed and my synagogue, and as the years passed I found myself freezing in the ice of retreat. The pain of their death had numbed me, leaving only the need to hide, a fear of ever experiencing such pain again through the loss of a loved one. Physical pain didn't bother me; nor was I concerned with the possibility of public failure. But behind the soldier's veneer of ruthless courage was this great fear of love. So, I retreated, refusing to involve myself emotionally, separating my physical needs from my emotions and making love a transaction… Yes, I turned to prostitutes, paying for purely physical release, easing the hungers of the flesh and ignoring emotional needs. As Leon said, I had a secret life… but that wasn't the whole of it.'

He kept his eyes fixed on Jerusalem, now golden in the twilight, surrounded by the hills and plains, the spreading shadows of evening. It was the landscape of a dream, one that circumscribed his being, containing joy and sorrow in equal measure, shredding the heart and renewing it. Kate was leaning forward beside him, her elbows resting on the wall, the light breeze blowing the hair across her face and her darkly glittering eyes. Her right shoulder was touching his, her hair occasionally brushed his cheek, and he felt her body's warmth seeping into him and stroking his senses.

'I never entered those women, Kate. That was something I couldn't do. It was as if, in some lost and guarded corner of my mind, the impulse that gave the flesh life had found a will of its own. I felt that entering them would be a

betrayal, the repudiation of my former love, and so I only let them use their hands and lips, their expert playing on nerve ends. A hypocritical sense of purity, a defiled moral superiority: the point was to allay all thoughts of self-abuse while keeping emotion in check. Ridiculous? Certainly. Shameful? Even more so. I was piling guilt upon guilt, shame upon shame, and calling that mess self-protection. Oh, I tried other women - they came and went in despair - but their bodies, like my wife's prostrate body, lay like death there beneath me. In the end, I gave up, tried no more, perhaps ashamed, and then, Kate, that night, the night of Joshua and the storm, when it seemed like Jerusalem was falling and Judgement Day was at hand, I found you in the ruins, your brown hair, your brown eyes, and understood in that moment, in a flash of revelation, that my life, which had been nailed down by guilt, could be lived once again. I wanted you then, Kate, and I want you now and always will; but I also want you to know and accept the truth of what I've been in the past… I don't deserve you… I want you.'

He heard her set the glass down and then felt her turning into him, one hand reaching up, fingers outspread, to slide over his face. He pressed his lips to her skin, grabbed her wrist, kissed her fingers, then released his other fingers from the glass and let them find her soft hair. She turned her face towards that hand, licked the skin between his fingers, and then he spread his fingers through her hair again, tugged her head back, leaned over her. She was staring up at him, her eyes enlarged, dark and deep, strands of hair coiling across her moist lips as they opened out to him. He felt his hands around her face, her hard cheekbones, her warm skin, then closed his eyes and felt his tongue drowning in the well of her mouth. He was holding her, crushing her, his whole body pressing against her, one hand heavy on her spine, the other between her shoulder blades, all his senses concentrating on her belly and breasts, as if, in that extraordinary warmth and softness, he might find revelation.

Nothing mattered but her being, the flesh and bone beneath his hands, the heat that poured from her melting loins and set his thoughts to the torch. His will had dissolved, his inhibitions had been demolished, and he felt the burning magnet of her body drawing the bonds from his long-imprisoned flesh. Her tongue licked his eyes and nose, drew a line around his lips, then slid down between his teeth, into his mouth, her breath mingling with his. He felt as if he was inside her, a beating impulse in her head, and her being, like

the pale moon and stars, seemed to swim all around him. Nothing mattered but the instant, the past and future being one, his heart beating with anguished need and exultation to the rhythm of pounding blood. He was gasping, jerking his head back, sliding his hands around her ribcage, opening his eyes to see his fingers outspread on her white shirt, curling down to tug the collars apart and reveal her tanned breasts. Eyes brown, breasts brown, the skin rising and falling, twin mounds that filled his hands with startling softness and sublime, heavy warmth. He saw them and lost them, his eyes closing to gaze inward, dimly aware that he was licking and sucking like a child seeking milk. Someone's fingers - in his hair. Other fingers - on his spine. He groaned and leaned forward, bending her backwards, stretching along her, mesmerised by her writhing pliancy and heat, his body ruling his mind.

The sun was sinking behind the hills, a crimson fire reflected on glass, his own reflection superimposed upon it as he carried her inside. The room grey, growing darker, shadows sliding along the walls, as he felt her hands clinging to his neck, her weight pulling his arms down. He could not recall picking her up and didn't see the bedroom door - only the bed, its springs squeaking in protest, as he dropped her across it. He either lay or fell beside her, grabbing her hips, pulling her towards him, stripping the shirt from her body and unzipping her denims as her spine arched and her body moved into him and she sucked on his tongue. She was gasping, kicking her legs, letting him slide the denims off, and his own clothes, removed by her hands, were soon lying with hers. They touched, their bodies met, her breasts flattening against his chest, and then she uncoiled beneath him, opening out to draw him in, her flesh rising and falling like a river pouring endlessly over him.

He closed his eyes to gaze inward, seeing darkness and light, now moving deep inside her, letting her flesh and heat envelop him, his every nerve reaching out to touch her and join her, becoming her and feeling what she felt as she tightened around him. She did not divide in two and survey the act from a distance, but let herself melt around his hardness and weld her flesh to him. Welded to him, she became him, her heart beating in time to his, their joined bodies a single river of sweat and tears that flowed into a timeless zone. She took him and let him take her, conquered him and surrendered to him, lost herself for the first time in the wonder of pure sensation, descending deep into the depths of herself to where her stripped nerves scorched her. There was sound - her joyous sobbing, their synchronised gasping, his

strangled moans - and then she felt the crushing weight of his body as the spasms whipped through her. She flew apart in that brief delirium, her senses spinning through light and heat, catapulting over the chasm of her fears, into the harbours of freedom. He felt her as she felt him; they felt each other as they collided, shuddering together in the ecstasy of release and the slow glide to contentment.

The river, flowing endlessly, had not flowed for long at all, but he lay upon her belly, kissing her breasts, like a man resurrected. He felt cured and purified, touched with wonder and hope, and as she ran her fingers lightly through his hair, he gave himself to her, totally. His draining tension told her this, the tender sliding of his tongue, and she glanced around the room, saw the white walls in darkness, and let the silence capture her beating heart and lay it gently upon him.

'I'm yours,' he said. 'Take me.'

32

He was in the middle of the wilderness, a light breeze tugging at his white robes, the sun beating down on his bowed head where he sat on a rock. He was motionless and silent, his face covered with his hands, apparently deaf to the sound of the jeep as it braked to a halt. Kate sat there for some time, too surprised to move immediately, one hand resting lightly on the steering wheel, the other holding the handbrake. Joshua looked like an apparition, a shimmering mirage, a lonely figure in the desert's vast expanse, sand drifting around him. The silence was eerie, the heat fierce and relentless, but he sat on the rock with his head bowed as if he was sleeping.

Kate shook her head from side to side, wondering what had brought her here, yet feeling, even as she clambered down from the jeep, that the question was pointless. Joshua had brought her here, calling her out of Moshe's bed, making her drive through the pearly-grey light of dawn, following her instincts. She knew this as she advanced upon him, her feet kicking up small clouds of sand. Joshua didn't move when she approached, remaining in the same position, his head bowed, his face covered with his hands, his hair falling about him.

'Joshua?' she said, not a statement but a question, as if, when eventually he raised his head, she might see someone else. 'It's Kate. Are you alright?'

He did not answer immediately, but his posture changed slightly, his head dropping and then rising again, his chest expanding to let him breathe in. His whole posture suggested weariness, a massive draining of physical strength, and Kate wondered where he had been and what he had done during his month-long disappearance.

'Joshua?' she said again, leaning forward to shake him lightly by the shoulder, her fingers spreading out on the white robe to feel the firmness of flesh and bone. 'It's Kate. Can you hear me?'

He shuddered and took a deep breath, held it in, released it, breathing

deeply in slow, regular rhythm, as if exercising. His head was still bowed, his face covered with his hands, but eventually he removed his hands and glanced up, blinking against the dazzling light. Kate was shocked by his appearance, not prepared for what she was seeing: he looked a lot older, his face gaunt, the skin lined, deep shadows under his silvery-grey eyes, his hair and beard filmed with sand. He glanced away and then looked at her again, his brow furrowed, then finally shook his head from side to side and offered a sad smile.

'I called and you came,' he said. 'My voice carries on the wind. In the night, in the silence of the wilderness, my own voice fills my head.'

'You called me?' she responded. 'I didn't know what was happening. I just woke up in the middle of the night and felt compelled to go for a drive. I didn't plan anywhere in particular. I simply had the urge for silence. So I thought I'd drive into the desert to be alone with my own thoughts.'

'What thoughts were those?'

'About Moshe and me. About how you introduced us. I was thinking of how you drew us together and how it seemed preordained. We'd made love earlier on, but I could still feel him inside me, my body seeming to reach out to take hold of him and make him a part of me. It was a remarkable feeling, very beautiful, almost religious, and I realised that the night we first made love was the same night you disappeared. So, I was thinking of that, of how long you'd been gone, of the fact that Moshe and I had been lovers for a month and that you hadn't been seen during that time. Then, unable to sleep, I left my bed and drove into the desert.'

Joshua smiled again, as if at a private joke, but kept his neutral gaze fixed upon her. 'What is willed will be done,' he said, 'and being done has been preordained - but there was no connection between your first night with Moshe and my disappearance.'

'Why did you disappear?'

'To be alone and meditate. I am not as I was, and my heart is pained and weary, and I take unto myself the sins of Man and his numerous temptations. I know that my time is coming, and feel pain and despair, but beyond that is the light of revelation and the hope of redemption. Yet now I am weak, sorely tempted by Earth's domain, and I hope that what transpired in my isolation will return me to strength. Such strength will be needed for the time which is to come, when nation shall rise against nation and kingdom turn against

kingdom.'

His words sent a chill through her, filling her thoughts with shifting shadows, and she recalled the smoke over the Golan Heights the last time she had seen him.

'Are you talking about another war?' she asked.

'The war has already begun, and you were witness to its beginning, the smoke signalling the prelude to the drama that will end after me.'

'*After* you?'

'When I am gone. When Israel is devastated. When Jerusalem is desecrated and made barren and must find its redemption.'

'The war you prophesied is over.'

'It has just begun and continues. The silence that now hangs over Jerusalem is the silence of fever. Men dream and then scheme, and their scheming brings their downfall, that defeat which offers hope or despair, good or bad, the last choice. Jerusalem must fall to rise again in its glory, radiating its light around the world of which it stands at the centre. That fall has not yet come, but it will come when I am gone; and then, out of my anguish and joy, Jerusalem will sing.'

The noon sun was merciless, beating out of an azure sky, making the distant mountains shimmer in heat waves that rose from the burning sands. Kate glanced about her, unnerved by the silence, then wiped sweat from her forehead with a handkerchief and stared at Joshua again. He was still seated on the rock, looking at her, veiled pain in his eyes.

'You disappeared for a month,' she said, 'and that caused widespread concern: the Jews blame the Moslems, the Moslems blame the Jews, and the Christians blame first one, then the other - each thinking that the other has stolen you and is keeping you hidden. If, as you say, there's going to be more trouble, then possibly your disappearance will be the cause of it.'

'I return today,' he said. 'You will drive me into Jerusalem. From this day forth my fate will be sealed and the fall will commence.'

'The fall of Jerusalem?'

'And the beginning of Man's rebirth - his transformation into that which is good or evil, redeemed or defiled.'

'You don't know which?'

'No.'

'You could be the instrument of either?'

‘I am the instrument of revelation - no more and no less - but what will be revealed is a mystery known only to God.’

‘You believe you come from Him?’

‘I only know that I believe *in* him. We are made manifest by His will and without Him we cannot be.’

‘You do not know Him?’

‘He is not to be known. The mind cannot encompass His glory, but the heart must accept Him.’

‘Faith?’

‘And love. We must give to receive. We must surrender ourselves to the whole and know the joy of redemption.’

‘Where does your faith come from?’

‘From doubt and temptation. From the conquest of both. My faith is a light blossoming out of the darkness, as boundless as the desert to a single grain of sand, as enduring as this rock upon which I now rest my Earthly body. At first I was innocent, knowing neither faith nor lack of it, simply watching and listening for the sign that would mean revelation. Then in watching and listening my emptiness was filled, all the vanities and weaknesses of man pouring into my nakedness. Thus humanised, I knew rage, the curse of greed and ambition, the temptation to use my uncommon powers for personal gain. Then I came to the wilderness, to the purging heat of God’s anvil, and spent thirty days and nights on a journey through the depths of my soul. I saw light and darkness, the forces of good and evil, knew the eternal pain of sin, heard the angelic song of virtue, was touched by the flame of lust and the ice of a continence that could lead, eventually, to transcendence. In me they were at war - as in all men they are - and I saw that I would have to take a stand and chose the present or future.’

Kate was hot, but she shivered, wrapping her arms about her body, feeling drawn to the gateway of his eyes and the cosmos beyond. He kept talking, and his voice was like the wind on a desolate planet, at once frightening and beautiful.

‘The present is what men have and live their lives in fear of losing: the known, the familiar, the instantly recognisable, the comfort of the illusion of Reality and the mirror of fellowmen. The future is something else: the great darkness, the unknown: that which terrifies because it has no shape and might never materialise, possibly no more than the worm in the flesh - then the dust,

the black Nothing. To some men it is that, but to others something worse: the bottomless pits of hell, the blade and the fire, devils and ogres and demons beyond description; eternal damnation and torture and fear - all the horrors and terrors of their dreams and festering nightmares. This, then, is Man's choice: between the known and the unknown, between reason and faith, between the satisfactions of the real present or sacrifice for an unreal future, between the weakness of his mortal human heart or the strength of his spirit. Thus, as a man must choose, so I, too, was forced to choose, having taken the vices of man into myself to know doubt and temptation.'

He stopped talking and glanced about him, his eyes reflecting the distant mountains, then lowered his gaze to survey the wilderness floor upon which his feet rested. In that silence Kate felt lost, wrenched away from the familiar, her fear rising as ethereally as smoke, with a quiet, lazy malice. She wanted Moshe beside her, on top of her, inside her, his flesh offering the one form of transcendence that the present could hold. She had faith, but it was weak, bound with vanity and Earthly love, and with Moshe, as she had discovered in his bed, she could feel that faith flowing.

'Why choose the unknown?' she asked, keeping her voice level, trying to control her racing heart and its threat of betrayal.

''Knowledge,' he replied, closing his eyes as if to pray. 'The revelation that my recent unhappiness was caused by my doubt. In the beginning I knew peace, the joyous calm of not knowing, the contentment that comes from an innocence that simply accepts. Then I became as other men, learning vanity and greed, wanting so much to drink from the present that I doubted the future. Who had called me? And why? What sign had He given me? Was I child to the blinding light or the forces of darkness? Such questions were like thorns, drawing blood from my broken flesh, biting deep into the marrow of my faith and dividing my spirit. I was tempted and turned away, tempted again and turned more slowly, tempted a third time and found myself faltering on the brink of acceptance. Mortal pleasures, power on Earth, the love of Man and not his hatred, the avoidance of the pain yet to come - these rewards were at hand. So, I refused, refused again with less conviction, tried to refuse a third time and went dumb, as if frightened of speaking. Yes, I was tempted, my lips drawn to forbidden fruit, and then, in the shame of doubt and weakness, I fled to this wilderness.'

He opened his eyes again, raised them slowly to take her in, his face

simultaneously wounded and radiant, the deep lines etching pain and joy.

'Knowledge,' he repeated, quietly returning to his beginning. 'The knowledge denied to the mass of men because its terrors are manifold. I travelled down through myself, thirty days and thirty nights, down that well of light and darkness within, to where the soul meets its source. There was silence beyond silence, a stillness beyond Nothing, a void so minute it could only blossom out at the far side of the infinite. There, in stillness and silence, in the resonance of the unknowable, was the war that began before time and now transcends eternity. In the Nothing was the light, which was blinding in its purity; and around it, in the darkness of the other Nothing, were the forces of evil. There, where there was no beginning, no middle, no end, my being, like that of all men, had to make its commitment. The forces of evil were tangible, a manifestation surrounding the void - known, recognisable, present, and seductively real. The light of good was less comforting, as opaque as an illusion, unknown, without shape or dimension, challenging weakness and doubt. To be, we must choose - between good and bad, belief and unbelief - between a faith that transcends our mortal fears and the rejection of hope. Knowing this, I explored my Self, surveying the forces at war within me - there, where the soul bridges the finite and the infinite - and realised that my worldly learning, my accumulation of greed and vanity, had brought me nothing but the anguish and irrevocable despair of those who can never commit themselves by accepting the light of redemption. Thus, I committed myself, casting doubt and temptation aside - and immediately felt the light blossoming out from my centre to dissolve the forces of darkness around me and let me be Whole. Then, knowing joy, the redeeming flame of faith and hope, I ascended back up through my Self and returned to the mortal world. Here, to test my faith and the strength of my humility, I must suffer the anguish that will come to force His children to Judgement Day - their Day of Decision.'

Kate took a step backward, trying to retreat from his revelations, but his silvery-grey gaze, almost luminous, refused to let her escape. He smiled at her, gently, like a loving father with his child, then pressed his hands against the small rock and pushed himself upright. Standing before her, he was tall, the robe trailing around his feet, his face gaunt with an all too human suffering, the features filmed with sand. He smiled again and touched her cheek with his fingers in melancholic affection.

‘Walk with me,’ he said.

They walked away from the rock, heading into the wilderness, towards the mountains that formed a dividing line between white sand and blue sky. The heat hammered down from the sky, making Kate feel almost dizzy, and she saw the air shimmering before her to distort the landscape. Joshua didn’t appear to notice - neither the heat nor the desert’s beauty - his gaze focused inward upon himself and the trials to come. Nevertheless, he did not walk far, perhaps no more than fifty metres, then turned around to study the small rock upon which he had sat.

‘I am weary,’ he said, ‘my strength drained from my meditation. Now I must learn to brave my fear of what is to come.’

‘What makes you so sure it’s coming?’

‘My heart and mind communicate. I know because I feel it inside me - and my feelings don’t lie.’

‘Do you know what will happen?’

‘Not to me: that is hidden. I only know that I will suffer and pass on to lead the way for Jerusalem.’

‘Why must you suffer?’

‘Because men will grieve and rage; and, in so doing, set in motion that which will eventually lead them to Judgement Day.’

‘Can you not avoid the suffering?’

‘No. It is ordained.’

‘Can you not use your extraordinary powers to move men in some other way?’

‘No, that would be blasphemous, going against the given way, an abuse of my faith and His trust, an admission of cowardice. I was given those powers to impress men, to draw them to me and make them wonder, but now that my time is coming near I must become as they are. I cannot use my powers to save myself or change events, for in doing so His word would be revoked and damnation would reign.’

‘But you can’t always control your powers,’ Kate said. ‘You couldn’t that day in the hospital, when you thought that you and I might be separated.’

‘No, I could not, because fear and rage blinded me, making me behave, in the weakness of my doubt, like normal men. This must not happen again, no matter how I feel or what I might be thinking, so now, at the beginning of my trial, I must exhaust my great gifts and leave myself to my mortal fate. My

powers, like the wind, will dissipate and leave me as other men.'

He raised his right hand and Kate felt a deep fear, born insidiously from the knowledge of what could happen and freezing her mind. She wanted to stop him but was powerless, her muscles turned to stone, and she saw him fix his gaze upon the rock in the shimmering distance. His raised hand started shaking, then vibrated like a diving rod, and he kept his gaze fixed on the distant rock, his eyes wide in the blinding light. Kate felt the power coming, rushing in from the elements, surrounding Joshua and then pouring through him and flowing into the earth. The ground rumbled and shook, started breaking up around them, then the sand began spitting and a jagged crack appeared, racing towards them from the base of the rock and terminating in front of them. Kate looked and was held, her thoughts frozen, only seeing, bearing witness, as the ground around the rock heaved and cracked, spitting clouds of sand into the air where they swirled like dark veils. Then the heaving earth exploded, mushrooming in languid waves, and the rock suddenly moved, nosing up into the air like an iceberg breaking loose, growing broader at its base as the growling earth was forced away, inching higher, growing larger, one edge cutting through the sun, soil and sand falling off it, until finally, with a muffled roar, the earth stopped its convulsive heaving and the buried mass of the original, much larger rock was exposed as a large, mud-covered hillock over which the sun flashed.

Kate's mind was frozen, admitting nothing but the visual, not open to fear or normal wonder, observing with lucidity. She saw the large hillock, silhouetted against the sky, striations of brilliant sunlight flashing around it to form a dazzling prism. The earth had stopped shaking, but Joshua was still trembling, his hand forming an arch across the sky and its few drifting white clouds. He was sweating, his lips tight, his brow furrowed, and a wind, sweeping out of the former stillness, blew his hair out behind him. He leaned forward, white robes whipping, fighting against the rushing air, then the sun, half of it hidden by the hillock, sank behind it and disappeared. The cold came instantly, springing out of the sudden gloom, then the sun reappeared at the far side of the hillock, and the heat, claustrophobic and draining, had dominion once more.

The heat was in the wind, which made the burning sand swirl, hissing around Kate as she stared at Joshua and his snapping white robes. His arched hand became a fist, trapping the elements in its grip, and then the wind, dying

away to a whisper, let the sand settle down. There was stillness and silence, a frozen, brilliant clarity, and Kate glanced up to see a pale moon gliding out from the white clouds. The moon was abnormally large, its black craters distinct, and it drifted across the blue sheen of the sky towards the immense, golden sun. The light darkened, turning grey, the mountains casting great shadows, and the wilderness, formerly distorted by shimmering heat waves, became a colourless dream. Then the moon reached the sun, slid across it to cover it, deflecting its rays of light into space and letting the darkness roll in. The moon stopped in front of the sun, obliterating it completely, and the stars shone in glory in a blackness that covered the wilderness.

Kate looked up and saw it, looked down and saw the same: the stars glittering above and below her in a featureless Nothing. The sand and stones were the stars, the desert floor a carpet of stars, and her feet, which she saw even in that darkness, stood on a bed of starlight. She did not move at all, feeling nothing, simply observing, and then a pool of light grew around her feet, spreading out through black night. In that eerie light was her reflection, her multiplied image, countless masks of herself drifting out in all directions to fade away in the distance. She was the stem of a flower, her Self forming the petals, the petals dying and floating away and renewing themselves. Then she sank down through the stars, through the reed of her Self, and saw the light blossoming around her, pushing the darkness back. The light brought the heat that bathed her body in sweat, became a brilliance that dazzled her eyes and erased every star. There was white haze, blue sky, a ragged mass resembling mountains, then the wilderness and sky were divided and the sun conquered all.

Kate stood in the wilderness, her gaze fixed on Joshua, the hillock that had formerly been a small rock soaring up just behind him. The wind whipped his white robes, the sand swirled around him, and Kate saw her Self standing there beside him, gazing down at the parched ground. He reached out and touched her, laying his hand upon her shoulder, and a globe of light, brighter than the sun, surrounded their bodies. Surveying her Self, she was herself, looking out from the dazzling light, seeing her Self, multiplied in the distance, forming a circle around her. She left herself to greet her Self, the past and future coexisting, passed through her Self and stopped in front of the hillock that was cutting off half of the sun. She studied the hillock, silhouetted against the sky, striations of blinding sunlight flashing around it

and quivering above her.

‘I am drained,’ he said. ‘Mortal.’

His white robes snapped in the wind as the lowered his arms, closed his eyes and then wearily bowed his head to let the elements retreat. The wind faded away, letting the swirling sand settle; then, in its lust to devour the silence, the earth growled and heaved again. The hillock shook violently, mud and sand sliding down it, then the soil around its base started sinking, sucking the hillock down with it. The hillock sank slowly, with a sublime, sombre majesty, sinking down as the sand subsided beneath it and dragging more sand down with it. The noise was catastrophic, the earth roaring in its hunger, and the hillock continued sinking, the sand pouring in around it, until only the peak remained, a small rock on the desolate plain, the great orb of the sun shining upon it to render it lifeless.

Joshua fell to his knees and placed his hands on the modest rock, spreading his fingers to explore its burning surface and then bowing his head. He was silent for a long time, breathing heavily, his body sagging, the light breeze blowing through his dishevelled hair and brushing sand from his white robes. Eventually he spoke, his voice pained and yet joyous, a haunting music carried on the wind and swept gently to Kate’s ears.

‘Around this rock,’ he said, ‘I will gather my Ministry - not to destroy, but to fulfil… for all men… and all time.’

Kate returned to her mortal shell, to the doubts and fears of life, and felt the spasms whipping through her body, bringing back her senses. She saw Joshua on his knees, his hands on the burning rock, his fingers outspread like a web around the globe, his head bowed in exhaustion. She wanted Moshe inside her, setting her free, absolved of all commitment, but her voice, as if mocking this desperate wish, whispered out over Joshua.

‘What Ministry?’

‘The world.’

PART FOUR:

CRUCIFIXION

His blood be on us, and on our children.
- *Matthew*, 27:25

33

The schemes of men, Jozsef thought, are always nurtured behind closed doors, away from the curious eyes of the world and its numerous victims. He thought this as the closed door opened and Rashid Idriss was ushered in, his brown eyes moving from Moshe to Ben Eleizer, then to Jozsef, as the guard stepped back out of the room, closing the door behind him. Rashid stood there for a moment, not pretending to be friendly, then nodded and walked across to the long table and sat down facing Moshe. They stared silently at one another, neither revealing what he was thinking, then the Prime Minister coughed into his fist and pursed his lips thoughtfully.

'We're glad you could make it, Rashid.'

'I've come to see the Mahdi.'

'I seriously doubt that he's the Mahdi, but you can certainly see him.'

'You assume he's your Messiah?'

'No, I do not. I merely suggest that he may not be what he seems - to you or to us.'

'He *is* the Mahdi.'

'There's no proof of that.'

'He has appeared to many Moslems.'

'He's also appeared to many Jews and Christians, but we can't all lay claim to him.'

'I know what I feel.'

'You're too educated for that, Rashid.'

'My Western education is now behind me, cast off like a useless rag.'

Moshe and Ben Eleizer glanced uneasily at one another, unable to hide their surprise at the abrupt change in Rashid. Jozsef, too, was surprised, his gaze drawn to Rashid's brown eyes, which glittered with the bright, hard intensity of growing fanaticism. Rashid had formerly been approachable, moderate in politics and religion, but the Arab who sat across the table from

them was very different from that. Jozsef knew about the Black Stone and how it had affected the Moslems, but he hadn't been prepared for the extent of Rashid's personal conversion. Now Rashid was staring at each of them in turn, his face stony and challenging.

'I'm surprised to see no Americans here,' he said.

'Why should there be Americans here?' Ben Eleizer responded. 'This is Israel, not America.'

'It must be difficult to admit that the Americans and Russians are on your doorstep, with the Americans pulling the strings that manipulate Jerusalem.'

'We are not puppets, Rashid.'

'But you *are* in chains, Ben Eleizer. Right now, the Americans and the Russians are deciding your fate.'

'Both armies have left Israel.'

'And are presently massed around it, negotiating in the tents between the tanks and quietly mapping out your future.'

'The United Nations is mediating.'

'The United Nations is a joke. As usual, the United Nations is impotent and merely gives empty speeches.'

'Our fate is your fate, Rashid.'

'Not quite,' Rashid said. 'The United Arab Republic has the oil; you have nothing to trade.'

He was sitting up straight, looking at each of them in turn, his eyes bright with the purity of his conviction, his lips forming a thin line.

'Neither the Americans nor the Russians are interested in trade,' Ben Eleizer said. 'They're only interested in stealing as much as possible in the name of world peace.'

'They've brought peace to Palestine.'

'A temporary peace, Rashid. While it's true that the so-called peacekeeping forces have kept us from each other's throats, it's also true that the peace is precarious. The Americans and Russians both feel that the presence of Joshua in this area remains a threat to them. As things now stand, you Moslems are convinced that Joshua is the Mahdi who'll ordain the sovereignty of Islam over all the Arabs states and Israel; a great number of Jews are equally convinced that Joshua is their Messiah, come to Earth to pave the way for the sovereignty of Judaism; and the Christians, both here and in Europe, are convinced that Joshua is the resurrected Jesus Christ

who'll inaugurate the conversion of the Jews and, presumably, the Moslems. No matter what Joshua is, no matter his nature, the three great monotheistic religions are equally convinced that Joshua belongs to them; and they're ready to move heaven and hell to establish their individual supremacy in his name. The present peace in Israel is therefore very precarious indeed - and further outbursts of violence between Jews, Arabs and Christians are already occurring.'

'The Christians have little bearing on the problems of Palestine. I'm only concerned with Zionists and Moslems.'

'Unfortunately the Christians, if having little effect within Israel, might soon be affecting this country from outside.'

'I don't know what you're talking about.'

'I'm talking, Rashid, about that speech the Pope broadcast world-wide yesterday - the speech proclaiming Joshua as the Christian's Son of God and announcing the unification of the Roman Catholic and Protestant churches into the one, once more unified, Christian Church. In other words, the Christian world has been united by what they are insisting is the Second Coming of Christ.'

Jozsef put his head down, feeling ashamed and humiliated, still shocked by what had happened and unable to reconcile himself to it. He was a rabbi, a Jew, and therefore not personally involved, but when he thought of the Pope's speech, and of the motives behind it, he also thought of what he had said to Kate during their walk to the Mount of Beatitudes, and wondered if he had been deceiving himself. In defending the silence of the Jewish and Christian religious bodies, he had claimed - as he had then genuinely thought or, perhaps, desperately wanted to believe - that their silence had been based on their inability to give an honestly objective judgement of Joshua; but now, given what had transpired in Europe, he was not at all sure of that.

'The claims of the Christian Church are of no interest to me,' Rashid said. 'The Christian Church has little influence over Palestine.'

'I think you may be wrong there,' Ben Eleizer said. 'The united Christian Church, if not directly involved with Israel, is certainly involved with the Russians.'

'The Vatican diplomatically kisses the hand of the Russians, but that hardly has any bearing on their claim that the Mahdi is Jesus Christ.'

'On the contrary, Rashid, we have reason to believe that the two are

intimately connected.'

'Your reasons, Ben Eleizer, if I may say so, are probably all in your head.'

At this point, Moshe pulled his chair closer to the table and glanced down at the papers spread out between his large hands. He scanned them quickly and then looked up again.

'Before you speak, major-general,' Rashid said with a flickering smile, 'please let me congratulate you on your recent marriage. I hope it brings you joy.'

It was the first sign of humour that Rashid had shown, and Moshe, obviously still wary, responded with a hesitant grin.

'Thank you,' he said. 'I, too, hope it brings me joy. I appreciate your interest in my personal affairs and accept it with gratitude.'

The mockery was gentle, but not without its point, and Rashid, clearly accepting it in good spirit, smiled again and shrugged slightly.

'So,' he said, 'let me hear about the Vatican and how it relates to Palestine.'

'Let me give you some background details,' Moshe said, looking down at his papers. 'The Pope, a Pole, is only the second non-Italian Pope in four and a half centuries, and as such has a particular interest in his own country and Eastern Europe in general. It's now clear that he was elected to the papacy as a sign that the Church was reasserting Eastern Europe's place in the religions of the West and, by implication, condemning Soviet influence in Eastern Europe. However, in doing this, as the Pope well knew, the Church was deliberately confronting the Soviets with the unenviable choice of either surrendering its influence to that of the Church or embarking on the task of eroding the Church completely in Eastern Europe. In short, it was a very specific conflict, engineered by the Vatican.'

'Those facts are hardly secret,' Rashid said.

'Wait,' Moshe said. 'I'm not finished yet… Prior to the appearance of the man known as Joshua, this conflict had been coming to a head, with the Pope finding himself under increasing pressure from the Soviets to pull in his horns and remove the Church from the political arena lest the Soviets reassert their authority by intensifying religious suppression - and possibly crushing the influence of the Church, once and for all - throughout Eastern Europe. However, with the advent of Joshua - and the widespread Christian belief in

him as the resurrected Jesus Christ - the Pope's dilemma has become even more acute.'

'This has no relevance to Palestine,' Rashid insisted.

'You surely must know of the increasing religious anarchy in Europe,' Ben Eleizer said. 'Many of the most bizarre and dangerous religious cults have adopted Joshua as their leader; there have been violent demonstrations by Jews, Moslems and Christians in every European capital; and along with the mass conversions, many based on hysteria, there's been a public outcry against the silence of religious leaders, to the extent that the Vatican had to call in riot troops to St. Peter's Square in Rome.'

'I still don't see the relevance,' Rashid said.

'It has relevance,' Moshe told him. 'The growing religious anarchy in Europe has been caused, in most instances, by the widespread Christian belief that Joshua is the Christ and that the Church has refused to either support or deny this view. The Church, however, has a problem: it knows that a denial of Joshua as the Christ will simply lead to hysterical outrage, more religious anarchy, and a widespread rejection of the Church itself - a situation disastrous for the Church and beneficial to the Soviets. If, on the other hand, the Church formally supports Joshua as the Christ, the Soviets will be convinced that it's doing so merely to reinforce Christianity and strengthen its own bargaining position - and that would almost certainly lead to Soviet suppression of the Church throughout Eastern Europe. That dilemma, seemingly insoluble, is what's caused the Vatican and the World Council of Churches to remain silent about Joshua for so long.'

'A silence that was broken yesterday,' Rashid said.

'Correct.' Moshe nodded. 'As the Prime Minister said, yesterday the Roman Catholic and Protestant churches were formally united as the one, so-called Christian Church - and together proclaimed the Second Coming of Christ.'

'United, they become twice as powerful.'

'That, also, is correct.' When Moshe flicked his eyes toward Jozsef, the latter felt himself blushing, unnerved by the recent events and his own confused thoughts on the matter. 'The Chief Rabbi,' Moshe continued, 'has just returned from a trip to Rome, and I think he should fill us in here.'

Jozsef leaned closer to the table, gazing at Rashid with some reluctance, scarcely able to formulate the words that now had to be uttered. He thought

of his trip to Europe, of what he had witnessed there, and the ice of an insidious, relentless fear filled the blood in his veins. Joshua's influence was contagious, causing exultation and dread, driving some to religion, driving others to madness, giving rise to joy and guilt and bewilderment, cementing beliefs or blowing them apart, leaving few unchanged. The Son of God to some, the devil to others, he had, just by being, drawn out of the mass subconscious all the passions, both noble and homicidal, that were normally suppressed. In England there had been thousands of suicides, the formerly empty churches were now packed, orthodox religions and occult sects were flourishing side by side, and on hills and in valleys, by day and by night, thousands were waiting for the coming of Joshua's fellow extraterrestrials or, in equally fearful surrender, for the fire and brimstone of Judgement Day. It was the same all over Europe, and not much better in Rome, where, west of the Tiber, behind the walls of Vatican City, beneath the statues of the saints atop the balustrade of St. Peter's Square, the worshippers had turned into rioters at war with the police. Jozsef thought of it with woe and a great deal of moral confusion, having to accept that his very own Rabbinate had been equally silent about Joshua.

'There were various reasons for the Vatican's compromise,' he said, 'and compromise, unfortunately, it has to be termed.' He found himself glancing at Moshe and Ben Eleizer, as if seeking their approval. 'As Moshe has already explained,' he continued, 'the Pope's main consideration was his fear of possible Soviet oppression in Eastern Europe. On the one hand fearful of outraging his congregation by denying that Joshua was the Christ, he was, on the other, equally concerned that the Church could not, if it supported Joshua, stand alone against the full onslaught of Soviet oppression. Torn between these two equally dire possibilities, the Pope simply could not decide what to do, and therefore continued his official silence. Alas, with the pressure increasing - from the outrage of his own Catholics on the one side and, on the other, the Soviet insistence that he take no formal stand on the matter - he succumbed, with the encouragement of the World Council of Churches, to the Christian church's ancient fear of the Jews.'

Jozsef closed his eyes for a moment, feeling weary and sick at heart, understanding that even though he was Jewish, he was not without sin. The Rabbinate, like the members of the Holy See in Rome, had made its own dubious compromises.

‘For its entire history,’ he continued, opening his eyes again, ‘the Church has worked for the conversion of the Jews. Indeed, in its Good Friday liturgy, the Roman Catholic Church made a special point of praying for the so-called perfidious Jews - *pro perfidis Judeis*: “That our God and Lord will remove the veil from their hearts, so that they, too, may acknowledge our Lord Jesus Christ…” This was the only passage during which the faithful did not kneel - though they knelt when they prayed for heretics, schismatics and pagans. This passage was altered by Pope John XXIII, but the sentiment remains - and for the Christians, unfortunately, the Second Coming of Christ is closely connected with the expected conversion of the Jews. How ironic, then, that the supposed Second Coming of their Christ should have taken place on the Jewish soil of the Holy Land.’

‘On *Palestinian* soil,’ Rashid said firmly.

Jozsef heard the remark clearly and, strangely, felt embarrassed, as if he had been caught in the act of stealing, his hand still in the till. Startled, confused, suddenly doubting his Zionist principles, he found that he could not look at Rashid and, instead, lowered his gaze to the table.

‘A mortal man,’ he continued, ‘with mortal man’s weaknesses, the Pope unfortunately surrendered to his church’s fear of the Jews; in this case the fear of what might happen to Christianity should the Jews of Israel - where Joshua had, of course, been discovered - manage to convince the Christian world that Joshua was not the Son of the Almighty, but His messenger as heralded in Judaism - fearful, in fact, of mass conversion and the threat of a dominant World Jewry.’

‘What about Islam?’ Rashid asked.

‘I don’t think they considered it.’

He raised his eyes to Rashid, sympathising with his anger, aware that he was thinking of all white men’s religions as being riddled with racist superiority and arrogant self-righteousness. Then, unable to brave Rashid’s gaze, he lowered his eyes to the table once more.

‘It *is* possible,’ he continued, ‘that had it not been for this old fear, the Pope might have maintained his official silence. Alas, this fear, combined with his fear of ostracising his congregation, drove him closer - irrespective of his own views, which remain ambiguous - to an official recognition of Joshua as the Christ of the Christians.’

‘Which would, in turn, have antagonised the Soviets,’ Rashid said, ‘and

led to the suppression of his own beloved Eastern Europe.'

'Correct,' Jozsef replied. 'Fearful for the religious freedom of Eastern Europe, but more frightened of ostracising the majority of his flock, he decided that he would have to risk the wrath of the Soviets, but desperately searched for a means of discouraging them from their intended acts of religious suppression. A possible solution was then suggested by the representatives of the World Council of Churches - who were, of course, equally anxious about the threat of mass conversion to Judaism and wished to strengthen the whole Christian world. So it was that in a secret meeting between the representatives of the Holy See and the World Council of Churches, the decision was taken to unify the Roman Catholic and Protestant churches, using the Second Coming of Christ as the reason for so doing, irrespective of what a proper theological interrogation of Joshua might reveal. The point was to unite both churches into the one, more powerful Christian Church, which would, at least in theory, frighten the Soviets into keeping their hands off Eastern Europe.'

Jozsef sighed and sat back, feeling obliquely defeated, unable to feel morally superior to the Christian delegates, no matter how obviously shameful their recent actions. His Rabbinate, after all, in a similar surrender to political expediency, had retained an equally shameful silence on matters pertaining to Joshua.

'So,' Rashid said, 'it might work and it might not - but either way, at least from where I sit, it has little bearing on Palestine.'

'Unfortunately,' Moshe responded, speaking quietly and calmly, 'our Intelligence reports indicate that the plan is already back-firing. Initial indications are that the Pope's speech has aroused the wrath of those Christians who do not believe in Joshua as the resurrected Christ, encouraged the lunatic fringe in their view of Joshua as the first of an imminent invasion by extraterrestrials or Satan come to inaugurate the Age of Darkness; and, more importantly, has *not* scared off the Soviets, but has, on the contrary, made them even more anxious to suppress the Church completely in Eastern Europe. Their intentions have been conveyed to the Vatican, and it seems that nothing will stop them.'

'Never bend over in front of a goat,' Rashid said. 'And the Soviet mind is a goat's mind.' He smiled at his own joke, but the smile contained steel, convincing Jozsef that he would not be persuaded easily to work against his

own interests. ‘So,’ he continued, raising his hands in mock bewilderment. ‘The Soviets are about to suppress the Church in Eastern Europe… How does this affect Palestine?’

Ben Eleizer had been sitting quietly with his chin resting on his folded hands, his elbows propped up on the table; now he waved his hands and shrugged his shoulders in a rabbinical gesture, his round face deceptively innocent.

‘The Soviets are in Syria and Jordan,’ he said, ‘so surely any move they make should be of concern to you.’

‘I am not concerned with their movements in Christian Europe.’

‘Well,’ Ben Eleizer said, ‘*we* are. The Americans will almost certainly view the suppression of the Christian Church in Eastern Europe as a flagrant act of aggression, a warning to the Christian world - which of course includes America - that the Soviets will not be intimidated by Joshua, the supposed Son of the Almighty. This might, in turn, encourage the Americans to set their own example by taking so-called preventative military actions in the Middle East, naturally using Israel and the United Arab Republic as their playground. In short, they might conceivably move their troops back into Israel to protect it from any possible Soviet religious suppression of the kind so brutally demonstrated in Eastern Europe - as the Americans will, after the Soviets have obliterated the Church, diplomatically phrase it.’

Jozsef looked thoughtfully at Rashid, intrigued by his face, which was, paradoxically, poetically delicate and hard with intelligent pragmatism. His gaze moved repeatedly from left and right, from Ben Eleizer to Moshe, but eventually settled on Moshe, whose rugged face revealed little. Now married to Kate, Moshe had changed and was less remote, but in political or military matters he remained, as Jozsef had noted, reserved and difficult to analyse. Now he was staring directly at Rashid, his grey gaze veiled.

‘What exactly do you want from me?’ Rashid asked.

‘If the Americans are given an excuse for moving back into Israel, it’s unlikely that we’ll get them out again. Should that happen, all of us will lose, Jew and Moslem alike.’

‘If the Americans use potential Soviet aggression as an excuse for moving back into Palestine, we Arabs could do little to prevent it. We’re not in a position, Moshe, to take action against the Americans or the Russians.’

‘You miss the point, Rashid: we don’t want it to get that far. The religious

suppression of Eastern Europe will scare the Americans into action, but it won't, politically speaking, be an acceptable *reason* for such action. No, our Intelligence indicates that the Americans are already viewing the Soviet intentions with alarm, but are themselves intending to use the resurgence of violence between Arabs and Jews as their excuse for moving strategically back into Israel. Once that happens, both the Jews and the Arabs will lose control of their own fate.'

'You want me to form an unofficial alliance with the Jews, and stop my Arabs from further acts of violence?'

'Precisely.'

'But your own zealots are responsible for that violence.'

'I don't think that's wholly true,' Jozsef put in. 'The Moslems are fighting because Joshua is here and they believe he's their Mahdi. They're fighting to win Jerusalem back and ordain the sovereignty of Islam.'

'The majority of Arabs, Chief Rabbi, were willing to stop fighting on the condition that they be granted access to their Mahdi. However, your own zealots have made it perfectly clear that they think of the Mahdi as their Messiah, that the sovereignty of Judaism must now be implemented, and that they intend throwing the present government out of the Knesset and forming an ecclesiastical Cabinet with their own, flagrantly Arab-hating members. As they have also made clear, they intend, once they are in power, to inaugurate the Zionist State and remove all non-Jews from Palestine. Such ambitions would be acceptable from a few harmless zealots, but now they are being supported by some of your most influential politicians and military leaders, and that means that they could possibly succeed in doing just what they want. My fighting Arabs are very much aware of this - and of what it could mean to them.'

'I think you exaggerate the situation, Rashid.'

'It cannot be an exaggeration when one of the strongest supporters of the zealots, namely Lieutenant Paul Frankel, is not only a leading member of Shin Bet, but the man formally placed in charge of our Mahdi.'

'I insist,' Jozsef said, refusing to dwell on Paul Frankel, 'that there are no grounds for calling Joshua the Mahdi.'

'Yet your Jews call him their Messiah.'

'The Rabbinate has not supported that claim.'

'Nor has it denied it.'

Jozsef felt trapped by that statement, knowing full well that he had no defence and suffering a harsh, shameful guilt. He was the acting Chief Rabbi, a leading member of the Rabbinate, and he had tolerated, in timidity and humiliation, his Rabbinate's cowardly silence. There was a valid reason for it - human doubt and fear of error - but behind that, inexcusably, was the ignoble wedding of religion to politics, that sordid bed in which moral judgements were clouded and values subtly changed. Joshua's discovery in Israel had drawn the veils from that bed, forcing Jozsef, and others in his position, to examine themselves. Mortal men, indeed, with mortal men's weaknesses; and he now knew that religion, which gave men moral guidelines, could itself form the slippery path into the sin of dishonesty.

'You have no answer, Chief Rabbi?'

'Yes, Rashid, I have. We abdicated our responsibilities in order to protect our faith, and neither Joshua nor what men tried to make of him can excuse what we did.'

He felt better for having said it, no less guilty but less ashamed, relieved to have unburdened himself of self-deceit and cleared the way for forgiveness. He would pray for the Lord's guidance and strength and then let events take their course. Like Joshua, he would listen and observe, and hope to find revelation.

'Well, Rashid,' Moshe said, 'we're still waiting for your answer. Are you willing to co-operate with us to keep the Americans out?'

'Joshua is the Mahdi.'

'You're welcome to that belief.'

'I wish to see the Mahdi, to speak with him, and I'll let his words guide me.'

'He won't advise you, Rashid. He won't confirm that he's your Mahdi. He doesn't know who he is or where he came from - and he never takes sides.'

'The true saint rarely recognises himself, nor takes credit for being one of the blessed; so if the Mahdi, in his humility, says little, I will know what he means.'

Catching his passing glance, the mosque challenging the synagogue, Jozsef decided to modestly turn his gaze away and discuss the matter no further. He looked at Moshe and Ben Eleizer, the former thoughtful, the latter acting bland; and saw them staring at one another, communicating even in

silence, before Moshe shrugged and turned back to Rashid, a slight smile on his lips.

'Alright,' he said. 'We have Joshua waiting outside this room. We'll bring him in and than you can decide.'

He picked up his phone and spoke to the guard outside the room, then put the phone down and sat back, his hands flat on the table. The brief silence was deceptive, seeming longer than it actually was, and Jozsef glanced down at the floor between his feet, feeling tense and unreal. He thought of Joshua, one man, his presence on Earth dividing the world, and realised that the fate of whole nations could hinge on his utterance. Joshua was passive, letting events take shape around him, and his innocence, or ignorance, was the living blank slate upon which the world's future was being written. He did not know who he was, nor where he had come from, but he had, simply by being, forced the world to reap the whirlwind, and the future, still obscured in the winds of chance, had yet to reveal itself.

The door was pushed open and Joshua walked in, his long hair, ascetic face and white robes making him look like a biblical prophet. The guard closed the door behind him as he walked up to the table, stopping when Rashid climbed to his feet and stepped forward to greet him. He studied Rashid for some time, his silvery-grey eyes hardly moving at all and yet strangely appealing. Rashid seemed to be hypnotised, then he suddenly turned away, glanced at Moshe and Ben Eleizer and Jozsef in turn; then, his brown eyes bright with either panic or exultation, he looked again at Joshua and licked his lips, his spine straight, his hands shaking.

'You wished to see me?' Joshua asked, his voice level, almost gentle, reaching out to caress and soothe Rashid, understanding his tension.

'Yes,' Rashid replied. 'I've been haunted by your presence. It's said that you're the hidden Imam, the Mahdi, and I wish to confirm this.'

'I can neither confirm nor deny it.'

'You're the Mahdi. I can see it.'

'We see only what we want to see, which for most is enough.'

'You do not know who you are or why you are here?'

'I am that I am - this I know. No more and no less.'

'Do you know what these men want of me?'

'They do not know themselves. They speak out of the fear of the moment, seeing little beyond it.'

‘Palestine is the centre of the world and the whole world now wants it. Who shall have Palestine?’

‘The East and the West are God’s; therefore, whichever way you turn, there is the face of God. There is no piety in turning your face towards the East or the West; but he is pious who believes in God, the scriptures, and the Last Day. Bear only this in mind: no one is a believer until he loves for his brother what he loves for himself; do not be envious of each other, and do not outbid each other, and do not hate each other; do not oppose each other and do not undersell each other. The dominion of the heavens and of the Earth is God’s; and you have neither patron nor helper, save God.’

Rashid clearly recognised the words, and in his exultation was terror: the knowledge that the answer he had been given had left a question mark over him. He licked his lips and glanced about him, knowing that help would not be offered, that Joshua, or the Mahdi, had left him with nothing but faith. Jozsef watched him, sympathising, understanding what he was feeling: he was being challenged to accept the will of God and let events take their course. No bartering, no intrigue, no hatred, no opposing; no dependence upon aid or patronage, whether political or spiritual; no looking East or West, neither to the Soviets nor to the Americans - only love for his fellowman and trust in God, who alone had dominion. Truth or untruth, belief or unbelief: Israel, the land Rashid knew as Palestine, would stand or fall by his faith.

Jozsef leaned closer to the table, his every thought focused on Rashid, his whole being flowing out to the space into which Rashid’s words would fall. Rashid and Joshua were face to face, very close, neither moving, and the silence, like a song in a deaf man’s ears, seemed to quiver and breathe. Rashid took a step back, turned his head and stared at Jozsef, let his gaze roam to Moshe and Ben Eleizer, then back to Joshua. He stared at Joshua for some time, his eyes bright and intense, and then shivered, as if casting off a ghost, and sank to his knees, his head bowed before Joshua.

‘In you I have faith,’ he said. ‘For me you are the Mahdi. I do not need confirmation or proof; in my faith, I believe it. I will not look East or West, nor harbour envy or hatred, but will love for my brother what he loves for himself, and will await the final judgement of our Lord. Upon this I swear, and by this I stand: as long as you are safe, as long as you freely walk the land of Palestine, I will not take up arms against my brothers nor incite them to war.’

He reached out for Joshua's hand, drew it to him and kissed it, then stood up and silently crossed the room, opened the door and walked out. Ben Eleizer raised his eyebrows, displaying his disbelief, as Moshe sighed and sank wearily into his chair, clearly relieved. Then Jozsef looked at Joshua, drawn inexorably to him, and saw, instead of the silvery-grey eyes, the shadowed hint of a smile.

A Mona Lisa smile. Ambiguity and mystery. Whether a smile or a grimace of despair, it chilled Jozsef to the bone.

34

Kate drove up the Mount of Olives to the Intercontinental Hotel and parked near the small amphitheatre overlooking Jerusalem. It was daylight, very bright, the domes and minarets gleaming in gold and silver, and she sat for some time in the car, her gaze fixed on the Old City. Staring at it, she hardly saw it, her thoughts imprisoned by her flesh, by the life that was growing within her and making her whole. She desperately wanted the child, for herself and for Moshe, yet even as she thought of this with joy, she also felt uneasy. She thought of when she had last been here - when she had last made love to Leon, when the unnatural storm had materialised, when the black obelisk had emerged from the ruins of the chapel, when she had first met Moshe and then found the robed Joshua in the blackness that defied definition and made the heart leap - and, in remembering, she felt even more uneasy, wondering why she had agreed to see Leon even against Moshe's wishes.

She climbed out of the car, locked the door and breathed deeply, then looked at the modern hotel above the sloping green gardens. The sky was a radiant blue, sending down a fierce heat, yet she shivered at the touch of the breeze, as if totally naked. There were tourists in the amphitheatre, taking photographs of Jerusalem, and their voices drove her forward, past the parked, dusty taxis, to the steps that led up through the gardens and into the hotel.

She wished that Leon hadn't phoned her, was glad that he had, felt confused, recalling the eagerness and trepidation with which he had taken her call; and, with more clarity, Moshe's anger when she had told him where she was going. His anger had not surprised her, but the violence of it had, and now, with her love for him rippling through the body, she wondered if she was doing the right thing in paying Leon this visit.

The hotel lobby was deserted, the restaurant still and silent, and she

thought of all the drinks she had shared with Leon beneath those large windows. Memory was a curse, nostalgia a seductive trap, and as she walked up the stairs, acutely aware of her extra weight, she wondered if Leon had deliberately picked this place to make her feel more defenceless. The hotel was air-conditioned, drying her sweat, reducing tension, but when she stopped at the door of Leon's room, she was already exhausted.

She stood there for some time, wanting to see him, wanting to leave, trying to work out just why she had come here and what she expected. There was no point in denying it: she had felt deeply for him - not love, but certainly something close to it: sexual attraction, camaraderie, simple warmth, a good-humoured affection. Love? Not really. Love's full commitment had been lacking. Her love flowed like a river to Moshe and did not suffer doubt. So why had she come? Perhaps the letter from Damascus: that atypical, if mildly sardonic cry of pain and unexpected bewilderment. The letter had moved her deeply, making her cast off his betrayal, goading her gently into the shallows of a helpless, slightly protective concern. She owed him something - a hand to hold in his despair - but as she stood there at the door, her hand raised, her fists clenched, she could only think of how Moshe had looked when she walked out of the house.

Taking a deep breath, she knocked on Leon's door, first lightly, then harder, and the sound seemed too loud in the silence of the long, deserted corridor. She did not wait for long - he had obviously been expecting her - but even as the door opened and Leon's face swam into view, she recalled with gratitude how Moshe had relented - not easily, but attempting to understand, stifling his anger and hurt. Her love, flowing endlessly like a river, went to him for that.

Leon now stood in front of her, unshaven, grinning crookedly, his hair dishevelled and his clothes badly wrinkled, the room behind him too dark. She was shocked by his appearance, the one thing she hadn't expected, but when he lowered his head and raised his eyes to her, his grin seemed more familiar.

'You came,' he said, slurring. '*Wunderbar*!'

'You're drunk already,' she replied.

'I'm seeing the world through rose-coloured glasses. It's more bearable that way.'

He stepped aside to let her in, bowing slightly, mockingly, his left hand

on the door, a large glass of whisky in his right fist. She stepped past him too quickly, her shoulder brushing his bowed head, and immediately smelt the staleness of a room that had not had much fresh air. The windows were shuttered and most of the room was in semi-darkness, illuminated only with a small bedside lamp that covered the unmade bed in yellow light. Leon's clothes and a lot of magazines and newspapers were strewn all over the place.

'You haven't been looking after yourself,' she said. 'This place is a mess.'

'No,' he said, closing the door, his voice coming from behind her. 'I decided to dispense with the chambermaid, but it's not working out.'

She sat at the table, just beneath the shuttered windows, and glanced up as Leon crossed to her, the ghost of his former self. He moved out of the semi-darkness and into the pale yellow light, which made him look drawn and ill, emphasising his frailty.

'You haven't been eating,' Kate said, feeling claustrophobic and nervous.

'When not drinking whisky, I drink brandy, which I'm told contains vitamins.' He stopped in front of her, grinning crookedly, looking older than his age, then nodded at the bottles on the table, his eyes bloodshot and sleepy. 'Can I offer the lady a drink? Or is it too early for that?'

'It's too early, Leon.'

'A coffee?'

'No, thanks.'

'You're a woman of strong moral fibre, which I hope Moshe appreciates.' He put the glass to his lips, gulping the whisky down as if it was water, then wiped his lips with the back of his free hand and sat on the edge of the bed. His eyes, in the pale, yellow light were bloodshot and baggy. 'So what's it like, my little pacifist,' he said, 'being married to the new Minister of Defence?'

'It's fine,' Kate said, not amused by his mockery. 'But I don't think we should talk about that right now.'

'Why not?'

'It's my private life.'

'That sounds terribly prim and proper.'

'I didn't come here to listen to your sarcasm.'

'Why *did* you come, Kate?'

She closed her eyes and lowered her head, recalling the phone call he had made, the unusual intensity in his voice when he asked her to visit him. Now,

she was angry, feeling as if she had been violated and that his question, offered with quiet deliberation, was intended to hurt her. She opened her eyes and stared directly at him, wondering what he was after.

'I came because you asked me to come,' she said, 'and you sounded quite desperate.'

'I was drunk.'

'That's true… but you insisted that you had to see me. In fact, you said it was really important. So, here I am.'

Leon had another drink, lowered his glass and grinned at her, his thin lips curving slowly and uncertainly towards the humour of bitterness.

'Did you tell Moshe you were coming here?'

'Yes, Leon, naturally.'

'And how did the Minister of Defence react to that?'

'He didn't forbid me to come.'

'That was decent of him.'

'Yes, Leon, it was.'

'I can tell that this conversation is making you angry, but I didn't intend that.'

'I'm not amused by your sarcasm.'

'I'm not amused that you married Moshe.'

'I wanted him, I married him, now I'm pregnant - and I don't regret anything.'

The shock made him visibly flinch, as if he had been whipped, and he glanced aimlessly around the untidy room to avoid looking at her. He was not the Leon she knew, but someone else, a haunted man; and the room, in its squalor and semi-darkness, reflected the change in him. Kate smelt the stale air, saw the shadows in the corners, and had the urge to get up and open the windows to let light and air in.

'I'm surprised they let you back into Israel.'

'So am I,' he replied. 'Nonetheless, I was simply waved through, so I must be forgiven.' He managed to look at her again, but his eyes were not pretty, bloodshot and terribly weary, deep shadows beneath them. 'You should know,' he said. 'You're married to Moshe. Did he mention my name?'

'No, Leon, he didn't. He didn't say anything about it. He didn't even know you'd returned, so he wasn't involved with it. More likely Shin Bet was

responsible.'

'Internal security,' Leon murmured. 'Of course, it would have to be them. They must want a talk with me.'

'I doubt it,' Kate said. 'I think they're just not concerned. You're a journalist and you were doing your job, so I don't think they'll touch you.' She glanced at the magazines and newspapers strewn haphazardly around the room, at the clothes draped over the furniture and thrown carelessly onto the floor, at the empty bottles and overflowing ashtrays. 'You used to be a tidy man,' she said. 'Why are you living like this?'

He shrugged with weary indifference, had a drink and licked his lips, lowered his head and stared at the floor, his shoulders slumped in defeat.

'Why not?' he said. 'The point is simply to pass the day. I have very few friends, none at all in Jerusalem, so I drink, occasionally eat, sleep a lot, usually alone, and spend hours studying the walls of this room in which we once made grand love.'

'Studying the walls won't bring it back. You won't solve anything that way. The only thing you're going to find in a bottle of whisky is the cork of another.'

'You always *were* sharp with your tongue, Kate.'

'You don't do too badly yourself.'

'And now, alas, my tongue has been lathered by too many whiskeys.'

'You said it.'

'I did.'

'You could pull yourself out of it. It's not pleasant seeing you like this, and I can no longer help you.'

'No, you're a married woman.'

'Yes, Leon, that's right. I still feel a great deal of concern for you, but it stretches no farther than that. I came here to see you – because I still happen to care for you – but I also came to find out what you wanted, and you still haven't told me.'

'Don't rush me, Kate. Please.'

'I'm trying to keep you awake.'

'I'm awake. I'm simply dead on my feet… my new full-time condition.'

Kate felt herself breaking, her defences washed away, pouring out on the tide of a compassion that sprang from old memories. She had truly cared for Leon - not with love, but with deep affection - and now, hearing his words,

seeing the frailty of his pose, she understood that her concern, now almost painfully resurrected, was based on the emotions they had shared and could never forget. She was not betraying Moshe, nor holding on to Leon's love, but recognising what could not be denied and affirming her genuine concern over what he was suffering.

'I received your letter,' she said.

'I vaguely remember writing it.'

'It was an eloquent letter, very passionate, filled with wonder and despair.'

'Really?'

'You remember, Leon. Don't pretend that you've forgotten. The Arabs filled you with wonder, with the enchantment of their conviction, but you ended on a note of despair over what you had lost.'

'I lost you.'

'You didn't mean that. Perhaps that, also, but certainly not that alone. More important than me, more destructive than your feelings for me, was the revelation that your lack of commitment had left you nothing to cling to. You envied the Arabs, Leon: their code of truth or untruth, their passionate belief in black and white, their refusal to recognise any grey area between, any emotion that left them in doubt or without the will to take action. Yes, Leon, you envied them, and felt smaller in their presence, convinced that in abdicating from commitment you had lost every value. All of that was in your letter – in the lines, not between them – it was there with the shame and the guilt that brought you back to this room.'

'I loved you and lost you, Kate. It was no more than that. I was filled with self-pity, perhaps feeling humiliated, and swept along in the extraordinary fervour of the *Hajj*, with the chanting and the singing and those thousands massed together, I naturally became somewhat melodramatic and put my hot pen to paper.'

'Are you denying what you wrote?'

'I might as well have been drunk.'

'Drunk, you couldn't have written as you did - and damned well you know it.'

'Please, Kate, this is painful.'

'You're inflicting the pain on yourself. You had the sense to recognise your own weakness, and now you're denying it.'

Leon sighed and stood up, haunted in the baleful light, went to the table and refilled his glass and instantly had a long drink. He sighed again and licked his lips, scratched his chest with his free hand, then walked over to the bed and just stood there, his back turned towards her.

'My weakness?' he said. 'My lack of commitment? What has commitment ever brought anyone except disillusionment? Politics, religion, art and romantic love: all these things, constantly changing, are as ephemeral as a burning candle. All men dream of tomorrow - the tomorrow that never comes - and from dreaming comes scheming, all the plans and ambitions, the pitiful belief in a future much improved on the present. How else could we survive it? Life's repeated deceits. And how else could we suffer our children and the crime of their birth? To be born is to be convicted, doomed to pain and certain death, and no belief or commitment of any kind can help us forget that. No, Kate, I don't believe - not in Joshua and not in Judgement Day - and so, lacking any belief, I can feel no commitment.'

'You're lying to yourself, Leon, trying to bury your true feelings. You committed yourself to me - let's say it: to love - and now, having lost me, you're trying to convince yourself that it never happened. It won't work, Leon. You can't live with that sort of lie. The fact that there may be no tomorrow has nothing to do with it. Don't use your children, Leon. Don't use disillusionment. We're born, and being born we must make choices, one way or the other. You made at least one choice - right or wrong, you chose me - and now, having lost me, you're reneging on even that small commitment. That's always been your problem: you could never accept loss or failure. It's not that you don't believe in anything, but that you can't stand to lose it.'

'I refuse to accept that.'

'You refuse to accept the truth.'

'The truth is what gets you through the night.'

'Is the truth in that whisky?'

The remark made him flinch again, but he didn't turn around to face her; instead remaining where he was near the bed, his back still turned to her. He was silent for a long time, breathing deeply and harshly, and when finally he spoke his voice was filled with self-lacerating bitterness.

'Yes, you're right,' he said. 'That's why I betrayed your trust. I couldn't stand the thought of losing you, I was angry more than hurt, and like a child smashing his toys in frustration, I betrayed you to punish you. You didn't

deserve that, and I don't feel proud of it, even less when I examine what I felt for you and come up with the truth. The truth is that I lied - to myself more than to you - and that my love for you, though based on genuine affection, was at heart the cowardly hope that in committing myself to you, I might be able to pretend that I did at least have one thing to believe in. That isn't real love - it's self-deception and the abuse of love - and so, understanding that, having to finally face up to it, realising that I couldn't even honestly commit myself to you, I had to accept that I was incapable of truly giving myself to anything, that I couldn't take a stand on any issue or trust my own feelings. No, Kate, I didn't love you - not as much as I pretended - and that fact in itself is an eloquent testimony to the self-deceptive cowardice of my nature. I was using you to hide from my sins, and that can't be called love.'

'It's love of a kind, Leon.'

'It's a halfway kind of love. A love that only goes so far, stopping short of commitment.'

'Is that why you left your wife and children?'

'Yes, I think so. At the time I laid the blame on political disillusionment, but in truth what I was hiding was the knowledge that I just didn't care enough.'

'Why don't you go back to them?'

'It was years ago, Kate. Even if I cared, if I now felt for them, it would be too late for that. In the event, such a gesture would be pointless since I still can't feel anything.'

He finally turned around to face her, grinning bleakly, without cynicism, then sighed and sat on the edge of the bed, his gaze fixed on the floor. Kate wanted to help, to touch him and reassure him, but she sensed that he had gone beyond that and had to find his own way back. Studying him, she thought him frail, the mere ghost of his former self, his skin sickly and his body undernourished, shoulders slumped in defeat. The glass of whisky, almost empty, reflected light from the web of his fingers.

'When did you leave Damascus?' she asked him, changing the subject.

'About six weeks ago.'

'You mean you've been in this hotel for the past six weeks?'

'No, Kate, I've only been here a week. I spent five weeks in Europe. I was writing about the riots and hysterical conversions, about the ritualistic murders by the new devil worshippers, about the thousands at Stonehenge

and other mystic sites who stand, in the silence of the night, and gaze up at the stars. Joshua is Jesus Christ. He's also the devil. He's also an extraterrestrial whose presence here on Earth is a sign that the Super Race is coming to either protect us or enslave us. The Europe I knew has gone and won't ever return, all its values, its culture and history, made redundant by Joshua. Every religious organisation and cult, good and evil, is flourishing; people are refusing to go to work and instead are demonstrating in the streets, chanting their demands to see Joshua the Christ; industry and commerce are grinding to a halt in the face of the new anti-materialist ethos; and the great new Christian Church, in the fifth week of its life, is under pressure from every government in Europe to do something about it.'

'Their plan back-fired,' Kate said, 'and then blew up in their faces. They united the churches and hailed Joshua as Jesus Christ to broaden the base of Christianity and protect the religious freedom of Eastern Europe. Unfortunately, in their panic, they forgot to consider the possible effects, both personal and public, on society in general. Now Western Europe is breaking down, the Church is being held responsible, and ironically, considering why all this came about, the Soviets have still made no move against Eastern Europe.'

'*Why* have the Soviets made no move, Kate? Have you thought about that?'

He raised his eyes to stare at her, not grinning, his gaze steady, the pale yellow light falling across him and shadowing his face. He was obviously very serious, very concerned, and that made her feel nervous.

'No,' she said, 'I hadn't thought about it. Why? Have you heard something new?'

He nodded, stood up and walked across to the window, raised his hand as if about to open the shutters, changed his mind, dropped his hand. He stood there, looking down at the table, swirling the drink in his glass.

'I owe you one,' he said. 'In my anger, I betrayed your trust. If I believe in nothing else, I believe in personal trust, so perhaps, in giving you this, I'll make amends, both to you and to Moshe. I could not, in all honesty, and with the best will in the world, give the information personally to your husband. So I'm going to tell you what I learned, whether or not it's helpful.'

He glanced at her, showing a pained, tentative longing, then stared down at the table again, speaking quietly and evenly.

‘I learned this from a disillusioned Vatican source,’ he said, ‘and knowing him well, I can guarantee that he speaks the truth. The Soviets have made no move because the Pope has agreed to a new deal that will get him off the hot seat and hopefully solve his mounting problems. Appalled by the unexpected results of his machinations with the World Council of Churches - including his confirmation of Joshua as the Christian Christ - and torn between his desire to preserve the moral fabric of Western Europe and his desire to save his beloved Eastern Europe from the threatened Soviet suppression, the Pope was left with no alternative but to offer the Soviets, unofficially and secretly, his second and most shameful compromise.’

Kate leaned forward, placed her elbows on the table and covered her face with her hands. She stared down through her fingers, seeing nothing, concentrating on Leon’s words.

‘Shortly after the unification of the two great Churches and their proclaiming of Joshua as their Christ, the Soviets made it clear to the Vatican that they would not be intimidated and that they intended, within a fortnight, to proceed with their plans for the obliteration of the Christian Church in Eastern Europe. The Pope was given two weeks grace to enable him to either dissolve the unification of the Catholic and Protestant Churches or to come up with some suitable alternative. The Soviets, further, made it clear that they were more concerned with the Church’s official acceptance of Joshua as Christ - with its far-reaching implications - than they were about the unification of the two Churches. Knowing this, and aware that the unification of the Churches could not be amended, the Pope had no choice but to accept from the Soviets their own, highly diabolical proposal: Joshua will be brought to Rome, interrogated by the Sacred College of Cardinals, and then, irrespective of their individual assessments, be proclaimed publicly as a false Messiah and not the Son of God as formerly announced.’

‘I don’t believe it,’ Kate murmured.

‘Believe it,’ Leon said.

‘If he does that,’ Kate said, ‘a lot of Christians will be even more outraged.’

‘That, Kate, is true, but it’s a choice between two evils, and in this case, no matter how high the price, the gains will outweigh the losses. The Vatican needs the political and fiscal support of Western Europe, but that support is already being withdrawn because of the chaos caused by its recent actions;

therefore, in renouncing Joshua, the Vatican will not only please the Soviets, but will also, by disillusioning a population seduced by Joshua, encourage the return of the materialistic ethos and the gratitude of the politicians and businessmen throughout Western Europe. Church attendance will fall again, and a lot of the converted will renounce their faith, but the Church will still stand, its public principles intact, and Eastern Europe will be saved from the boot heels of Soviet oppression.'

Kate didn't want to believe it, but she knew it must be true, and she felt a faint nausea and dread spreading out deep inside her. She looked up and saw Leon staring at her, his face drawn and solemn.

'So,' she said, 'they not only save themselves, but also wash their hands of what happens in the Middle East: in renouncing Joshua, they return the whole issue to the Jews and the Moslems.'

'That's correct,' Leon said.

'Ben Eleizer won't stand for it. He'll understand what's going on. He'll simply ignore their communiqué - as he has all the others.'

'He won't be able to,' Leon said. 'They won't use a communiqué. This time it won't be secret - the Pope needs a public drama - so the request will be made, sometime next week, through a widely publicised world-wide broadcast.'

Kate glanced about the room, at the semi-darkness and squalor, and suddenly felt disturbingly unreal, as if locked in a dream. She thought of Joshua and what he had become - to the individual and to the world in general - and a fear as relentless as a tidal wave swept through her and shook her. Men dreamed and schemed, and in their scheming wrought destruction; and now Joshua, in his ambiguity, was the pivot around which these schemes moved. She felt that Joshua was in danger, that the tide was moving against him, and the fear, now like ice around her heart, seemed to close in and crush her. Looking up, she saw Leon looking down, a ghost standing in shadow.

'Why did you want to tell me this?' she asked. 'Surely it can't affect things in Israel, one way or the other.'

'I think Moshe should know,' he said, 'and, in turn, Ben Eleizer, because the Americans are bound to view it as a victory for the Soviets in Europe. Viewing it thus, they'll also view it as a deliberate attempt to isolate Joshua's influence to the Middle East. That narrows it down to Jew and Moslem, both trying to claim Joshua, and it still begs the question of who will finally have

that dubious honour. The fate of the Middle East could be decided by a word from Joshua, and the Americans, viewing the Soviets across Israel, won't forget Joshua's presence. They will, indeed, view him as the innocent instrument of Soviet intentions.'

'You mean they might want to use him before the Soviets attempt to do so.'

'I mean the Vatican, once allowing the Pope to speak, will most likely have left them little choice - and Israel, whether she likes it or not, will have to deal with the Americans.'

He picked up one of the bottles and poured himself another drink, his hand shaking and letting the whisky splash over the table. Kate watched him, feeling troubled, frightened for Joshua, sad for Leon, then she lowered her eyes, trying to blot it out, feeling sweat on her brow.

'That's it,' Leon said. 'That's my favour. You can take your leave now.'

She glanced at him, startled, stung by his sudden harshness, and watched him step away from the window and go back to the bed. He placed his glass on the bedside cabinet, kicked his shoes off and lay down, covering his closed eyes with his hands and taking slow, even breaths. The pale yellow light fell across his body, but his face was in shadow, and his voice, coming out of that darkness, was the voice of a broken man.

'You heard me, Kate. I said you could leave. You've no reason for staying here.'

Kate stood up, feeling wounded, silently grieving for his suffering, but understanding that there was nothing she could do except leave him alone. She walked away from the table, newspapers rustling around her feet, and stopped when she came to the door, turning back to look at him. He was still outstretched on the bed, his face hidden in the shadows, the pale light illuminating the dishevelled shirt that fell off his white body. He did not make a sound, and appeared not to be breathing, but eventually his hand emerged to the light and reached out for the glass of whiskey on the bedside cabinet.

'Open the shutters,' Kate said. 'Let some light and air in. Admit the world and stop killing yourself with your pathetic self-pity.'

His hand disappeared into the darkness, taking the glass of whisky with it, and she knew he was having a drink while still flat on his back. Shaken, feeling lost, she placed her hand on her own belly, checked the life stirring

within her; felt, if not joyous, at least hopeful. Then she walked from the room.

35

Looking out of the window of the roaring helicopter, shading his eyes to combat the dazzling brilliance of the sun, Moshe saw the wastelands of the Sinai Desert, far below, giving way to the incandescent blue of the Gulf of Suez. He looked down for some time, feeling drawn towards it, as if, were he not strapped into his seat, he would have thrown himself out. He loved the emptiness of the desert, was seduced by its dangerous beauty, and now, feeling trapped, hemmed in by mounting pressures, he wanted to be standing on his own feet on that hot, burning sand.

'So they know,' Ben Eleizer said.

'Yes, Shlomo, they know. When I rang them to give them Leon's news, they said they'd just picked it up.'

'Then that's what they want to talk about.'

'I'd think so. Almost certainly.'

'Well, we're in for an interesting conversation, but it may not be pleasant.'

Pleasant it would not be, as Moshe understood fully, but as he looked down at the Gulf of Suez, at that ribbon of water dividing the deserts, he was thinking of Kate's meeting with Leon and feeling resentful. His resentment was ridiculous, almost childishly stupid, and when he thought of Kate, pregnant and proud, he was ashamed of himself. She had been sad when she returned from seeing Leon, obviously shocked by his appearance, and in telling him how Leon had changed, she had not mixed her words. Moshe had felt better then, less suspicious of her motives, but still, like acid rotting the guts, a faint resentment remained.

The helicopter was dropping lower, casting its shadow on the blue water, and then the edge of the Eastern Desert, looking white in the shimmering heat-haze, advanced as the Gulf slid past below and then gradually disappeared. Moshe looked down on Egypt, at the United Arab Republic, and

saw the rippling sand dunes sweeping away to parched brown-and-purple mountains, a single road snaking as a black line through the barren lowlands. The mountains advanced quickly, becoming higher, three-dimensional, then suddenly they were spread out around the helicopter, blocking out the sky. The helicopter started ascending, moving up the face of the cliffs, then it flew over the summit, across the parched, cracked rock, until the desert opened out at the other side and seemed to go on forever.

'There they are,' Ben Eleizer said.

The American tanks were in the desert, spread out in long lines, forming a protective flank along a makeshift airstrip on which the aircraft sat in neat rows, their wings reflecting the sunlight. There were also trucks and jeeps, gun emplacements and supply dumps, and the hundreds of tents, forming white, linear patterns, housed the thousands of men who for now resembled black ants moving in columns through a pool of liquid gold.

'Yankee Doodle Dandy,' Ben Eleizer said blandly. 'They sure know how to put on a show and make an impression.'

The remark didn't amuse Moshe who, looking down, felt only the dryness in his throat and an odd kind of nausea. What he saw down there was power, military might and its need to strike, and as the helicopter dropped lower and the tanks seemed to spread out farther, he thought of the Russians in Syria and Jordan, and understood the position.

'They mean business,' he said.

'Most assuredly, my friend.'

'Those people aren't here to protect anyone; they're here to take over.'

The helicopter dropped lower, roaring louder and rocking slightly, coming down above the tanks, then heading west across the tents, whipping the sand up as the land spread out around it and eventually hovering just above the airstrip, beyond the last row of aircraft. There were combat troops around the landing zone, their weapons held at the ready, and behind them, in two well-guarded jeeps, were the high-ranking officers. The sand was blowing across them, swirling away above their heads, as the helicopter dropped even lower, bobbed up and down a little, and finally, with a mild thudding sound, settled onto the LZ.

Moshe unclipped his seat belt as the rotors slowed down, stood up as they stuttered into silence and came to a halt. He glanced through the window and saw some soldiers breaking ranks, moving apart to let the two jeeps advance

and stop close to the LZ. The door of the helicopter was opened, making a shrill grinding sound, then the ladder, clanging brutally, was dropped down through the inpouring sunlight. Ben Eleizer sighed wearily, composing his moon-shaped face, then he moved towards the door and reached out to take hold of the engineer. The young man responded, helping Ben Eleizer down the ladder. Following him down, Moshe finally placed his feet on the soil of Egypt. He turned around to see the Americans walking towards him through the shimmering heat-haze.

General Kernan was in the lead, offering his hand to Ben Eleizer, flanked by two lieutenants and another two men wearing plain clothes. The general shook hands with Ben Eleizer, then did the same with Moshe, nodding his head and offering a formal smile that did not reach his gelid, hazel eyes. The other officers were introduced, lieutenants Green and Schonfield, then the two men in plain clothes, Cohn and Thompson, who belonged to the CIA. General Kernan apologised for the lack of formality, pointing out that this was Arab territory, making a joke about the delicacy of the situation as they walked to the jeeps. Moshe and Ben Eleizer shared the first jeep with General Kernan. The driver headed along the airstrip, past rows of crowded tents and gleaming planes, then turned left and passed jeeps and trucks and the ominous gun emplacements, churning up the sand and hurling it over the nearest soldiers, before stopping at a particularly large tent at the hub of the camp.

‘Home sweet home,’ General Kernan said, climbing down from the parked jeep. ‘It’s not quite the Pentagon, Shlomo, but at least there are chairs inside.’

The tent was spacious and cool, the chairs surrounding a large trestle table, lamps wired to generators shedding light on the various maps spread out between the ashtrays and glasses and field telephones. The general indicated two chairs and Moshe sat beside Ben Eleizer as the other four men entered the tent and also sat at the table. General Kernan, facing Ben Eleizer and Moshe, mopped his brow with a handkerchief.

‘A drink, Shlomo?’

‘Just water.’

‘Moshe?’

‘I’ll have a beer, thanks.’

‘Let’s settle for cans of beer and jugs of water. Okay, corporal, get to it.’

The corporal did as he was told, using the assistance of two privates, setting bottles of mineral water and cans of beer on the table, and then being dismissed. When he had departed, they all helped themselves to drinks - only Moshe and the CIA men drinking beer, the others settling for water. Their thirst slaked, they prepared themselves, lighting cigarettes, slyly studying each other, then General Kernan leaned closer to the table to address Ben Eleizer.

'This talk is off the record, Shlomo.'

'I *had* assumed so, Ralph.'

'If this leaks out, we'll deny it.'

'We'll do exactly the same, Ralph.'

The general nodded and sat back, mopped his forehead with the handkerchief, glanced uneasily at the two men in plain clothes and then leaned forward again. He had silvery-grey hair, a broken nose, a brick-shaped chin; and his eyes, slightly baggy, webbed with lines, held little real warmth.

'Our information confirms what you picked up from that English lush,' he said. 'The Vatican is going to deal with the Soviets in order to keep their hands off Eastern Europe.'

'Quite,' Ben Eleizer said.

'I don't think I have to tell you how we feel about this projected move, except to say that it's a clear defeat for the Vatican in the face of Soviet aggression.'

'But the Vatican is stepping down to *prevent* the suppression of the Christian Church in Eastern Europe.'

'Right,' the general said. 'Which is, in itself, a clear victory for the Soviets, weakening the authority of the Vatican and strengthening that of the Soviets throughout Eastern Europe - by implication, without the threat of physical force.'

'I fail to see how the Soviet Union, in agreeing to keep its hands *off* the Christian Church in Eastern Europe, will actually strengthen its authority in that area.'

'Don't act naïve with me, Shlomo. You know as well as I do that in forcing the Church to back down, the Soviets will have won an enormous psychological victory and reaffirmed - to the world and the peoples of Eastern Europe in particular - that their control, in political *and* religious matters, is still absolute. All the Vatican has done, Shlomo, is walk right into

the Soviet trap: giving them the opportunity to increase their authority throughout Eastern Europe without the embarrassment of having to use physical force - and demonstrating to Western Europe that even the Vatican, with all its power and prestige, can't stand up to the Kremlin.'

'I think you're reading too much into this,' Ben Eleizer said.

'We know how the Soviet mind thinks,' the general replied, 'and if they think they've scored a victory, that's enough - they'll try it again.'

'You mean here, in the Middle East?'

'Precisely.'

'Ah,' Ben Eleizer said. He clasped his hands together on the table, turned them over, examined his fingernails, furrowed his brow as if trying to think, his face deceptively innocent.

'It's our belief,' the general continued, 'that the Soviets, having won so easily over Eastern Europe, will now try to exploit their moral victory by taking similar steps in this area. It's also our belief that part of their strategy concerning the Vatican was to confine your man Joshua to the Middle East and the Jewish-Arab claims for him.'

'And how would that benefit the Soviets?'

'They'll simply wait until Joshua leans one way or the other - and then they'll move accordingly.'

'I don't think I understand, Ralph.'

The general glanced at the men around him, clearly exasperated by Ben Eleizer's coyness; then one of the CIA men, Thompson, leaned forward, his face as flat as an ironing board.

'I think you know what we're talking about,' he said. 'The mystery of this Joshua, whoever he is, has stirred the imagination of the whole world, causing chaos in Europe and America, inflaming the Middle East situation, and encouraging the Soviets and Chinese, plus the predominantly Hindu and Buddhist countries, to accuse us of having used him to manufacture the recent Arab-Israeli war.'

'A war you certainly appreciated,' Moshe said, unable to let the point pass.

'We're here to protect our interests in the Middle East,' the general said, 'and to ensure that Israel doesn't drop an atomic weapon on the heads of our Arab friends. We're here, in short, to prevent a Third World War.'

The statement was marginally true, but not nearly true enough, and Moshe

felt the acid of anger in his stomach, the heat in his cheeks.

'We didn't manufacture the recent war,' Thompson said. 'It came about because of your man Joshua - and that's my whole point.'

'What point?' Ben Eleizer asked,

'The point, Mr. Prime Minister, is that the man known as Joshua has become a danger to everyone with interests in this sensitive area - not only us Americans, but the Russians, the Moslems and you Jews. Already, he's led to one war; he could soon lead to another. The Arabs think of him as their Mahdi, most Jews think of him as their Messiah, and now, with the Vatican about to disown him completely, the claims upon him are about to be narrowed down to the Jews and Arabs alone. We happen to believe that the Russians, in forcing the Vatican to disown Joshua, have deliberately returned the problem to where it started: right here in the Middle East.'

'Why?'

'The Russians are presently massed along the borders of Jordan and Syria, their tanks and guns facing Israel. By reducing the question of who or what Joshua is to a running conflict between the Jews and Arabs alone, they're hoping that the conflict will erupt into another war that would - due to your former threat to use your atomic weapons - give them an excuse for crossing the border into Israel as a so-called peace-keeping force. Such an action would be taken without prior warning - and once in, as it was with Afghanistan, you won't get them out.'

Ben Eleizer looked up, spreading his hands on the table, his bland gaze scanning everyone in turn, his moon face unrevealing.

'I don't think the Russians will do that,' he said, 'unless Joshua takes a definite stand, one way or the other.'

'Right,' the general replied. 'If Joshua claims to be the Messiah, the Jews will attempt to inaugurate the pure Zionist State, the remaining Arabs in Israel will all be thrown out, and the Arab world, understandably incensed, will retaliate with war. If, on the other hand, Joshua claims to be the Mahdi, then the Arabs will be impelled to inaugurate the sovereignty of Islam and, again, will embark on a war against Israel. Either way, sooner or later, something will break - and neither we nor the Soviets can let that happen.'

'Our experience convinces us that Joshua will take no side, and that those events, at least as you envisage them, simply will not materialise.'

'That's the whole point,' Thompson said. 'You're mistaken in thinking

that Joshua would have to pick one side over the other in order to start another war; unfortunately, the facts would seem to suggest otherwise. Joshua's presence in Israel - just his presence - is enough; and current events, all springing out of his presence, are already leading to war.'

Moshe caught Ben Eleizer's glance, the merest flicker of movement, and knew that he was less bland than he looked and was, in fact, worried. Moshe was likewise worried, but his anxiety was touched with anger, a cold fury that the Americans and Russians, in the arrogance of their might, could manoeuvre through such squalid intrigues to settle the fate of the Holy Land.

'I admit to bewilderment,' Ben Eleizer said, 'but do, pray, continue.'

The other CIA man, Cohn, lit a cigarette, taking his time about it, blowing the smoke out before speaking.

'We're talking about your own zealots,' he said, 'and their obsession with Joshua.' He stared hard at Ben Eleizer, but received no visible response. He glanced briefly at General Kernan and his two lieutenants, then shrugged his shoulders. 'Okay,' he continued, 'I'll spell it out for you. Your zealots, believing in Joshua as the Jewish Messiah, are determined to inaugurate the Zionist State and throw all the Arabs out of Israel. They always wanted that, of course, but their intentions didn't bother us, since they were, at most, a minority group without any great influence. Now, however, with the advent of Joshua, they've picked up some powerful supporters and can no longer be safely ignored. They want to oust your presiding government and install their own Cabinet - a Cabinet consisting of handpicked, fanatical Zionists - and, having done that, they intend making good on all their promises.'

'They won't get me out,' Ben Eleizer said.

'I'm sorry, Mr. Prime Minister, but I'm afraid they will. Our Intelligence reports reveal that widespread belief in Joshua as the Jewish Messiah will ensure that eighty percent of your Jewish citizens will vote for the zealots. It's also worth noting, if painful to accept, that the Soviets are supporting the zealots with secret supplies of arms and money - because they know that when the zealots get in they'll have the war they so badly need.'

For the first time, Ben Eleizer failed to maintain his bland façade, his cheeks flushing, his eyes widening in shock, his fists clenching on the table, as the shock of what he was hearing bolted through him. It only lasted a moment, perhaps one or two seconds, but it was enough to make Moshe understand just how badly he felt. Moshe was suffering a similar shock, as if

a trap door had been opened beneath him, as if he was falling down through a darkness that would never let light in again. The world was closing in on Israel, wanting to bury it in order to gain the Middle East; and Moshe, in his fear and despair, had to fight to control himself.

'Presuming that what you say is true,' Moshe said, trying to keep his voice level, 'just what are you after?'

Cohn glanced at Thompson, nervously seeking his approval, received a nod and returned his gaze to the front, his eyes roaming back and forth between Moshe and Ben Eleizer, as if he wasn't sure which one of them he was addressing. His voice, like the information he was conveying, had a funereal ring to it.

'Please bear in mind that whatever you desire, as things stand at the moment, the zealots will soon be running your country. If you let that happen, there'll be another Arab-Israeli war and the zealots, already supported by the Russians, will turn to them for aid. The Russians will agree to help them, but the price will be high - notably the inclusion of their so-called "advisors" in the reconstructed Israeli government and the acceptance of a long-term Soviet peace-keeping army in Israel. This will effectively give the Russians dominance over the Middle East, with their military forces controlling Syria, Jordan and, surreptitiously, Israel. We cannot, and will not, allow such a disaster to take place.'

'So,' Moshe said, 'you want to get in first.'

'Right,' Cohn replied, looking even more uneasy. 'No matter how distasteful, you simply have to accept the fact that sooner or later you're going to have to make a deal with either the Russians or us. If you decide to do nothing, the zealots will deal with the Russians anyway - and the fate of Israel will be out of your hands. If, on the other hand, you accept our proposal, we can guarantee the survival of your presiding government and the freedom of Israel.'

'Wonderful!' Ben Eleizer exclaimed quietly. 'But what do you expect in return?'

General Kernan coughed into his clenched fist and then studied his hands at length, while Cohn, glancing again at his partner, laid his cards on the table.

'We have two concerns,' he said. 'The first is to abort the Soviet's expected triumph in Eastern Europe, and the second is to find a final solution

to the problem of Palestine.'

'Israel,' Ben Eleizer corrected him.

'Sorry,' Cohn said.

'And by a final solution, you mean a formal agreement concerning Soviet and American containment of this area.'

'I'm afraid so,' Cohn said.

Moshe glanced down at the table, feeling despair and increasing anger, silently cursing his fellow Jews for their disparate religious passions and their inability to live with one another. Israel, which had once been divided between Jew and Arab, was now, more ironically, divided because of Jew fighting Jew. It was meat for the Americans and Soviets, a dinner set down on a plate, and the Jews, their heads bowed, their thoughts focused on Judgement Day, would still be worshipping when their country was devoured by those more realistic. The thought of it made Moshe sick to his stomach.

'So,' he said bitterly, now unable to conceal it, looking directly at Cohn. 'What's your proposal?'

'Our proposal,' Cohn replied, 'is that Joshua be removed from the scene before he reaches the Vatican.'

There was a long, shocked silence that seemed to last forever, then Moshe heard the sound of his own voice, twice as old as it should be.

'Are you talking about kidnapping?' he asked.

'Termination,' Cohn replied bluntly.

Moshe glanced at Ben Eleizer but his stare was not returned; Ben Eleizer was gazing down at the table, his head in his hands. He stayed like that for some time, silent, not moving, but eventually, with an audible sigh, he looked up once more. His eyes roamed from Moshe to General Kernan and his two lieutenants, then finally came to rest on the two CIA men, particularly Cohn. He stared at Cohn for a long time, not saying a word, until Cohn, obviously getting the message, finished off his proposal.

'To remove Joshua from the scene,' he said, 'before the Pope can make his request, will, in preventing the Pope from publicly disowning him, ensure that the authority of the Church isn't undermined by the Soviets - and, incidentally, since the Vatican won't be responsible, leave the godless communists with no excuse for suppressing the Church in Eastern Europe.'

'So,' Ben Eleizer said, 'you deny the Russians that particular victory, and in making it impossible for the Church to deny Joshua, ensure that the

conflict about his nature isn't confined to the Middle East.'

'That, as far as it goes, is correct.'

'And the rest?'

'Please remember, Mr. Prime Minister, that if you reject this proposal, the zealots will take over Israel, there'll be an Arab-Israeli war, and the Soviets will end up in control of Jerusalem.'

'Please, Mr. Cohn, get it over with.'

Cohn sat up straight in his chair and tried to keep his gaze steady. 'Our proposal is that Joshua be terminated, by pistol shot, in some area where his body is certain to be found. Once his dead body is discovered, the news of his murder will spread like wildfire, with the Jews blaming the Arabs and the Arabs blaming the Jews for the crime. The shock and anger engendered by this - particularly throughout the Arab world - will give us an excuse for embarking on further preventative action right here in the United Arab Republic, but also entailing a base from which to expand our military presence into the Arab oil states of the Persian Gulf. Having done that, we'll be in a stronger strategic position when it comes to negotiating with the Soviets as we orchestrate, with them, a final settlement of the Arab-Israeli and Israeli-Palestinian problem. As part of that settlement - and negotiating from a position of strength - we'll offer the return of the Egyptian, Jordanian and Syrian territories, but insist, in return, upon the fulfilment of the Israelis' dream of statehood, and ensure, during this process, that certain Israeli laws be amended to reduce to the barest minimum level the political freedoms of the zealots. Your own Cabinet, along with Israel's freedom, will thus be protected - and the United States will be able to guarantee the security of your borders from a position of much greater military strength.'

'The United States, Mr. Cohn, will be able to guarantee the security of our borders because they will, to all intents and purposes, rule most of the Arab world.'

'Better the United States than the Soviet Union, as I'm sure you'll agree.'

Moshe caught the flickering of Ben Eleizer's eyes, his flushed cheeks, as he tried to control his anger over what he was hearing. For Moshe it was a nightmare, something chillingly final, God's punishment for an Israel divided within itself and torn by the passionate religious differences that made Jew fight Jew. He glanced around the table, seeing the faces of normal men, and wondering, with a suffocating bitterness, at their suspicion and greed. He

wanted to hate them, but failed to do so, since their duplicities were not uncommon, but were in fact endemic to Israel and its religious dissension. As for himself, he was no better - and now he understood it - because even as he accepted the horror of what was being proposed, he knew that he was going to agree because he, meaning Israel, had no choice.

Ben Eleizer's moon-shaped face was drawn and pale, and Moshe knew, from the distracted flickering of his eyes, that they were thinking the same thing.

'Let's assume for the moment that we agree,' Ben Eleizer said. 'If, as you propose, we are to assassinate Joshua, who's to be responsible for pulling the trigger? I can't think, off hand, of one Jew or Arab who'd be willing to put a gun to Joshua's head.'

'Not at the moment,' Cohn said, 'but it can be arranged.'

He nodded at his partner, Thompson, and the latter, putting on a pair of spectacles, leaned over the file opened before him: clearly a CIA Intelligence report.

'Obviously,' he said, 'the United States cannot be seen to be involved in this, so using one of our own agents is out of the question. The assassination, therefore, will have to be arranged by you and carried out by one of your own Israelis. Assuming that this will be the case, it is our belief that in the unlikely event of the assassin's identity being uncovered, a religious zealot with a grudge would make it easier, diplomatically speaking, to absolve the Jews in general of the crime. Ideally, then, what we're after is a military-trained religious zealot who'll either keep his silence after the assassination or can be dispensed with shortly after the event.'

'A religious zealot,' Moshe said, feeling almost numb with disbelief, 'would be the last person to consent to murdering Joshua, the so-called Jewish Messiah.'

'A fanatic is a fanatic,' Thompson replied levelly, 'and fanaticism in a human being makes him or her into an instrument that can be turned, if handled with care, in any direction.'

'You have someone in mind?'

'Yes, major-general, we have. He's Lieutenant Paul Frankel. Lieutenant Frankel is a zealot, but he's also a trained soldier. He's been supporting the overthrow of your government, he's passionately devoted to Joshua, whom he thinks is the Messiah, and we believe that if properly handled, he'll turn

on his master.'

Moshe took a deep breath, feeling as if he had been stabbed, and then glanced across the table at Ben Eleizer, to check his reaction. The Prime Minister, no longer able to feign indifference, was staring at Thompson with wide eyes. Moshe, disorientated, wanting to get up and walk out, expelled his breath and gazed down at the table, thinking of Paul with pure hatred.

'Paul Frankel,' he said, 'may indeed have supported the zealots, but he certainly wouldn't support them to the extent of trying to overthrow this government.'

'On the contrary,' Thompson said, not looking up from his papers, 'Lieutenant Frankel is something other than a run-of-the-mill zealot. He believes that Joshua is the Messiah, that Judgement Day is at hand, and that his duty as a Jew - above all other moral considerations - is to ensure, at any cost, that the present, secular government is overthrown and that a new, purely ecclesiastical Cabinet is installed in the Knesset. Lieutenant Frankel, therefore, doesn't only *support* the zealots: he arranged for the bombing of the Mae Shearim quarter to kill one of his religious rivals; he passed secret information to foreign journalists, including Leon Halcomb; and finally, most importantly, in order to incite the Arabs and weaken the credibility of your government - thus giving the zealots their first chance to replace you - he personally revealed the secret of Joshua to a world-wide syndication agency. It was not, we can assure you, that journalist, Leon Halcomb, but Lieutenant Paul Frankel of Shin Bet.'

Moshe stared in a daze at Thompson, not believing what he was hearing, then accepting it and reeling from the shock and a pure, violent contempt. He glanced at Ben Eleizer, at General Kernan and his two silent lieutenants, then forced himself to concentrate on Thompson, who was finally raising his head from his papers. Thompson removed his spectacles, wiped them with a paper napkin, placed them on the papers before him and then spoke with calm, chilling conviction.

'Lieutenant Frankel is a fanatic, a man of immense frustration, and if we can turn that frustration in another direction, we can make it work for us. Though fanatically devoted to Joshua, he'll be just as fanatically against him if you convince him that Joshua, during his meeting with Rashid Idriss, confirmed that he was the Mahdi of the Moslems and said he would make it public knowledge by taking up residence in Mecca and spreading the gospel

of Muhammad. Though fanatically devoted to Zionism, he'll do as you wish if you point out that Joshua, the Mahdi, if allowed to stay alive, will incite the Arab world to a Holy War designed to win back Jerusalem. Finally, Lieutenant Frankel, who exposed Joshua to the world, will - if informed how his crime could benefit the Arabs and humiliate his fellow zealots - perform his military duty and keep his mouth shut as long as you maintain your silence about his crime. Given these facts, I think we can all safely assume that Lieutenant Frankel will assassinate Joshua - Messiah *or* Mahdi.'

Moshe didn't know what to say and could scarcely formulate his thoughts, his head swimming with images of Leon and Kate and Paul Frankel and Joshua, of the web of love and deceit and betrayal that now bound them together. He felt lost and ineffectual, totally drained and empty, and then, out of the silence of the wilderness inside him, he heard the sound of his own, much-altered voice, whispering rather than talking:

'So be it,' he said.

36

Paul entered the office tentatively, his expression aggressive, his brown eyes cool, obviously aware that the request to see him was not routine and wondering what it could mean. He closed the door quietly behind him, keeping his back to it, facing the desk, looked at Moshe and Ben Eleizer in turn and then walked up to them. Ben Eleizer nodded at the chair in front of the desk, saying nothing, his face blank, and Paul sat down, folding his hands in his lap and keeping his spine straight. Ben Eleizer was behind the desk and Moshe was standing in the corner nearest to him, his arms folded, his eyes sliding across Paul before settling on the middle distance. Paul lowered his head and coughed into his clenched fist, then raised his eyes again.

'I'm sorry to have brought you over here at such short notice,' Ben Eleizer said, 'but the matter is particularly important and urgent.' He looked steadily at Paul, his hands cupped beneath his chin, but Paul, merely blinking and licking his dry lips, offered no reply. 'Before proceeding to the main subject,' Ben Eleizer continued, 'I feel obliged to say that I'm extremely unhappy about your public support of the zealots, including Kash and *Gush Emunin*.'

'I'm a Zionist,' Paul replied, raising his chin to show defiance. 'Such a belief isn't forbidden in Israel, though you may disapprove of it.'

'I disapprove,' Ben Eleizer said, 'and would be a liar to say otherwise, but it hasn't been my practice to try to suppress the views of the Zionists. The point in your case, Lieutenant Frankel, is that you're a member of the Defence Forces and as such are committed to serving the government in office, keeping your political differences to yourself, except when conversing with friends or at the polling booth.'

'I've only gone against this government by expressing my religious views and publicly supporting those groups who share those views.'

'The groups who share your views are very active politically, and your

support of them must therefore be interpreted as political activity.'

'You can't suppress free speech, Prime Minister.'

'Your activities have gone beyond that.'

'This government has betrayed Zionism and doesn't deserve office; only the zealots, as you call them, have the will and belief to lead Israel away from compromise and into pure Zionism, undiluted by your diplomatic considerations and opportunistic internationalism.'

'Israel cannot stand alone, nor ignore events outside its borders. It has to deal with the international community and make certain compromises. Your friends, with their religious ideals, are politically naïve.'

'You're betraying Judaism.'

'This is the modern age, Paul. We can't turn our back on the rest of the world and hope to survive.'

'Your kind of compromise is blasphemous. The Holy Land belongs to the Jews. The Moslems and Christians have no place here and must be removed. That time is now coming. The Messiah has arrived. His presence here on Earth is a sign that the sovereignty of Judaism is at hand. The Messiah is the sign, but under him we are the instruments: we must inaugurate the pure Zionist State and await Judgement Day.'

Moshe looked into Paul's eyes, sweetly brown, much too bright, and understood that the intensity of his belief had indeed made him fanatical. He belonged to the Mae Shearim quarter, to the gun emplacements of the West Bank, and sooner or later, if left alone, he would unleash his fury. The CIA man was right - that fanaticism had to be directed elsewhere - but Moshe, in the knowledge of what was happening, still felt sick to his soul. He glanced at Ben Eleizer and wondered if he felt the same, but the Prime Minister, with his chin in his hands, was showing nothing at all.

'Can I take it,' he said, his steady gaze still fixed on Paul, 'that you're refusing to co-operate with us by keeping your views to yourself?'

'I won't give up my freedom of speech, nor change the company I keep.'

His specific crimes had not been mentioned, and would not be until strictly necessary. For the moment, Ben Eleizer's sole intention was to gently, slyly, lead him to Joshua.

'Your own beliefs,' Ben Eleizer said, 'and the beliefs of your friends, are clearly based on the assumption that Joshua is the Jewish Messiah.'

'Yes,' Paul said, 'of course.'

‘But Joshua has never made such a claim.’

‘Nor has he denied it.’

‘A lack of denial is hardly confirmation, as I’m sure you’d agree.’

‘He doesn’t have to know who he is or what he is. I’ve listened to his words and been witness to his miracles, and I know, from what I’ve seen and heard, that he *is* the Messiah. Do you need to know more? Is your lack of faith so blinding? He came down from the Mount of Olives the night the Golden Gate was opened; he’s a man of flesh and blood, but one with supernatural abilities; and his ignorance about himself hasn’t blinded him to the knowledge that he’s here on Earth for some specific purpose, which has to be the Redemption. As surely as the Golden Gate has been opened, Joshua *is* the Messiah.’

Ben Eleizer had what he wanted - confirmation of Paul’s fanaticism - so he leaned back in his chair, removing his hands from his chin and letting them rest on the table. He stared flatly at Paul, revealing nothing of his thoughts, and Paul eventually looked away to glance at Moshe, his dark eyes confused. Moshe felt uneasy, even guilty, almost criminal, understanding that what he was involved in was, if necessary, undoubtedly sordid. As a soldier, he was used to making unpleasant decisions, hardened to the necessity of political and military intrigue, conditioned in the acceptance of sacrifice as a means to an end; yet now he felt vile, his hands sweaty, his stomach heaving, convinced that what they were doing was pure treachery and murder, and that his own hands, which would soon be stained with blood, would never be clean again.

‘To support the Zionists is one thing,’ Ben Eleizer said quietly, ‘but to proclaim Joshua as the Messiah - in defiance of your own government’s official silence - is something we simply cannot tolerate. It was bad enough before, but it will now be more embarrassing - since Joshua will personally soon be proclaiming that he’s not the Messiah, but is, rather, the Mahdi of the Moslems.’

Paul visibly stiffened, his eyes widening in disbelief, then the hands that had been folded in his lap came apart and moved restlessly.

‘That’s nonsense,’ he said.

‘I wish it was,’ Ben Eleizer replied, ‘because it means bad trouble for us. Alas, it’s absolutely true and we just have to face it.’

Paul’s hands were opening and closing spasmodically on his thighs, as if

wanting to grab hold of something and cling to it for dear life.

'I don't believe you,' he said, though his voice sounded strained, emerging from his lips with reluctance and fading slowly, painfully, into a lingering silence.

Ben Eleizer broke that silence. 'Don't accuse me of lying,' he said, his face convincingly angry and offended, his fists clenching dramatically. 'As you know, Rashid Idriss had a meeting with Joshua - here, in this very office, only a few weeks ago. Rashid came here at Joshua's request, because Joshua wanted to talk to him. When they met, in my presence, the first thing Joshua said was that he was the Mahdi, not the Messiah, and would need Rashid's protection when eventually he ventured forth to Mecca. That's what the meeting was for - to arrange Joshua's journey to Mecca - and once there, as he explained, he was going to take up residence and thereafter preach the gospel of Muhammad. He'll be making that journey within the next few days - and once he does, the Messiah theory will be finished and the Moslems will own him.'

'*No*!' Paul exclaimed, the word exploding like a pistol shot, a denial and a cry of fear at once, whipping Moshe with its violence. 'It's not true. *It's not true*!'

Ben Eleizer stood up instantly, seizing the drama of the moment, and hurried around his desk to grab Paul by the shoulders and vigorously shake him.

'Damn you!' he snapped. 'It's true! Joshua's going to Mecca. He's going to proclaim himself as the Mahdi and gain the allegiance of the whole Arab world. Do you want to check this out? Then go and see him - right this minute! As I speak, he's in the El-Aqsa mosque with Rashid Idriss. Do you think the Jewish Messiah would worship Muhammad? Go and ask him, Paul. *Ask him*!'

He had bawled the last words, his face very close to Paul's, and he shook him again and then released him and walked back around his desk. Sighing loudly, despairingly, shaking his head in a weary gesture, he sank into his chair and then leaned forward, keeping his hard stare fixed on Paul. The latter was sitting up straight, his fingers digging neurotically into his thighs, his brown eyes, enlarged, roaming to and fro restlessly, as if in his searching he might find something hopeful to cling to. Eventually, with a shudder, after trying to speak and failing, he wiped his lips with an agitated hand and

managed to get the words out:

'Is it true?'

'Yes,' Ben Eleizer said. 'Right now, Joshua is with Rashid Idriss. He's been staying with Idriss for quite a few days now, and soon he'll go with him to Mecca to spread the gospel of Islam.'

What Ben Eleizer said was true - or was at least based on truth - since Joshua, presently staying with some Arabs in Silwan, had been visited every day by Rashid Idriss. There the truth ended, however, and the fiction began: Joshua alternated between Jew and Moslem, between Moslem and Christian; but he listened more than he talked, and, when he talked, couched his words in a studied ambiguity that avoided commitment to any single religion. If he had been seen in the El-Aqsa mosque, he had also been seen at the Wailing Wall; and his conversations with Rashid Idriss, all instigated by Rashid, had so far produced no clarification of who, or what, Joshua might be. Ben Eleizer had lied with skill, basing his lies on certain facts, and now Paul, if he checked out those facts, could think only the worst.

'Do you know what this means?' Ben Eleizer now said melodramatically. 'If Joshua goes to Mecca to be hailed as the Mahdi, the Arabs will be compelled to go to war and recapture Jerusalem.' He paused to let his words sink in, not removing his gaze from Paul, not flinching at the sight of Paul's anguish and shocked disbelief. 'Do you understand?' he continued. 'We simply cannot let that happen. If Joshua proclaims himself as the Mahdi, he'll unite the whole Arab world, and the Arabs, once united, will sweep in on Israel from all sides.' Paul was now leaning forward, his elbows resting on his knees, his hands clasped and his head tilted downward, his body wracked by visible spasms of grief. 'We'll be surrounded,' Ben Eleizer continued. 'Every Arab state will attack us. From Saudi Arabia, from Jordan and Syria, from Lebanon and the Arab Republic of Egypt - they'll all want Jerusalem.' Paul choked back a sob and wiped his eyes with trembling fingers, while Ben Eleizer, histrionically intense, leaned over his desk. 'Jerusalem will fall,' he said. 'We won't be able to prevent it. Inflamed with thoughts of the Mahdi and Judgement Day, the Arabs will wipe out the Jews.'

'The Russians won't allow it,' Paul whispered with pitiful desperation.

'I'm afraid they will,' Ben Eleizer said. 'Informed by Rashid Idriss of Joshua's statement, they're already negotiating the return of the Arab territories and their share in the future division of Israel.'

‘They can’t do this! *We agreed*!’

‘We know about your agreement, Lieutenant Frankel. Unfortunately, at least for you, that agreement only had relevance while the Jews could proclaim Joshua as their Messiah. Now, with Joshua turning to the Moslems, the Russians must deal with the Arabs.’

Paul raised his head again, his brown eyes too large and bright, as if they were no longer looking outward, but inward, to himself. The thought of the Messiah had given him new life, making real the dream of Zion, and now, as Moshe could see in every line of his face, in the expression of his anguish, he was seeing that dream fall apart, his illusions shattered. Though despising him, Moshe sympathised; indeed he felt a corrosive shame: for Ben Eleizer, for himself, for the Americans and the Israelis; and, most of all, for the despicable thing they were planning in order, rightly or wrongly, to preserve the precious freedom of Israel. At that moment, he despised himself, wanting to find some other way, but he knew, even as he heard Ben Eleizer’s voice, that he would follow it through to the bitter end.

‘This can’t happen,’ Ben Eleizer said. ‘We simply can’t let it happen. If Joshua is allowed to go to Mecca, if he proclaims himself as the Mahdi, then nothing on Earth will stop the Arabs from overrunning Jerusalem. When that happens, neither the zealots nor my own Cabinet will be able to prevent the dismantling of Israel. Jerusalem will become the new Mecca - and Islam will reign.’

The words were spoken with quiet brutality, calmly hammering the lies home, and Moshe, having listened to them, aware that he was a collaborator, lowered his head to avoid Paul’s stricken gaze and yearned for the floor to devour him. He looked up again, his eyes drawn against their will, when Ben Eleizer, with his gently murderous skill, slipped the blade between Paul’s ribs.

‘Joshua has to be removed,’ he said. ‘We can’t let him reach Mecca. We can’t have this man - whom most of the Jews think is the Messiah - turning around and proclaiming himself as the Mahdi. We wouldn’t survive psychologically - nor would we survive the ensuing conflict - so Joshua, this man claiming to be the Mahdi, must never reach Mecca.’

‘We can’t stop him,’ Paul whispered.

‘We can,’ Ben Eleizer said.

‘We can’t stop him from proclaiming himself as the Mahdi.’

‘He can disappear,’ Ben Eleizer said.

Paul stared at him, shocked, understanding the implication, and his eyes, which had been tearful with despair, now melted into panic.

‘Disappear…?’

‘He must be terminated.’

‘*No*!’

‘We have to do it, lieutenant. We can stop him from going to Mecca, but we can’t stop him talking, and once he proclaims himself as the Mahdi, Israel is lost.’

Now Paul knew exactly what Ben Eleizer meant, and the horror, sinking in, made him sit up straight in his chair. He glanced at Moshe, his eyes blind, looking inward, but then his head turned in a slow, distracted movement, until he faced Ben Eleizer once more.

‘No,’ he said, shaking his head from side to side. ‘Not me… I can’t do it… No, not that… even now… I just can’t… *I won’t do it*!’

Ben Eleizer remained calm, his saintly patience an indecency, as he waited for Paul to settle down and stop shaking his head. Then he leaned across the table, touching the edge with his chest, pressed his hands down and spread his thin fingers and twisted the blade in Paul’s flesh.

‘Yes,’ he said, ‘you’ll do it. Your own beliefs will make you do it. You’ve supported the zealots and proclaimed Joshua as the Messiah; now, if your Messiah proclaims himself as the Moslem’s Mahdi, the zealots supporting your beliefs will be humiliated. Do you understand, Paul? The dream of Zion will dissolve. You’ll be dishonourably discharged from the army for having released that information, your zealots will reject you for having made them look like fools, and the possibility of a true Zionist State will dissolve and then melt away entirely. So, you’ll do what we want, lieutenant - for yourself and for your ideals - and, having done it, you’ll never mention the deed, in return for which we’ll never mention the fact that you, and not Leon Halcomb, released the story of Joshua.’

Paul gasped and sucked his breath in, covering his face with his hands, bent forward as if he was praying, then straightened up again. He removed his hands slowly, opening his eyes as he did so, glanced at Moshe, licked his dry lips, turned away and finally faced Ben Eleizer. The latter let the silence flay Paul alive - and then he gave his instructions.

‘Every night,’ he said, ‘Joshua walks to Gethsemane to meditate, alone, in

the garden of the Basilica of the Agony. Few know that he goes there - and at that time the garden is deserted - so tomorrow evening, precisely at midnight, you'll be there to greet him. We want you to use a handgun. We also want you to use a silencer. When you've completed your task, you'll simply walk away and let us do the rest. Now is that understood?'

Paul looked at Ben Eleizer for a very long time, and then, in a silence utterly damning, the tears rolled down his cheeks. At first, Moshe was revolted, then he felt only pity, his revulsion reserved for himself and his part in this vile plot. Paul wept silently and helplessly, not moving, his tears glistening, and Moshe felt that everything he had believed in was turning to mud. Paul's tears were like rain, falling mournfully for Zion. Moshe thought about Kate, about the child she was carrying, about Joshua who had resurrected belief from the deserts of hopelessness. Joshua had given him Kate, another child, a new life, but now, as Paul's tears signified, Joshua had outlived his usefulness. Feeling sick, his soul choked with guilt and shame, Moshe turned his face to the wall.

'Yes,' Paul sobbed. 'I understand.'

37

Moshe drove into the carport of his small house in Talpiot, feeling like one of the damned, crushed by despair. He turned the ignition off, switched the lights out and just sat there, looking over the dark flatlands and hills to the distant lights of Jerusalem. In two hours from now Paul would be leaving, wearing plain clothes, carrying a handgun, to hide himself in the garden of the Basilica of the Agony and await the arrival of Joshua, who had shattered his Zionist dreams. Moshe thought of their terrible deception, of the plotting and the intrigue, and shivered, feeling feverish and haunted, confused between right and wrong.

After climbing out of the car, he glanced about him, grateful for the darkness, his fugitive heart needing it to hide in, and then walked around to the front of the house and opened the door. The light was on in the lounge, beaming into the short hallway, and he hung his jacket up and then entered to find Kate on the couch. She was showing her pregnancy, her body heavy and maternal, but her skin glowed with vitality, an inner radiance and contentment, and her dark hair, still long and hanging loose, framed her calm, loving face.

He leaned over and kissed her, pressing his lips to her forehead, sliding one hand through the softness of her hair and pulling her towards him. He sensed that she was smiling, pulled her head back and confirmed it, was simultaneously touched and disturbed, being unable to forget what was happening, what he was involved in. Right now, in Jerusalem, Paul Frankel was preparing to kill Joshua - and Kate, as Moshe knew too well, was devoted to Joshua.

Straightening up, he looked down at her, his heart beating too quickly, various emotions conflicting within him, some warm, others ice-cold. Kate patted her swollen stomach, still smiling, obviously happy, nodding to confirm that her body was giving its blessing.

‘It’s a girl,’ she said. ‘I know it. She’s as stubborn as her mother. Do you want another woman in the house or would that be too much for you?’

‘Two Kates are better than one. I’ll be spoiled beyond repair. No man, if he has any sense at all, could complain about that.’

‘I could be wrong,’ she said. ‘It might even be a boy. The competition won’t do you any harm and could do me some good.’

‘How?’

‘I’ll be appreciated.’

‘You’re appreciated now.’

‘I’m pampered,’ she said. ‘Really.’

‘Let me pamper you by getting you a drink. A glass of wine can’t be harmful.’

As he entered the kitchen, her face floated through his mind, her inner radiance merely increasing his feelings of guilt and shame over what was to come. He poured the drinks automatically, a white wine for Kate, a beer for himself, only noticing that his hands were shaking slightly when he picked up the glasses. He tried to wipe the tormenting images out of his thoughts, but failed to do so, his imagination running riot, seeing the Basilica of the Agony, the garden dark and silent, Paul emerging from behind an olive tree, his handgun aimed at Joshua. The thought of it shook him badly, made him feel almost nauseous, and as he went back out to Kate, carrying the drinks in his unsteady hands, he was haunted not only by his personal part in the affair, but by the sudden understanding of how Kate would feel when she heard of the murder.

He gave her the drink, silently watched her sipping it, as contented as a cat with milk, and wanted to reach down and embrace her and tell her the truth. That thought alone was enough to chill him, conjuring an image of her reaction: he could visualise, with shocking clarity, the horror in her face, the disbelief at his complicity in the matter and her subsequent revulsion. Disturbed, he turned away and faced the glass doors of the patio, looking beyond the low wall to Jerusalem, twinkling high on the hills.

‘How are things working out?’ Kate asked.

‘What things?’

‘The current intrigues… The Vatican and the Soviets, the Pope’s forthcoming announcement… Whether or not you’ll let Joshua go… All those humdrum affairs.’

‘Nothing’s changed,’ he lied, feeling the heat rise to his cheeks. ‘The Pope will make his speech in a week or so, and then we’ll have to let Joshua go.’

‘I think you should talk him out of going.’

‘Joshua can’t be talked out of anything. As well you know, he’ll simply accept the Vatican summons as being preordained. So of course he’ll go.’

‘Then what happens, Moshe?’

‘Then anything can happen, Kate. There’s not a damned thing we can do about it. We’ll just have to wait and see.’

He despised himself for lying, for the political expediency that made him do so, and, most of all, for the fact that it was a betrayal of Kate. Feeling ashamed, he had to face her, turning his back on Jerusalem, looking down at her with love, shame and guilt, feeling treacherous and sordid. Why was he doing it? Did he love Israel that much? Would the freedom of the Holy Land in time wash the blood from his hands? At that moment he doubted it, feeling increasingly like a criminal, unable to look at Kate without thinking of Joshua and imagining the pain it would cause her when she heard of his death.

‘How *is* Joshua?’ she asked.

‘As far as I know, he’s fine. He moves from Jew to Moslem, from Moslem to Christian, from Christian back to Jew, giving everyone a little of what they need while making no firm commitment. He’s still passive, an observer, only responding, never initiating; still ignorant, I think, of what he is and where he came from.’

‘He may still be ignorant,’ Kate said, ‘about who he is or where he came from, but he is, at least, convinced that his resurrection is a sign that he’s here for a specific purpose.’

‘That conviction, if anything, is even stronger.’

Kate frowned and lowered her gaze, as if disturbed by what she was thinking, then her hands, in a gesture of hope, came to rest on her belly.

‘Don’t think about it,’ Moshe said.

‘I can’t *stop* thinking about it. He’s not sure of what’s coming - at least not in detail - but he’s convinced that his own blood will be shed and that Jerusalem, or Israel, will then fall in order to rise again.’

Moshe instantly thought of Paul, now preparing to kill Joshua, and the second, more hideous aspect of the affair took shape in his mind. Who, or what, was Joshua? Where had he come from? Was he truly on Earth for some

specific purpose and, if so, what was it? Those questions had not been answered and were still blowing in the wind, hanging over the whole world like an immense cloud blotting out the sun. Joshua's nature was a mystery - perhaps the greatest the world had known - and now, before that mystery had been solved, he was to be terminated. It was a crime beyond the normal, a sin of staggering proportions, possibly a defiance of God and His intentions for the future of mankind. Irrespective of his personal beliefs, Moshe could not ignore this thought, because Joshua, in his very ambiguity, by the miracle of his resurrection, had become a challenge to the beliefs of men and nations, magnifying their ignorance. Joshua represented the unknown - he was possibly the key to revelation - and yet now, out of fear, because of human weakness and doubt, he was about to become the victim of a crime that history might never forgive. Moshe thought of it with horror, with a growing nausea and fear, and his hand, when he put the glass to his lips, was visibly shaking. He drank, trying to calm his churning emotions, and then looked down at Kate.

'He prophesied the recent war,' Kate said, looking up with dark, anxious eyes. 'He implied that the war hadn't really ended at all, and that his blood, when it was shed, would signal the coming downfall of Israel. I'm worried, Moshe. I think I know what he meant: his death, which will come soon, will lead to another war - and this time, it won't be a minor war, but something catastrophic. I'm worried about him, Moshe, and I'm worried about the future of Israel.'

Moshe took the chair facing her, not wanting to be too close to her, afraid that her proximity and warmth would break his resolve. He had a long drink of his beer, wanting to soothe his ravaged nerves, then he put his glass down on the coffee table, not feeling any better.

'You worry too much,' he said.

'I can't help it,' she responded. 'I've got Joshua in my blood. As long as I live, I won't be able to shake off the feeling that Joshua and you and me and our child are all connected in some mysterious way. That storm, that strange star, meeting you, then finding Joshua, the conviction, even before I found him, that someone was calling me - all of it, Moshe, including those weeks in the hospital with him, the feeling that he was somehow feeding off me, taking energy and life from me; the conviction that he was coming alive in my mind as, in fact, he then *came* alive - all of it, Moshe, ties me to him in a bond I

can’t break. You understand what I’m saying? It’s some kind of love, Moshe. Not like my love for you, not like my love for the child I’m carrying, but something even more mysterious, something spiritual, beyond me, a feeling that his fate and our fates are intertwined and that we, in a manner I can’t explain, are responsible for him. I guided him into the world, Moshe - yes, and you, too - together we looked after him, allowing him to grow, and now, though he’s on his own, and with the whole world trying to claim him, I feel that he’s in danger, that something terrible is about to happen, and that whether or not he knows about it, I can’t let it happen.’

Moshe leaned forward in his chair and placed his clasped hands to his lips, feeling that he was slipping into a nightmare and floundering in darkness. His love for Kate had released him, giving him new life and commitment, but now that very love, in its need for truth and honesty, was making him feel even more strongly the imprisoning guilt of duplicity. What he had sanctioned was an awful business, lacerating him with shame, but even worse was the thought of how Kate would feel when Joshua’s body was found. She wouldn’t know that Moshe was part of it, but her ignorance would hardly help her: the pain that she would suffer over his death would be terrible for her. Moshe didn’t want to think about it - he wanted to pretend that it would not happen - and so, in desperately wanting to change the subject, he took an equally dangerous road.

‘I’ve something to tell you,’ he said.

‘About Joshua?’

‘No.’

‘You have that serious look on your face.’

‘It’s about Leon,’ he said.

Her cheeks reddened a little, with embarrassment and anxiety, but she kept her eyes squarely upon him, not hiding anything. He no longer felt jealous or suspicious of her feelings, but he knew that the mention of Leon’s name still made her uncomfortable.

‘This information is bona fide,’ he said. ‘It comes from American Intelligence. Leon didn’t blow the story of Joshua… He had nothing to do with it.’

She stared at him for some time, saying nothing, not moving, letting the words sink in, then her eyes moved to the side, almost furtively, with guilt, sliding back to focus directly upon him, her face showing bewilderment.

‘He had nothing to do with it?’

‘No, Kate, not a thing.’

‘Then why…?’

‘I have no idea, Kate. You’d better ask him yourself.’

Her cheeks were still burning, her body shook briefly, and he knew that she was struggling with guilt and a great deal of confusion. Seeing that, he felt wounded, perhaps sharing her pain, understanding that the joy which her pregnancy had heightened was being eroded by her growing anxiety over Joshua and Leon. He felt worse every second, accepting the responsibility for this, having to face the fact that what he had implemented was going to make her pain even worse.

‘Why?’ Kate said. ‘*Why*? He never once tried to deny it. Why did he take the blame for all that? I just don’t understand it!’

Moshe stood up and went to her, bent down and embraced her, pulling her head into his chest and stroking her hair as she trembled against him. She held him tightly, sobbing quietly, not trying to hide it, then she gently, reluctantly, pushed him away and stood up, her cheeks wet. She smiled painfully, biting her lower lip, and wiped the tears from her eyes, then shook her head from side to side in self-mocking despair.

‘This is all too much,’ she said. ‘First Joshua, now Leon. I can’t take any more for tonight, so I’m going to bed. Do you mind?’

‘Of course not.’

She nodded distractedly, still smiling, if painfully, then slid her arms around him and clung to him, her head on his chest.

‘Joshua and Leon,’ she murmured. ‘The other two men in my life. Leon very much of the Earth and Joshua out of my dreams. They both managed to change me, Moshe, to make me view myself more clearly: Leon by making me face the self-deceptions of my emotional life; Joshua by making me see that there were things *beyond* this life. It’s a form of faith, Moshe - I think that’s what they both taught me - faith in myself, but also faith in my future here in Israel, where I rightfully belong. I owe them both and love them both, Moshe - but not the way I love you.’

She held him even more tightly, trying to glue herself to him, letting him feel the swelling of her belly as she pressed herself to him. He kissed the top of her head, stroked her shoulders, squeezed her waist, then again she gently pushed him away, her eyes closing and opening.

‘Come to bed,’ she said. ‘*Soon*.’

She turned away and entered the bedroom, leaving the door slightly ajar, and he stood there until the light, once turned on, had been turned off again. Hoping that she would sleep well, undisturbed by thoughts of Joshua, he went into the kitchen and poured another beer and then returned to the lounge. He looked out across the patio, at the distant lights of Jerusalem, then sat down in the chair behind the table and drank the beer too quickly. The alcohol didn’t soothe him, but had the opposite effect instead: snapping the stretched threads of his control and letting the fear take command. He thought of Kate and her love for Joshua, of what she had just said about him, and instantly, vividly, imagined Paul aiming his pistol, his hand jerking as he fired, and Joshua falling to the ground, his heart stopped by the bullet. The feeling of horror was overwhelming, almost pinning him to the chair; but then, when he heard Kate screaming, when that sound slashed through his reverie, he jumped up and rushed into the bedroom with his heart pounding wildly.

Kate was sitting upright on the bed, her knees raised, her arms around them, holding herself and rocking back and forth, her eyes filled with panic. A beam of moonlight was pouring in, cutting a line across her face, and that light, in its thin, wavering brilliance, made her skin look like marble.

‘*Joshua*!’ she exclaimed. ‘Something’s happening! I know it! *I feel it*!’

Moshe sat on the edge of the bed, hardly knowing what he was doing. Twisting sideways, he leaned forward to embrace her. She was sobbing, her body trembling, and he rocked her to and fro, pressing her head to his chest, feeling her hair at his lips, guilt and a lacerating dread whipping through him in spasms. Paul would now be on his way, wearing plain clothes, carrying a pistol, emotionally blackmailed into carrying out a deed that could never be rectified. He was doing it for Israel - for this abstraction that ruled them all - but now, as Moshe rocked Kate, as she sobbed in his arms, he felt that the assassination was of a vileness that could never be justified. To let it happen would be a sin - against Kate; against God - and as he felt Kate’s warmth coursing through him, he knew what he must do.

He kept rocking her in his arms, stroking her hair, whispering reassuring words, until eventually she stopped sobbing, sniffed her tears back and fell silent. Emotionally drained and exhausted, she fell asleep on his shoulder. He eased her back onto the bed, tucked the blankets around her, kissed her

lightly on the forehead, and then, feeling the urgency of his heartbeat, quietly left the house.

It was cold and dark outside when he drove the car away, heading as fast as he dared back to Jerusalem. His headlights beamed through the darkness, illuminated the rushing road, and it seemed as if that road was moving endlessly and leading him nowhere. His thoughts scattered and spun, weaving arabesques of panic, his heart beating to the rhythm of the car as it raced down the winding road. The lights shone on the distant hills, fewer now as Jerusalem slept, seeming to slip in glittering splendour across the sky as the road curved away from them. Moshe cursed quietly, checking his wristwatch, seeing the hour-hand creep towards midnight, thinking of Joshua meditating in the garden, unaware of Paul's coming. He tried to blot it out, to retain his objectivity, but that vision of faith and destructive doubt wrapped his tight head in thorns.

The road levelled out, revealing the outskirts of Jerusalem, darkened houses and synagogues whipping past while streetlamps dazzled his tired eyes. He drove blindly, automatically, more carelessly than he knew, tormented by the image of Paul advancing upon Joshua and raising his pistol. A crossroads…another car… the Old City passing by… The final leg of the journey was composed of fragmented scenes, the familiar sights that in the darkness, in his dread, now seemed unreal. Only the Golden Gate distracted him, drawing his gaze to the gaping hole, and he shivered and followed the road to the right, in the direction of the lower slopes of the Mount of Olives. It was dark and deserted here, the Kidron Valley as black as pitch. He braked below the Basilica of the Agony and then turned the ignition off. The sudden silence was shocking, rushing into his head, and he sat there, feeling numb, glancing over the moonlit slopes, and then suddenly jumped out and slammed the door and headed up towards the walls of the Basilica.

He hardly knew what he was doing and looked neither left nor right, his every impulse and thought concentrating on what he might find. He thought of Kate in her bed, her dreaming thoughts streaming outward, travelling over the distance he had come and spreading out through the garden. She was living and breathing Joshua, her nerves tuned to his every impulse; and Moshe dreaded the effect it would have upon her if that shot had been fired. He entered the garden at a trot, kicking up twigs and fallen leaves, saw splashes of moonlight on bougainvillaea and cacti, emphasising the shadows

that shifted and changed in the silence.

Not silence: someone sobbing. There was no sign of Joshua. Moshe saw Paul on the ground, resting against an olive tree, bent forward with his forehead on his knees, his hands clasped behind his neck. He was rocking back and forth - as Kate had rocked back and forth - and his sobbing, like Kate's sobbing, held an anguish that cut to the bone.

Moshe froze where he stood, suddenly confused and disorientated. He stared at Paul and then glanced about him in a vain search for Joshua. The bougainvillaea whispered, dripping moonlight, casting shadows, but Joshua was nowhere to be seen and Paul sobbed all alone. His lower spine was against the tree-trunk, his huddled body bent forward, and his sobbing cut through the crooning of the breeze with a choked, ragged hollowness.

Moshe went to him, feeling embarrassed, no longer fearful for Joshua, and stopped a few feet away from him, wondering what had occurred. Paul heard him and raised his head, letting his hands fall away, looking up with his brown eyes enlarged and glistening with tears. Moonlight filtered through the branches, falling over his body, illuminating his dark, handsome face and its terrible anguish.

'I couldn't do it,' he sobbed. 'He was here, but I couldn't do it. I tried to, but I couldn't press the trigger when I looked at his face. He was staring straight at me, not frightened, just smiling, and I knew, when I gazed into his eyes, that I just couldn't do it. "Not yet," he said. "Not yet - and not you. It is coming, but not by your hand and not in this garden." Hearing that, I was terrified. Seeing his smile, I was in torment. I knew then that he could not be the Mahdi, but was indeed our Messiah. "Is this what you want?" he said. "Can you truly betray yourself? Is your faith of the kind that can be shaken by the whispering of mortal men?" My heart broke when he said that. My shame destroyed my will. In his eyes, and in his smile, I saw reflected my own weakness and doubt. Then he raised his right hand, brushed the pistol aside, touched my cheek with the tips of his fingers and said, "Don't be frightened." Only that. Nothing else. He turned away and walked out. I was left in the silence of this garden with my shame and self-hatred.'

He turned his head away from Moshe, his body heaving convulsively as he wept, the moonlight falling over his shaking shoulders to splash on green grass. Moshe watched him, feeling stricken, not knowing what to do, cheeks burning with the shame of his duplicity and evil intentions. He thought of

Kate in the safety of her sleep, but the thought brought no comfort.

'We betrayed him,' Paul sobbed. 'In our weakness, we doubted him. We dreamed and schemed for the Holy Land, committing our crimes in the name of faith, and in the end, forgetting the nature of our faith, we let our vanity rule us. We betrayed him by betraying ourselves, refusing to wait for His sign, and then, in our impatience and greed, we were corrupted by doubt. He looked at me and smiled. I will never forget that sight. Whether a smile or a grimace of despair, it chilled me and frightened me. We betrayed him - you and I, Ben Eleizer, the Holy Land - and I knew, when he walked from this garden, that I would never forget it.'

He started weeping again, his head still turned away, the moonlight beaming down through the tangled branches and falling over his shoulders.

'It's alright,' Moshe said. 'It's all over. You can forget it. Nothing happened, so there's nothing to worry about. Just go home and relax.'

He then walked away from Paul, unable to bear his sobbing, wanting to get out of the garden as quickly as possible and lie down beside Kate. He did not get very far before he heard the single gunshot, loud and clear in the stillness of the night, blotting out his senses for a moment. Horrified, he spun around and saw the shivering olive tree, the moonlight still filtering through its branches to fall upon Paul. He lay on his side, his legs bent, one arm outstretched, the other curved under his face in the tree-trunk's dark shadow.

Moshe walked back and looked down, but there was nothing he could do. Paul had placed the barrel of the pistol in his mouth and blown his own head off.

38

The modest house was in Silwan, overlooking the Kidron Valley, its front door open and shedding light into the darkness. Moshe stood outside, observing the visitors coming and going, a constant stream of Moslems, Jews and Christians, all solemn and awe-struck. He felt sweaty and unclean, thinking of Paul's suicide, and his shame, which before had been acute, was now a bottomless well. He wanted to see Joshua alone, to warn him about the plot against him, knowing full well that Paul's inability to carry out his task had not put an end to it. Too much was at stake - for the Americans and the Israelis - and Moshe, whose love for Kate was at odds with his love of his country, had decided, once Paul had killed himself, that enough was enough. He loved Israel, the Holy Land, the land dominated by Jerusalem, but he now felt that nothing worth having could spring out of their vile scheme. What Paul had said was correct - in a bid to preserve Israel they were betraying what Israel stood for - and now Moshe, in his despair, in the horror of what had happened, was convinced that no matter the importance of their cause, the murder of Joshua would be a crime beyond forgiveness, gaining nothing but infamy.

He waited a long time, feeling the cold eating at him, hearing the murmuring from inside the house, seeing the faithful emerging, each silhouetted briefly in the outpouring light before being swallowed by the darkness as he or she headed for home. They seemed to come and go forever, as if none of them ever slept, but eventually, in the early hours of the morning, the endless flow tapered off. An Arab materialised in the doorway, wearing a striped *keffiyes*; he reached out to close the door for the night and then saw Moshe standing there. He gazed enquiringly at Moshe, glanced back into the house, then turned again to Moshe, smiling in welcome, and motioned him inside.

Moshe stepped in, stooping low, feeling sweaty and slightly feverish,

unable to shake off the nightmare of Paul's suicide, and aware that what he was doing would not please Ben Eleizer or the Americans. The house was small and Spartan, its stone walls unpainted. Joshua was seated behind a crude wooden table, still wearing his white robes. The only source of illumination came from a few hanging oil lamps, and their light, which was dim and pale yellow, brightened his silvery-grey eyes. He gazed steadily at Moshe, a faint smile on his lips, then he nodded at the old Arab, who lowered his head and backed out of the house, closing the door quietly when he went, offering privacy.

'So,' Joshua said, 'you came.'

'You sound as if you were expecting me.'

'I knew that you could not let transpire what was not meant to be.'

'You mean Paul Frankel?'

'Yes.'

'Did you know what you were doing to him? When you left, he put the pistol in his mouth and blew his brains out.'

Joshua's response was minimal, a mere flickering of his eyelids, but he kept his gaze squarely on Moshe, his hands flat on the table.

'I did nothing to him,' he said. 'I merely made him question himself. If he took his own life, it was preordained - and not without meaning.'

Moshe was chilled by this response, which, in its tone of calm acceptance - or, perhaps, indifference - struck him as utterly inhuman. Who, or what, was Joshua? They had never found that out. Now, looking at him, at the smile that was not a smile, Moshe wondered if Joshua was good or evil, on the side of God or the devil. They had all assumed his goodness, his relationship to the Almighty, but sometimes, though he had never mentioned it to Kate, Moshe had wondered about that.

'You feel nothing?' he said.

'Love and sorrow,' Joshua replied. 'But such feelings are not for Paul alone; they embrace all of mankind.'

'What about individuals?'

'I could not prevent Paul's death. My powers, once formidable, are gone, and now, like you, I am mortal.'

'The faithful who come here hardly think so.'

'They take from me what they need. They speak to unravel themselves and I listen to learn.'

‘So what have you learnt?’

‘That the time for change has come. That my own time, so brief, will soon be over, and revelation will come.’

He was gazing steadily at Moshe, his lips curved ambiguously, in a manner that suggested a smile that was not actually visible. Moshe felt even more unreal, as if locked in a waking dream, unable to comprehend Joshua’s nature or feel any warmth for him. Kate loved him and felt part of him, her nerves tuned to his every impulse, yet Moshe, staring into those silvery-grey eyes, felt only confusion. Joshua was a cipher, his mysterious nature seductive, but Moshe, in his presence, saw only his remote, unrevealing face. Did Joshua really feel love and sorrow? His eyes belied the possibility. Those eyes, like the dark side of the moon, had the chilling beauty of lifelessness.

‘You doubt me,’ Joshua said. ‘Your face cannot hide that truth. In thinking of your wife and her feelings, you wonder why you feel differently.’

‘We don’t know who you are. You claim not to know yourself. You claim to feel love for all mankind, but you don’t show your feelings. Are you good or evil? Are you here to help us or destroy us? Your face is a closed book, a mask, concealing what you might be.’

‘My face conceals nothing, but merely displays my own ignorance. I do not know who I am, if I am good or I am evil, but only that I am here for a purpose that will soon be revealed. I believe in the Almighty, who is Himself unknowable, and, given the mystery of His nature, I must stand on my faith. Is the Almighty good or evil? Can either exist without Him? Is it possible that good and evil - both concepts of mortal man - are in fact the two sides of the Almighty’s face. These questions cannot be answered - not by you and not by me - but I have to accept what I feel and know it to be true. I am here to serve a purpose, and only this do I know about it: Jerusalem, now tarnished, must fall to rise again, and I am the instrument of that event. Will it rise again to glory? Will it inaugurate a new Dark Age? I am not here to answer such questions, but to make men face up to them. These are my feelings - the only feelings I know - and if, as you say, I do not show my feelings, perhaps there is nothing to show beyond curiosity. I am here to observe and listen, and to wait for my sign - and you, coming here to this house, are revealed as that sign.’

‘I came here to warn you.’

‘That Paul was just the beginning? Yes, you came to warn me - you have

the need to save my life - and that, in itself, is the sign that I have been patiently waiting for.'

'You have to leave Jerusalem.'

'I belong to Jerusalem.'

'You'll probably have to leave Israel entirely. If you don't, they'll kill you.'

'What is willed, will be done. Your coming here is the sign. That which will be done is now beginning - and cannot be stopped.'

'You won't leave?'

'I will not.'

'Don't martyr yourself.'

'I do not. I simply orchestrate the events that will lead you to Judgement Day.'

'I don't believe in Judgement Day.'

'That's why you see nothing in me. You look at me and wonder why your Kate has such deep feelings for me. Her feelings come from faith - or, more accurately, from belief - and your Kate, like the others who come here, takes what she needs from me. Think of me as a mirror: I reflect what the viewer seeks: faith, hope, confirmation of the hereafter, the promise of forgiveness and mercy through the joy of redemption. You do not believe in such - at least you question their validity - and so, when you look at me for meaning, your own doubts are reflected.'

'I have doubts about your nature, about whether it's good or bad, and it worries me that people assume that you represent goodness.'

'Then why try to save me?'

'Because I can't condone murder, because I believe that your death will do more harm than good, and because I don't want to be instrumental in causing pain to my wife.'

'Those are public and private reasons.'

'There can't be any other.'

'You have not denied me - you have simply clung to natural doubt - and in doing so, you have admitted to yourself that all things are possible.'

At that point he smiled, a genuine, gentle smile, and Moshe felt himself responding automatically, with helpless warmth and respect. He tried to fight it and failed, gradually losing himself, his antagonism and doubt disappearing to leave him stronger. He looked at Joshua and thought of Kate, felt her love

and passed it on, and Joshua's silvery-grey eyes, in response, became much more human. He was doomed and knew it, his eyes reflecting joy and sorrow; and Moshe, even knowing that it was useless, felt compelled to press on.

'You can't let them kill you.'

'That they want to means I must.'

'I can't stand aside and let it happen.'

'Your own gun is the instrument.'

Moshe reached instinctively for the pistol holstered on his hip, hardly knowing he was doing so, and then, when his fingers curved around the butt, he felt a numbing chill. He started to speak, but failed to get the words out, his mouth opening and closing without making a sound, and a fear such as he had never known before stripped his senses raw. More than fear: horror, a cold and clammy revulsion, rising up as he looked into Joshua's eyes and understood what he meant.

'You must go through with it,' Joshua said. 'You must end what you have begun. My presence on Earth has changed the world forever, and the fate of Israel will change it even more. And whatever that fate, good or bad, it cannot be avoided. I know what is being planned - that certain men wish to deny me - and I cannot, whatever the cost, let that denial be uttered. I am here as a beacon, to light the path to Judgement Day, and it is imperative that the light is not diminished by those who would fear me. For this reason I must depart, leaving my name on the lips of men, and you, who came here as the sign, must remain as the instrument.'

Moshe felt the butt of the pistol, fitted snugly between his fingers, and he jerked his hand away, feeling scorched, his will evaporating under Joshua's unblinking gaze.

'The instrument?' Moshe whispered, hardly recognising his own voice, a sound that cut through the silence like a knife shredding paper.

'Yes,' Joshua confirmed. 'By your pistol I will die. And you, being the instrument of my passing, must come with me tomorrow.'

'Tomorrow?'

'In the evening. When the moon dissolves the sun. You will drive me along the road I need to take and ensure that the end comes.'

'No, I can't do it!'

'You tried to make Paul do it.'

'And then went to stop him!'

‘And then he killed himself because of what you had almost forced him to do. You are guilty, Moshe. Pay for it.’

The words cut Moshe to the quick, leaving no room for pride, opening him out to let hatred rush in and offer protection. He stared at Joshua with fear and loathing, seeing his logic as the road to hell, his blunt honesty as a weapon more final than the pistol in Paul’s hand. Joshua’s eyes were prismatic, reflecting all things to all men. Life and death were in those eyes, the vaults of heaven, the flames of hell, and below the eyes, rich with ambiguity, was a smile that was not a smile. He was gentle - and gently murderous, offering no respite from truth, his words uttered softly, offering nothing but cold, precise logic. Human beings could not contain him, nor cleave to what he valued; and Moshe, feeling human and therefore powerless, had to bend to his will.

‘Why me?’ he asked.

‘Because you came to this house. Because you and Kate found me, and through me became one; and because, having come to this house from Kate, you are completing the circle. Let the circle be unbroken. Let my passing fill men’s minds. When your child comes, and the dust of the Apocalypse reigns, you will look to the future.’

‘I feel nothing but hatred for you.’

‘You did not feel it before.’

‘I feel it now.’

‘You feel that hatred only for yourself - and I reflect it back onto you.’

The door behind Moshe opened and the cold air rushed in, caressing his neck with icy fingers that caused him to shiver. He glanced back over his shoulder, expecting to see the old Arab, and instead, with a shock, saw Leon Halcomb, his blue eyes bloodshot. Leon closed the door behind him, obviously drunk but in control, then bowed mockingly, his grin less than assured, his cheeks flushed and unshaven.

‘So sorry to have intruded,’ he said. ‘But I didn’t expect to find you here, major-general.’

Moshe did not reply, but stepped sideways, automatically, leaving the space between Leon and Joshua free, feeling faintly embarrassed. Leon stared at him, still grinning, ghostly in the dim light, then took a couple of steps forward to look down upon Joshua.

‘I’m Leon Halcomb,’ he said.

‘I have heard of you,’ Joshua said.

‘As a good journalist, I have a leading question: When do you sleep?’

‘You are drunk,’ Joshua said.

‘That’s true, Messiah or Mahdi. But your observation doesn’t answer my question: When do you sleep?’

‘I admit, your question baffles me.’

‘Because sleep itself baffles you. I came here at this time because I’ve heard that you see people any time.’

‘My time on Earth is brief.’

‘Any time and anywhere.’

‘People see me when they need to feel my presence - wherever they are.’

‘You don’t sleep?’

‘It is natural.’

‘When?’

‘When it is needed.’

‘Then you move through space and time like a ghost - or like a god seeking shelter.’

‘No, I am not a god.’

‘Then what?’

‘I am mortal.’

‘If mortal, how do you explain yourself?’

‘I am here to be witnessed.’

Moshe noticed the change in Leon, his subtle slide back to sobriety, his shoulders straightening and his grin disappearing as the fear cleared his bloodshot eyes. He rubbed those eyes with his fingertips, his head bowed in apparent weariness, then pressed his fingers into his cheeks and opened his eyes again. He studied Joshua for some time, his face thoughtful, no longer cynical, while the wan yellow light from the oil lamps made him look like a dying man.

‘Why did you come here?’ Joshua asked.

‘Curiosity,’ Leon said. ‘I couldn’t bring myself to leave the Holy Land without seeing its saviour.’

‘You are leaving?’

‘Tomorrow.’

‘As was written,’ Joshua said.

‘Nothing was written,’ Leon responded. ‘I just decided to leave.’

‘Why?’

‘My time’s up.’

‘Time runs out for us all.’

‘I think we’re talking on two different wave-lengths; what I mean is, I’m finished here.’ Moshe caught his brief glance, at once uneasy and challenging, as if, still surprised to find him here, he didn’t know what to do. Perhaps realising this himself, Leon turned back to Joshua. ‘You’ve obviously heard of me,’ he said, ‘but you talk as if you know me. Know me, shall we say, in an intimate manner, which certainly puzzles me.’

He was attempting to be flippant, but was no longer grinning, and his eyes, illuminated by the flickering pale yellow light, revealed suppressed fear. Moshe gazed at him with sympathy, no longer capable of despising him, feeling for him, much to his surprise, an almost tender regard.

‘I know you,’ Joshua said. ‘You were called, but not chosen. Like the majority of men you feel rejected and diminished in stature.’

‘I’m not sure I understand.’

‘You have not been chosen to lead. Needing to be blessed, you were blessed but not called, destined to swim in the tide that makes most men common. Unrecognised, you felt bitter, refusing to accept your fate, and in anger you turned away from Him, embracing sin and self-hatred.’

‘The thirteenth Apostle?’

‘Yes. The one called but not chosen. The one representing the mass of men and their hope for rebirth.’

Leon took a step back, as if someone had slapped him, his hands slipping away from his face and sliding down to his chest. He seemed haunted at that moment, his face drawn, his lips shivering, his skin, in the dim, flickering light, like some pale, ancient parchment.

‘This is nonsense,’ he said.

‘You did not come here for nonsense. You came here in search of suitable punishment before burying yourself.’

‘I’m not a masochist,’ Leon said. ‘I won’t be burying myself, metaphorically or otherwise. I’m leaving Israel for no other reason than that I’ve been here too long.’

‘You lie,’ Joshua said. ‘To me and to yourself. You are leaving because of failure - both in life and in love - and because, being called but not chosen, you now feel rejected. Your cynicism is a mask, hiding your need for the

faith you lost, and my presence here in Israel, which has focused your attention, has made you look deeply in the mirror and see your base self-betrayal. No, you are not a masochist, but you valued yourself too highly, putting yourself above other men and expecting His grace. An idealist, you asked for too much, wanting more than His blessing, wanting not only to be called as the mass of men are, but to be chosen and separated from the mass of men, as very few are. Yet why did you feel rejected? To be called is enough. Those who are called by being born are the salt of the Earth. The Earth abides and is abundant, nurturing his flock through its trials, and those who care called but not chosen are a bridge to the heavenly vaults. Those chosen are but His messengers, spreading His gospel throughout the Earth, but they are not held in greater esteem for it, since He sees all as equal. You were called but not chosen, one blessed, though not a saint, and in your arrogance you felt as one cast out and thus turned away from Him. Now you come here in shame, hiding your shame in cynicism, but you also come like a child in trembling guilt, in search of punishment and the ultimate cleansing. This is what you are here for.'

'*No*!' Leon cried out.

'Yes,' Joshua said. 'You came here as you were destined to come - to purge yourself with self-sacrifice.'

Joshua finally stood up, looking fragile and weary, then walked around the table and up to Leon, placing his hands on his shoulders.

'This man, Moshe, is your brother,' he said, 'as all men are your brothers. Like you, he suffers doubt and confusion through the weakening of faith. He was called and then chosen, but does not yet accept it; but tomorrow, when the moon dissolves the sun, he will have understanding. You leave Israel tomorrow. You go to bury yourself. Bring your belongings to this house and come with us before you take your final leave. Be a witness to understanding. Support your brother in his hour of need. Do this and you will come to self-sacrifice and find purification.'

His gaze was fierce and commanding, almost mesmeric in its brilliance, and his hands, arched over Leon's shoulders, now dug deeper to shake him. Leon stared back like a blind man, licking his lips and breathing harshly, the wan yellow light washing over his features to make him ghost-like. He glanced at Moshe, at once embarrassed and fearful, then tore himself away from Joshua's hands and turned his face to the door. He stood there, like a

man in a trance, breathing deeply and trembling.

Moshe stepped forward, wanting to say something, then stopped, unable to speak, feeling himself turning inexorably towards Joshua, who was staring straight at him. Joshua's eyes seemed too large, their brilliance piercing the dim light, his beard and hair tangled and dusty, his face fiercely ascetic. Moshe felt himself floating, spiralling out of his body, his essence, the reality, spreading out above Joshua and Leon. He looked down on them with pity, understanding what was to come, then his pity changed to love and compassion and enveloping terror. There was beauty in that terror, the recognition of necessity, and his essence, the reality, having observed and accepted, drifted back to the mortal shell of his body and bore witness to Leon's final decision.

'Damn you,' Leon said. 'Yes!'

Joshua smiled at him, without malice, even with warmth, and then he closed his eyes and lowered his head, having no more to say.

39

Kate slept after lunch, her swollen body exhausting her, and awakened, in the hot, sunlit bedroom, feeling deeply depressed. She scrambled carefully off the bed, blinking and gazing around her, still held in the web of the dream about death and destruction. Fiery skies and drifting smoke, the earth exploding around Jerusalem: in her dream she had seen it, an apocalyptic rain, but had also seen Joshua, his white robes red with blood, sinking down with his head in his hands, his eyes raised to the heavens. Now Kate felt haunted, convinced that something was wrong, and when she heard the front door slamming, then the growling of Moshe's car, she went to the window of the room, more fearful than ever.

He had said that he was going to the Knesset and might be there all night, but as she watched him drive off, creating billowing clouds of dust, she was more certain than ever that something unpleasant was in the wind. She still had that feeling now, in the bright light of morning, so she looked down at her considerably enlarged stomach and took comfort from it. She spread her fingers to feel the child, imagined its movement and felt better. Holding her face up to the sunlight pouring in through the window, she let the heat bring warmth to her skin and make her feel healthier.

'I want this child,' she said, taking comfort from her own voice. 'A boy or a girl, it doesn't matter, so long as it's healthy.'

Turning away, she went downstairs, into the empty living room, and glanced across the patio wall to Jerusalem, resting high on the sunlit hills. The domes and minarets of the Old City were clearly visible, separated from the modern town; and the thin white filaments of cirrus clouds drifted across the blue sky, so pretty they almost seemed artificial. It was a beautiful sight, at once peaceful and uplifting, and yet Kate could not shake off her feeling that something was wrong.

Entering the kitchen, she drank some water and then just stood there,

feeling isolated and uneasy, but not knowing why. It was something to do with Moshe. He had been moody ever since seeing the Americans - still affectionate, but more distracted, his brow constantly furrowed with anxiety, his lips pursed in a tight line.

Still sleepy, she closed her eyes, letting her senses take wing, trying to imagine her child, the years passing, the child growing, and then seeing, instead of a mature child, the whipping white robes of Joshua. The white robes were covered in blood and spread out on the sand, then blown off to reveal Joshua's face, his dead eyes staring skyward. Kate felt fear and deep grief - suddenly aware of what was wrong - and then, before she could open her eyes again, she saw Moshe and Leon. They were standing in the desert, their eyes fixed upon one another, the body of Joshua lying between them, the sand covering his spilt blood. Kate gasped and opened her eyes, saw the kitchen wall in front of her, then twitched when the doorbell rang, sounding louder than usual.

Hurrying out of the kitchen, she crossed the living room and opened the front door. It was Leon. His eyes were sleepless and shadowed, his face pale and gaunt, and when he shrugged, without offering his customary grin, his whole body trembled.

'Well, can I come in?'

She was startled to see him - not only because of his wasted appearance, but because she hadn't expected him to come to this particular house. So, she just stood there, staring at him, embarrassed and confused, then managing to get her senses back, she smiled and waved him in.

He sat down immediately, sinking into a soft armchair, his back turned to the hills around Jerusalem, the sunlight pouring in over him. He glanced about him automatically, his journalist's eyes still restless , but then quickly returned his gaze to her, staring up with deep weariness. In truth, he looked awful, his eyes baggy, cheeks sunken, the skin of his face almost yellow and pulled tight on his cheekbones. He was thin and seemed fragile, his jacket and trousers too lose, and his former ebullience, his witty cynicism, was no longer in evidence. Truly shocked, unable to accept the change in him, Kate sank into the chair directly facing him, feeling weak and forlorn. He shrugged and waved his hand in a desultory fashion, tried to grin and failed dismally.

'So,' he said, 'I've finally seen your new home. I feel rather privileged.'

'I didn't imagine you'd ever come here.'

‘Nor did I, Kate.’

‘Why did you?’

‘I’ve come to say goodbye. That’s it. I’m leaving it short and sweet.’

It was a sharp, unpleasant shock, surprising in its intensity, and she understood immediately, without the slightest doubt, that she was seeing him for the last time. There was pain in this knowledge, but also something chilling, as if, in awakening to her depression, she had sensed what was coming.

‘You’re leaving Israel?’

‘For good.’

‘When?’

‘This evening. I’d have told you a lot sooner if I’d known, but I just didn’t know.’

‘A last-minute decision?’

‘Something like that.’

‘You’re packing the oddments of your life in a suitcase and just taking off again.’

‘That’s it, Kate. Exactly.’

He ran his fingers through his hair, shaking his head from side to side, then distractedly massaged the back of his neck, eyes closed, head bowed. Kate felt a terrible sadness, the first intimations of loss, and her grief wasn’t eased by the conviction that he was seriously ill.

‘Are you alright?’ she asked him.

‘Yes,’ he said, ‘I’m fine.’

‘You look awful.’

‘Too much drink, too little food… Maybe that’s why I’m leaving.’

‘I doubt it. *Why*, Leon?’

‘Different reasons.’

‘Am I one of them?’

‘Absolutely.’

‘I’m not worth it.’

‘Alas, you are, Kate… But I learnt that too late.’

She didn’t know what to say, though she blushed like a schoolgirl, an odd reaction given their former relationship, perhaps due to her pregnancy. She was keenly aware of her own appearance, her extra weight and swollen stomach, so she lowered her gaze to the floor, feeling uncommonly shy.

‘You’re looking forward to being a mother?’

‘Yes, Leon, I am.’

‘Then why do you seem so very anxious?’

‘It’s not because of my pregnancy.’

She raised her eyes to the sunlight, hoping to beat her depression, but the ominous feeling remained to darken her thoughts. Looking at Leon, she thought of Moshe; thinking of Moshe, she thought of Joshua - and the three faces, merging in her mind, merely heightened her fear. Yes, it was fear, a premonition of pain and grief; and as she studied Leon’s face, noticing how the skin was stretched tight on the bone, she felt that his departure was merely the beginning of some much greater tragedy.

‘So, why are you anxious, Kate?’

‘Why are you leaving, Leon?’

‘Is that why you’re anxious? Because I’m leaving?’

‘It’s a shock - and you know it.’

He smiled bleakly at that, his eyes wandering around her face, always focused on some point just beyond her, never meeting her gaze.

‘You’re one of the reasons,’ he said. ‘I’d be a liar to say otherwise. I learned too late just how much you meant to me - and having learnt it, I lost you. So, yes, you’re one reason for my going - I believe we’ll both benefit from my absence - but there are, I must confess, other reasons, most of which I learned through you.’

‘Through me?’

‘Through your honesty. Your refusal to tell a lie. The lie, for instance, that you loved me - a lie you never once uttered.’

‘I didn’t feel good about hurting you.’

‘No, Kate, you wouldn’t. I think that telling me about Moshe hurt you as well, and I respect you for that.’

‘And still hate me a little?’

‘On the contrary, I still love you. If I value nothing else in my life, I *do* value that.’

She tried to keep her eyes upon him, but failed and looked away, warmed and embarrassed by his revelation, knowing how she had wounded him.

‘And the other reasons?’ she asked.

‘Too many to discuss,’ he replied. ‘Feelings of failure, feelings of shame, too many glances in the mirror, too many mornings coming out of sleep

wondering how to get through the day. What am I doing here? I don't really belong here. I'm an Englishman working for an American newspaper from a hotel in Israel. Schizophrenia, dear Kate. The utter loss of myself. I am leaving for a complex of reasons that sum up my lost self.'

She studied him thoughtfully, trying to read between his words, believing what he said, but also believing even more that the reasons he was offering were a subterfuge for something far greater. He refused to meet her gaze, but instead examined the space around her, as if, in looking at her, he was drawn to a presence over her shoulder. She shivered, feeling haunted, sensing that Leon was also haunted, his flight from Israel motivated by something that he could not divulge. Leon and Moshe: two haunted men, both hiding within themselves. She recalled Moshe arriving home in the early hours of the morning, his face troubled when he lay her down to sleep before leaving for work… Troubled, secretive, pretending to be light-hearted, yet emanating fear and despair from every pore in his body. Leon and Moshe: the men divided by Joshua's presence; the men joined by their commitment to her, both now steeped in misery. She thought about it and felt bewildered, wondering if she was to blame, and then saw Leon moving too slowly, standing up like an old man. He shrugged, grinning bleakly, too frail to be healthy, then rubbed his wasted face with his hand, the fingers visibly trembling.

'Where will you go?' she asked

'Back to England - home.'

'To your wife and kids?'

'No, I don't think so. It's too late for that now.'

He still avoided her gaze, instead looking over her shoulder, in search of that distracting, ghostly presence that she felt might be real. Joshua? Imagination? The concealed fear of her pregnancy? She tried to cast such dire thoughts aside, concentrating on Leon. He sensed her gaze and lowered his eyes, examining his dusty brown-leather shoes, rubbed his eyes as if they were filled with insects, then took a deep, painful breath. At that moment, she felt it - his fear and despair - and what she felt emanating from him suddenly gripped her like ice.

'What's the matter, Leon?'

'It's nothing. I'd better go.'

'There's something else, Leon - not your leaving - and it's eating away at

you.'

'You're imagining things, Kate.'

'No, Leon, I'm not. I know you as well as anyone can and there's something disturbing you.'

He made a move towards the hall, walking as if dragging chains, beads of sweat on his face, distractedly rubbing his forehead. She watched him, feeling frightened, contaminated by his odd behaviour, recalling her dream, the blood splashed on Joshua's robes, Leon and Moshe standing over his body, the sand swirling around them. A dream… no more than that… subconscious fears in search of meaning. She tried to rationalise the dream, to put her fears in proper perspective, but her feelings defied rationality and left her nerves jangling. Leon turned back at the hallway, his lips pursed in thought, and then, for the first time since he'd arrived, he managed to look in her eyes.

'You deserve Moshe,' he said. 'He's a lot stronger than I am. I think that if I'd won you, I'd have dragged you down to my sorry level, whereas Moshe, a much better man than I, will keep you where you belong. He's still not my favourite man - moral rectitude isn't my bag - but he is at least a man of strong convictions, so you're clearly well matched. Be considerate to him, Kate. He may be in for a bad time. Certain things could be happening that you won't quite understand, so try to keep yourself from blaming Moshe. In fact, he'll need your support.'

He went along the hallway and opened the front door. She followed him with her heart racing uncomfortably at what he had said. Reaching out, she grabbed his shoulder, making him turn back to face her, his eyes once more refusing to look directly at her and instead roaming restlessly about her. She felt the ghost over her shoulder, that emanation of pain and grief, and she trembled, as if touched by an icy wind, and then heard the whispered sibilance of her own voice.

'*What things*?' she said.

'I don't know, Kate. Not the details. I only know that there's a lot going on, and that Moshe is involved in it.'

'The Americans?'

'That's right.'

'And the Russians?'

'Right again.'

‘And does Joshua fit into this somewhere? Tell the truth, Leon. *Tell me*!’

She shook him hysterically, but he pulled away from her, stepped outside and then turned back to face her. For the second time, he looked directly at her, though only for a brief moment.

‘Yes,’ he said, ‘Joshua’s involved. At least I *think* he’s involved. I honestly don’t know precisely how, but I’m sure something’s coming.’

Kate thought of her dream - of the flame and smoke around Jerusalem, of Joshua lying dead between Moshe and Leon - and then the fear, which before had been like a fog, became a blade that cut all the way through her to leave her in disarray. She reached out for the door, feeling weak and dizzy, and then placed her free hand on her stomach, trying to find reassurance.

‘I’m sorry,’ Leon said. ‘This is no way to say goodbye. I wanted to warn you, but perhaps I shouldn’t have mentioned it, since it might make things worse for you. Who knows? It may not happen. The wind might blow it all away. Have faith, Kate, and be a good mother. The world won’t end with this.’

He made a move towards his car, but she grabbed his arm again, feeling torn by the finality of his departure, drowning in a sense of hopelessness at the thought of what might be happening. Trying to smile, but failing to do so, Leon held her hand.

‘Yes, Kate?’

‘One last thing. I have to know before you go. *Why*, Leon? Why did you take the blame for releasing the news about Joshua?’

‘Self-punishment,’ he said. ‘The punishment I deserved. In planning to tell the world about Joshua, I betrayed you - and I meant it as vengeance. Yes, it’s true I didn’t do it, that someone else beat me to it, but if they hadn’t, if I’d managed to get in first, then I certainly would have. It was the intention, Kate: that nasty need to make you suffer. You rejected me and I wanted to pay you back by betraying your trust. Someone saved me from doing it - Paul Frankel, I believe - but he only did what I’d planned to do, which hardly lessens my guilt. Would I have done it in the end? Maybe - maybe not. Now I’ll never know - and neither will you - and that, by itself, is enough to prove that I’m guilty. Do you understand, Kate? I took the blame because I deserved it. If I believed in nothing else, I believed in my love for you, and I’m hoping that I shouldered the blame to reaffirm that belief. I loved you and still do. I’ve kept my faith in that belief. And I want you to remember it and

keep it with you always - not in the hope that it'll make you feel guilty, but in the hope that you'll think of me with kindness instead of contempt.'

Kate felt the tears coming, trickling gently down her cheeks, and she stepped forward, shaking with emotion, to let his arms slide around her. He held her close to him, pressing his lips to her forehead, and his body, also shaking, seemed as breakable as a reed in the wind. He was fading away, killing himself with drink and guilt, and she knew that whatever she said, he would never return. She pressed her hands against his spine, digging her fingernails into his jacket, feeling no sense of betrayal, no guilt over Moshe, as she tried to let him know that she still cared and that her heart still beat for him. He responded with a groan, a muffled cry of loss and yearning, and then pushed her away from him, with tenderness, and walked back to his car.

He drove off too quickly, the car churning up clouds of dust, his free hand thrusting out through the window, waving slowly and weakly. Then he was gone, the dust settling back on the road, and she stood there in the silence, the tears still on her cheeks, her grief battling with the clammy, relentless fear that was creeping back over her. After a long time, feeling haunted and heartbroken, she returned to the empty house.

40

Moshe drove straight through Hebron, continued south to Beersheba, then followed the asphalt road past the remaining fertile stretches and into the desolate grandeur of the Negev Desert. Leon saw little, feeling trapped inside his head, his thoughts swirling like a murky, dangerous whirlpool that was sucking him down. He felt ill and weak, broken up at seeing Kate, and now, in the jeep, sitting beside the silent Joshua, he wondered just where they were going and what was to happen.

Glancing at Moshe, he saw that roughly handsome profile and noticed what could only be fear in the lines of his deeply tanned skin. That emotion was what united them, binding them together in speechless wonder, neither willing nor able to speak for fear of what might be said. Leon kept his eyes on Moshe, saw the sweat on his forehead, sensed his revulsion and despair, but didn't know what was causing it. Did he know what was going to happen? If he did, it could not be pleasant. What Leon sensed in him was a horror that was clearly contagious.

He tried to forget it, sinking down through himself, trying to will the past to return and blot out the present. He saw the fires of Con Thien, the smoking streets of Londonderry, the other nameless villages lost in flames in nameless countries where he had, in his weakness and self-deceit, lost the will to go on. Then his wife and two children, if not nameless, now faceless (How old were they now?), mere ghosts that occasionally crossed his mind and touched his soul with mild guilt. Beyond that, there was no past - only Israel and Kate - or, at least, an Israel in transition since the arrival of Joshua. The whole world had changed since then - as Kate had changed and he had changed - and he now felt cut off from all the strands that had woven his reality. He was a dreamer, a sleepwalker, impelled by intangible forces, neither knowing in what direction he was headed nor what he would waken to.

Glancing out of the jeep, blinking against the glaring light, he saw the

desert sweeping out to the mountains and their harsh, primal beauty. The sun was melting as it sank, the heat distorting its fiery brilliance, making it look like an enormous pomegranate with its blood-red juice flowing. Leon blinked and turned away, his gaze falling on Joshua, his profile made unearthly and mysterious in the darkening crimson glow.

Leon shivered, feeling frightened, wondering just who Joshua was, whether a saint or a sinner, God's child or the devil's, the incarnation of man's theological dreams or his most monstrous desires. The world had changed because of Joshua - and was going to change more - and yet Joshua, the most passive of living creatures, had done nothing to warrant it. He had simply materialised, emerging magically out of time, and had, since that moment, offered nothing but his seductive ambiguity. He had changed the world just by *being*, affirming nothing, denying nothing, simply waiting, with inhuman patience and dignity, for the world to reveal itself. And that the world had done, removing its mask and showing its real face, every impulse, good and bad, pouring out to create a new countenance. So, Joshua had changed the world - not by living; by merely existing - and now, as Leon accepted this fact, he felt his fear growing stronger.

'I have to catch a plane,' he said.

'Patience,' Joshua responded.

'It'll take hours to get back to Tel Aviv, so I want to know where we're going.'

'We are going to where the end begins.'

'What end? What does that mean?'

'It is not very far,' Joshua said. 'I will know it when we arrive there.'

Leon glanced across at Moshe, but saw no change in his face, the beads of sweat still glistening on his forehead, his lips forming a straight line. He knew that Moshe was not himself, that some imminent horror had engaged his thoughts, and realising this, his own fear no help at all, he recalled the light of terror in Kate's eyes and wondered what she had sensed.

'There's nothing here,' he said. 'We're in the middle of the Negev. Apart from the Bedouin, there's nothing but desert and mountains.'

'Here the end begins,' Joshua said.

'You still haven't explained that. You couch everything you say in ambiguity, as if frightened of truth.'

'Do you know what truth is?'

‘Do you?’

‘I seek to find it. The end begins where truth reveals itself and forces wise men to stutter.’

Leon did not reply, his fear of Joshua sealing his lips; instead he glanced across the burning plain at the immense, ochre cliffs. The sun was lower in the sky, an enormous blood-red orb in shimmering heat waves, its lower half melting and spreading out as twin streams of red-and-yellow lava. The cliff peaks had started bleeding - or at least appeared to bleed, the jagged peaks turning pink, then crimson, then blood-red, the blood dripping down the scarred face of the rock to cover its dark, pock-marked surface.

Leon was feeling cold even though he should be burning, and he turned his eyes away from the bleeding cliffs to look into himself. He saw darkness and light, the latter shrinking in the former, his soul retreating before the advancing unknown and what it might represent. The unknown was the darkness, the challenge in Joshua’s smile, and the light was the flickering of his own will at the doors of oblivion. Why had he come with them? What had he hoped to find? He had come because that light, the final flickering of his will, had been challenged by the mystery of Joshua’s smile to flare up in defiance.

‘I can’t fight you,’ he said before he heard himself speaking. ‘I no longer have the will to believe - and belief requires will.’

‘Open your eyes,’ Joshua said. ‘Don’t be frightened of looking at me. I am mortal, I bleed, I have known the sin of pride; and you, because you feel that sin acutely, are no less than I am. You spoke before knowing that you had done so - and that requires some belief.’

Leon opened his eyes to see the blood on the nearby cliffs, the sun melting and pouring away to dissolve into the shimmering heat-haze. A pale moon was materialising, still faint in the bright sky, and Leon felt, more than ever, that he was living the events of a dream.

‘What can you possibly show me that I haven’t already seen?’

‘What do you wish to see?’

‘Riddles, enigmas, conundrums - I didn’t come here for those.’

‘You wanted something specific?’

‘You promised me some kind of revelation.’

‘I promised only self-sacrifice and purification - and you obviously wanted it’

Leon flinched from that truth, recalling what had been said, accepting the accuracy of the statement, but appalled by its heartlessness. The Messiah or the Mahdi - possibly even the Christian Christ - Joshua lived by the breath of every word and would not let one pass. Was it heartlessness or faith? A stern belief in ultimate truth? Leon sighed in his ignorance of the answers, then glanced down at his hands. Flesh. Blood and bone. The only reality was himself. The only truth was the love he had felt and let slip through his fingers. He thought of Kate and felt despair, the awful grief of his final farewell, realising that in her, through her honesty and strength, he had understood the fallacy of cynicism and lack of commitment. She and Joshua were the same, two sides of the same coin; and Joshua, in his heartlessness, in his calm grasp of the truth, was the embodiment of an honesty and commitment that eluded most men.

'Why did I come?' Leon whispered, his voice emerging behind the thought. 'We're just driving like lunatics through this desert with no fixed destination.'

'You came for revelation.' Joshua's voice was like the wind. 'And what is a fixed destination when the Earth shifts so much?'

'I want to know where we're going.'

'You are frightened of your future.'

'I won't find any future in this desert.'

'You will. When the end begins.'

He turned his head to smile at Leon, a strange smile, touched with grief; a smile contradicting itself by binding joy to its opposite. Leon sighed again, feeling helpless and lost, no longer capable of trusting his own judgement, wondering where joy and anguish met, if one supported the other. Glancing at Moshe, he saw only the anguish, the excruciating pain of dreadful anticipation, and then he knew that the terror in Kate's eyes had been based on sound instincts. Moshe was caught in some kind of trap, his face revealing a secret nightmare, and Leon knew, with a dreadful sinking sensation, that it was bound up with Joshua.

'Are we close?' he asked of Joshua.

'Yes, I believe we are.'

'You don't know?'

'I only know what I feel - and I feel that we're close.'

'Stop the car,' Leon said.

‘Why should we stop?’

‘Because I don’t want to go any farther; I want to turn back right now.’

‘You are frightened?’

‘Yes.’

‘Why?’

‘I don’t know. I only know that I won’t go any farther, so I want to turn back.’

‘You will never turn back again.’

‘Moshe, please stop this car.’

‘If you insist, we will stop,’ Joshua said, ‘because this must be the place.’

Moshe slowed down and stopped, applied the handbrake and then just sat there, leaning slightly forward over the steering wheel, his eyes fixed straight ahead. He had not said a word throughout the whole journey, and now, in his silence, there was a tension that seemed almost palpable. Disturbed, Leon glanced around and saw the darkening crimson sunset, the top edge of the sun sinking behind the western cliffs, and the blood, which was the light of the sun, turning black on the parched rock. A pale moon was in the sky, its light seeming to dissolve the sunlight, and then Leon, in recalling what Joshua had said, felt even more frightened.

‘Here,’ Joshua said. ‘It ends here. This is where it begins.’

The contradiction had a resonance that shook Leon leaf and bough. As he turned to see Joshua getting out of the jeep, he felt himself beginning to shake as if with some fever. In desperation, he glanced at Moshe, wanting a sign of what was coming, but Moshe, as he also left the jeep, kept his eyes averted. Leon felt himself freezing, paralysed with indecision, only his eyes still alive, flicking repeatedly from Moshe to Joshua, ascertaining with the clarity and unreality of a vivid dream that they were standing about six feet apart, directly facing each other.

Moshe’s face now seemed ravaged by fear and doubt, his left hand wiping the sweat from his furrowed brow, then falling away like a wounded bird. Leon started out of the jeep, again feeling ill and dizzy, his eyes shifting from Joshua to Moshe and then back to Joshua. The pale moon had dissolved the sun - that image filled Leon’s head - and as he placed his feet unsteadily on the ground, the crimson twilight enveloped him. The sand dunes were rust-red, the red mountains darkly shadowed, and that red light, falling over Moshe and Joshua, made them both look oddly demoniac.

‘What is it?’ Leon heard himself saying, as if from a great distance. ‘What’s happening? Why are we…?’

The question died on his lips when Moshe visibly trembled, shaking his head from side to side in protest as he withdrew his pistol. Leon just stared at Moshe, not believing what he was seeing, suddenly realising what was happening, and then, in the desperate hope that it would not come about, he turned his gaze upon Joshua. The silvery-grey eyes were staring at him, ignoring the pistol in Moshe’s hand, glittering unnaturally, but with calm, ruthless challenge, through the darkening crimson dusk.

‘No,’ Joshua said. ‘Not Moshe. It was never him. It is *you*.’

Leon stepped back in confusion, then with swiftly mounting terror, understanding what Joshua was implying and unable to face it. Self-sacrifice and purification - now he knew what was meant by that - and the darkness, briefly erasing the crimson sky, was caused by his upraised right hand. He felt fear and despair, a ghastly revulsion and nausea, and as his hand dropped away, letting the crimson sky rush back, he saw the shock on Moshe’s face, the pistol dangling from his fingers, and realised that Moshe was merely to be the witness to his own transgression. The horror of this was catastrophic, whipping his nerves, lancing his soul: he, Leon Halcomb, the one called but not chosen, was, in the end, being chosen to test his faith in the flames.

Leon lost his senses then, finding faith in delirium, stepping forward into the streaming crimson haze, his hand outstretched and searching.

Kate dreamed of Moshe and Leon, of Joshua stretched out between them, and awakened in the crimson haze of sunset with her heart beating wildly. She opened her eyes and saw the room, its white walls tinged with pink, a bloody womb in which her soul was being contained, well away from the living world. There was no wind outside, allowing the silence to have dominion, and she heard, in the completeness of that silence, her own slow, painful breathing.

She climbed slowly off the bed, one hand resting on her swollen belly, stood up, feeling weaker than expected, and then put on her dressing gown. Her lonesome feelings still possessed her - had, in fact, been exacerbated by Leon’s sad farewell - and as she slid her feet into her slippers, she wished that Moshe would come home.

Leon had gone for good and this knowledge filled her mind. The sadness

overwhelmed her, but was mixed with a clinging fear, mainly caused by the fact that the morning's dream had been repeated that afternoon. She felt haunted and almost crazy, unable to grasp what was happening to her, convinced that the dream, with its blood and death, was a sign to the future.

The crimson haze filled the room, making her feel that she was still dreaming, and she walked too quickly into the lounge, feeling less claustrophobic. It was brighter here, less threatening, the crimson haze not so prevalent, as she walked to the glass doors of the patio and looked across to Jerusalem. It sat high on the hills, its gold and silver domes gleaming, its high-rise buildings silhouetted against the blood-red twilight.

Leon's departure had hurt her. Moshe's secrecy had caused concern. The dream about Joshua had dragged him back into her thoughts, his image spiralling languidly in her mind until it formed a large question mark. She and Joshua were bound together, her nerves tuned to his every impulse, and now, as she gazed upon Jerusalem the Golden, she thought about him with anxiety - and then she felt a sharp, stabbing pain that briefly numbed her whole body.

She cried out and pressed her stomach, shocked and terrified by the pain, then heard the roaring of thunder and glanced up to see lightning daggering impossibly across the clear crimson sky. Stunned, not believing it, she stepped forward to look again, then realised that she could not feel her legs and sank to her knees. Pain exploded through her left shoulder, stabbing down her flailing arm, and she cried out as her body twisted sideways, punched by an invisible fist. The thunder roared and the lightning flashed, and she looked up, amazed, seeing no trace of a cloud in the sky and wondering if she had started hallucinating. Pain exploded again - this time in her left hip - and she shrieked and fell onto her right shoulder, then rolled onto her back.

She closed her eyes and breathed deeply, trying to regain her senses, feeling the life returning to her limbs as the numbness wore off. A roll of thunder erased her thoughts, then she heard the crackling lightning, and the floor beneath her started shaking as if in an earthquake. The fear was luminous within her, forcing her eyes wide open, and she looked up to see jagged cracks appearing in the ceiling above.

Dust and plaster rained down as she slithered across the floor, moving backwards, stretched out on her spine, the child pressing upon her. Thinking

of this, her fear increased, almost turning into panic, and she reached out for the edge of a chair and pulled herself up onto her knees. She shook her head, trying to clear it, trying to think straight, but then the thunder rolled again, followed by the snapping lightning, and she turned around, still on her knees, to look out at the patio.

Joshua was standing there, his hands raised, fingers outspread. He was motionless, but his white robes flapped dementedly in a sudden, fierce wind. He was there and yet not there. His white robes were transparent, as, indeed, was his body. Through his transparent body she could see the low wall of the patio and , beyond it, the distant domes of Jerusalem.

Fear grabbed Kate like a vice - not love, but mindless fear - and she blinked and looked again to see his white robes whipping out from his raised arms. Now the robe was opaque, revealing nothing but his outlined form, the fierce wind sweeping across the patio and pressing the cloth to his body.

Thunder roared and lightning flashed, daggering out of a clear sky, darting fingers of silver in the crimson haze of the darkening twilight. The wind howled across the patio, sweeping pots and plants away, making Joshua's white robes billow dramatically and blowing his hair about. Then a bolt of lightning struck him, exploded blindingly around him, and he burst into flames, became a floating ball of fire, and then the fire became a dense cloud of smoke, which the wind quickly scattered.

The sound of Kate's screaming reverberated through her head, and she threw her hands over her ears as she turned away from the patio. The thunder roared, the floor shook, the chair beside her slid sideways, the carpet started rippling like waves and the bedroom door slammed shut. That sound shocked her badly, froze the scream on her lips, and she glanced around the room in a panic as the cracked walls spat plaster. The room was bathed in the crimson haze, growing darker and hotter, and the carpet, still rippling as if alive, had a will of its own.

Then death. The grave's darkness. She felt a violent, icy wind. The room was silent and the floor had stopped shaking and she heard her own breathing. She thought of death and then heard it, creaking like a rusty hinge. She turned her head and saw the bedroom door opening, very slowly and quietly.

The terror froze her where she crouched, in that darkening, crimson haze, but refused to let her move her eyes away from that opening door. A beam of

light trickled out, pouring across the floor towards her, coming closer as the door opened wider to let even more light out. Then a shadow materialised, thin at first, but growing broader, stretching along the rectangular strip of light to reach out and touch her. She tried to pull her hand away, her fingers stung by the ice of death, but the shadow grew wider and longer and finally stopped at her knees. She looked down at the shadow, her thoughts numbed by fear, then her eyes, against her will, travelled back along the shadow to where it ended, parallel with the doorway, at two tanned feet in sandals.

Joshua was standing there, silhouetted in the beams of bright light pouring out of the bedroom.

Kate stared at him, terrified, looking through him to the room behind him, as his body faded in and out like a light growing weaker, then stronger. He faded away and then returned, his white robes clearly visible, and his eyes, which had the sheen of polished stones, revealed nothing at all.

Kate sobbed and struggled backwards, moving along on her hands and knees, tugged between the seductive dread of death and the life kicking inside her. The living child gave her life, encouraging fear and the urge to flee, and she turned away from Joshua, trying to stand, feeling the cold at her back. The glass doors to the patio were the colour of blood, reflecting Joshua's white-robed form, and Kate screamed her defiance, a single word of denial, '*No*!', as his image disappeared from the glass and let her see Jerusalem again.

Freedom. The patio. She had to get out of the room. She saw the darkening sky, the pale moon in its ascendance, and stumbled forward to reach for the door handle and pull the doors open. Her hand fell on the door handle, and she shrieked, her fingers burning, then glanced down to see blue ice on the glass, illuminated by lightning. Straightening up, her senses scattering, she looked out at the patio and saw Joshua, clouds of sand sweeping over him.

She was drawn to the wintry depths of his eyes and felt them sucking her in. Inside him, she became him, her nerves tuned to his every impulse, feeling death coming closer every second, bringing horror or glory. She let it come and was not afraid, knowing Joshua as light and darkness, his nature as mysterious as good and evil, perhaps embracing them both. She felt the nearness of death, let it touch her and surround her, its silence seductive and sly, offering peace everlasting.

A dream. Or not a dream. An experience of the night. The fear limned the edge of the experience and then cast her back out. She heard sobbing - her own sobbing - and then opened her eyes again, the tears streaming down her cheeks as grief laid its chilling hands on her heart. She saw the lights of Jerusalem, the crimson sky turning darker, a cloud of sand drifting languidly across the patio, the frost melting in warm air.

The cloud materialised out of nothing, not too high up in the sky, first a dark spot, then what looked like a ball of smoke growing larger each second. It was dark and dense, boiling out of itself, mushrooming and spreading across the sky to blot out the pale moon. Kate watched it, mesmerised, remembering that first night, the discovery, as the cloud, growing larger, descended and drifted over the house. The first tendrils caressed the patio, spiralling lazily, draping the wall, then more cloud, like grey smoke, drifted down and obscured the whole area.

The lingering silence of death. The slow descent of death's darkness. She watched the moon disappearing, then the stars, then Jerusalem, and finally, when the lights of Jerusalem had vanished, she cried out for Moshe. In this pain was her humanity, the refusal to surrender, and she stepped back, her eyes fixed on the door, the child kicking inside her.

She saw Joshua on the patio. His head was bowed and he was weeping. He raised his head, his eyes gleaming through the grey cloud, and she saw his tears flowing. The child kicked in her stomach. Thunder roared and lightning flashed. She felt love and fear at once - for her child and Joshua, for Moshe and Leon, for Jerusalem and the promise of a future, no matter its nature - and then the lightning daggered down, snapping and crackling through the cloud, turning Joshua into flame and shimmering light, signifying the end.

Kate knew it was over - that Joshua's death had finally come - and her grief and exultation came together and fused her child to her. The grey cloud flashed and crackled, hissed and glowed in electric splendour, and then the thunder rolled again, the lightning daggered from the sky, and the glass doors containing Joshua's image exploded into the room.

Thrown backwards, Kate was saved, falling under the flying shards of glass, but she screamed in fear for her child, her stomach pounded by the sliding table, and then pain, or perhaps implacable horror, plunged her into oblivion.

The rolling thunder awakened Moshe, jerking him out of his stunned reverie, and he looked up to see a bolt of lightning daggering out of the cloudless sky. Startled, hardly believing it, he lowered his gaze to look at Joshua, saw him bathed in the darkening crimson haze as he stepped towards Leon. Moshe felt lost, his senses in disarray, but he suddenly understood what was happening, and he glanced wildly around him, at the desert and nearby cliffs, and then forced his gaze back to Joshua and Leon, where they stood in that fiery light. Joshua was reaching out to Leon, placing his hands on his shoulders, and Leon, at the touch of those hands, seemed to break deep inside.

'Not Moshe,' Joshua said. 'It was never him. Now you know it was you.'

The horror returned to Moshe immediately, making him tremble where he stood, the weight of the pistol dragging his hand down as it had not done before. What was happening was unreal, too bizarre to be true, and he wondered, with a bitter, self-wounding humour, if he was going insane. Yet Joshua and Leon were there, the one calm, the other shaking, and then he saw the bright delirium in Leon's eyes as he took hold of Joshua's wrists.

'No!' he said. 'I won't do it! You can't ask me to do it! I won't sacrifice myself for your madness! I won't do it! You're crazy!'

Thunder rolled and lightning flashed, daggering out of a cloudless sky, illuminating Leon's eyes as he clenched Joshua's wrists and tore his hands off his trembling shoulders. Joshua stepped back, smiling slightly, ambiguously, yet keeping his gaze firmly upon Leon, refusing to pardon him.

'You claim not to believe,' he said. 'You have lived your life by that claim. You have stumbled into darkness and despair in support of that claim. Is your pride, then, that meaningful? Is your future worth the having? Can the pain that you inflict upon yourself be any worse than this moment? Judge not as you be judged. What is asked is necessary. I must stand by my faith, and you, too, must so stand, pursuing the law of your logic to its absolute end. You claim to believe in nothing. That belief can now be tested. If, as you say, you believe in nothing, then you have nothing to lose. What you will be, which is what you want to be, will soon be revealed. You must press the trigger for me. Believing in nothing, you cannot sin. If, as you believe, there is no justice, the lack of justice absolves you. You will press the trigger, Leon. You have left yourself no choice. You were called but not chosen, and let bitterness destroy your faith, and now, with neither faith nor belief, you

have nothing to live for. My death will release you, Leon. It will bring you revelation. Whether exalted or debased, good or bad, right or wrong, that revelation, whatever it reveals, is all you have left. Now find out. Press the trigger.'

Leon sobbed and turned away, his shoulders stooped, his body shaking, and Moshe felt a terrible wonder and grief that almost destroyed him. Thunder rolled and lightning flashed, daggering through the darkening sky, and the pale moon, like an eye slowly closing, was obscured by a passing cloud. The crimson haze started fading, letting the cliffs sink into darkness, and Moshe felt the wind tugging at his clothes, then saw it sweeping the sand up. Leon sobbed and shook helplessly, his back still turned towards them, and the sand, carried up on the growing wind, started swirling around him.

Moshe slowly raised the pistol, feeling demented and unreal, only aware that it was he who had started this bleak affair and that he could not, no matter what Joshua said, allow Leon to finish it. The pistol wavered in his hand, being whipped by the rushing wind, and he saw Joshua's head, the noble profile, the whipping hair, and then saw Kate's face floating before him, her dark eyes filled with pain. That pain lanced through him, lacerating his resolve, and he tried to think of Israel, the Middle East, the whole world, willing himself to believe that salvation could rest in one gunshot. He tried, but did not succeed, feeling embarrassed by his vanity, unable to accept that the future could depend on his actions. Who was Joshua, after all? No one knew, nor ever would. He was a man of unusual talents, of seductive and mesmeric powers, but for all that he was still a normal man, flesh and blood, a mere mortal. Let the world decide its own fate, let the sands of time take charge: it was vanity and possible hysteria that had led to this moment.

'Don't be frightened,' Joshua said. 'Death will not have dominion. I go to my death to bring life to the wounded and lost. What is asked is necessary. Beyond death is revelation. And revelation, its horror or glory, is all we can hope for.'

Moshe started lowering the pistol, feeling defeated and ineffectual, now aware that no matter what Joshua said, he could not press the trigger. Thunder rolled and lightning flashed, and he looked up, disbelieving, and saw an immense black cloud descending as the sand spiralled skyward. The desert was in revolt, either attacking or defending Joshua, and Moshe lowered his eyes and saw Leon turning into the swirling sand. He stared at Joshua with

weeping eyes, rubbed his lips with his hand, let the tears trickle down over the knuckles, and then turned towards Moshe.

Moshe stepped back automatically, hardly aware that he had done so, as Leon stumbled towards him out of the swirling sand, his eyes demented and haunted. Joshua watched him, saying nothing, then raised his face to the sky. Leon reached out and snatched the pistol from Moshe and then turned away from him. Moshe stood there, briefly frozen, glancing down at his empty hand, then looked up to see Leon aiming the pistol at Joshua. The pistol wavered in his hand, being whipped by the howling wind, and Moshe stood there, paralysed, unable to accept what he was witnessing, and then found his hands clawing at Leon, trying to snatch the pistol back.

Leon sobbed and jerked away, then turned back, his right hand swinging, and the pistol, slammed into Moshe's head, made him stumble and fall. He managed to stay on his knees, his head reeling, filled with pain, and the blood, pouring over his eyes, seemed to pour over Joshua. He jerked and stumbled backwards - only then did he hear the shot - and then raised his hands to shoulder-level, his fingers curved downward. Leon cried out and fired again, without skill, his arm jerking, and Joshua twitched and took another step back, his white robes splashed with blood. Thunder roared and lightning flashed, then the third shot rang out, and Leon sobbed as Joshua fell to his knees, the sand swirling around him. He raised his hands in entreaty, his dangling fingers dripping blood, and then the wind, after the fourth and fifth gunshots, made him fall gently sideways. Leon sobbed and ran forward, aimed the pistol, fired the last shot, and Joshua, his bloodied robes flapping wildly, quivered once and was still.

Moshe climbed back to his feet, feeling dizzy, swaying slightly, then looked through the dense, swirling sand, trying to focus his eyes. He saw the huddled form of Joshua, his bloodied robes like a fallen flag, the pistol thudding into the sand by his head as Leon turned away from him. Moshe walked forward, moving awkwardly, feeling nauseous and weak, and reached out to take hold of Leon's shoulder and pull him towards him. His hand found the wind-whipped air, the sand biting his dangling fingers, then he saw Leon making his way past the jeep and heading into the wilderness. Leon was still sobbing - Moshe could hear it from where he stood - and that sound, replacing the thunder and lightning, was the cry of a dying man.

Moshe ran forward, calling out to him, trying to bring him back, but then

he stopped, the blood blinding him, the dizziness defeating him, and sank to his knees in the sand, feeling drained and exhausted. The wind abruptly died away, the swirling sand settled down, and the cloud that had obscured the moon and stars was no longer in view. Moshe wiped the blood from his eyes, raised his head to look at Leon, saw him shrinking and eventually disappearing in the vast, starlit wilderness. Only then, feeling broken, the full horror rushing through him, did Moshe turn back and look at the huddled form in the bloodied white robes.

Joshua was dead.

PART FIVE:

RESURRECTION

‘Touch me not; for I am not yet ascended to my Father: but go to my brethren, and say unto them, I ascend to my Father, and your Father; and to my God, and your God.’
-*John*, 20:17

‘The end begins where truth reveals itself and forces wise men to stutter.’
-*Joshua*

41

Every corridor in the hospital was being guarded by soldiers, all of them armed to the teeth. Moshe nodded at them as he passed, taking no pleasure from their presence, too aware of the reason for their being here and disturbed by the thought of it. He still felt that he was dreaming, that Joshua's death had not occurred, but news of the killing had been broadcast two days ago, and already the repercussions were shaking the whole Middle East.

Kate was in a private ward, leaning against her pillows, her long hair pinned up on her head, shadows under her eyes. Moshe stood in the doorway, hardly able to enter, his guilt and shame more than he could bear, his deception lying upon him like chains and draining his spirit. Kate smiled when she saw him, but her pain was clearly visible, etching fine lines around her eyes and making her lips shiver slightly.

'*Shalom*, Kate.'

'*Shalom*. Don't just stand there: come in. You look almost as ill as I feel, so we should change positions.'

He advanced to the bed and kissed her, appreciating her attempt at levity, but knowing that her smile hid real anguish. Stepping back, he saw her eyes, now luminous with grief and fear - grief at Joshua's death and fear for her baby, still convinced that the blow to her abdomen had caused her some damage. He pulled the chair closer, sat down and held her hand, trying to keep the guilt from his face, feeling furtive and criminal.

'So, how do you feel?'

She shrugged. 'Not too good. I have the same dreams every night, and during the day I'm depressed. I'm trying not to give in to it - honestly, Moshe, I'm trying - but the tears come before I can control them, making me feel like a child.'

'It's Joshua,' Moshe said, ashamed to even speak that name. 'You still haven't recovered from his death; it's been a bad shock to you.'

She turned her head away, shielding her face with a cupped hand, obviously about to weep and trying to hide it.

'Who?' she said. '*Why*? And what was Joshua doing out there? Someone must have taken him out there for that very purpose.'

'We'll probably never know,' Moshe lied. 'He was found by some wandering Bedouins two days after it happened.'

'Maybe the Bedouins did it.'

'No,' Moshe said, 'they didn't. We have witnesses who saw them in the camel market in Beersheba at approximately the same time that Joshua was murdered. The Bedouins stayed in Beersheba until late that evening and only found Joshua's body when making their way back to the Negev Desert. That, plus the fact that they had no weapons, makes it clear that they weren't involved.'

He wanted to reach out and stroke the nape of her neck, but his guilt at the deception he was practising made the thought seem indecent.

'So where are they keeping his body?'

'Right here in the morgue. We thought it best to keep him in Jerusalem until we decide where to bury him. He'll probably be buried near here, on the Mount of Olives, more or less where we initially found him.'

Kate started sobbing, her back still turned to him, her spine curved, her hands covering her face. Sunlight poured in through the window, falling obliquely on the bed, and Moshe felt it on his already burning cheeks as he leaned closer to her. She had pulled her hand away from his in order to cover her face, but he tugged at her elbow, gently coaxing her hand back, and when eventually it slid into his, he drew it close to his chest. She leaned against the pillows, sniffing mournfully, her gaze fixed on the ceiling.

'You'll forget it,' Moshe said. 'Sooner or later… The pain won't last forever.'

His own words cut a hole in him, letting more guilt rush in, the rank hypocrisy of his remark producing a wave of shame and remorse. Joshua was dead - and he, Moshe, had planned it and witnessed it - and now, weaving his web of deceit, he wanted to walk out and throw up. He had lied to Kate, betrayed her, and was still deceiving her; and he would, to his dismay, have to maintain that lie into the future. Thus, his love turned to lead inside him, weighing him down and draining his spirit, so he raised her hand and pressed his lips to it, hoping to comfort himself.

‘I’m always frightened,’ Kate said. ‘I feel frightened and confused. I’m tormented by the conviction that Joshua’s not really dead, that his presence, at least, is still around me, refusing to leave. The dreams are so vivid - the sort of dreams you don’t forget - and sometimes, when I sleep during the day, I’m not sure that they’re dreams. I’m often convinced that I’m awake - I check the room and pinch myself - and then, if I blink and look again, I can still see him standing there. He’s always standing in front of the door, right there, where you stood, saying nothing, his hands by his sides, smiling ambiguously. Sometimes I speak his name. When I do, he smiles and nods. When he does that, I usually feel comforted and drift back into sleep…’

She blinked repeatedly and licked her lips, obviously foiled by her own thoughts, trying to reconcile reality with the dream and touch solid ground.

‘I can’t forget what happened,’ she continued. ‘I mean what happened the night he was murdered. When I saw him, when my world turned upside down, I felt nothing but fear. I loved him, but he frightened me - whether in my mind or not - as if, instead of the warmth I’d felt in him, suddenly there was nothing but malice. It was evil, pure and simple, radiating from his image; and I wondered then, and still wonder now, if it came out of me.’

‘No,’ Moshe said, squeezing her hand reassuringly, ‘it didn’t come out of you. It was death, Kate - you sensed that he was dying - and what you felt was that horror. Given that, you must have imagined the rest of it - you might even have imagined Joshua - but whatever it was that caused that havoc, it didn’t come from you.’

Not convinced, she closed her eyes to think, then opened them again and glanced down at the hand Moshe was holding.

‘He seemed evil,’ she said. ‘And then he seemed good again. At first, in my terror, I sensed evil all around me, and then, not much later, when he wept on the patio, he radiated compassion and love, as he did when I knew him. Now we’ll never know, and I’ll always be haunted by it: not knowing whether Joshua was good or evil - or maybe both at the same time. Perhaps he *was* just a mirror, reflecting what we normally hide - or an empty vessel being filled up with our virtues and vices. Was he God’s or the devil’s? We’ll never know… But his death… Yes, it haunts me.’

Moshe could not meet her gaze, feeling defiled by his own deceits, so he studied the sun-tanned skin of her wrist, very smooth, highly sensual. He thought of Leon in the desert, his eyes bright with delirium, being lured into

hell's fiery portals to find revelation. Glory or horror; salvation or damnation: just as he would never discover Joshua's true nature, so, too, he would never come to know what Leon had found. Death, almost certainly; and beyond that, the unknowable: the peace of eternal sleep or the nightmare of life everlasting. Moshe was chilled by that possibility, wanting only the one life, so he bent over and kissed Kate's frail wrist, taking hope from her touch.

'You're very affectionate today, Moshe.'

'I'm lonely without you.'

'I feel frightened without you - unprotected - and I want to get out of here.'

'You have to stay a few more days. They want to keep their eye on you. They don't think the blow caused you any damage, but they need to be sure.'

It was the wrong thing to say, as he realised on the instant, silently cursing himself for his stupidity when she turned away from him. She covered her face with one hand, her body trembling as she wept, obviously trying to choke back the tears but failing to do so.

'Damn him!' she sobbed. 'It was Joshua - I didn't imagine it. He was there, materialising wherever I looked, and he caused all that havoc. What was he trying to do? Was he deliberately trying to hurt me? He devastated our home and nearly killed me and might have damaged our baby. It was Joshua. I know it! When he smiled, I was terrified. He made all those things happen, tried to frighten me and hurt me, as if seeking revenge for something I'd done. But what did I do? Was he after our baby? Damn him! He tried to hurt the child, and I'll never forget that.'

She shook her head in disbelief, still sobbing and shaking, while Moshe held her hand, feeling humiliated and remorseful, unable to forget what he had done, almost crushed by the weight of it.

'No,' he said, 'I think you're wrong. I think it was all some sort of accident. You were very close to him - you seemed to be tuned to his every impulse - and I believe that when he was dying, maybe just before his death, the emotions he went through, rage or fear, grief or pity, were made manifest through you, in the house, with particular force. Joshua might have thought about you – the woman always closest to him – and, in thinking about you, caused the manifestations that occurred about the same time as his death. Not evil or malicious, Kate. Possibly neither good nor evil. Perhaps simply a paranormal manifestation of highly charged emotions. You were there, Kate,

and felt what he felt at the moment of his death.'

In saying this, he was accusing himself, since he had sanctioned the original plot; and now, knowing it, unable to forget it, his humiliation was bitter and cut deep. He felt haunted and debased, pursued by his own shadow, unable to gaze into the mirror that would show him his conscience. He had done it for Israel, even knowing how Kate felt, and in doing so had made a clear choice between his country and Kate. He was loathe to admit this, but the truth of it stuck, and his only consolation was the fact that he had changed his mind at the last minute, stopping either out of fear or because of his enduring love for Kate. He would never know which.

'We'll never know,' Kate said despairingly, almost echoing Moshe's thoughts. 'That's what haunts me more than anything else. We'll never know if he was good or evil, compassionate or malicious, and because of that, if anything happens to my baby, I'll never forgive myself.'

'Yourself or Joshua?'

'Not Joshua - me. For having given myself to Joshua. For believing, without proof, on faith, that Joshua was good. I should never have done that - it was romantic and immature - and now, even suffering as I am from his death, I can't help feeling hatred for him - for endangering my child.'

'The baby's in no danger.'

'Damn you, you don't know that! You're a man, you're not pregnant, and you can't know what I feel, so don't sit there and tell me there's no danger. *You don't know a damned thing*!'

Moshe recoiled from her outburst, slightly stunned by her vehemence, and felt the blush rising to his cheeks as the hurt made his heart leap. But she turned her head away, obviously just as shocked as he was, and then started trembling again as she choked back her tears.

'Oh, damn it!' she said. 'I didn't mean to say that. Really, Moshe, I didn't. I'm behaving like a bitch, trying to take it out on someone. I'm frightened for our baby, I'm convinced that something's wrong, and so, even knowing that it's your child as well, I'm trying to make you suffer in my stead, as all bitches do. Yes, I'm a bitch - I'm being thoughtless and selfish - but I just can't get it out of my head that something is wrong.'

Sniffing her tears back, wiping her eyes with her fingertips, she turned to face him once more. He stood up and leaned across the bed to pull her into his arms. She came to him, like a child, her strength and courage briefly

weakened; but he embraced her and kissed her tangled hair, trying to reassure her, even while secretly enduring the torments of hell. He deserved what she had said for the damage he had done - to Joshua, Leon, Paul Frankel, and her - and accepting this bitter truth while holding her in his arms, he let his brimming pain be the punishment that might never end.

'The baby's fine,' he whispered. 'There's no need to worry. I've talked to the doctors and they said nothing's wrong, that you're just suffering from a form of mild hysteria that will soon go away. You have to try to forget Joshua - forget what happened in the house - and instead remember that you and the baby are doing just fine. You'll soon be a mother, Kate - *a mother* - and nothing else matters.'

'You spoil me.'

'You deserve it.'

'You deserve more than me.'

'Having you, I'm worth more than I was. I want our child… I want you.'

He pressed his lips to her soft hair, holding her tight, feeling her warmth, and then she raised her face and kissed him on the lips, clinging to him, her eyes closed. He then closed his own eyes, kissing her cheeks, her neck and shoulders, travelling down through himself, through his crippling guilt and shame, to take succour from the magic of her skin, with its promise of permanence. Their child would be an anchor, holding them steady in future storms, and he knew, as he gradually released her, that she sensed this as well.

'I have to go now,' he said. 'I'm wanted urgently at the Knesset. There's a lot of Arab movement along the borders and it's causing concern.'

'Because of Joshua?'

'I'm afraid so. They're convinced that he was murdered by the Jews. Certain Jews are, of course, equally convinced that he was murdered by Arabs.'

'You think there'll be more trouble?'

'I'm certain of it, Kate. The Arabs believe we murdered their Mahdi, so they're set for a Holy War.'

He didn't want to discuss it further, so he leaned forward and kissed her, then hurried to the door and glanced back, trying to seem unconcerned. She was still sitting upright, leaning back against the pillows, and her dark hair, being piled upon her head, made her face look too thin. She smiled, but her

eyes, large and luminous, didn't show the same humour.

'*Shalom*,' Moshe said.

'Come back soon,' Kate replied. 'It doesn't matter what we say or believe - I only relate to what I feel - and I'm frightened for my baby, particularly because the dreams are so vivid, they seem almost real… Joshua's presence…? I *feel* it.'

He nodded and walked away, feeling as if he was deserting her, shivering briefly because her parting words clung to him like a lingering bad dream. Armed soldiers were in the corridors, nodding respectfully as he passed, contrasting starkly with the white-smocked medics and nurses who were moving about with an air of quiet efficiency. The windows framed a bright day, the sun high in the sky, beaming down on the lower slopes of the Mount of Olives, where the hospital was located. Moshe longed to be outside, in open space and fresh air, but he forced himself to enter the chilly gloom of the well-guarded morgue.

Joshua was stretched out on a surgical table, still wearing his white, bloodstained robes, his hands folded primly on his stomach, his feet bare and washed clean. Rabbi Latinavots, wearing a plain shirt and slacks, was silently gazing down upon him. The Rabbi glanced up when Moshe entered, then shook his head from side to side - a gesture of weary bewilderment, if not actually of sadness.

'*Shalom*, Moshe.'

'*Shalom*, Jozsef.'

'Well, he's back where he came from. A mortal man, he died like a mortal man and can be buried as such.'

'Let's hope so,' Moshe said.

He stepped up to the surgical table and looked down at the dead Joshua, wondering what he had expected to find and feeling shocked when he found it: the same mask of inhuman composure and unnatural, undeniable serenity. Joshua's face was the light, drawing it in and reflecting it, turning it back upon Moshe to make him uneasy. The face was a cipher, offering nothing, revealing all, at once innocent and wise, very young and very old, too blank to be real, too vivid to be forgotten, defying, in its terrible beauty and repose, definition and logic.

Moshe gripped the edge of the table, his heart racing with sudden panic, seeing the child in the man, the man in the child, ascetic lips, sunken cheeks,

the dark beard flecked with grey, the nose aquiline, the closed eyes with long eyelashes, forehead smooth, the hair matted. A mature man. A child. One dissolved into the other. The face was a contradiction: a blank page, the map of history, a void waiting to receive and be received and thus fill itself up. Shocked, Moshe stepped back, touching his dry lips with his fingers, blinking and then staring at Jozsef as if seeing a ghost. Jozsef smiled and spread his hands in the air to suggest resignation.

'You felt it, too?' he said. 'You saw it? What is it we're looking at? A mortal man, certainly. But a *normal* man? I doubt it. There's something in that ostensibly normal face that defies comprehension. Who was Joshua? *What* was he? That mystery remains unsolved. It will haunt me for the rest of my days, frustrating my faith.'

He lowered his hands to his side, glanced at Joshua and shivered, then let his gaze roam around the gloomy, chilly morgue before settling back on Moshe.

'You saw Kate?'

'Yes.'

'And how was she?'

'Not too good. She's still convinced that that blow to her stomach might have harmed the baby. The doctor thinks so, too, but I didn't tell her that, since, as the doctor also said, her other fears aren't helping her condition.'

'What other fears?'

'Joshua,' Moshe said, deliberately keeping his gaze away from the corpse on the surgical table. 'She's having exceptionally vivid dreams - so vivid they seem real - to the degree where she's no longer sure if she's dreaming or hallucinating. She sees him repeatedly, just standing there, smiling, his hands by his sides. When she speaks his name, he disappears.'

He saw Jozsef's startled expression, his eyes widening, his cheeks flushed, and the dread that had recently took hold of him slithered back through him.

'What's the matter, Jozsef?'

'What you said… about what Kate saw… A lot of people, Jew, Arab and Christian, are reporting the very same phenomenon.'

'Dreams of Joshua?'

'More like visions. They also see him when awake. He's been seen in broad daylight, by more than one person at a time - at the Wailing Wall, in

the Haram es-Sharif, by the Garden Tomb and in the Garden of Gethsemane - and even in the Church of the Holy Sepulchre, reportedly standing at the Sepulchre itself, gazing down at the shelf that was cut out of the rock of Golgotha. Of course it could be mass hysteria - common in religious matters - but some of the sightings have been remarkable… and reported by reliable people.'

Moshe glanced automatically at Joshua, felt fearful and looked away, wondering about the nature of reality, if the mind harboured a separate world.

'It's not helping us,' Jozsef said. 'It's merely increasing speculation. The obsession with Joshua, always acute, now seems even greater.'

'I know,' Moshe said. 'And it's infecting the Arabs. Rashid Idriss is claiming that Joshua is the Mahdi, that the Jews arranged his murder, and that the Moslems are now honour-bound to take his body to Mecca.'

'We can't concede to that?'

'No,' Moshe said, 'we can't… And that's why Rashid's talking about a Holy War… A war designed to capture Joshua's body and transport it to Mecca.'

'Do you think that's likely to happen?'

'Yes, Jozsef, I do. The whole Arab world is now obsessed with the notion of Joshua as their Mahdi, and because of that, for the very first time, they've put their differences aside. They don't care about the Americans or the Russians - they only care about their Mahdi - and the possibility of dying in a Holy War is a song in their hearts. They're massing all along our borders, defying the American and Russian so-called forces of intervention, and I believe that their sole concern is the capture of Jerusalem and, thus, Joshua's corpse.'

'Is Joshua's corpse worth such a war? I'm not sure that it is. If Jerusalem is threatened, it might be best to surrender the corpse and avoid a war that no one can win.'

'We can't do that, Jozsef, for more than one reason. As you surely know yourself, too many Jews think of Joshua as the Messiah; consequently, if we handed him over to the Moslems, we'd be accused of blasphemy and find ourselves fighting our own Jews. Likewise, the Christian world has adopted him as the Christ of the Christians and would therefore be outraged if we surrendered his body to the Arabs. No, Jozsef, we're hemmed in on all sides, so we have to keep hold of him.'

He turned away from Jozsef, not wanting him to see the guilt that his words had resurrected. What he had said was perfectly true, but it wasn't the most important truth: the fact that Joshua's body had to remain here in Israel to inflame the Arabs into the war that America needed. The plan formulated in the desert now had to proceed, to enable the American forces to intervene - to their own benefit as well as Israel's. Moshe had sanctioned that plan, in shame and humiliation, but now, unable to meet Jozsef's gaze, he wondered what he had started.

'Joshua,' Jozsef said, letting the name hang in a brief, uneasy silence. 'He came, he saw, and he conquered - and he hasn't left yet.'

They stared at Joshua's corpse, both feeling frightened and fascinated… and at that very moment, as if Joshua had responded, the floor shook and they heard a dull rumbling sound that seemed not too far off.

Moshe knew the sound well and felt the dread lancing through him; he saw nothing but Jozsef's widening eyes as his head jerked around. The floor shook again, the rumbling noise was repeated, and then, impelled by instinct, Moshe rushed to the door of the morgue. Jozsef called out to him, but Moshe didn't look back, and then he heard Jozsef's footsteps close behind him, following him as he hurried out of the morgue and turned into the corridor. The armed soldiers were alert, checking their weapons, bawling instructions, while the medics and nurses seemed frozen, as if trying to see through the walls. The rumbling sound came again, making the walls and floor shake; then Moshe heard another sound, the deafening roar of an explosion, and a jet plane shrieked low across the hospital, heading south to the Negev.

Moshe started running, hearing the soldiers shouting on all sides, their voices drowned out by another jet plane, then a third and a fourth. The walls shook and trolleys rattled, bolts were slamming home in rifles, and then another explosion, obviously close to the hospital, reverberated around the corridor and was followed by the rumbling of collapsing walls. There was bawling, a single scream, more jet planes shrieking overhead, as Moshe rushed into the main lobby to see swirling clouds of dust and smoke where part of a wall had been blown away. Moshe stopped running and took it in - the bloody bodies in smouldering debris - and then he turned in the direction of the reception office, in search of a telephone. More jets screamed overhead, another explosion came from the direction of Jerusalem, and then an army lieutenant, surprisingly young, bathed in sweat, emerged from a

dust-filled doorway and stopped just in front of him.

‘HQ has just called,’ the young lieutenant said breathlessly. ‘The whole Arab world seems to be on the move and heading straight for our borders. They’re already crossing at Lebanon and still advancing from Syria - and their aircraft are heading towards us from Jordan and Egypt. Obviously they’re defying the Americans and the Russians - neither of whom have made any move yet - and the attacks appear to have been synchronised with the bombs that have just exploded all over Jerusalem. Right now, on the West Bank, and in certain areas of Jerusalem, there are an awful lot of Arabs on the loose, most bearing arms. In short, we have a war in Jerusalem - and at all of our borders.’

Jozsef hurried up to Moshe, breathing heavily, sweating profusely, his dazed eyes taking in the swirling smoke and the broken, bloody bodies lying in rubble. Clearly shocked, he stared at Moshe, but the latter turned away from him, unable to believe that he had sanctioned what was now just beginning.

42

It was a slow descent into hell. At first, from the summit of Mount Tabor, it looked almost pretty, the sun shining on the hills of Galilee, reflecting off the lake itself, beyond which, the smoke of war no longer visible, were the lost Golan Heights. It was also pretty in the other direction, looking across the Plain of Jezreel, where the Israeli tanks, forming a wall in front of Megiddo, were moving forward into purple mushrooms of purple smoke and darting fingers of yellow flame. The Lebanese guns were beyond the plain, south of Nazareth and Haifa, and their shells, exploding between the advancing tanks, soon started darkening the clear air. Moshe looked back in the other direction, the binoculars straining his eyes, and saw the Syrians advancing, a mass of ants on the rolling hills, spread out between Tiberias and Zefat, a thin smoke drifting over them.

Most of Galilee was gone and he couldn't hold the plain much longer, so he stood up in the jeep, feeling weary and bitter, and waved his right hand, slowly and methodically, to indicate that the evacuation of Mount Tabor should commence. The troop-trucks and jeeps moved out quickly, trundling down the dusty road, sunlight reflected off mirrors and weapons, a strong wind whipping parched grass. The dust soon filled the air, forming a single, boiling cloud, and Moshe had to use his binoculars again to see the broad plain below him. The tanks were still advancing, zigzagging sluggishly, trying to avoid the explosions of scorching flame and spewing soil, crawling forward into the thickening smoke with the foot soldiers spread out behind them.

'We need more aircraft,' Sergeant Aranow said. 'We can't hold out without them. Those tanks won't hold anything back if we don't get more air support.'

'We won't get it,' Moshe informed him. 'We have to let this area go. Most of the aircraft are being used to stop the Arab advance in Sinai, the few

remaining to keep the Jordanians back, though that can't be for long.'

'We're pulling out of the Jezreel Valley?'

'We don't have a choice. The Syrians have captured most of Galilee, the Lebanese have captured Haifa, and so we have to pull back north of Samaria and pray that something positive will break.'

'That leaves a lot unprotected.'

'I repeat: we have no choice. Anything north of Nablus will simply have to go, including all the coastal towns north of Netanya. We've got to try to hold Tel Aviv and Nablus, and keep them out of Samaria. If they manage to capture Samaria, they'll get Jerusalem and we can call it a day.'

The scenario, a nightmare, was not much worse than the reality: the Jordanians were advancing towards the River Jordan, the Egyptians were advancing across Sinai and would soon be in the Negev, and in and around Jerusalem, where army strength was minimal, there were bombings, ambushes and minor battles every hour of the day. Moshe despaired when he thought about it, and felt fear when he thought of Kate, wondering if she was safe in the hospital, guarded or not.

'It's hopeless,' Sergeant Aranow said, scratching his nose in a distracted fashion, his eyes scanning the Plain of Jezreel, below, where the tanks were advancing. 'We can't hold them off on all sides without some kind of help. We don't have enough men, enough tanks, enough aircraft, enough anything. We need the intervention of the Americans or Russians, whether we like it or not.'

Moshe looked down on the Plain of Jezreel, which seemed a lot closer now, and saw the smoke swirling across the tanks and over the men massed behind them. The Lebanese guns were firing constantly, the shells hissing and then shrieking, exploding with a monstrous roaring between the tanks, sending black smoke boiling outward from balls of fire.

'They're already moving,' Moshe said. 'They were just taken unawares. They didn't think the Arabs would ignore them, they didn't expect them to be co-ordinated, and they certainly weren't prepared for the sheer number of Arabs involved.'

He thought of this with bitterness, not forgetting his own role in it, now faced with the fact that the situation was out of control, and that neither the Americans nor the Russians could put a stop to it. The Americans had miscalculated, underestimating Arab fervour, and had, in re-routing their

forces to the Arab oil states of the Persian Gulf, depleted their forces in the Arab Republic of Egypt and opened the door for the invasion of Sinai. This situation, bleak at best, had degenerated further when the Soviets, outraged by the 'imperialist aggression' of the Americans, used the major portion of their forces in Syria and Jordan for a 'defensive' invasion of northern Iraq, thus weakening the line dividing the Syrians and Jordanians from Israel, allowing them to quickly conquer all of Galilee. Both the Soviets and the Americans were now rushing in fresh forces, but the likelihood of them stopping the Arab advances seemed very remote. Indeed, Jerusalem could fall before the Americans managed to reach it; and Moshe, when he thought of this possibility, knew what the damned suffered.

The road ahead was levelling out, snaking towards the Plain of Jezreel, and Moshe gazed across the flat expanse of land at the smoke in the distance. The tanks looked like large stones, the troops like ants at the rear, and the shells were raining down at a murderous rate, the noise now much louder. The earth roared and erupted, spewing soil and jagged flames, the latter forming into dazzling balls of silvery-white fire that spun crazily in the air and then spiralled away as black smoke. The tanks moved left and right, lumbering through the inferno, and then the soldiers, suddenly within range of the guns, started zigzagging furiously. The shells shrieked and then exploded, fire and soil swirled and soared; then one tank was hit, slewing sideways, vomiting smoke, and then a series of explosions ripped viciously through the soldiers, throwing them into the air like broken dolls and then hurling them down again.

Moshe tore his eyes away and looked at the tracks ahead, the column now following the road across the plain to the ruins of Megiddo. The army was scattered around Megiddo, the tents flapping in the wind, with more tanks and half-tracks and men moving out very minute. From here, Megiddo was a small mound on the skyline, rising above the army massed around it, the modest ruins overgrown. Megiddo*: Har Megiddo*. Armageddon: the ultimate battlefield… Now the battle had come, very possibly the final battle, and Moshe suddenly smelt the smoke and cordite as the trucks raced into the thick of it.

The trucks growled, the guns roared, the shells shrieked and exploded, and the smoke, swirling wildly above the tanks, was carried back on the wind. The air abruptly turned dark, became a grey, choking cloud, and then

the trucks up ahead started scattering left and right, driving around the outlying tents to brake near the big guns. Men were running back and forth, reduced to shadows in the murk, while the big guns, roaring awesomely, rocking violently to and fro, made the ground shake beneath them as they belched flame and smoke.

Moshe's jeep came to a halt, its wheels shrieking in soft soil, and he immediately stood up and jumped out, the smoke making his eyes sting.

General Meshel was in the command tank, jabbing his index finger at some officers, all of them grouped around a trestle table that was covered with maps. He glanced up when Moshe approached, not smiling, his eyes bloodshot, but his hand reached out to touch Moshe on the shoulder in a gesture of sympathy.

'We have to pull back,' Moshe said. 'The Syrians have nearly reached Mount Tabor. When we left, their southernmost flank was closing in on Sharona, so it's only a matter of time before they reach here.'

'And the Lebanese?'

'Their guns are close and their army's advanced to Yoqne'am. Another arm has advanced through Haifa, is moving down the coast and should shortly be reaching the outskirts of Caesarea.'

'What about air support?'

'It's not possible,' Moshe said flatly. 'We need all our remaining aircraft down south, for the Sinai and Jordan.'

The guns roared and the ground shook, the Lebanese shells kept falling, and more tanks and half-tracks were pulling out, churning up the dried soil. Moshe gazed across the Plain of Jezreel, saw the flames and soil erupting, the oily black smoke sweeping across the weaving tanks and zigzagging men. It was a nightmarish scene, extraordinarily violent and surrealistic, the soldiers looking like spectres in the dark, streaming smoke, the tanks resembling weird, prehistoric monsters, some broken and dying.

'We're being slaughtered,' General Meshel said.

'Pull them back,' Moshe responded. 'We can't hold Galilee any longer, so there's no point in staying here.'

As the general reached for the field phone, Moshe stared across the plain to see the Syrian jets glinting above Mount Tabor, heading straight for the camp. He opened his mouth to warn the officers, automatically, hardly thinking, but before he could say a word, the jets were diving straight at him.

He saw the smoke trail of the rockets, heard the jets screaming past, and then the ground ahead erupted, geysering up between the tents, forming monstrous umbrellas of spewing soil and smoke, immense balls of dazzling fire spreading out and soaring upward and then splashing back down again. The tents disintegrated in a second, became smouldering rags in flight, flapping furiously and falling back on the human torches that were screaming dementedly. The jets returned, shrieking hideously, the rockets howling; then the hell began again, the flames devouring men and tents, a tank outlined in flames, a truck shuddering and then exploding, the smoke and dust sweeping across the camp with the force of a hurricane.

General Meshel was bawling, his lips close to the field phone, ordering his tank commanders to pull back, his voice barely audible. The ground spasmed and erupted, making a catastrophic din, and a cloud of dust was swept through the tent on a wave of fierce heat. Moshe turned and saw light, was sucked into it, somersaulting, fell down through a tunnel of scorching heat and found himself on his back, sprawled out, spread-eagled. Dust and soil rained upon him, showering out of an oily black smoke, and he kicked his feet, rolled onto his belly and then stood up again. General Meshel was slamming the phone down, smacking his temple with his free hand, then he blinked, stared at Moshe and nodded vigorously, his lips set in a tight line.

'Right,' he said, 'they're retreating. They can actually see the Lebanese. You men…' He turned to the officers gathered around the table…'Start evacuating the camp.'

The officers scattered in different directions, zigzagging around the erupting earth, while Moshe looked above the flames of the burning camp to see the jets flying off. Blackened men were screaming terribly, all blistered, some still smouldering, and the medics were racing frantically through the smoke, carrying stretchers and field packs. Moshe saw blazing trucks and tanks, the skeletal frames of burnt tents, a blind man wandering aimlessly about, his hands holding his bloody head. Then Moshe looked the other way, across the Plain of Jezreel, and saw the first of the retreating soldiers racing out of the smoke, the tanks rattling and rocking behind them, some smouldering, some burning.

Another field phone rang and General Meshel grabbed it, his free hand reaching up to stop the blood that was trickling out of one ear. He shook his head and listened intently, trying to hear above the exploding shells, while

behind him, like phantoms in a nightmare, more retreating men emerged from a wall of smoke. The shells were still falling, tearing the men to pieces, the flames illuminating the soaring smoke that seeming to push the soil ahead of it, after which the soil rained back down through the smoke in great looping waves. Moshe stared at it, mesmerised, his guilt and shame freezing thought, then General Meshel tugged at his arm and held out the field phone.

'It's the Prime Minister,' he said. 'He wants to talk to you. He sounds agitated.'

Moshe took the phone, covering one ear with his hand, trying to hear above the roaring of the guns and the cataclysmic explosions.

'Shlomo?'

'How are things?'

'Terrible,' Moshe confessed. 'I'm afraid we've lost the whole of Galilee, so we'll have to pull back.'

'Where are the Syrians?'

'Right here.'

'And the Lebanese?'

'Nearly here. They're also moving south along the coast, clearly heading for Tel Aviv.'

Ben Eleizer was silent, obviously shocked by what he was hearing, and Moshe looked straight ahead to see more men racing out of the boiling smoke. They were running and falling, catapulting and spinning, mere puppets in a maelstrom of daggering flames and dark, swirling soil. A tank shuddered and exploded, its barrel snapping and flying away, its turret-lid falling back to reveal a man's head and shoulders, briefly silhouetted in a tongue of yellow flame that licked over the hatch, burning the crew alive.

'I need you back here,' Ben Eleizer said eventually. 'I want you to personally take charge of Joshua's body. I want the body removed from the morgue and taken out of Jerusalem to our temporary HQ in the New Hebrew University, where we'll keep it until this conflict is resolved, one way or the other. We can't afford to lose him, Moshe - it would have catastrophic results - and Jerusalem is now practically in a state of siege, with Arab fighters swarming all over the place. I'm talking about professional fighters, men well-trained and briefed: they've bombed the Central Post Office and the Hebrew Union College, the Jewish Agency, half a dozen synagogues, and various parts of the Mae Shearim quarter. We caught some of them at it and

tugged their tongues for information; they belong to Rashid Idriss, parachuted into the Negev, and now we've reason to believe that Rashid himself is here, making his way to Jerusalem with a group of skilled Fatah commandos, determined to get to the Augusta Victoria Hospital and take Joshua out of there.'

'That's where Kate is,' Moshe said.

'I know, Moshe. I know. You can collect her as well and bring her here to the university; then we'll transfer her to the Hadassah Medical Centre, where you'll be able to keep a closer eye on her. I want you to do it immediately, Moshe. We can't afford to lose Joshua's body. Joshua might be the only card we have left: we might need him for bartering.'

'Bartering?'

'With the Arabs. I don't think the Americans can help us. In their greed for the Arab oil states, they left it too late, and now, even though they're trying to get here, I don't think they've a chance. The Arabs will get here before them - we can't pretend otherwise - and the only thing that might keep them out is the offer of Joshua.'

'What about the Jews and Christians?'

'We can't worry about that now. Let the Christian world protest - we can deal with that when it comes - but an Israel filled with any kind of Jew is better than no Israel at all.'

'Okay,' Moshe said, 'I'll do it.'

Ben Eleizer hung up and Moshe put the phone down as the retreating men poured in around the tent, covered in filth and exhausted. The falling shells were coming closer, the explosions making the tent shake, the dust and soil pouring in on waves that lashed his skin like a whip. He heard the growling of the tanks, the frantic roaring of trucks and half-trucks, and looked around to see them all moving off, heading back towards Samaria. General Meshel was staring at him, suppressed pain in his bloodshot eyes, then he turned away and watched his men retreating, his shoulders stooped in dejection. Moshe walked up to him and took hold of his shoulder, wondering how it could come to this.

'They want me in Jerusalem,' he said. 'I've got to go immediately. Don't hang around here any longer than you have to; we'll need you down south.'

The general nodded but said nothing, his gaze fixed on the retreating soldiers, then he suddenly stepped forward, straightening his shoulders on the

move, bawling orders and waving his hands as the column moved off.

Sergeant Aranow was in the jeep, the ground erupting about him, and he glanced around as Moshe waved his hand and told him to move. The jeep was moving as Moshe climbed in, reversing sharply in clouds of dust, and then it whined and wound its way through the retreating soldiers, passing trucks and half-tracks. Moshe caught a glimpse of General Meshel, standing upright in another jeep, but then a cloud of smoke obscured him, Sergeant Aranow put his foot down, and when Moshe next looked the general was gone, now far behind with his marching men.

They soon left the column behind, travelling an empty road to Jenin, then turning onto the road to Nablus and Ramallah, racing past fields of olive trees and grape vines and wheat, the sun blazing out of a sky free of smoke, the wheat bending in waves. Moshe saw little of the scenery, his senses numbed by defeat, his sole thought to get Kate out of the hospital before it was too late. He felt drained and exhausted, letting time pass in a dream, but then Sergeant Aranow shouted while stabbing the air with his index finger. When Moshe looked up, he saw a column of dust spiralling over the road ahead.

Moshe reached for his Uzi sub-machinegun as Sergeant Aranow slowed the jeep, one hand still on the steering wheel, the other slipping down to his pistol. They approached the column of dust, saw one civilian, then another, then a great mass of civilians tramping the road to Jerusalem, all fleeing from the direction of Netanya, in fear of the Lebanese. Some were walking, others were cycling; some empty-handed, others with suitcases; yet others pushing carts piled high with furniture, their children sitting on top. The column was moving slowly, the wheels of carts creaking and squeaking, and occasionally a car would inch through, its horn honking repeatedly.

‘Go through them,’ Moshe told his driver. ‘Just go through them. We have to get to Jerusalem.’

The sergeant did as he was told, advancing slowly through the shuffling people, honking his horn when they didn’t move quickly enough, ignoring their pleas for a lift. They seemed lost and desolated, a cloud of dust hovering over them, the wind whipping frocks and baggy trousers and racing on through the wheat fields. The column stretched right down to Nablus, the town chaotic with refugees, but thinned out considerably at the far side, letting the jeep race ahead, the road rising and falling and bending on the way to Ramallah.

There were more refugees at Ramallah, snaking a mile back from the town, and Moshe felt a mixture of grief and frustration when Sergeant Aranow slowed down again. His grief was for Israel, for the dead and the homeless; his frustration sprang out of his fear for Kate and what might already be happening. He was frightened of being too late - of marauding Arabs getting there before him - and when the jeep's horn started honking, when they parted the refugees, when they crawled at a snail's pace through the crammed streets of Ramallah, he felt the fear rising like a sea that was sucking him under.

They broke through at last and headed straight for Jerusalem, the sergeant pressing the gas pedal flat until the jeep whined in protest and started shaking. They soon reached the outskirts, passing apartment blocks and hotels, and Moshe noticed how the streets were unusually empty, how the air stank of smoke and cordite. He heard shots in the distance, an explosion, more shots, saw some Jews running across the road ahead, crouched low, armed with rifles. Sergeant Aranow didn't stop as Moshe raised his sub-machinegun, holding it level with his chest, looking left and right, searching for the glint of an assassin's weapon as the buildings rushed past him.

He saw nothing but the smoke, a grey gauze over the streets, rising and falling, coiling languidly, spiralling upwards and then drifting away. There was the smell of conflagration - burning wood and smouldering rubble - and then he saw buildings reduced to ash, with blue and yellow flames flickering. An explosion, geysering sparks, a great mushroom of black smoke - and then the jeep turned a corner and some Arabs were firing at it, crouched low behind the ruins of someone's home, their weapons snapping and spitting. Sergeant Aranow cursed, lowered his head and put his foot down, and as the jeep raced ahead, bouncing over the street's debris, Moshe twisted to the side and aimed his sub-machinegun and then pressed the trigger. The weapon bucked in his hands, making a horrible, metallic noise, and he saw the rubble spitting pulverised limestone as he raked the whole area. The Arabs dropped out of sight, jumped up again as he passed them, and their guns started screeching and rattling as they dropped far behind. Moshe fell across the seat, letting the bullets whine overhead, then he sat up and saw the walls of the Old City, also covered in skeins of smoke.

The jeep bounced over more rubble, careened around a corner, and then raced alongside the Old City, through another pall of grey smoke. There were

corpses lying by the roadside, the Arab robes flapping forlornly, the black coats of the Orthodox Jews almost brown from the dust.

Moshe looked away, revolted, fixing his gaze on the Mount of Olives, its summit rising above the pall of smoke and made bright by the dazzling sun. More jet planes shrieked overhead, flying south to Sinai, and some Israelis, armed to the teeth, passed by in a truck. The lower slopes were free of smoke, the air crisp and clear, but then, when they neared the hospital, the smell of smoke returned, and Moshe, to his horror, heard gunshots and another explosion.

'Hurry up!' he snapped. '*Hurry*!'

Taking no precautions, Sergeant Aranow raced recklessly into the hospital grounds and then slammed on the brakes, letting the jeep slide into a minor skid and then stop in a cloud of billowing dust. Moshe jumped out without a word, seeing more smoke streaming skyward, his heart pounding as he raced forwards the entrance, thinking only of Kate. The smoke was coming from the far end, from an explosion around the corner, but some of the windows in the front wall were shattered, the walls pockmarked with bullet holes. The Medical Director was in the lobby, broken glass beneath his feet, shaking his head wearily from side to side as some nurses surrounded him. Seeing Moshe, he raised his right thumb and gave him a smile.

'Kate's out of it,' he said. 'I took the liberty of moving her earlier. You'll find her in the Hadassah Medical Centre, probably under sedation. There's something wrong with her, Moshe, but we don't know what it is yet; in the meantime, she's a lot safer there than she would be here. Arabs shot us up and they might not be the last; they also planted a bomb at the northern wing and blew half the wall away. Luckily, there's nothing there but the morgue - and dead meat feels no pain.'

Moshe turned away and started running, closely followed by Sergeant Aranow, the latter unclipping his pistol on the move, the former still holding his sub-machinegun. Smoke was drifting along the corridor, growing darker and more dense with each step they took, until eventually, by the time they reached the morgue, they could scarcely see anything. Moshe ran straight into the morgue, not concerned with lingering Arabs, and was met with a wall of dense smoke, beyond which he could not see. Sergeant Aranow crashed into him, grabbed his shoulder, steadied himself, and then they both inched forward through the smoke and looked down on the familiar surgical table.

Joshua’s body was gone.

43

The pain in his head was fierce, dragging Jozsef from unconsciousness, and he opened his eyes and looked around him, at first thinking that he was still in the morgue. The reality came soon enough: the truck growling and shaking beneath him, the canvas top shivering and shadowing the watchful eyes of Rashid Idriss and the Fatah commandos, most of whom were sitting on the wooden benches on both sides of the vehicle, their weapons clattering together as it bounced over holes in the road. Jozsef sat up slowly, feeling dizzy, his head aching, and then gingerly touched the lump on his head where Rashid's pistol had felled him. He licked his lips and blinked repeatedly, trying to focus his watery eyes, and then looked beyond his feet to see the dead Joshua stretched out on the floor. He stared at Joshua for a very long time, feeling worse every second.

Rashid was kneeling on the floor of the truck, holding onto the wooden bench for balance, directly facing Jozsef and right beside Joshua's prostate body. He leaned forward, a slight smile on his face, though no malice was visible.

'How do you feel?' he asked.

'You knocked me unconscious, Rashid.'

'I didn't want you running off to tell your friends that we were taking the Mahdi.'

'You mean stealing him,' Jozsef said.

'I mean *taking* him,' Rashid replied. 'Joshua, as the Mahdi of the Moslems, must be buried in Mecca.'

He smiled with his lips but his eyes were bright with fervour, afire with the conviction of the belief that had inflamed the whole Arab world. Jozsef glanced down at Joshua, shivered briefly at the sight of him, then glanced around the rear of the truck, at the faces of the young Fatah commandos, most of whom were exhausted and filthy, their clothes reeking of cordite.

They stared back at him, merely curious, no enmity in their eyes, but still he felt uncomfortable and nervous, wondering what would become of him.

'Why did you bring me along?' he asked.

'You might be useful as protection. Presumably the Jews value their Chief Rabbi and won't want us to harm him.'

'Where are we going?'

'The Negev Desert.'

'And then?'

'We'll meet our brothers. Right now, the Arabs are advancing across the Sinai Desert and will soon reach the Negev.'

'You will never take Jerusalem.'

'I think we will, Rabbi. The presence of the Mahdi has united the Arab world at last – and now nothing can stop us.'

'The Americans or Russians might stop you.'

'That seems highly unlikely. Their mutual suspicion and greed has greatly reduced their chances of stopping us. Most of the Russians are in Iraq, most of the Americans are in the Persian Gulf, and now, though both sides are rushing more troops to Palestine, those men will arrive far too late to be of much use to them. We will capture Jerusalem and, once having done so, will keep the Moslem world united around it, once and for all.'

Jozsef held his aching head and examined the floor of the speeding truck, understanding that what Rashid had said could be true, and deeply, bitterly shocked by the thought of it. *Yerushalayim*, the Holy City, the sacred centre of Jewish belief, might indeed fall to the Arabs, taking Israel down with it, thus tearing the very heart out of Judaism and rendering it prostrate. The possibility was monstrous, too horrible to contemplate, and he tried to blot it out of his mind, feeling pain when he failed.

'You won't help the Moslems by claiming that Joshua is the Mahdi when the rest of the world thinks of him otherwise. Joshua, whoever he is, has become all things to all men, and your insistence that he's the Mahdi will only turn the Christians and Jews against you.'

'The Christians can do nothing – and the Jews will no longer hold Palestine.'

'And what do you intend doing with the Jews once you have Israel?'

'We'll treat the Jews as successive Jewish governments have treated the Arabs: Palestine will be open to those Jews who obey Palestinian law.'

The irony was not lost on Jozsef, but he found it difficult to smile, his heart breaking at the thought of the possible fall of Israel and the equally likely dispersal of the Jewish nation. He glanced out of the back of the speeding truck, saw the road racing away through sandy flatlands, isolated houses and hamlets whipping past and then receding, bathed in the brilliant light of the sun beyond the cloud of dust being thrown up by the wheels of the vehicle. It was his land, his home, the very roots of his being, and losing it, he now realised, would be tantamount to losing his very soul.

'The Jews won't bend to accept Arab law,' he said. 'You know that just as you know, as surely as you're sitting there, that eventually you'll remove the Jews completely from Israel.'

'The choice will be theirs,' Rashid replied, his brown eyes glittering with uncommon intensity. 'We'll only be doing unto them as they've done unto us - dispersing them, if they resist, as the Arabs have been dispersed, and letting them enjoy the refugee camps that we'll no longer need. Try not to be upset, Rabbi; think of it as natural justice. The Jews will simply learn to taste what they've made the Arabs eat: every Arab village demolished to make way for new Jewish homes will be rebuilt over the ruins of those Jewish homes; every Arab farmer exiled to make way for Jewish settlers will return during the exodus of those settlers to the refugee camps. I call it natural justice, but it's not even that harsh: we'll merely return to the Arabs what the Jews callously stole from them.'

'There were injustices, certainly.'

'It was deliberate exploitation.'

'We're talking of the mistakes that men make when they fight for their lives.'

'The Jews weren't fighting for their lives - they were fighting to steal this land - and now, having had the land stolen from us, we are fighting to get it back.'

'And what if you succeed? Do you believe it will bring you peace? There'll be no peace in Israel so long as the land is divided.'

'It wasn't divided until the Jews came. Before the Jews, this land was not at war. The Jews divided the land, as they also divided Jerusalem, robbing the Arabs not only of their homes, but also of their houses of worship. The Jews, in the self-righteousness of their obscene religion, spat on Muhammad.'

'Certain Jews - not all. You also have your extremists. The actions of such

people, on both sides, haven't always been helpful.'

'And that's your excuse? That only the extremist Jews are guilty? Is the Chief Rabbi absolving himself from sin by denying his responsibility for Jewish actions?'

'I'm not denying my personal sin, nor the sins of the Rabbinate; I'm merely pointing out that both sides have their extremists; and that both sides, Jew and Arab, have been guilty of certain crimes.'

'Our only sin, Chief Rabbi, is that we let the Jews deprive us of our homeland. We didn't steal from the Jews; they stole from us. That crime was one-sided.'

'The Jews also needed a homeland and it had to be Israel. In coming here, we simply returned to our original source.'

'We let the Jews settle here. We gave them all the land they needed. When they had what they needed, they wanted more and began stealing from us. They proliferated like lice, taking more and more from us, casting us out of our own homes, murdering those of us who resisted, and eventually setting their sights on the whole of Palestine, irrespective of Arab rights. Don't mention original sources to me: you came here and stole from us.'

Jozsef didn't reply, knowing the argument would go in circles, both of them right, both of them wrong, neither capable of offering satisfactory answers. He looked out of the growling, rattling truck, saw the Arab hamlets and smallholdings, the parched land rising and falling on both sides, becoming ever more barren. The driver was using the back roads, avoiding the main towns, and the army truck, having been stolen from the Israelis, passed on unmolested. Recognising the area, Jozsef knew that they had just passed Beersheba and were heading south into the Negev Desert, where the war would soon rage.

He stared at Joshua, fascinated, thinking of what his presence in Israel had wrought - plots, counterplots, religious squabbles and political intrigues, a world divided in the name of God, the Holy Land once more in flames; and then he imagined a dark, devouring mass closing in on Jerusalem. Galilee had fallen already, the Jordanians were heading for the Jordan River, and right now, farther south, their hearts and minds inflamed by Joshua, thousands of Arabs were swarming across the Sinai Desert and approaching the Negev. The picture was terrifying, more so in his tormented thoughts, his imagination, overwrought with grief and despair, turning it into a nightmarish

reconstruction of the portals of hell. It was, indeed, Armageddon, that final, most terrible battle, and Israel, if it managed to survive at all, would never be the same again. Jozsef wondered if he would survive to see it, or if the Arabs would let him return; and the possibility that he had seen it for the last time filled him with woe. He glanced at Joshua and then at Rashid, the dead more alive than the living, and wondered at the mystery of belief that had bound them together. Rashid, staring back with brown eyes, was no longer smiling.

'What will you do with me?' Jozsef asked.

'When we get there?'

'Yes.'

'We can hardly leave you to the mercy of the desert, so you'll have to come with us.'

'To the Arab Republic?'

'Of course.'

'And then?'

'Wherever you wish.'

'Including Israel?'

'No, I'm afraid not. Once in power, we won't permit the return of the exiled Chief Rabbi.'

'You mean you'll make an example of me.'

'That's more or less the case. Your absence will emphasise that Jerusalem is no longer Judaic, that the Rabbinate has little authority, and that the new rulers, the Moslems, will not be intimidated by protests from even the most illustrious of Jews. I'll repeat what I said before and would ask you to remember it: Palestine will be open to those Jews who obey Arab law - but certain Jews, such as Ben Eleizer and Major-General Moshe Eitan, will be deported as an example to Jewish citizens that we mean business. No Jew of major importance will be allowed to remain, but the nameless, as long as they obey our laws, will be treated respectfully.

'You will, in short, remove all possible resistance.'

'We will ensure peaceful sovereignty.'

Jozsef lowered his head, closed his eyes and sighed as the truck growled and shook and carried him far away. He thought longingly of Jerusalem, as if years had already passed, as if the shock of his abduction had disorientated him completely and was eroding his sense of time and place. He thought of Kate and Moshe, of Ben Eleizer and his fellow rabbis, and they seemed as

remote as the faces from his childhood, conjured out of some impossibly distant era that would never return. He was travelling into the wilderness, across God's scorching anvil, and he felt that he was making his final journey into the void of the unknown.

'It was strange,' Rashid said, 'to blow the wall of that morgue away and walk in and find you standing there.'

'Why strange?'

'Unexpected. What did you want in there? We know from our sources that you went there every day - alone and for no apparent reason - just to look at him. What were you looking for, Rabbi? What were you thinking? You've consistently refused to acknowledge him as either Messiah or Mahdi, so why were you so obsessed with him?'

Jozsef glanced around the truck, at the faces of the young Fatah commandos, then looked out at the road as it unwound behind him, becoming a black line in the distance, snaking back through the desert. They were now deep in the Negev - the word actually meant 'south' - and he felt that they were travelling south forever, to the world's hidden centre. He saw the rippling sand dunes, the ochre cliffs tearing the blue sheet of the sky, and his thoughts travelled down to that point where man's logic meets truth. Why indeed had he repeatedly visited the morgue? What had drawn him there every day? One: the fact that Joshua's body had not decomposed. Two: what the law courts would term 'irresistible impulse': a need beyond personal hunger or logic, an inane fascination. What had he hoped to find? Had he imagined that the dead would speak? Now, thinking about it, trying to avoid Rashid's brown gaze, glancing constantly, repeatedly, at Joshua, he had to face the hard truth: he had gone there in expectation, waiting for something, wanting something, knowing only that Joshua had haunted his dreams with a startling reality.

'I don't know,' he confessed.

'I think you do,' Rashid replied. 'I think that you were looking for the answer to your own brimming doubts.'

'What doubts?'

'About Joshua's nature. About who or what he was. About whether he was the Messiah or the Mahdi or the Christ of the Christians.'

'I don't believe he was either.'

'Then what?'

‘I refuse to contemplate.’

‘You contemplated when you went to the morgue every day he was lying there.’

‘I was curious, of course.’

‘One day is curiosity. *Every* day is more like an obsession, an irresistible impulse.’

Jozsef was startled, as if someone had slapped his face, not believing that Rashid could have used that particular phrase by accident.

‘Yes,’ Rashid continued. ‘You may not have known why - you may have refused to admit it - but you went to that morgue, every day without fail, because you felt that you could find revelation in Joshua’s dead eyes.’

‘What revelation?’

‘The secret. *That* secret! The truth that lurks in sleep. The one mystery that has challenged all men, irrespective of creed: the secret, the unanswerable riddle of the nature of being. Yes, Rabbi, you went to the morgue - in fear and trembling and expectation - or, rather than *going* there, you were *drawn* there because Joshua had called you. Messiah or Mahdi? The Christ of the Christians? Do such questions, in the end, really matter in the presence of Joshua? You said it yourself, Rabbi - he’s become all things to all men - and that, in the end, is all that matters as the world spins in panic. *Of course* Joshua is the Mahdi! What else could he be to us? If Joshua is all things to all men, then he *must* be our Mahdi. You want him. We want him. The whole Christian world wants him. We all want him and need him, for reasons both good and bad; and, this being so, no matter the rights or wrongs, someone must eventually claim him and loudly proclaim him. Jew, Christian or Moslem? What known logic can resolve this issue? The truth, my Jewish friend, my searching rabbi, is in irresistible impulse. You were called as I was called. We were both called to that morgue. We were called, Jew and Moslem, to journey south to where the desert breeds silence.’

‘Silence?’

‘The unanswerable. The only thing that unites all men. In my dreams he came to me, his Arab robes white and radiant, and spoke of the need to believe. Truth or untruth. A clear choice between two opposites. Black or white, no grey areas in between, only hard, pure commitment. Come to me, he said. Either come or turn away. If you come, you must come for your brothers, who are all things and all men. And so, Rabbi, I came - to the

morgue and to you - and there, at that moment, with the sound of the bomb still reverberating, I saw you leaning over his body and knew that you, too, had been called. No, Rabbi, you're not our protection. You're not here for that. You're here because he called and you answered, so now we are brothers. Will I take you to the Republic? Will I leave you in the desert? Those are questions that are written on the wind as it blows towards Judgement Day.'

Jozsef felt an electric shock, the sudden light of revelation, looking deep into Rashid's brown eyes to see himself twice reflected. What, indeed, was Joshua, if not all things to all men? The Messiah, the Mahdi and the Christ, all rolled into one. Did it matter who held Jerusalem? Did it even matter who claimed Joshua? Joshua, being all things to all men, would join opposites together. Jerusalem would still stand, singing the gospel of the One, and life, being all things and all men, would continue evolving. Jerusalem the Golden, if nothing else was an abstraction, a symbol of the brotherhood of Man, built on disparate creeds. It didn't really matter who held Jerusalem - nor who was in charge of the body of Joshua - what mattered was that Joshua, in the wisdom of his silence, had forced men to examine themselves and acknowledge their frailty. Jew, Moslem and Christian - all were one and the same - and Armageddon, that final, most terrible battle, would resolve their sad differences.

'Leave me in the desert,' Jozsef said. 'I want to die here in Israel.'

'We will see what is written,' Rashid replied. 'Let Joshua decide.'

What was it? The end! And exploding hell of noise and light and heat: the truck screeching and careening sideways and leaping upward and rolling over as its canvas top burst into flames and the men, tumbling into each other, screamed and burned and died. First the sky, then the mountains, then the desert spinning over, a wall of flame rushing at him and around him, then the ground smashing into him. *Aircraft* - one thought: a spark of consciousness fading rapidly - then sinking through the infernal bedlam, the screaming men, the crackling flames, through parting curtains of pain to a darkness that swept soothingly over him, offering oblivion.

The wilderness.

Silence.

44

The doctor was waiting for Moshe when he arrived at the Hadassah Medical Centre, the lights flashing off his rimless glasses and concealing his eyes. Moshe glanced quickly around the lobby, unable to ignore the weeping and wailing, the floor covered in stretchers, the young soldiers soaked in blood, parents and relatives grouped around them, murmuring soothing words, sobbing. He looked away again quickly, returning his gaze to the doctor, and knew instantly, from the expression on the doctor's face, that the situation was serious.

'I'm sorry to drag you away at a time like this,' the doctor said, 'but I thought I should take to you personally, before you talk to Kate.' He nodded towards the corridor at the end of the chaotic lobby, then lightly touched Moshe on the elbow and led him away. 'Let's go to my office,' he said. 'It's a lot quieter there. These kids were all butchered in the battle just outside Netanya, and we don't have any room left in the wards.'

They made their way across the lobby, weaving through the wounded, sometimes forced to step over stretchers and their pitiful burdens. Moshe was relieved when they reached the corridor, leaving the suffering and grief behind, the stench of cordite and urine and sweat being replaced by the disinfected air of the hospital proper. The doctor said nothing as they walked, his Lithuanian face composed, and Moshe felt his heart fluttering with panic at what was to come. They soon turned into the doctor's office, a small room, Spartan and clean, and the doctor thoughtfully closed the door behind him, before giving his attention to Moshe.

'Do you want a drink?' he asked.

'No,' Moshe replied, 'I don't. I want to know what's wrong with Kate, and I haven't much time.'

'She's in a dangerous condition, Moshe, and getting worse every hour. Having this baby could kill her, so we want to abort.'

The pain was cold and clean, cutting through his exhaustion, slicing away the cobwebs in his mind and reawakening his dulled senses.

'What kind of condition? Something other than hysteria? Are you saying that the blow from that table somehow damaged the baby?'

'No, Moshe, I'm not saying that. The blow from the table didn't harm her at all. But she's suffering from acute toxemia, or, more accurately, eclampsia.'

'What the hell's that?'

'The toxemias are disorders occurring spontaneously only in human females and only during pregnancy or the puerperium. They can, when severe, lead to numerous complications, including kidney, heart, pulmonary and gastrointestinal disturbances.'

'What causes it?'

'The factors producing it are still unknown: what *is* known is that there's a generalised spasm of the minute arteries, with associated severe circulatory effects. The term "eclampsia" is reserved for those instances in which there are convulsions or coma - both of which Kate has been intermittently suffering - and really severe eclampsia can lead to death.'

The pain was clean no longer, but was now inducing nausea, a combination of dread and revulsion that made Moshe start sweating.

'And the causes are unknown?'

'That's right, Moshe. Totally unknown.'

Moshe glanced down at the floor, then closed his eyes, trying to think, hoping to feel what Kate was feeling, doubtless fear and despair, still convinced that her affliction was caused by Joshua for some obscure reason. What could he now say that would make her think differently? It was a disease of unknown origin, without rational explanation, and that in itself would be enough to convince her that Joshua, still haunting her, had cursed her. Moshe raised his eyes again, trying to keep his features composed, determined to do the right thing by his wife, no matter what befell Israel.

'Are you absolutely sure it's this eclampsia thing?'

'Yes, Moshe,' the doctor replied. 'Kate's displaying all of the symptoms. She's excreting more than six grams of protein in her urine every twenty-four hours; she's suffering from pulmonary oedema, or cyanosis, which is a bluish or purplish colour of the skin; and, as I said, she's also suffering minor convulsions and brief comas - all of which would indicate a rapidly

deteriorating situation in which the toxemia is seriously affecting her cardiorespiratory apparatus. If we allow the pregnancy to come to term, she could end up with fluid in the lungs, which would in turn lead to heart failure. We therefore feel that her pregnancy should be terminated by caesarean section.'

Moshe covered his face with his hands, pressing his eyelids with his fingers, observing the white spots in the darkness while his grief stripped him bare. For a moment he drifted away, seeing the advancing hordes of Arab fighters - now marching through Netanya, approaching the outskirts of Nablus, swarming down the Mountains of Moab towards the glittering Dead Sea, stretching across to the Sinai Desert and then heading inexorably for the Negev to commence the encirclement of Jerusalem - but even this nightmare, totally hideous and final, could not ease the pain he felt at what he was hearing. He knew what Kate felt - how much she wanted their child - so even as he looked up, and heard his own words tumbling out, he knew what the answer to his question was going to be.

'You've told her all this?'

'Yes, we've told her - but she refuses, absolutely, no matter the risk, to have an abortion. She insists on bringing the pregnancy to term - and we can't talk her out of it. You understand, Moshe? It's all up to you now. If Kate sees this pregnancy out, if she insists upon having the baby, we can't be responsible for her life. You have to talk to her, Moshe.'

Moshe turned away without a word and hurried out of the office, heading for Kate's room as the blood pounded fiercely at his temples. The corridors were also packed, the soldiers lining up for treatment, some leaning wearily against the walls, their heads thrown back, eyes closed, others grimly supporting one another, blood and filth on their uniforms. The doctor rushed up behind him, breathing heavily, his white smock rustling, and together they entered Kate's room, stopping by the bed.

Moshe looked down at her, shocked by the sight of her, knowing that he would never forget this day as long as he lived. She was lying back against the pillows, her face gaunt, her skin bluish, her eyes deeply shadowed and too large, filled with glittering dread. She smiled when she saw him, her right hand rising weakly, and when he took that hand he felt that he was holding a frail, wounded bird.

'*Shalom*, Kate.'

‘My Moshe.’

‘I’ve just heard the bad news. There’s no doubt about it at all: you have to have the abortion.’

‘No, Moshe.’

‘You might die.’

‘No, Moshe, I won’t do it. I’m going to have our baby - I *will* have it - and you won’t talk me out of it.’

‘Kate, it’s too *dangerous*! I simply can’t let you do it. It’s not that important - we can try again - but you can’t have this baby.’

Though she offered him a smile, her lips were parched and cracked, her eyes almost luminous with the fear that she refused to acknowledge.

‘I can’t have my baby? Is that what you’re trying to tell me? That having already aborted one, I should abort another and go back to the start of it? No, Moshe, I won’t do it. The doctors, with the best will in the world, can’t be certain of what’s going to happen. They *think* it might harm me - they don’t *know* - and that isn’t enough for me. Joshua didn’t curse me, Moshe: he just put me to the test. He made me will the blood and face the truth, and having faced it, find faith. Now he’s testing that faith - and my faith in our future - and I’m not going to let my fear destroy the rest of my life. How could I do that, Moshe? If I did, could I then live with myself? Could I live with the possibility, after losing my child, that the doctors had been wrong and that I could have given birth to the baby without harming myself? We can’t answer that question - not until the baby comes - but as long as there’s the chance that I’ll survive, I can’t let them destroy my child.’

Clearly, though she was fearful, she had the need to preserve her faith, so Moshe sat on the edge of the bed to place his hand reassuringly on her forehead. She was feverish and sweaty, her long hair a tangled mess, but her face, with its odd, suppressed beauty, drew him in through its healing light.

‘I’m worried about you,’ he said. ‘I want the child, but not that much. I don’t want you doing this for me, because the risk is too great. It’s not worth it, Kate. In giving birth, you might die. I don’t want to live without you, darling - and I don’t want this gamble.’

‘Have faith, my Moshe. I won’t give up that easily. I see Joshua in my dreams, and when my eyes are wide open, and I know that what happened in our house was not the product of malice. He soothes my pain, Moshe, and eases my fear when he’s here; and I know that what’s happening is a test of

my faith, and that whether I live or die, I can't sacrifice a child for the second time. The baby's kicking me right now - him or her, I can't tell - and as long as I feel that movement inside me, I won't even consider an abortion. Don't ask me again, Moshe. Don't make me refuse you. I love you and want to stay with you, but I won't kill my baby.'

Her weak smile stole his will, her defiance stole his resolve, so he leaned over, hiding his own fear, to press his lips to her mouth. Her free hand fell on his head, her fingers wandering through his hair, and he quivered, torn by yearning and fear at once, his heart silently breaking.

'My Moshe,' Kate said. 'Trust me.'

He pulled his head back and sat upright, watching her hand fall away, then he squeezed her other hand and stood up, his smile still hiding his fear.

'Okay,' he said. 'Fine.'

'No, Moshe!' the doctor exclaimed.

'It's her child,' Moshe said, 'and her choice… and I can't take that from her.'

The doctor threw his hands up, rolling his eyes melodramatically, then turned and walked out of the room. Moshe looked down at Kate, feeling helpless, still fearful, convinced that if he reached down and touched her she would break into pieces.

'I have to go now,' he said.

'The war?'

'It's getting worse. I'll try to keep in touch as much as possible, but it may not be easy.'

'Be careful.'

'*You* be careful.'

'I'll be alright… I know it.'

'If I don't get back, I'll ring you this evening. *Shalom*, Kate.'

'*Shalom*.'

He turned away and walked out, hearing a plane shriek overhead, not daring to look back, but averting his eyes from the soldiers who were filling the corridors with blood and misery as they waited for treatment. He stepped outside, feeling broken, taking lungfuls of fresh air, glancing around him at the hills that were bathed in dazzling sunlight, not yet ravaged by the choking smoke of war and its multiple horrors. They would come soon enough, filling the silent air with screaming, and as he clambered into his jeep, about to drive

to the university, he shook with the agony of his fears for Israel… and for Kate.

The smooth green lawns of the university were swarming with troops, filled with trucks and half-tracks and big guns and portable canteens. More trucks were coming and going, bringing more troops into the area, swelling the ranks of the battalions around the nearby Knesset and the Shrine of the Book. Moshe went straight to the new HQ in the heart of the university, passing hundreds of troops in the corridors of the main building, some sleeping, others reading, yet others eating and drinking, and eventually entered the assembly hall that had been converted overnight into the centre of defensive operations. Ben Eleizer was waiting for him, his moon-shaped face anxious; he was surrounded by various high-ranking officers, none looking too happy. They were standing around a long table, studying maps and grid-lines, jabbing their index fingers and arguing heatedly with one another as Moshe approached.

'How's Kate?' was Ben Eleizer's first question.

'Not too good,' Moshe said honestly. 'They wanted to perform an abortion, but she wouldn't let them, so things could be tricky.'

'I'm sorry, Moshe. Truly.'

'Bad days all around,' Moshe said. 'They can't be sure when it's going to happen, but they'll call through to here.'

'I'll make sure you get the message.'

'So what's happening here?'

'It looks like we're finished.'

With shoulders slumped in exhaustion, Ben Eleizer rubbed his eyes, then raised his head and looked straight at Moshe, trying to keep his voice steady.

'The situation is this,' he said. 'The Lebanese have captured Netanya and are now advancing south towards Tel Aviv. The Syrians have taken Nablus and are now advancing across Samaria to Ramallah. The Jordanians are entrenched along the base of the Mountains of Moab and are preparing to launch themselves across the Dead Sea. In short, it's only a matter of hours before they march into Jerusalem.'

'We can't let that happen,' Moshe said.

'No, Moshe, we can't.' Ben Eleizer exhaled his breath, puffing his cheeks out in what, in another situation, would have been a comical manner, then reluctantly returned his gaze to Moshe. 'We're going to have to use our

atomic warheads,' he said. 'There's no other way out of it.'

Moshe felt himself retreating inwardly, wanting to hide deep in himself, not willing to accept what he was hearing, reluctant to sanction it. Ben Eleizer kept staring at him, his gaze steady, pragmatic, refusing to let sentiment intervene, pinning Moshe to the wall.

'It's *Jerusalem*,' he said eventually.

'I know,' Moshe replied.

'We simply cannot let them take Jerusalem. If they do, it's the end for us.'

Moshe lowered his head and thought of Kate in the hospital, imagining an Arab shell screaming down and tearing into her room. He burned up at the thought, but he also felt shame, realising that her safety was, at least for him, more important than what he and Ben Eleizer were contemplating in all of its horror. Eventually, feeling defeated and dirty, he looked up again.

'The Lebanese, the Syrians and the Jordanians are too close,' he said, 'so presumably you're thinking of the Egyptians.'

Ben Eleizer nodded. 'Correct,' he said. 'And if we do it, we do it now. The Egyptians are approximately halfway across the Sinai Desert, still advancing towards our army in the Negev. We'll use an atomic warhead to decimate the Egyptian army, and then, when the world learns about it and is reeling from the shock, make it clear that we're prepared to do the same, suicidal or not, to any army still advancing from north of Jerusalem.'

He was staring steadily at Moshe, not letting him off the hook, but Moshe knew, with a sinking heart, that he would have made exactly the same decision.

'We think it'll work,' Ben Eleizer said. 'It'll be interpreted as desperation. One atomic warhead - just one dropped on the Sinai - will put a stop to the rest of them.'

'And the Americans and Russians?'

'They're moving in very fast, but unfortunately they still won't get here in time. That atomic warhead will buy us some breathing space - putting a stop to the Arabs closing in on us - and by the time they decide whether or not they're going to advance again, the Americans and Russians will be in a position for more positive military intervention.'

'Where are the Russians now?'

'Following the Arabs into the Galilee.'

'And the Americans?'

‘Spread out between Suez and Sharm el Sheikh, in hot pursuit of the Egyptians.’

‘They won’t do much good behind them.’

‘Exactly my sentiments. And it means that the salvation of Jerusalem might rest with the Russians.’

‘And our threat could also keep the Russians out.’

‘Correct. So let’s do it.’

He started to turn away, but Moshe reached out and grabbed him by the elbow to make him turn back.

‘How long before we launch the missiles?’

‘About thirty minutes,’ Ben Eleizer said.

‘I want a helicopter to take me to the Negev. I should be with my men.’

‘Keep in touch,’ Ben Eleizer said.

Moshe hurried away, feeling driven and possessed, wanting to be out there when the light of the desert turned to mushrooming smoke. He was doing this for Israel, for Kate, for their future, but these reasons, important though they were, could not diminish his shame. It was the survival of the fittest, the law of the jungle, and that law, in all its bloody permutations, had come to dominate Israel. Was anything worth it? Did Israel need to survive? Moshe was starting to doubt it, feeling revolted when he thought of it, and as he left the university and drove off in the jeep, he wondered how it was that he could still breathe in the swamp of his guilt.

The helicopter was nearby and was always ready for lift-off, the crews being rotated in shifts and condemned to wait inside the craft. The men were there when Moshe climbed in, and they took their places automatically, without a word, and even before Moshe had strapped himself in the rotors roared into action. Moshe glanced around as they took off, again surprised at how young the crewmembers were, then looked out as the helicopter ascended and the ground fell away below. He saw the buildings of the university, then the Shrine of the Book, then the Knesset in its setting of green lawns and strategically placed trees. The helicopter kept ascending, then flew south across Jerusalem, and he looked down at the domes and minarets, the maze of *souks* in the labyrinth of the Old City. Then the wilderness of Judea, starkly beautiful and desolate, rolling on to the northern edge of the Negev Desert, with its raw, rippling grandeur. Looking down there, at parched rock and drifting sand, he felt the weight of his sorrow.

He put his head back on the seat, closing his eyes, trying in vain to relax, hoping to find some hidden corner of himself that was not webbed with guilt. Failing to find such a place, he felt his sweat breaking out, the physical manifestation of the tension that he now suffered constantly. He thought of Joshua and Kate on the night he had found them both, and was filled with an almost childish wonder at the changes since then. Joshua's face floated before him, vivid, all too real, his smile as mysterious as the dark side of the moon, his gaze as enigmatic as the Mona Lisa, drawing light to its darkness. Yet Joshua was dead, a suicide by assassination (he had willed it, after all) and Moshe felt a deep chill passing through him when he thought about Leon. First Joshua and Kate, then Kate and Leon, then Leon and Joshua in the wilderness, finally putting an end to it. Moshe would never forget that - he dreamed about it every night - and now, as he opened his eyes, as he looked down upon the Negev, he wondered how far Leon had gone before the killing sun cut him down.

The helicopter was descending, letting the mountains reveal their features, and Moshe saw the shadowed rock, the jagged peaks bathed in sunlight, and then, in the rippling sand of the wilderness floor, the tanks and troops of the Israeli army. They were spread out a great distance, between Tel Sharuhen and Mizpe Ramon, facing the burning hell of the Sinai Desert and the Arab advance.

The helicopter dropped lower, coming down south of Shivta, and Moshe soon saw the tents of the command post with the big guns around them. He looked towards the Sinai, his eyes dazzled by the scorched wastelands, then glanced around the gloomy helicopter, his thoughts wandering back to Kate. The fear gripped him instantly, tearing savagely at his nerves, and he knew, with a sudden, fierce conviction, that Kate was in labour. His nerves started falling to pieces, letting the fear have dominion, but then the helicopter touched down, rocking lightly from side to side, and he managed to regain control of himself as he unclipped his safety belt.

The door slid back with a screech, the ladder clattered to the ground, and a crewmember moved to the side to let Moshe make his exit. He climbed down to the burning sand, was dazzled and felt the heat, instantly put his sunglasses on and then looked straight ahead. Major Steinberg was waiting for him, silhouetted in the white light, his face only regaining its features when Moshe stopped in front of him.

‘We’re still waiting,’ Major Steinberg said.

‘Five more minutes,’ Moshe replied, checking his wristwatch.

‘I still can’t believe we’re really going to do it.’

‘Nor can I, Saul. Not really.’

He entered the command tent and shook hands with the assembled officers, noticing that none of them were smiling and that few met his gaze. There was tension in the air, an almost palpable manifestation, and he turned away, trying to ignore it, and picked up a pair of binoculars.

‘How far away are they?’

‘Thirty miles,’ Major Steinberg said. ‘They’re advancing on a very broad front - and they’re coming right at us.’

Moshe stepped out of the tent and placed the binoculars to his eyes, surveying the vast expanse of the Sinai Desert, but seeing nothing at all. He turned north and surveyed the Negev, seeing his own tanks and planes, stretching back in separate groups to the horizon, the sun blazing upon them. Feeling dazed, he lowered the binoculars, rubbed his eyes and shook his head, then looked at the unlined face of Major Steinberg, whose hazel eyes revealed disbelief.

‘I’m sorry, Saul, but it’s going to happen.’

‘I know, Moshe. I know. I know, but I just can’t believe it. I keep thinking I’m dreaming.’

They joined the other officers at the far side of the tent, all facing the spectacular immensity of the Sinai Desert, all holding binoculars. Moshe checked his wristwatch. There was one minute to go. He put the binoculars to his eyes, saw the sky, the rippling sand dunes, a dazzling whiteness rolling away to a brighter whiteness in a shimmering heat-haze. Looking at it, he became it, dissolving into its deathly silence, letting the silence surround him and seduce him until the moment of impact.

Nothing happened. Not a thing. Moshe checked his wristwatch and then looked out there again. Nothing happened and he stared at the other officers to see them shaking their heads in bewilderment. They kept looking at the Sinai, at the sky, at one another, until two minutes had passed, then three and then five, and only then, looking stunned, clearly as stunned as Moshe felt, did they realise that nothing was going to happen and they were wasting their time.

After that it became unreal, a dream without solid substance, sliding down

over Moshe like an invisible curtain that transformed the whole world. He tried to clear it away, to take a grip on reality, but the events, too bizarre to be real, were too real to be dealt with. The news came over the radio, one message after another, destroying logical thought as one hour passed into the next and the Arabs materialised on the horizon like a line of black ants.

The first missile had vanished, inexplicably, illogically, disappearing at the apex of its arc somewhere up in the stratosphere. A second missile had been launched, but disappeared just as mysteriously; and a third, launched approximately two hours later, had suffered the same fate.

More hours passed in chilly silence, the radio crackling with static, the black ants on the horizon growing bigger, spreading out, still advancing. Another voice on the radio, almost strangled with disbelief, conveying more information that made logic redundant.

More missiles had been launched. All had disappeared in the stratosphere. Mossad had talked to London, and London to Washington, and Washington had talked to the Kremlin and received the same news: the nuclear world was dying out, the computers no longer working, the atomic reactors and missile silos malfunctioning and surrendering to silence.

Moshe believed - and did not believe. He no longer needed the binoculars. He saw the black ants on the Sinai as Arabs, moving forward inexorably. The hours passed and they still advanced. He wondered why there were no aircraft. He passed the order for his own planes to take off, but their engines malfunctioned. The planes stayed on the ground, their engines dead, the pilots baffled, and the tanks, when Moshe ordered them out, likewise stuttered and died.

Moshe dissolved into the dream, his thoughts circling endlessly, being drawn in ever shrinking rings to the crackling radio. A new shift, another voice, equally strangled and hysterical, trying to wrap itself around the impossible and make it coherent. Information from Mossad: the nuclear age had just ended; every satellite in the stratosphere, defensive or offensive, Russian and American, British and Chinese, had blinked out on every known radar screen and was no longer traceable. The nuclear age had ended. The great silos were silent. The darkness was descending as Moshe looked across the Negev and saw the Arab tanks slowing down and finally stopping. The Arab soldiers kept marching. The night took command abruptly. Then a surreal crimson light, materialising out of the darkness, illuminated the

thousands of soldiers in the rich hue of blood.

The sky was on fire.

45

The Arabs started running towards the Jews. It was, perhaps, panic rather than aggression, since the surreal crimson light, turning the darkness to streaming blood, was emanating from no fixed direction and seemed part of the atmosphere. Moshe instantly bawled his orders, hearing his words even before he thought about them, and the officers hurriedly grabbed the field phones to pass on his commands. The crimson light was eerie, turning everyone into a spectre, and Moshe had to turn away, gripped by fear, and again saw the Arabs. They were coming at him in their thousands, making high-pitched, wailing sounds, looking ghostly and unreal in the crimson night as they swarmed over the sand dunes. A few rifles started firing (they at least, Moshe thought, were working) and then the big guns, also working, suddenly roared from the flat plain behind him. The sand between the Arabs erupted, geysering high in graceful fountains, forced up on spreading fans of yellow flame and boiling black smoke. The Arab guns replied in kind, sounding muffled in the distance, and then the first shells exploded nearby, catastrophically violent. More explosions, heat and light, the quavering anguish of human screaming; then the machineguns and rifles, the big guns roaring again - and Moshe stepped out of the tent, into that frightening crimson gloom, looked straight ahead at the thousands of Arabs coming towards him, and then, suddenly thinking of Kate with a powerful, bitter longing, looked up at the sky and saw a single star, growing bigger, descending.

Stunned, he just stood there, the guns roaring on all sides, the wailing of the advancing Arabs in his ears, as the bright star descended. Not a star: a brilliant light, illuminating the crimson night, spreading out and become immense and corrupting his senses. He tried to see where it ended, wanting to ascertain its shape and size, but it wasn’t, as he had surmised, actually spreading across the sky, but materialising out of the very atmosphere to

swallow the crimson light. The night sky became a white haze, a protoplasmic, boiling mass, the white becoming almost silvery, phosphorescent and dazzling, lighting up the desert with a clarity even greater than daylight.

The running Arabs slowed down, looking above them in confusion, shading their eyes as the night turned to day and a fierce heat poured down. The new sky was a living thing, at once beautiful and terrifying, a boiling silvery mass that stretched from horizon to horizon as it descended inexorably upon them, as if to devour them. The Arabs scattered wildly. Some sank to their knees to pray. Moshe glanced back over his shoulder and saw his fellow Jews doing exactly the same. The big guns had ceased firing, the rifles stuttered into silence, and then, as the pulsating sky seemed to drop lower, becoming a vast ceiling, all the men, Jew and Arab alike, started bawling and screaming.

They were kneeling to pray, jabbing their fingers at the descending sky, running blindly to and fro, or just staring silently, either filled with wonder or stunned. Rifles thudded into the sand, caps and helmets were thrown away, and the fierce heat, coming down from the still descending sky, made some rip off their clothing.

The sky continued falling upon them, a pulsating silvery mass, still stretching from horizon to horizon like shivering jelly. Panic spread throughout the ranks, infecting Jew and Arab alike, and some men started babbling dementedly as their sanity crumbled. Moshe kept his gaze skyward, his eyes dazzled by the silvery light, and then, as that ceiling of light dropped even lower, as it covered the whole plain, he felt himself escaping from his dread and instead filling up with a sense of wonder. He thought of what Kate had witnessed, of the light that had introduced them, and his love, rising eagerly to greet the light, set him free from all fear. His sense of wonder blossomed, a child's wonder, seeking magic, and he stepped out beneath the descending sky in the expectation of goodness.

The sky abruptly stopped falling, about two hundred metres up, shivering and pulsating like protoplasm, a shimmering white streaked with silver. That low it was awesome, stretching across the visible spectrum, its fierce light and heat pouring down upon the thousands below it. The men were weeping and praying, babbling dementedly or staring up in silence, but Moshe, hardly aware of them, his head back, his eyes wide open, was looking at a whirlpool

of darkness that was rapidly taking shape and growing bigger above him.

It was a grey-streaked black hole, swirling languidly, growing bigger, descending through the dazzle of the pulsating sky and taking the shape of a funnel. The funnel's base was immense, its dimensions impossible to calculate, and it was spinning at an incredible rate with silvery sparks shooting through it. The funnel created the wind, first mild and then violent, a hot wind that raced in great circles to sweep up the sand. The sand hissed and spun wildly, started roaring and became a storm, and then it turned into a raging tornado that obscured the whole desert.

Moshe was picked up and hurled back down, punched across the shifting sand; he crashed into the wheel of a truck and then crawled in beneath it. He lay there, gripping the wheel, feeling the wind tugging at him, rubbing the sun from his eyes and looking out as the storm roared and raged. The noise was appalling, threatening to split his head in two, and he saw waving arms and spinning bodies in the dense, swirling sand. He thought of Kate, that first night, the storm raging across Jerusalem, and his love, like an anchor to his sanity, kept the fear at bay.

The storm scattered the opposing armies, causing panic and havoc, throwing men into the air like rag dolls and then casting them down again. Moshe looked on and understood - Armageddon: the final battle - and in understanding this he was released from the shame of his actions. What was willed was now done, changing the world for all time, and as the storm died away, having lasted only a short time, he knew that the future, if unknown, was nonetheless guaranteed. Joshua had come and gone, his spirit breathing on the Earth, and life, as men had known it and lived it, would march along a new path.

The storm died away, the swirling sand settling down, falling lazily on the men who were scattered widely on flat land and sand dunes. The spinning black hole had disappeared, shrinking back up into the new sky, then that sky, like a white fog illuminated from within, vaporised to let the darkness return and reveal the real stars.

The Arabs were scattered over the sand dunes. The Jews covered the rippling flatlands. The thousands of men, Jew and Arab alike, were too dazed to do anything. Time passed and brought life back. Myriad eyes turned towards the stars. Eventually, standing upright, the Jews and Arabs moved towards one another. They had no weapons and were silent, covered in sand,

their bodies shaking, as they advanced through the starlit darkness, approaching each other in a dream, and then mingled together, some sobbing, others smiling, sharing water and cigarettes and food, finally crossing the barriers of race and religion and enmity. Their murmuring words, springing out of the silence, expressed the inchoate hope for reconciliation and peace everlasting.

Moshe sighed and rubbed his eyes, still weary but filled with wonder, thinking of Kate and Joshua and Leon and Jozsef, of the events that in tearing them apart had bound them together. He knew that Kate was in labour - this conviction could not be challenged - and as he studied the men around him, Jews and Arabs intermingling, he knew with even greater conviction that child and mother would live.

He rubbed his eyes again, then stared back across the Negev, unconsciously attempting to do the impossible: to view Jerusalem the Golden. Instead he saw another light, about forty miles away, boiling out of some space in the empty sky above the plain and emitting great striations of silver that fell obliquely to earth. Moshe kept staring, entranced, thinking of Joshua and Kate, of the child that Kate would have, and seeing, in that triangular column of light, a sign of hope for the future. The light fell obliquely to earth, pouring down from a greater light, an immense, dazzling, spherical mass that sank lower each second. It appeared to drop behind the mountains, illuminating their jagged peaks, and then it almost touched the earth, its light setting the ground on fire, and then it flared up to an abrupt, blinding flash and just as abruptly winked out.

First the light.

Then the darkness.

Jozsef opened his eyes, saw the stars, the velvet sky, briefly transported to beauty and wonder before the pain flayed him. He groaned and bit his lower lip, suffering the agony of blistered flesh, and raised his right hand to affirm that he was still alive. The hand dangled in the air, clearly visible in the starlight, the flesh shredded and terribly burnt, exposing soot-blackened bone. He shuddered with revulsion, hardly able to believe it, then let the hand fall to the sand, forgetting the pain it would cause him.

When the fresh pain came, it was shocking, daggering along his right arm, and he heard his own strangled, sobbing groan as his limbs twitched

helplessly. Settling down, he just lay there, breathing deeply but not with ease, distracting himself by looking at the stars and surrendering to them. The heavenly vault was a dark pool, first below him, then above him, reflecting the light of the stars and couched in dead silence. He lay there, unwilling to move, and then it all came back to him…

The shriek of the jet plane, the sudden sibilance of the rocket, the truck bursting into flames and turning over and throwing him out… Recalling this, he remembered Rashid, the other Arabs scattered around him; and, unforgettably, by Rashid's booted feet, stretched out on the desert floor in his bloody white robes, the cold, lifeless Joshua.

Jozsef closed his eyes for a moment, trying to slow his racing heart, feeling the sand drifting languidly over him as if wanting to cover him. A shocking pain spread through his body, stripping bare his every nerve, and he felt warm tears trickling down his cheeks with a will of their own. He tried to ignore the pain, and, failing this, to join it, sinking into the hell of his blistered skin and becoming part of it. Eventually, still aware of the pain, yet more able to bear it, he awkwardly turned his head to the left and looked across at the truck.

It was lying on its side, its metal ribs blackened, no longer smouldering, the wheels covered in hardening melted rubber, the engine blown off completely. The driver was hanging out of his cabin, his head resembling a pomegranate, and in the rear, beneath the remaining strips of canvas, was a pile of dead bodies. Other young men lay scattered about, spread-eagled, their bodies broken, their dead eyes staring up at the stars and shining like marbles. A white flag fluttered feebly, highly visible in the starlight, then it became a white robe, the sand drifting over it, the robe fluttering across the dead body of Joshua, who lay flat on his back. His eyes, unlike the eyes of the other dead men, were closed and at peace.

Jozsef studied him a long time, letting Joshua ease his pain, sinking into a reverie so complete that it made him feel he was dreaming. He saw Kate in the hospital (*Is this your form of conversion*?), then Joshua, his smile enigmatic, preparing for Judgement Day. Conversion had come, taking many shapes and colours: for Kate, very possibly for Leon, for himself in a different way. When had that happened? What kind of conversion was it? A Jew and a Rabbi, he still believed, though in something quite different… Kate, by the Sea of Galilee: they had walked side by side; he had cursed her

conversion as blasphemy before understanding it. Understanding came later, by the waters of *Yam Kinneret*, the revelation tripping off his own tongue as he looked into Kate's eyes... *Perhaps faith itself, without discipline imposed from outside, if held firmly and close to the heart, will purify and sustain…* So, there it was: a very personal and private faith, not bound by literal theology or dogma, but springing out of the heart… Jozsef smiled and saw Joshua, starlight falling upon his face, then he turned his head and looked the other way and saw the sand-covered mound.

It was a globe-shaped, modest rock, the only rock on the flat plain, and resting against it, shaped like a human being, was a sand-covered mound. Jozsef stared at it, mesmerised, feeling as if it was calling to him, speaking out of the silence of the wilderness with a soft, anguished eloquence. He blinked and licked his lips, kept looking, his eyes straining; heard the wind crooning lightly around him and saw it blowing the sand away. The sand spiralled off the mound, forming dark, drifting tendrils, thinning out on the mound to reveal, first, a hand, then a shoulder. It continued spiralling away, like a curtain slowly rising, to show the squatting form of a human being. It fell away from the head, drifting slowly to the ground, and then he saw the hands and feet, the blistered lips and blind eyes… the thin, sun-scorched and anguished face of the dead Leon Halcomb.

Jozsef stared, disbelieving, feeling haunted and frightened, then his fear, as if surrendering to his grief, slipped away to leave only sorrow. Leon was staring straight at him, his dead eyes reflecting the moon, while his hands, the palms turned upwards on his thighs, suggested entreaty. Jozsef felt that he was dreaming, that his senses were betraying him, but the physical pain that gnawed away at his body let him know otherwise. He kept staring at Leon, wondering what he had been seeking, his back pressed to the modest rock on the flat plain, his eyes surveying the wilderness.

A mystery. No answers. Jozsef shuddered and closed his eyes. In his mind he saw that lone rock in the wilderness, drawing Leon towards it. He opened his eyes again, his attention drawn by human groaning, and then, turning his head in the opposite direction, saw Rashid Idriss.

The Arab was still alive, crawling forward on his belly, his face blistered and shredded down one side, his eyes bright and determined. He looked at Jozsef, staring blankly, obviously trying to remember him, failed and then inched forward again, his fingers digging into the sand. He was crawling

towards Joshua, gritting his teeth and sometimes whimpering, but his eyes, flaring out of that broken face, were grimly determined.

Jozsef watched him, feeling pity, then compassion and even love, wanting to help him as he crawled towards Joshua, but unable to move. Rashid reached out to Joshua, tried to touch him and failed. He groaned and tried to pull himself forward, but his strength finally failed him. The wind crooned as Rashid sobbed, his hands scrabbling in front of Joshua, and then Jozsef, unable to bear his brother's pain, suffered his own pain with gladness. The pain lashed him when he moved, scourged his flesh when he rolled over, tried to skin him alive as he crawled forward, pouring sweat, dripping fresh blood. It took a long time, an eternity in hell, but eventually he made it, almost swooning with the pain, and reached out to turn Rashid's hand upward and place Joshua's hand in it.

They lay there together, Jozsef, Rashid and Joshua, their hands clasped as light filled the darkness.

Jozsef saw the light and felt it, a fierce heat pouring down, and he managed to twist around and look up as that brilliance descended. The light formed an enormous circle, dazzlingly bright, almost magical, growing larger as it descended upon him to blot out the natural sky. He stared at Rashid and Joshua, turned his head to glance at Leon, saw the light stretching out to embrace Leon and the small rock behind him. Leon turned into marble, reflecting the light and also devouring it, as the shadow of something larger than the light moved away from the modest rock. Jozsef turned his head again, looking at Rashid and Joshua; he saw Rashid staring up at the light as if begging for blindness. Tears were trickling down his cheeks, then the light erased his features, becoming so bright that it made him and Joshua shimmer and eventually disappear. Jozsef closed his eyes and prayed. He felt a wondrous exultation. Sighing, he rolled onto his back and opened his eyes to the heavens.

First the darkness.

Then light.

Not darkness, but light - a brilliant light in her mind - offering the revelations of transcendence and obliterating her fear. Kate bit her lower lip, embracing the pain in order to crush it, determined to give birth to her child, no matter how great the risk. She was alone in the dark room, the silence

pressing in upon her, and the sound of her own breathing, asphyxiated and irregular, confirmed that her circulation was failing as the doctors had predicted.

Her time had not yet come, but she knew that it was close, feeling the child struggling inside her as she laboured to free it. Her lungs seemed to be on fire, her body wracked by pain, but she saw the light growing in the darkness, giving birth to the future. She cried aloud and gripped the bed, trying to fight the clawing pain, her thoughts slipping in and out of reality as the drugs took command.

The light grew out of the darkness, illuminating the desert sands, and she suddenly saw Leon and the rabbi in that fierce luminescence. Leon was sitting against a rock, staring blindly at the rabbi, and Jozsef was stretched out on his back, holding the hand of an Arab. The light was a brilliant star, descending slowly, growing larger, and then it suddenly flared up into a sheer, blinding radiance, making Leon and Jozsef and the Arab dissolve, then abruptly shrinking back into darkness.

Kate opened her eyes and saw the darkness of the room, moonlight beaming through the window to her right and falling onto the bed. Was she awake or still dreaming? What had happened to Leon and Jozsef? She glanced repeatedly around her, fighting the pain, trying to breathe, and understood that she was definitely awake, though struggling to survive. The child struggled with her, inside her, wanting to spring forth to the world, but her womb, now contracting spasmodically, refused to release it. Kate groaned, her body arching, then reached for the alarm bell, tempted to call the doctors and nurses, but still reluctant to do so. Her hand wavered and dropped away, falling lightly onto her swollen belly, then she closed her eyes and sobbed, wanting Moshe, recalling what he had told her.

The nuclear age had ended. The great silos were silent. Every satellite in the stratosphere, defensive and offensive, had blinked out on all the radar screens and was no longer traceable. The tanks and aircraft were also silent, no longer capable of moving; and in the Sinai Desert, facing each other in the darkness, the Jews and Arabs had stopped fighting. The balance of terror had ended. Armageddon had been averted. Or at least Armageddon, that final and most terrible battle, had been fought around the ruins of Megiddo before the missiles were fired. Now the missiles were no more - they had vanished in mid-flight - and the possibility of nuclear destruction was no longer a worry.

Judgement Day had come, bringing reconciliation - between Jew and Arab, between the two great Christian churches - and the future, for good or evil, would be built from the eerie silence of a tentative, hoped for, peace.

Kate sobbed as her body quivered - out of pain; for the world - realising that Israel had been saved and that Moshe had survived. She closed her eyes and embraced the pain, travelling down through herself, sinking into the dark well of her womb and becoming one with her child. All around her was darkness, a black painted on black, closing in and retreating and then closing in again, until a pinprick of light, growing larger, flared up to reveal him.

Did she dream of him or see him? It scarcely mattered at that moment. He raised his hands to let his robes spread out, white and windblown and fluttering. His face was the light, drawing it in and also reflecting it, turning it back upon Kate to bathe her in radiance. A mature man. A child. One dissolved into the other. His silvery-grey eyes, luminous even in darkness, drew the pain from her twitching limbs.

'It is over,' he said. 'What was willed has been done. My time on Earth has passed and has served its cleansing purpose: the gates before the road to Judgement Day have at last been opened. Man must enter or turn away. The choice lies with him alone. The gates lead to where the sun reflects his image in the shape of a question mark. Will the future be good or evil? Will there be regeneration or degeneration? Will man, in his wisdom or folly, even walk through the gates? He can enter or turn away. The decision remains with him. He must decide in the silence of this transient peace and be marked by his choice.'

Joshua was the light, drawing it in and also reflecting it, letting it fall obliquely through the darkness to the wilderness floor. Kate saw Leon and Jozsef, the former dead, the latter blind, and then both of them - and the Arab between them - dissolved into the dazzling light. Joshua drew that light to him, sucked it up in the shape of a funnel, then Joshua changed and became a star that ascended and winked out. Then Kate saw the nocturnal desert. Leon and Jozsef were still there. Leon leant against the rock, his dead eyes like two stones, and Jozsef lay on his back on the ground, holding the hand of the Arab. He died slowly and peacefully, fading away with the Arab, both swept away by the radiance of revelation, death freezing their smiling lips. The sand drifted and whispered and covered their outspread limbs, as eventually it covered Leon and the rock against which he was leaning - until, when the

light of dawn appeared, they were buried completely. The vision faded as Joshua materialised, his hands clasped in front of him.

'They have passed on,' he said. 'Like the wind, they are here and gone. They joined hands at the moment of revelation and have now become one. Do not grieve for them, Kate, nor for me or my brothers; feared by men, death is merely transmutation to redemption's eternal light. We are here, though we are gone. We will always be with you. The bodies being covered by the desert sands are no more than our broken shells. Think about us and we will live. Recall us and we will come. We are with you now as we always were with you - and always will be.'

Kate went tumbling back through the darkness, away from Joshua, real or imagined, sinking again into a coma, fighting desperately to breathe, but determined to defeat the pain and affirm her faith by giving life to her child. In the depths she thought of Moshe, world's end, the new world's silence; and her heart, breaking in two, was renewed because Israel still stood. Her child's future was in that fact. What was it that Moshe had said? *Israel is the centre of the world - and if it falls, the world breaks…* Well, Israel still stood, as did Jerusalem in its glory, and Kate, who for so long had rejected it, was now, in fighting to give life to her child, affirming her faith and accepting it. She belonged to Israel - and Israel to the world - and the survival of her country was a sign that the world would be saved. Kate knew this in her bones, through her love and determination, as she struggled back up through the darkness, past accumulated layers of pain, and saw the light spreading out through the room to let Joshua materialise again. Whether real or imagined, he filled her vision with a crystalline brilliance.

'No,' he said, 'there are no answers. I settle the matter before you raise it. I emerged from a fragmented history and am fading back into it. Where did I come from and where do I go? This mystery is as real to me as it has been to you; and revelation, if it comes, will only come when it is too late to speak. I was, that I might be. I only knew what I learned from you. My purpose was to draw men towards me and let them see their own souls. Think of me as a reflection, man's conscience and hope, the manifestation of his glory and shame, the question mark drawn before his future that he might learn to brave it. I materialised and disappeared. I left no evidence of my existence. Men will search for the proof of my existence and find only frustration. Did I ever exist? Was I real or merely a myth? In time, as the new world, good or evil,

takes shape, what I was or might have been will be coloured by man's yearnings and hopes. I was, that I might be. Having been, I will remain. My signature will be written across the sky as the Earth slowly spins. I belong to you, Kate, and to your brothers and to your child; and my presence, whether real or imagined, will live on in your hearts. For your child, as for you, I will endure as a light in the darkness… Will the light. Let it shine!'

He had confirmed that her child would live, and she felt a great joy, rising out of her pain as a light mushrooming up through her soul. She called out for Moshe, wanting him with her, wanting to share her joy with him, and then, remembering that he was still in the desert, she reached for the alarm bell. She opened her eyes and saw the dark room, heard the song of the morning's silence, looked for Joshua and saw nothing but the moonlight fading slowly as dawn broke. She pressed the bell to call the nurses, her body arching, pushing down, embracing the pain and willing her weakening lungs to work as the contractions increased. She heard footsteps outside. The door opened and light poured in. The breath rushed from her lungs, there was pain and sudden nausea, then the blood pounded violently in her head and sent her into oblivion.

No light.

Just the darkness.

The cry of a child. Behind closed eyes was the darkness. Kate opened her eyes to the light and saw the child in her arms. Not a child, but a baby, wrapped warmly in swaddling clothes, its face pink and pinched, eyes closed, lips tight and determined. A tender love filled her heart, defeating the pain still in her body, and she held the baby close to her breast and felt its softness against her. She lived and had life, and would not let it go; and when Moshe entered the room, his face filthy, his eyes weary, she held the baby up on her trembling hands and let her smile tell him everything. He stopped and stared at her, at the child, at the floor, then he stepped up to the bed and gazed down at the gift she had given him. He wanted to touch it but was frightened - not of death, but of new life - and then his tears, pouring out of the deep well of his relief, trickled down his cheeks to fall on the child as he leaned over to kiss it. He said nothing to Kate, and she had nothing to say to him. They just stared at one another, gazing across the crying child, looking into each other's eyes to that future which love might make whole: *shielded and lifted*

by its precepts as a dove by its wings.

THE BLOOD OF THE LORD

W.A. HARBINSON

Part One
Chapter One

Anna uncoiled, her naked body sweat-slicked, turning like a wisp of smoke above a light flame. The stained sheet fell off her, trailing down to the floor. Anna sighed and raised a long, shapely leg, then opened her eyes. They were as blue as the sky outside, but slightly troubled, distracted, as if she had lost track of herself and hardly knew where she was. Her head turned on the pillow, her golden hair a glorious tangle, then she bit her lush lower lip and stared out the window.

She'd just had a dream in which God's light, shining upon her, had made her feel whole.
She had that dream often.
The sun was indeed shining over the flatlands outside, reflecting off the pumps of the gas station and beaming in through the window of this rickety old house to illuminate Anna's tanned limbs and return her to life. She yawned and stretched, a voyeur's vision, seductive, then slid her legs off the bed and stood up to get washed and dressed.
The house didn't have a shower, so Anna used the cracked sink. She just ran the cold water, rubbed it over her naked body, dried herself with a towel, and then put on her clothes. She didn't use deodorant, but her body had a sweet smell. Her mother disapproved of perfume and make-up, so Anna, when she had dressed, had only to comb her hair, which fell to above her waist, shining like gold in the sunlight beaming in on her back.
When Anna tightened the belt on her dress, she was something to see.
She thought of her dream, about God's light shining upon her. In her dream, that light made her feel good, but now it disturbed her. It always did when she'd wakened.
Shivering, she opened the door and walked out of the bedroom.
Her mother Beth was in the kitchen, doing ham and eggs, staring down grimly at the frying pan, as if at an enemy. Her grey hair was pinned up and her skin was brown and wrinkled, making her look older than she was. Yet when she heard Anna come in, she raised her eyes and broke into a smile that

lit up the room.
'Mornin', honey,' she said.
'Mornin', Ma.'
'Did you sleep well? You didn't have bad dreams?'
'No,' Anna lied. 'I didn't. I feel really fine, Ma.'
Beth grabbed a plate, flipped the ham and eggs onto it. 'Here,' she said, dragging her clubfoot across the floor and placing the plate on the table, 'eat it all up. A growin' girl needs her nourishment.'
'I'll get fat,' Anna said, pulling a chair out while Beth sat down at the other side of the table and grabbed her packet of cigarets. 'Fried food is unhealthy.'
'It's a treat,' Beth replied, lighting a cigaret and blowing smoke sideways. 'You don't get fried food that often. Besides, the Nicholson women aren't fat. We're all thin as reeds. It's your family inheritance.'
The radio was playing country & western music that filled Anna with fine feelings as she had her breakfast. For someone so nervous, she had a surprisingly healthy appetite and always enjoyed the first meal of the day.
'A real scorcher,' Beth said, gazing sideways, out the window. 'It's gonna be hot as hell out there. Sun's bin up for a long time.'
Anna glanced out. She saw the rusty gas pumps and desolate flatlands stretching out to the horizon. Nothing out there but parched earth and sky. The sun was a fierce, shimmering orb; the sky looked like sheet metal.
'I like it hot,' Anna observed. 'It makes my body feel whole.'
'Never mind your body,' Beth replied firmly. 'Let others think about that. You just try to stay sensible.'
Anna didn't reply. She didn't know what her mother meant. She just finished off her eggs and scooped up the gravy with some bread. The coffee tasted real good, as well.
Beth blew a cloud of smoke, sucked her breath in with a sigh. 'Trinity, East Texas,' she said. 'The end of the earth! I haven't had one customer this morning. They don't even need gas here.'
'It's real early, Ma.'
'Yeah, honey, I know. I get up too early for my own good, and that makes the day seem long. Then I look out my window, at that little ol' gas station, and I think the only thing worse than actually living in Trinity is havin’ to live on the edge of town. You know what I mean, hon'?'
'I like it,' Anna replied, licking her fingers as if wanting to eat them. 'I've

always liked being alone. Some folks just make me nervous.'
Beth didn't reply to that. She thought it best to skirt the subject. Sighing again, she gazed out the window, where the sunlight was brightening. The noise of the flies buzzing in the kitchen blended in with the music.
'Well,' she said, 'at least something excitin' is comin' to town at last.'
'The Reverend Juble Lee revivalist tent?'
'Yeah, honey, that's right. He's really taken this whole state by storm, so I can't wait to see him. The Lord be praised, he might do this town some good, and that can't be a bad thing.'
'I've never been to a revivalist meetin'.'
'I'm gonna take you, honey. They came around a lot when I was a kid, but there aren't many these days. Reverend Juble Lee... they say he's the best there's bin in years, so it should be excitin'. Gimme that old time religion, honey. Get them tambourines rattlin'.'
Anna pushed her plate away, sat back in her chair, then glanced distractedly around the room. The kitchen and living room were one, untidy but clean, as spartan as Beth's sun-dried face and her piled-up grey hair. There were photographs on the walls, as old and brown as the curtains, of Beth's mother and father, born and died in this state, though surprisingly there were none of Anna's dad, who'd disappeared a long time ago. The only photo of her dad was the wedding picture of him and Beth, now resting on the table in Anna's room. It gave her comfort to see it there.
'We doin' anything today?'
'Yeah,' Beth said, 'we're goin' to town. We've got to get us some shopping.'
She pushed her chair back, stood up, and dragged her clubfoot across the bare wooden floor to turn off the radio. A news announcer was talking about the latest drought in Wyoming and how it was devastating the economy. Beth cut him off in mid-sentence. 'I can't stand the news these days,' she said. 'No news is good news.'
Anna stood up to start clearing the table. She didn't like the idea of going to town and felt nervous again. 'What about the pumps?' she asked hopefully. 'What if somebody comes by? Don't you want me to stay here?'
'The hell with 'em,' Beth said. 'No-one from Trinity travels far, so they can come back this afternoon.'
'I'd prefer to stay here,' Anna said, thinking of hungry eyes that turned and stared. 'I think I should look after the pumps while you get the shopping.'

'I need someone to help me carry it,' Beth said, 'so you best come along. What's the matter? You suddenly don't feel good?'
'I don't like going to town.' Anna was almost whispering. 'I don't like the way the boys stare at me. It makes me uncomfortable.'
'It's because you're so beautiful,' Beth said, ' and boys their age like that. You'll just have to get used to it.'
'It makes me feel naked. They also stare as if I'm some kind of freak. As if...'
She couldn't get the words out, so Beth said it for her. 'It's because you're sick, Anna. You might as well admit it. You're beautiful - but you're also sick, which is something they can't forget. They want you and they're frightened of you as well. You'll have to always be careful, child.'
'Just let me stay here, Ma.'
Beth came around the table, dragging her clubfoot. When she stopped in front of Anna, her eyes, which were as blue as her daughter's, narrowed to slits.
'No,' she said. 'You're comin' with me. You can't hide all the time. Your beauty is as much a penance as your illness, but you'll have to learn to live with it. Damn the boys in town! To hell with their rotten fathers! You're my daughter and you'll hold your head high for as long as I breathe. Now is that understood?'
'Yes, Ma,' Anna said. She nodded, her lovely gaze troubled, then started cleaning the table.
The sun shining through the window warmed her face and she saw it as God's light.

Chapter Two

Tom Beale wanted Anna. He knew this every time she drove into town with her mother in their old beat-up truck, to buy their groceries for the week, which they did just about every Saturday morning. As usual, Tom was there with his pals, just passing time in front of the drugstore, when Anna got out of the truck, wearing only a cheap cotton dress that was pressed to her perfect body by the constant winds that blew in off the flatlands and straight along Main Street. Larry Mitchell, standing right beside Tom, gave a low, measured whistle.

'There she blows,' Pete Fallow said.
'Just let me at it, Gary Johnson boasted.
'There's nothin' under that dress but naked flesh,'

Larry said with a lewd grin. 'An' every inch of it lush.'

They were the old gang from high school, but they'd left it last year. Now two of them, Tom and Larry, worked for their fathers, and the other two, Pete and Gary, were unemployed, like most kids in town. They spent a lot of time there, on the porch outside the drugstore, hassling the girls coming in and trying to make out. They did that most evenings, though it didn't get them much, and they all knew why they came here on Saturday - to catch sight of Anna.

'What I'd give,' Gary said.
'Stop hopin'.' Pete grinned at him.
'If she took that dress off,' Larry told them, 'you'd

jump out of your skin. What she needs is a man, kid.' 'Like you?'
'Yeah, Tom, like me.' Larry rolled the gum in his

mouth, his smile filled with challenge, but Tom was still staring across the road as if he'd been blinded. He was staring at Anna. She was helping her Ma down. When she reached up, the cotton dress tightened against her breasts

and rippled down the curve of her spine. The wind was making her hair whip like a flag, long and golden in sunlight. She was a vision out of heaven, too lovely to be real, and Tom felt consumed by the sight of her.

Then the clubfoot appeared, dropping down out of the truck, and old Beth, looking as tough as they come, was helped down by her daughter. Tom shivered just to see her. The clubfoot made her different. He was frightened of old Beth, just as he was of Anna, though his fear of the latter was based on shyness and the ache in his yearning heart.

'A cripple and an epileptic,' Larry said. 'A real cabaret act.'
'It's not their fault,' Tom said.
'Didn't say it was, Tom.'
'I tell ya,' Gary said, his chubby face already sweating, his checkered shirt too tight on his heavy body, damp under the armpits. 'That Anna's some looker, no question, but I don't wanna know.'
'You're just scared,' Larry said.
'Good reason,' Gary replied. 'Epileptics are possessed by the devil - ain't no doubt about it.'
'That's an old wive's tale,' Tom said.
'Maybe,' Pete said. 'Maybe not.' Over six feet tall, he was as skinny as a cornstalk. Wearing a tight shirt, denims and high-heeled boots made him look even taller. 'I only know,' he said, staring down solemnly at short Gary, 'that I don't wanna mix with epileptics and goddamned clubfoots. You got two things like that in one family and it just doesn't sit right. I'm not suspicious, but…'
'Shoot,' Larry said, 'you're as suspicious as my grandma. You think Beth's gonna put the evil eye on you if you just *glance* at Anna. Me, I only know one thing for sure
- that Anna's there for the takin'.'
'How would you know?' Tom asked.
'I heard rumours, pal.'
'She never did a damn thing at school, Larry. She didn't act like a tramp.'
'Folks still talk,' Larry said. He grinned and rolled his gum, checked his reflection in the plate-glass window, slicked his hair back and shrugged his shoulders, then hitched up his pants. A real macho man at seventeen years

old. 'Boy, just look at that ass on her!'
Anna was following her mother into Sarah Greeve's general store, stepping up onto the porch and under the awning. Tom hated to hear dirty talk about her, but even he couldn't ignore the truth: when she raised her leg, the short dress tightened around her backside to reveal its perfection.
His throat tightened and he had to swallow, heart racing, flushed. He was dazzled by the sight of her even from this distance - the curved spine and broad hips, the long legs and golden hair - and felt bereaved when she was up in the porch and obscured by the shadows. He just blinked and when he opened his eyes again, she'd already entered the store.
'Come back out,' Larry said. He was the leader of the pack. A good looker, he always got the girls and was pretty sure of himself. Tom knew that's why he really wanted Anna: just to say that he'd done it. The mere thought of Larry getting his hands on her made Tom feel pretty bad. 'No use gawpin' at the door,' Larry said. 'She's gone inside, kid.'
'She'll be comin' out again.'
'It must be love,' Gary said. Short and fat, he was sweating like a pig, though he grinned like a friend. 'Is that what it is, Tom?'
'Naw,' Tom lied, 'I just like to look at her - just like all of you guys. You see anything *else* there?'
He was trying to be laid back, but he had a real point, which he realised, as he had done before, when he looked up and down Main Street. It was a real one-horse town, a Green River railroad town, with a population of 400 souls, most brain-dead from too much sun and too little work, what with the drought and all. Not much crops around here. Even the cattle were dying. There were two schools and three churches, a library and a railway station, and everything else was on Main Street, which was all there was, really. It looked like a cowboy town, like something straight out of the movies, with clapboard buildings and steps leading up to porches shadowed under broad awnings. A couple of bars, a few diners and stores, one hotel, the sheriff's office, the cinema and a drugstore for the kids, and that was it, folks. This was Main Street. There wasn't much hidden behind it. At one end of it was the railway station, run by Tom's dad, and farther on, at the edge of the flatlands, was old Beth's gas station and the clapboard house in which she and Anna lived. There were other girls in town besides Anna, but they weren't worth the watching.

'You see anything *else* out there?' Tom repeated, trying to act cool.
They all glanced up and down, automatically, maybe hoping, and their eyes fixed on the only two girls about - down there, by the hardware store. It was the Proctor sisters, Betty and Lorraine, both twenty years old, unmarried and already washed out. They were wearing wide skirts and loose jackets, with their feet in flat shoes. Their hair was pinned up just like Beth's, and they looked almost as old. Sitting side by side, on a rocking bench on the porch, they had their hands folded in their laps and were staring down at their crossed feet.
'I see somebody's future,' Larry said, his grin slipping sideways, 'and I fear for the future. Any volunteers, guys?'
'No, thanks,' Gary said. 'I have enough bad dreams.'
'You smile at 'em,' Pete added, 'an' they jump out of their skin. You talk to 'em an' they turn white and run away. Those girls are *weird,* man!'
Tom didn't say a word. He didn't think there was anything funny about the Proctor sisters. There were too many girls like them in town and it made him depressed. They were quiet and polite, but mostly too nervous, and they all wore really drab clothes and tried to look unattractive. No wonder Anna looked great.
At that moment, Dan Proctor, tall, gaunt and unshaven, emerged from the hardware store and said something to his daughters. Meekly, with heads bowed, they got up and followed him along the sidewalk.
'That Dan Proctor must be one real mean Daddy,' Larry said. 'Those girls are suppressed, man. Whoops! Here she comes.'
Anna was on the porch, half lost in the shadows, strands of her golden hair whipping out into the light, then falling back over her face. She stepped down, into the light, the dress riding up her long legs, then brushed the hair back from her face and started crossing the street. She crossed at an angle, heading away from the drugstore, her profile and body outlined in striated sunlight. She seemed to glow and glide, her body shimmering, in slow motion, and Tom was so dazzled by her presence that he thought he'd go blind.
'Just look at those melons,' Larry said. 'And that ass! Oh, my God! How the hell can old Beth be so protective, then let her dress like that?'
'She's trying to drive us all crazy,' Pete said, grinning down from his lofty heights, 'and I think she's succeeding.'

Reaching their side of the street, which was helpfully in the sunlight, Anna jumped onto the sidewalk with a quick, graceful movement. Then she wandered toward the boys in her familiar, distracted manner, going up and down the steps and along the dusty porches, repeatedly brushing her wind-whipped hair from her face as she stared into windows. She also sucked her thumb. It was something she did a lot. It made her seem like a little kid, but everything else about her was something else: that ravishing face, the golden-coloured, long hair, that perfect body accentuated by the wind-flattened cotton dress, her legs brown, her small feet in dusty moccasins - she was some kind of dream.
'It's either her or a video-tape,' Larry said. 'Otherwise I'll explode.'
He had said it loud and clear, knowing damned well she could hear it, since she was stepping up onto the porch that ran along to the drugstore. She froze where she was, obviously startled, suddenly seeing them, and her eyes, which were as blue as the sky, filled up with panic. She glanced at Tom - or so it seemed to him - and he burned up with shame.
'Oh!' she exclaimed, not sucking her thumb now.
'Hi, Anna,' Larry said. He grinned sideways at the others, slicked his hair back, rolled the gum in his mouth. 'We haven't seen you this close in a long time. You're lookin' real good.'
Anna opened her mouth to speak, left it open, struck dumb, and Tom noticed the flush beneath her brown skin as she lowered her eyes.
'You wanna a milkshake?' Larry asked, spreading his legs, straightening his spine, looking handsome in his white shirt and black pants, his big belt-buckle gleaming. 'You wanna suck on a straw with me?'
'Lay off!' Tom whispered. He wanted to die right there and then. Anna was kicking up the dust with her right foot and studying the boards on the porch.
'What about a drive?' Larry asked. 'We could go out to the river. Just you, me, some beers, and maybe a blanket. Whatd'ya say, Anna?'
Anna kept her head down. She was kicking up the dust. She glanced at Larry, then stared across the street, as if looking for Beth.
Tom felt really bad. 'Let her pass,' he said to Larry. He saw that Pete and Gary were grinning sheepishly, trying not to show their shame, but that Larry was enjoying himself, making up for his loss. 'Let her pass, Larry,' Tom repeated. 'Stop trying to embarrass her.'
'*Embarrass* her?' Larry replied, looking mock amazed, rolling his big grey

eyes and grinning broadly again. 'Wouldn't *dream* of it, pal!' Then he stepped aside and performed a mock curtsey, bowing low, indicating with a wave of his hand that Anna could pass. 'Please walk on,' he said.

Anna studied the dusty boards. She kicked up more dust. She raised her eyes to stare at Larry, then glanced accusingly at Tom. Even as he blushed, burning up with embarrassment, she skipped down the steps and ran off across the road, waving at Beth as she emerged from the general store, burdened down with some heavy bags. Anna took the bags from her and heaved them into the truck. She helped her mother up and clambered in behind her. Then the truck coughed into life and trundled off, churning up clouds of dust.

'Some day - ' Larry began.

'Shut up, dammit,' Tom said, shocked by his own vehemence, turning away to hide his burning face, then jumping down off the porch. The truck was a long way off and he watched it disappearing, thinking all the while of how he had often dreamed of Anna - seeing her as an angel descending from heaven, unreal in dazzling light, then turning into a living, full-blooded, romantic creature whose love rescued him from the crushing boredom and misery of adolescence in Trinity.

He had that dream often.

Chapter Three

Anna loved animals. Back home, in the early evening, when the sun was going down, she walked out of the rickety old clapboard house by the gas station to feed her two fierce Alsatian dogs and half a dozen cats. The cats were all strays that she'd picked up in Trinity, one after the other, when overcome by pity at the sight and sound of them, bone-thin and scraggly, meowing for food along the road through Main Street. Anna just couldn't resist a hungry or lonely cat because, having lost her own father, she knew what they were suffering.

The Alsatians were guard dogs, called Batman and Robin. Though indifferent to the cats, they'd been trained to look out for strangers and give them a hard time. Beth didn't trust strangers. Nor the townsfolk for that matter. She had often told Anna to be wary of strangers, particularly men, even those in Trinity, and she'd personally trained the Alsatians to be vicious and make lots of noise.

The dogs were safe if Beth was present and they practically worshipped Anna. They only became agitated when customers stopped by for gas. That explained the lack of customers. Flaherty's gas station, at the other side of town, did a lot more business; but that fact didn't bother Beth a bit. Her only concession was to shoo the dogs behind the mesh-wire door of the house when someone arrived for gas or other business. But often both dogs would be all over the customer's car, snapping and slathering, playing hell with the paintwork, before Beth or Anna had time to get out of the house and order them off. When that happened, most customers wouldn't get out of their cars. No, thanks. They'd just disappear in a cloud of dust, heading over to Flaherty's.

Every Christmas, Flaherty sent the dogs a card. It was his little joke. Anna smiled, remembering that, as she knelt down to feed the dogs. She lifted the raw meat from the bowl with her elegant fingers and dropped the pieces into the smaller bowls for Batman and Robin. Then she licked her fingers. It seemed a natural thing to do. She patted the dogs on the head and

walked back to the porch, unbuttoning her thin cotton dress to let the air at her body. She was naked beneath the dress, except for a pair of panties, because she needed to feel as free as possible, at one with the elements. When she reached the porch, she sat down, undoing the button below her breasts, then tugged the lower part of the dress off her thighs to let the sun on her legs. The top of the dress was already hanging off her shoulders and the evening breeze cooled her down.

She looked out across the land. It was her favourite time of day. The sun was sinking beyond the flatlands, setting fire to the horizon, and the first stars were appearing in the sky where pink bled into darkening blue. She liked to imagine that her father was out there, just beyond the horizon, building a life better than the one he had left behind and preparing to come back and take her and Beth away with him. It was something to dream about.

A light breeze picked up and blew dust across the flatlands. It crooned as it blew around Anna and tugged at her dress. She felt it on her bare shoulders, on the top of her breasts, on the brown thighs exposed to the falling night. She was taking the breeze in through her pores when she heard the car coming.

The dogs started barking immediately, even turning away from their food, staring wildly at the approaching car and baring teeth covered in blood. The feeding cats scattered, running for shelter beneath the porch, and Anna stood up, as calm as you please, and walked toward the dogs.

'Batman!' she snapped softly. 'Robin! Get back in the house. Go on now! Get going!'

The dogs ignored her for a moment, working themselves into a frenzy, but when she stamped her foot on the ground and slapped at them, they loped back to the house, still making a lot of noise. Beth was there at the outside door, opening it up to let them in, and when they slipped past her, she closed the door again and pressed her nose to the mesh wire, looking down through narrow, suspicious eyes into the dimming light. Anna stepped out as the car, a dusty 1987 Chevrolet, stopped by the pumps.

The nearside window was rolled down and a man's face appeared. When Anna walked up to him, he gave a low whistle, then held the keys out through the window.

'You're a sight for sore eyes,' he said. 'Fill 'er up, thanks.'

Blushing, but not thinking to do up the buttons of her dress, Anna took the

keys off him and went about filling the tank with gas. The man got out of the car, stretched himself, then stared at her. He was portly and balding, his tie loosened, his shirt sweat-stained, and his hazel eyes, though weary from driving, took all of her in.
'Travellin' far?' Anna asked him, feeling nervous, wanting distraction.
'All the way from San Antonio. On my way to Oklahoma City. A long way to go yet.'
'You tourin'?'
'I'm travellin"
'You mean work?'
'Somethin' like that.'
'It must be pretty lonesome on the road.'
'A man misses certain things.'
Anna put the cap back on. She felt pretty uncomfortable. She glanced at the man, couldn't meet his bold gaze, so wiped her hands and stared across the plain, where great shadows were shifting. The breeze, which was crooning across the flatlands, blew the dress off her thighs.
'You want the oil and water checked?'
The man let his breath out in a loud sigh. 'Sure,' he said. 'Naturally.'
Anna lifted the hood and went about her business. The hood blocked off her view of the man, but she knew he was watching her. She was bent over, working down there in the engine, the dress tight on her spine and rump. She hadn't thought, at this late hour of the evening, that she might have a customer.
'A nice dress,' the man said. Anna didn't reply. She was too busy topping up the oil and trying to be quick about it. 'A nice suntan as well,' the man said. 'The dress shows it off well.'
Anna straightened up, wiping the oil off her hands. She still had to top up the water and she dreaded the thought of it.
'You don't talk much,' the man said, looking her up and down, grinning.
'Do you really need water?' she asked him.
'Yeah,' he said. 'I need water.'
She went to fetch the water can. The wind was pressing the dress against her. It was blowing it right off her legs, but she couldn't prevent it. She picked the can up, having to bend down to get it. When she straightened up and turned around to walk back, the man was staring right at her.

'What age are you?' he asked.
'Seventeen,' she replied.
'You're some hot-lookin' number for seventeen. You live here alone?'
'No, with my mother.' She wished she'd added her father. When she walked past the man, he stepped forward and their bodies touched lightly.
'Is she in the house now?'
'Yes,' Anna said, taking a deep breath and bending over the engine to top up the water. When she poured, her hand started shaking and water splashed on her dress. When the water soaked through to chill her breasts, she felt even more nervous.
'What's she like?' the man asked. He was standing right behind her. He was only about a foot away from her and his breathing was audible.
'Who?' Anna asked, hardly knowing what she was saying, only aware of that man right behind her, looking down on her.
'Your mother. Is she old? Is she deaf, dumb and blind? Is she out back, in the kitchen, in the john, or can she see us right now?'
Anna replaced the water cap and straightened up with relief. When she turned around, the man was standing right in front of her, beads of sweat on his nose and around his lips, glistening under his wide eyes. His breathing was heavy.
'She's up there with two dogs,' Anna said, 'and she's probably in the front room. She likes to keep her eye on me.'
The man grinned at that, misinterpreting what she'd said. When he stepped forward, she quickly stepped aside, but he just slammed the hood down. Anna's heart skipped a beat. She felt as if she'd been violated. She turned back to face the man and saw his grin when he took in her soaked dress.
'What about the windscreen?' he said. 'You gonna do that as well?'
'If you want.'
'I want,' he said, his sweaty grin broadening into a crooked leer that made her feel naked. 'I want it all, kid.'
She didn't want to do the windscreen. It meant leaning across the hood. She'd forgotten that she was wearing this dress and that she'd unbuttoned most of it. She quickly did the top buttons, though it wouldn't help much. The water had soaked through, exposing her breasts, and she knew he could see that.
Taking another deep breath, her heart racing, she leaned over the bonnet with the wet rag to polish the windshield. She tried to stay as upright as possible, but she knew it was useless; she was stretched out, twisted slightly sideways,

over the hood, with the thin dress stretching tight on her body, breasts exposed by the wet patch.
She knew how men normally looked at her, and this was making it worse. The man stepped forward and stopped right behind her, so close his groin was touching her thigh. Anna wanted to straighten up, but was too scared, so she started drying the windscreen.
'What about it?' the man said, sounding strangled. 'In the back of the car. I'll even pay you. I don't give a damn. You'll be worth every cent. Five minutes is all, kid.'
His hand fell on her thigh, sliding under the dress and along her bare skin. A spasm of fear and revulsion daggered through her, making her jerk upright, turning around and slapping him with the wet rag before she could think. He stepped back and she pushed him farther, dropping the rag, crying, 'No!' Then she pressed herself back against the car and covered her lips with her fingers. He blinked the water from his eyes, licked it from his lips, rubbed it from his face and then stared at her, turning purple with rage.
'Goddammit,' he croaked, then gave up trying to speak and reached out to take hold of the dress just above her wet breasts.
He was stopped by the barking dogs.
Anna glanced up to see Batman and Robin bounding down the porch steps, making a dreadful noise, illuminated in the light beaming through the open door and silhouetting Beth in the hallway. The man glanced over his shoulder, into the dimming light, as the two large Alsation dogs, barking and snarling, cleared the fence and rushed at him. Grabbing Anna by the shoulder, the man threw her aside, jumped into his car, and slammed the door just before the dogs got to him. Anna ran back to the house, reached the gate and looked back. Batman and Robin were on their hind legs, front paws pounding on the windows, snapping and snarling like hounds from hell as the man gunned the engine. The car took off in a billowing cloud of dust and raced off down the road, pursued for a while by the two dogs, then disappearing. When the dogs returned, emerging from settling dust, Anna reached down and patted them.
'Anna!' Beth bawled from the porch. 'Come on up here, child! Leave the dogs out there for a while just in case he comes back. Now get into this house, girl!'
Anna did as she was told. When she climbed the porch steps, her mother was

waiting for her, half of her face in shadow, one eye caught in brightening moonlight, her lips pursed in a grim line. She reached out to place her hand on Anna's shoulder, then shook her gently.
'You alright?' she asked.
'Yes, Ma, I'm fine.'
'Okay. Come inside, girl. Dinner's on the table.'
They said their prayers before eating, then picked up their knives and forks. Yellow light from the oil lamp flickered over mashed potatoes, green beans, and steak done rare and bleeding. Beth had a few mouthfuls, then spread her hands on the table, her knife and fork pointing at the ceiling, like weapons of war.
'Goddamned men!' she said with contempt. 'They only think of one thing!'
Anna knew what that thing was. She had seen it in the eyes of the boys who gawped at her; in the eyes of the married men, slipping helplessly, guiltily sideways each time she passed by. She had also seen it in her dreams, but in more confusing form, when her visions of God, or His magical light, were mixed up with other visions of violent, terrifying carnality devoid of clearly defined shape.
She felt herself to be the victim of forces beyond comprehension.
When she thought about this, she tried in vain to recall her father. Even though she had been thirteen when he left home for good, she could hardly remember a thing about him. For that reason she was convinced that he'd been some kind of saint, standing on the right hand of God and casting light on her childhood. When she lost him, she lost a whole world and was never secure again.
'All men can't be bad,' she told Beth.
'Most are,' Beth replied.
'You told me Dad was a good man.'
'Yes, child, he was that. He was a good man who treated us well - but then he just upped and left.'
'You've never told me why.'
'That's because I don't know. I was a good wife to him and he seemed to be contented - then suddenly, he just upped and left and never returned. No note. Not a thing. He just disappeared, Anna.'
'You think there was another woman?'
'There wasn't another woman.'

'Maybe he just too sick, Ma, and couldn't take it no more. Maybe he was too sick to think and just wanted to hide away.'
'He wasn't a suicidal man.'
'I mean sick... in the head.'
'No, Anna, he wasn't sick in the head. I only wish that he had been. God damn it, child, I don't know why he left. I've wondered about it ever since. I know it hurts you, but it hurts me as well. That's why I want to forget him.'
'That's why you mistrust men.'
'That's one of the reasons. The other reason should be obvious even to you - just think of that man out there.'
'Not all men are like that, Ma.'
'Not many *aren't* like that. And you, Anna - you're more beautiful than you know, so men look at you differently.'
'They know that I'm sick.'
'Yes, they know that as well. That only makes them more dangerous. They fear you and lust for you at the same time - and few men can take that. The more they want you, the more they're gonna fear you - and that makes them dangerous. You'll always have to be careful, child.'
The thought depressed Anna and she finished her meal in silence, occasionally glancing around the spartan room, now dimly, erratically illuminated in the flickering oil lamps. When she had finished, she put down her knife and fork and sat back in her chair.
'I feel really tired, Man... That man - I think he exhausted me. I'm gonna go to bed early.'
'You do that, child. That's wise. Best to sleep it away and wake up feeling refreshed. You go on. I'll clear up here.'
Anna went to bed, stripping naked as usual. She lay between the sheets and stared out at the moon, imagining it was God's eye up there, gazing down to protect her.
She needed that protection because she didn't have a father. If she had, he wouldn't let the males of Trinity look at her the way they did. They embarrassed and humiliated her. Sometimes they frightened her. All of them except Tom Beale, her former schoolfriend. When Tom looked at her, even with desire, his gaze showed shy tenderness.
In fact, Anna had been dreaming about Tom for months. He was all mixed up with God in her dreams of love and destruction. Not too sure of just what that

signified, she closed her eyes and tried sleeping. The dogs occasionally barked outside, the wind moaned, but otherwise there was silence. Anna drifted out of herself on wings of light to find God in her dreaming. Tom was mixed up, somehow, with God to bring terror and love. Anna's body was burning.

Chapter Four

Tom was still awake. He was in the dismal old house that stood by the railway station, run by his father and mother, with some help from him. Tom had lived there all his life and couldn't stand the place. The only interest was in the occasional passenger stepping down and looking around with distaste. Few visitors stayed for long.

Tom was crowded into the hot, cluttered living room with his Mom and Dad, and three older sisters. His mother Myrna was a worn-out rag, ironing clothes while watching TV; his father, fat-bellied, jowly and mean, was slouched deep in the only comfortable chair in the house, swigging beer and smoking a cheroot while also watching the TV.

Tom's sisters were watching, too. They didn't really have a choice. In this house, you did as you were told or suffered the consequences. Still, that didn't explain Tom's sisters, Betty, Jean and Clara, eighteen, nineteen and twenty years old respectively, but exceptionally dim and cowed. They were sitting close together, like rag dolls on the sofa, wearing baggy, unattractive clothes, with their hair prim and proper. They all had their hands in their laps and they didn't move much.

They were watching some dumb quiz show. The sets were in garish colours. The applause and laughter had been amplified and the noise was atrocious. It didn't disturb Tom's mother and father, who were both glued to the box, the former watching and ironing in deathlike silence, the latter belching and bawling rude comments about the halfwitted participants.

Half-witted, Tom thought resentfully, just like my sisters. Like my Mom and Dad, too. Dear God, let me out of here.

'That dumb sonofabitch!' his father sneered about a hapless contestant. 'He doesn't even know where the Channel Islands are! They oughta feed him some peanuts!'

'Where are they?' Tom asked.
'In England, fat-head!' his father sneered. 'England *is* an island,' Tom said.
'What do *you* know? Get outa here!'
Tom wanted to strike him, but knew that if he tried,

his Dad would break every bone in his body. Well, not quite, but he'd certainly slap him around some, just as he often did to Tom's mother and three terrified sisters. That probably explained them. It explained a lot of things. Like why living here was hell on Earth or, at least, some kind of purgatory.

'Look at the balloons on that wife of his,' Jack Beale said of another participant on the TV quiz game. 'I guess that's where her brains are.'

'*Please*, Jack!' Myrna remonstrated feebly.

'Shut your mouth,' Jack replied. 'Hey, girls,' he added, turning to his daughters. 'What do *you* think?'
Betty and Jean lowered their heads, looking down at their twisting hands. Clara cast Tom a dead-eyed glance, then stared straight at her father. 'Ha, ha,' she murmured.
'You don't think that's funny? Hey, you two,' he shouted at Betty and Jean, 'why the hell are you blushing? You haven't got tits or something? Is that it? You don't like to hear talk about them? What's the matter? You're *shy*, girls?'
'*Please*, Jack,' Myrna whispered again.
'Shut up, Myrna, I'm warning you. Jesus, what a brood! The walking dead! No wonder they can't get a goddamned man. Their conversation's too dazzling.' He burped, had another slug of beer, then wiped his lips with the back of his hand. 'Hey, Tom,' he said, 'go and close up the station for the night. I've gotta see this show finished.'
'Okay,' Tom said. It was like getting out of prison. He stood up and turned around, his eyes scanning the gloomy room: unpainted clapboard walls newspaper cuttings; faded prints, and photographs; the furniture, old and torn, covered with clothes and magazines; empty plates and crushed beer cans on the serving counter of the kitchen; ashtrays filled with ash and peanut shells all over the place; a mangy mutt chewing bones by the unlit fire on a dust-

covered floor. Tom couldn't stand the sight of it and gratefully hurried covered in browning outside, glad to see space all around him and breathe in the fresh air.
Still, it was desolate. These were the flatlands of East Texas which, in the darkness, looked like a taut black sheet stretching out to the star-covered mountains on the distant horizon. Not much out there at all. The wind moaned night and day. The only thing moving out there was that wind and its swirling dust clouds. They moved lazily, eerily, obliterating the moon and stars, forming great loops and arcs and other ghostly shapes that invariably swept over the railway station and accompanying house.
Located on the outskirts of town, the house and station, illuminated in the darkness, seemed mighty lonesome.
It was just a milk-stop station, with a one-man switchbox, a water tower, a waiting room on a short, exposed platform, and another room for the mail and stationmaster. That was Tom's dad, Jack, though Tom now helped him out. Like a lot of other kids, he couldn't find work locally - the drought had killed off lots of jobs - so he didn't have any choice in the matter. At least it got him out of the house, which was some kind of blessing.
Tom soon crossed the short distance between the house and the station, leaning into the wind, covering his eyes against the sweeping dust, and climbed the wooden steps up to the station door, which was open and held back with a hook and pin. Walking through, he emerged to the platform, walked along to the end of it, jumped down and crossed another stretch of ground, then climbed up to the switchbox.
He liked it up there. You had a good view all round. There were only two tracks, going in opposite directions, both of them perfectly straight as far as the eye could see. Not many trains came through. When they did, they only stopped to deliver the mail being sorted through Houston. Few passengers disembarked. Those that did, the brave few, usually just squinted through the dust in all directions, saw nothing but flat plains and a one-horse town named Trinity, so boarded the train again, more grateful to be on it, and let it carry them away to somewhere better.
Tom often wanted to make that journey with them, but sensed that he never would.
Besides, he didn't think he could make that journey if he couldn't take Anna.
Sighing, filled with longing, he turned out the lights, climbed back down the

ladder, then crossed to the platform. Stepping up onto it, he walked along to the mailroom, ensured that it was locked, checked that the waiting room was empty, then locked that as well. When he had finished, he went back through to the entrance and stood there for a while, letting the wind and dust blow around him as he studied the lights of his rickety old home and, beyond it, the lights of Trinity, most of them now beaming out of the homes behind Main Street, but gradually winking out, one by one. Soon darkness would cover the whole town and then it would, at least temporarily, cease to exist.

There were times when Tom wished with all his heart that this was actually so.

Only the thought of Anna made him glad that he'd been born and raised here. He couldn't see her house from here. It was at the other side of town. But he gazed in that direction, trying to imagine it - a house no better than his own, located beside a gas station that few people went to. Anna had lived there all her life, breathing gasoline fumes, and Tom had first seen her at school when she was five years old, the same age as him. He recalled that even then he had been dazzled by her golden, curly hair and angelic beauty. The hair had straightened out, though the golden-blonde colour had remained, and Anna had become a lovely adolescent blighted by tragedy.

Her mother, old Beth, had always had that clubfoot, which couldn't have helped much. Then Anna's father disappeared when she was thirteen years old and soon after, Anna started having fits. When that happened, things changed. She was off school for weeks, but returned eventually like someone different: a grief-stricken, beautiful angel, who refused to associate with the other kids and dropped out as soon as she could. Now, she hardly ever came to town, rarely spoke when she did, and was protected fiercely by her mother. Tom loved her, but didn't know how to tell her, and that broke his heart even more.

He jumped down the steps and started back to his house squinting through the swirling dust at its lighted windows as the wind moaned about him. It was a twostorey house with a gabled roof and veranda, the paint flaking off its weathered boards and its drainpipes all rusted. With all its lights on, beaming out into the darkness, it looked a bit like the house in *Psycho,* one of Tom's favourite movies. He liked the movie, not the house - at least not his own house. Standing there on its own, all lit up in the night, the house only reminded Tom of how desolate his life in this place was. He often thought

that if he didn't get out of here, he was likely to go mad.
Going back inside, he found everyone exactly where they had been before, his mother still doing the ironing, the rest watching TV. Not much else to do in here. They all had to live together. That meant they had to do what Tom's dad said and keep their lips buttoned. Jack Beale drank an awful lot of beer and lived on a short fuse.
'You see anyone in town today, honey?' Myrna asked, as Tom took a hard wooden chair against the wall, to the side of the glowing, noisy TV set, facing his father and sisters.
'No-one new,' Tom replied, untying his shoe laces and starting to kick off the left shoe. 'Anna Lansing came into town with old Beth. Apart from that I just saw the guys.'
'Haven't seen 'em for years,' Myrna noted. 'Is Anna still pretty?'
'She likes to show what she's got,' Jack Beale said, resting his beer can on his belly and still staring blearyeyed at the TV screen. 'She has a woman's body, wears a dress that shows it all, and sucks her thumb like a little bitty girl, but otherwise flounces around like a whore. That's how pretty *she* is!'
'She's beautiful,' Tom said quietly.
'She's also crazy,' Jack replied. 'And the first man that grabs her's gonna get her, so you better jump in there, kid'
'*Jack!*' Myrna snapped. 'That's enough of that dirty talk! We've got a decent boy here and three girls who don't need that kind of talk.'
'Shut your dumb mouth,' Jack replied. 'If you don't, I'll shut it for you. Won't be the first time I've laid you on your back, and it won't be the last. As for these kids, they should know the facts of life - and that's what I'm teaching them. Isn't that right, kids?' Nobody replied, so he laughed and drank more beer. He burped and wiped his lips with the back of his hand, then rubbed the wet can on his bare belly, hoping to cool it down. 'Marriage!' he grumbled to himself. 'What the hell does it get a man? You're better off in a whorehouse.'
Tom knew the signs, so he decided to get out of there. Once started, his dad didn't let up on things - and that could get them right back to Anna. If that happened, Tom wouldn't be able to stay silent, then a riot would commence and he, Tom, would end up black and blue.
'I'm going to bed,' he said.
'Yeah,' Jack said, 'you do that. Keep yourself entertained between the sheets. It's all you're good for.'

Tom glanced at his sisters. They were probably all blushing, just like him, but they had lowered their heads. He stood up and crossed the room, leaving his shoes by the chair, then gratefully hurried up the stairs and into his bedroom. He didn't switch on the light. Nor did he undress. He just glanced out the window, at that vast expanse of darkened flatlands and sweeping, star-filled sky, then lay down fully dressed on the bed, cradling the back of his head in his folded hands and gazing up at the ceiling.

His heart was racing while he burned with humiliation. He felt that if he stayed in this hellish place, he would surely go mad... He'd go mad without Anna.

When finally he drifted into sleep, he dreamed again of his angel, golden haired and radiant in a light that erased the whole world, leaving only the two of them.

'Anna!' he whispered.

Chapter Five

Anna awakened the next morning with the light of God warming her naked body. She sighed and stretched, then slid out of bed. When she had washed, this time in the hot tub in the adjoining room, she put on her best Sunday dress, white and starched, then joined her mother in the living room. Beth was already in the kitchen, making breakfast as usual, but all dressed up in a black skirt and blouse, with a scarf at her throat.
'You look fine and dandy,' Anna said. 'I can see

you're all set for it.'
'It's a sign of respect for the Lord. This should be a great day. Now sit down and eat, child.'
As they were going out this morning, they only had cornflakes in milk, washed down with coffee. Beth was visibly excited, even smiling once or twice, and she couldn't clear the table quickly enough. Then she picked up her handbag.
'Let's go,' she said. 'I don't wanna be late. I wouldn't miss this for anything.'
When Beth opened the door, Batman and Robin rushed out, barking and snapping, already looking for the enemy, and raced down the steps to tear up the dirt and pound the yard fence. Beth called them back up, her voice as hard as sheet metal, and they reluctantly did as they were told, looking really deprived. When Beth had locked them in, to savage any foolish intruder, she and Anna walked down the steps and crossed the yard to the truck. 'I dusted the seats down this morning,' Beth explained, 'so we won't get too much of it on our clothes. But put this sheet of newspaper under your backside, just to make sure.'
Anna climbed into the truck, placed the newspaper on the seat and sat on it. Beth did the same on her side, then

turned on the ignition. The truck was old but reliable and it sprang into life instantly. Beth released the handbrake and drove the truck over the rough earth, then onto the road. 'The Lord be praised, there's hardly any wind,' Beth said. 'It's a beautiful day for it.'

'Yeah,' Anna said, glancing across the flat, brown plain surrounded by distant mountains, into brilliant sunlight. 'We won't get covered in dust. We should still look pretty decent when we get there.'

'That's a good sign,' Beth told her.

The great tent for the Reverend Juble Lee's Revivalist Meeting had been raised on the flatlands just north of the town, not far from Pat Flaherty's gas station. By the time Beth and Anna got there in their old beat-up truck, most of the townsfolk were already present, dressed up in their Sunday best. A lot of the men were in highheeled boots, light-grey suits and Stetson hats, while the women wore suitably modest dresses and broad hats, some even carrying dainty parasols to keep the sun off them. A few people were still circulating between the trestle tables outside, but most were already inside the tent, hoping to get as close as possible to the raised stage, where the spirit might move them all the more.

After parking the car with the couple of hundred others covering the flat plain, Beth led Anna to the big flapping tent, by way of the trestle tables, where the Reverend Juble Lee's people were selling bibles, religious pamphlets, assorted books and souvenirs, as well as cool drinks and hot dogs. Beth was clutching a Bible in her right hand as she dragged her clubfoot through the dust, letting nothing stop her. When they neared the flapping, creaking tent, Anna became self-conscious, feeling hemmed in by the crowds, uncomfortably aware that even when dressed modestly, she was causing too many men to stare at her. She was blushing already.

'Hi, Beth!' a familiar voice said. 'Hi, Anna! Haven't

seen you two in a long time. How are you keepin'?' When Beth stopped walking, Anna almost bumped
into her. Her heart started racing and she filled up with
panic when she saw that the man speaking was Jack Beale.
Big and bloated, his grin lascivious, his stare too direct, he
was standing in their way with his worn-out wife, three
browbeaten daughters, and only son, Tom, bunched up
behind him.
Anna glanced at Tom, feeling something lurch
inside her, then she saw the bold stare of his father and
tumbled down into chaos. She reached out blindly until she
found her mother's hand, then squeezed it entreatingly. 'What's the matter, Beth?' Beale asked, while still
grinning lasciviously at Anna. 'The cat got your tongue?' 'Anna!' Beth snapped, tugging her forward. 'You
come with me, girl!' Anna did as she was told - not really
having a choice, but wanting to anyway and was
practically dragged by Beth past Beale and his family, on
into the big tent. A lot of heads turned when they entered,
making Anna blush even more, but Beth hurried along a
carpet laid down between rows of folding chairs, then down
the central aisle, toward the stage, until she found two good
seats.
'Here,' she said, handing Anna another sheet of
folded newspaper. 'Put your backside on this.'
Almost dying with embarrassment, Anna unfolded
the sheet of newspaper, placed it on the chair and sat down,
grateful to be hidden away at last from the many eyes she
felt boring into her, mostly the eyes of men, young and old,
all wanting a piece of her.
'If ever a man needed this,' Beth informed her, 'it's
that fat pig, Jack Beale. If he dares approach us again,
ignore him and his brood. Praise the Lord, it's beginning!' The Reverend Juble Lee was a Christian and
Democrat, so the choir that came out on stage was a
mixture of black and white. They were all wearing red

robes, with purple, priest-like collars, and took their places along the whole length of the stage, beneath an enormous American flag that had a painting of the Reverend's face in the middle, his grey hair shining like silver, his blue eyes, almost phosphorescent, staring down at his audience. A chill went down Anna's spine. Those staring eyes petrified her. She wanted to look away, but the eyes couldn't be avoided, so she tried to distract herself by letting her gaze roam about them to take in what else was happening on the stage. The choir had taken their positions and look colourful beneath that huge flag. Other men and women, wearing white robes or plain clothes, were taking up positions along the stage, behind the microphones and between the amplifiers. They all seemed really happy and were beaming smiles at the audience. Then a woman walked out, wearing red robes like the choir, and when she stopped at centre stage, facing the choir, the people in the tent applauded wildly, as if at a concert.

Even Beth was applauding.

With that woman conducting from centre stage, the choir burst into song, accompanied by an organ, a synthesiser, tambourines and clapping hands, making an exultant, jubilant sound that soon had the audience swept up with it and clapping as well. The choir sang a whole batch of songs, mostly rocking gospel tunes, and the beaming people at the front of the stage exhorted the audience to join in, until everyone was clapping and stamping, and singing as loud as could be.

Beth sang with the best of them, her eyes gleaming in the light, but Anna, though excited and feeling unreal, just moved her lips.

Then the choir stopped singing. There was the silence of expectation. When the good reverend didn't come on immediately, the crowd, now excited, became restless and started stamping and clapping their feet in unison, as if already demanding an encore. At last, when this was deafening, threatening to bring down the whole tent, one of the men in normal clothes, beaming his love at everyone,

raised his hands and shouted into a microphone: 'Ladies and gentlemen - brothers and sisters - Hallelujah! - the Lord be praised - your friend and mine, the Lord's servant... *The Reverend Juble Lee!*'

The audience roared with one voice and jumped up and applauded wildly as the Reverend Juble Lee walked out onto the stage, raising his hands in benediction, or perhaps in a gesture of modesty, to take his place behind the microphone located front and centre of the stage. He cut an imposing figure, tall, broad and elegant in a grey suit and black shoes, with a white shirt and striped tie. His silvery-grey hair was shining in the dazzling light from arc lamps and exploding flashbulbs, and his eyes were as blue as the sky in his handsome, suntanned face. When he raised his hands and cried 'Brothers and sisters!' the whole crowd went wild.

Anna couldn't help herself. She just flew out of herself. At one with the congregation, swept up in the excitement, she lost herself by surrendering to the stagecraft of the Reverend Juble Lee. He ranted and raved, threatened and beseeched, clenched his fists and spread his hands, fell to his knees and jumped back up, cursed the devil and praised the Lord and kept screaming 'Hallelujah!' and then had the choir singing again with those tambourines beating.

The congregation was ecstatic, hysterical, raised on high, with people, male and female, young and old, sick and healthy, falling to their knees or fainting, holding oneanother, sobbing, stopping only long enough to fill up the collection boxes that were passed back and forth and then back again, until they were gleaming like pots of gold and rattling just like the tambourines.

The Reverend Juble Lee didn't rest. His voice exhorted and beseeched. He jumped down off the stage and moved up the central aisle, reaching out to touch the sick and the lame and let them fall at his feet. Anna viewed it as a dream. None of it seemed real at all. There were eyes streaming tears, flushed faces and open mouths, folks down on their knees to reach up and touch the hem of his garments. His eyes were a brilliant blue, matching the eyes on that great banner. When Anna tried to look away from his piercing gaze, she was

transfixed by the giant eyes above the stage and felt even more unreal. The Reverend Juble Lee stared at her. He was looking her up and down. He was transfixed just like her, breathing heavily in her face, and he reached out and grabbed her by the shoulder, bawling, 'Down on your knees, child!' Anna did as she was told, kneeling in front of his outspread legs. She looked up to see those piercing blue eyes forming whirlpools above her. His face was spinning like a wheel. The whole tent was spinning above her. Anna felt her heart racing, she started to shake, then her heart burst and her head seemed to explode and she swooped into darkness.

'She's havin' a fit!' someone called out as the sound rushed back in.
'Stand back! Stand back!' the Reverend Juble Lee bawled. 'This child has been possessed by the Lord. *The Lord's will be done!*'
Anna opened her eyes. There was something between her teeth. She spat it out, licked her lips, and stared up at a circle of faces. Beth and Tom Beale were there, both looking pretty worried. When she saw Tom, something lurched inside her, but then his face floated out of sight. The Reverend Juble Lee's face appeared suntanned and handsome, eyes like diamonds; he smiled and put his hand on her forehead, then leaned down even closer. 'We have the same colour eyes,' he said, whispering. 'Ain't that something, child?' Then he stood up, raising his hands, turning around to let the whole crowd see him. 'Brothers and sisters!' he bawled. 'This child has seen the glory of the Lord! *The Lord be praised! Hallelujah!*' The whole place went wild. The Reverend dropped back to his knees. He and Beth were close together, in a circle of faces, all staring down as Anna looked up, feeling dazed and unreal.
'Take this child home,' the Reverend Juble Lee said. 'This child is obviously someone very special. Take her home - and take care of her.'
Anna was helped up. She felt dizzy, sick and weak. Too many people were crowding around her and trying to touch her. All those hands, all those fingers - she trembled and turned to Beth. The Reverend Juble Lee stared at her, as if trying to possess her, then abruptly turned away and raised his hands to scream, 'Praise the Lord!' The crowd went wild again, the choir burst into song, and the congregation broke into applause and stood up on the chairs. When the Reverend Juble Lee jumped back on stage, a majestic figure in dazzling lights, his own likeness enlarged behind him with those greater eyes staring down, the crowd became even more hysterical and some women

fainted.
Beth led Anna out, practically carrying her along the aisle, and Anna saw, or imagined seeing, Tom's face as she passed the Beale family. Then she was outside, in the sunshine and fresh air, and was able to walk to the truck and climb up beside Beth. They didn't speak on the way back - Anna was dazed, Beth excited - but when they reached the house, Beth insisted that Anna go straight to bed and let her racing heart settle down.
'I thought it was a fit,' Beth said, 'but the Reverend Juble Lee was convinced that the Lord had possessed you. He told me to take you home. I'd never have left otherwise. Praise the Lord, he gazed into your soul and saw how special you were. Now you go and lie down, child.'
She led Anna into the bedroom, holding onto her, still frightened for her. Knowing that Anna slept naked, she turned away to let her undress alone. Still dazed, Anna undressed and slipped into bed.
'Trust in the Lord,' Beth said, tucking her in as she always did when concerned. 'Thank the Lord for men like Reverend Juble Lee. Faith is all we have left now.'
Left alone, Anna slept. She awakened when it was dark. A cloud was gliding over the moon, both framed in the window. Anna felt disorientated and clutched her pillow, needing something. She saw the face of Tom Beale, his brown eyes filled with concern, and wanted to reach up and stroke his black hair, touch his lips with her fingers. Yet even as she thought this, she remembered his father and was shriven by that bold look and leer, falling back into panic. Her heart started racing and her throat became constricted. Swallowing, she licked her dry lips and saw the Reverend Juble Lee. He was blue-eyed and handsome, but as old as her mother; yet even now, when she recalled how she'd knelt at his feet, she felt again as she had done at that moment: consumed by fire, scorched by flame.
Anna closed her eyes again. Those three faces materialised. She tossed and turned on the bed, her body sweating, then burning, before falling asleep for a second time and dreaming about God - that faceless figure in streaming light, descending from on high to embrace her and carry her off.
But this time it was different. God turned into the devil. The devil looked like Jack Beale, then became something worse, and Anna screamed and awakened, jerking upright on the bed as her mother hurried through the doorway, enabling the light from the living room to fall over the bed.

Anna looked down in terror at her stinging hands.
The palms of both hands were bleeding.

Chapter Six

Steve McLean wanted money. He needed it real bad. He knew this when he boarded the train at Houston, and knew it even more when, later, he looked out of the window at the desolate flatlands of East Texas. It didn't look too good out there. It sure as hell wasn't a city. McLean wasn't a man comfortable out of cities, and this looked like a wilderness. Barren flatlands running out to distant mountains under grey clouds and drifting dust. This train had been on the move for an eternity on rails as straight as an arrow. That just about said it all.

'Hey, partner,' McLean said to the old coot sitting opposite, 'how much longer before we get to Trinity?'
The old coot shrugged and spat tobacco juice on the floor. It landed close to McLean's patent-leather shoe and made him jerk his foot back. 'Dunno,' the old coot said. 'Never bin there myself. I'm only goin' to see the Reverend Juble Lee and that gal with the bleedin' hands.'
Well, at least they existed. McLean had sometimes had his doubts. When his boss, Ralph Bleeker, editor of the *Weekly Enquirer*, a sensationalist rag that entertained the low tastes of McLean's hometown, had called McLean into his office to show him a cutting from the *Trinity Gazette*, McLean had thought it was some kind of joke. The article claimed that a local girl, Anna Lansing, had fainted during a Reverend Juble Lee revivalist meeting, gone into an epileptic fit, then started bleeding from the palms of her hands. Apparently the girl's mother had later shown the stigmata to the Reverent Juble Lee. She had done this in confidence, but the good reverend, always looking for publicity, had decided to spread the news.
'You want the job?' Bleeker had asked.
'Nope,' McLean had replied. 'I can't stand getting dust on my shoes. I hate breathing fresh air.'
'You got all this aggravation,' Bleeker responded. 'Gambling debts, alimony, the demands of your other women - you're a man with a lot of financial problems, so this could be your salvation. You refuse, I've got nothing else to offer. Now what do you say, McLean?'

'You're a real pal,' McLean said.
Now, here he was, on a train for Cowboy Land, with old coots who spat tobacco juice on the floor and hardly knew where they were. Still, a man had to make sacrifices when the odds were stacked against him, and his problems, he knew, could be solved if this bucket held water. Bleeding palms? He didn't believe it. Not for one second, pal... But then he *was* writing for Bleeker's filthy rag, where the word 'truth' was unknown. Monsters lurking in dishwashers, aliens coming down the chimney, women giving birth to dogs, and three-headed children speaking Esperanto from the day they were born... it was *that* kind of news.
'Hey, partner,' McLean said to the old coot sitting opposite, 'how come you don't know how far Trinity is when you only got on at the last stop? I mean, the last stop is where you *live,* right?'
'Right.'
'So - '
'I ain't never bin as far as Trinity,' the old coot said, chewing his tobacco with toothless gums, his cheeks as flexible as the gum, and scratching what balls he had left beneath his greasy coveralls. 'Nothing there I ever needed. This trip's costing me ten dollars return and that's enough for one lifetime.'
Couldn't be far, McLean thought. We should be there any minute. Let's just hope this old bastard doesn't get a heart attack and keel over to complicate my life. Damned amazing he's still alive.
'So,' he said to the old coot, feeling desperate for conversation, 'you're going to see the Reverend Juble Lee and the girl with the bleeding palms.'
'S'right,' the old coot said, brimming over with conversation.
'Why?'
'What?'
'Why do you want to see the Reverend Juble Lee?'
'The Lord be praised, he'll wash away my sins and heal my arthritis.'
'You believe he can do that?'
'I've heard it told,' the old coot said. 'Lots of folks in my town, they saw him when he came through, and some of 'em, once crippled, they could walk again; some sick, they were cured. Me, when I refused to go an' see 'im, I came down with arthritis.'
'What age are you?' McLean asked.
'Eighty-nine this April. Healthy as a kid all my life, then I get this arthritis.

The Lord works in mysterious ways.'
'He sure does,' McLean said, hardly able to believe this shit. Lighting a cigaret, he blew a cloud of smoke at the old coot's face to let him have a good coughing fit.
'What about the girl with the bleeding palms?' McLean asked when the old coot had managed to stop his coughing. 'You think that really happened?'
'Stigmata,' the old coot said. 'The wounds of the Cross. Sure as God, it's a miracle that occurred, and I want to see it.'
'Could be fakery,' McLean observed.
'Reverend Juble Lee witnessed it.'
'And that's enough? That the good reverend witnessed it?'
'That's enough for me, son.'
To stop his own sigh of despair, McLean inhaled on his cigaret. He could never believe how gullible people were, but without them, where would he be? Bored, he pursed his lips, puffed out his cheeks, then blew another cloud of smoke at the old coot and watched him coughing convulsively.
'A little problem with those lungs,' McLean said. 'That might be worse than arthritis. Hi, ho, here we are.'
It was pretty amazing, really. He couldn't believe he had arrived. You didn't get any warning like you did with a city, first seeing the suburbs, then the junkyards, then the slums, until finally the plate-glass and chrome was all around you, soaring up to the sky, kind of phallic, suggesting wealth and power. No, nothing like that here. This was obviously the *real* world. One minute you're looking at what might have been a desert; the next you're in Trinity station, with the whole town behind it. A real onehorse town. McLean could see that much. No wonder the old coot never came here: it looked as dead as he'd soon be.
McLean stood up and yanked his suitcase from the rack, then glanced at the overnight bag resting beside the old coot. 'Stop coughing,' he said to the old bastard. 'You'll just encourage a rupture. I'll see you around, pal.' He started walking out, not wanting to get involved, but when the old coot, still coughing, sat down again, he had to turn back. 'You okay?' he asked.
'Just breathless,' the old coot said.
'Must be all this fresh air,' McLean said. 'You're probably not used to it.' The old coot had stopped coughing and was looking up forlornly. 'Okay, okay,' McLean said, stubbing out his cigaret and picking up the old coot's bag with

his free hand. 'I'll carry this out to the platform. Do you think you can walk that far?' When the old guy nodded, wiping tears from his eyes, McLean walked along the carriage, his suitcase in one hand, the bag in the other, then opened the door and stepped down onto the dusty wooden platform of Trinity station.

He placed the suitcase and bag on the platform, then glanced left and right. No-one else had disembarked. There was no-one waiting to board. The station had a mailroom and waiting room and switchbox. A kid about seventeen years old was taking mail off the guard from the train and putting it into the mailroom. There was no guard on the mailroom. The door was wide open. You could walk in there and lay one on the kid and waltz out with the whole works. Trusting folk out here, folks.

McLean walked along the platform, which took about two seconds, then glanced past the station at the first thing he saw, which was a big old clapboard house with gabled roof and veranda, its paint flaking and its drainpipes all rusty. It reminded him of the house in the movie, *Psycho*, so he moved his gaze onward.

There the town was, about half a mile from here, sprawling untidily around the main street, which looked dead and bleached of colour in the noon's shimmering light. The wind was moaning and blowing clouds of dust over the whole town, making it look a bit unreal, as if made from fine gauze.

McLean hoped that in the absence of a thriving red-light area there might at least be a lively bar, but he couldn't bank on it. Ten minutes east and west, north and south, and you had the town covered.

'Two days here and I'm out of my mind,' he said, speaking to himself. 'Let's hope that's all this job takes.'

He walked back along the platform and stopped by his suitcase. The guard had climbed back on the train, but the old coot was nowhere in sight, though his bag was still here. McLean thought to ask the kid, but then decided against it; instead, he picked up the bag and hopped back on the train, not wanting to have his life complicated if the old coot had died. Luckily, he was still alive, just about, and wiping tears from his eyes.

'What's the matter?' McLean asked.

'Asthma attack,' the old coot said. 'Don't think I can make it into Trinity, so I'll just stay on board. This train's goin' straight back, the guard said, so I'll just stay right here.'

'You'll be okay?'
'Yeah. My inhaler's right here.' He fumbled in his pockets as the train whistle blew. 'A few sniffs and a rest goin' back an' I'll be right as rain. Thanks for the bag.'
'Don't mention it,' McLean said, wanting to kill him. 'The best of luck, pal.'
'Same to you.'
'Adios.'
McLean hurried along the carriage and hopped out of the train just as the kid from the mailroom was about to slam the door closed. He practically knocked the kid over, but got clear soon enough, and the kid shut the door as the train pulled out again, heading back to where it had come from. The kid was wearing a dusty uniform and had lost his peaked cap. He bent over to pick it up, wiped the dust off it with his elbow, put it on his head of dark hair and looked up with big brown eyes.
'Sorry, kid,' McLean said. 'I hope I didn't do you damage.'
'No,' the kid replied, 'I'm okay. I didn't know you were still on board.'
'Do all the trains stop at this station? Is this the end of the line?
The kid pointed along the rails, away from the departing train. The track went as far as the eye could see and didn't bend once.
'Don't tell me where it goes,' McLean said. 'I don't want to know. Well, kid, I'll see you around. Best of luck here in Purgatory.'
He picked his suitcase up and walked through the door marked 'Exit'. When he got to the other side, which he assumed was the station's entrance, he found himself looking over at a short stretch of parched land with that house from *Psycho* standing all on its own and the town a good half-mile beyond it. When he looked down the steps, he saw... Nothing. No people. No cabs. Nothing at all... Just the wind and the swirling dust.
McLean gave a loud sigh, spat on the ground, then turned and walked back through the station. To his amazement, the kid was brushing the platform with an old straw broom, even as the dust swirled about him. What more could be said?
'Hey, kid!' McLean called out, walking purposefully toward the rube, half expecting him to stick his tongue out, roll his eyes, or maybe chew on a straw. 'How the hell do I get to the town? I mean, where's all the transport?'
The kid stopped his brushing and looked up, surprised. His brown eyes, when McLean saw them close up, were filled with crystalline innocence.

'I'm sorry,' he said, just like a normal human being, 'but there isn't any transport in this town. We don't have the need for it.'
'What about the passengers?'
'We don't get very many.'
'How the hell am I supposed to get to town?'
'I'll give you a lift.'
'In what?'
'My dad's truck. It's round the side of the station.'
McLean sighed again. 'So why didn't you tell me that in the first place?'
'Most folks coming here have someone waiting for them. Why else would they come here?' The kid stared steadily at McLean, not even trying to be funny. He might be a yokel, but he wasn't the kind easy to put down. McLean liked him for that. 'You go back to your suitcase,' he told McLean, 'and I'll bring the truck round.'
'Great, kid. You do that.'
McLean walked back through the station, another two seconds lost, and emerged to the sight of Tony Perkins' grisly house being covered in the dust of the flatlands. The kid came soon enough, driving a battered old truck, and when McLean was in, he headed into the wind, straight toward that old house.
'If that's the town's hotel, I'll shoot myself,' McLean said. 'You mind if I smoke?'
'No,' the kid said.
McLean lit a cigaret. 'What's your name, kid?' he asked.
'Tom Beale,' the kid said.
'Tom. Good to know you. I'm McLean - Steve McLean. You work full-time at the station?'
'I just help my dad. He's the station-master. He was up in the switchbox when you came. He's worked there since the drought killed his farm. We went bust, like lots of folks.'
'You live in the town?'
'Yes.'
'Where, exactly?'
'Right there,' Tom Beale said, pointing up at the old house as they drove past it.
'Gee, kid,' McLean began, not embarrassed, but thinking, *You dumb jackass:*

there goes your helping hand…
'With my dad and mom and three sisters,' the kid continued as if he wasn't perturbed. 'It's not too much fun.'
McLean didn't reply. He just blew a cloud of smoke. He watched it spiralling around Tom Beale's face as the kid turned to study him.
'You got folks living here?' Tom asked him.
'Folks *here?*' McLean replied, outraged by the very thought. 'No, kid, I'm here purely on business. Out here working for the *Weekly Enquirer*. You ever heard of the rag?'
'No,' Tom Beale said. 'It's a newspaper, right?'
'That's stretching it a bit far,' McLean said, 'but I guess you could call it that.'
They'd turned around the big old house and were heading along a straight road that appeared to run through the centre of Trinity to form the main street. Behind both sides of Main Street were clapboard houses and buildings that looked haphazard, badly weathered and neglected, though mercifully they, too, were obscured by drifting clouds of dust. A couple of church spires soared optimistically above the rooftops, but there were no neon lights or skyscrapers. McLean didn't envisage a great social life, but he had to pay for his sins.
'Hey, Tom,' he said, wanting to be friendly, 'what goes on here at nights?'
'Nothing,' Tom said.
'So where are you taking me?'
'To the hotel,' Tom said.
'They've got a *hotel* in this town? Gee, whiz, I'm in pure country heaven!'
Tom Beale smiled at that. 'I guess it's not much to you. I mean, a reporter an' all. What's a reporter from Houston doing in Trinity?'
'You've heard of Anna Lansing?' The kid almost drove off the road. 'Hold on there, Tom! Watch it! Keep your eyes straight ahead. I take it you *have* heard of Anna Lansing?'
'Yes,' Tom said. I know her.'
They had reached the town already and were bouncing into the end of Main Street, passing a garage, then a blacksmith's and adjoining hardware store, followed by a row of different stores, all on raised porches. There were even some people there - a few women with their kids
- and then McLean glimpsed a guy wearing a Stetson and real high-heel boots. McLean looked for the tethering posts for the horses; but, shucks, there

weren't any.
The kid pulled up in front of a clapboard building with a sign that said: *Hotel*. It looked more like a boarding house.
'Well, Mister McLean, here we are - this is Rhoda's hotel.'
'Looks wonderful,' McLean said. 'So tell me, Tom, before you depart: Why did you nearly run off the road when I mentioned Miss Lansing?'
Tom blushed and said, 'I didn't.'
'Oh, yes, Tom, you did. Don't tell me you're in love with the little lady.'
'Don't be stupid,' Tom said.
McLean grinned. 'But you know her.'
'It's a small town, Mister McLean. Everyone knows everyone. I've know Anna since we went to school together. That's all there is to it.'
'What about the bleeding hands?'
'What about them?'
'Are they real?'
'I've never seen them, Mister McLean, that's the truth - but a lot of folks have.'
'Where does Anna live?'
'At the other end of Main Street. Just outside the town. In a house beside her mom's gas station. Her mom has a clubfoot.'
'An epileptic and a clubfoot,' McLean said. 'Ralph Bleeker of the *Weekly Enquirer* will be in absolute heaven.'
Tom just looked at him, bewildered. McLean patted him on the shoulder. 'Don't worry, Tom,' he said. 'There are worlds you cannot know. How much do I owe you for the lift?'
'Two dollars,' Tom said.
McLean paid him and stepped down. Tom handed him the suitcase. McLean glanced left and right, wondering where the action was, then spat on the ground near his own feet. 'I'll see you around, kid,' he said. Then he entered the hotel.

Chapter Seven

Jack Lomax was desperate. He was the mayor of Trinity and the town wasn't doing well at all. The recent drought had destroyed agriculture, that loss had destroyed business, and then the cattle and sheep had started suffering from diseases caused by some goddamned hole in the ozone layer, whatever *that* was. Now the banks were pulling their money out of the town and it was starting to die.

Lomax was also haunted. Just the other day, he had seen that Anna Lansing - the last person he wanted to think of walking around in her usual daze, but this time showing her hands to all and sundry.

The palms of her hands were bleeding alright. Even Lomax had seen that.
It gave Lomax the shivers, making him think of retribution. Even now, outside his office, on the porch, sitting there in his rocking chair in the hope of breathing cool air, he was nervous of all the attention that Anna was getting.
A crippled mother and an epileptic, he thought. Though Anna sure is some looker. That could explain a few things...
'Hi, Mister Lomax,' a youthful voice said, making Lomax almost jump out of his chair. He looked up and saw Tom Beale, Jack's only son, smiling down at him. An awfully sweet boy, considering Jack's vile nature, always willing to do you a favour and not ask for payment.
'Oh, hi, kid,' Lomax said, settling down. 'What are you doin' in town?'
'Someone just got off the train,' Tom informed him. 'I took him to the hotel.'
'Someone got off the *train?*' Lomax said. 'Who the hell would that be?'
The kid squinted along the street as if looking for someone. He kicked up the dust with his boot, then shrugged and said, 'A reporter from Houston. He's here on business, he said.'
When Lomax rocked his chair it squeaked a lot, but now it stopped squeaking.
'A *reporter?*' he asked.
'Yeah,' Tom said, 'that's right. Said he worked for the *Weekly Enquirer* and was here to see Anna.'

Lomax straightened up in his chair. It squeaked a little when he did that. He cleared his throat and groped around in his pocket to pull out a butt. His throat was dry, but he lit the butt anyway and had a good drag. Thought it might help his heart slow down.
'Did you say the *Weekly Enquirer?*' he asked, when he'd gotten his wind back.
'That's right,' Tom said, his eyes scanning the street, taking in the parked cars and trucks, probably looking for Anna. 'Why? Do you know it?'
'Know it?' Lomax said. He kept repeating Tom's words. 'No, no,' he lied brazenly, being a regular subscriber, finding it relaxing to read when he'd had a few beers, trash and filth being easier to digest when the brain was befuddled. 'Not that I can recall. I just wondered what a reporter from Houston wanted with Anna.'
'A story,' Tom said. 'That's pretty obvious, ain't it? He asked me about her bleeding palms, so I guess that's what he's after.'
Damn right, it was. Lomax knew the *Weekly Enquirer*. Cannibal children, child-molesting priests, threebreasted women, nymphomaniacal Venusians, piranha fish that came out of toilet bowls to feed on your privates... it was *that* kind of news. Lomax loved to read the rag, but he didn't want it here. The very thought of one of those journalists in Trinity was making his heart race.
'I don't like it,' Tom said.
'What?' Lomax asked distractedly.
'The thought of what he might say to Anna. I think he might harm her.'
Lomax dropped his smouldering butt, ground it out beneath his boot heel, then glanced in both directions along Main Street, which he felt was all his. He was looking for someone - a friend in need, a shoulder to lean on - but all he saw were old men with bandy legs and Stetson hats, a bunch of worn-out women and their daughters, buying groceries and clothing. Not much else here in Trinity. All the life was draining out of it. Not much left, but at least it was his if it wasn't brought tumbling down. That could happen if this drought continued. It could also happen because of Anna. If that reporter... Goddammit, if he sniffed around, he might blow it apart. It didn't bear thinking about.
'Harm her?' he said. He was echoing Tom again. 'Naw, I don't think he'll do that. He'll just ask a few questions, get his story, and clear on out of here.'

'He might make a fool of her,' Tom said. 'That's what they like to do. And this reporter, he sounded pretty sceptical. Sounded real mean as well.'
'Well,' Lomax said, feeling slightly less fearful, 'if he takes the piss out of her, she's not gonna know, 'cause it's only gonna be published in Houston, which lets us off the hook.'
'What do you mean?'
'What, kid?'
'About letting you off the hook.'
Jesus Christ, Lomax thought, the kid's sharp. I better watch myself here.
'Nothin',' he said. 'I mean, nothing in particular. Just meant that he can't do much damage if he hounds back to Houston.'
'Damage to the town?'
'Damage to *Anna,* kid. I mean, no-one here reads that filthy rag, so she should be okay.'
'I thought you didn't know it.'
'What?' Lomax asked, confused.
'The *Weekly Enquirer.* You told me you didn't know the paper; now you say it's a filthy rag.'
Lomax licked his dry lips. His heart was racing again. To drown out the sound of his beating heart, he started rocking the chair. Its squeaking sometimes got on his nerves, but now he found it consoling.
'I just remembered it,' he lied. 'I haven't read it, but I know about it. I mean, I heard about it sometime, from someone, and its one of those filthy rags. Not sex - I don't mean *that.* I mean, it's got that as well. But it's really sensationalist, pretty wild... What some would call *far out*.' Lomax was a Christian and didn't want to shock the kid, so he avoided the more entertaining subjects when describing the rag. 'You know? World War Two aircraft found on the moon. Flying saucers landing on solid citizens' backyards. Ghosts and poltergeists and aliens made of jelly. Unexplained phenomenon and miracles and... people like Anna. They're sort of... *gross,* you might say.'
'You mean he'll take the facts and distort them to make a fool out of her.'
Lomax sighed. 'I guess so.' Not that he gave a damn about Anna's bleeding hands. What worried him was what she might say if that reporter asked too much. To ask Anna too much could upset her, and then... 'Hell,' Lomax said, waving the buzzing flies from his eyes, 'there's no need to worry, Tom. That

reporter, he'll just write a silly story and then forget all about her. As for Anna, she'll never know what he wrote, so relax, kid. Don't worry.' He stopped rocking the chair. The squeaking was getting to him. Removing his kerchief from his pocket, he wiped his forehead and dabbed his fat cheeks.
'By the way,' he said, 'what was the reporter's name?'
'McLean,' Tom said distractedly, scanning Main Street, still looking for Anna. 'Steve McLean.'
'An' he's in Rhoda's place?'
'That's right, Mister Lomax.'
'I might just have a talk with him, Tom, and pass on your concern.'
'Gee, would you?'
'Sure, Tom, why not? After all, I'm the mayor of the town and I guess that's my duty.'
'Gee, thanks, Mister Lomax. Thanks a lot!'
Lomax smiled, though it hurt. 'Now you run along, Tom. This being Saturday lunchtime, you're allowed to enjoy yourself. Have a good day, son.'
'Yeah,' Tom said, 'I will. Thanks again, Mister Lomax.'
He cut obliquely across the street, obviously heading for the drugstore, and Lomax started rocking again as he watched him departing. He liked his rocking chair. It made him feel he was in his cradle. It made him feel innocent and protected, though those days were long gone. In fact, he broke out in a cold sweat at the thought of what could be coming.
'Retribution!' he whispered.

Chapter Eight

It wasn't really a hotel. It was just a converted house. McLean had been in dumps like this before and he found them comfortable enough. Besides, he fancied the owner, the redheaded Rhoda Benning, who was resting her tits on the reception desk and letting him look down her dress. She was twenty-one years old.

'The room okay?' she asked him. She had sent him up alone.
'Terrific,' McLean said. 'A nice bed. I bet it's seen lots of action.'
'I wouldn't know,' she replied with a laconic grin. 'I hardly ever go up there.'
'You don't make the beds yourself?'
'Yeah,' she admitted, 'I make the beds.'
'Then you must know what's going on,' McLean said. 'I'll try not to show too much.'
Rhoda grinned at him again with those brightly painted lips. Her red hair fell around bright green eyes that made him think of a big cat.
'What's a girl like you doing working here?' he asked while signing the register.
She sighed. 'It's owned by my dad, but he doesn't like running it. He spends most of his time in the bar, complaining about how badly *I* run it.'
'Can't you get other work?'
Rhoda's laugh was a short bark. 'Ha! That's a good one! Not much work around here for man or beast, let alone for the likes of me.'
McLean put the pen down and straightened up again. He'd had a good look down Rhoda's dress and liked what he saw there. 'Still,' he said, 'it must have its moments.'
'What moments?' she asked him.
He shrugged and spread his hands in the air, his grin as wide as a barn door. 'The guests,' he said. 'People passing through. There must be some interest there.'
Rhoda looked up, grinning also, before leaning over the high desk. She took a deep breath to give him a good view, then opened her brightly painted lips. 'You mean people like you?'

'Sure,' McLean said, 'why not?' He lit a cigaret, blew some smoke, watched it drifting around her. 'Place like this, it must be a relief to see the face of a stranger.'
Rhoda stared steadily at him, her painted smile knowing, then she raised her hand and studied her long fingernails, sometimes blowing upon them. 'So what's a stranger like you doin' in Trinity? Come to see your grandma?'
'Anna Lansing,' he said. 'That's the one I've come to see. Writing up a little piece for the *Weekly Enquirer.* You ever heard of it?'
'Nope,' Rhoda said. 'Only read the local rag. They sold a few copies off Anna, so why not start there?'
'You should be a reporter,' McLean said.
'Wish I was,' Rhoda replied.
'You know Anna?' Rhoda nodded. 'So what do you think? Is she for real or is she pulling a scam? Is she the kind who could do that?'
'I don't think Anna's capable of a scam. Not her; not her mother.'
'So you think the bleeding's genuine?'
'That's what the town quack says. According to Doc' Reynolds, he tried every test in the book and found no sign of fakery. The scars are genuine. The blood's real and Anna's blood type. What's unnatural is how fast the scars heal as soon as the bleeding stops.'
'Any word on what's causing it?'
'You want to know what might be the cause, go see Doc' Reynolds. His surgery is just along the street, fifty yards from the *Trinity Gazette*, which is run by Dwight Stewart. Those are the two you should talk to. They know more than I do.'
McLean studied Rhoda's face. She looked older than her age. She wasn't as tough as she tried to seem, but she sure wasn't innocent.
'I've never trusted doctors,' McLean said. 'Always moaning and groaning about my liver. Drive me straight back to drink.'
Rhoda opened a drawer, pulled out a nail file, started carefully filing her long nails, which were as red as her lipstick. 'Then try the Reverend Juble Lee. He's getting the benefit.'
'Yeah,' McLean said. 'Sounds like it.' He straightened his shoulders, inhaled, blew more smoke, had another quick look down Rhoda's dress, then gave a loud sigh. 'Well,' he said, 'I better get going. No time like the present. What do you do nights?'

Her green eyes rolled up to fix steadily upon him. She had a bold, measuring gaze that made her seem a lot older than she was. It was the look of experience. 'Not much,' she said. 'Whatever comes along, I guess.'
'I might see you later on,' McLean said. 'You never know what the night brings.'
'I can tell you're real shy, Mister McLean.'
'A real momma's boy. Which way do I go?'
'Turn left. It's just along Main Street.'
'I'll be seeing you, Rhoda.'
He winked and walked out, feeling better already, having found his one hope for salvation in this land of the living dead. It certainly looked that way on Main Street. Not a neon sign in sight. If it wasn't for the lack of hitching posts, he'd be expecting John Wayne. Lots of women about, in and out of the stores, looking no more attractive than their daughters, who trailed after them, eyes fixed on the ground, like nuns in a convent. McLean walked along the street, fascinated by the women. The men he could take
– they wore Stetsons in Houston, too - but the women, young and old, were wrung-out rags, wearing old-fashioned clothes. Not a sexy dress in sight. No long hair flowing freely. If it hadn't been for Rhoda's low-cut dress and red hair, he'd have thought that he'd stepped into the past, through some kind of time-warp.
Thank God, he hadn't drank on the train: he would have called this the D.T's.
There were two girls just ahead, on a swinging bench on the porch, both wearing those old-fashioned clothes, hands folded demurely in their laps. McLean stopped just before he walked past them and gave them a big smile.
'Hi, ladies!' he said, sounding friendly and open, gazing down as they both looked up, startled, their eyes widening with panic. 'I'm a stranger here, ladies - just got off the last train - and I'm wondering if you could kindly direct me to the *Trinity Gazette.* The local rag, don't you know.'
They stared at him in silence, glanced at oneanother, then blushed deeply and looked up at him again, their panic growing each second.
'The *Trinity Gazette,* ladies?'
One of the girls took a deep breath, sank back into her seat, then pointed on down the street, now bathed in fierce sunlight.
'Down there,' she said, practically whispering.
'Gee, thanks,' McLean said, 'that's real helpful. I'll see you around girls.'

Not much experience there, he thought. Not like Rhoda at all. The very thought of a man taking off his clothes would probably put them in shock. He walked up and down steps, crossed a couple of porches, and soon came to the tinted glass windows of the town's only rag. Without pause, he opened the door and entered, glad to be somewhere cooler.

It wasn't like he'd imagined no old-fashioned printing press. Just an open-plan office with a couple of cluttered desks where some girls were working wordprocessors, like they did back in Houston. There was another office at the far end, a smaller office, mostly glass, where a guy with white hair and moustache was leaning over his desk, squinting down through his specs as he scrawled on some papers. That had to be Dwight Stewart.

One of the girls, a brunette, adolescent and petite, looking livelier than the two he'd met outside, came up to the counter. 'Hi!' she said with a big, Colgate smile. 'Can I help you, sir?'

'I'm looking for Dwight Stewart,' McLean said, laying on his own Colgate. 'I take it that's him over there the one actually writing.'

The girl glanced over her shoulder and giggled as she turned back to him. She didn't ask McLean if he had an appointment; she just said, 'What's your name?'

'Steve McLean. I'm a reporter from the *Weekly Enquirer* and I need some assistance.'

'Just a moment,' the girl said.

She went into the back office, spoke to Dwight Stewart, then returned and opened the gate in the counter. 'Come in,' she said, smiling. When McLean had done so, she led him to the back office and introduced him to the white-haired Dwight Stewart, who shook his hand warily.

'The *Weekly Enquirer?*' he asked.

'That's right,' McLean replied. 'It's kind of an unusual rag.'

'Yeah,' Stewart said. 'I know it. Here, take a seat. Can I get you a coffee?'

'No, thanks,' McLean said. 'So what do you think of the *Weekly Enquirer?*'

'I'd better not say, friend.'

McLean grinned and took a chair as Stewart sat behind his desk. 'I've come about Anna Lansing, Mister Stewart.'

'Yeah,' Stewart said. 'That figures.'

'You've interviewed her, right?'

'I'm the town's only reporter.'

'Folks tell me that the bleeding is genuine. Is that what you think?'
'Yeah, McLean, it's what I think. I can't explain it, but I think it is. We had Doc' Reynolds examine her and he thinks so as well. As for me, I can only tell you that I saw the bleeding and, later, the scars. We ran tests and the scars fade unnaturally fast, before the bleeding comes back. When it does, the scars come back as well. There's no trickery about that.'
'What do you think?'
'It doesn't matter what I think. I only report what I see. You wanna know what might be the cause, go ask Doc' Reynolds. Either him or the preacher-man.'
'You mean the town priest or the Reverend Juble Lee?'
'Take your pick.'
'Okay,' McLean said, talking turkey with a fellow scribe. 'So what are you feelings about the Reverend Juble Lee? I mean, what have we got there? Religion or showbiz?'
Stewart grinned at that. 'A bit of both, I guess. The good reverend, he believes what he says - but he's also a showman. He likes the smell of the greasepaint and the roar of the crowd, but he has his own brand of sincerity. I'm sure you know the type well.'
'Yeah,' McLean said, 'I do.'
'So what else does the *Weekly Enquirer* want to know?'
'Do you think this is some kind of con trick?'
'No, I don't think so. I don't think Anna's capable of that. Not her. Not her mother.'
'The clubfoot.'
Stewart winced. 'You sure got a mouth, McLean.'
'Things just pop out, I know. Like, what about Anna being a tease? Thumb in the mouth, acting real shy, but flaunting all she's got, which I believe is considerable.'
'Who have you been talking to?'
'I've seen the news photos. I've also read a few of the more scurrilous stories. Some old buddies wrote them.'
'Nice buddies you've got,' Stewart said. 'So what if she's attractive and likes to flaunt it?'
'It might have some bearing.'
'What bearing?'

'Exhibitionism. A girl wants attention that much, she's capable of anything.'
Stewart shook his head sadly. 'It's all idle gossip,' he said. 'Based on jealousy, sexual frustration, or plain, smalltown malice. And those emotions, combined with fear of Anna's epilepsy - now with fear of her bleeding hands as well - have caused too many tongues to wag too often.'
'Which gets us back to the stigmata,' McLean said. 'You must have an opinion.'
'I can't see any trickery,' Stewart told him, 'and that's all I can say. Go see Doc' Reynolds.'
McLean stood up. 'I'm on my way, Mister Stewart.' He turned away to leave, but was stopped when Stewart spoke to his departing back. 'You're gonna stir this up, aren't you, McLean?'
'I guess so.'
'You're a real sonofabitch, you know that?'
'We all are,' McLean said.
He walked out of the office, turned left and moved on. He soon came to Doc' Reynolds' surgery and opened the unlocked door. There was no-one in the waiting room. A healthy bunch in the town of Trinity. McLean couldn't see a receptionist's window, so he knocked on the next door. A male voice said, 'Come in.'
Entering the doctor's office, McLean found a lean, grey-haired man with a good-humoured, untrustworthy face, leaning back in his chair, his hands folded behind his head and his feet on the desk.
'Doc' Reynolds?'
'Yep.' Reynolds didn't remove his feet from his desk, but offered a wide-open smile. 'You're not one of my regular patients, which means you're a stranger. Did you get off the wrong train?'
'Nope. I'm here of my own accord. Do you mind if I sit down?'
The doc' slid his feet off the desk and spread his hands out on it instead. 'Not at all,' he said, indicating the wooden chair. 'By all means, help yourself.'
McLean pulled the chair up and sat down while the doc' opened one of his desk drawers and pulled out a quart of Jack Daniels. 'It's good luck to share a drink with a stranger,' he said, separating two plastic cups from the stack on the shelf behind them, then unscrewing the cap on the bottle and pouring two stiff ones. 'You have the look of a man who likes a drink. It's all under the eyes there. Am I right or wrong, stranger?'

'You're right,' McLean said. 'I'm just sorry it shows.'
'It lends a man character,' the doc' said. 'It's the women who suffer.' He passed a cup to McLean, then sat back in his chair. He sipped some of his drink, sighed with pleasure and then licked his lips. 'So what can I do for you?'
'I'm a reporter,' McLean said.
'I didn't think you were a patient.'
'I've just been to see Dwight Stewart and he recommended I have a talk with you.'
'Not about your state of health,' Reynolds said, 'so I take it you mean Anna Lansing.'
'Right. Bleeding hands.'
Reynolds sighed and sipped some more. 'You want to know if the bleeding's real or not. You want confirmation.'
'Correct.'
Reynolds nodded. 'It's real alright. There's no trickery about it. I've tried every test in the book and I can't find the fakery. The scars are real enough. The blood's real and of Anna's blood-type. What's unnatural is how fast the scars heal as soon as the bleeding stops. No, sir, there ain't no trickery at all, though what it is, I can't say.'
'Anna's an epileptic.'
'That's no secret,' Reynolds said.
'Is there a chance that the wounds could be psychosomatic, maybe due to her fits?'
Reynolds studied his plastic cup, swirled the drink around, then smelt it. 'It's obviously been discussed, it's clearly possible, but we can't say for sure. There's no proof that the subconscious, even hysteria, could produce bleeding and scarring of that kind. It's just a theory, that's all.'
'What about religion?' McLean asked.
'Go to church,' Reynolds told him.
McLean grinned, then finished off his Jack Daniels and stood up to go. 'What about the Reverend Juble Lee? Do you think he works miracles?'
'Not for me, friend,' the doc' said laconically, 'but others swear by the man.'
'Anna?'
'She doesn't have an opinion, though her mother, old Beth, well, she's something else again and is convinced, as is the Reverend Juble Lee, that Anna's been touched by the spirit of the Lord and is bleeding His blood.'

'You think the reverend really believes that?'
'I don't know, Mister…? '
'McLean - Steve McLean.'
'I only know that since he said it, it's sure brought in the crowds and filled up all those empty collection plates. Which doesn't mean the good reverend isn't genuine. I'd just hedge my bets, is all.'
'I think I'll go see him.'
'You do that, young man. You look like you've lots to confess, so it won't harm you none.'
McLean grinned, amused by the doc's perception. 'Thanks,' he said. I'll be seeing you.'
'I'm sure,' Reynolds said.
McLean left the office, walking into brilliant sunlight, then wandered up and down Main Street, trying in vain to find a car rental company. Defeated and frustrated, he wandered back to his hotel. Rhoda received him warmly, listened to his problem, then passed over a set of car keys. 'The red Ford outside,' she said. 'We keep it just for guests. I'll add the rental on to your check. You wanna know what it costs?'
'I trust you implicitly,' McLean said. 'I can tell you've got heart.'
Rhonda smiled while keeping her green gaze steady. 'Drive safely,' she said. 'We might need the car tonight.'
'You and me?'
'Yeah, McLean, you and me.'
McLean nodded and walked out and climbed into the red Ford. As he was driving out of town, his bones rattling from the potholes, he passed a beat-up truck that was going in the opposite direction, churning up angry clouds of dust. He caught a glimpse of what looked like a luscious, long-haired blonde, sitting beside a driver of indeterminate sex. The sight of her, being so unexpected in this dump, almost made him go off the road, just like Tom had done. Then the truck had passed and McLean was heading out of town, determined to drive around and explore, to find out what was where. Ten minutes east and west, north and south, and you had the town covered. He had to pay for his sins.

Chapter Nine

Lomax heard the squealing of worn brake pads, the rattling of loose parts, and opened his eyes, where he was sitting in his rocking chair, to glance across the sunblasted, parched road. Beth's old truck had pulled up in front of Sarah Greeve's general store and was shuddering like a dying dinosaur in a subsiding cloud of dust. Anna got out first, that long leg coming down, the dress riding up her body, while Lomax, still not blasé about her, sucked in his breath. It was fear and desire at once, the former engendered by the latter, and it compelled him to wipe the sweat from his face with the palm of his hand. Anna walked around the truck, wearing her dress like a second skin, brushing her long blonde hair from her face as she disappeared around the far side. She was obviously helping Beth down. Lomax stood up to see them. They stepped up on the porch together, Beth dragging her clubfoot, Anna holding her by the elbow, as they disappeared into the general store. Lomax shuddered, feeling dazed by lust and dread, then he glanced left and right.

Half the goddamned town was watching. The women as well, now. The men watched Anna with a mixture of guilty lust and fear, the women with curiosity and resentment based on fear for their men. The bleeding hands had made it worse, making the whole town think about her. The last thing Lomax wanted was that, so he shuddered again.

What should he do? He glanced left and right again. Tom Beale and his buddies were standing outside the drugstore, just as they did every Saturday, daydreaming and wishing. Tom Beale was okay. A nice kid, all things considered. The rest weren't bad either, but they didn't have any work, which made you wonder what they were dreaming, day in and day out. About Anna, no doubt. Not much competition elsewhere. Lomax wondered what would happen if they found out, and the thought made his skin crawl.

As for Tom, he was one of the closest to it, and that really scared Lomax.

He went into his office, picked his phone up, put it down. Chewing his lower lip, he wiped sweat from his face and then picked the phone up again.

'Yeah?' said that dumb bitch, Jean Ford, chewing gum with a great deal of noise at the town's only switchboard.

'This is the mayor,' Lomax said. 'Put me through to

Sarah Greeve's general store.'
'Yes, *sir!* the dumb bitch said.
Lomax waited. Jean was muttering to herself. She

was probably sticking the wrong jacks in the wrongs plugs and getting New Zealand. Lomax glanced across the road. A bunch of women were milling about the general store, all trying to look casual. They were waiting for Beth and Anna to come out, to see a miracle walking.

There was static in Lomax's right ear, then a rough, female voice: 'Greeve's store. What is it?'
'It's Lomax. Is Beth Lansing still in there?'
'Yeah.'
'Let me talk to her.'
There was a bang at the other end. Sarah must have dropped the phone. Lomax heard their muffled voices, sounds of coughing, then Beth came on.
'Lomax?'
'That's right, Beth.'
'What the hell do *you* want?'
'I have to talk to you, Beth - in person. Not on the phone.'
'I don't want to talk to you - not now, not ever.'
'Don't hang up, Beth! Listen! Don't hang up! We've got to talk, Beth. I mean it. Godammit it, it's *serious*.'
'What about?'
'Come on over.'
'Give me a clue or I hang up.'
'Someone's arrived in town,' Lomax said, 'and he could cause some problems.'
Beth was silent for a moment. There was murmuring in the background. Lomax stared through his window, across the road, as if somehow he'd see them. He just saw the old truck, the door of the general store beyond it, and

the townswomen milling around and trying to act casual.
'Okay,' Beth said at last, ‘I'm comin' over... But this better be good.'
She put her phone down, leaving Lomax with the static. He slammed his own phone down and poured a shot and knocked it back in one swallow. Gasping, he lit a cigaret, took a few soothing drags, then stared across the street, through the window, feeling pretty damned nervous. Beth and Anna came out. There was a shift in the watching women. It was comical how they tried not to look, though their heads just kept turning. Beth glared at them, of course, making them suddenly look away. Anna just stood there, distracted, immune, smoothing down her dress and glancing about her as if in a dream. Lomax almost had an erection. Only the fear kept it in check. He inhaled too much and started to choke and coughed out a forest fire. When he recovered, when he looked back through the window, Anna was wandering in her vague manner along the far side walkway and Beth was already crossing the road, grimly dragging her clubfoot.
Lomax kept his eyes on Anna, being fearful of bulging pants, and moved away from the window when Beth, with no mean bit of effort, hauled herself up onto the porch just outside his office. The outside door was open, and now he opened the inside door. He stepped back when he heard Beth's clubfoot thumping down the bare boards of the hall and then in through his door. When he saw her standing grimly in the doorway, he tried his town mayor's smile.
'This better be good, Lomax,' Beth said, her voice about as gentle as barbed-wire being dragged across your throat. 'I hope it's no joke.'
Lomax stopped smiling. 'I wouldn't dare joke with you, Beth. Step inside. Take a seat.'
'I ain't no cripple. I can stand on my own two feet. Now what do you want? You said someone had arrived in town and that it might give us problems. What did you mean by that?'
Lomax took a deep breath and let it out in a nervous sigh. 'It's a reporter,' he told her. 'A guy called Steve McLean. He's from Houston. He works for one of those sensationalist-type rags and he wants to see Anna.'
'How did he know about her?'
'How do you think, Beth? He probably received a cutting from that article in the *Trinity Gazette*.'
'You shouldn't've let Dwight write that.'

'I didn't think at the time.'
'No, you didn't think at the time. None of you bastards ever do.'
'Okay, Beth, that's enough.'
'Not thinkin's what started this.'
'It's not to be discussed any more, Beth. That was part of the deal.'
Lomax felt a tremor of fear. A lightning bolt passed through his head. After briefly illuminating the nightmare, it mercifully passed on. He shuddered, though, and wiped sweat from his face, too aware of his racing heart.
'This man,' he tried explaining, 'he's from the *Weekly Enquirer*. That means he's an unscrupulous bastard who'll go for all he can get. I don't want him talkin' to Anna. He won't make it easy for her. He'll start sweet until he gains her trust, then he'll just wade right into her. He'll dig as deep as he can go. What he can't find, he'll invent. We can survive that, but what we won't survive is Anna having a recall. That might happen if he pushes her too far and she breaks down and brings it back. You understand what I'm saying, Beth?'
'Yeah, I understand.'
'He's gonna have to go through you,' Lomax said, 'so you better not talk to him.'
There was silence for a moment, while Beth took it all in. She wasn't that dumb, but she was careful and also digging at Lomax, sticking pins in a clay doll. He knew that, alright. He could see it in her eyes. Those eyes, which were almost as blue as Anna's, were as hard as cut diamonds. Then she smiled... Beth Lansing actually smiled... and Lomax went cold all over.
'It's good to see you sick with worry,' Beth said with a dreadful smile. 'But even that won't make me talk to McLean. Relax, Lomax. Stop sweating.'
She turned away and left his office, dragging her ugly clubfoot, leaving Lomax to collapse into his chair like a punctured balloon.
'Jesus Christ,' he said, shaking.

Chapter Ten

The great tent for the Reverend Juble Lee's Revivalist Meeting was flapping and snapping on the flatlands just north of town. McLean parked his car and climbed out to cooler air, then stretched himself and glanced all around him. Everywhere you looked there was featureless flatlands. The mountains were always on the horizon, obscured in the heat haze. McLean spat on the ground. Might help the soil flourish. He lit a cigaret and inhaled some more cancer, then glanced across rows of empty trestle tables to the opened flaps of the big tent.

There were signs all over the place. Just like a circus, McLean thought. Arrows indicating toilets and firstaid areas and prayer tents, the latter being smaller affairs attached to the main tent. A lot of people were at work, getting ready for tomorrow. McLean grinned and followed the arrow to 'Public Relations', located in another side tent. He went in to find a trestle table covered with a pile of press material. The girl behind the table was white-skinned, golden haired, and shapely, with a big toothpaste smile.

'Hi!' she said.
'Hi!'
'Can I help you, sir?'
'I hope so.' McLean gave her a flash of his Press

Card and asked to see the big cheese.
'Have you an appointment, sir?'
'No.'
'The Reverend likes to have appointments.' 'Tell him I'm from the great city of Houston and I

go back this evening.'
'Please take a seat, sir.' She stood up and walked
out, looking neat in white skirt and blouse, not tight
enough, McLean noted, to give offence to righteous
women, but tight enough to make the eyes of male sinners

slip sideways when she walked down the aisles with her tambourine. High heels, as well. Good legs in sheer stockings. You let her loose with an empty collection plate and she turns into Fort Knox. She returned, smiling brightly, tugging her dress down on her hips, letting McLean see how generous the Lord could be to repentant male sinners. For that he was willing to convert. Any day. Any time. 'The Reverend understands your schedule problems, sir, and will see you right now.'

'Gee, thanks,' Lomax said.

She led him out of the small tent, her hips swinging like a metronome, then took him into the big tent and around the back of the stage. He glanced up at the Stars and Stripes and that huge painting of Juble Lee, entertained by the notion that humility came in all shapes and sizes. 'Here we are, sir,' the PR lady said. 'You'll find the reverend in there.'

Her teeth flashed and then were gone. McLean looked at more tent flaps. This was obviously the master suite. McLean assumed this because of the two heavies guarding the entrance. They stared at him through dark glasses - at least he *thought* they were staring at him - then one of them pulled a flap aside and said, 'Right in here, sir.'

McLean ducked low and entered the tent of the Reverend Juble Lee.

He was sitting behind a desk - not a trestle table: an antique desk - with his large hands spread possessively on his fan mail, his rings glittering brilliantly. He was handsome and blue-eyed. His gaze was steady and benign. He had a suntan and thick, silvery-grey hair and a generous smile.

'I am the Reverend Juble Lee,' he said. 'Welcome, son. Good to see you.'

As he stood up to shake McLean's hand, McLean took a quick scan of the tent. There were chairs of the finest leather, a big bed at the back, a portable TV, videorecorder, and refrigerator,

all run, McLean surmised, from
the portable generators he'd seen out the front. He shook
the reverend's hand. The grip was firm, but not challenging.
No masculine ego on the rampage here; just one of God's
chosen few. The reverend indicated two facing leather
armchairs and said, 'Let's sit down there. Can I fetch you a
drink?'
'You got Jack Daniels back there?' The reverend smiled benignly at him.
'Sorry, son,'
he said in a deep, mellifluous tone. 'Only soft drinks, I fear.'
His big body shook when he chuckled, but his blue gaze
was watchful. The good reverend knew all about the press
and wouldn't let his guard down.
'No problem,' McLean said. 'I don't really want a
drink. I'm a bit short on time - '
'Yes, Mary told me. You go home tonight.' ' - so I'll just get out my notebook
and pen and we
can get down to business.'
'Yes, son, you do that.'
They sat in the facing chairs. McLean sank into
luxury. He pulled out his notebook and pen and then looked
up with a sweet smile.
'You don't use a tape-recorder?' the reverend asked,
sounding slightly concerned.
'I don't think that's necessary,' McLean said. 'I
mean, this isn't a profile. Just a few comments about a few
things. Nothing too complicated.'
'I'm sure you won't mind if I…' The reverend
leaned sideways to switch on his own battery-operated
tape-recorder, then sat back to face McLean again. 'Just to
be sure,' he explained with a brotherly smile.
'Sure,' McLean said, 'no problem.' He coughed into
his clenched fist, glanced thoughtfully at his notebook, then
looked up again. 'I guess you know I'm gonna ask about - ' 'Yes, son, I know.'
The reverend sighed, as if pained
by human baseness, though understanding its needs. 'I

guess a humble country preacher's not important in the presence of miracles. Fire away, son.'
'You think the bleeding of Anna's hands is miraculous?'
'Of course. What else could it be?'
'Fakery?'
'The relevant tests have been run. There is no sign of fakery.'
'Do you believe in miracles, reverend?'
'Of course, I'm a man of God. I believe what I read in the Bible - and it's filled with miracles. Haven't you *read* the Good Book, son?'
'A long time ago, but I remember the miracles. I didn't think they were meant to be taken literally.' 'They were, son. They *are*.'
The reverend took a deep breath. His chest expanded dramatically. He let his breath out in a sigh that seemed oddly threatening.
'Have you ever come to the Lord, son?'
'No.'
'I feared not.' The reverend leaned forward, his azure gaze intense, offering brotherly love with a smile that could have formed a new Ice Age. 'So why are you here?' he asked. 'You must have read that I believe. Did you think I would suddenly change my mind and give you a retraction?'
'I thought you might explain why you believe Anna's wounds are genuine.'
The reverend sat back in his chair. He seemed less threatening that way. The light of God shone into the tent and made his silvery hair shine.
'You are a sinner, my son.'
'Yes, Reverend, I guess I am.'
'So you come here not believing in stigmata and ask me to support you.'
'No, Reverend, I don't. I've come to find out if you really believe in miracles or are simply exploiting this girl.' The reverend

took another deep breath, the jacket
tightened against his broad chest, and he opened and closed
his hands repeatedly, as if agitated. They were exceptionally large hands,
McLean noticed, and those rings
could flay skin from bone.
'What I meant…' McLean began.
'It's alright, my son. There's no need to apologise. I
prefer an honest sinner to a lying Christian. I am *here* for
the sinners.'
The reverend took some even breaths, showing
admirable self control, then leaned forward again in that
threatening manner, his gaze very direct.
'I believe in miracles,' he said. 'I also believe in
stigmata. Now what else would you like to know?' 'Is Anna's stigmata
religious or hysterical? Do you
think there's a difference?'
Reverend Juble Lee smiled. 'So what is stigmata?
In the religious sense, it's the reproduction on a living
person of wounds or scars corresponding to those of the
crucified Christ.'
'I know that,' McLean said, not about to have his
hand held. 'The wounds are usually on hands and feet, near
the heart, sometimes even on the head, shoulders and back.' 'As if a cross had
been carried,' the reverend noted
smoothly.
'Right,' McLean said.
'And what are the religious possibilities of
stigmata?' the reverend asked rhetorically, taking a breath
before answering his own question. 'The Church believes in
the possibility of supernatural, or divine, stigmata, in which
the cause is to be found in God. By this it is meant that God
may produce in certain persons an emotional condition that
externalises itself in the body.'
'But - '
'However,' the reverend interjected, raising his right
hand, not about to be contradicted by any mortal, much less

a sinner, 'the Church also believes in what is termed the psychophysical repercussions of ecstatic trance. While the first known stigmatist was St. Francis of Assisi, the majority are women, which may account for this second religious possibility.'

'The psychophysical repercussions of ecstatic trance.'

'Very good, Mister...?'

'McLean.'

'Of...?'

'The New York *Herald-Tribune*.'

'Of Houston, Texas.'

'I work as a freelance,' McLean lied, unabashed by this grilling. 'It's hard work, but I'm free at least.' 'Freedom is an illusion,' the reverend said, then sat back and smiled. 'Your soul is in hock to God.' He raised his right hand, studied his glittering rings, blew on them, then rubbed them on his coat sleeve and smiled benignly again. 'As for Anna,' he said, holding up his index finger, 'the psychophysical repercussions of ecstatic trance. That would seem to explain it.'

'You think so?'

'I do.' The reverend leaned forward again, fixing McLean with his sky-blue eyes. Those eyes were as empty as the sky, but not nearly as warm. 'Think of it,' he said, again raising his index finger. 'The girl is an epileptic. Epilepsy is still a mystery. She comes to my congregation, is brought to God through me, falls into an ecstatic trance and then produces stigmata. We are talking *religion* here!' He nodded emphatically, stood up and paced the floor, his face bathed in the down-pouring sunlight, his right fist raised and clenched. 'Yes, my son,' he said, turning to McLean. 'What *else* could it be?'

'Hysteria,' McLean said. 'Good old-fashioned hysteria. It's been proven that hysteria can produce physical manifestations like stigmata. I think that's what we have

here.'
The reverend walked up to McLean, spread his legs, gazed down upon him. From where McLean sat, the Reverend was a giant whose thin smile was like death warmed up. 'And what if we have?' he asked. 'Is that not the same thing? What is the difference between hysteria and an ecstatic trance? Both experiences plumb the depths of the human soul. Both are essentially religious.'
The reverend let out his breath in a sigh of pleasure, then walked back to his desk. He glanced at the fan letters spread across it, then turned back to McLean.
'I'm a modern, urban man,' McLean said, standing up, 'and I tend toward the scientific viewpoint. Doc' Reynolds thinks the wounds are psychosomatic, and I agree with him. They're psychosomatic in a medical sense - not in a religious sense.'
'Why can't they be both?' the reverend said without pause. 'Anna's an epileptic, which may also be psychosomatic. The illness didn't manifest itself until after the disappearance of her father - and she certainly had an intense religious experience at my revivalist meeting. The wounds, then, no matter the cause, are genuine and religious.'
'And certainly not harming your business,' McLean said. Then he grinned and walked out.

Chapter Eleven

'There she blows!' Pete Fallow said when Anna parted from old Beth on the sidewalk opposite and started wandering in her dazed fashion along Main Street. 'It's Saturday mornin' again, folks!' He took off his Stetson hat, scratched his thatch of fair hair, put his hat back on his head and beamed down at his three pals from his lofty heights.

Gary gave a low whistle. 'Ain't that somethin', fellas! I never get tired of the sight of it. My legs are shakin' already.'

Tom wished they'd all shut up, maybe show a little respect. Just because Anna was shapely and wore that skimpy dress didn't mean they had to talk like she was a tramp. Anna wasn't that way at all. Never had been in her life. Even at school, when she was developing into a woman, she had always been shy. But it hadn't stopped the boys gawping. Even Tom had been guilty. He hadn't gawped, but he'd certainly gazed sideways and dreamed about her a lot. Yet she never once used it, never fooled around with anyone. If anything, the constant gawping of the boys in the school yard had just made her even more self-conscious. Then her father disappeared, and after that she was even worse. From then on, she'd become a virtual recluse, hiding out with her mother. No, Anna was no tramp. She was just proud of her body. She was innocent, not knowing what she looked like nor the effect that her body had on men, so she wore what was comfortable. It was as simple as that.

'That's it,' Gary said. 'Just keep walkin' towards us,

Anna.'
'Two more buttons undone,' Larry noted, 'and those
melons would tumble out.'
'You're disgusting,' Pete chided him.
'But you're waiting, Larry replied.
'I'd rather have her from a distance,' Pete explained.
'I don't want complications.'
Anna was trailing along the porches, glancing into

the store windows, sometimes sucking on her thumb and always looking distracted. The dress was real flimsy, a onepiece number in patterned cotton, buttoned up along the front, though lots of buttons were undone, low cut and with the hem above the knees. She had firm breasts and long, sunburnt legs, a small waist and broad hips. Even her face
was a vision.
The wind, beating at her, pressed the dress tight to
her body, but whipped it off those long legs each time she
took another step forward. Her blonde hair was blowing
around her face and she kept pushing it back with her hand. Gary groaned melodramatically.
'Knock it off,' Tom said.
'Yeah, knock it off,' Larry said. 'Tom's in love and
you're hurtin' him.' He glanced into the plate-glass window,
had a good look at himself, slicked his hair back with the
palms of his hands, then hitched up his belt. 'Here come the
Proctor sisters,' he said. 'They suit you dumb rubes much
better.'
The Proctor sisters, Betty and Lorraine, were
approaching along the sidewalk, stepping daintily up and
down the low steps and over the porches. Betty was twenty
and her sister was nineteen. Neither of them had a
boyfriend and they both looked washed out. They were
wearing frilly dresses with flared sleeves and high collars,
with flat shoes and wide bonnets on their heads. When they
saw the boys, they stiffened like two boards, but walked on
resolutely.
'Hi, girls,' Larry said. 'You comin' into the
drugstore?'
'No,' Betty whispered, 'we're just walkin'.' 'Waitin' for Ma and Pa,' Lorraine explained. Larry turned around to face them, spreading his
legs, blocking their path, hitching up the big buckle on his
belt as he flashed his white teeth.
'You want a real man for an escort?' he asked. 'Please step aside,' Betty said. She sounded firm, but looked frightened. So did her
sister. Both were glancing left and right, up and down, with

big, panicky eyes.
'Let 'em go,' Tom said, hating Larry's mean games.
'You know they don't like it.'
Larry shrugged and turned sideways. 'Just tryin' to
be friendly,' he said. 'A big mistake in *this* town.' The girls hurried on by, holding hands, looking
down, as Tom glanced across the road at Anna with his
heart spinning over. She had reached the end of the block
and was turning to head back to the grocery store. She'd
soon be gone for another week.
'Now *that,*' Gary said, following Tom's gaze, 'is
more like the real thing. Why, oh why, I ask myself, are so
many of the girls in this town so damned lifeless? They're
like nuns, man, I tell you. If it wasn't for Anna, over there,
we'd have nothin' to dream about.'
'That's it,' Larry said, coming up to stand beside
them, squinting into the afternoon light as he looked Anna
up and down. 'You just *dream* about it. That's about all any
of you guys are capable of *dreamin'* about it. Me, if I
could get past old Beth, I'd show Anna what's what.' 'You'd be takin' a big chance,' Pete said. He was
standing behind them, towering over them. Already over
six-foot tall, he wore high heels and seemed to sway in the
wind. 'A clubfoot and an epileptic - like I told you, that's a
bad sign. Did you see her in that tent? At the big revivalist
meetin'? There she was, rollin' about the ground and
kickin' her legs, just like a wild thing. Now she's afflicted
with bleedin' hands as well, an' I say that's witchcraft. No,
man, don't go near her.'
Larry just chuckled and slicked his hair back with
his hands. 'She can put a spell on me anytime. I think it's
worth the risk, fellas.'
Anna was walking back to the store, her long
blonde hair blowing out, the winding pressing the dress
against her body and blowing it off her legs. The hot air
was shimmering up all around her to make her look

magical. Tom choked up as he watched her.
'You're just as scared as us,' Gary calmly informed Larry, stretching himself and letting his belly hang out, far too big for a small guy. 'If you found yourself alone in a room with Anna, you'd probably dive out the window.' 'I'd dive into *Anna*,' Larry replied, his gaze dreamy.
'She'd feel me inside her for weeks after - and that's a fact, buddy.'
'Godammit!' Tom exploded, unable to stop himself. 'Do you guys have to be so damned insulting? To hell with it, I'm going!'
He jumped down off the porch, leaving them all startled, and hurried without thinking along the road, walking parallel to Anna, his heart pounding like he'd just run a race, his whole body burning. He hardly knew what he was doing and didn't stop to think about it; he just hurried along the street, back toward Lomax's office, but crossed the road a good bit before he got there and jumped up on the opposite side. He was ahead of Anna now. She was walking straight towards him. Her short dress was rippling on her body and being whipped off her legs. The long blonde hair was blowing across her face as hot air shimmered about her. Tom took a deep breath, then moved out onto the porch. He was blocking Anna's path and she stopped walking, as if shocked by his presence. She blinked and brushed the blonde hair from her face to stare at him with blue eyes. She looked like an angel.
'Hi, Anna,' Tom said. He didn't sound like himself at all. When she didn't reply, but just continued staring at him, he blushed even more deeply, shuffled his feet, and then coughed into his clenched fist to clear his throat. 'Listen,' he said. 'Don't run away. I mean, I want to say something.'
She stared solemnly at him, her gaze uncomprehending. Sliding a thumb between moist lips to touch her teeth, she said softly, 'Oh?'

Tom didn't know what to say. What the hell was he doing here? He was consumed by her face, overwhelmed, and could hardly think straight. 'I just want to say... I mean, I want to apologise... I mean, my pals, the way they talked to you last week... I mean, they didn't mean anything... You know? They're just foolin'.' He had to stop at that point. His heart was beating too fast. Anna was pressing her front teeth with her thumb and staring solemnly at him. 'That's not what I wanted to say at all,' Tom blurted out. 'God, Anna, say something!'

She took the thumb out of her mouth and said, 'Tom... Tom Beale. How are you, Tom?'

Tom breathed a little easier. 'I'm fine, Anna. Great. We don't see you around much any more.'

'No, Tom, I guess not.'

'Lookin' after the gas station?'

'Yeah, I guess that's it. Gotta be there all day long, you know? Besides, I like it out there.'

'You should come to town more often.'

'I don't like it here, Tom. Folks stare at me. I don't like them starin'. I guess that's why I don't come in.' 'They stare because you're real pretty.'

'They stare because I'm an epileptic and my mom has a clubfoot. They're frightened of me *and* my mom. Now because of my bleedin' hands, they think I'm either a witch or a saint, so they stare even harder.'

'They also stare because you're pretty.'

'I don't like that kind of stare.'

'I sometimes stare that way myself, Anna.' 'No, Tom, you stare differently.'

There was silence for a moment. Tom felt dizzy and unreal. The sunlight flashing over Anna's blonde hair made it look like pure gold. Tom felt himself melting into her. 'What did you want, Tom?' Though her voice was soft, it startled him. 'You didn't tell me what you wanted to say. What was it, Tom?'

He could hardly remember. Too busy losing his

senses. His insides were turning upside-down and he felt pretty shaky. He had the urge to reach out and touch her face, but he didn't dare move. Then at last he remembered... 'There's a reporter in town,' he said. 'That's what I wanted to tell you. He's from a newspaper in Houston and he wants to talk to you.'

'I've got nothing to say.' Anna turned her hands over and glanced down at the palms. Right now they weren't bleeding, but Tom saw the scars. 'Ma won't let me talk to anyone any more, least of all about this. I've got nothin' to say to him.'

She kept studying her hands, first the palms, then the backs, turning them this way and that, as if hypnotised. When Tom coughed into his fist, she looked up, her blue eyes big and startled. Tom was lost in her beauty. 'I'd sure like to see you again,' he managed.

'Anywhere. Anytime.'

She stared solemnly at him, her gaze as radiant as the sky, then reached out to trace the line of his burning cheek with tentative fingers.

'I go swimmin',' she confided. 'Down by the bend in the river, not far from the house. Every night when the sun sets.'

'I'll be there tomorrow night,' Tom said, feeling breathless. Then hearing the clump-clump of Beth's clubfoot, he hurried away.

Chapter Twelve

Convinced more than ever that Anna and the Reverend Juble Lee were in collusion for profit, McLean drove to Anna's house on the outskirts of town, following instructions given to him by Rhoda. The sun was going down, sunlight shrinking back into darkness, the grey clouds above the mountains on the horizon streaked with pink, but still casting great shadows across the flatlands. Real eerie out there. McLean didn't like it at all. He didn't mind muggers, panhandlers or junkies, but he couldn't stand the wide-open spaces or creepy-crawlies or animals. He just wanted to pin down this Anna Lansing and then get the hell out of there.

He braked to a halt when he saw the gas station. The house was just beside it. It was an old clapboard house, all spread out on one floor, but raised off the ground and with a wooden veranda running across the front and down both crooked sides. The wood was chipped, the paint flaking. There was junk all around the yard. McLean recognised the beat-up truck that he'd seen driving into town that day, and realised that the stunning blonde in the passenger seat must have been Anna. He started the car and drove forward, stopping again when he was near the yard fence, between the house and the gas pumps.

'Some dump,' he said aloud.

He had a good look at the house, trying to visualise how they lived: old clubfoot and the teenage epileptic all alone in this junkyard. It was probably worse inside. They probably lived in a squalid mess. Pretty lonely out here for two women and no man to clean up for. Yeah, McLean thought, a mess. Women without men are useless. Best to keep the darling creatures in their cages and feed them some birdseed. He grinned at the thought, opened the door and climbed out. Grateful to be a member of the superior sex, he flexed his shoulders, straightened his spine, and walked up to the house.

The dogs came out of nowhere, two great slathering monsters, snapping and barking like hounds from hell as they leaped over the yard fence. McLean nearly fainted, but recovered just in time, spinning around and racing back to

his car just before they got to him. He dived in and slammed the door, his heart pounding like a drum, but heard a louder pounding on the window and looked into the jaws of death. The pounding came from large paws, from those monsters out there, both of them standing on hind legs while trying to smash through the window. Their lips were pulled back to show teeth that would have made a shark jealous. They had long tongues and wide jaws.

'Jesus Christ!' McLean whispered.

The whole car was rocking and he feared it might turn over. Either that, or the windows would be smashed and they'd tear him to shreds. He reached for the ignition key but was too shaky to use it, so took a deep breath and tried again, this time succeeding.

The engine coughed into life. The dogs suddenly disappeared. McLean heard a harsh voice snapping, 'Batman! Robin! Get back in the house!' In his panic, he assumed he was hallucinating, but then a woman appeared. She was middle-aged, but worn out with it, dragging a clubfoot, and holding a rifle at the ready as she advanced on the car. Bending down, she stared in through the window, her lips pursed in a grim line.

'You want gas?' she shouted.
'*What?*' McLean replied.
'I can't hear you with that window rolled up. Roll it

down, you damned fool.'

McLean glanced past her shoulder. The dogs seemed to have disappeared. He rolled the window down a little and heard no barking, so rolled it down farther. The woman staring at him was younger than she'd appeared at first, but her skin had been wrinkled by too much sun and lined by hard living. Her lips formed a thin, asexual crevice, her blue eyes were fierce, and her grey hair was piled up on her head. She was wearing a coverall.

'You want me to fill 'er up?' she asked.
'No,' McLean said, still trying to get his breath back. 'This is a gas station, mister.'

'You're Beth Lansing. I'm a journalist. Steve

McLean. I'd like a talk with you.'
Beth straightened up. 'You mean you'd like to talk with Anna.'
'I'd like to talk with you both,' McLean said. 'I think I could help you.'
'Help us?'
'Yeah.'
'How?'
'I can pay. Give me a good enough story and I promise I'll make it worth your while. My boss is generous that way.'
Beth went rigid as a board. 'Get the hell out of here.'
She stepped back and started aiming the rifle like she knew how to handle it. 'You get out or I'll fill this car with lead and then set the dogs on you.'
'Listen, Mrs Lansing - '
'I'm gonna count to three.'
'If you just give me - '
'One,' she said. 'Two - '
'I don't believe you'd do this.'
'Batman! Robin!' she bawled. 'Get yourselves down here!'
McLean heard them, then saw them, coming at him like the wind, and he rolled the window up just before they reached the car to hurl themselves viciously at the door. He gave gas and screeched off, churning up clouds of dust, and saw the two monsters in his rear-view mirror, in hot pursuit with their teeth bared. He accelerated and raced ahead, his heart pounding again, and only slowed down when they disappeared from sight, obscured by dense, boiling dust. He took a deep breath, slowed down and then stopped. He let his breath out and turned the car around and headed back where he'd come from.
The sun had started sinking, a great dome of boiling

lava, pouring itself along the horizon as the darkness took over. McLean's heart had stopped its pounding, but his fear of the dogs remained, so he turned off the road and bounced across the rough flatlands as soon as the gas station came into view. He stopped a good way out, in the middle of nowhere, then rolled the window down again and picked up his binoculars. Leaning his elbows on the window, he placed the binoculars to his eyes and patiently waited.

The sun was going down when Anna Lansing emerged to feed her six cats and two hounds from hell. She was wearing a short dress that didn't hide too much. The wind was flattening the dress against her perfect body while whipping that golden hair around her face. When she knelt down to feed her slavering beasts, the dress fell off superb legs.

Seen in close-up, through the powerful binoculars, she was a heavenly vision.

McLean was transfixed.

Chapter Thirteen

Tom was sweeping the station platform. It was noon and the sun was high. The wind was blowing across the platform, laying down the dust as quick as Tom could sweep it up, but he kept sweeping because that was his duty at this time of the day. 'It's regulations,' his dad had told him so many times he'd lost track. 'It's written down in the manual of instructions an' I do my job right. Every noon you got to sweep the goddamned platform, so get out there and do it.'

Tom did it every day, come rain or sunshine, though mostly these days it was sunshine, so hot you could fry in it. His dad knew how hot it was, which is why he was resting, sitting over there in the shade, on the bench by the waiting room, slugging beer and keeping his eye on his son, who came at no charge. Kids could be a pain, but there were benefits, and Tom knew he was one of them.

He stopped to rest a while, glancing across at the house, and saw the mayor's car turning around it and parking by the front gate. Lomax climbed out and walked up the yard path, obviously looking for Tom's dad, and Tom gazed beyond the house, to the town, trying to see to the far end.

Impossible, of course, but he thought he'd try anyway. He conjured up the gas station and the old house beside it, with Beth clumping about in the living room and Anna in her bedroom. He imagined her getting dressed, getting undressed, combing her hair, having a bath, lying down on the bed, maybe even thinking of him. He was going to see her this evening by the river and the thought made his heart leap.

Lomax walked back to his car. He must have spoken to Tom's mom. He climbed into the car and it shuddered into life again, lurching forward and churning up clouds of dust as it headed straight for the station. The dust was everywhere. It came out of the parched soil. The wind blew it across the flatlands, day in and day out, and laid it like a blanket on the town and everyone in it. Dust and desolation, burning sun and bright sky. The days

were long in Trinity, East Texas, and Tom longed to make his escape.

'You gonna stand there all day looking bare-assed?' his dad bawled from the shaded bench. 'Git that broom movin', boy!'

Tom went back to sweeping the platform. Lomax got out of his car. Looking up to see Tom on the platform, he waved his right hand. Then he hurried up the steps, entered the station, and came out onto the platform, right beside the waiting room. Not seeing his big buddy slumped behind him, he turned towards Tom.

'Hey, Tom!' he shouted. 'Your ma said your pa was over here Where's the old bastard hiding?'
'Right behind you,' Tom said.
Lomax, small and fat, always sweated a lot and chewed gum with quick, nervous movements and far too much noise. He was doing that now, his jaws working overtime, as he turned away from Tom and looked down at his beer-swilling dad.
'Hi, Lomax,' Jack Beale said from the bench. 'What the hell are you doing here at this time of day?'
'I wanted to talk to you, Jack.'
'Sure,' Beale said. 'Have a beer.'
Lomax glanced over his shoulder at Tom, then looked back at Beale. They were silent for a second. Tom saw his dad glancing at him. 'Hey, Tom!' his dad finally shouted. 'Take a break! Go get lunch!'
Tom picked up the broom and walked over to them. He should have been pleased, but instead he was curious, wondering why Lomax was looking so nervous at seeing him there. When he reached them, Lomax stopped chewing his gum long enough to say, 'Hi, Tom. Howya doin', kid?'
'Fine, Mr. Lomax,' Tom said. 'Did you go see that reporter?'
'What?'
'That reporter I told you about. McLean. The one who - '
'Oh, him! Yeah, right. No, I haven't seen him yet, kid. But don't you go worrying about a thing. He won't be botherin' no-one.'
Tom's dad straightened up, wiping his lips with the back of a hairy hand, holding the can in the other. 'Worry? What's Tom worryin' about? An' whose

this reporter you're talkin' about?'
'Hey, kid,' Lomax said, taking hold of Tom's shoulder and shoving him toward the exit. 'Go get your lunch. He's not worried about anything, Jack. Okay, Tom, you git goin'.'
Tom leaned the broom against the wall, glanced at both of them and left. He was just about to walk down the steps at the entrance when he changed his mind and went back inside. Without thinking, he walked on tip-toes, making sure they didn't hear him, and stood quietly just inside the door to peer round the doorframe.
Lomax was taking a seat beside Tom's dad and cracking a can. When the beer foamed out, he had a long swig, then licked his fat lips.
'Some reporter arrived in town yesterday,' he said, 'and Tom just happened to tell me about it. Some guy called McLean.'
'A reporter?'
'That's right. From Houston's *Weekly Enquirer.* That's one of those rags that likes way-out stories and this guy has come here to talk to Anna.'
'So what's Tom worried about?' Beale asked, slopping down some more beer.
'The same thing *I'm* worried about,' Lomax said, 'if the kid did but know it.'
'What the hell are you talkin' about?'
'I'm talking about Anna. Tom's worried that this reporter might do Anna damage - maybe upset her real bad
- and that's exactly what *I'm* worried about.'
'If Tom's worried about her, he's got ants in his pants, but why the hell should *you* be concerned? Let the bitch be upset.'
'You don't understand, Jack. We're talkin' *Weekly Enquirer* here! The guys who work for that rag aren't cleanlivin' Christian boys. McLean won't go back to write about Anna comin' to Christ. He'll want somethin' a lot hotter than that somethin' really sensational. He's snoopin' around town, tryin' to dig up some dirt. I'm worried that if he digs deep enough, he might come up with somethin'.'
'Like what?'
'You know what.'
'He won't dig that deep, Lomax. No-one's ever gonna talk about that, no matter how deep he digs.'
'That guy digs graves for the livin'.'
'Graves always keep their silence.'

'The one I'm worried about is Anna,' Lomax said. 'She's the one out of reach.'
'Right, Lomax, she's out of reach. She's that way because she's mad. She doesn't know a thing, it's been wiped out, so I don't see your problem.'
'She's unpredictable,' Lomax said. 'She has those fits an' that makes her dangerous. This reporter, he could push her too far and maybe upset her.'
'Let 'im upset the whore.'
'You're not following me, Jack. If he pushes her too far, if he upsets her, it might all come back - and if it does, we're cooked goose.'
Tom started shaking. A tremor of dread passed through him. He didn't know what they were talking about, but the brutality wounded him. His father's choice of words, particularly when talking about Anna, had punched through to Tom's core. There was that and something else: the subtext he could not translate. He didn't know what they were talking about, but understood that it wasn't good.
'Stop worryin',' Beale said. 'This McLean won't find a thing. What's known was lost to Anna long ago and won't be comin' back. The guy will write what he wants to write. What he can't find, he'll invent. What he'll publish is a sensationalist story about a modern-day miracle: the blood of the Lord on the hands of a teenage epileptic. Hell, Lomax, he might even do some good for the town, so let him get on with it.'
'Some *good,* Jack? Some good for the *town?* I don't know what you mean.'
'Think about it,' Beale said. 'Already folks is comin' from miles away, from all around, to catch a glimpse of that little bitch and then purge their goddamned souls in the tent of the good ol' Reverend Juble Lee. This reporter fella, he could jack the story a mile high - make it nationwide then this town would be boomin' with tourists and we'd all be floatin' in greenbacks.'
'Jesus, Jack, I never thought about that.'
'Think about it,' Beale said.
Tom sneaked out of the station, still shaking, his heart pounding. Though he emerged to scorching heat and dazzling light, it was tears that were blinding him. He ran all the way back to the house and went straight to his bedroom, fully intending not to emerge until it was time to see Anna. That resolve was not broken.

Chapter Fourteen

'I must confess,' Rhoda said, 'I was expectin' somethin' better than that, but I guess you're just a poor city slicker in need of some nourishment.'

McLean rolled off her, still gasping, sweat-slicked, and reached out for the pack of cigarets lying beside Gideon's Bible. 'Swear to God,' he lied, 'that's never happened to me before. It must have been all that drink I had last night. I still feel sick as hell.'

'Where'dya have all that drink?'

'In that bar at the end of Main Street. You should know it. It's the only bar in town and they pour gasoline.'
'Riley's,' Rhoda said. 'I should've known when you didn't show. I was boilin' mad, I don't have to tell you. All dressed up an' all. Give me a drag on that.'
McLean gave her the cigaret and she slipped it between her lips. Her lipstick had all been mashed off, but her lips were still full. She passed the cigaret back.
'So why'd you get divorced?'
'What?' McLean asked, inhaling.
'Anything to do with your little problem? Did she go somewhere else?'
'What problem?' McLean replied. 'I haven't got a problem. The only problem I've got is the gasoline served down in Riley's.'
'A real dive,' Rhoda said. 'I wouldn't go there unescorted. The only place you'll get a good drink in this town is right here in Rhoda's. Why not open the bottle?'
'Good idea,' McLean said. He filled two glasses with the bourbon and handed one to Rhoda. He didn't have to look down her dress because right now she was naked.
'So why'd you get divorced?'
'We had problems,' McLean said. 'I must confess, I've had this problem before, but mostly with Liza.'
'That was your wife?'
'Right.'

'What led to the little problem?'
'The little word 'familiarity',' McLean said. 'We just got too familiar.'
'You must be lacking in imagination.'
'There are only so many ways. I tried them all and then I turned to other women, which I'd always done anyway. What I mean is, I turned to *more* women, and Liza didn't like that.'
'How did she find out?'
'I used to bring them home,' McLean said. 'She was working at an office and I was working out of home, so I found it convenient to call them over and you can't do that too much. Rumpled sheets, hairpins, and diaphragms - it all came out in the wash.'
'Why did you get married?'
'I got her pregnant,' McLean said.
'You had a kid?'
'She had an abortion. She always hated me for making her get it, which is how the end started.'
'Did you love her?'
'No. I don't know what that means. My parents fought a war that never stopped until one of them died, so I grew up assuming that men and women were perfectly mismatched. I didn't even have an adolescent romance - I just learnt about sex.'
'Obviously you still need some lessons.'
'It'll come back,' McLean said. 'I just need a little drink and a drag, then I'll be right as rain.'
But he wasn't too sure of that, being still in a state of shock. That vision of Anna Lansing kneeling over to feed her animals was still burned into his mind as if branded there.
She had looked like an angel.
McLean was all shook up, confused by his emotions, not experienced enough in finer feelings to know how to deal with this. He didn't believe in romantic love, nor in the soul, nor in beauty, yet the beauty of that girl by the gas tanks at sunset had plumbed the depths of whatever soul he had, making him feel a need beyond sex. He sensed that, but could not define it, or failed to recognise it, and now thrashed in the thickets of a bewilderment that edged into fear. McLean was not a fearful man. He had seen all there was to see. Yet now, unable to grasp what he was feeling, the fear slipped in to fill the

breach.
For the first time in his life he felt lost, which is why he felt fearful.
He was frightened of angels.
'How do you do it?' Rhoda asked, sipping bourbon, smiling sweetly. 'I mean, how can you write up all that sleaze and still live with yourself?'
'I can do it because that's what *people* do and my job's to report. I can do it because I don't respect people and that's based on experience.'
'You mean you don't think there are many worth respecting?'
'Do you? If you don't mind me saying so, you look like someone who hasn't been treated well. Like someone hiding a few scars.'
'I'm hiding nothing.' Rhoda sipped some more bourbon. 'You won't find any scars on this girl. Just a few little bruises.'
'You've got skeletons in your closets, right? You also have a lot of nightmares. What causes them, Rhoda?'
'We all have skeletons in our closets, but I won't show you mine. As for the nightmares, they're too private to discuss, so let's change the subject.'
'Sure,' McLean said, 'let's do that. You're a real attractive woman, great body, good face. So tell me why you're still living alone.'
'I live with my dad.'
'Let me rephrase the question: Why, in a town so short of attractive women, are you still on the shelf?'
Rhoda bit her lower lip, turned the glass in her hands, studied it, put it to her lips and then had another sip. 'I can't... I mean, I won't...' She quickly finished off her drink. 'Dammit, McLean, it isn't your concern. Here, give me another.'
McLean filled the glass, then studied Rhoda's naked body. He wanted it, but each time he tried to take it, he saw Anna Lansing. He was haunted by her, obsessed with her, already possessed by her, and he felt the singular fear of incomprehension and loss of identity. There was only one thing to do, one line of defence, and that was to take the job to its limits and scourge himself of her that way. Thus resolved, he turned away from Rhoda and picked up the telephone. No secrets here, he thought.
'Hi,' he said to the switchboard girl, another Trinity halfwit. 'How you doin', beautiful? Fine? Good. Yeah, right, I'm fine as well. Listen, honey, just get me this number, will you?' He gave the dumb bitch the number, glanced at Rhoda and rolled his eyes. While he waited, hearing the music of the static, Rhoda put her glass down and rolled over with a wide-eyed, wicked smile to

press her lips to his stomach. 'Mmmmm,' McLean hummed. 'Wow, honey, that's nice!'
'It's *what?*' Ralph Bleeker asked at the other end of the line, in the editor's office of the sleazy *Weekly Enquirer* in civilised Houston. 'Who the hell is this?'
'Jesus! Hi, Bleeker!' McLean pushed Rhoda's head away. 'It's me, boss. McLean. I'm in Trinity, East Texas. I should get paid compensation just for coming. So how are things there in Houston?'
'It hasn't changed much in two days, you dumb shit. Why are you calling?'
Rhoda put her tongue out and McLean flashed his teeth at her. She leaned over and stuck her tongue in his navel and started having some fun. McLean almost yelped.
'It's a story,' he said instead. 'The bleeding hands are real, Bleeker. I've checked with the town quack and the editor of the local rag, and both of them have no doubts at all that the stigmata is real.'
'What's stigmata?' Bleeker asked.
'Bleeding hands,' McLean explained. It was nice to have a literate editor when involved in great literature.
'I don't like the word 'stigmata'.'
'You don't?' McLean asked.
'That seems like a pretty heavy word. Let's call it "the blood of Christ".'
'The blood of the Lord,' McLean said, thinking of Anna, feeling dazed, aware of Rhoda's tongue playing its tricks down there, yet not really effected.
'So, what's the angle?' Bleeker was starting to sound impatient. 'We've got a case of stig- whatever it is, but that's just a miracle. What's the *hook*, McLean?'
McLean couldn't believe his ears. What more did this bastard want? He glanced down and saw the top of Rhoda's head and felt a twinge of excitement. Then he thought about Anna. 'Jesus, Bleeker, I thought that *was* the hook. I mean, a *miracle,* for chrissakes!'
'It's happened before,' Bleeker said. 'There's that guy, Francis - he had it. A couple of broads in Italy had it. So we need to add something. A little spice for our fine readers. This girl with the paws, what is she? Can we make something out of her?'
'Dammit, Bleeker,' McLean said, running his fingers through Rhoda's red thatch, imagining it was Anna's golden hair and only managing to come alive

that way, 'I would've thought that bleeding hands on a sexy, blonde adolescent would have been enough to - '
'Sexy! That's good! We've got a photographic angle. But we need to dig some dirt to go with it. Is she some kind of tramp, or what?'
'No, I don't think so.'
'Be inventive, McLean. Any dumb shit can become a reporter, but you work for *us*.'
'Correct, Bleeker. I do.' McLean sighed and gave up, pushing Rhoda's head away. She rolled off him and sat up on the bed stark naked, creamy-skinned and voluptuous... but having no effect on him. Despairing, Rhoda lit a cigaret and blew smoke in McLean's face.
'Okay,' Bleeker said. 'Stick around a bit longer. Send me the photos of the broad so I can see what she looks like. Then try to dig up some - '
'I don't have any photos. I haven't got to her yet. Anna Lansing is well protected by her mother and two hounds from hell.'
'*What?* Her *mother?* You're worried about someone's *mother?* I'm gonna hang up, McLean - I never heard that. Her *mother*, for chrissakes! I don't wanna know about mothers or hounds from hell or other dumb shit, so just get off your ass and go out there and take me some photos, then find me a hook for the goddamned story. Keep in touch, McLean. Adios.'
The line went dead, so McLean put the phone down. He lit a cigaret, then blew a couple of smoke rings, letting his breath out in a sigh that filled the whole room.
'A sexy, blonde adolescent,' Rhoda said. 'Now I know what the problem is.'
There is silence and there is *silence*, and this was the latter kind. McLean tried to fill it out with another sigh, but it didn't help much.
'I didn't mean it that way,' he said.
'You should have heard how you sounded.'
'I don't want this conversation,' McLean said, 'so I think I'll go back to work.'
'Yeah, McLean, you do that.'
McLean got out of bed, had a shower and dressed himself. Glancing at Rhoda, he grinned forlornly, shrugged his shoulders, then opened the door.
'That Anna gets all the attention,' Rhoda said as McLean was leaving.
'It's the way of the world,' McLean replied, then stepped out and closed the door.
Yet as he left the hotel and stepped into the sunset, he wasn't feeling as

cynical as he had sounded when speaking to Rhoda. In fact, for the first time in his life, or at least as long as he could remember, his heart was racing at the thought of meeting a woman - or, in this case, a girl. Anna Lansing, a mere girl, was more beautiful, more sensual, more perfect than any woman he'd ever seen. He had studied her face for a long time through his binoculars, and saw in it an innocence so complete it made him think of some other world.

She was more than all the women he had ever known - a woman much too good for him.

Which is exactly why he had to possess her.

McLean burned with that need.

Chapter Fifteen

The sun was setting over the Green River when Tom arrived and saw Anna, sitting on a patch of parched grass and weeds, under a dying tree, the hem of her dress pulled up over her brown thighs, her bare feet dangling over the bank, toes dipping into the dark, running water. A lump came to Tom's throat because she looked like a dream. The dying sunlight was golden and her long hair blended with it, blowing across her face, falling over her bared shoulders, lying like gilded threads on her breasts swelling under the cotton dress. She brushed the hair back from her face, turned her head and gave him a radiant smile.

'Hi, Tom,' she said.

He heard the ringing of bells. His heart was near to bursting. Blushing, he walked up to her and just stood there, struck dumb by love. 'Hi,' he said, short of words as well as breath. 'I told you I'd come.'

'Yes, Tom,' Anna replied. 'I knew you would. Here, sit beside me.' She patted the dead grass and Tom sat there, crossing his legs. His knee touched her thigh and he almost died, it felt so damned good.

'So,' Anna said.
'Yeah,' Tom replied, setting his rolled-up towel beside Anna's and trying to act natural. She was staring right at him, so he lowered his gaze, pretending to study the river. There was silence for a while. Tom was having problems breathing. When the silence became too much to bear, he looked up again. Anna was still staring directly at him, smiling slightly, ambiguously.
'It's nice here,' Tom said.
'Yeah, Tom, that's why I come here. It's somewhere I can come to be alone. I like the sound of the river.'
'Hope I'm not interrupting.'
'I didn't mean it that way, Tom.' She smiled more broadly and placed her hand on his wrist, making his heart leap. 'I'm glad you came, Tom.'
He nodded, relieved. The river sounded good to him. He thought of the many

times she must have come here alone while he lay on his bed, thinking about her. It made him feel like a fool.
'We used to be real close,' he said.
'Yes, Tom, I remember.'
'I thought you were the prettiest thing in school. At least that hasn't changed.'
'I'm older now, Tom. I'm different. We're not at school any more.'
'I wish we were, Anna. I miss you a lot. I only ever see you on Saturdays - and that's from a distance.'
'You could have talked to me before.'
'We're all frightened of your ma. She's fierce when it comes to you, Anna. She protects you too much.'
'It's because of the epilepsy,' Ann said. 'It can strike anytime.'
Her hand was still on his wrist and the warmth of her burned through him. He was glowing with an ethereal heat that made him feel disembodied.
'It's more than that,' he said. 'It's because you're so pretty. She doesn't want anyone to get near you. She's fierce about that as well.'
Anna smiled and squeezed his wrist. Her face filled his whole world. Brushing strands of blonde hair from her lips, she said, 'Well, that's natural.'
'No, Anna, it's not natural. Not the way your mom has it. She's been fierce since your dad disappeared. That's when we stopped seeing you.'
'My choice,' Anna insisted, her voice oddly muted, lowering her gaze to look at her own hand, the fingers spread on Tom's wrist. 'His leaving hurt me bad, Tom. I was in a state of shock. I had blackouts and I still can't remember much about that particular time. Then I started having the fits and stopped going out. That's all there was to it.' She raised her eyes to stare directly at him, as if near to tears. 'But I missed you, Tom. I didn't forget you. I just couldn't see anyone.'
Tom was trembling all over and he wanted to hide the fact. 'I thought we came here for a swim,' he said.
Anna smiled. 'Yes, we did.' She stood up and started unbuttoning her dress to let it fall off her shoulders.
She was naked beneath it.
Tom nearly died. Anna's beauty stripped his senses. When she unbuttoned the rest of the dress, his trembling became worse. She let the dress fall to the ground and just stood there, stark naked, as if it was the most natural state in the world, not unusual at all.

'Skinny dipping,' she said.
'What?' Tom croaked.
'It's the only way to swim,' Anna said. 'I hate the feel of wet clothes on my body. Come on, Tom, get undressed.'
'I can't,' Tom said. He had good reason not to stand. 'I'm wearing my swimming trunks under my pants, and that's how I'm goin' in.'
'Then I won't go in with you.'
'Dammit, Anna!'
'I won't.' But she smiled and turned away, showing a flawless posterior, and said, 'Okay, I'll tell you what I'll do. If you promise to skinny-dip, I'll go in now and then you can follow. I won't see you, Tom.'
'Okay,' Tom said, relieved. 'I guess that's a deal.'
Anna chuckled, a melodious, sensual sound, then slid down the muddy bank and into the water, giving a little shriek when she splashed in. Tom stood up, embarrassed by what was showing, and glanced down at the river. Anna was swimming out toward the centre, face down, arms and legs churning, so he hurriedly took off his clothes, including his swimming trunks and underpants, then raced down the bank and followed her in. The cold water was merciful.
They swam about for quite a while, splashing each other, sometimes racing, behaving like two ten-year old kids, playing all kinds of games. It allowed them to touch each other, getting used to one-another, and when they climbed out and flopped down on the towels, nothing could stop them.
Tom reached out like a blind man, sightless with love and longing, to run his fingers lightly across her lips and then stroke her hair. She kissed the back of his hand, turned it over, kissed the palm, then lay back, pulled him down on her naked body and opened her lips.
That first kiss changed him forever, sweeping away what he had been, filling him with something more demanding than what he had known before. He lost himself in her mouth, at once devoured and devouring, and shrank until he was no more than an impulse about to explode. His hands were not his own - they were simply part of Anna and his body, though it burned in ethereal heat, was also enslaved to her.
Her skin… her *bare*skin… he was aware of nothing else... Then, just before he could explode, she gently pushed him aside.
'No!' she whispered. 'I can't. It frightens me. Just touch me, that's all.'
That was good enough for Tom. Not quite, but enough. Maybe he was still

frightened as well, though for different reasons. So he sat with her, stroking her, bare fingers on naked skin, and felt all the wonder of the unknown expanding inside him.
'What frightens you?' he asked.
'I don't know,' Anna replied. 'I want it, but then, when I think about it, I just get real scared.'
'That's natural,' Tom said.
'You're scared?'
'I guess so.'
'You're sweet to admit that to a girl, but what scares me is different.'
'How?'
'I'm not sure. I only know that it is. It's not the thought of doing it that scares me. It's something behind it. I think about it, then I have these bad feelin's, these visions, and they slip in and out of my head and make me start shaking.'
When she shuddered, Tom pulled her close to him, melting into her tender flesh. 'What about you, Tom?' she asked. 'You don't seem too happy.'
He glanced down at the river, which here moved as slow as time. Usually the slow passing of the days drove him crazy, but now that he had Anna in his arms, it was God's benediction.
'I hate it at home,' he said. 'Dad bullies us all. Mom's all washed out and my sisters are timid and miserable. That's why they're still on the shelf, like a lot of girls in this town. They're made to wear those awful clothes, all baggy and unattractive, and they're watched as much as Beth watches you. The spirit's been knocked right out of 'em.'
'I couldn't stand clothes like that. I hate to feel clothes on my skin. I like as much of me to be as bare as possible. Clothes make me think of my bad dreams.'
'What do you dream about?'
Anna shivered. 'Heavy cloth against my skin. Maybe just wet and clinging. Shadows that shift along the walls and seem to be breathing. Something wet. Suffocating. I never know what it is. I always wake up screaming before I find out. Guess that's why I like to be as bare as possible. I need to feel free.'
'That's why you wear those skimpy dresses?'
'Yeah, Tom, I guess so.'
'That's why the guys stare. Why the older men stare, too.'
'Most of the older men are like your dad - they drink too much and stare too

hard.'
'Yeah, Tom,' said, 'I know.' He glanced at her bare shoulder, ran his eyes over her breasts. She was the most beautiful thing he'd ever seen and she made his heart ache. 'God, I hate my Dad. He's just a foul-mouthed drunk. It started when the crops died and he had to sell the farm and take that lousy job in the railway station. My Dad - him and Lomax - they ran this town, but now there's nothing to run. Now he drinks and abuses us.'
'Gee, Tom, that's so sad.'
The river ran slow and quiet, snaking through the whole county, coming from and going to places he might never see. It made him feel like a prisoner.
'I sometimes think your life's just as bad,' he said. 'People say your mom's crazy.'
Anna just smiled. 'No, Tom, she's not crazy. She's just had a hard life. Her folks died when she was a kid, she married when she was young, then she crushed her foot in a car accident a year after the weddin', when I was two months old. I think the clubfoot, and maybe my epilepsy, were what made Dad take off.'
'You don't leave a crippled wife and sick kid. A decent man doesn't do that.'
Anna didn't get angry, though she *was* firm about it. 'No, Tom, he was good. I remember that much. Before he took off, he was really considerate. Even Ma admits that. Don't suggest otherwise, Tom, or I'll just get upset.'
'Okay, Anna, I'm sorry.' All girls need a decent father. Thinking that, Tom felt wise. He stroked her naked spine with outspread fingers and lit up inside.
'I guess you're right,' he said. 'I remember he was quiet. Yet him and my dad were real buddies - and my dad's a pig.'
'Don't say that, Tom.'
'It's the truth.'
'Don't say it anyway. Maybe your dad wasn't *always* bad. Maybe that's why him and my dad are friends. You can't remember it clearly.'
'I can't remember my dad ever being nice.'
'Oh, Tom, I'm so sad for you.' She kissed him on the forehead, then full on the lips, making him drain out of himself and float about in a cloud. When he opened his eyes again, she was staring at him, her steady blue gaze a treasure-chest.
'Do you want me?' she asked.
'God, yes!' Tom exclaimed.

'Then kiss the scars on the palms of my hands. Only that, Tom. No more.'
He turned her hands over. The scars were visible, but fading. They were nail-shaped, the size of barn spikes, and the skin around them was withered.
'Does it hurt when you bleed?' Tom asked.
'Yes, Tom, it hurts.'
'What else do you feel? What do you think about?'
'I see Christ on the Cross.'
Tom held her hands up. His tears fell on the scars. He kissed the palm of her left hand, then the right, then did it over again.
Tom sealed his love with those kisses, then lay down with his angel.
He liked the sound of the river.

Chapter Sixteen

They parted at the crossroads, not far from Anna's home, just before darkness had taken hold, but when the stars were already out. Tom clung desperately to her, not wanting to let her go, but eventually, with the gentlest of smiles, she pushed him away.

'Tomorrow night?' she whispered. 'The same place?' 'God, yes.'
'That's good,' she said.
Then she was gone. The night swallowed her up.

They called it the 'flatlands' but it wasn't really flat: it rose and fell gently and had trees here and there, so Anna appeared to float upward and descend and then mysteriously disappear. It was an optical illusion, wrought by dimming light and shadow, but it placed a magic seal on the evening and made Tom feel enchanted.

He had to walk home and it was quite a way to go, since he cut around the back of town and then on to the far end. He stuck to the fields, not wanting to meet anyone, and quietly revelled in the feel and smell of Anna, now all over him like a wonderful second skin, giving warmth and fresh hope. For the first time in a long time he liked the desolation, the wide open spaces, the sky that fell away to the horizon, drenched with stars, streaked by moonlight. He felt renewed and made whole, at last returned to his lost self, and started dreaming of taking Anna away, where they could build their own life.

Then the old house loomed up, its lights burning into the night, and he felt the return of an oppression that had been with him too long. Only the thought of Anna saved him. The feel and smell of her stayed with him. He spread his fingers and touched himself where she had touched him, and it made him feel better. When he reached the house and was going up the yard path, he was floating on air again.

Still, you couldn't forget this house. You walked in and it swallowed you. The nightly routine was unchanging and not geared to high spirits. Tom's

mom was still ironing, his dad was slouched in the chair, drinking, and his sisters, all three of them, were sitting side by side on the couch, staring dull-eyed, like Tom's mom and dad, at the color TV.

Tom didn't know why they bothered. There was so much static, it looked like snow. The people on the screen had crimson eyes, green ears, purple lips and yellow cheeks; the picture kept fading in and out and was crisscrossed with silvery lines. The sound was even worse, all static and distortion, with the tail end of practically every sentence and phrase uttered being drowned out by canned applause or laughter. Tom thought TV was a nightmare. There was nothing real about it. In America, Tom was certain, the sole purpose of television was to fill people's heads with mindless pap and turn them into the living dead... Just look at his mother and sisters. Just look at his parents.

'Where've you bin?' his father asked.
'In town,' Tom replied.
'When I ask a question, I expect a proper answer.

Now where have you *bin?*'
'At the drugstore,' Tom lied. 'With the guys. Just hangin' out.'
'Fibber,' Clara whispered.
Surprised to even hear her speak, Tom stared at his eldest sister. She was twisting her hands in her lap and lowering her eyes again.
'What did you say?' Tom asked.
'She called you a liar,' his dad informed him. 'With that tramp, of all people,' Jean said, though she didn't look up.
Tom felt suffocated. It was hot and gloomy in here. His dad liked to save money by only keeping one lamp on and its pale light bled weakly through shadows and made everyone ghostlike. Particularly his sisters, Clara, Jean and Betty, sitting like three statues on the sofa with their hands in their laps. All three were studying their hands, frightened to look him in the eye, though Betty, the youngest, was

bright red and glancing repeatedly at him as if begging forgiveness.
'Well?' his dad said.
'Well, *what?*' Tom responded.
'Where you in town with the guys or were you not?' 'You've obviously heard different.'
'Damn right I have. You and that tramp, Anna Lansing. You were seen comin' back from the river just after sunset. Now is that true or not?'
Tom glared at his sisters, but Clara and Jean refused to look up. Betty, the youngest and prettiest, was still bright red and wide-eyed. 'I'm sorry,' she said. 'I didn't mean nothin', Tom. I just mentioned it, that's all.'
'With that tramp,' Clara said with deep bitterness, still not looking up. 'Our own brother! The shame of it!' 'She's not a tramp,' Tom said.
His father just laughed at that, but the laughter turned into coughing and burping. When he'd finished, he drank some beer, wiped his lips with his hand, inhaled on his cheroot and added more smoke to the stifling room. 'You hear that, Myrna?' he said to his wife. 'Our boy here's been lyin' by the river with that tramp, Anna Lansing. Did she give you a piece?' he asked, turning to Tom. 'She sure knows how to do it!'
Tom almost went for him, but managed to control himself when his mother, still at the ironing board, gave a rare demonstration of anger, snapping, 'Jack! That's enough!'
'Shut your mouth, Myrna. I just want to know, is all. Well, Tom, are you grown up now or not? Did she put out or not?'
'That tramp!' Clara hissed through pursed lips. 'An epileptic!' Jean whispered, obviously horrified.
'And maybe possessed!'
'She's not possessed,' Tom said.
'Her hands bleed!' Jean whispered. 'Some say it's the

blood of the Lord, others say it's the devil. You'd fornicate with the devil?'
'We didn't…'
'Oh, no?' His father's sneer was like a switchblade.
'Are you tryin' to say you didn't do it? An' her so damned good at it!'
'She's not that kind,' Tom insisted. 'She isn't!' 'She's that kind alright. She surely is. And you better
believe it!'
Tom wanted to strike him, but instead crossed the room, preparing to go up the stairs and lock himself in his bedroom. As he passed his sisters, Betty, the youngest, eighteen and still pretty, looked up at him with tears in her eyes. 'I didn't mean nothin' by it - honest! I just mentioned it, that's all.' Tom nodded and tried to smile, but he couldn't quite make it; instead, he turned back to his father and said, 'You've no reason for saying that.'
'Yes, I have,' his father said. 'I know a lot more than you think, so I - '
'Jack!'
He glanced up and saw his wife's warning look, then he turned back to Tom. There was silence for a moment, the kind that spoke volumes, then he finally waved his hairy right hand and said, 'Go to bed, kid.' He was raising the bottle to his lips as Tom hurried upstairs, glad to make his escape.

Chapter Seventeen

Hungover and bleary-eyed, McLean was having a shave in his hotel room, at the mirror above the sink located by the window, when he heard a vehicle pull up with a squealing of brakes, followed by the sound of dogs barking. Almost jumping out of his skin, he turned off his electric razor, then looked down through the window. Beth's old beat-up truck was shuddering in a cloud of dust just outside the vet's premises, opposite. Batman and Robin were in the back, leaping about, snarling and barking, but tied on leashes to the steel bars that ran along the open end of the truck. McLean couldn't believe his luck.

When Beth confirmed his good luck by untying her monsters and taking them into the vet', McLean finished shaving, put on his shirt and jacket, then hared it down the stairs to the lobby, where Rhoda was back in 'Reception' and looking bored mindless.

'Mornin',' McLean said.
'Why are you lookin' breathless?'
'Does that vet' over the road get a lot of business?' 'All the townsfolk have animals.'
'A packed waiting room, right?'
'You don't get out in a hurry.'
'Thanks, Rhoda. I'll see you tonight.'
'I'll be waitin' here, breathless.'
McLean liked a sharp-tongued woman, but he didn't

have time for small talk, so he beamed her his earlymorning special and then hurried outside. The red Ford was there, a featureless heap with all that dust, and he climbed in and glanced nervously at the vet's premises, then shot off down Main Street, heading north, to the outskirts of town. He was there in two minutes, the town already behind him, and burning along the flat, dusty road toward the gas station. One more minute and he was braking to a halt right beside the gas pumps. No Beth with a rifle, no raving dogs, just six cats by the steps. McLean, who was scared of no man, was certainly not scared of

cats.

He climbed out of the car and hurried around to the front gate, then walked up the yard path, between rusty oil drums, discarded tires, piles of planks and heaps of firewood, two or three old lawnmowers and a lot of other bits of junk, before mounting the few steps to the veranda and reaching the door. It was only an outer door, its wooden frame filled with mesh wire. There was a squareshaped hallway with bones lying on the floor and another, solid door on the other side. McLean tried unsuccessfully to open the mesh-wire door, then looked around it for a bell and failed to see one. Exasperated, not knowing what else to do, he put his lips close to the mesh wire and bawled Anna's name.

There was no response. He bawled her name again. When that didn't work, he said, 'I'm a reporter, Miss Lansing! From Houston! I just want a few words! Please come out, Miss Lansing!'

'I'm right here,' Anna said.

McLean almost freaked. He wasn't expecting her behind him. Automatically thinking of Beth and the dogs, he spun around and stepped back. His heart was already racing, but it raced for a different reason when he saw Anna standing just below him, close to the porch steps. She was wearing another thin cotton dress and her blonde hair was whipping. Shading her gorgeous eyes with her hand, she squinted up at him.

'What do you want, Mister?'
'I'm a reporter,' McLean said.
'I already heard that.'
'I'm from a newspaper in Houston,' McLean said. 'I heard that as well.'
She was calm and collected, which was more than

he was, and when he walked down the steps, she stepped back to let him stand facing her. Up close, her beauty was magical, Madonna-like, oddly elusive, a loveliness made even more appealing by her air of nervous distraction. She wasn't nervous of him - he sensed that immediately. It was a fear that lurked deep inside her and ran right through her system. She wasn't

really focused on him. She was looking inside herself. She was staring at him, but her gaze was focused inward, at once watchful and fearful.

She was a woman with frightening thoughts. 'I'm Steve McLean,' he said and held out his hand. Anna looked down at it, as if wondering what it was, then took it in the most tentative manner, as if scared of touching it. Her fingers, light and dry in his fingers, sent a small shock right through him.
'I'm Anna,' she said, smiling. 'But I guess you know that.' The smile was impossibly lovely and lit up her azure gaze, making McLean feel mesmerised, enslaved, imprisoned by new, unleashed feelings. He was not the McLean he knew so well, but he would hide that fear from her.
'You're still holding my hand,' Anna said, sounding childish and seductive at once, her eyes steady upon him. When he smiled back and let go of her hand, she said, 'What did you want?'
'Can I examine your hands?'
She smiled and held out both hands, the palms turned up to him. He held both her wrists, which was a good excuse to touch her, and looked down at two vanishing, nail-sized scars.
'When did they last bleed?'
'About a week ago.'
'Will the scars disappear completely?'
'Yes - if the bleeding doesn't start first. If it does, the scars will return.'
She tugged gently to release her wrists, but he pretended not to notice. Instead, he leaned a little closer, drawn by a sweet, sublime perfume.
'Mmmm,' he hummed. 'That's nice.'
'What?'
'Your perfume.'
'I don't use perfume,' Anna said. 'I never have. I don't like it.'
McLean leaned closer. He sniffed and smelt the perfume. It was a sweet, unfamiliar, real odour that aroused his sensual feelings.
'I can smell a sweet perfume,' he repeated.
'I don't use perfume,' she insisted. 'You must be imagining it.'
When she tugged her wrists away, he let them go, but then studied her face. He was overwhelmed by it.
'Do they bleed at special times?'
'No. I don't think so. They bleed when I get too emotional or have one of my

fits.'
'The epilepsy.'
'Yes.'
He was struck by her calm and collected manner, her lack of embarrassment. It sat oddly with her air of nervous distraction, just as her remarkably sensual appearance was at odds with her shyness. McLean felt himself faltering.
'What do you feel when you have the bleeding?'
'Pain.'
'In your hands?'
'Yes.'
'And what do you see?'
'Christ on the Cross. I see that when I close my eyes.'
'What happens when you open your eyes?'
'I see the real world, but I still feel the pain. The pain goes away when the bleeding stops, but the scars... they stay longer.'
'But they fade away unnaturally fast.'
'Real fast,' Anna said.
McLean nodded and smiled at her. Smiling back, she still seemed solemn. Her blue gaze, which had the radiance of the sky, brought a lump to his throat.
'It's not a trick?'
'No,' Anna said, 'it's not a trick.'
'You don't mind me asking?'
'No. Why should I?'
She had the stillness of self-conviction, the calm repose of the innocent, making McLean feel as shabby as a pimp who had once been an honest man. He didn't like the feeling and even found it unnerving, which is why he had to hold himself steady and fight against what he saw and felt.
Seeing true beauty for the first time, he felt emotions that were frightening, based on the kind of love he had denied for most of his life. He had to have Anna in order to degrade her and crush the fear engendered by his wanting her. What he felt for her, this burgeoning love, he would destroy to protect his source of strength. He could only protect his cynicism by destroying her innocence.
'What do you want?' she asked him.
'I want to help you, Anna.'

'How can you help me, Mister McLean?'
'By selling your story.'
'You already know my story.'
'The tip of the iceberg, Anna. I need a lot more, your whole life, then I can sell lots of stories. For that, I need your cooperation. Are you willing to give it?'
He took hold of her wrists, raised her hands, turned them over, pretending to study the fading scars but wanting only to touch her. Leaning closer, again he smelt the perfume she had claimed she did not use.
Tugging gently until he released her wrists, she gazed solemnly at him.
'You'll have to talk to my mom.'
'I've talked to her. She won't help me.'
'I won't do anything without her permission. I'm sorry. Goodbye.'
She went past him and up the steps. He turned around to watch her go. She had a very narrow waist, broad hips and long legs, which were enhanced by the clinging cotton dress and her body's natural ebb and flow. Every line of her was fluid, pure poetry in motion, and McLean wanted to run up and grab her, to take her right there and then. It was lust, but also love, a cauterizing emotion, and he turned away, bereaved by her departure, and heard the outer door closing. When he glanced up, she wasn't looking down, so he returned to his car.
He drove off, feeling desolate, but still smelling her body's sweet perfume, surprised by its persistence.

Chapter Eighteen

As the drive back to town took him past the big tent, McLean decided to pay a visit to the good old Reverend Juble Lee. The main tent was busy, with most of the staff working overtime, realigning the folding chairs and checking the mikes and amplifiers while the choir, black and white and now wearing normal clothes, ran through a rehearsal of their gospel songs. It was a pretty terrific sound, rousing the spirits even now, and McLean, who liked rock 'n' roll music, was soon snapping his fingers. He saw the two goons there as well, the reverend's bodyguards, wearing shades, and realising that this was indeed his lucky day, he hared around the back of the stage and went straight to the reverend's tent.

He was just about to p ull the tent’s flaps apart when he heard a female murmuring inside. Stopping just in time, he took a step back and called out, 'Reverend Juble Lee!'

There was a moment's silence. Shocked silence, McLean thought cynically. It was followed by the sound of glasses set down on a table, then the squeaking of springs and the reverend's deep, mellifluous voice: 'Yes, who is it?'

'This is Steve McLean, Reverend! You remember? The reporter from Houston. We met yesterday!'
Was that a soft curse in there? God forbid, McLean thought. Three Hail Marys is what I'd be demanding if old Jube was a Catholic. He stepped back and waited patiently. Fixed the smile on his face. When the flaps were opened up from the inside, he was waiting, prepared.
The starched beauty in charge of 'Public Relations' appeared in the opening in the tent, still adjusting her Snow White blouse, her immaculate blonde hair just a teeny bit dishevelled and the Barbie Doll smile moving into place.
'Why, Mister McLean!'
'I know, I don't have an appointment. Thing is, I missed my train last night and I'm at a loose end. Thought me and the good reverend might - '
'The reverend *does* prefer appointments.'
'Let Mister McLean come in,' the reverend said, his voice as warm as

Antarctica. 'Thank you, Miss French.'
Blushing prettily, Miss French stepped out of the reverend's tent, patted her untidy hair, flashed McLean another embarrassed smile, and hurried away on her high heels. Entering the tent, McLean found the reverend already seated behind the big antique desk, his striped shirt buttoned up to the neck, his hands clasped and propping up his chin. The smile on his face didn't reach his eyes; his gaze was steady and searching.
'I thought you were leaving,' he said.
'Missed my train,' McLean answered.
'How unfortunate.'
'Not really, Reverend.' McLean raised his hands in benediction. 'Gave me time to see Anna.'
The reverend raised his eyebrows. 'You saw Anna?' he asked. 'I'm surprised her mother let her speak to you. Beth's not keen on reporters.'
'I have my charms,' McLean said.
'Obviously,' the reverend replied. He removed one hand from under his chin and indicated the chair by his desk. 'Please,' he said, 'take a seat. Can I offer you lemonade?'
McLean glanced over the reverend's shoulder at the bed behind the desk. The sheets were freshly rumpled and two glasses of what looked suspiciously like bourbon were on the table beside the bed. 'No, thanks,' McLean said, taking the chair and gazing across the big desk.
The reverend was again resting his chin on his clasped hands, his blue gaze as steady as a rock and not all that much warmer.
'So,' he said, 'Beth let you speak to Anna.'
'Right,' McLean lied.
'And you concluded?'
'Well, she certainly seems *sincere,*' McLean said, being careful not to show what he was feeling, which was more than he understood.
'So at least you no longer think it's some kind of trick cooked up by the Reverend Juble Lee?'
'No, Reverend, I guess not.' McLean smiled like a little schoolboy. "Course I still think it's not doing you any damage. Here you are, still in Trinity. You don't normally pitch your tent for so long beside these dust-bowls.'
The reverend's smile was bleak. 'It was fortuitous, I'll admit. I do so without shame. Anything that brings sinners to the Lord is fine and dandy with me.'

'But you didn't arrange it?'
'No. Certainly, the fact that Anna started bleeding shortly after having a fit in my tent encouraged folks to connect the two events. And why not, Mister McLean? The two events might indeed be related. The Lord works in mysterious ways.'
'Your congregation thinks the Lord possessed Anna at your meeting and then showed Himself through her bleeding hands.'
'That sums it up neatly.'
McLean nodded, deep in thought, trying to work this twister out. The reverend was no fool and wouldn't pass up a good chance, but that didn't necessarily mean he was a crook. A bit of a *charlatan*, maybe, but that was almost traditional. The choir was singing away in the big tent. The Lord was still being praised.
Taking a deep breath, about to wing it off the cuff, McLean was stopped by the sweet smell of Anna. When he smelt her, he practically saw her, that radiant beauty right there before him, and it instantly consumed him with longing and fear combined, filling him with the need to destroy what he wanted too much.
'So, Mister McLean,' the reverend said, making it clear that he was trying to be patient but had mortal limits, 'what else did you come here for? Surely not just to say that you *believed* me. I can't imagine you bothering.'
'I can tell you have a low opinion of me.'
'God loves the sinner.' The reverend opened his hands, as if holding a glass of wine, sniffed, and then slowly expelled his breath in an oddly threatening manner. 'So what is it?' he asked.
McLean sat forward in his chair. 'Does Anna use perfume?'
'Is that a trick question? Are you suggesting I… ?'
'No, it's not a trick question. I'm not talking about you and Anna. Today, when I spoke to her, a sweet smell came off her - like a pretty fancy perfume - but she swore that she didn't use the stuff. I wasn't imagining it. The sweet smell was definitely there. As a matter of fact, I can *still* smell it. Is Anna lying or am I going mad?'
The reverend stiffened in his chair, looking genuinely surprised, then stood up and walked around the desk to lean down and sniff at McLean's clothes. Satisfied, he straightened up again and said, 'I can't smell a thing.'
'But *I* can,' McLean told him.

Looking excited, the reverend paced the floor, then stopped to look down at McLean with eyes filled with wonder.
'The odour of sanctity!' he exclaimed as if seeing a revelation. 'What you smelt was the odour of sanctity - and that's the proof she's genuine.'
'*What?*' McLean asked.
'The odour of sanctity!' the reverend repeated. 'That's what you smelt on Anna. It's a sweet perfume that seems to have no earthly source. A person smells it only during moments of particularly intense religious experience. You'd normally only smell it if *you* were having that experience, but in this instance you picked it up from Anna. It was *Anna's* religious intensity you were experiencing - and, obviously, smelling. *The girl is truly miraculous!*'
Leaning down to McLean, the reverend grabbed his wrist, raised it, then took hold of his hand and vigorously shook it. 'Thank you, my son,' he said, tugging McLean out of the chair, then squeezing his shoulder and embracing him. 'You have been sent by God. The Lord be praised. Thank you! *Thank you!*' Then he hurried out of his tent, leaving McLean to rob the place, and was shouting at the people in the big tent even before McLean had managed to rouse himself and follow him out.
He was in the big tent, raising his hands and calling for attention. The choir tapered off into silence and everyone else stopped working. The reverend kept his hands up in the air and his big legs were spread wide.
'Anna Lansing has the odour of sanctity!' he bellowed. 'The girl has been sent to us by God! Praise the Lord! *Hallelujah!*'
The gathered people went wild, cheering and clapping, hugging themselves, some with tears streaming down their cheeks, others radiant with joy.
'Hallelujah!' they cried. 'Praise the Lord!' others shouted. The choir on the stage, black and white, burst out in song again. The gospel music filled the tent with the sounds of jubilation while the Reverend Juble Lee's brothers and sisters all gathered around him, either laughing or crying.
McLean hurried out and drove back to town to put a call through to Bleeker.
'I've got the story of the decade,' he told his boss.
'Oh, yeah?' Bleeker said.

Chapter Nineteen

Tom and Anna sat on the bank of the Green River, watching the sun setting over the distant mountains. The heat haze made it look like molten metal pouring out of a giant pot. It bled along the horizon, as if washing over the mountains, and crimson bled into darkening blue where the stars were appearing. The flatlands were still in light, though the shadows of the trees were long, and larger shadows, like great pools of black ink, were cast down by the clouds.

It was eerily beautiful out there, making Tom want to travel, though for now he was content to be with Anna, shoulder to shoulder, thigh to thigh, fully dressed but feeling nicely naked, his arm looped around her. The warmth of her body filled him up and made him glow inside. His free hand was holding her hand where it lay in his lap. He felt as good as can be.

'Lordy,' Anna murmured in a dreamy, soft-voiced way, 'it sure is a beautiful sight. I can never get used to it.'
'A beautiful prison,' Tom said. 'All that space is our prison. It reminds me that there's a better world out there, way beyond the horizon. That's where we should be.'
'You want to get out, Tom?'
'Yes, Anna, I do. I've wanted that for as long as I can remember. It gets worse every year.'
'Even as a kid? You were unhappy even then?'
'I don't remember it as being better then. I always wanted to get out.'
'That's sad.'
'That's a fact.'
'I still think it's sad, Tom. Least we can expect is a happy childhood. God owes us that much.'
'You had a happy childhood?'
'I can't remember much,' Anna said. 'But it wasn't until Pa disappeared that the badness set in. It was good. *He* must've been good. My childhood was okay.'
They both stared across the river where the night was falling quietly, letting

the flatlands melt into the darkness like smoke dissolving in air. Tom felt a great aching in his heart that was mixed up with joy. It was hard to breathe sometimes.
'Do you mind this?' Anna asked him.
'Mind what?' Tom replied.
'Just sittin' here. Me not letting you…'
'No, I don't mind at all. I mean, I do, but I don't. I mean, I'm not that experienced.'
'You're nice.'
'Gee, thanks.'
'You're honest.'
'I try.'
Anna leaned forward, coming away from his arm, then she turned in towards him. She unbuttoned the dress and slid it off her shoulders to let him look at her. He was stunned by the contours of her body and its smooth, sublime skin.
'You like to look at me, don't you?'
'God, yes,' he croaked, 'I do.'
She picked his hand up and laid it on her breast, right over the nipple.
'You like to touch me, don't you?'
'Oh, God, Anna,' he groaned.
She leaned into him, pressing her breast against his hand, the nipple stiffening against his palm.
'Touch me, Tom. I want you to touch me. I could die when you do it. Touch me all over, Tom.'
Tom thought his heart would burst. He started trembling and burning. When he kissed her, she sucked his tongue into her mouth and slid her hands up his spine. Her fingers curled through his hair, taking hold of his head, and her tongue and lips stripped his senses bare as he squeezed her full breast. She leaned into him, groaning, then fell away and pulled him with her, until he was stretched out on top of her, scorched by her ambient heat. He tugged the rest of her dress apart, wanting nothing to be between them, though even when she had stripped of his shirt, he still had his pants on.
Then he touched her all over, his fingertips like magic wands. There were sparks coming out of his fingertips to sparkle within him. When he touched her, he felt her… more than skin and bone… her insides. He touched her very

essence, her spirit, and was raised on high by it.
The rest could come later. That great mystery would bide its time. For now, Tom was enraptured and torn by all the love pouring out of him. She reached down to hold him there, and when she did, he just dissolved. He turned into roaring winds, exploding galaxies, streaming light, and the tides of pain and rapture washed him clean and left him renewed. When he groaned, which he did when he soaked her body, he was offering his heart and soul.
'God, I love you,' he gasped.
'I love you, too,' Anna whispered. 'And I think our love might have cured me, Tom. I don't bleed any more.'
She gently pushed him away and he slid down to the river. He washed himself, then soaked the towel in the water and clambered back up the bank. He rubbed Anna's belly clean, kissed it tenderly, smiling quietly, then let her roll onto her back and rest her head in his lap. Looking up at him, she held her hands up, fingers outstretched, palms facing him.
'Look, Tom, the scars are gone. I haven't bled for weeks now. I think I'm cured. I feel clean inside. Love heals everything, Tom.'
Tom took hold of her wrists, kissed the palms of her hands, licked her wrists, then ran his tongue along both arms, one after the other. She rolled over to sit beside him, then started tugging her dress back on. The blonde hair on the tanned skin of her shoulders looked like threads of pure gold.
'You still want to escape, Tom?'
'Yes,' he said, 'with you.'
'You want to take me away from all this?'
'It's all bad here, Anna.'
'I think I'm cured, Tom. I think your love has cured me. I get the fits when the fear becomes too bad, which is why my hands bleed. It's not the Lord, Tom, and it's not the devil either: it's fear that turns into hysteria and then makes my hands bleed. I think you've cured me, Tom. I'm not frightened any more. What I needed was the love you're giving to me, and some day we'll make it real.'
He knew what she meant and let her seal it with a kiss. When they parted at the crossroads, in the dark, windblown fields, he didn't feel like a virgin or confused adolescent, though deep down he knew that he was both. His heart was bursting, but he felt like a man who could ride the whirlwind.
The stars were inside his head.

Chapter Twenty

Anna felt good, washed clean of her sins, released from the nightmares in her head and prepared to take wing. When she left Tom to walk back across the moonlit fields, she felt the light of love shining within - Tom's love, her gift from God - and approached her house in the radiance of that glorious new dawning.

Batman and Robin were in the yard and came loping out to greet her, barking and wagging their tails, almost tripping her up. She looked up at the house, which had filled her with so much dread, but didn't feel threatened by it any more, which she took as a good sign. She went up the steps, leaving the dogs outside, and went in to find her mother at the stove, peering into a steaming pot. The house was lit dimly from the flickering light of the oil lamps, but the shadows that danced across the walls scared Anna no longer.

'Hi, Mom,' she said.
'Hi, honey. Did you have a good swim?'
'Yeah, Mom, real good.'
'I'm cookin' this up for tomorrow. Pour yourself a

glass of lemonade and turn on the TV.'

Anna went to the refrigerator, which was just behind Beth. She filled a tall glass with lemonade and went out to the table. 'I don't want to watch TV,' she said. 'Let's keep the radio on.'

'I'm not fussed,' Beth said.

It was a Country & Western program - Willie Nelson, Dolly Parton, Emmylou Harris, Mickey Newbury and the music drifted soulfully across the room to keep Anna's spirits soothed. She glanced around the living room, which was spartan, gloomy and clean, and thought about Tom's dream of escape to somewhere much better. She had wanted to escape as well, but not because she was bored; it was the visions and nightmares that had made her

dream of finding peace elsewhere. Now, it didn't matter. She was convinced that her fears had gone. She and Tom had a love that would protect them against any ill wind.

'How are Batman and Robin?' she asked. 'What did the vet' say?'
'Those dogs are as fit as we are. I don't know why I bother.'
'It's best to get them an annual check-up.'
'Yeah, I guess you're right. Better to be safe than sorry, and we're safe for another year. That damned journalist from Houston *he* knows how fit they are! When they went for him, he tailed outa here like he had no tomorrow.'
'You mean that man, McLean?'
Beth stopped stirring the pot. 'That's right' she said. 'McLean. How did you know that?'
'He came here this afternoon - when you were at the vet's. I found him shouting at me through the door, but I was right there behind him.'
Beth wiped her hands on a towel as she emerged from the kitchen. 'That sonofabitch,' she said. 'He came back! He musta seen me in town. Did you talk to him, Anna?'
'Sure, I talked to him. He was pretty nice, really. Had a look at my hands, wanting to check if they'd really bled, and told me he could make us lots of money by selling my story.'
'Sonofabitch!' Beth said again, throwing the cloth on the table and pulling up a chair facing Anna. 'And what did you say?'
'I told him he'd have to talk to you. He said he had, but you wouldn't cooperate. I told him in that case I couldn't help him, then I came in.'
'He went away then?'
'Yes, Ma.'
'Scared of me comin' back with Batman and Robin. Scared of gettin' a hole in his pants and maybe much worse. Still, I gotta give him his due: he sure is persistent.'
'We could make money, Ma.'
'Not that way, honey. He'd make you the laughin' stock of the county and ruin you for life. You keep away from him, honey.'
Beth lit a cigaret. She liked a drag now and then. After inhaling as if she was taking her last breath, she blew a decent-sized cloud of smoke. When Beth smoked, it was like having a man around and that made Anna feel good.

'A city slicker,' Beth said. 'That's what McLean is. He'd promise you the moon and the stars while he's diggin' your grave. No principles there, I tell ya. Not a clean bone in his body. A gutter-rat with a nose for the dirt, which is what he'll try findin' here. Stay away from him, honey. If you can't avoid him, ignore his charm. That kinda charm comes too easy to his kind, which means you can't trust it. You walk wary, girl.'
She blew another cloud of smoke, her gaze focused on the ceiling, eyes slitted and lips pursed in a grim line that invited no argument.
'You always tell me that,' Anna said. 'You say that about *all* the men.'
Beth lowered her gaze and waved the hand holding the cigaret. 'That's right, girl. That's exactly what I say. An' I stand by my words. Some are better than others - I'm willin' to grant you that - but there's not a man alive that I'd trust when you really get down to it. There's no season with 'em. What they want, they *always* want. They think about it night and day, every hour, every minute, and they'd sell their wives and daughters to get it. Don't you ever forget that, girl!'
Anna felt a flash of anger, thinking of Tom by the river bank. 'They're not *all* like that,' she said, meaning Tom, not daring to mention him. 'What about the Reverend Juble Lee? Do you think *he's* like that?'
Beth stubbed her cigaret out with angry, stabbing movements. 'A man of God!' she snapped. 'You should wash your mouth out, child. That man, praise the Lord, is a saint who brought the blood of Christ to you. He's not like other men and you know it, so don't even suggest it.'
Anna kicked her chair back and stood up, flushed with anger, thinking of Tom by the river and what he had done for her. 'It's not the blood of the Lord,' she said. 'It was caused by my epilepsy. I had visions of the Lord because I had that attack when in the tent of the Reverend Juble Lee. But that doesn't make it Christ's blood. It only makes it the blood of fear. The fear's caused by all the things you keep telling me; by the prison you keep me in. But I'm gonna be free, Ma. I don't think all men are bad. I don't believe that Tom Beale is bad and I'm gonna keep seeing him. I - '
'*What?*' Beth nearly screamed it, grabbing hold of the table's edge, her knuckles as white as her face as she pushed herself upright. 'Did you say... *Tom Beale?*'
Anna was taken aback, hardly remembering what she had said, not prepared for the vehemence she had aroused at the mention of Tom's name. When her

heart began to race and she started shaking, she covered her mouth with her hand. Then Beth hurried around the table, clump-clump with the clubfoot, to grab her shoulders and stare fiercely at her.
'Did you say Tom Beale? Are you *seeing* Tom Beale? *Answer me!*' She shook Anna violently. '*Are you seeing Tom Beale?*'
Anna tried to break free, but her mother's grip was like a vice. 'Yes!' Anna cried. 'I'm seeing Tom! We meet down by the river!'
Beth grabbed the hem of Anna's dress and pulled it up to examine it. 'Mud!' she snapped, dropping the garment as if it had scorched her fingers. 'You've been laying down with Tom Beale!'
Anna burst into tears while Beth shook her by both shoulders. 'Not him!' she snapped. 'Not any of that clan! You keep away from that family! Did he…? Did you…?'
'No!'
'Not with him, child! *Not ever!*'
Anna ran into her bedroom, slamming the door behind her. She fell on the bed, sobbing hysterically, as the light of love turned into the darkness of fear and despair.
The blood trickled out of the palms of her hands to stain the white sheet.

Chapter Twenty-One

When the telephone rang, McLean thought it was a pneumatic drill. He wondered why they were drilling outside Riley's bar at midnight, then realised that he was lying in bed with the sun shining in on him. 'Jesus Christ!' he said. Nice to have a pillow to talk to. He had Anna mixed up with the pillow when he reached for the phone. 'Yeah?' he said, sounding hoarse. 'Hi, sexy,' Rhoda replied. 'If only the girls in Riley's could see you now! I bet they're missing a treat!' McLean opened his eyes. Nice to have a pillow to look at. It was clear that the pillow wasn't Anna and that Rhoda was talking.

'What time is it?' he asked.
'Ten in the morning, lover.'
'You just left two hours ago,' McLean said. 'I didn't

think you were that keen.'

Rhoda gave a throaty chuckle. 'No, you weren't too good, McLean. Still, you sure know how to make me smile, so I guess that makes up for it.'

'I don't feel well,' McLean said. 'What is this? Is it punishment?'
'No,' Rhoda said, 'it's not punishment. Can you actually listen?'
He felt ill, but not *that* ill. It was something in Rhoda's voice. His head was filled with visions of him and her in Riley's bar, lots of gasoline on the table, the old Wurlitzer pounding, girls and boys on the dance floor, none remotely under-aged, with breaking glass and whoopin' and hollerin' and God knows what else. McLean was a city slicker who normally thrived in the midnight hour, but since coming to this Land of the Living Dead he was more dead than living. There was only one bar in town because few people drank. What that meant is that the few who *did* drink had a prodigious capacity. One of those was Rhoda, who drank a lot to kill her nightmares. McLean didn't know what the nightmares were about, but she had them more often than not and claimed they tormented her. Rhoda was more than she seemed, a haunted woman acting hard, and McLean, who had come to respect her, knew every nuance in her voice.

Which is why, when he heard her tone of voice, he sat upright, wincing.
'Yeah,' he croaked, 'I can listen.'
'Two things,' Rhoda said. 'The first is that by nine this morning the public relations representative of the Reverend Juble Lee was knocking on the door of the *Trinity Gazette* to inform Dwight Stewart that Anna Lansing has somethin' called the odour of sanctity - '
McLean groaned.
' - which, accordin' to Juble Lee, proves that the blood on her hands is the blood of the Lord.'
McLean groaned again.
'The second,' Rhoda said, 'is that I just saw Beth and Anna Lansing get out of their old truck and enter Doc' Reynolds' surgery. Anna's hands were bandaged.'
'*What?*'
'You heard me. She had her hands bandaged.'
McLean slammed the phone down, swung his legs off the bed, stood up, felt the room spinning around, but then quickly regained control. The shower was along the hallway, which was too far to walk, so he leaned over the sink to splash his face, but almost threw up. Almost, but not quite. Being experienced, he straightened up, took some deep breaths, slugged down the mineral water that he always kept by his bed, then leaned over again without danger and attended to his ablutions. When he was finished, he slithered into his clothes and hared on down the stairs, coming out in the lobby.
'What a sight for sore eyes,' Rhoda crooned. 'If the ladies in Riley's bar could see you now!'
'Okay, Rhoda, that's enough.'
'You were so witty last night. So urban and urbane. All those jokes about city slickers and country pumpkins had the whole place convulsed. I didn't mind that at all. Brought a smile to my face, in fact. I stopped smilin' when we got back to your room and you mistook me for Anna.'
'Oh, my God,' McLean muttered.
Rhoda gave a bitter grin, shrugged bare shoulders, brushed her hair back. Taking a deep breath, she let him see her breasts while her eyes filled with tears. 'The abuse of men,' she said. 'The abuse, the abuse... Goddammit, why do we stand it? Just go to hell, McLean.'
He almost said 'I'm on my way!' but her tears shocked even him. Struck

dumb, he hurried on out the door and turned left, along Main Street. The sun was shining already, a pearly light on the dusty road, broken up by the shadows of the clapboard buildings and a few drifting clouds. McLean hurried along the street, noting how quiet it was. Passing the premises of the *Trinity Gazette*, he walked on to Doc' Reynolds' place. He stopped before he got there, seeing Beth's truck outside, and sat on the edge of the porch to wait until she came out. He had given up smoking long ago, but now he wanted a cigaret.

He seemed to be there forever. In fact, it was ten minutes. Anna came out first, all blonde hair and blue eyes, a vision of loveliness in a white skirt, both hands in white bandages. She brought a lump to McLean's throat. He ached to hold and possess her. Distraction was offered when Beth came out behind her, pushing her forward with some impatience. McLean took a deep breath, got to his feet and walked up to them. When Anna stopped to gaze at him in a dazed way, he knew she'd been crying.

Beth glared at him with widening eyes. 'Step aside, Mister!'

'I know all about it,' McLean said. 'She's been bleeding again.'

'So, she's been bleedin'. I said, step aside, Mister.'

But McLean stayed where he was, blocking her path. 'What started it, Beth?'

'It's not your concern.'

'Come on, Beth. What started it this time?'

'She just got upset,' Beth said. 'She'd been seein' Jack Beale's boy. I told her she had to stop seein' him and she went all hysterical. Then the bleedin', the Lord be praised, started up again.'

McLean felt a stab of pain and a fierce, jarring jealousy that bordered on helpless hatred for young Tom. Shaken, he glanced at Anna. She was staring blindly, weteyed, across the street, so he turned back to Beth.

'What's wrong with young Tom?'

'It's the whole goddamned Beale family. I want nothin' to do with them. In fact, Tom's the only halfway decent one in the bunch. Jack Beale's a drunken brute, his wife Myrna's just pitiful, and the daughters are so cowed, they're probably idiots. I think that whole family's crazy.'

'Some folks think *you're* crazy, Beth.'

'They say it, but I'm not. You know that alright, McLean. But those Beale girls - and half the others in this town - they're not like normal folks. That's all *I've* got to say!'

She has a point there, McLean thought The girls in this town aren't so bright. Never seen a stranger bunch in my life, and that's saying something.
'Anyway, it's true that Anna's hands are bleedin' and that's all that matters. Now step out of my way, McLean.'
'No,' McLean said. 'The Reverend Juble Lee's spreading the word. It'll soon be nationwide, Beth.'
'Whatd'ya mean, he's spreadin' the word?'
'His PR has been at work.'
'PR? What's that?'
'A person dealing with public relations. *Publicity*, Beth.'
'Oh?' Beth's slitted eyes showed more interest. 'What's being publicised?'
'The Reverend Juble Lee believes that Anna has the odour of sanctity. That means he believes that the blood in Anna's hands is truly the blood of the Lord. He's told all his staff about it. He's told them to spread the word. He sent his public relations lady to the *Trinity Gazette* to ensure that they spread the news in the paper. This town's gonna bust open, Beth.'
'Dwight won't print the story.'
'Why not?'
'He just won't.'
'This is a real tight-lipped town, I'll grant you that, but Dwight won't have a choice. If someone takes that kind of story to him, he's gonna have to run it or answer a few questions about why he didn't. Why *would* be refuse?'
Beth was silent for a moment. 'He has his reasons,' she said eventually.
'He's gonna have to run the story, Beth, then this town will bust open.'
Anna gazed at him in a daze. She didn't seem to be listening. She was listening to voices inside her head and they were making her fearful. McLean wanted to lie down and die for her, but instead he'd destroy her. He was in love with her - he accepted it now - and he couldn't bear that emotion. Yet it hurt just to see her there.
'What are you tryin' to say, McLean?'
'Anna's going to be public property. It doesn't matter whether you want that or not - it's going to happen, believe me, Beth.'
'So?'
'I can protect her. I can hold the wolves back. Let me draw up an agreement that'll put me in charge and enable me to *control* how the story's handled. I'll make money out of it - no question about that - but you'll be selling a story

that they'd otherwise take for free and I'll give Anna a measure of protection that she's sure going to need. Believe me, Beth. You don't know what real newshounds from the cities can be like. They'll tear Anna to shreds. Better the devil you know that the one you don't know, so what do you say?'
He glanced at Anna, but she was just staring through him. He might as well have been the Invisible Man, though it just made him want her more. But Beth was looking more keenly at him, with reluctant respect.
I've got her, he thought.
'Okay,' Beth said. 'You draw up your agreement. Be careful how you do it, McLean, because I'm no country bumpkin. I'll read everything, includin' the small print, and I won't stand for nonsense.'
'You got it,' McLean said.
'When you've got the agreement drawn up, come on out to the house.'
'What about the dogs?'
Beth actually grinned briefly. 'We're on the phone,' she said. 'You can get us through the switchboard. Call us when you're plannin' to come and I'll tether the dogs. Okay, Anna, let's go.'
She took Anna by the elbow and led her to the truck. When they were in it, the truck coughed into life and trundled away down the street, leaving McLean alone on the road in a cloud of subsiding dust.
He stood there a long time.

Part Two
Chapter Twenty-Two

The tourists had come to Trinity. McLean watched them with pleasure from the window of Mayor Lomax's office as they poured out of the buses that had brought them from all over the country. The breaking of Anna's story had changed Trinity virtually overnight, making it prosperous again, with tourism replacing cattle and agriculture, bringing in the greenbacks. New stores and restaurants had opened. Rhoda's hotel was always booked out. Lomax had built a new hotel and a couple of bars, managing to throw them up in six months and now filling them every day. People actually used Beale's railway station, coming in by their hundreds, to ritualistically attend a Reverend Juble Lee Revival Meeting and hopefully catch a glimpse of Anna Lansing, described variously as a saint and a witch, but always good news for the media. The Reverend Juble Lee's tent had become a permanent fixture, packed just about every day, with the trestle tables outside doing a great trade in bibles, books, pamphlets and souvenirs, not to mention hamburgers, hot dogs, and various soft drinks.

The whole town was booming.
McLean had done well, also. Beth had signed his agreement and he was now in charge of Anna, controlling her media profile, selling interviews and articles to the highest bidders, syndicating the whole works. There was also talk about a book, with maybe a lucrative movie deal, though he was still in deep negotiations with the agent phoning in from Hollywood. All in all, he was having a hot streak, though not feeling that hot.
'You must be rolling in it,' Lomax said as they both gazed through the window at the tourists pouring out of the latest bus. 'Trinity, East Texas, has been good to you, McLean, putting a flush on your cheeks and a bulge in your billfold.'
'You haven't done so badly yourself,' McLean pointed out. 'You own that new hotel and those new restaurants and bars. The money's been blowin' in on the breeze. You've got a lot to be thankful for.'
'No doubt about it,' Lomax said, enjoying his whisky and cigar, filled with

pleasure at the sight of all the tourists. 'Anna's sure done us proud.'
The very mention of Anna's name filled McLean with love and rage, the latter because of the former, which he suffered helplessly, in anguish, despising feelings he had always mistrusted but could not now control. Of course there were compensations - bulging billfolds and so forth but the fact that he still hadn't possessed Anna was burning him up.
'How *is* Anna?' Lomax asked.
'She's fine,' McLean replied. 'I see her just about every day and she's doing okay.'
'You've got her locked up nice and tight?'
'Signed, sealed and delivered. Old Beth always keeps her in sight and lets her talk to no-one.'
'Unless you say so, of course.'
'Naturally,' McLean said.
'Beth knows what side her bread's buttered on.'
'It's more than that,' McLean said.
'Oh? What?'
'It's not the money, Lomax. That's just a fringe benefit. I got Beth to agree by painting a lurid picture of how hellish the big-city newshounds would make life for Anna. I gave the impression that they'd tear her to shreds and maybe do her real damage. Now she and Anna are getting the benefit while also being protected. At least that's what Beth thinks.'
'We *want* her protected, McLean. That girl's our bread and butter. We don't want some bloodsucker upsettin' her and maybe blowin' this whole thing. You're doin' a good job there, McLean. Here, have a Havana.'
'No, thanks, I don't smoke. Smoked too much when I was married. Two packs a day and coughed all night while my wife cried in bed. Gave it up when I got divorced.'
'Hope you feel better for it.'
'I've made up for it with drinking.'
'I haven't noticed you using my bars.'
'Rhoda likes it in Riley's.'
'You like that Rhoda?'
'We have a kind of arrangement.'
'Does she talk?'
'What do you mean?'

'You know... about the town.'
'She talks a lot about gettin' the hell out, if that's what you mean.'
'Not about the townsfolk?'
'No, Lomax. Why?'
'I just wondered, that's all. I mean, Rhoda... Well, she has an inventive tongue and you can't believe all she tells you.'
'What did you think she'd tell me?'
'Nothin' special. I just wondered, that's all.'
'Keeping wondering,' McLean said.
He had another sip of whisky, then stepped closer to the window. Jack Beale's car had pulled up at the other side of the street, near the general store, and Beale, unshaven and bloated, was just climbing out. He was followed by his downtrodden wife, his three very strange daughters, and the only normal person in the household, Anna's boyfriend, Tom.
McLean had seen them around a lot and they always fascinated him. Beale's daughters, though practically full-grown women, had a dull-eyed, defeated look and were always rigid with nervousness. As for Beale's wife, Myrna, she seemed twice her age, rarely opened her mouth, and never looked anyone in the eye. Only Tom, the one son, the boy Anna claimed to love, seemed normal, if not particularly happy. McLean hated the sight of him.
It wasn't Tom's fault. It was just that Anna loved him. McLean had actually liked the kid when he met him, but now he wanted to strangle him. McLean had always believed that love led to hatred; now he knew this was true.
'Just look at them,' he said. 'Beale's wife and daughters! Living proof that the dead can actually rise. How the hell did they get like that?'
Lomax cleared his throat. 'Nothing special,' he said. 'They're just plain country folks who've had it hard. They live tight and private. It's pretty common around here.'
'You think those girls are normal?'
'A bit nervous, I'll admit.'
'More than a *bit* nervous,' McLean said. 'Those damned girls look *haunted*.'
'You're imagining it,' Lomax said, coughing into his fist again. 'You're just used to all them high-flyin' fillies from the big-city streets.'
McLean sighed. 'Yeah, I guess so. Lots of girls like that in Trinity. In fact, most of the girls their age are like that.'
'Except for Rhoda and Anna.'

'That's right,' McLean said.
Tom was talking to his father. Beale nodded and waved his hand. Tom hurried gratefully away from his family, heading toward the drugstore. Beale stretched his big body, glancing up and down the street, then he waved his hand again and started walking. His wife and daughters, taking note of his waving hand, sheepishly fell in behind him. They headed along the street, toward the new stores, and were cut off from view.
McLean turned away from the window, thinking of Tom, seeing Anna, burning up in the fires of his love and anger and jealousy. It made him feel out of control, like some dumb adolescent, and the hatred he'd directed at Tom he actually felt for himself.
Loving Anna, McLean had become her victim and was losing himself. He just couldn't bear that thought.
'The Father, the Son, and the Holy Ghost,' he said. 'We are gathered together here in Trinity to pay tribute to its upstanding citizens, better known as the living dead. Must be nice to be mayor.'
'That's not funny, McLean.' Lomax filled up his glass and lit another cigar. McLean noted that he was shaking a little bit and sweating too much.
'You drink and smoke too much,' McLean said. 'It can't be good for your health.'
'I'll survive,' Lomax said. When he raised his glass to his lips, his hand was shaking so much, he spilled some of the drink down his shirt.
He heaved a loud sigh of relief when McLean took his leave.

Chapter Twenty-Three

'She's not gonna come,' Gary said. 'She hasn't come in for weeks.'

'She's too busy healing the sick and the lame,' Pete informed them. 'She's too busy with the layin' on of hands to bother with mortal men.'

'She can lay her hands on me anytime,' Larry said, sticking resolutely to the secular point of view. 'I'm pretty sure I'd rise to the occasion. What do *you* say, Tom?'

'I say you have a filthy mouth, Larry, and should go wash it out.'
'Gee, you sound just like my mom. I feel humbled to know you.'
They all laughed at that. Even Tom had to smile. They were gathered together as usual outside the drugstore, waiting for Anna to appear, though she rarely did these days.
'Any of you guys been out there?' Gary asked.
'Out where?' Pete responded.
'To the tent of the Reverend Juble Lee,' Larry informed him. 'With all the howlin' sinners and tourists. Is that where you meant, Pete?'
'Right,' Pete said. 'Tell the truth now. Hands up! Who's been out there to fall on their knees and sob, "Take me, Jesus!" just to get close to sexy Anna?'
'I have,' Gary admitted.
'Me, too,' Tom said.
'We all knew *you'd* go,' Larry said to Tom, 'but *you,* Gary - that's heavy, man.'
Gary looked a bit embarrassed, but he took these things seriously. Resting his hands on his belly, which was flopping over his belt, he focused his gaze on the distance and said, 'I don't know, guys, I was curious, you know? I wanted to see what was happenin'.'
'So, what *was* happenin'?' Pete was smiling down at Gary. Six-feet-two, but still wearing high-heel boots, he seemed to sway high above them.
'Incredible,' Gary said. 'Absolutely incredible. That black an' white choir was belting out gospel songs, the Reverend Juble Lee was preachin' up a storm, and Anna was standin' there in a white robe, holding up her scarred hands. Christ, she looked wonderful! That white robe showed what she had.

Underneath, she was as naked as a jaybird - of that I'm convinced.'
'Nice to know you went there to worship,' Larry observed, slicking back his greased, well combed hair. 'So what else did you see?'
'Incredible,' Gary said. 'Absolutely amazin'. What with singin' and preachin' and Anna holdin' up her hands, the whole congregation was goin' wild and almost wreckin' the tent. Folks were laughin' and cryin'. Some were dancin' in the aisles. There were cripples tryin' to get out of wheelchairs beautiful!'
Tom himself. What Gary was saying was true, but Tom didn't want to be reminded of it. It was just too embarrassing.
'Unbelievable!' Gary said. 'I mean, really way out! They were comin' up the aisles in their wheelchairs, on crutches, and the reverend's helpers - wearin' shades, big guys with barrel chests - would push 'em back and only let 'em get at Anna one by one, in a queue. Then she'd lay on her hands, whether bleedin' or just scarred, an' I swear, some of those cripples startin' walking', though maybe not all that well. There'd be clappin' and whoopin' and hollerin' when that happened - and Anna... Well, she'd have her eyes closed, but with tears streamin' down 'er face. Christ, she looked sexy!'
Pete nodded judiciously, taking all of it in, debating it philosophically in his mind, way up there above Gary. Larry, admiring himself in the plate-glass window, was too busy with higher thoughts.
'Fantastic!' Gary Anna's laying on the hands and the cripples are tryin' to walk an' the Reverend Juble Lee, well, he's preachin' up a storm and exhortin' everyone to put money in the collection plates being passed hand-to-hand. The money's fallin' like rain. Real good lookin' girls collecting. The choir's beltin' out the gospel an' Anna's laying on the hands an' then the reverend starts callin' folk to the Lord and they rush up in droves. They're all on their knees, weepin' and wailin', wringin' hands, cryin' "Save me, Lord!" an' "Hallelujah!" and "Take me, Jesus!" an' things like that and the reverend, well, he's havin' a field day, throwin' out the big net. A great catch every time. I went two or three days and walk up to Anna. Christ, she looked

didn't want to listen. He had been there

said. 'Absolutely incredible! runnin'. Damned near converted myself each time I laid eyes on Anna. Who'd have blamed me? Right, Tom?'

'Right,' Tom said bitterly. He wanted to forget it. He felt embarrassed just remembering and filled up with shame for Anna, still not able to believe that she was part of that whole sorry spectacle. It was as bad as TV. In fact, he thought it was worse. With TV, you could pretend it wasn't real or else switch it off. He had gone to see Anna, being that desperate by then, but what he saw had shocked him immeasurably and reduced him to tears. Not tears for the Lord, nor for his soul, but tears for how he had lost her.

That bastard, McLean.

Tom hadn't seen her for months and he knew whose fault it was: McLean, her new, so-called 'manager' and 'representative', who was quoted in all of the articles about Anna and her 'gift' from the Lord. Tom was still in a state of shock, not believing what had happened to her, still in thrall to the recollection of their few days by the river, when she'd told him, and showed him, that she loved him and thought his love had cured her. Then her hands had bled again, the word had spread like wildfire, and before Tom could get to see her again, McLean had stepped in.

Tom had gone back to the river. He had done it a lot. Night after night, he had sat there, but Anna never showed up. Then she suddenly turned up in newspapers and TV - right there in Tom's own home! - and McLean and the Reverend Juble Lee were both prominent, also. Anna stopped coming to town. Beth installed an answerphone. Anna started making appearances at the Reverend Juble Lee's Revival Meeting and people from all over the county flocked in to see her.

That's when Tom noticed McLean. That city slicker was always present. He talked on Anna's behalf in newspapers and magazines, interrupted Anna on radio, and always shoved his face in on TV if Anna showed some confusion. He was reported as being her 'manager', her 'agent', her 'representative', and as his and Anna's so-called 'media profile' expanded, the people flocked in not only from Texas, but from every damned state in the Union.

The laying on of hands was new, a relatively recent innovation, and Tom didn't know if Anna really believed she had that 'gift' or if McLean, or even the Reverend Juble Lee, had invented it for her.

He felt sick when he thought of it.

'There's that dude from Colorado,' Larry said. 'You think *he's* gettin' Anna?'
Tom looked along the street. McLean was ambling in this direction. He'd obviously just come out of the office of Mayor Lomax, getting richer every day with his hotel, bars and restaurants, and was moseying along to Rhoda's hotel, where he'd been living ever since coming to Trinity. Seeing him, Tom filled up with an anger that made him jump down off the porch, without even saying goodbye to his buddies. Then he hurried along the road, blind with rage, to stop McLean in his tracks.
'Hi,' he said. 'Remember me?'
'Young Tom,' McLean said flatly.
'I gave you a lift into town and - '
'I know, kid. I remember.'
'I should've thrown you back on the train.'
'What?'
'I think you heard me. You came here to talk to Anna and I was worried about that, and everything that worried me came to pass. You're pretty rotten, McLean.'
McLean grinned at that. 'Pretty rotten,' he repeated. 'Some would call me a bastard. Some would call be a sonofabitch. Some would even call me a shit, but you say "pretty rotten". What a nice boy you are.'
'I suppose you think that's funny.'
'I did, but you're not laughing.'
'I think that what you're doin' to Anna is lousy. Real low-down and mean.'
'What am I doing, Tom?'
'You're using her, that's what.'
'With her consent and the consent of her mother, which is more than you'd get.'
'You're just out to make money.'
'For them as well as myself. If I'm using them, I'm also protecting them, which right now they need.'
'Protecting them from what?
'From what and from whom? From the ones who'd use them *without* protecting them. You don't know what the world out there is like, kid, so stop being so damned high and mighty.'
The city slicker was a fancy talker and Tom knew he was being beaten. His fists were clenched and he wanted to use them, which was an impulse that

shocked him. He had never been violent before, but now he felt truly murderous. He wanted to smash McLean.
'Anna used to be my girlfriend.'
'You didn't tell me that.'
'She was.'
'I'd never have guessed. So, what's your problem, kid?'
'I can't get to see her.'
'She's as free as a bird. If she wanted to see you, she would, but she's never mentioned your name.'
'That's because she's not herself.'
'I only know the one Anna.'
'Who told her to start the layin' on of hands? Anna never believed that stuff.'
'She believes it now, Tom. Believe me, she believes it. I didn't put her up to it - I swear - she did it all on her own.'
'You and the Reverend Juble Lee - you're partners in this, aren't you?'
'No.' McLean didn't hesitate. 'It benefits both of us, I'll grant you, but partners? No, we're not.'
'Did he put her up to it?'
'When I asked him, he denied it. He could be lying, but I think he's on the level. It was all Anna's doing.'
Tom didn't want to believe it. Thinking about it was bad enough. What he wanted was to obliterate McLean and get Anna back. Nothing else meant a damn.
'You want her, don't you?' he asked, before he knew what he was saying. 'That's why you've built the walls all around her - you want her for yourself.'
McLean didn't smile at all, just went from white to red, then he shook his head from side to side, saying, 'No, that's not true.'
'Yes, damn you, it's true. It's *Anna* you want. You think I'm just a rube, a dumb country boy, but I sussed you as soon as I met you - and now I know what you want.'
'Anna.'
'Right. But you're not gonna get her. She doesn't want you, McLean - she wants me - and when I get to her, when I get to talk to her, she'll see sense and you'll lose her.'
'When I want her, I'll get her,' McLean retorted shortly. Then he skipped around Tom and sauntered away like a man with all the time in the world.

Tom had tears in his eyes.

Chapter Twenty-Four

Walking away from Tom, McLean felt ashamed of himself. The kid was hurting real bad and McLean had twisted the knife some more, unable to resist wounding the one person who had Anna's affections. That's what being in love was like: it made you possessive, jealous, vindictive, and plain stupid. It turned you into an irrational person, and McLean couldn't stand that. Experienced in the ways of man, that bottomless pit of vile activity, McLean prided himself on the contempt that had kept him aloof from it. Now, he had lost it and was riddled with mindless passions, including adolescent yearning and petty vindictiveness, which just made him despise all the more his love and desire for Anna Lansing.

Picking on kids, for chrissakes! What next? he wondered.
Entering Rhoda's hotel, he found the lobby filled with tourists, most of them middle-aged or elderly, many carrying bibles. Rhoda wasn't behind the desk, but Belinda Hart was there - as dumb as they come, completely devoid of charm, and scared shitless of McLean's urban ways. Right now, Belinda was giving instructions on how to get to the Reverend Juble Lee's revival tent to a bunch of bluerinsed, bespectacled matrons from Baton Rouge, Louisiana. When she saw McLean, she blushed. McLean grinned and walked on. He took the stairs while pondering on how much life had changed in recent months in the sleepy town of Trinity, East Texas.
I should get an award, he thought.
His room door was already unlocked. Stepping inside, he found Rhoda on his bed, fully dressed in that clinging red number, which was pulled back off her knees, while she had a glass of bourbon and a smoke. She smiled with that familiar hint of wickedness as soon as he walked in.
'Hi,' she said.
'Hi,' McLean replied, closing the door behind him and starting to take off his jacket. 'What are you doing here at this time of the day? It's not even noon.'
'Don't you want me here, darlin'?'
'You look a treat, I'll admit that.' McLean hung his jacket in the wardrobe, then turned back to face her. 'I'm just surprised,' he said. 'That's all.'

'I've got time on my hands, McLean. Lots of it these days. Now that we're so busy and I can afford a receptionist, I spend most of my time talkin' to the guests and holdin' their hands. I enjoy it, but it isn't exactly wildly stimulatin', so I came in here for a welcome break.'
'Welcome,' McLean said, sitting on the edge of the bed and pouring a stiff one. 'Cheers,' he said, touching Rhoda's glass with his. Then he had a good slug of it.
'Say, hey!' Rhoda exclaimed. 'It's early yet! Better drink that more slowly.'
'To hell with it,' McLean said. He had another drink, put the glass on the table, then rested his hand on Rhoda's knee. He knew the knee well by now.
'Hotel's busy,' he said.
'Never better, McLean.'
'You'll soon have enough money to leave this town. Is that still in your plans?'
'Is that an invitation, McLean?'
'Not really, Rhoda. I'm not a man for permanent relationships. I just wondered, that's all.'
Rhoda sighed with disappointment. 'Naw,' she said, 'I'll probably stay here. What could I do if I went elsewhere? I only *know* this hotel.'
'I thought you hated this town.'
'Hate can keep you alive, givin' you somethin' to cling to when the night closes in.'
'You still get the nightmares?'
'Doesn't everyone?'
'Not me.'
'Sure, I still get the nightmares. I guess they're with me forever.'
'What are they about?'
'Never mind, McLean. You know me well enough already. Let me keep something private.'
McLean grinned and stroked her knee, slid his hand down her shin-bone, ran it around the back of her leg, then back up to the knee.
'Mmmmm,' Rhoda crooned. 'So where have you been this mornin'? In fact, where have you been the past few days? I'm gettin' lonesome for love and attention, but my lover's not here.'
'I was having a drink with Lomax. A pre-lunch aperitif. Just checking out how thing's are going. He says the town's booming.'

'Well, he's right there. He should know, since he's the mayor. He's also making more out of it than the rest of us put together because he happens to own half the town. He must look like a fat, sassy cat. With a big Cheshire smile.'
McLean squeezed Rhoda's raised knee, then ran his hand up her leg. He let it come to rest between her thighs, which were tender and warm. 'Lomax didn't look fat and sassy,' he said, 'and was wearing no Cheshire cat smile. In fact, he seemed strangely nervous when we spoke, as if something was bugging him. That started when we saw Beale and his brood and discussed those weird sisters. That's when he got nervous.'
Rhoda chuckled and sipped some bourbon. 'He's just frightened of girls,' she said. 'Maybe that's why he's still a bachelor. Just a poor little shy man.' She closed her thighs on McLean's hand, making a sandwich of it. The heat of her smooth skin was exciting and started arousing him.
'Mmmmm,' Rhoda crooned.
'That's nice,' McLean said.
'So why don't you come around more often? It's *your* room, after all.'
'Real frantic,' McLean said. 'All this business about Anna. I'm so busy taking care of things, I hardly have a free moment.'
'Twenty-four hours a day,' Rhoda said. 'That's real dedication.'
Knowing every nuance in her voice, McLean knew what she meant. 'It's not that,' he lied.
'Yes, it is, McLean. That little bitch gets all the attention and now she's got yours. You've got the hots for her, you're obsessed, and now you can't keep away from her.'
'I'm *managing* her,' McLean insisted, 'so I *have* to see her a lot. Believe me, even if I wanted to snatch her, old Beth wouldn't let me.'
'Bless old Beth,' Rhoda said, 'but the point is that you want to. Dammit, McLean, why Anna instead of me? What *is* it with her?'
'I don't know,' McLean said.
Rhoda opened her legs to express her disgust, so McLean stood up and went to the window to look down on the street. The folks he'd seen in the lobby were piling into the bus that would take them to Reverend Juble Lee's big tent. The sun was high in the sky and Main Street was becoming livelier, with tourists wandering up and down the porches, in and out of the stores. A lot of the stores were new and most sold souvenirs, including postcards of Anna

with her hands raised, palms outward, showing the scars of her stigmata. It made McLean's stomach churn, but it would have happened without him, so better that he got something out of it than some other bastard.
He heard the bed creaking, then Rhoda walked up behind him. She slid her arms around him, clasped her hands on his chest, and leaned into him, flattening her breasts against his back to let him feel her whole body.
'I'm sorry, honey,' she whispered. 'I shouldn't have said that. I'll just have to learn to share you with Anna - and remember that I'm gettin' the most of you. Greedy girls should be punished.'
McLean saw the Beale family coming out of a store opposite and gathering in a bunch on the porch. Big Jack was obviously snarling something at poor Myrna while the sisters, dressed as usual in figure-concealing clothes, stood silently to the side with their heads bowed, trying not to see anyone.
'Look at them,' McLean said. 'Young Tom's three elder sisters. I've never seen girls so lifeless and cowed as the bunch in this town - except you, of course.'
'And Anna!' Rhoda said.
'Right. Anna, you, and some others. But why are most of the young girls in this town just like Tom Beale's sisters?'
'Ask your friend, Jack Lomax,' Rhoda said. 'After all, he's the *mayor.'*
Slipping around McLean, she dropped to her knees in front of him, kneeling between his legs and the wall, just under the window. 'Just you stay there, honey,' she said, unzipping his trousers, 'while I make up for making you feel bad. Think of Anna while I'm doin' it. I don't mind. I'm used to bein' abused. Just stay where you are, McLean.'
McLean looked down on the street as the Beales walked away. When he thought of Tom, who wasn't with them, he thought also of Anna and felt a great, swooping fear that made him start trembling. Either fear or just Rhoda, who was working her wonders on him. McLean stood there trembling with fear and desire, accepting that if he didn't get Anna soon he would simply explode.
He leaned forward to rest his hands on the wooden frame of the window, his body convulsing in silent spasms that gave him no joy.
He groaned aloud.
In despair.

Chapter Twenty-Five

Tom was in an agony of unrequited love when he was forced to attend, in the company of his family, a hot Sunday gathering at Reverend Juble Lee's Revival Meeting in the big tent outside town. Still hurting from his confrontation with the hated McLean, whom he was convinced was going to exploit Anna sexually as well as materially, he was also fearful of McLean's worldly experience and more desperately yearned to protect Anna. For this reason, he badly wanted to see her - but not here, not now, at this meeting with his family beside him. He was just embarrassed to be here.

Most of the townsfolk were at the meeting, as well as many tourists, and the big tent was packed and as hot as hell. The people in the rows of folding chairs were mopping sweat from their flushed faces and trying to keep it off their hymn books while the choir, dressed in red robes and spread across the stage, were belting out their rousing gospel songs and clapping their hands to the rhythm. The huge American flag was behind them, stretching high above them, and the enormous painting of the Reverend Juble Lee could not be ignored. His eyes were sky blue and piercing, looking down on the congregation, and it was impossible to look up at the stage without seeing that giant's accusing gaze.

Another egomaniac, Tom thought. Like all those fools on TV.
When the gospel choir had whipped the audience up into a state of high excitement, the Reverend Juble Lee came out on stage like some kind of superstar. The whole place went wild, with people standing up on their chairs to clap, and only when the reverend had raised his hands did they settle down again. Then the reverend started preaching, giving them brimstone and hellfire, and people shouted 'Hallelujah!' and 'Praise the Lord!' and stuff like that, then were whipped up even more than before when the reverend gave them the works. His voice was something special, an actor's voice, hard and soft, and he fell to his knees, spread his hands dramatically, and sometimes looked like he was about to burst into tears, which many watching him did. The sound of sobbing was mixed up with all the shouting and made Tom more uncomfortable.

'And now, brothers and sisters!' the reverend Juble Lee announced at last. 'Here's the child who's been chosen by the Lord and sheds His blood for all of us. Brothers and sisters - a miracle in the flesh! Don't be shy, child! Come on out!'

Anna walked out on the stage, wearing an anklelength white robe, her hands clasped together in front of her, her blonde hair hanging loose down her back, looking golden in a dazzling web of spotlights. When the reverend gallantly stepped aside to let her take centre stage, she turned around to face the congregation, then raised her hands.

You couldn't see much from where Tom was.

The congregation went wild anyway. People jumped back on their chairs, other chairs were kicked over, and the sick and lame struggled to get into the central aisles and make their way up to the stage. They were stopped by the reverend's helpers, the big men wearing shades, and either waved back to their seats or pushed back in their wheelchairs to enable the other helpers, the attractive ladies in tight skirts, to make their way between the rows of folding chairs with big smiles and collection plates.

'He's sure organised,' Tom's dad said cynically. 'I'm obviously in the wrong business.'

In all that noise and activity only Tom's family was still, his father staring at Anna in a steady, ambiguous way, his mother muttering prayers but otherwise not moving much, and his three sisters, though joining in the hymns, only raising their eyes from the ground when looking up at the stage. Some things never changed.

Tom's throat was constricted and his heart was fit to burst. When he looked up at Anna, a golden beauty in silvery light, the white robe hanging off her breasts and falling over her broad hips, he was torn between love and despair, all mixed up with his shame for her. Then he saw McLean at the side of the stage, giving quotes to the reporters, letting photographers through, glancing frequently, possessively, at Anna, and he wanted to run up there and obliterate him from the face of the earth.

Instead, he just clenched his fists.

The women were still collecting money and the sick and lame were agitated, so the Reverend Juble Lee, maybe carried away himself, suddenly shouted, 'Go to 'em, child! Go down among the flock! Mingle with your brothers and sisters and give them your faith. Let them feel the power of the Lord and be

brought to His mercy!' Anna glanced at him, shocked, but he gave her no time to argue. Rushing forward, he took her by the elbow and led her down off the stage.

The congregation went wild again.

Reverend Juble Lee led Anna along the central aisle, with Beth on one side of her and McLean on the other, making her turn left and right while holding up her hands to give everyone a good look at the palms. The sick and lame fought to get at her, in wheelchairs, on crutches, and the reverend took Anna's hands and placed them down on heads and shoulders until she started doing it herself to those who got near her. Some people on crutches fell. The wheelchairs bumped into them. Other people, when touched by Anna, sobbed hysterically or fainted dead away, collapsing into the arms of the guards with shades, who dropped them back in their seats. Other cripples stood unaided, though wobbling uncertainly, and screamed to all and sundry that they'd been cured. Others wept or applauded.

Then Anna reached Tom, who was sitting amongst his family, his father and mother in the two seats by the aisle, his three sisters on the chairs at the other side of him. They all stood up when Anna approached. It seemed a natural thing to do. When Anna reached Tom's row, she stopped dead and stared at him, as if shocked to see him there, then her blue eyes brimmed up with tears. She started reaching out to him, opening her mouth to speak, but then, when she suddenly saw his father, she stepped back with a gasp.

Beth stared at Tom's father with pure hatred, then violently tugged Anna away and led her right past them.

McLean, catching Tom's eyes, grinned at him and walked on, following Anna, Beth and Reverend Juble Lee along the noisy, chaotic aisle toward the back of the packed tent.

Tom felt confused and torn.

He didn't understand what had happened. His father was staring at Anna's back with a small, deadly smile, but his mother was studying her own feet as if in a state of shock. Anna glanced back once, her eyes large and still tearful, then was lost between Beth and McLean, the Reverent Juble Lee and his bodyguards, as they made their way around the rear of the tent and then back up the other side. By the time they stepped onto the stage again, the tent was filled with weeping and wailing, cries of praise and loud groaning. Then the choir burst back into song, bodies swaying, hands clapping, the tambourines

beating, with the organ and guitars amplified to make them sound like a fullblooded orchestra.
The Reverend Juble Lee's tent was filled with jubilation, but Tom was in unutterable anguish and left before it had ended.
He had to see Anna.

Chapter Twenty-Six

When the meeting was over, Tom didn't go home with his family. He told his father that he'd arranged to meet some of the guys in town and wanted to be dropped off at the drugstore. When his father dropped him off, on the way back to the house at the other side of town, Tom waited until the car had disappeared along Main Street, then walked all the way back to the big tent.

Although the revival meeting was over, a lot of people were still milling about between the trestle tables, some buying books, pamphlets or signed photographs of Anna, others having a cheap lunch of hamburgers or hot dogs with soft drinks. The sun was still shining, making everything seem bright and festive, and most of the people were still flushed with excitement over what they had seen and heard.

Tom walked around the big tent, following the many signs on posts, until he came to the queue of people who were waiting to have an audience with Anna. He was filled with fear and trepidation, expecting McLeod or Beth to see him, but when, after an hour, he had reached the entrance to Anna's side tent, there was still no sign of either
- only a couple of guys with shades, one at each side of the entrance, both with their hands folded in front of them, neither one of them smiling.

When Tom became first in the queue, he started sweating and feeling shaky, as if he was going to see the Queen of England. He hated himself for it, but just couldn't control it, and was glad when the tent flaps parted and the woman who'd been before him came out at last. There were tears on her cheeks, but she was glowing with joy, and when a man, presumably her husband, approached her, she threw herself into his arms and clung sobbing to him. The man was patting her spine with big hands when Tom entered the smaller tent.

Anna was sitting behind a small table, still wearing the simple, revealing white robe, her golden hair framing that perfect face with its full lips and blue eyes. There were piles of pamphlets and signed photographs on both sides of

the desk, and her hands were folded on the table between them. Tom just stood there, not knowing what to say, until she looked up.

Her lovely eyes brimmed up with tears, but she didn't actually cry. Instead, she wiped the tears away with her fingers, then took a deep breath.

'Hello, Tom,' she said.

Her voice had a hymnal quality, which Tom thought was appropriate, but when she waved her hand to indicate that he take a chair, he shook his head and said, 'No, thanks.'

'Can I help you, Tom?'
'What?'
'I said, can I help you? That's why those folks are

waiting outside. They want me to help them.'
'How can you do that?'
'By listening to what they say.'
'You give them advice?'
'No. I only tell them to have faith. That's what I tell

all of them.'

Tom was perplexed, and also deeply wounded, to be this close to Anna at last, yet feel so far away. He was awash in his love, but also buffeted by confusion, yearning for her to stand up and embrace him, turned to stone when she didn't. If pain had a quantifiable limit, he was reaching it right now.

'I didn't know you believed in this,' he said. 'Yes, Tom, I believe. Why else would I do it?' 'I thought maybe they'd made you.'
'Who?'
'That McLean. Maybe the Reverend Juble Lee.

Maybe even your ma...'
'No, Tom, no-one made me do anything. I just saw
the light, that's all.'

'When?'
'Pardon?'
'When did you see the light? We were on the riverbank, you told me you loved me, we arranged to meet the following night -and then McLean took you over. What happened, Anna?'
'My hands bled, Tom. They bled that night when I got home. I thought our love had cured me, but it hadn't; it was just wishful thinking.'
'What happened when you got home?'
'I told you: my hands bled.'
'What happened before your hands bled?' 'Nothing.'
'You're lying.'
Anna turned her hands over, palms up, to study them in what seemed like a trance. When she looked up again, there were tears in her eyes.
'I can't see you again, Tom. I can't go against my mother. She told me I couldn't see you again. I don't know why. She just did. I can't go against her, Tom.'
'If you love me, why not?'
'I love God more, Tom. My stigmata have shown me that the only road open to me is God's road. I see Him when I bleed.'
Tom had a flash of revelation. It came as sure as a bolt of lightning. It lit him up and gave him the courage to speak like an older man. He was totally confident. 'You're frightened,' he told her. 'You're frightened of our love. You love me, but you're frightened of *making* love, which is a whole different ball game. That's why we never made love, isn't it? You never wanted to go that far. You were scared of us getting into that, and so you ran away from me. It's not your mother that you're frightened of - it's me - making love; having sex. Why, Anna? *Why?*' Anna started weeping. 'You're wrong, Tom,' she said. 'It's not like that at all. I bleed the blood of the Lord and that's what separates us. I love you, but my love for Him comes first. That's why we can't meet again. So please

leave, Tom - for both our sakes.'
'You're frightened,' Tom insisted. Though not
happy, he was confident. 'It's what our love would lead us
to, Anna: the physical proof of it.'
She kept sobbing without a sound. 'Please leave,
Tom. Please go.'
Tom felt an extraordinary exhilaration mixed up
with his pain; heard a distant note of triumph in his defeat.
'Okay,' he said. 'If you want me to, I'll go. But just promise
me this one thing, Anna, and then I'll go happier.' She
raised her fine eyebrows in a questioning manner. 'No
matter what else, please promise me this: That you won't,
under any circumstances, let that bastard, Steve McLean,
have you.'
Anna pushed her chair back and stood up to glare at
him. 'How could you even *think* such a thing? Please leave,
Tom. Goodbye.'
Tom did so, flicking tears from his eyes, but filled
with an odd jubilation, seeing light in his darkness. 'Awopbopaloobop
alopbam-boom!' he chanted
while snapping his fingers, as if that would protect him.

Chapter Twenty-Seven

'The Lord is generous,' the Reverend Juble Lee said. 'That was a wonderful meeting. We've never had so many converts in one day. The Lord be praised for his goodness.'

'It's Anna you should be praising,' McLean replied. 'That little walk down the aisle. An inspired idea, Reverend.'

The reverend offered his icy smile. 'Inspiration comes from faith. The Lord gave me guidance and I passed it on to Anna. The power of the Lord was passed through her and reached all those sinners.'

'Filled the collection boxes as well.'

'The cynic must have his day. Here, McLean, have some lemonade. You look a bit pooped.'
The Reverend's bourbon was out of sight, so McLean had the lemonade. He swirled it in his glass, but didn't drink it, not trusting its potency.
'You might have gone too far, Reverend.'
'What does that mean, my son?'
'Anna's laying on of hands. That's borderline stuff, Reverend. A lot of folks could get offended by that, especially the media. If they're looking for something to knock, you might have handed it to them. Also, it can't be good for Anna. She might think it's for real.'
'But it *is* real, McLean. Anna sheds the blood of Christ. Those poor sinners, if they think they've been cured, then surely they *are* cured.'
'I didn't see too many cures. I saw a lot of wishful thinking. I also saw a lot of hysterical optimism that'll soon turn to tears.'
The reverend spread his big hands, as if saying, 'What can I do?'
'It wasn't Anna's idea, Reverend. You dragged her off that stage. When you got her down there among the sick, you started her off. You took hold of her hands and laid them on until she started to do it.'
'I don't remember that, McLean.'
'You're a disingenuous man, Reverend.'

'And you're a man with a tongue, my young friend a tongue that needs cutting out.'
'Silence the sinner.'
'No, my son, *save* the sinner. I'm determined to save your soul, McLean, which is why you're still here.'
'I'm still here because of Anna,' McLean said, 'which is why *you're* still here. Without her, you'd be moving on.'
'I like it in Trinity,' the reverend said disingenuously. 'The name of the town has a certain aptness that makes me feel welcomed though I'll move on eventually.'
'When it all backfires on Anna.'
'Anna's in the Lord's hands.'
'You told me the Lord's in *her* hands, but I guess that's nit-picking.'
The reverend just smiled and sipped his lemonade, then sat back in his chair, breathing deeply, his chest expanding, while his gaze took in the many envelopes on his desk, most containing contributions to his ministry, as well as telephone numbers. The ladies liked the reverend. They viewed him as a force of nature. When he came on with the fire and brimstone, they practically wet their seats. McLean still couldn't figure him and felt outfoxed by him. The reverend was a true believer and truly believed in Anna, but he was also a man of the flesh who knew just what he was doing - and what he was doing was using Anna, just as much as McLean was. The reverend enjoyed money, power and notoriety; he also relished the simpler things in life, such as bourbon and women. True believers, it was now clear to Mclean, came in all shapes and sizes.
'How *is* Anna?' the reverend asked. 'No problems there, I trust.'
'She's starting to believe what she hears and reads about the media's Anna, so I don't anticipate too many problems.'
'You mean her divine gifts.'
'That's right: she believes in those.'
'She's not alone in that belief, my son. I, too, believe in them.'
'I think you really mean that.'
'I don't expect you to understand. You look at the collection plates and the items we sell and think that I use Anna for fiscal gain, but that's not strictly true. I *do* appreciate the money God's work couldn't be done without it - but I truly believe in Anna's gifts and think them miraculous.'

McLean believed in Anna, also. His love for her was his curse. He was tormented by the intensity of his need to both love and degrade her. She had unearthed his buried self, that lost child who believed in goodness, and almost drowned him in the kind of emotions he could no longer tolerate. In loving Anna, he was helpless, deprived of his cynicism, and his fear of finding weakness in himself had formed the need to destroy her. He had to possess her, to get to know her completely, then, having done so, degrade what it was he most loved. It was his penance for weakness.
'You look thoughtful, McLean.'
'I'm a thoughtful man, Reverend. I was thinking of the confrontation between Anna and the Beales. Not just young Tom -- he used to be her boyfriend - but more the way Anna looked at his father, as if seeing the devil.'
'I remember. There was definitely something there. I don't know what it was.'
'Beth knows what it was. She shot daggers at Jack Beale and practically dragged Anna away. I don't think it was anything to do with Tom. It was *Beale* they were frightened by.'
'I can't imagine Beth Lansing being frightened of anyone. Anna - yes - but not Beth. She's a woman of spirit. As for what might have gone on between them, I can't help you at all. I'm a stranger here, McLean, as much as you are. I know as little as you do.'
McLean nodded and stood up. 'Thanks for the lemonade.'
'You didn't even drink it,' the reverend complained.
'It's bad for my stomach.'
McLean waved and walked out, then went to see Anna. The queue outside her tent had disappeared, so he ducked down and entered. Anna was at the table, leaning forward, elbows propped up, covering her face with her hands and taking deep, even breaths. When McLean coughed softly into his fist, she looked up with a start.
'Hi!' McLean said.
The evening sunlight, bleeding weakly through an opening in the tent, formed a gauze-like web on Anna's face, making her seem even more beautiful and slightly mysterious. She smiled in a weary, distracted manner and languidly waved a hand.
'Hi,' she said. 'What time is it?'
'Four o'clock.'
'It seems a lot later than that.'

'You've had a long day.'
She nodded and closed her eyes. She kept them closed for some time. Her mouth was slightly open, as if she was asleep, and McLean felt a sudden rush of desire that made him feel weak and unreal. He wanted to have her there and then, on the floor behind the desk, and almost reached out to touch her, before regaining his senses. 'Where's Beth?' he asked hoarsely.
'She went home for a rest. She said she'd come back for me later, when all the people had gone. I told her to come back about five.'
'Another hour,' McLean said.
His voice sounded unnatural to him. He felt as if he was choking. It was hot and claustrophobic in the tent, and he noticed that Anna was flushed. He also noticed that her eyes were too red, as if she'd been crying.
'Are you okay?' he asked.
'Yeah,' she said. 'Just hot and tired. I can hardly keep my eyes open and I'm covered in sweat.'
'There's no-one left outside,' McLean said. 'You can take the robe off.'
'That's a thought,' Anna said.
She lowered her hands beneath the table, grasped the bottom of the robe, then pulled it up over her body, then over her head. When her arms were raised, her breasts pressed against the white blouse. Her perfect body seemed to twist in sensual motion as she jerked the robe off. She let it fall back over the chair, took a deep breath, brushed her hair back. The white blouse had no sleeves, with only straps over her shoulders, and its top couple of buttons were undone, to reveal the curve of tanned breasts.
McLean realised that she suntanned in the nude and choked up when he thought of it.
'I'm so tired,' Anna murmured, rolling her head on her shoulders. 'It's so tiring just sittin' here listening to all of their talk. I'm achin' all over.'
McLean walked around the table to lean against it, almost sitting, his leg running down past Anna's shoulder, practically touching it. He reached out to put his hand under her chin and tilt her face upward.
'Were you crying?'
'Yes,' she said.
'Why?'
'It was nothing.'
'It must have been something,' McLean said. 'I'm just tired,' she told him.

McLean knew that wasn't true. At least it hadn't caused the tears. He was convinced that someone had been here and he could guess who it was. He kept holding Anna's chin, staring down as she looked up, and gradually saw in the distracted gleam in her blue eyes the light of clashing emotions. A desperate yearning came out of her, almost palpable, radiating, and it gripped him and drew him towards her with a will of its own. He spread his fingers across her cheek, felt its tenderness, its burning, then ran his hand down the side of her neck and around to her throat. She sighed and closed her eyes.
'No,' she whispered, though not moving. McLean took a deep breath and leaned down to press his lips to her forehead. 'Please, don't,' she murmured, though she tilted her head back, letting him move his lips down her nose and onto her mouth. She didn't part her lips. McLean tried to slide his tongue in. When she still didn't open her mouth, he slid his hand down her blouse. 'No!' she groaned, opening her mouth, letting his tongue divide her lips, while her body, which felt as smooth as silk, trembled under his fingertips. She groaned, but couldn't speak. McLean's tongue was in her throat. Her body trembled even more, as if stricken by some augue, as he tugged the blouse down off her shoulders and slid his hands to her breasts. She jerked her head away, freeing her mouth, then grabbed his wrists and screamed, '*No!*'
She pushed him off and tumbled back, the chair spinning to the side, and rolled over when she fell on the floor with her whole body shaking. McLean fell to his knees, not understanding, wanting to rape her, but was stopped when she started thrashing about in an epileptic convulsion.
'Oh, my God!' McLean cried out.
Anna writhed and groaned dementedly, possessed by her private demons, and was starting to foam at the mouth when Beth entered the tent. She stopped to stare down in horror at her moaning, convulsing daughter, then gasped and hurried across the tent, dragging her clubfoot.
'Give me your billfold!' she snapped. *'Dammit, do what I tell you!'*
When McLean gave her the billfold, she jammed it between Anna's teeth to prevent her from biting her own tongue. Then she knelt on Anna's chest, pressed her shoulders against the floor, and held her down until the terrible fit had passed.
When Anna had fallen into the sleep of exhaustion, Beth silently studied her bared shoulders and breasts, then looked up contemptuously at McLean.
'You sonofabitch,' she said quietly. 'You're just like all the rest. Get the hell

out of here.'
Shocked and deeply ashamed, McLean fled from the tent.

Chapter Twenty-Eight

Anna woke up at home. The morning sun was falling upon her. She felt drugged and still haunted by the nightmares, but her heart wasn't racing. Beth was sitting by the bed. Batman and Robin were in the corner. Beth was leaning slightly forward, reading her Bible, her brow furrowed in deep concentration, her lips pursed in a grim line. When Anna rubbed her eyes and yawned softly, Beth turned to stare at her.

'Ah,' she said, 'you're awake!'
'How long have I been asleep?'
'Since yesterday,' Beth told her. 'Since shortly after

four. You had a fit in the tent, then went unconscious, so we called for an ambulance. You've been sleepin' for sixteen hours, child, so I hope you feel better.'

Anna smiled weakly. 'I do, Ma. Just a bit weak, is all.' She glanced over at the dogs, which seemed unnaturally large in the small bedroom, then glanced out the window and saw a bright-blue, cloudless sky. There were birds winging up there, heading south, and she wanted to join them. 'I wanna leave here forever,' she said. 'I feel so ashamed.'

'Not your fault,' Beth said. 'McLean took advantage of you. I don't know how far it went, Anna, but that's certainly what caused it. You and men... You know what happens when you even think about it... Lordy, why did you let him?'

Anna took a deep breath and released it in a sigh. She took another deep breath and held it in until she thought she would die, which is what she was hoping for. 'I don't know,' she admitted, finally letting her breath out. 'I was all hot and tired. So tired I was hardly there. Tom came to see me and that made me feel real bad. When McLean... Damn it, Ma, you should know. I was thinkin' of Tom. I was wantin' Tom, Ma.'

'So you let McLean…'
'I didn't let him. I just didn't try to stop him. I wanted it - wanted Tom - needed someone real bad... Then, when McLean touched me, the fear returned... and that brought on the fit... I was *rememberin'*, Ma.'
Beth closed her eyes, clenched and unclenched her fists, nodded and patted Anna's wrist, then sat back in her chair. She gazed out the window. 'How far did it go, child?'
'It didn't go anywhere. He just kissed me, Ma... and kinda touched me... On my shoulders and... That's all.'
'That bastard, McLean. He probably sensed how you were feelin' and took advantage of it... But you should have known better. You shouldn't have let him. It always brings on the rememberin' - and that brings on the fits.'
'I couldn't help myself, Ma. I was thinkin' of Tom and hurtin' real bad. I want Tom so much.'
Beth suddenly glared at her with bright, furious eyes, then reached down to roughly shake her by the shoulder. 'No, Anna! I won't let you! I don't care how much it hurts! Not with Tom! You've gotta keep away from Beale! *Do you understand, child?*'
Anna jerked away, turned around on the bed, and lay on her side, facing the wall, her tears falling again.
'Yes, Ma,' she whispered. 'I understand. Now please leave me alone.'
There was a moment's deadly silence, finally broken by Beth's loud sigh.
'Okay, Anna,' she said. 'I'm sorry, but I had to say it. Now I'll leave you alone. Stay in bed today, child. Rest up. I'm goin' to town to fetch some things, but I'll be back in an hour. You try to relax now.'
She got up and left the room, clump-clump with the clubfoot, taking Batman and Robin with her, leaving Anna to stare at the nearest wall with her thumb in her mouth. She hadn't done that for a long time, but she needed to do it now. Sucking her thumb, she felt like a little girl who still had no bad memories.
They came back when she closed her eyes. She saw the shadows along the walls. Elongated, they moved all around her and filled her with dread. She was suffocated and crushed, humiliated, obliterated, but she couldn't fix a face to the shadows and retreated from knowing them. She didn't want to be touched, felt revulsion when it happened, and escaped into the bolt-hole of hysteria where everything disappeared. God's light, which only came out of

that darkness, was the one hope she had.
Anna opened her eyes again. The sun was shining on the wall. She thought of how, even after she'd given her promise to Tom, she'd almost let McLean have his way with her.
The thought filled her with shame.
Rolling onto her back, she stared up at the ceiling, the tears trickling down her cheeks as her heart started racing. She thought of McLean with shame, of Tom with despair, then closed her eyes and saw the shadows along the walls in that evening five years ago. With that, rising inexorably from her shame and despair, came the fear that she felt would never leave and would finally destroy her.
The real pain, physical pain, lanced through both of her hands, making her cry out and jerk upright on the bed, her fingers twitching spasmodically. There was blood in the palms of her hands, seeping out of two small wounds.
I'm impure, Anna thought, and always will be. What was done, can't be mended.
She felt a great anguish boiling up to consume her, and decided that the only way to stop the bleeding was to rid herself of her blood. It was a flash of revelation, a bolt of lightning that lit her up. When she thought of Tom, whom she loved, and of the grief she had caused him, she was rid of all doubts and realised that she had to empty herself to become a new person.
Get rid of the blood, she thought.
Anna slipped out of bed, feeling weak and lightheaded, and then tiptoed out of the bedroom and into the bathroom. She glimpsed herself in the bathroom mirror, a haunted beauty, not quite real, then took the straight razor used for shaving her legs, and calmly slit her wrists with it.
It stung a bit, but didn't hurt nearly as much as her hands, so she put the razor down, pleased with herself, and slid to the floor.
She hung her wrists over the bath and heard the blood dripping into it. She felt good for a moment, but then the anguish consumed her, and she drifted down into a darkness that now seemed so familiar.
The light of God filled her dimming eyes.
'Tom!' she whispered, then passed out.

Chapter Twenty-Nine

The news soon hit town: Anna Lansing had tried to slit her wrists, but had been discovered by old Beth just in time and taken to the local hospital. There she now lay unconscious, her bloody wrists bandaged, but with the palms of her hands still seeping blood.

The news shook a lot of folks up.
Tom was one of them. He saw it on TV. He watched in growing shock as Anna, on a stretcher, was lifted down from an ambulance, placed on a trolley, and wheeled into the Trinity General Hospital by guys in white smocks. Then the anchorman came on, old Joe Cameron, a local celebrity, to inform his audience that Anna had tried to kill herself and was now in intensive care. There were more shots of the hospital. Beth came out to face the reporters. There was no sign of that bastard, McLean, nor of the Reverend Juble Lee. Beth confirmed the bad news, but said that Anna would survive. She was unconscious right now, but she would live, praise the Lord and good afternoon.
Joe Cameron came back on, looking suitably solemn, to say, 'Well, there it is, folks. The girl with bleedin' hands is now bleedin' from the wrists and some folks may have a lot to answer for. We'll keep you informed.' Joe Cameron disappeared and was replaced with an ad' for toothpaste, so Tom got up and switched the TV off and went into his bedroom. He lay down and cried a lot. First the pain, then the hatred. He kept thinking of McLean. If Anna had tried to kill herself, McLean had something to do with it. Tom knew that for sure, with the clean conviction of jealousy, and kept imagining what McLean had done to drive her that far. He didn't want to think about it, feeling dirty when he did so, but the thought of sex raised its ugly head like a snake in the parched grass.
McLean had finally gone and done it. The city slicker had made his play for Anna and, whether or not he'd succeeded, she was now near death's door. Tom wanted to kill him.
He burst into tears again, burying his face in the pillow, trying to stifle the sobs while his body shook as if coming apart. He fell asleep and had terrible

dreams about Anna in pools of blood, then awakened as the sun was sinking outside and the darkness was creeping in. When his mother called him to dinner, he shouted back that he didn't want it, then started crying again, wiping his wet eyes with his shirt-sleeve and sniffling a lot. He kept thinking of Anna lying unconscious while McLean had a good laugh.
Yes, he wanted to kill McLean.
Someone hammered on his door. Tom didn't respond. 'What the hell are you doin' in there?' his dad bawled. 'Pinin' for that tramp, Anna Lansing? Get your ass out here, boy!'
'I don't wanna,' Tom responded.
His dad kicked the door open. You could tell that he'd had a few. He was framed in the doorway, damned near filling it out, with striations of light from the living room spraying in all around him. He looked pretty big standing there.
'Snifflin' in here like a baby! Is that what you're doin'? Get off that bed before I drag you off it. We've got somewhere to go.'
'I don't wanna go anywhere.'
His dad stepped into the bedroom. More light from the living room, beaming in around him, turned him into a stark silhouette in a silvery web that seemed to quiver magically about him. He stopped, towering over Tom's bed, and said, 'Get up or I'll pull you up.'
Tom knew better than to argue, so he swung his legs off the bed. His dad's fists were clenched and they looked menacing. He reached out to take Tom by the chin and jerk his face up.
'I knew it. You've bin cryin'.'
'I wasn't.'
'Yes, you were.' His father gave a mirthless chuckle. 'Shit! A boy your age, turned eighteen last month, and you're cryin' like a baby in its cradle for that tramp, Anna Lansing.'
'She's not a tramp.'
'How would *you* know?'
'She isn't.'
'She's a crazy little whore,' his father said, 'and you're best off without her.'
'Don't say that about her.'
His father grinned. 'Well, that's better! At least you're showin' a little bit of spit. Come on, kid, come with me.'

'Where are we goin'?'
'Don't argue, kid. Stand up.' A big hand came down and grabbed Tom by the shoulder and jerked him upright. 'We're goin' out for the night, Tom. We're gonna hang one on. I'm gonna teach you how to behave like a man and put all thoughts of that crazy little tramp out of your head. Now shut up and don't give me any arguments, 'cause we're goin' right now. Put your shoes on and let's go.'
Tom did as he was told, following his dad into the living room. His three sisters were sitting as usual on the sofa, pretending to stare at the TV, but glancing sideways to take note of his red eyes. He didn't try to hide them. Braved his sisters face to face. When he did, they all looked back at their feet, as if counting their toes. Then Tom glanced at his mother, who was doing her ironing near the TV. She threw him a look of such despair, he wanted to run up and kiss her.
'Me and Tom are goin' out,' Jack Beale said to his wife. 'Don't wait up for us. We won't be back early. Any damned questions, Myrna?'
Tom's mother opened her mouth to speak, saw the look on her husband's face, trembled and lowered her head and started ironing again. 'Have a good time,' she whispered.
Tom followed his father out and sat beside him in their old Ford. The stars in the dark sky formed a tapestry around the moon; the wind moaned as usual across the flatlands, giving life to the dust. Tom glanced across at the railway station, remembering the day McLean arrived. The recollection honed his rage to a fine point and made him feel stronger. His father gunned the engine, released the handbrake, and the car cruised away, churning up a cloud of dust, then turned around the front of the house and headed for Trinity.
'You ever bin to Riley's bar?'
'No,' Tom said truthfully, though recalling that he'd often seen McLean entering or leaving the place, usually in the company of that woman, Rhoda, who ran the hotel and had a reputation.
'Well, that's where you're goin' tonight, to get drunk, throw up, and have a woman. I'll make a man of you yet, boy.'
'I'm not old enough, Dad.'
'They won't worry 'bout that at Riley's. As long as you've got two legs and a billfold, you can just walk right in.'
'I don't wanna go.'

'You're goin', so don't give me no arguments. We'll be there in no time.'
It took no time at all because Riley's was in Main Street. The town was in darkness and most of the stores were closed, but lights were beaming down off the porches and out of the windows. Tom's father braked in front of Riley's, which Tom had only seen from the outside. You couldn't see inside because the windows were tinted glass, but even from where Tom sat in the car he could hear it was noisy.
His father got out his side of the car and said, 'Okay, let's go.'
Tom felt really wild, torn between grief and anger. Hardly thinking straight at all, but knowing McLean might be inside, he flipped open the glove compartment and pulled out the pistol that his dad always kept there for emergencies. Then he slipped it under his shirt, between his belly and his belt, and got out of his side of the car before his father had noticed.
'Okay, Dad,' he said.
When his father walked through the entrance of Riley's bar. Tom followed him in.
The noise exploded over him as the door slammed behind him. The bar ran along one side and was lined with high stools, all occupied, and the rest of the place was taken up with tables scattered around a small dance floor. The music came from an old Wurlitzer, pounding away there in the corner. The people dancing and sitting at the tables or along the bar were mostly in their twenties and thirties, most coming from the ruined ranches and farms that were scattered like debris around Trinity. The men looked like cowboys, wearing Stetson hats and high-heel boots. A lot of the women also wore Stetson hats, but with tasselled dresses, spangled jackets, spikes, and far too much makeup. A lot of drink was going down and the air was filled with smoke; with loud laughter and an awful lot of shouting, accompanied by breaking glass.
'*There's* a joke for you,' Tom's father said, pointing to Mayor Lomax, who was sitting with Jack Proctor at one of the tables close to the bar. 'Old Lomax, he has his own bars but comes here for his drinkin'. Come on, let's go join 'im.'
When they reached Lomax's table, Tom saw that he was loaded. 'This boy is under-age,' he said, indicating Tom, 'but I promise not to tell the sheriff. Sit down, gents. Have a drink. Is this boy *allowed* to drink?'
'That's what I brought him here for,' Beale retorted. 'Thought I'd let him hang

one on. He's bin pining for that crazy Anna Lansing and I've had enough of it. Time to tell him a few facts of life. Maybe get him a woman here.' Beale indicated the painted ladies at the other crowded tables. 'I'm sure a night with one of these would do him good. Get Anna out of his system. Here, kid, gulp this down.'
He shoved a glass of bourbon at Tom. It smelt awful, but Tom drank it. Burning down his throat and chest, it made his head go kind of funny, but soon he was feeling pretty bright and prepared for another.
'Here,' Beale said, 'have another.'
'Thanks,' Tom said, glancing at Jack Procter and noticing the dead light in his dark eyes. 'Don't mind if I do. This is quite a place, isn't it?'
'Lomax likes it,' Beale said. 'He leaves his own bars to the tourists. That doesn't say much for his own bars, but we'd best not discuss that.'
Lomax grinned. 'What a smart-ass! A real live-wire we got here. I just decided not to mix with my own customers. Keeps things more businesslike. Tell me, kid,' he said, turning to Tom, 'what's this about Anna? You're hot for her, is that it?'
Drunk already, Tom was feeling bold and gave Lomax a hard stare. 'That's my concern, Mister Lomax, sir.'
'Just askin',' Lomax said.
'That Anna,' Proctor said. 'She might have done this town proud, but I reckon she's crazy.'
'That's what *I* said,' Beale told him.
'I'm not listening,' Tom said.
'We've good reason to believe she's crazy,' Lomax said, then gave a short, bitter laugh as he turned back to Beale. 'Just what facts of life were you plannin' to teach this boy, Jack?'
'If I were you, I'd watch my tongue,' Beale said grimly. 'It's a little bit loose there.'
'Yeah,' Lomax said. 'Right. There's nothin' but trouble in that direction. Now the dumb bitch goes and slits her wrists just when business is boomin'. I hear the sinners who converted have already lost faith and are turnin' back to their sinnin' ways. The sick who were healed have decided they're sick again; and those who said Anna was a saint now say she's a witch. Amazin' how quick folks can turn, whether Christian or not.'
'Hypocrites,' Tom said, brimming over with pain again, thinking of Anna

lying there in the hospital, close to death's door. 'Just a bunch of damned hypocrites,' he expanded on his theme, feeling exceptionally bright in the head, as well as melodramatic. 'Can I fill my glass up?'
'Sure,' Lomax said. 'Help yourself from the bottle. Damned right, they're a bunch of hypocrites, but they brought money in. It's gonna dry up real quick. A lot of pilrims are goin' home. There's even talk that the good ol' Reverend Juble Lee is gettin' ready to leave town. Lucky we made our money when we did. I think the tourists are dying off. We'll soon be back to the old ways.'
'That little bitch, Anna,' Proctor said, 'she's bin nothin' but trouble.'
'What the hell are you talkin' about?' Tom said, feeling even more drunk and bold. 'She put this town on the map. It was dead and she brought it back to life.'
'Then she ruined it,' Lomax said. 'Just like I knew she would. That little bitch, I always said she'd be the one to bring hell and damnation. She's gonna do that, I tell ya.'
'What are you talkin' about?' Tom asked, feeling grown-up and mad. 'She made you money and now that it's drying up you're saying she's ruining you?'
'He didn't mean that,' Proctor said.
'Then what the hell *did* he mean?'
'He didn't mean nothin',' Tom's dad said. 'Shut up, Lomax, you've said enough.'
'I wanna know what he meant.'
'You're drunk, Tom,' Beale said. He was grinning, but it wasn't affectionate and his dark eyes were burning. 'Here,' he said, 'have another. When you throw up all over the floor, we're gonna get you a woman. Ain't that right, Lomax?'
'Damned right,' Lomax said.
Tom didn't give a damn. He was drunk and despised them all. They were a bunch of goddamned hypocrites, only out for themselves, and they'd worked hand in hand with McLean to drive Anna to that suicide attempt. Tom felt a burning anguish. The drinking had only made it worse. He touched the pistol at his belly, wondering why he had brought it in here, then saw McLean sitting across the room, pretty close to the front door.
McLean was all on his own and didn't look very happy.
'That bastard,' Tom said.
'*What?*' his father responded.

'That bastard, McLean,' Tom said. 'He used Anna, then tried to seduce her and drove her near to suicide.'
'You don't know that,' Lomax said. 'No-one knows why she did it. Some say she was just suffering stress and had one of her fits.'
'It was McLean,' Tom said, finishing his bourbon in one gulp, 'and I'm gonna take him out for it.'
He started to stand up, but his father jerked him back down. 'No point in actin' like John Wayne,' he said, winking at Lomax and Proctor. 'Not unless she's *worth* somethin'.'
That remark was all Tom needed. Nothing would stop him now. Even as Beale spoke, McLean pushed his chair back, stood up and walked unsteadily toward the door, clearly intending to leave. Tom was struck by the expression on his face, which was one of pure misery, but he kicked his own chair back and also stood up, thinking only of one thing.
'I'm gonna take that bastard out,' he said. 'Make him pay for what he did.' He slipped his hand inside his shirt as he walked away from the table, hearing his father and Lomax laughing behind him, not knowing that he was groping for a pistol and was all set to use it. 'It's for Anna!' he whispered.
McLean went out the door and Tom followed him out. McLean was staggering and Tom knew he was drunk, but that didn't matter. McLean stepped off the porch. He almost missed the step and fell. When he'd recovered, he looked repeatedly up and down the street, as if not knowing which direction he should be going in.
Tom unbuttoned his shirt and jerked the pistol out, then jumped down off the porch, just behind McLean, who wheeled about and looked at Tom in surprise.
Tom held up the pistol and took aim. 'You bastard!' he said. He was only a few feet from McLean. The noise of the old Wurlitzer was coming out of Riley's bar when McLean, swaying slightly, rubbed his eyes and then stared at Tom's pistol. 'You made Anna slit her wrists. It was you, McLean - wasn't it? You said that when you wanted her, you'd get her, then you went on and did it. Did you seduce her? Is that why she did it? I'm gonna kill you, McLean.'
McLean raised his eyebrows. He was drunk, but his gaze was steady. He was staring straight into the barrel of the pistol, but he didn't seem too concerned. 'I didn't do a damned thing to her,' he said. 'But go ahead - shoot me anyway.

It's all I deserve, kid.'
Tom just stared at him, immobilised by his indifference, shocked by his haunted gaze.
'Goddamn you,' he said eventually, 'don't try to fool me. Stop acting noble. I don't want your city-slicker tricks. I'm going to kill you, you bastard.'
'I don't care,' McLean said.
The music lay low in the night. It came out of Riley's bar, slightly muffled and distant, and seemed to float down from the stars as if it had always been there. Tom heard it magnified as he confronted McLean in the darkness, and wondered at its power to affect him so deeply, even as he was cocking the pistol and trying to take aim. It was the voice of the Irishman, Van Morrison, Van the Man, singing 'You're my woman,' and repeating the phrase again and again in a trance of passion and grief.
Tom was blinded by the tears in his eyes, and his hand started shaking.
Then his father, Lomax, Jack Proctor and some friends practically fell out through the door of Riley's bar. They disentangled themselves and stared down at Tom and McLean, just as the *Trinity Gazette* proprietor, Dwight Stewart, came out, looking concerned.
'Just look at the two of you!' Beale sneered. 'Fighting over that whore!' He fell against Lomax, but was propped upright, to sneer again. 'Yeah, that's right - the whore! You think she's a virgin 'cause neither of you have had her. But she ain't a virgin, boys. *I've* had her! We've *all* had her!' He waved his hand to indicate Lomax, Dwight Stewart, half the town... 'Damn it, boys, don't you see it in her eyes? *She knows what we all know!*'
Tom went for his father, swinging the pistol, trying to brain him, but was pushed away by Lomax and Dwight Stewart, then pulled off by McLean.
'What was that?' McLean asked as he held the struggling Tom back. 'What did you mean by that?'
'Nothin',' Beale said, suddenly sober and turning away. 'It was just drunken talk. Nothin' else. Take that boy of mine home.'
Then he walked back into the bar, followed by Lomax, Proctor and Stewart, while Tom broke into tears and dropped the pistol, then turned into McLean.
'It's okay,' McLean whispered, his voice trembling and hoarse, while Tom sobbed brokenly in his arms. 'It was just drunken talk.'
'No, it wasn't,' Tom said.

Chapter Thirty

McLean felt like hell, but that wasn't going to stop him. When he practically fell out of bed, his eyes stinging from the morning sunlight, he was still half asleep, still thinking of Tom Beale, and filled with a guilt so deep and true that it made his hands shake.

Tha t… and the drink… the long night he'd spent in Riley's. He'd driven Tom home, dried his tears, sent him in, then returned to Riley's bar to confront Tom's father and that bastard, Lomax. Alas, he was too late. They'd gone on, he was informed, to one of Lomax's bars, gibbering, he was also told, about the problems that were coming with the loss of Juble Lee's star attraction, Anna, and the tourists that she'd attracted to Trinity.

'The town's gonna die again,' Rhoda had told him in Riley's. 'That's what those two scumbags were sayin' as they staggered out of this joint. They were goin' off to check out the possibilities of Lomax's bars and see how they could maximise profit when the tourists stopped comin'. Drinkin' here, in Riley's bar, folks tend to become optimistic - but *you* don't feel that way, do you, McLean? Here, have another one.'

McLean and Rhoda had drank a lot, into the wee small hours, then returned to McLean's bed where again he mistook Rhoda for Anna. She had left in disgust, leaving him to sink or swim, and now, in the morning's grey light, as he rolled out of bed, he was convinced that he had died and was lost in the Land of the Living Dead. What he meant was that an awful lot of people here in Trinity were not exactly what they seemed to be. They weren't like *real* people.

All drunkards were paranoid, after all. He was a drunk. He accepted it. Washed and dressed, he felt much better - almost a different person - and he knew, as he left the hotel, smiling brightly at the dumb receptionist, that the guilt he was feeling over Anna would sustain him for life. He had almost destroyed her, which is what he had wanted, but when he realised just what he had done, he also found his own limits.

He had loved once in his life and been frightened by its intensity. In attempting to destroy the object of his affections, he had learned what real love meant.
He loved Anna enough to give her up and let her find what she needed.
That goddamned kid, Tom.
Well, what else could a real man do?
He could finish the job *that's* what he could do and that's exactly what he was planning to do when he walked from Rhoda's hotel to the *Trinity Gazette* and had a talk with its proprietor, Dwight Stewart.
Old Dwight, who had been at Riley's bar the night before, was still looking fresh and sweet-faced, smiling out from under his white moustache and occasionally stroking his white hair.
'That was some scene last night,' he said. 'I hope you got the kid home.'
'Yeah,' McLean replied. 'I got him home okay. What bothered me was why I had to do it. What was going on there, Dwight?'
'Tom was blaming you for Anna's troubles. That seemed pretty obvious.'
'I don't mean that,' McLean said. 'I'm after what's behind Anna. There were things being said there last night that I don't understand.'
Dwight pushed his chair back, stroked his white moustache, smiled sweetly.
'I've no idea what you're talking about, McLean. It was just drunken gibberish.'
'Is Anna a tramp?'
'I don't know. Why ask me?'
'Half the men in this town call her a tramp, but I can't find the proof.'
Dwight shrugged and smiled again. He had the smile of a wicked schoolboy.
'This town isn't exactly noted for its vivacious, attractive ladies, so Anna's always been something special. When men lust after women they can't possess they have the need to degrade them. Here, in Trinity, they do that by calling Anna a tramp. What else do you need to know?'
The need to degrade. The phrase rang in McLean's head. Ashamed, he was more determined than ever to make amends for his sins.
'I think there's more to it than that,' he said, not taking his eyes off Dwight.
'There's something *behind* Anna
- something all those guys know. Whatever it is, it frightens and angers them. What is it, Dwight?'
Dwight shrugged and smiled his schoolboy's smile, though it didn't come

easy now. 'I can't help you,' he said.
McLean didn't trust him. He had seen too much to do so. That schoolboy smile in the face of a man with white hair and moustache struck McLean as being pretty damned unnatural. There was more here than met the eye.
'About three years ago,' McLean said, choosing his words with care, 'Anna's father disappeared. Then Anna became an epileptic - probably through shock. What have you got on that?'
'Nothing,' Dwight replied.
'The town's sole newspaper has nothing on an event of such importance?'
'For good reason,' Dwight said. 'Initially, I *did* try to investigate the affair, but I was silenced by Mayor Lomax and the members of his so-called Town Committee, including most of the prominent businessmen, as well as Jack Beale.'
'You were silenced? How?'
'They threatened to withdraw their advertising from the paper if I wrote any more about the matter. And since I couldn't afford to lose my advertising... '
'You dropped the story.'
'Yes, McLean. I protected my newspaper.'
'What do you think they were trying to hide?' McLean asked.
'I can't tell you that.'
'And you don't want to know. I thought all the lousy journalists were in Houston. Have a good day, Stewart.'
McLean walked out without saying another word and went straight back to his hotel. Though intending to call Ralph Bleeker at the *Weekly Enquirer,* to tell him that the story was dead and he was coming back home, he couldn't do it because Rhoda was in his room, on his bed, fully clothed, smoking and having a glass of bourbon at ten in the morning.
'You look a pretty sight,' McLean said, 'but I thought you'd just left me.'
Rhoda smiled. She'd always liked his sense of humour. 'I left at six this morning,' she informed him, 'when you looked like a wet rag.'
'Still feel like one, Rhoda.'
'At least you're honest, McLean. Where have you been so early in the morning? It must have been something serious.'
McLean told her.
'You poor bastard,' Rhoda said. 'Steve McLean, the so-called cynic, is in love with the sweet Anna Lansing and wants to know what's behind her. Whose

soul are you trying to save, McLean? Her's or your own?'
'Maybe both,' McLean said. 'Not that it makes much difference, since this town has a zip on its collective lip and I'm running in circles. I was hoping to find you here, Rhoda. You're the one key I'm holding.'
Rhoda smiled up from the bed. She looked lush in the tight red dress. McLean sat on the edge of the bed and placed his hand on her thigh.
'What's going on here, Rhoda? What's behind Anna? You and Anna are the only two ladies in town worth knowing. The rest are scared out of their wits and dress like old-fashioned spinsters. You say you have nightmares. Anna has those as well. You're an attractive woman, but you still haven't married. Anna has epileptic fits, mysterious bleeding, and a mental block about her father's last days at home. Is Anna epileptic or hysterical? And what's haunting you, Rhoda? What the hell's going on?'
'Don't ask me. I'm just a poor country girl. I can't count beyond one and one.'
'You mean I should be able to?'
'Right, McLean. That's what I mean.'
'Beale and Lomax,' McLean said. 'The broken girls, the disappearance of Anna's father. Anna's so-called epilepsy or fear of sex... How do *you* fit in, Rhoda?'
'I was one of those broken girls,' Rhoda confessed. 'I just happen to look a lot older. That's because I survived it.'
'Survived what?' McLean asked.
'Lomax, Jack Beale, and... Yes, damn it, Anna's wonderful father... Do you really want to hear this?'
'I thrive in cesspits,' McLean said.

Chapter Thirty-One

When McLean called Tom to say he wanted to meet him, Tom felt nothing but an awful embarrassment about the previous night. He covered it up by asking what McLean wanted, but McLean refused to tell him over the phone and said he had to tell Tom in person. They met in the drugstore in the early hours of the morning, when no-one else was about. McLean looked as hungover as Tom felt, though that gave Tom no comfort. They sat in one of the booths and had coffee, face to face, neither easy.

'About last night...' Tom began.

'It's okay,' McLean said. 'I don't mind being threatened with a pistol. It's all part of the job.'
Tom had to smile. 'I feel so stupid,' he said.
'You're not stupid, Tom, you're just decent. That's a heavy cross to bear.'
'Of course, I wouldn't have shot you.'
'No, I don't think you would have. Still, it's the thought that counts, kid. You sure proved that you loved her.'
'What they said wasn't true.'
'About Anna?'
'She's no tramp.'
'I know it, you know it, and they know it, so stop worrying, Tom. Start thinking about saving her.'
'How do I do that?'
'Go see her in the hospital. Tell her that the Reverend Juble Lee is clearing off and that she's soon going to be as free as a bird.'
'How can she be free? Her hands are still bleeding. As long as she has those bleeding hands, she'll think she's guilty of something.'
'She’s not guilty of anything. She’s just another victim. Now I'm going to tell you something and it's going to hurt you badly. It's going to set you even more against your dad, but that can't be avoided. You don't like him anyway. There's something about him that scares you. You don't know what it is, but your sisters do, so he scares *them* even more. What I'm going to tell you will seem like a nightmare - but you've always suspected something, your mother

and sisters have been broken by it, and if you know it, you can set them all free and also save Anna. I'm going to tell you what it is that Anna refuses to face, and if you tell her that you know, and that you still love and want her, the palms of her hands will stop bleeding and she'll be yours for life. Are you willing to risk this?'
'Yes,' Tom said. 'Anything.'
McLean told him the story. Tom cursed and cried a lot. When McLean was leaving, he looked down at Tom's clenched fists and said, 'Your knuckles are white.'
'I'm okay,' Tom said.
'I think you are, kid. I know it hurts about your dad, but knowing it, you can help your mom and sisters. You can also save Anna.'
'You love her, McLean, don't you?'
'It hasn't been returned.'
'So why are you doing this for me?'
'I'm doing it for Anna. I've never been in love before and this has taught me one thing: that it's better to love than *be* loved, because at least it's your choice. That belief keeps me sane when the pain comes, so I'm going to cling to it.'
'You're a decent man, McLean.'
'It's decent of you to say so.'
'I guess I'd better go and see Anna.'
'Right, Tom. You do that.'
Tom walked out of the drugstore, leaving McLean sitting there - not an old man, but aged by his surroundings and the life he had lived. Tom was choked up, now knowing he'd wronged McLean, but he took heart from the knowledge that McLean had learned something, too. Life was all give and take. It was learning and unlearning. Tom learnt that much as he hurried through the streets behind Main Street and came to the Trinity General Hospital and went in to see Anna. He only faltered when he thought he might meet Beth, but she was nowhere in sight.
Tom asked to see Anna. There was no problem at all. He was given instructions and pointed in the right direction, and soon found himself standing outside her door with his heart pounding dangerously.
He took a deep breath and walked in.
Anna was sitting up in the bed, surrounded by ‘Get Well' cards, the blonde

hair falling around her lovely face and framing those exquisite blue eyes. When she saw him, her eyes opened and closed, but otherwise she showed little.
'Hi, Tom,' she said.
'Hi, Anna,' he responded. He had the feeling that they'd said all this before, but some things you could live with. 'You look great. Really great.'
'So do you,' Anna said.
There was silence for a moment. It was just like on TV. The girl's dying, but she looks really lovely and the guy's near to tears. Tom had seen it all before. He knew that TV was garbage. Still, he had to admit that Anna looked really beautiful, and when he did, to himself if not to her, he came near to tears.
'Jesus!' he whispered.
Anna held her hands up. There were no scars on her palms. This time, the bandages were on her wrists, which is what she was showing him.
'I guess I'm pretty damned stupid,' she said.
'Yes,' Tom said, 'you are.' He walked across the room, took hold of her wrists, kissed the bandages, then sat on the bed and smiled tenderly at her.
'I love you,' he said. 'I'm not my dad - I'm *me*. No matter what's said, what comes out, I'm yours, now and always.'
'I know that,' Anna said. 'I've *always* known that. But what can come out? What do you mean, Tom?'
He took a deep breath. 'You really don't remember your dad?'
'Only that he was good.'
'And you don't remember why he disappeared?'
'No, Tom, I don't.'
Tom took hold of Anna's hands and turned the palms up, then kissed them, one after the other, and pressed them down on his cheeks. 'Please don't hate me, Anna.'
'Why do you think I could hate you, Tom?'
'I'm gonna tell you the truth.'

Chapter Thirty-Two

McLean drove up to Beth Lansing's house and stopped in a cloud of dust by the gas pumps. When he tooted his horn, Batman and Robin came streaking out, but McLean had put the locks on all the doors and had faith in the windows. Thump, thump, went the paws, hammering frantically against both windows. Their teeth were bared in fierce snarls and they looked like hounds from hell as they panted and barked in his face at the other side of the glass.

You couldn't help being nervous. The brutes were rocking the whole damned car. Then Beth came out, clump-clump with the clubfoot, dragging it down off the porch and along the yard, then out through the gate and toward his car, barking almost as loud as the dogs and making them back off. When they had vanished back inside the house, McLean got out of the car.

Beth had the shotgun in her hands and was lifting it up to aim it at him. He knew damned well she'd use it.

'Okay, Beth,' he said, holding his hands up in the air in mock surrender. 'Go easy now.'
'I oughta blow your brains out. Or blow your goddamned balls off. That'd be more appropriate.'
McLean couldn't help grinning. 'Yeah, Beth, I see your point. But nothing went on with me and Anna. I promise you that.'
'The point is that you tried.'
'I couldn't resist her, Beth. But I wasn't viewing her as some little tramp. It was a lot more than that.'
'Don't tell me you love 'er. I hate that kind of talk. When men talk about love, they mean somethin' else. I've known that for an awful long time. It's somethin' I learnt well.'
'The hard way.'
'What do you mean by that?'
'I mean that I know exactly what went on with Anna. I know what causes her fits. I know everything, Beth.'
McLean looked up at the house and imagined it in darkness. When he

thought of that night three years ago, a shudder went through him. In one evening, in less than an hour, Anna's whole world had been turned upside-down and became a nightmare. McLean shuddered again, thinking about it, feeling rage and despair. Then he cast his gaze around the front yard and finally settled on Beth.

'So you know,' she said, lowering the shotgun to her side and letting go of the barrel until it was pointing safely at the ground and not at his head.

'Yes, Beth. I know that it happened three years ago, when Anna was fifteen. I also know that your husband was involved. So where did you bury him?'

Beth stared steadily at him, without animosity, then turned around until she was facing the house. She pointed to a pile of rusty barrels in the front yard.

'Over there,' she said.

There was silence for a moment. McLean didn't know what to say. Now that Beth had told him, confirming it, he didn't know where to go. Beth kept staring at the gasoline barrels, as if recalling that dreadful night, then she sighed again and turned back to face him, her gaze steady and hard and unashamed, brooking no condemnation.

'The shock of it made Anna forget everything. *Everything!* And I didn't want her to ever have to re-live it. She loved him so much - he was her father, after all - and when it happened, she blotted it out of her mind and survived it that way. I've no guilt at all, Mister.'

McLean nodded, understanding. He would have done the same himself. Even now, he was filled with simmering rage and despair for his fellowman. When he thought of Anna in the hospital, he filled up with love for her. When he thought of that girl three years ago, the rage threatened to choke him. Yes, he understood why Beth had done it and had no cause to blame her. If his own rage and despair were any measure, Beth must have been justified.

'Who else was involved?' he finally asked her, wanting to put an end to it.

'They *all* were,' Beth replied with deep bitterness. 'It's that kind of town.'

Chapter Thirty-Three

'Boredom,' Lomax said. He looked pitiful behind bars. 'I guess you could say it was that, though it don't excuse anything. We didn't plan it at all. It just kinda sneaked up on us. You don't know what it was like to live here, McLean, when the ranches and farms went bust. It was awful. Just awful.'

Lomax was alone. The others had their own cells: Jack Beale, Proctor, Doc' Reynolds, and maybe half-adozen more at this point in time. McLean knew that more were going to be hauled in over the next few days, as the ones already caught started squealing to reduce their own sentences.

'It was a graveyard, McLean. The whole damned place just died. The drought killed off the crops, folks lost their ranches and farms, and those that didn't leave Trinity altogether had no money or jobs. Men without work are dangerous. The days are long in East Texas. A lot of drinkin' was done, there were fist-fights every night, guns were fired, and a lot of cars were smashed up. A kind of madness took hold of us all, which is when it began.'

Lomax wiped sweat from his brow. His kerchief was soaked. There were dark stains under the armpits of his shirt and his eyes had a blind look.

'Bored men fantasize,' he said. 'The less they have, the more they want. We had videos and TV to show us what we'd never have, which was money and what it can buy, including beautiful women. Not many of those in Trinity. The women here, they work hard. We're talkin' ranchers and farmers and women who work the fields and look worn out. That's what we all had.'

Lomax sniffed, as if about to cry, but wiped his eyes with his kerchief. The kerchief, being soaked with his sweat, made his eyes look even worse.

'You know what I mean, McLean? There was lots of fantasising. Lots of drunken talk in lots of bars scattered around Trinity, most of it focused on sex and other kinds of excitement.'

'I think I know what you mean.'
'At first it was just a joke. A lot of jokes about their wives. About how they were worn out and hardly worth looking at; about how the only attractive women around were the girls, the teenagers. In other words, their own daughters.'
McLean didn't want to hear this. He liked young girls himself. A lot of his friends claimed that they didn't, but McLean knew they were lying. That knowledge didn't help now.
'A lot of drinkin', McLean. More than you can imagine. The drinkin' made everything the same and they traded notes on their daughters. Just jokin' at first. "Mine looks better than yours." Then it got to, "My kid is real attractive, but I think yours looks sexier." Just jokin', of course. Jokes that soon had an edge. Pretty soon they were drunkenly comparing notes on who fancied whose daughter. The drinkin' made it acceptable.'
'You always say "they",' McLean observed, 'but you were part of it.'
'I'm not married,' Lomax said.
He took a nervous breath, let it out with a sigh. After wiping his face again, he glanced down at his soaked kerchief. McLean noticed that his hands were shaking badly, as if he had fever.
'It was just a game at first,' he said. 'We talked about it, but did nothing. Then Jack Beale, being really drunk one night, when Myrna was at her mother's, joked that we try one of his daughters... and the joke became serious.'
McLean thought of Beale's big house, looming over the wasteland beside the railway station. It had made him think of the house in the movie, *Psycho,* and now he understood why. The decay in Beale's soul was in the house and it showed on the surface. The corruption of Beale was in the woodwork, the peeling paint, the rusty pipes. The house was rotting like Beale.
'We had 'er at the railway station. We queued up in the waiting room. We took Beale's eldest daughter, Clara she was only fifteen at the time - an' we had her one by one on the floor while she bawled her eyes out. Sick? Yes, we were. Sickened? That as well. But once we started, we couldn't stop. Beale was the first, I was the last, and when we'd finished, we told Clara to dry her eyes and keep her mouth shut. We told her we'd kill 'er if she talked an' she took that to heart.'
'That's why none of the girls ever talked. They thought they'd be killed.'
'Yeah, McLean. Right.'

Lomax scratched his nose. He then tugged at his ear. He bit his lower lip, wiped the sweat from his face, and glanced with the longing of the lost through his cell's one barred window. He would have to get used to that.
'Later,' he continued, 'though we were horrified by what we'd done, we were also excited and, usually drinkin', egged each other on to do it again. Some of us, me included, wanted to stop, but we just couldn't do it. You know? We'd lose face.'
'*What?*' McLean said. He could hardly believe what he was hearing. In the pits of human vice, he had seen it all, but that didn't help now. He kept thinking about Tom's sisters, those broken girls with heads hung low, and of all the other girls their age that he'd seen in Trinity, washed out and hung up to dry for the rest of their days. What he'd sensed in those girls was a dread that could now be explained. They had endured a nightmare.
Lomax shrugged. 'It was machismo. We were frightened of losing face. After Clara, we couldn't back down, so we started to trade. One of Proctor's daughters came next. Then Doc' Reynolds' kid. Then another one of Beale's. Then Benning took us to his Rhoda, and so it went on... It was a regular little thing: we all swopped, and noone could say "No." So it went on and on.'
'Until Beth and Anna Lansing,' McLean prompted him.
Lomax sighed in despair. 'Yeah. Our Alamo. In fact, a blessing in disguise. We took Anna in her house when Beth was at a prayer meetin'. Anna's father, that bastard, well what can I say? He broke her in for us and gave her the back of his hand when she tried to resist... He was into it then. He was one of the worst. Once he started, he couldn't get enough of it and pushed us all farther... He was worse because of Beth. Said the clubfoot made it difficult. The marriage hadn't worked out and Lansing claimed he'd been starved of it for years. He'd wanted Anna real bad... We all did, even then.'
McLean wanted to strangle him, but held himself in check. He thought of Anna in that old house, trapped in her own bedroom, the shadows shifting along the walls, as they did in her dreams, as the men gathered panting around her bed. She had told him about those shadows, her nightmares about faceless men, and now he knew why the thought of consummation was linked to hysteria.
'So Abe had his own daughter.' Lomax spoke like the walking dead. 'We were in the bedroom, all standin' around the bed, excited by what we were seein' and waitin' our turn. There were six of us that night. Beale, Proctor,

Benning…even Doc' Reynolds. We all had our turn, then Abe wanted it again, and although we wanted to stop him, we couldn't - he just started in on her.'
Lomax went silent, as if frightened to go farther, but McLean, shocked to his core, feeling murderous, gave him no respite. 'And then?'
'Beth returned when Anna was in hysterics an' that was the end of it.'
McLean was choked up. He felt strangled by his own rage. He recalled the blood in Anna's hands, the distracted look in her blue eyes, and understood why his own attempt to seduce her had led to slit wrists. The shame he felt was not only for himself, but for most of mankind.
We are all collaborators, he thought. I can't wash my hands of this.
'Beth came up on us real quiet. She must have heard Anna's cryin'. She probably thought it was strangers attackin' Anna, so she came in with the shotgun. When we heard her gasp of horror, we looked over our shoulders. Saw her standin' in the doorway. She was already raisin' the shotgun to her shoulder when we raced out of there, pushin' frantically past her... We all fled, McLean. Ran like hell for our cars... We left Abe Lansing on top of his sobbing daughter, desperately tryin' to roll off her, then we heard the gunshots.'
Lomax offered a whimpering sound, a choked sobbing; he bit his knuckles to gain control of himself, then removed his fist from his dribbling lips and continued his story.
'Some of us went back in. Anna was still stretched out on the bed, though her white skin was splashed with patches of blood and she was shaking somethin' dreadful and moaning. Abe was lying on the floor beside the bed, his pants down around his ankles, all bloody and torn up, and it was clear that old Beth had shot him as he rolled off his daughter. He was dead. That was pretty damned clear as well. Then Anna, still shaking and moaning, hardly aware of our presence, sat upright on the bed, saw her dad's body, and then glanced down to see the blood on her own body. When she saw it, when she realised what it was, she became hysterical, started screaming dementedly, and had the first of her epileptic fits. When she recovered, about ten minutes later, she didn't remember a thing. She'd just blotted it out...'
'Come on, damn you, finish it,' McLean said in a choked voice, just wanting to know the end of the story and then make his escape.
'When we saw that Anna had already forgotten what had happened, had

blotted it out completely, we knew we were saved. We persuaded Beth that if she talked, Anna would suffer somethin' dreadful - and old Beth, well, she loved that kid so much, she swallowed it whole. She let us bury Abe - there and then, in the front yard - and although she's hated us ever since, she's kept her mouth shut… At least until *you* talked to her.'

Lomax smiled like a broken man. He then leaned forward, covered his face with his hands, and spoke through his trembling, outspread fingers.

'Yes, McLean, we shared our daughters around... and God help us all.'

McLean stood up and walked out.

Chapter Thirty-Four

'The Lord giveth and the Lord taketh away,' the Reverend Juble Lee said as the door of the big truck containing his tent was slammed shut by the workmen. 'Let that be a lesson to your readers - poor sinners all.'

Everything had been taken away and now the field looked oddly desolate, as if a bomb had hit it, obliterating a whole community, leaving only dead earth. Juble Lee and his crew had been here a long time; it seemed strange that they wouldn't be here any longer, filling up all that empty space. His two immense removal trucks and a lot of cars were lined up and all set to go.

'I'll give my morally polluted readers your blessing,' McLean said. 'I'm sure they'll sit up and take note.'
The reverend smiled, and this time it reached his eyes. 'I only regret that I didn't save you, McLean. Now *that* would have been a real achievement. Something worth taking pride in.'
'I'm sorry you were disappointed.'
'My faith will sustain me. Had you a similar brand of faith, McLean, you'd be a happier man.'
'Maybe,' McLean said.
Miss French, the starched beauty in charge of Juble Lee's public relations, and something else besides, was walking away from the reverend's limousine and coming toward them.
'So they've all been rounded up?' the reverend asked.
'Yeah,' McLean said. 'Beale, Lomax, Dwight Stewart - the whole gang. All behind bars and awaiting trial. It should be quite a show.'
'A vile business,' the reverend said.
'It's human nature,' McLean responded.
'No, McLean, it's only *part* of human nature. One side of the coin. Human nature can be base, but also noble. Just look at yourself.'
I didn't know you thought so highly of me, Reverend.'
'You're a sinner worth saving.'
When Miss French reached them, she flashed McLean her professional, white-toothed smile, then turned to Juble Lee, whom, McLean knew, she

revered to the point of intimacy, and said, 'Looks like we're set to roll, Reverend. Whenever you're ready.'
'Thank you, Miss French. I'll join you in the limousine in a moment, when I've said goodbye to McLean here.'
Miss French turned to McLean and flashed him another smile. 'Goodbye, Mister McLean.'
'I'm sure going to miss you, Miss French. Now I only have dreams left.'
Miss French blushed and smiled, but waved her hand in a resolute manner, then walked back to the limousine.
'She's your driver?' McLean asked.
'That's correct, McLean.'
'She must help to make the long journeys bearable.'
'I'll ignore the implication in that remark. The sinner must have his day. Still, you have your worthy side, McLean. I was quite entertained.' The reverend put his big hand out to let McLean shake it. 'Goodbye, McLean. I'll say a prayer for you.'
'You do that,' McLean said. Juble Lee turned away to go to his limousine, but McLean stopped him with: 'Just one more thing, Reverend.' Juble Lee turned back to face him. 'Tell me the truth, Reverend. Are you just another charlatan or do you genuinely believe in all this?'
McLean waved his hand to take in the field where the tents and tables had been pitched, as well as the two immense removal trucks, the cars, and Juble Lee's gleaming limousine. After taking in what McLean was indicating, Juble Lee gazed at him with a seductive, though oddly threatening, smile.
'Every coin has two sides,' he said. 'Take your pick, McLean.' Then he waved and walked off, climbed into the limousine, and was driven away by Miss French.
The rest of the convoy moved out behind him, churning up clouds of dust, and eventually disappeared in the distance, leaving only the empty flatlands and a vast, empty sky.
Empty sky.
Empty everything.

McLean drove back to town, parked outside Rhoda's hotel, and went up to his room to collect his things. Rhoda was in his room, sitting cross-legged on the bed beside his packed suitcase, smoking and looking pretty sexy in a blood-

red sheath dress.

'The train leaves in twenty minutes,' she said. 'I was gettin' worried that you were gonna be late. Truth tell, I was hopin'.'

'That's nice,' McLean said. 'Why don't you come with me?'
Rhoda sighed. 'I swear, I've thought about it, but it just wouldn't work. You and me, we make a nice, casual couple, but livin' together is out. I'll never live with a man as long as I live. I know enough to know that much.'
'You were one of those girls?' McLean asked, as if he didn't already know.
'Yeah,' Rhoda replied laconically, exhaling smoke. 'All the men here have intimate knowledge of me.'
'Are you going to tell the cops about your dad?'
'No,' Rhoda said. 'He's old and sick and fadin' away with guilt. Why the hell should I bother him?'
'That's pretty decent of you, Rhoda.'
'No, it's not. He's my dad. Girls can't give up their fathers that easily, no matter what's been done to 'em. That's a hard fact of life.'
True enough, McLean thought, though he still felt quiet amazement. He looked at Rhoda with a new sense of respect and growing affection.
'How the hell did you manage to stay sane?' he asked.
'I just grew up overnight.'
'Obviously I had you figured all wrong.'
'That's the trouble with men, McLean.'
He leaned down and kissed her forehead, then held up his right hand. 'The keys for the rented Ford,' he said. 'How do I get to the station?'
'I'll drive you,' Rhoda said.
It only took a couple of minutes, but they had their excitements. The Rydell sisters were in Main Street, sitting on a swinging bench, both with their hands in their laps, both looking down at their feet. Their loose clothes revealed nothing.
'Don't tell me,' McLean said. 'It's their dad who picks their clothes.'
'Right,' Rhoda said. 'No red dresses for them. Their fathers, the rapists, are concerned that other men might lust after them. Aren't men really cute?'
'We're a swell bunch,' Mclean agreed.
The sun was burning down on the station. McLean got out of the car,

removed his suitcase from the trunk, glanced up at Jack Beale's big old house, and couldn't help shivering. Then he walked back to the front of the car and leaned down to the window.
'Thanks, Rhoda. I'll see you around.'
'No you won't, but the thought's nice. Have a wet dream on me, McLean.'
'I'll do that. Adios.'
He kissed her, then straightened up and walked away, not looking back to see the tears misting her eyes. He heard her cursing softly, then the car roared into life. It shot away with a squealing of tires as McLean reached the station. He glanced back over his shoulder to see the Ford in a cloud of dust. It turned around Beale's big house and disappeared, leaving silence behind.
McLean entered the station.

After carrying his suitcase out onto the platform, the first person that McLean saw was Anna. She was wearing a simple cotton dress that clung to her perfect body, being flattened by the beating wind, while the blonde hair whipped around her lovely face and fell like gold on her shoulders. She was sweeping the dust-wreathed platform with a broom as if the wind didn't matter.

Tom Beale, wearing the station-master's cap formerly worn by his father, was changing the timetables on the wall near the waiting room where his sisters had been abused, one after the other, three years ago.

When Tom and Anna saw McLean, they both stopped what they were doing and smiled at him. Tom had moved in with Anna, with the blessing of old Beth, and now both of them looked radiantly happy. That made McLean feel good, almost paternal, a human being at last.

Ignoring Tom, he took hold of Anna's wrists and turned the palms of her hands up.
'The scars are disappearing,' he said.
'Yeah,' Anna replied, 'and they won't come back. I give you that as a fact, McLean.'
McLean grinned sardonically, feeling the ache of love for her, but willing to bear the pain of his loss if it meant her salvation. 'I believe it,' he said, then let

her go and turned to Tom. 'You're just a country boy, a yokel, a rube... and one hell of a guy.'
'Thanks,' Tom said. 'I hope so.'
The train howled in the distance. McLean watched it approaching. It materialised out of featureless flatlands and spiralling columns of dust.
It looked like all hell out there.
When the train stopped at the station, McLean got on board, but turned back to face Anna and Tom.
'The Lord giveth and the Lord taketh away,' he said. 'Some you win, some you lose. Good luck, kids.'
'Good luck, McLean.'
Both voices sounded as one as the trained pulled out of Trinity, heading for that distant horizon where the land met the sky.
God's light shone on all of them.

AUTHOR'S NOTE

The Crystal Skulls is a work of fantasy and the fantastical should not be hemmed in by mere facts. There is, indeed, a Museum of Mankind in London, England, and it did, and possibly still does, display an early Mayan crystal skull. However, the Museum of Mankind mentioned in this novel is purely a figment of the author's voluptuous imagination, and the physical layout and security systems described herein bear no relation to those of the real Museum of Mankind and are not recommended to those planning burglary. Likewise, while there is a British Embassy in Bangkok, the British Consulate described in this novel does not exist in reality.

The pursuit of fiction is not the pursuit of facts, and *The Crystal Skulls* is entirely a work of fiction.

W.A.Harbinson West Cork, Ireland

Prologue

The Great Pyramid of El Castillo at Chichén Itzá, Yucatán, was bathed in the moonlight, under a star-filled sky, when two Mexican peasants, each using a hammer and chisel, chipped away the cement around one of the heavy stone slabs in the flat roof of the Shrine at the summit. Once the cement had been chipped away, they began prising the stone slab out of its ancient, dust-filled foundations.

Exposed to the chill night wind sweeping across the open-sided Shrine thirty metres above ground level, surrounded by the other Mayan ruins of this ancient site, the Mexican peasants were breathing harshly and sweating from their efforts to lift up a slab that had been embedded there for many centuries.

They were being watched intently, nervously, by a redhaired American with a scarred face who was dressed in a badly rumpled light tropical suit. Though normally a hard man, cold as ice, casually murderous, he could not help feeling nervous at the thought of what that equally murderous swine Lu Thong would do to him if, after all this time and effort, he returned empty-handed to Bangkok.

Either Lu Thong or that psychopathic bitch Mai Suphan, the American thought. Neither will welcome me back with a smile if I return without what they sent me here for. I'll be dead meat for sure.

Filled with dread at this thought, the American became impatient and, when the slab had been removed and set aside, he roughly pushed the peasants away and dropped to his knees to look into the dark rectangular hole. A few seconds later, when his eyes had adjusted to the darkness and he could see properly, he gave a low whistle of disbelief, then reached down into the hole and pulled out a macabre, eerily shining skull.

'God Almighty!' he whispered.

Holding the skull up in both hands, he turned it slowly in the moonlight beaming obliquely under the roof of the Shrine. It was a life-sized skull, made of clear crystal, with a smooth, domed head, two gaping, empty eye sockets, and parallel rows of perfect, exceptionally large teeth gritted together in a mouth whose upper lip merged with the cheek bones and the flat line of the nose. Everything – head, jawbone, eye sockets and teeth – was made from the same clear crystal and it appeared to have been carved from one solid

block, being without the slightest trace of a seam, except for the hinges of the jawbone.

In the moonlight it gave off an unreal, mesmeric glow that only enhanced its dreadful, frightening appearance.

The two Mexican peasants had started gibbering fearfully the instant they set eyes on the crystal skull. But now, as the American examined it, helplessly filling up with awe and exhilaration, thinking, *Even that animal Lu Thong can't touch me now*, they glanced up at the roof of the Shrine and let out wails of absolute, almost inhuman terror.

Startled, the American also looked up and saw something that defied his comprehension.

Though the roof of the Shrine was directly above him, he somehow saw, as if seeing *through* it, an enormous, saucer-shaped, pulsating light, materializing magically in the moonlit darkness of the sky and growing wider as it descended silently upon him.

Still looking up, disorientated by what he was seeing, suddenly thinking that he was dreaming, he squinted against the light, tried to study it more thoroughly, and imagined that within its oddly pulsating brilliance he could discern… *stars*.

Not the stars in a normal sky – which had, in fact, been erased by the brilliant light – but much bigger, far closer stars that formed a slowly spinning, glowing whirlpool, now only a few metres above him and either melting, or somehow obliterating, the roof of the Shrine.

'Well, I'll be damned!' he exclaimed in disbelief.

The two Mexican peasants had fallen to their knees on the floor of the Shrine and were wringing their hands and gibbering ever more fearfully, obviously offering up their prayers, when a much brighter light exploded out of that pulsating phenomenon – a blinding light that spread over the great temple – and the American was bathed in a wave of heat so fierce that it sucked the breath out of him and scorched him beyond the limits of pain.

He and his companions screamed dementedly as they burst into flames.

They collapsed on the instant, turning into three human torches, quivering in the spasms of death as they were covered in smoke. They were still burning, though no longer moving, released from pain through death, when the saucer-shaped light shrank back into the darkness, as if sucked up into a gigantic, invisible funnel, letting the moonlight return and the roof of the Shrine

reappear.
When the flames consuming the burning men finally died away, leaving only smouldering remains, the moonlight beamed obliquely on three hideously charred corpses… and on the miraculously untouched, gleaming crystal skull that had fallen from the scorched hands of the American. Now it rested on its chin, its face turned towards the east, on the windblown floor of the Shrine, on top of the ancient pyramid, high above the flat, moonlit Earth, far below the stars in the heavens.
Had anyone been left alive to study the skull at that moment, they would have seen, inside it, another cosmos of stars that, glowing and pulsating oddly, were swirling like a slow, silent whirlpool.
Those stars vanished with the stars in the heavens when dawn broke over the ruins.

Part One
Chapter One

Dawn was breaking when Tom Powell turned off the Mex.180 highway, heading for the ruins of Chichen Itzá. Twenty-nine years old, with a boyish, inexperienced face, unruly auburn hair and brown eyes that saw no evil, he was wearing rumpled blue denims, a sleeveless photographer's waistcoat over an open-necked red-and-blue checkered shirt, and a pair of laced-up, rubber-soled canvas boots.

He had left Mérida in the early hours of the morning with the intention of beating the heavy commercial traffic on the highway and now, as he left the main road and his rented jeep bounced over the rough gravel and potholes of the narrow track that wound through the soaring mahogany and dyewood trees of the rain forest, he felt proud of his initiative and was glad that he had decided to test his courage by coming on this trip alone. Indeed, he was deliberately taking this narrow back road to the ancient site as another test of his courage, determined, as he had been since leaving Mérida, not to be a normal tourist, resolved to shuck off the constraints of his past and to turn himself into a more worldly, independent man.

He was therefore very surprised when, mere minutes into the rain forest, he saw an attractive young lady up ahead, clearly Caucasian, wearing denims

and shirt, with only a rucksack on her back, frantically waving him down.

Tom carefully braked to a halt beside her.

‘Hi,’ she said.

Tom looked at her, speechless. He was often speechless in front of ladies. This one didn’t actually look like a ‘lady’ in her faded denims and shirt, with her blonde hair pinned up on her head under a peaked cap clearly intended to keep the sun off her prominent nose and sunburnt pale skin. She had sharp green eyes and full lips that seemed curved in a perpetual grimace of mistrust, but her body was slim and full-breasted, supported on long, shapely legs.

‘You dumb or something?’ she asked, sounding like a New York cab driver.

‘Pardon?’

‘I said “Hi” and you’re just standin’ there gawpin’. The cat got your tongue or what?’

‘Sorry,’ Tom said. ‘You just took me by surprise. What on earth are you doing out here?’

She rolled her eyes. ‘Bird watching.’

‘Really?’

She rolled her eyes again. ‘No, not really. I’m tryin’ to get to Chichén Itzá, which is where this road leads to. You’re going there, too, I guess.’

‘Yes,’ Tom said.

‘So… Are you gonna give me a lift or do I stand here and fry in the heat when that sun rises properly?’ ‘Of course,’ Tom said. ‘Naturally.’

Before he could change his mind, she removed her rucksack from her shoulders and threw it into the back of the jeep, then she clambered onto the seat beside him and strapped herself in.

‘Great,’ she said. ‘Let’s go.’

Disconcerted, wondering if he had done the wise thing in picking up this particular young lady, Tom started the jeep and drove off, making his way carefully over the potholes in the narrow track and trying to avoid the marshy ground around the trees on either side of his vehicle. He did, however, sneak a sideways

glance at his passenger and judged her to be in her early twenties. She was attractive in a kind of rough-hewn way, but when she popped some gum into her mouth and started chewing – not bothering to offer him any – she seemed distinctly aggressive.

‘So what’s your name?’ Tom asked.

‘Molly Beale,’ she replied, sighing as if aware that she would have to pay for the lift with forced conversation. ‘American?’ Tom asked.

‘Yeah,’ she said. ‘From Brooklyn.’

‘That’s in New York, isn’t it?’

Molly rolled her eyes for the third time. ‘Lord have mercy!’ she exclaimed.

‘I’m sorry. I’m not familiar with America.’

‘So it seems,’ Molly said.

Tom drove in silence for another minute or so, aware of the rising heat and humidity, then he broke the uncomfortable silence by saying, ‘I just thought it odd that you’d be in the rain forest instead of hitching a lift on the highway.’

‘What’s odd about it?’

‘The rain forest could be dangerous for a woman travelling alone,’ Tom said.

‘Dangerous. You gotta be kidding! What’s dangerous is that damned highway, I can tell you. You hitch a lift and you’ve got male hands crawlin’ over you like spiders – that’s a fact of life, buddy.’ Tom winced at her words, but Molly just went on, unperturbed. ‘Christ, these Mexicans! They see a white woman alone and they practically rape her with a glance, before actually tryin’ it on. After a couple of days of that, I’d had enough and decided to take the back route. I’d rather get eaten alive in this rain forest than deal with those bastids.’

Tom watched the road ahead, embarrassed by Molly’s way of talking. The sun was clearly rising and, though he couldn’t see it, he saw its light forming silvery striations between the tall trees, falling on the branches and green

leaves, forming luminous pools on the forest floor. The heat was rising as well.

‘You’ve come from Mérida?’ he asked her, now knowing what else to say.

‘Been all over,’ she replied. ‘Hitch-hiking through Mexico and Yucatán. I’ve been here forever.’

‘You’re interested in Mayan culture?’ Tom asked her. ‘Don’t know anything about it,’ Molly replied, ‘except what I’ve read in my stupid guidebooks. I just wanted to get away, distract myself with something different, and this place seemed exotic enough when I saw it on TV. So I said, “Go screw yourself,” to my useless boyfriend and then packed my rucksack and lit out with no particular plans. So, here I am.’

Tom sneaked another sideways glance at her to see her blowing a bubble with her gum, then sucking it back into her mouth. She certainly had a prominent nose and, as Tom glanced at her, she tapped it a couple of times with her index finger.

‘You’re looking at my hooter,’ she said, ‘so let’s get it over and done with. I’m Jewish on my Mom’s side. My Dad’s a bog-Irish immigrant. Does that give you problems?’

‘No, of course not,’ Tom said, even more embarrassed. ‘My Mom wanted me to be Jewish but Dad put a stop to it. He told me that I was a tart just like most other women and couldn’t be helped with religion. That probably made it easier for him when he felt up me up in bed – at least until I’d had enough of his crap and lit out of there. He was a bit of a lush, I guess, and used to beat up on my Mom, so she disappeared when I was only twelve years old, leaving me with him. With her gone, he had to do it with someone and he tried it with me until I lit out for good. I moved in with some junkie friends to a dive in the Lower East Side. Winos and junkies in the hallways, garbage stinkin’ up the joint, but even then it was better

than home, so I stayed on for a while.'
'You poor girl,' Tom muttered.
'Not so poor,' Molly said. 'It wasn't all that bad. I didn't take junk myself – I mean, I wanted to live a life, not wander around like a zombie – but my junkie friends looked after me as best they could. Then I got a job and, eventually, a boyfriend.'
'That must have been nice,' Tom said.
'A nightmare,' Molly said. 'Brad Crawford. What a creep! I was working in a supermarket, a checkout girl – damned boring, I can tell you – and he was working in the stock room, unpacking the crap we sold. Jet-black hair and big brown eyes, sleeves rolled up, muscles rippling, a grin most girls would kill for. He took me out for a beer and charmed me witless, then, of course we ended up in the sack and it went on from there. Downhill from Day One.' 'Deary me,' Tom said. He didn't know what else to say.
He wasn't used to this kind of conversation – the women he knew were not like this one – and it made him feel distinctly uncomfortable as he drove on through the forest. 'First mistake,' Molly said. 'I moved in with him, practically just around the corner, and his place was even worse than the one I'd been in. He hadn't cleaned it since *he'd* moved in, and it was clear, from the minute I stepped through the door, why he wanted me there. I worked night and day to keep that pig-pen clean, but he kept throwin' his beer cans on the floor and throwin' up on his moth-eaten rugs. Second mistake. I thought I could change him but he kept drinkin' like a fish, stayed out all night with his pals and other girlfriends, and obviously kept his muscles in trim by beatin' up on his women. Naturally, since I was his woman of the moment, I ended up black and blue. So between him and my old man, my so-called Dad, I figured I'd had enough of men. What bastids they are!'
She turned to glare angrily at Tom, obviously incriminating him in the crimes of all base men, making

him nervously finger the collar of his shirt with one hand while continuing to steer with the other. Cobwebs glistened on the branches of the trees slipping past on both sides of him.

‘Well, I…’ he began.

‘Blow you!’ Molly exclaimed. Tom nearly jumped out of his skin. ‘That’s what I said to that bastid. “Blow you, I’m getting’ out of here!’” And that’s just what I did. I waited until he was sleeping – drunk and snoring like a pig – then I stole his billfold and lit out of there, determined to be my own woman.’

She lit a cigaret without offering him one. Not that he smoked, but he would, at least, have appreciated the offer – as he would, indeed, have appreciated a piece of her gum to freshen his mouth, which was dry after his early morning drive. He thought this, with a little resentment, when he glanced sideways and noted that she was still noisily chewing her gum, when not puffing smoke from her cigaret. Fearful that she would see his sideways glance, he turned his eyes to the front again.

‘I’d already thought of Mexico.’ Molly certainly knew how to talk. ‘I mean, I’d seen it on TV – and so, like I said, I stole his goddamned billfold. I also took the cash he’d hidden under his mattress – ‘cause a fool with money, he didn’t have a bank account – and rode a Greyhound all the way to Tijuana, where I stopped for a while, trying to work out what to do with my future.’

‘By way of being your own woman,’ Tom ventured. ‘Yeah, right,’ Molly said, then she turned to stare at him, incidentally blowing a cloud of smoke over him. ‘Hey, you bein’ sarcastic, or what? You Limeys are famous for that.’

‘No! No!’ Tom exclaimed, almost stuttering, while trying to concentrate on the muddy track ahead, which was, he realized, much narrower than he had expected it to be – and potentially dangerous. The branches of the trees were scraping the jeep; the ditches on both sides were filled with

water. Tom was keen to test his courage in certain ways, but Molly Beale was distracting him. ‘I merely meant – ’ ‘Yeah, right.’ Molly looked to the front and exhaled another cloud of cigaret smoke. ‘Anyway, as you can imagine, between that bastid and my Dad I wasn’t exactly keen on men, and then, to make some bread, I took a job in a Tijuana, selling smokes in a casino.’ She inhaled again. ‘You know? Do I have to paint a picture? Black stockings, stiletto heels, my boobs bulging out of a bit of cloth that wouldn’t have covered a postage stamp – and I was instructed to lean forward, real low, letting a bit of cleavage show, when the gamblers asked for a pack of smokes and leered like serial killers.’

‘How awful,’ Tom said.

‘An easy number,’ Molly informed him. ‘I mean, the tips were gi-normous. Then, on top of that, you got all these invitations to all kinds of gatherings – parties and dinners and breakfast in bed, endless champagne to round out the night – and *they* paid for everything! Then I made the mistake of falling in love again and that screwed me up again.’

‘Oh, dear,’ Tom said. He didn’t know what else to say. He was shocked by her story, not to mention her vocabulary, and he was wondering if he’d be able to get rid of her when they reached Chichén Itzá. He sympathized with her, of course – her life had clearly been a nightmare – but he really just wanted peace and quiet, which was what he had come here for.

‘A damned gambler,’ Molly said. ‘I know how to pick ‘em, right? He liked to gamble and he was fifty-five years old and had the hots for young girls.’

‘And you are…?’ Tom asked.

‘Twenty-three.’

‘I see,’ Tom said.

Molly sighed, exhaling more smoke, then blew another bubble with her gum, popped it and sucked it back in again. ‘He was nice when he won,’ she said. ‘Real generous with

those greenbacks. There was nothing he wouldn't give you when he won – but, oh boy, when he lost!' She inhaled and coughed raggedly when exhaling, then waved the smoke from her face. 'Fists and boots,' he said. 'A real rave-up of despair. Accused me of bringin' him bad luck and then made me suffer accordingly. Of course, I lit out. I mean, I'd been that route before. First my Dad, then that bastid, Brad Crawford, now this lunatic who lost more than he won and
needed someone to blame. So I lit out again.'
Tom felt that at this point he should make a
contribution to the conversation, but when he glanced
sideways at Molly and saw the grim set to her lips – full
lips beneath a generous nose and, possibly, attractive when
she smiled, which so far she had not done – his
nervousness made him decide against it.
Instead, he returned his gaze to the front, concentrating
on the narrow track, watching out for fallen logs or wild
animals or, even worse, the bandits that he was convinced,
despite his optimistic, lying travel books, inhabited the rain
forest. Though he had come here to prove his manhood, he
still feared certain things.
'The same crap all over again,' Molly continued,
puffing another cloud of smoke and noisily chewing the
gum that would have refreshed Tom's dry mouth and
cleaned his unbrushed teeth. 'I took a job at the racetrack.
Goin' back to my roots, you know? I'd had enough of the
high-rollers, all those gamblers with greenbacks, an'
thought I'd fit in better where the gambling was done by
guys in coveralls. It could've been nice, really. I mean, I
had a protective window between me and them - the meshwire with the small slot below – and they just slid their
hands under it, handing over their dollars. Unfortunately, I had a boss. He was broader than he was tall. He had a wife you would have died to avoid and his kids were real monsters. Frustrated, right? Wanted somethin' more to live for. Couldn't keep himself from pawing me all over and breathed like a gorilla. Did I get involved? Yeah! I mean, I needed the job. So I ended up meeting him in motels and pretending I liked it. Then his wife found out. I

mean, she found us at the wrong time in the wrong place doin' the wrong thing. She walked in when she found out where we were and all hell broke loose. Of course – '

'You lit out again,' Tom said.

'Yeah, right. I lit out again.' She turned to glare at him, lips grim, green eyes blazing. 'Say, are you bein' sarcastic again? You bein' a Limey an' all.'

'No! No!' Tom denied strenuously, his heart racing. 'I merely meant to say – '

'Yeah, right,' Molly said. 'Okay. No sweat, pal. Anyways, I just lit out of there and started travellin' again. Hitch-hiking, mostly. Not really knowing where I was going and not really caring. Hitched all the way through Mexico, enjoyin' the sights, and then bought myself a little guide book and let it lead me to here. Just wanted out, right? To be on my own, right? Thought I might as well see a bit of somethin' that I might never see again. Pyramids, old ruins – that kind of crap – so that's why I'm here. What about you?'

'Me?'

'Yeah, you. You think I'm talkin' about the man in the moon? Where do *you* come from?'

'England,' Tom said. He didn't wish to discuss himself. 'England,' Molly said. 'Terrific. Now I know all there is to know.'

'I'm sorry. I didn't mean to sound so abrupt. It's just that I've little of interest to say. I'm just – '

'You're wearin' one of those photographer's jackets – you know? That canvas number with all them pockets for lenses and things. Are you a photographer?'

'Well, no, not really,' Tom replied, embarrassed once more. 'I have a camera, of course – I mean, I take the odd picture – but I'm not a professional photographer. I only take photos for personal gratification. The jacket – ' 'Yeah,' Molly interjected. 'I noticed that all those pockets are empty. Just decoration. So why the hell are you

wearin' that kind of number?'
'It seemed appropriate for tropical climates,' Tom explained, trying to regain his lost dignity. 'I mean, it has lots of pockets – '
'All empty,' Molly reminded him.
' which hold money and passport and various documents,' Tom continued doggedly, 'and, of course, though it's quite warm when one needs warmth, it doesn't have sleeves, which keeps one cool when required. So, though I'm not a photographer, it *did* seem like a sensible garment to wear on this particular trip.'
'Yeah, right,' Molly said.
Feeling humiliated, Tom decided not to respond and concentrated instead on his driving, taking note of the striations of sunlight now beaming down through the soaring trees and of the heat, which was steadily rising and making him sweat. He was also sweating because his heart was racing, but he tried to ignore that fact.
'So, come on, *tell me*!'
'Pardon?' Tom said.
'Tell me why you're here. Just touring, is that it?' 'Well, yes, sort of,' Tom said, not wishing to discuss his personal life.
'Just touring?'
'Yes,' Tom confirmed.
'All on your little lonesome?'
'Yes,' Tom said.
Molly took a last drag on her cigaret and flicked the butt out into the rain forest, not concerned that she might set it on fire. She then turned to blow the smoke in Tom's face, while offering a slight, sardonic smile.
'You speak really nice,' she said.
'Do I?'
'Yeah. At least to my ears. I mean, you sound really English, kinda posh, an' I'm not used to that.'
'Really?'

‘Really.’
‘I don’t really speak posh,’ Tom said. ‘It’s just normal English. But then you *are* from New York.’
‘Where we don’t speak proper English,’ Molly said. ‘I didn’t mean – ’
‘No, of course not.’ Molly leaned back in her seat, blew a bubble of gum, popped it and sucked the gum back into her mouth before speaking again. ‘So you’re touring the Yucatán on your little lonesome. Why’s that, may I ask?’ Tom didn’t wish to discuss it. It was still too painful for him. ‘I don’t wish to discuss it,’ he said. ‘It’s a personal matter.’
Molly turned to glare at him, obviously outraged. ‘You don’t wanna discuss it? Oh, terrific! I mean, you don’t mind askin’ *me* a lot of questions, prying into *my* personal life, but now you don’t wanna discuss your own business. Boy, that really takes the cake!’
Tom couldn’t recall asking her any questions at all, but he didn’t wish to say so in case she became even angrier.
‘Well,’ he said, hesitating, his embarrassment now acute, ‘like you, I came to get away from things.’
‘What things?’
‘Well…’
‘Yeah?’
‘Actually, I’ve just been through a rather painful divorce,’ Tom confessed, feeling ever more uncomfortable, not wanting to think about it, ‘and I came here to put it all behind me and sort myself out.’
‘Why here?’ Molly asked, sounding none too sympathetic, which, given the life she had lived, might have been understandable.
‘I’ve always been deeply interested in Mayan culture,’ Tom explained, sounding rather portentous, perhaps because he was uneasy, ‘and so I decided that coming here, seeing the ancient sites at first hand, as it were, would be a way of finding perfect peace while gaining intellectual satisfaction.’

‘That sounds like a right mouthful,’ Molly retorted, ‘but if you’ve come to see the sites, here they are. What more could you want, pal?’

And they were, indeed, leaving the gloomy rain forest behind them and heading along an open road that led to the vast sprawl of Chichén Itzá, its great pyramids and ruined temples and soaring columns bathed in dawn’s pearly light. ‘Oh, how wonderful!’ Tom exclaimed.

Chapter Two

Though a nominal fee was normally charged for entrance to the site, there was no one on duty yet and Tom was able to drive right up to the low fence at the edge of the vast, smooth green lawns that stretched out in all directions around the ruins. Once there, he braked to a halt, turned off the ignition, applied the handbrake and climbed out.

As he removed his camera from the bag in the rear seat and slung its strap around his neck, letting the camera rest on his chest, Molly clambered out of the other side of the jeep to yawn loudly and stretch herself. When she did that, the shirt tightened on her body and showed off her fine breasts and slim waist. Tom felt a sexual stirring that he tried to ignore. Instead, he let himself fill up with awe at what he was seeing. Molly, however, merely blew more bubbles of gum, her face a picture of cynical bemusement.

‘Man, this is weird!’ she exclaimed.

The ruins certainly looked eerie in the dawn light, with their Chac Mools, friezes of ancient warriors, carved jaguars, soaring columns shaped like serpent bodies, their heads at ground level, and great stone stairways with sculpted serpent balustrades. Immediately ahead, beyond the fence, was what Tom most wanted to see: the great pyramid of El Castillo, with its four massive stairways facing the cardinal points and leading up to the Shrine on the high summit.

Impressed by that sight, Tom clambered over the low fence, again followed by Molly, then went up to the pyramid and started walking around its immense greystone mass, with Molly sticking close to him. Now genuinely awestruck, he took in the pyramid’s calendric-cycle panels and many terraces and steps, wondering at the ingenuity behind it all and wishing

that he could view it alone, as he had planned originally. When he reached the north-west side, he stopped walking and just stared at the ancient temple in respectful silence.

'You look disappointed,' Molly said, having blown another bubble of gum, popped it and sucked it back in, clearly not as impressed as was Tom.

Understanding instantly why he wanted to be here alone – and certainly without the proximity of this bubblegum-chewing, cigaret-smoking, New York floozie – Tom replied: 'I'm only disappointed because I really wanted to come here during either the spring or the fall equinox, in March and September, when – '

'The *what*?' Molly interjected.

'The equinoxes,' Tom explained. 'That's when the sun crosses the equator, and night and day are of equal length in every part of the Earth.'

'Big deal,' Molly said. 'But what's it got to do with that pile of stones?'

Tom sighed. 'During the equinoxes, an unusual solar phenomenon, the interplay of light and shadow creates a sunlit serpent on this side of the pyramid. That serpent is about thirty-four metres long and it appears to slide down the building to join the head of the stone serpent at the bottom of the steps. As you can see,' he continued before Molly could interrupt him again, waving his right hand to indicate the serpent-shaped columns and sculpted serpent balustrades of this and the other ruins, 'the serpent is very much part of the Mayan culture. So clearly this temple was created deliberately to have that sunlit serpent materialize, almost magically, during the summer and fall equinoxes. That's rather marvellous, don't you think?'

Molly stopped chewing, studied the north-west side for a moment, then said, 'Men need their little toys to play with, including their snakes, which probably made the Mayan males think of their – '

'I *beg* your pardon?' Tom interjected, outraged.

'So what's all that other crap I see?' Molly asked, not returning to her original sentence. 'All those panels and things.'

Shocked by what he viewed as her philistine nature, but also deeply embarrassed, Tom blushed and coughed into his clenched fist. Removing his hand from his mouth and wondering how he could get rid of this crass creature, he said, 'The panels correspond to the number of years in the Mayan calendric cycles, so there are fifty-two in all, and there are eighteen of those terraces on each side, with each side representing the eighteen-month

religious year.'
'There are only twelve months in the year,' Molly corrected him.
'Not for the Mayans,' Tom said, being a patient man. 'As for the steps,' he continued doggedly, 'leading up to the summit, upon which the Shrine is built, there are ninety-one steps on each side, adding up to three hundred and sixty four, so if you add the summit, or the floor of the Shrine, which is treated as another step, you have three hundred and sixty five, which is the number of days in the year. So the outside of the temple was created as a kind of religious calendar.'
'Gee, whiz, you sure know your stuff.' Molly chewed her gum even more vigorously while studying the great pyramid, obviously trying to make sense of what she was being told. 'So is it solid?' she asked eventually. 'Or is there something inside it?'
'Well, it *is* a temple,' Tom emphasized, as if speaking to a child, 'so it would hardly be solid. Inside is the temple built to Kukulcán. It contains a jaguar-throne encrusted with seventy-three jade disks, representing spots and eyes, as well as a reclining Chac Mool monolith in an adjoining room.'
'A *Chac Mool*?'
'A statue of the Messenger of the Gods, formerly used as a vital prop in sacrificial rites.'
'What kinda sacrifice?'
'Human hearts, torn from the living flesh of the unfortunate victims, were flung, still steaming and beating, into the laps of the Chac Mools by knife-wielding priests as offerings to Kululcán, the Quetzalcoátl of the Mayans.'
Molly shivered melodramatically. 'Oh, boy!' Obviously, like an adolescent at a horror movie, she enjoyed feeling shivery. 'So what's the Quetzalcoátl? Some kinda high priest?'
Clearly she was at least *listening* to what Tom was telling her. 'Not quite,' he said. 'The Quetzalcoátl of the Toltecs was a legendary figure widely believed to have arrived as a god in the tenth century with the first wave of Toltec-Nahua invaders. The name means 'plumed serpent' in both languages.'
'Back to phallic symbols again.'
'Yes,' Tom said, determined to educate the brainless, possibly sex-obsessed creature. 'And while that mythical figure came to be thought of as the incarnation of the god, the real Kukulcán didn't actually arrive until the middle of the thirteenth century. He's been credited with founding Mayapán

as the civil capital of the peninsula, though this place, Chichén Itzá, long remained as its principal religious center.'
Molly nodded, then looked again, more thoughtfully, at the Castillo. 'So why's that pyramid called the Castillo?' she asked, 'when it was really a temple?'
Surprised and pleased by the percipience of the question, Tom gladly explained. 'Because the Spanish used it as a fortress.'
'That makes sense,' Molly said. 'Can we go inside?'
'Unfortunately, not yet, though I certainly plan to enter it later, when the guards open the place properly and they start selling tickets.'
'So why'd you come so early?' Molly asked.
'I wanted to get here before the tourists arrived. I wanted to contemplate the place in reverent silence.'
'Now you've got me makin' noise,' Molly said.
'I don't mind,' Tom lied.
Appreciating that she might not be as dumb as she sometimes sounded, he suggested that they explore the whole site together.
'Sure, what not?' she responded.
First, they walked the rest of the way around the great temple, with Tom taking photos of its four separate sides. When he was satisfied that he had seen enough, he led them on to the Ball Court. More than 500 feet wide, it had massive stone platforms on either end of its vast walls. As they crossed it in silence, with Tom taking more photos, he tried visualizing the young men of the mysterious Nahua and Mayan people playing their ball games here.
'This is a kind of football pitch,' he explained to Molly, who was glancing left and right with searching eyes. 'The game was called *Tlachtli* or, in the Mayan, *Pok-To-Pok – '*
'Sounds like sex,' Molly interjected with a grin. 'You know? Have a poke '
Tom ignored the saucy remark. 'From the written records,' he continued, 'it seems to have been a rather bizarre mixture of soccer, basketball, and lacrosse. The object was to propel a solid *chicle* ball through high stone rings using only the forearms, knees and hips, all of which were well padded.'
'Not too dangerous, then,' Molly noted.
'It could be,' Tom replied. 'As you can see from the magnificent reliefs on those two walls, the losers were often sacrificed.'
Molly studied the two reliefs and shivered. 'Hell's bells!' she said.

Halfway across the Ball Court, Tom turned north onto the *saché*, or sacred road, that ran for approximately 300 yards to what appeared to be a solid mass of jungle.
'What the hell are you goin' there for?' Molly asked. 'There's nothing there but the trees!'
'Yes, there is,' Tom said.
He was right. At the end of the sacred road, they came abruptly, almost shockingly, to what seemed like a gaping wound in the forest: a vast hole nearly 200 feet across and dropping just over seventy feet to the surface of a darkly glittering jade-green pool.
'Oh, boy!' Molly exclaimed softly, her eyes growing big as she looked down.
'This is the *Cenote Sagrado*, or Well of Sacrifices,' Tom explained with satisfaction, noting the look of awe on Molly's normally cynical face. 'The victims were hurled into that pool to propitiate the god *Chac*.'
'Virgins, no doubt,' Molly said. 'And thrown down there by males.'
'Not only virgins, but children of both sexes, most of them under twelve years old.'
'The barbaric bastids!' Molly exclaimed with deep feeling.
'Not really,' Tom said. 'It was a deeply religious rite. However, the pool was dredged in 1968 and they found not only the bones of those poor children, but also many artefacts – hundreds of tiny copper bells, gold ornaments, jade fragments. Not that this cleared up the mystery of the Mayans, since apart from some 1,200-year-old jade fragments and bits of pottery, most of the artefacts were from the fourteenth and fifteenth centuries and of Centraland-South American origins.'
'A real mystery, these Mayans, right?'
'Right,' Tom said.
Believing that he was getting her serious attention at last, and hoping that this would make his tour more enjoyable, he led her back along the sacred path to the *Tzompantli* and the House of the Eagles and Tigers, the first a large platform of human skulls, the second a smaller platform adorned with carved eagles and jaguars holding human hearts in their claws.
'A bloodthirsty bunch of bastids,' Molly said. 'You don't need a fancy education to tell *that* about them.'
'That's a simplified way of looking at it,' Tom said, offended by her crass comment.

‘Oh, yeah?’ Molly retorted.
Deciding that he may have been wrong in imagining that he was gaining her *serious* attention, Tom took some more photos, then led her to the magnificent Temple of the Warriors. As large as El Castillo, it was fronted with a colonnade of square columns carved with plumed warriors and dominated by a recumbent Chac Mool, gazing towards the pyramid of El Castillo and flanked by two enormous serpents columns.
‘More phallic symbols,’ Molly said.
‘Do you mind?’ Tom responded, sounding like a stern headmaster. ‘There’s more to this architecture than – ’
‘Violence and sex,’ Molly interjected. ‘Torn-out hearts and snakes. Don’t give me any intellectual crap to justify your pitiful male ego. These bastids were just like all men, and their women were, as usual, victims.’
‘That’s ridiculous!’
‘Oh, yeah?’
‘It’s a gross simplification. Clearly, you know nothing about the ancient religions or those who once practised them.’
‘All men,’ Molly reminded him. ‘It was the women who were sacrificed, remember?’
Outraged again, Tom glanced south and east to see the Court of the Thousand Temples with its remaining columns, representing giant plumed serpents, rising out of the surrounding rubble.
Oh, God, he thought, more serpents. She’ll go mad if she sees them. Clearly, she’s a deranged Women’s Libber. How on earth can I lose her?
‘Can I just explain – ’ he began.
‘No, you can’t,’ Molly said firmly. ‘These bastids ripped the hearts out of virgins, threw them into that goddamned pool, then raised monuments to their own supposed glory. What’s that if it isn’t male ego runnin’ rampant as usual?’
Shocked almost speechless, Tom turned away and started walking back to his jeep.
‘Where you going?’ Molly called after him.
Trying to control his anger, Tom turned back to face her. ‘To my jeep,’ he said. ‘I have to leave now.’
‘Already?’
‘Yes, already.’

‘I thought you wanted to see inside the temples.’
‘I’ve changed my mind,’ Tom said. ‘I have to travel on to Uxmal and I’d like to go now.’
He hurried away from her, heading back to the great pyramid of El Castillo, which in truth he had wanted to climb before the Visitors’ Center opened and more crass tourists like Molly made his life a misery. Now, however, he was so angry, so determined to get rid of her, that he kept on walking past the pyramid – until stopped by the challenge in her voice, ringing out loud and clear from where she had come up right behind him.
‘Hey, you!’ she called out.
Tom stopped and turned to face her again. She grinned and pointed up to the summit of the pyramid. ‘Don’t you want to go up there?’
‘No.’
‘Why not?’
‘I’ve seen all I wish to see,’ Tom said.
‘You’re lying.’
‘I am not!’
‘That thing up top, the…?’
‘Shrine.’
‘Yeah, right, the Shrine. It’s supposed to have a great view of the Court of the Thousand Columns and the Temple of the Warriors. They’d make really good photos – and you know that if you don’t take those photos, you’ll never forgive yourself. So why aren’t you doing it?’
‘I don’t wish to.’
‘You do. It’s just ‘cause I’m here. If I wasn’t here, you’d be climbing that thing and taking photos from up there.’
‘I would not.’
‘Scared of heights?’
Tom sucked his breath in, trying to control his racing heart. She was, of course, correct. More than anything else, he had wanted to climb to the summit of the pyramid, yet he now found himself reluctant to do so – not only because she was annoying him, but also, as she had clearly deduced, because, as he realized when he glanced upwards, he *was* afraid of heights.
‘Don’t be ridiculous,’ he said.
‘You’re afraid of heights,’ she insisted.
‘I am not!’

‘You are!’
‘If you’re so damned smart, why don’t you come with me?’
‘I will,’ Molly said.
Realizing that he was trapped, Tom strode manfully to the massive steps of the pyramid, took a deep breath, and then began the arduous, dizzying climb to the summit. Molly joined him, coming up behind him, soon catching up with him, and grinning when she saw him perspiring and heard his heavy breathing. He was breathing heavily not only from exertion, but from visible nervousness.
‘Are you nervous?’ Molly asked, when they were only halfway up and had stopped for a rest, though Tom pretended that he had done so to take photos of the surrounding landscapes.
‘Of course not,’ Tom replied, squinting bleary-eyed through the camera’s viewer and worrying that he might faint, given the fact that the ground was already far below him. ‘But if *you’re* nervous, by all means go back down and I’ll continue alone.’
‘No way,’ Molly retorted. ‘I used to keep pigeons on my roof when I lived in Brooklyn. I’ve always liked heights.’
Defeated again, Tom clambered up higher, surprised to find how tall the steps were, but eventually had to stop for another rest, when, trying to hide his exhaustion and nervousness, he took some more photos.
‘So what’s your fascination with Mayan culture?’ Molly asked, glancing about her and also squinting against the morning’s brightening light.
‘Oh,’ Tom said, surprised to hear an intelligent question from her and glad to be distracted from his fear of heights. ‘Their… their mysterious origins, I suppose.’
‘What’s so mysterious about ‘em?’
‘Well…’ Tom hesitated, wondering if he could manage to discuss such esoteric matters with her, but relieved to be talking instead of climbing. ‘Well,’ he began again, ‘we really know so little about them. In fact, all we really know about them is what you see before you. We *do* know that the Mayan empire included present-day Guatemala, British Honduras, Honduras, Salvador, and, of course, Mexico and Yucatán, but we only know that from the evidence of their great lost cities.’
‘Like this one, right?’
‘Right. But we still don’t know where they came from, why they periodically

abandoned their cities only to reoccupy them centuries later, and why their great civilization broke down and eventually dispersed even before the arrival of the Spaniards. So, given this, the Mayans were surely one of the most mysterious people on Earth, which is what makes them especially fascinating – at least to *me*.'

'I can tell you're an intellectual,' Molly responded, chewing gum, blowing bubbles, 'so let me tell you something about intellectuals: they all have holes in their brains.'

'Oh? How come?' Despite himself, Tom was becoming intrigued by this blunt-tongued young American lady. She had the confidence of all fools, he thought, and that lent her a certain charm.

'They can't see the woods for the trees,' Molly explained. 'I mean, these Mayans, they're probably just like our American Indians – like, they've been here since time began, right? There ain't no mystery to it.'

'Ah, yes,' Tom said, glancing down upon the lawns far below, but quickly looking away again, feeling dizzy. 'That theory belongs to the "Independent Origin" school of thought – '

'Pardon?'

' – which holds that American Man – in this case, the Mayans – was here from the beginning. However, there *is* another school of thought, the diffusionist theory, which holds that a large body of evidence indicates that other races – Chinese, Etruscans, Negroes, Phoenicians and Jews – '

'Don't drag *us* into this!'

' – came here first and contributed elements of their own culture to the Mayans.'

'Just hold on there, pal. Regarding us Jews – '

'However,' Tom continued, now enraptured with his own thoughts, being distracted from the dizzying heights, 'wherever the Mayans came from, they were almost certainly in this peninsula as early as 1500 BC, and it's possible – only *possible* – that their many migrations were due to periods of drought. As to their disintegration and ultimate dispersal, it is possible – just *possible* – that during one of the many droughts the peasants revolted, slaughtered the ruling priests and nobles, and thus, depriving themselves of their knowledgeable leaders, ordained their own destruction.'

'Possible,' Molly echoed him.

‘Pardon?’
‘Only possible. You intellectuals don’t know nothin’ from nothin’ – you’re just making guesses. With guys like you running loose in Academia, I’m glad I didn’t have a proper education.’
‘Very funny,’ Tom said.
Molly grinned at him. ‘You wanna start climbing again?’
‘Why not?’ Tom said boldly.
This time, Molly took the lead and Tom, though resenting that he was behind and below her, could not help feeling comforted by her presence, which somehow seemed protective, even though, when you really thought about it, he would have been more protected had she been behind and below him, to possibly break his fall if he slipped. In the event, after more strenuous effort, he followed her up onto the flat roof of the pyramid, this being the floor of the Shrine, which had its own roof, and gratefully crawled into its breeze-blown, cool, silent shadows.
That was when Molly screamed.

Chapter Three

In his palatial home in the rich man’s quarter of Bang Kapi, Bangkok, Thailand, the wealthy and powerful criminal Lu Thong was having lunch with the beautiful, diabolically evil Mai Suphan. Having just removed his golden, catlike body from his wide bed – not quite as catlike as Mai Suphan’s, but certainly just as slim – he was seated at the bamboo table in his dressing gown of shiny Thai silk, handwoven and dyed by the peasants whom he ruthlessly exploited.

‘So, my dear,’ he was saying to Mai Suphan as he smoked one of the cigarets that he was convinced, rightly or wrongly, would kill him sooner or later, though sooner, he often thought, might be better than later, ‘what is the situation with regard to the pharmaceuticals?’

He spoke perfect English with an Oxford accent of which he was proud, having been educated at that excellent university. His father, a Bangkok businessman of dubious reputation, had wanted him to be a corporate lawyer, which would have helped the family business, but Lu Thong, perhaps taking after his father and certainly loathing the English weather, had, upon graduating with a Law degree, returned home to create a criminal empire

based on drugs, prostitution and, more to his personal liking, the sale of stolen works of art and antiques. By ‘pharmaceuticals’ he did, of course, mean drugs and Mai Suphan understood this, being one of his most efficient lieutenants as well as his remarkably sensual, untrustworthy mistress.

‘We have no problems,’ she now told him, finishing off her caviar on toast and dabbing at her luscious lips with a hand-painted paper napkin of the kind used only by the exceptionally wealthy. ‘Every dealer in Bangkok is now under our control, and the streets, it can safely be said, are yours to command.’

‘I’m surprised you’ve had no problems,’ Lu Thong said, exhaling a thin stream of smoke and fully aware that Mai Suphan, though his mistress, was not a girl to be trusted. Like many a Thai girl who had come up the hard way, she had very expensive, Westernized tastes and she was, furthermore, as independent as a wild cat in the forest. Sooner or later she would want to be her own woman. He would have to watch out for that.

‘You mean those who refused to cooperate?’

‘Exactly,’ Lu Thong said.

‘They’re all either in their graves or went up in smoke,’

Mai said, referring to the crematorium, which was how most in Thailand preferred to go to their Maker. Most of the drug dealers, coming from traditional families, had gone up in smoke. ‘Not one has survived.’

Lu Thong smiled. ‘I’m sure you enjoyed that little task, my sweet.’

‘I’m sweet because I enjoyed it.’

‘Your pleasures run to the diabolical,’ Lu Thong said, ‘and I find that irresistible.’

They were sitting on velvet cushions placed on the floor on both sides of a low glass-topped table. Mai, wearing a skin-tight Malaysian *cheongsam* slit up to the thigh, curled her long, shapely legs beneath her, drawing his dark, glittering gaze to her silken skin and perfect ankles in stiletto-heeled shoes.

‘You think I’m evil,’ she said.

‘I don’t believe in the concept. I only believe in what men – and women - *do*. And they do what they need to do in order to survive – no more and no less. Moral judgement, the concept of good and evil, becomes redundant when a man – or a woman - knows only one way to survive and has no choice but to take it. Where is the evil here? No, my dear, I do not think you’re evil; I think you are as you were born to be – and you can’t be anything else.’

‘*I* think I’m evil,’ Mai said, ‘but I rather enjoy it.’
‘I’m sure you do,’ Lu Thong said.
He studied her face, which was beautiful beyond compare, and wondered how such beauty could mask a soul so utterly black. She didn’t have an evil face – for indeed it was sublime: high cheekbones, enormous liquid brown eyes, an almost perfect, piquant nose and the kind of full lips that made men imagine the most exquisite pleasures. It was also, however, a face that could become all things to all men by shifting through moods of darkness and light in a way that bordered on the prismatic. She was an actress at heart, only alive when playing roles, the more dangerous and deadly the better. Certainly she was as skilled at melting a hard man’s heart as she was at destroying the soul of a decent man or, if the occasion called for it, coldbloodedly killing him.
Lu Thong understood this because he’d virtually created her, abducting her from her jungle *kampong*, rescuing her from the thatched shacks raised high on stilts, from the stench of the open drains, from the squawking chickens and the goats, from the old men smoking opium and the women ageing dreadfully before their time because of endless labour and lack of hope. Mai had been abducted by one of Lu thong’s roaming gangs of brigands – the ones who regularly raided the *kampongs* and trading boats, pillaging and looting, murdering all witnesses, and abducting young girls for the slave trade. Mai had been such a girl, a rare beauty in rags, and Lu Thong’s brigands had carried her off in their boat and brought her, with other abducted girls, to one of Lu Thong’s many Bangkok brothels. There he had known her for the first time: her ravishing beauty and lust for life, her seductiveness and cruelty, the pleasure she gained from sex and violence, having been abused as a child, all of which made her a woman to reckon with. So he had decided, in the fullness of time, having personally sampled her sensual artistry and total lack of morality, that he could mould her into what he wanted her to be and then use her for better things.
This he had done. But she was even better than he had thought, a natural talent, an unscrupulous little witch who could never be trusted. It was no accident, therefore, that he had carefully trained her, refined her love of violence, encouraged her lust for wealth and power, eventually turning her into his deadliest, most efficient lieutenant in his ever-expanding world of vice and crime. She was ideal as a tool for blackmail, for various forms of

entrapment, and finally, when he had addicted her to drugs, as a killing machine. She was a cold, calculating, clever woman, dangerous even to him.
‘Actually,’ she now said, having learnt her perfect English from him, ‘I’m just a simple girl with a simple girl’s needs, easily satisfied.’ She raised her glass of champagne before her melting brown eyes, alight with selfconfidence. ‘Champagne and caviar and great wealth. What else does a girl need?’
‘Sex?’
‘That’s for the taking.’
‘For your kind, that’s true. I consider myself lucky to have you just by snapping my fingers, but I know you have others.’
‘So do you,’ Mai said. ‘You’ve always told me that boredom kills lust, variety being the spice of life, and that I, like you, should take what I can where I find it. What you tell me, I practise.’
Lu Thong smiled again, amused by her impertinence. He had strangled other women for less, but Mai Suphan was a special case. Being dangerous, she kept him on edge and that was better than boredom.
He had a low boredom threshold, finding most of life banal, and he needed the thrill of danger, high risk and conquest, to regenerate his easily depleted spirit and strengthen his flagging will to live. Mai Suphan was such a challenge, being treacherous beyond belief, but he still needed power beyond measure to keep him afloat. For that he would need the Crystal Skull – and it loomed large in his thoughts.
‘You do what I tell you,’ he said, ‘because it gives you more freedom than you could possibly have otherwise. You do what I tell you because it suits you, but when it doesn’t, you’ll stop.’
‘And then?’
‘Then we’ll come into conflict.’
Smiling like a Cheshire cat, Mai placed her champagne glass back on the table, then leaned forward to sniff up the cocaine that lay like snow on its surface. As she did so, the silk *cheongsam* rippled over her body, outlining every exquisite curve and hollow, making Lu Thong breathe deeply. Hearing that sound, Mai straightened up again and said, ‘You’ve just had me.’
‘And will have you again if I so desire.’
‘You’re insatiable,’ Mai said. When she leaned back on her hands, her long black hair fell onto the cushions, spreading out like a rug. ‘You’re insatiable

because you're restless,' she said. 'Like a spoilt boy, you've smashed all your toys and now need something new.'
'What toys?' Lu Thong asked.
Mai waved her right hand, indicating the spacious lounge with its rare paintings, glittering chandeliers, antiques and rare crystals, some purchased legally, but most of them stolen and all of them priceless. 'All of this,' she said. 'All the wealth you've acquired. You've got it because it was a challenge to acquire it and now it means nothing to you. What comes after this?'
What a smart bitch she is, Lu Thong thought. Too smart for her own good. I drag her out of the *kampongs*, I teach her everything she knows, and now she throws her knowledge back in my face. It's my own fault, of course.
But he had to admire her for it, so he told half of the truth. 'I'm bored with drugs and sex – even with my wealth and power – but I'm compensating by reaching beyond the merely rare and priceless – the world's great paintings and antiques; those bought and sold behind closed doors – and am now striving to obtain only those artefacts that are not only rare, but legendary.'
'What does that mean?'
Lu Thong offered a loud sigh, feeling oddly inadequate, and turned his head to gaze through the panoramic window that overlooked the sprawling city of Bangkok, with its 3,000,000 lost souls. They were all lost, of course, because this was God's wish (or so Lu Thong thought) and they included the wealthy of this very area, Bang Kapi, the squatters of Klong Toei, where Lu Thong's drug business thrived, and the tolerably poor of Din Daeng and Hua Mak, ghettoized in their welfare-housing estates and more fodder for Lu Thong's pimps and drug traffickers. Most Thais called Bangkok 'Krung Thep' – the City of Angels – and Lu Thong, who was fond of the decadence of Los Angeles, always thought of that great American city, where crime was richly rewarded, when he considered the cesspit he now ruled. Down there, in the sweltering humidity, around the banks of the Chao Phraya river, the Chinese of Samp Peng, the Indians of Wang Burapha, and even the Westerners in the affluent eastern section of the city were all subjected, in one way or the other, to his rule. The city was overcrowded and this overcrowding, not unlike that of a bee's nest, was honey to Lu Thong. He exploited not only the poverty, but the gap between rich and poor, as well as the witless yearning of foreigners for exotic experiences. Thus, his nightclubs and restaurants, his

bars and brothels, brought him excellent revenue.
Nevertheless – and this saddened him – he could also see down there the many *wats*, or Buddhist monasteries, over three hundred in all, that upheld the values with which he had been raised, but now could not accept. He was a religious man at heart – he felt that life must have some meaning – but until he could find something greater than life's banality, the meaningless crawl from birth to death, he would never be able to sleep well without his nightcap of opium. For this reason – to rise above the need for opium and other sedatives, including Mai Suphan – he required nothing less than the world's greatest treasure.
He needed the Crystal Skull.
Sighing again, turning back to the gorgeous Mai Suphan, he said, 'There are treasures, my dear, that you cannot even begin to imagine – treasures so rare that they're often assumed to be legendary, rather than actual artefacts, but treasures that actually *do* exist and are so highly prized that only those with extraordinary determination – and, of course, the financial means – can possibly obtain them.'
'Such as?'
'The missing Lodestone from the Great Pyramid of Giza, said to be the Philosopher's Stone imbued with unearthly powers. The Excalibur Sword of King Arthur, also imbued with magical powers. The Holy Grail, which may or may not exist as a physical object but is widely believed to be the chalice used by Christ at the Last Supper and therefore capable of giving magical powers to the one who possesses it. The coded manuscript from the church of Rennes-le-Château, said to reveal the location of the most fabulous treasure in the world – that of King Solomon. The infamous *Necronomicon*, a book containing the secret code that can summon forth the Great Old Ones and enable the holder to take possession of the whole world. And, of course, the legendary Crystal Skull of the Maya – for, alas, there is more than one, though not all of them magical – that is said to be able to conjure up all the hidden powers of the universe, perhaps even revealing the true face of God and the devil. These are treasures so rare and valuable that even I, who have treasures that many would willingly die for, find them irresistible. In fact, these are the *only* treasures that will now satisfy me, and I'm determined to find at least one of them – for indeed, if a man possesses even one of them, he'll have as much as any human being can reasonably deal with. He will, in

truth, be gambling with the Great Unknown – and that, my dear, I am convinced is the only challenge now worthy of me.'
'Are you serious?' Mai asked.
Insolent bitch, Lu Thong though. She can help me, but her time will surely come and I'll be there when that happens.
'Yes,' he said, 'I'm serious. Even now I'm in pursuit of the legendary Crystal Skull of the Maya… And I believe that it's at last within my grasp.'
'What makes you believe that?'
Though Mai Suphar was clearly sceptical of what she had been told – she was an earthly woman, after all, finding gold in cesspits – she also respected Lu Thong's judgement and would, at the very least, give serious consideration to anything he told her. If he believed that this Crystal Skull was valuable, then almost certainly it was – not, in her view, as a magical artefact, but almost certainly as a saleable item in the illicit international marketplace for antiques. She was interested because of that and that alone, so she wanted to hear more.
'You must know,' Lu Thong said, 'that if I do anything, I do not do it by halves.'
'Yes, I know that,' Mai said.
Lu Thong nodded his appreciation. Then, with a lazy curving of his index finger, he pointed at the ceiling, indicating the upper floor of his palatial home.
'Up there,' he said, 'is Professor Paul Schwarz, an English expert in antiquities and the world's foremost authority on the ancient Maya. Learning that he had been hired by the Museum of Mexico to work in their library and update their records on Mayan relics, I paid him handsomely to use his own knowledge and, of course, the museum's considerable research facilities, to learn everything he could about the original Crystal Skull and pass that information on to me. Having been doing that on my behalf for the past couple of years, the good professor has finally come up with the information, strongly substantiated, that the only genuine Crystal Skull in the world – apart from the one held in the Museum of Mankind in London – is to be found in a specially carved repository
– a kind of miniature tomb – in the roof of the Temple of the Warriors in Chichén Itzá.'
'No problem there,' Mai Suphan said.

‘Exactly,’ Lu Thong said. ‘So a few days back – the same day, in fact, that Professor Schwarz brought me this news – I despatched one of my best men, an expatriate American gangster, to go to Chichén Itzá and bring the Crystal Skull back here. And…’ Lu Thong checked his international wristwatch, then looked up again. ‘According to my calculations, he should have found it by now and will already be on his way to Mérida, en route back to here.’
‘Sounds good so far,’ Mai said.
‘Are you being cynical, my dear?’
‘No,’ Mai replied. ‘I’m merely thinking that if your Yank gangster-friend *has* actually found this Crystal Skull, then you’re going to have to keep the matter secret until you decide what to do with it.’
‘So?’
‘So the only person who’ll know about it – apart from your Yank gangster and, of course, me – is that helpful academic now resting upstairs. Namely, Professor Schwarz.’
‘Ah, yes,’ Lu Thong said. ‘That fact is undeniable. Not that I hadn’t thought about it, but it’s nice to be reminded. He will, of course, be disposed of.’
‘Don’t do that,’ Mai said. ‘You’ll be depriving me of my pleasure. Let Professor Schwarz return to his hotel. He won’t last very long.’
Lu Thong smiled, knowing exactly what she meant, and said, ‘He’s all yours, my sweet.’
Returning Lu Thong’s smile, Mai uncurled her delicious legs and stood up by the low table, stretching her fabulous, seductive body.
‘You want anything before I leave?’ she asked.
‘You’ve exhausted me already,’ Lu Thong replied.
Smiling even more broadly, her cynicism obvious, Mai picked up her alligator-skin bag, slung it over her bronzed shoulder, then nodded and walked out of the room.
When Lu Thong heard the front door slam shut, he picked up his intercom, dialled a number, and told his goons to inform Professor Schwarz that he could pack his overnight bag and come down to the lounge. The professor arrived within minutes, his bag hanging from one shoulder. Dressed in a light-grey suit with shirt and old-school tie, he was slim, silvery-haired and still handsome, though clearly scared mindless.
‘Does this mean I can…?’
He had been invited three days ago to convey his latest findings about the

Crystal Skull over an unforgettable, wine-sodden gourmet meal. Once he had conveyed the news that Lu Thong so badly wanted to hear, he had been sent up to a guest bedroom with one of Lu Thong's exquisite slave girls. When the good professor awoke the next morning, he found the girl gone and, even worse, his room door locked. He had remained there, albeit with a luxurious *en suite* bathroom and with meals delivered three times a day, for three lonely days, no doubt tormented by the knowledge of what fate might now be in store for him. So, having been finally released from the bedroom, his prison, and allowed to bring his overnight bag with him, he was visibly relieved, though still not sure if he had good cause to be so.

'Yes, you can leave,' Lu Thong said. 'I *do* apologize, my friend, for having kept you here for so long, but I had to be sure that your information was correct. Luckily for you, a call from my man in Yucatán confirmed that the Crystal Skull was indeed where you said it was and that he was going to the temple to collect it and bring it back to me. Almost certainly he will have done that by now – so you may leave. Please rest assured that you *will* be well paid.'

'I've been paid enough already,' Professor Schwarz replied, inching back towards the door of the lounge, obviously still not believing his good luck. 'But, of course, if you insist, a small bonus would be…'

'Appreciated,' Lu Thong said, completing the professor's sentence for him, understanding that he had a dry throat and needed reassurance. 'You can be sure that you'll be paid more than you can imagine for what you have done. Thank you and good day.'

'Good day, Mr Thong.'

Breathing heavily, Professor Schwarz turned away and hurried out of the room. When Lu Thong again heard the front door slam shut, he sighed, smiled triumphantly, then picked up the telephone and asked for a number in Mexico City. The line was not good – there was an awful lot of static and the operator was an idiot – but eventually he managed to connect with his friend on the ground and asked if the Crystal Skull had been located.

The answer wiped the smile from his face and made him slam the phone down.

Chapter Four

Molly's frightened screaming tapered off as Tom straightened up and saw her at the other side of the floor of the Shrine, silhouetted by the brightening morning light. She was staring down, bug-eyed, at what looked like three piles of blackened rags scattered around a rectangular hole in the floor. One of the stone slabs, Tom noted, had been chipped free with a hammer and chisel, which he could see lying close to the hole. He was still wondering what had made Molly scream when he realized that the piles of blackened rags were actually the charred remains of three human beings. Discerning this, and then smelling the scorched flesh, he almost threw up.

'Oh, my God!' Molly exclaimed, staring at each of the corpses in turn. 'What the…?'

Holding his handkerchief over his mouth and nostrils, Tom was still fighting to stop himself from retching. When he felt that it was safe to do so – when his heaving stomach had settled down – he removed the handkerchief from his face and forced himself to look at the charred corpses. He did not look for long. The sight of those burnt men was too awful to contemplate. Revolted, he turned away and gazed out over the ruins of the Complex of the Thousand Columns, the nearby Temple of the Warriors, and, beyond it, the dense trees of what seemed like endless, almost totally flat jungle. Then, reluctantly, he turned back to Molly and her wide-eyed, disbelieving gaze.

'They're all burnt to a cinder,' she said, obviously regaining control of herself but still scared.

'Yes,' Tom said, just as scared, or possibly more scared than she was, but trying not to show it. 'Burnt to a cinder – quite so.'

'And you can still smell the poor bastids – '

Almost retching at merely being *reminded* of that fact, Tom placed the handkerchief over his mouth again.

' – which means that whatever happened here, it only happened a short time ago. But what the hell *did* happen?'

Managing to control his churning stomach once more, Tom removed the handkerchief from his face and said, 'They've been burnt to death. I should think that was obvious.'

'But how? And by *what*?'

'Pardon?' Tom was still too dazed and shaken to think straight.

'Look around you,' Molly said. 'What do you see? Those corpses have been burnt to a cinder, but nothing else here – not even the floor – has a burn mark

on it. So what incinerated those guys without touching anything else?'
'A flamethrower?' Tom ventured.
'A flamethrower would have burnt the stones of the floor or at least one of the walls, but the only things blackened here are the corpses. Now how the hell could that happen?'
'I'm sure there must be a logical explanation. I…'
'So look around you again.' Demonstrating, Molly turned slowly on the balls of her feet, intending to study every side of the Shrine. Then she stopped and her eyes grew wide again.
'What…?'
Tom followed Molly's downward gaze… and nearly jumped out of his skin when he saw, not far from the three dead men and also resting on the floor, a brightly glittering, life-sized crystal skull. Its empty eye sockets appeared to be staring at him.
'Christ!' Molly exclaimed.
'Deary me,' Tom said.
'What the hell's *that*?' Molly asked.
'A skull,' Tom replied, stating the obvious.
'Not a real one, buddy. It's made of glass or crystal. It looks pretty damned valuable to me – and those guys there…' she indicated the charred corpses on the floor… 'were obviously here to remove it from that hole in the floor.'
'Stealing it?' Tom responded, not being too bright right now.
'What the hell do *you* think? It had to be hidden in the floor, under that stone that's been removed. And shortly after they took it from there, they were charred to a cinder. But how? And by *what*?'
Tom started forward, intending to study the skull up close, but at that moment he was struck by two dazzling beams of light that shot forth from the skull's gaping eye sockets.
Molly screamed again.
Temporarily blinded, shocked by Molly's sudden screaming, Tom thought briefly of the three charred corpses on the floor and imagined that he was about to suffer the same fate – burnt to a cinder by that magical, dazzling light. Instinctively, as if attacking a dangerous beast, he jumped forward and kicked out at where he judged the crystal skull to be located. The toe of his boot connected with it and sent it flying away to hit the wall behind and, judging by the ringing sound it made, to roll over the floor.

When Molly stopped screaming, Tom opened his eyes again. Though surprised and relieved to find himself still alive, he was stunned to see that the interior of the Shrine was being swept by brilliant beams of light that were flashing on and off rapidly. Squinting between those dazzling striations, orientating himself by the sections of gloom behind them, which offered depth and definition, he saw that they were still beaming out of the eye sockets of the crystal skull as it rolled across the floor towards Molly. The beams of light were still flashing in silvery striations when the eye sockets turned sideways and upwards, creating a bizarre *son et lumière* spectacle within which Molly looked eerily ghostlike.

'Let's get out of here!' she yelled, obviously imagining, like Tom, that the beams of light were the cause of the charred corpses around the hole in the floor.

With heart racing and hands shaking, Tom needed no further urging to make his way across the floor to the steps and start down the sloping side of the temple. Molly was doing the same when the skull stopped rolling and the lights beaming from its eye sockets blinked out and did not come on again. On an impulse, Molly raced back across the floor of the Shrine, tentatively touched the skull with her fingertips, ascertaining that it wasn't hot, then picked it up and carried it down the steps, hurrying to catch up with Tom. When she reached his side, he was still running towards the low fence. He saw the skull in her hands. 'What are you doing?' he shouted, still running.

'We can't just leave it there!' she shouted back. 'It's too valuable to leave behind!'

'That's why you can't take it!'

'If I don't, someone else will. Now let's get the hell out of here!'

They clambered over the fence and piled into the jeep, then Tom drove away from the ancient site as fast as he dared, this time taking Mex.180 and not really thinking about where he was going. He just wanted to get as far as possible away from Chichén Itzá and the horror of what they had experienced there.

'You keep driving,' Molly said, leaning back over the seat to carefully place the crystal skull in her rucksack. 'Don't stop until we're really far from here. We don't want anyone following us.'

'Following us?' Tom asked, still too shocked to think straight. 'Who would want to…? You mean that crystal skull? You mean that someone might

follow us because you stole that crystal skull? I mean, why did you *do* that?'
Though realizing that he was sounding hysterical, he could not help himself.
'I didn't steal it, you dummy,' Molly said. 'I rescued it! Those guys were obviously stealin' it and they were burnt to death when they were doin' it, so the skull must be pretty damned valuable and it's better that we take it than someone else.'
Trouble, Tom thought hysterically. I knew that the minute I laid eyes on her. Every instinct told me so. Now she's made us both leave the scene of a multiple homicide and stolen that artefact into the bargain. Oh, dear God, this is serious!
'It's theft!' Tom shrieked, more hysterical than ever.
'It's rescue,' Molly insisted. 'Those dead men were obviously stealin' it. That means they were crooks. So we simply rescued it from a bunch of goddamned thieves. We might get a reward.'
'*We*?' Tom responded. 'Please don't include *me* in this. You stole that crystal skull – I had nothing to do with it – so please do *not* use the word "we".'
'Watch your driving,' Molly said.
'Don't change the subject,' Tom admonished her.
'All them vultures lifting slowly off the road,' Molly said. 'If you're not careful, if you don't watch them goddamned vultures, you might come across one too late and have to swerve to avoid it.'
'Please don't tell me how to drive,' Tom said testily. 'That's the absolute limit.'
'Okay,' Molly said. 'Fine.'
Tom was in fact driving at a dangerously reckless speed, either looking frequently in his rear-vision mirror to ensure that they were not being followed or glancing left and right at the vast Henequen plantations on either side of the road, half expecting to see a police helicopter lifting out of the trees to pursue him and bring him to justice. Realizing that he was suffering from acute paranoia caused by fear and disbelief, he tried to compose himself and turned back to the front just in time to see a vulture, bloated from having just fed on the body of a squashed, bloody chicken, rising awkwardly off the tarmac right in front of the jeep.
He swerved to avoid it.
'Damn!' Molly exclaimed.
The jeep went careening to the opposite side of the road and almost struck a

battered truck that was coming from the opposite direction. Swerving again to avoid the truck, Tom went into a screeching, shuddering skid that almost had him falling out of the vehicle while Molly hung on with all her might, holding herself well away from the windshield. Luckily, the jeep came to a rough, bone-jolting halt in a patch of dusty wasteground at the side of an ovalshaped building with a thatched roof and walls made of poles. Tom and Molly both coughed to clear their throats while vigorously waving swirling dust from their faces.

'Damned bird,' Tom muttered when the drifting dust had settled down.

'A vulture,' Molly clarified.

'Alright! Alright! So it was a vulture! What's the difference?'

'I told you so,' Molly said. 'I told you that if you – '

'Yes, yes,' Tom interjected, not wishing to be reminded by this stupid girl of just how stupid *he* had been. 'Thank you very much, my dear, but I think it's time we got out of this jeep and discussed what to do next.'

Molly glanced sideways at the oval-shaped thatched building that looked like it was about to fall down. It had an advertisement for a world-famous American beverage dangling over the front door. 'You mean over there?' she asked.

'Of course,' Tom replied grimly, already clambering down from the jeep and taking his travelling bag in one hand, being sensible enough not to leave it in the vehicle. 'Why not, may I ask?'

'That's just a shack,' Molly said.

'It's a *Posada*,' Tom informed her. 'A cheap hotel. We should be able to get a drink in there – and right now I could do with one.'

'That's not a *Posada*,' Molly replied. 'It's just some kind of sleazy bar.'

'I would never drink in a sleazy bar,' Tom assured her, 'and right now I intend entering that *Posada* for a soothing libation.'

'It's just a sleazy bar,' Molly insisted, though she climbed down from the jeep and picked up her rucksack. 'You might get more than a quick drink in there. You might get your throat cut.'

'It's a perfectly respectable establishment,' Tom said, 'but if you're nervous, by all means stay in the jeep until I return. As for me, I am thirsty and can recognize a normal *Posada* when I see one, so I'm going on in.'

'Okay,' Molly said. 'Fine.'

Shrugging, she followed Tom across the wasteground to the thatched

building. When they reached it, Tom saw that the building was indeed in a very bad state of repair and that the door – or what he had imagined was a door – consisted of no more than a piece of sackcloth hanging down to cover an empty doorframe. Tom stopped instinctively, wondering what was inside, but then he felt Molly coming up behind him and had no choice but to enter. Pulling the sackcloth aside, he created another cloud of dust. When he entered and he saw what was inside, he wanted to turn around and walk back out again. Indeed, he started doing so, actually making a half-turn, but when he saw Molly staring directly at him, her steady gaze challenging, he took a deep breath, turned back to the front, and entered the building.

The floor was bare soil, the bar was clearly the missing front door torn off its hinges and now resting horizontally on upright barrels, the few tables were made from chipped wood, and the paint had peeled off the metal chairs and left them all rusty. There were a few men at the bar, most of them short, brown-skinned, and black-haired, drinking either beer or the anise-flavoured liquor 'X-Tabentum', none friendly as Mexicans normally were.

'Oh, Lord!' Tom whispered.

'A *Posada*!' Molly said, loud and clear.

'Alright, so it's *not* a *Posada*.' Tom could scarcely contain himself. 'Now why don't you just take a seat while I fetch us a drink?'

Molly took a seat at the nearest table, placing her rucksack on the dirt floor at her feet.

'I respect my body,' she said, 'so nothing alcoholic for me – certainly not at nine o'clock in the goddamned morning. You wanna destroy your body with that poison, you go right ahead. Get drunk before you even have breakfast. I won't even pass comment.'

'Oh, won't you, indeed?'

'No, I won't.'

'I'm so grateful,' Tom said. 'So what would *you* like to drink?'

'*Horchata*,' Molly said.

'Pardon?'

'*Horchata*. It's a non-alcoholic drink made from rice, sugar, vanilla essence and ice water. More likely to quench a thirst than alcohol, but don't you listen to me. I mean, what would *I* know? If *you* need a shot of false courage, then by all means have alcohol.'

'I do *not* need a shot of false courage!'

‘You don’t have to shout.’
‘I’m not shouting!’
‘You are.’
‘Oh, go to hell!’ Tom said, then he spun on the heel of his boot and stomped to the bar, inflamed that a woman so immature could talk to him, a mature man of thirty, as if she was twice his age, and worse, cast reflections upon his courage. When he reached the bar and saw the unsmiling, unshaven faces around him, his courage sank back into his boots, but he managed, with his basic Spanish and a great deal of confusion, to obtain the drinks and pay for them. Then, even more aware of the grim faces along the bar, he returned to the table and chairs on their bed of dirt. Sitting down opposite Molly, he pushed her glass of *Horchata* across to her, had a good sip of his *Monteja* beer, then slammed his glass back down on the table.
‘Very good,’ he said. ‘Excellent.’
‘Quenched your thirst, did it?’
‘Yes,’ he said. ‘Perfectly.’
Molly had a sip of her *Horchata*, then placed her glass back on the table with deliberate delicacy. Moistening her full lips with her tongue, she said, ‘That’s pretty damned good.’
‘I’m pleased to hear that,’ Tom said.
‘No, you’re not,’ Molly said. ‘You’re so mad, you’d like it better if this was cyanide, but I won’t hold that against you.’
‘How kind of you,’ Tom said.
‘Hey, can we stop this? I mean, neither of us needs this. We’ve just shared an extraordinary experience, so let’s talk about it.’
‘Yes, let’s do that,’ Tom said.
Glancing left and right at the grim-faced denizens of this sleazy bar, all of whom were staring directly, antagonistically, at him, he recalled how he had desperately wanted to get rid of this sharp-tongued American floozy. But now, he realized, given the company they were both keeping, he was reluctantly comforted by her presence. She was tough, after all – she had *street cred’* – and that was more than he had. What he had was good breeding and an excellent education, neither of which were likely to be very helpful in these circumstances. So in truth, though he was loath to admit it, he was starting to appreciate the fact that she was sitting there facing him.
He could get rid of her, after all, in the near future, when life didn’t seem

quite so threatening. He could slip surreptitiously away from her.
‘So,’ he said, ‘where do we begin?’
‘We begin with this,’ Molly said.
Reaching down into her rucksack, she pulled out the macabre crystal skull. Shocked that she should be so stupid in front of what he assumed to be a bunch of Mexican bandits, Tom was about to protest when he heard from the bar behind him a series of frightened outcries that made him glance back over his shoulder. Most of the men at the bar – who had looked to Tom like fearsome bandits – were now staring fearfully at the crystal skull and speaking loudly amongst themselves. Even before Tom could get fully to grips with this, they hurriedly downed their drinks and rushed out of the building, glancing apprehensively at the crystal skull as they passed the table and then looking away again. When they had left, only the barman and one other customer remained. Though clearly not as frightened as the others, they were whispering to each other.
‘Well, really!’ Tom said, turning back to Molly, who had placed the crystal skull on the table, holding it between her hands, and was staring directly into its gaping eye sockets. The light from the naked bulb above reflected off the clear crystal of the skull and made it seem to glow magically within. Molly did not respond to Tom’s remark. She appeared not to have noticed the men stampeding from the building and was, Tom noted eventually, staring at the skull as if hypnotized by it.
After speaking to her a few more times and receiving no response, he realized, with a shock, that she *had* been hypnotized by the skull and could neither see him nor hear what he was saying. Shocked and even more frightened, he reached across the table, slid the skull away until it was out of her line of sight, then gently shook her right shoulder. Her eyes opened instantly, but she blinked a few times and glanced about her, as if disorientated.
‘What…?’ She rubbed her eyes as if they were sleepy, then stared at Tom as if seriously bewildered. ‘What happened?’ she asked.
‘You were hypnotized by that skull,’ Tom told her. ‘*Really* hypnotized. Your eyes were wide-open, but you didn’t seem to be hearing or seeing anything. Do you *remember* anything?’
‘Yeah,’ Molly replied after a considerable pause, her eyes slitted to denote that she was thinking.

‘What?’
‘The last thing I remember is looking into the crystal skull and…’
‘Yes?’
‘It went all kinda milky – or cloudy – and then I saw…’
She paused again, clearly reluctant to give credence to her own words.
‘Yes?’ Tom said again.
‘Stars,’ Molly said. She slumped back in her chair, took a deep breath, glanced nervously at the crystal skull, then quickly looked away again. ‘Just stars,’ she continued, returning her gaze to Tom. ‘Millions of stars in a galaxy. I felt myself floating into those stars… and that’s all I remembered till you woke me up… Nothing but stars.’
They were silent for a moment, both trying to take this in, then Tom repeated, ‘You were obviously hypnotized.’
‘Yeah,’ Molly said. ‘Right.’
Tom sighed nervously and glanced at the bar, where the barman and his sole remaining customer were staring steadily at him. Lowering his gaze and feeling clammy with unease, he said to Molly, ‘So what do we do now?’
Regaining her senses, Molly glanced at the crystal skull, which now, being away from the naked light bulb, was not shining quite so much. ‘Christ,’ Molly said, ‘whatever that thing is, whatever it can do, it must be real valuable. I say we take it to a museum in Mérida and find out just what it is, and, you know, find out just how *valuable* it is and if we can clean up by selling it.’
‘I suspect that selling it would be illegal,’ Tom said.
‘Oh, yeah?’ Molly responded with a sly grin.
Realizing beyond any shadow of a doubt that this young lady was not only street-wise but unscrupulous, and could get him into a whole heap of trouble, Tom was about to make the retort of an honest man when the barman walked up to the table. After glancing at the crystal skull, then, or so it seemed, deliberately looking away, he said in faltering English, ‘*Perdóneme*, *Seňor*, but where did you find that?’
‘What?’ Tom asked innocently, though Molly quietly dragged the crystal skull towards her.
‘That,’ the barman said, nodding to indicate the artefact without actually looking at it. ‘That crystal skull on the table.’
‘We bought it,’ Molly said, lying brazenly, Tom noted, with practised ease.

‘From a roadside trader.’
‘*Perdóneme, Seňor*, but you’re lying,’ the barman said. Like most Mexicans, he was short, as broad as he was tall, but, unlike most Mexicans, his unshaven, swarthy face was threatening. Also, his hairy right hand was dangling over the knife tucked down behind his belt. ‘No local trader would deal in such an object – not even an artificial skull. So, please, where did you get it?’
‘We found it in a field,’ Molly lied, this time even more brazenly. ‘So what’s it to you?’
Shocked that Molly could be so insolent to this meanfaced brute with a knife in his belt, Tom was about to calm what he imagined would be troubled waters when the barman said, ‘Please understand, Seňor, I don’t want the skull. I don’t even want it in this bar. I only want to know if you found it in Chichén Itzá. This is all I ask.’
‘Yes,’ Tom confessed, ‘that’s where we found it.’
‘In the pyramid of El Castillo?’ the barman asked.
‘That’s right,’ Tom said. ‘Why?’
The barman took a deep breath. ‘Seňor, if you truly found that skull in the pyramid of El Castillo, you’ve come into possession of the legendary Skull of Doom.’
‘Which is?’ Tom asked.
‘According to Mayan legend, the Skull of Doom was hidden in the pyramid by the priests of ancient times. They hid it because it has magical powers that can be used for good or evil; and the priests, when they saw that their civilization was collapsing, did not want it to fall into the wrong hands. It is called the Skull of Doom because only the pure of heart can possess it without fear, and so most of those who have found it, being mortal men with mortal weaknesses, have come to bad ends. So please, Seňor, leave my bar and take that crystal skull with you and do not return. That skull is a curse not only to those who possess it, but also to those who gaze too long upon it. Please leave here right now.’
‘I’ll just finish my drink,’ Molly said.
‘No, you won’t,’ the barman said, lowering his hand to the knife at his belt. ‘If you please, you will get up and leave right now.’
‘Of course!’ Tom said. ‘Naturally! Come on, Molly, let’s go.’
Though she grinned mockingly at him, Molly lowered the crystal skull back

into her rucksack and then pushed her chair back. As Tom did the same, preparing to leave, he noticed that the sole remaining customer, still standing at the bar, was staring steadily, fearlessly, at him with only one eye. His other eye, Tom noticed, was made of glass and it seemed to glitter unnaturally.
Shocked by that sight, feeling as if he was dreaming, Tom hurriedly turned away and led Molly out of the building. When they were both in the jeep, he drove off as quickly as possible, heading for Mérida. He was hoping for peace and quiet, for time to think, but Molly soon started talking.

Chapter Five

All heads turned when Mai Suphan entered the busy lobby of the Oriental Hotel overlooking the Chao Phraya River. The child of a Thai mother and Chinese father, Mai was a truly exquisite combination of the two races, with lightbrown, almost golden skin, heavenly brown eyes, long black hair that fell to her slim waist, small but perfect breasts, and long, shapely legs that were always emphasized by her stiletto-heeled shoes and a skintight *cheongsam* of shimmering silk, slit up to the thigh. When Mai strode deliberately across the lobby, her hips swinging sensually, tight buttocks quivering, the slit in the *cheongsam* repeatedly exposed each of her long legs in turn, causing most of the men present to suck their breath in.

The hotel was famous for having housed Joseph Conrad and Somerset Maugham, but Mai did not know this and wouldn't have cared if she had. Her only interest in this opulent establishment was the fact that it was used mostly by Americans and Europeans, all of whom had more money than they knew what to do with. This was Mai's general interest and it was strictly professional: she usually came here to pick up clients and seduce them into selling their souls to the devil for ephemeral pleasure. Her particular interest this day, however, was in seeing Professor Paul Schwarz, who, after his brief taste of heaven, would be slung into hell.

Taking the lift up to the sixth floor, Mai walked along to the suite being used by Professor Schwarz, though it was, of course, being paid for by Lu Thong. When she rang the bell, the door was opened by Schwarz, who beckoned her in so urgently that she knew he was embarrassed to be using the services of a whore, albeit high-class, which he assumed Mai was. Amused, Mai stepped inside, deliberately letting her breasts brush against the

professor's chest. The suite was spacious and exotic, with french doors overlooking the river, Siamese-styled furniture decorated with lacquered Thai mother-of-pearl Celadon lamps and Bencharong ceramics, and a magnificent four-poster, highcanopied double bed covered in a quilt finely woven by hill-tribe women.

'You *are*, I take it, the woman sent by Lu Thong?'

Professor Schwarz asked as he closed the door behind her. 'Yes,' Mai replied. 'Mr Thong told me to tell you that I've been sent here as a sign of his appreciation and to reward you for your services to him.'

'Do you know what those services were?' Schwarz asked nervously.

'No,' Mai lied blandly. 'I'm just a call girl. Mr Thong hires me by phone to pleasure certain of his friends and associates. He never tells me their business. I'm just given their name and address and the date and time of when I'm to visit them. When I'm finished, I invoice him by email and he always pays promptly. It's as simple as that.' 'You speak perfect English,' Schwarz said, clearly relieved by what she had told him.

'Thank you,' Mai said.

The professor was slim, silvery-haired and still youthfully handsome, with the slightly naïve air of a man who had spent most of his life in scholarly pursuits. Though wearing grey slacks and an open-necked shirt, his feet were bare.

Already prepared for bed, Mai thought, though he's nervous about it. This one should be easy.

The french doors offered a superb view of the river, its huge steel barges heavily laden with sand, old teak rice barges used as family homes, tugboats, longtail boats, fishermen's boats, bum boats, sampans, and ferries packed with vehicles and foot-passengers. Glancing down, Mai saw some water-borne vendors cooking and serving steaming noodles to those on the family barges, while halfnaked children dived off the sides to swim in the filthy,

polluted water.
I could have been one of those poor kids, Mai thought. Rather them than me.
Turning back to face Professor Schwarz, she noticed the up-and-down movement of his eyes, which were slightly dilated, having just taken in the length of her wondrous body. She also saw the bulge in his trousers and knew just what he wanted.
‘Can I fetch you a drink?’ Professor Schwarz asked.
Mai saw a half-finished bottle of Singha beer and an empty glass on the bedside table. There was also a bottle of champagne in an ice bucket, with two flute glasses beside it. Clearly, the professor, ill at ease in this kind of situation even while he desired it, had prepared for her arrival and was hoping to break the ice with alcohol. ‘Some champagne, perhaps?’
‘No, thanks,’ Mai said, having drunk champagne earlier with Lu Thong and, also, wishing to amuse herself by playing on the Englishman’s nervousness. ‘Do you have Mekhong whiskey?’
Schwarz nodded. ‘Yes.’
‘Then that’s what I’ll have,’ Mai said. ‘With club soda and lime.’
‘I’ve heard that Mekhong whiskey packs a powerful punch,’ the professor said. ‘It could be too strong for someone with a delicate constitution.’
‘So?’
‘You’re a woman. Mekhong whiskey may be too strong for your stomach.’
‘Nothing’s too strong for my stomach,’ Mai replied, not referring to the drink but to the many dreadful things that she had seen and done in her checkered past. ‘So please make it a whiskey.’
‘Right,’ the professor said.
As he was pouring her drink, Mai dangled her crocodile-skin shoulder-bag over the arm of a chair, then

sat on the edge of the bed, crossing her legs, thus exposing a teasing length of golden thigh. When Schwarz turned back to see her, that sight almost took his breath away and brought a blush to his pale cheeks.

Mai smiled. Schwarz stepped towards her and then stopped, holding a glass of whiskey in each hand, but seemingly paralyzed. Mai smiled again and patted the area of bed right beside her.

'Sit here,' she said.

Nodding obediently, Schwarz stepped forward again, handed Mai her drink, then sat beside her, quite close but not as close as she had indicated, clearly still feeling nervous. He studied his own feet, then had a sip of his whiskey and raised his uneasy gaze to her.

'I was surprised to receive Mr Thong's call,' he said, 'telling me that he was sending a woman over.'

'He's a kind man,' Mai said, 'but he doesn't do it for everyone. He only sends me to those he feels indebted to. He must owe you a lot.'

'Not really,' Schwarz said. 'And I don't think he's quite as kind as you say, since he practically kept me prisoner in his home for three days and nights.'

'Oh? Why was that?'

'I gave him some information that I knew he desperately wanted and he said I had to stay there until he had it checked out. He said that if it didn't check out, he was going to kill me – and I'm sure he meant it.'

'He certainly did,' Mai said. 'On the other hand, he must have been satisfied with what you told him, once it *had* checked out. Otherwise he wouldn't have sent me to you. Aren't you *pleased* that I'm here?'

'Well…' Schwarz looked at Mai, at her heaving breasts and gorgeous, almost fully exposed legs, then sighed with lust and embarrassment. 'Yes, I suppose so.'

Mai let him watch her drinking and held his gaze while she licked her lush, moisturized lips. The bulge in his

trousers was still there, but the glass in his hand was shaking and his gaze was distracted. Clearly, he was stunned by her beauty and drunk on his lust. Mai was pleased to observe this.

‘You’re a very handsome man,’ she told him.

‘You don’t have to say that,’ he replied.

‘I meant it,’ Mai said. ‘You’re a very handsome man for your age, though you seem a bit shy.’

‘I’m just not used to this.’ He had another sip of his whiskey, then rested the glass on his right knee. ‘I wouldn’t do this in England.’

‘You’re married?’

‘Yes.’

‘Children?’

‘Two.’

‘You feel guilty?’

‘Yes, I suppose so.’

‘That’s nice,’ Mai said.

The professor thought she was being kind, when in fact she was taking pleasure from his guilt and playing with his emotions.

‘Do you want me to leave?’ she asked, deliberately crossing one leg over the other, exposing even more thigh to mesmerize his guilty, lustful gaze. ‘Ýou don’t *have* to have me – though, of course, Mr Thong might be offended and blame *me* because this didn’t work out. Nevertheless, if this is making you feel bad, I’ll leave the room right now.’ ‘No, please don’t,’ the professor said.

Clearly, he was a decent man and this knowledge pleasured Mai even more. Imperceptibly, while crossing her legs seductively, she had moved closer to him. Now she turned slightly sideways, placing her breasts close to his chest, breathing deeply, sensually, her fabulous lips parted slightly. He was aware of her closeness, her heat, and his own breathing quickened.

‘Do you love your wife?’ she asked, deliberately

reminding him of that dear woman in order to torment him even more. ‘Í mean, is she why you’re feeling so guilty?’ ‘Yes,’ he said. ‘Í suppose so.’

‘That’s nice,’ Mai repeated. ‘So what would you like?’ ‘Pardon?’

‘I said, what would you like? There’s nothing you can imagine that I can’t do, but I have to know where you want to start.’

She had another sip of whiskey, deliberately licked her wet lips, then placed her hand on his trembling knee and gave it a light squeeze. His knee trembled even more.

‘Well,’ he said, practically stuttering, ‘I don’t…’

‘Know.’

‘Pardon?’

‘You don’t know. You’re a happily married man, and although you love your wife, there’s a limit to what you’ve done together, so you don’t know what to ask *me* for. Well, what would you *like*?’

Now in as much pain as a man on a rack – increasing guilt on the one hand, helpless lust on the other, both encouraged by Mai – the professor had another sip of whiskey and blushed with embarrassment. When he shrugged, hardly knowing what to say, too inhibited to give voice to the wild, reckless desires that now filled his thoughts, Mai slid her hand higher up his leg, up to near where the bulge was, then spread her fingers and squeezed encouragingly again. Professor Schwarz trembled visibly. ‘Tell me,’ Mai said, almost crooning.

‘I…’ The professor opened and closed his mouth, then licked his dry lips, but he didn’t get further. Mai took hold of his free hand and placed it over her heaving breast, then pressed it down for him. He closed his eyes and breathed deeply.

‘Look at me,’ Mai said with quiet authority.

The professor opened his dazed eyes.

‘Why don’t I get undressed?’ Mai suggested, ‘and we can go on from there?’

The professor stared at her with dazed eyes, as if deaf, then eventually he nodded. ‘Yes.’
‘Why don’t you help me?’ Mai said.
In fact, she wanted to undress because she couldn’t move too much in the skintight *cheongsam* and soon she would need to move a lot. After removing the whiskey glass from the professor’s visibly shaking hand, she stood up, went to the bedside cabinet, and put both glasses down, his and her own. Then she returned to sit beside him again, first touching her knees to his, then smiling at him and licking her pouting lips, then helpfully squeezing the bulge in his trousers, and finally, artfully, turning her back to him.
‘Unzip me,’ she whispered.
With trembling hands, Professor Schwarz unzipped the *cheongsam*, running the zip all the way down her spine. He sighed audibly at the sight of her flawless golden back, then, forgetting his guilt, driven helplessly by his need, he leaned forward to press his hot lips to the skin between her fine shoulder-blades. Mai sighed and deliberately arched her spine to make him think she was loving this.
‘Mmmm,’ she crooned. ‘Now remove the dress completely.’
Breathing harshly, the professor tugged the shimmering dress off Mai’s smooth shoulders – works of art, as she well knew – and then peeled it off her lithe body, all the way down to her waist, groaning softly and repeatedly kissing her as he did so – the back of her neck, her shoulders, the shoulder-blades, then down her back until he reached the juncture where the spine leads to the crack at the start of her rump. By this time, the learned professor was on his knees, breathing harshly and practically sobbing, his body shaking with need.
‘Oh, God!’ he groaned. ‘Christ!’
He was tugging frantically at the *cheongsam*, trying to work it down farther, but he couldn’t do that until Mai

stood up, which is what she now did. When she stood over him, gazing down upon him, he looked up with blind eyes. ‘Take my shoes off,’ Mai said.

Obligingly, she raised her right foot, then her left, to enable the panting professor to remove the stiletto-heeled shoes while kissing her feet and sucking her toes and licking her ankles. When both shoes were on the floor, while the professor was still slobbering over her feet, she grasped his hair and jerked his head up, to let his eyes crawl all over her like spiders.

‘Now peel the dress off,’ she whispered.

Still on his knees, practically choking for breath and losing muscular control, the professor used both shaking hands to tug the *cheongsam* all the way down Mai’s long, shapely legs and over her ankles. She helped him by raising each foot in turn and stepping out of the dress. Then she bent down to pick the dress up and lay it out neatly on the bed, so as not to crumple it. This done, she turned back to face the professor, who was still kneeling on the floor, and spread her legs just in front of his flushed face. She was wearing a push-up bra, though she did not normally need it, and panties so brief that they were hardly more than a piece of string. She knew that to the average man she would have looked no less than breathtaking. As for the highly educated, distinguished professor, he was desperately trying to catch his breath, even as his widening eyes travelled up over her.

‘Now what do you want?’ Mai asked, looking down upon him with a small, deadly smile.

‘Anything. *Everything*!’

‘Then stand up,’ Mai said.

Freed from her skintight *cheongsam*, Mai was all set to go; so when the professor stood up, breathing hungrily in her face, she kneed him in the groin, making him scream like a stuck pig, then karate-chopped him on the side of the neck, sending him flying sideways to land spreadeagled across the big four-poster bed. The professor lay there, groaning, hardly knowing what had happened to him, until

Mai leaned down and dragged him off the bed, then picked him up and swung him over her shoulders and slammed him into the wall. He struck the wall with a sickening thud, actually cracking the plaster, then fell to the floor in a cloud of dust and rolled onto his back. His eyes were glazed and only came back to life when he vomited over his shirt. ‘You poor baba,’ Mai murmured.

She leaned down to him, smiling warmly at him, then took hold of the lapels of his vomit-soaked shirt and hauled him back to his feet. He stood there before her, swaying groggily from side to side, blood dribbling from his nose, until she kneed him in the groin again, making him scream and jackknife. Then she karate-chopped the back of his neck, hammering his face into her raised knee, breaking his nose entirely, then flipped him over her outthrust right leg to slam him into the floor for the second time. He gasped and groaned miserably and threw up again. Then Mai hauled him back to his feet, spun him around until he faced her, and used a jujitsu movement to roll him over her stooped shoulders, and finally, straightening up, to send him hurtling bodily through the air. He smashed through the french doors, glass exploding in all directions, and fell screaming to the crowded sidewalk six storeys below. Even as the sounds of wailing onlookers and skidding or crashing cars came wafting up from below, Mai was slipping back into her immaculate *cheongsam* and picking up her shoulder-bag and walking out of the room, a big smile on her lovely face, her eyes bright with excitement.

She walked along the corridor and stopped at a lift. When the lift door opened, a waiter from Room Service came out, bearing a tray of cocktails.

‘For me!’ Mai said. She picked up a cocktail, drained it in one gulp, placed it back on the tray, then gave the stunned waiter a glowing smile and took the lift down. When she emerged from the hotel, a crowd of onlookers was gathered around the broken body of Professor Paul Schwarz and the road was covered with shards of broken glass. Schwarz had crashed onto the

bonnet of a passing car and dented it badly, drenching it in his blood as he bounced off and onto the sidewalk, coming to rest between shocked passers-by. Some of those people were now sitting on the sidewalk, sobbing and being consoled by friends or other pedestrians. Also, due to the falling body, some cars had crashed into each other and the drivers were now violently arguing, each hoping to apportion blame to the other.

Satisfied with her evening's work, amused by what she was seeing, Mai called a three-wheeled taxi to the sidewalk and let the *samlor* driver pedal her away from the chaos that she had artfully wrought. She told him to take her to Bang Kapi, then sat back and enjoyed the ride.

Chapter Six

'All I'm sayin',' Molly was saying as Tom, who had dearly wanted peace and quiet, drove along Mex.180, heading back to Mérida, 'is that those men were burnt to a goddamned cinder, yet nothing else in the vicinity was scorched – so it couldn't have been done with a flamethrower or any other kinda weapon. You get my drift, pal?'

'I think so,' Tom responded, not wanting to recall the dreadful sight of those burnt men, let alone discuss the matter with the inexhaustible Molly. 'Perhaps it was a gangster-styled execution of the kind that one sees in the movies. You know? Someone pours petrol over some poor souls and then sets a match to them.'

'Petrol?'

'Gasoline.'

'Oh,' Molly said. 'Right. But that doesn't wear with me. If that'd happened, there would've been burn marks on the stones around them. Besides, if someone had done that to 'em, they'd have done it to get their hands on the crystal skull.'

'Sounds logical,' Tom said.

'Except they *didn't* bother to take the crystal skull. Now do you think it's logical for someone to set those three guys on fire and then not take what they came for? No way, pal. *No* way!'

Wishing that she would shut up for a few minutes at least, though feeling obliged to respond to her, if only to hear his own, much saner voice, Tom

said, ‘I don’t know why. Maybe in their haste to get away, they just *forgot* to take it.’
‘They set three guys on fire just to get it, and then they just *forget* it? Hey, gimme a break here! And besides, as I’ve just said, if those three guys had been torched with a flamethrower or set on fire with gasoline, there would’ve been burn marks on the floor, walls or ceiling – but there weren’t. So that’s the most mysterious part of the whole damned thing and it’s sure got me thinkin’.’
She’s thinking, Tom thought. God help me. The poor dear imagines that she’s thinking. The self-delusion is wondrous.
He studied the scenery passing by, the endless rows of cacti in the Henequen plantations stretching out to the flat horizon in the morning’s bright light. Eventually, returning his gaze to the road ahead, he said, ‘So what are you thinking? I can’t wait to hear it.’
‘Sarcasm,’ Molly said.
‘I can’t help myself,’ Tom retorted.
‘You’re just trying to shut me up, but I won’t shut up, ‘cause this subject needs talking through.’
‘It needs *thinking* through,’ Tom corrected her.
‘I’m thinkin’ aloud,’ Molly informed him. ‘An’ what I’m thinkin’ is that somethin’ really weird went on back there.’
‘Why do you sometimes complete your words and sometimes not. Like “thinkin’” instead of “thinking” - and so on and so forth?’
‘I’m being confused by your fancy English talk. I’m bein’ corrupted by your high-toned education. But I still say, speakin’ proudly like an American, that somethin’ weird went on back there.’
‘Weird,’ Tom murmured.
‘Yeah, weird.’
‘It wasn’t *weird*, my dear, it was *horrific*. Three men were brutally murdered back there.’
‘Right. But… *How*? And by *who*?’
‘Whom,’ Tom corrected her.
‘Okay, *whom*.’
‘Well…’ Tom began.
‘We’re agreed,’ Molly continued, though Tom could not recall agreeing to anything, ‘that they couldn’t have been burned by a flamethrower or torched

by gasoline, ‘cause nothing else around them was scorched. Right?’
Tom sighed wearily. ‘Right.’
‘Which means we’re dealing with something unnatural, right?’
‘Something…’ Tom was intrigued, despite himself. ‘Something… *unnatural*?’
‘Exactly! ‘Cause how else could that have happened? And if a human element was involved, they’d have taken the crystal skull with them.’
Tom glanced to the side and saw another Henequen plantation, with the cacti running in new rows for what looked like miles and the odd thatched shack rising lonesome out of them.
‘I’m afraid I can’t accept that…’
‘You ever hear of spontaneous combustion?’ Molly asked.
‘I don’t believe so.’
Clearly, Molly was getting into her element and becoming excited. ‘Spontaneous combustion,’ she explained enthusiastically, ‘is a mysterious phenomenon that makes human beings burst spontaneously into flames for no known reason. And what’s so weird about it is that, though the victims are burned all over, practically cinders in parts, they seem to have burst into flames from inside of themselves – and, even stranger, the burning is purely localized.’
Impressed that Molly would even use such a term as ‘purely localized’, but feeling that this line of speculation was off the wall, Tom merely repeated, ‘Localized?’
‘Yeah, right. I mean, the victim might be sitting in a chair when he or she bursts into flames and is burnt to death – yet the chair won’t have the slightest burn mark on it. Or the poor bastid’s in the bath or on the can and he’ll suddenly burst into flames and burn down to a cinder – just like the men we saw – yet there won’t be a burn- mark anywhere: not on the bath, not on the toilet, not on the walls around him, not on the floor or the ceiling. So, you know, it’s just like what happened back there - and I think that’s real weird.’
‘I’m sure there’s a rational explanation,’ Tom said.
‘Yeah. Some people think it’s caused by an unusual electrical discharge, though no one seems to know what kind it is.’
‘I see,’ Tom said. ‘So you believe…?’
‘Right,’ Molly interjected excitedly. ‘Those guys were the victims of some kind of spontaneous combustion – but what caused it to happen

simultaneously to all three of them? That's what *I'd* like to know.'
'Well, perhaps it *wasn't* spon… '
'Spontaneous combustion,' Molly reminded him. 'But it had to be. Nothing else would explain why they were burnt so badly and yet nothing around them was burnt at all. So it had to be some kind of…'
'Spontaneous combustion.'
'Right. The only question being: How come all three bought it at once?'
'Well, perhaps…'
'And what *I* say,' Molly went on, growing more excited by the second, 'is that they were attacked by some kind of unnatural force that was protectin' the crystal skull. It killed those guys, but it didn't take the skull, 'cause it wasn't a physical entity; it was some kind of…' She stopped chewing her gum, had a good think, then shrugged in defeat. 'Some kind of… *alien* force. Maybe somethin' released by the skull itself… So that's what I think.'
Realizing that the sun was becoming hotter and that he was actually very thirsty, perhaps because of his increasing tension, Tom pulled in when he saw what looked like a genuine *Posada* with a neatly thatched roof, rainbowcoloured beaded curtains across the door, and, standing out front, a sign advertising a well-known American beverage.
'We're stoppin' already?' Molly asked, as Tom braked to a halt in the dusty ground near the entrance.
'I'm parched,' Tom said.
'We should keep driving,' Molly insisted. 'We should try to get as far as possible from Chichén Itzá before stopping again.'
'I'm thirsty and tired,' Tom said, clambering out of the jeep and reaching into the back for his travelling bag. 'I was out of bed terribly early this morning in order to get to Chichén Itzá before sunrise. It was a drive of nearly eighty miles from Mérida, and that, plus the recent dreadful events, may perhaps have tired me more than usual.'
'You got out of bed terribly early?' Molly asked sarcastically, as she too clambered out of the jeep and picked her rucksack off the back seat. 'What time was that?'
'Five A.M.'
'Oh, big deal!' Molly exclaimed in disgust, falling in beside Tom as he headed resolutely for the *Posada*. 'You mean, you slept all night in a nice bed in a hotel in Mérida, but had to get up at five in the mornin' and the effort has

practically killed you?'
'I am merely pointing out that – '
'Well, let me tell you, buddy,' Molly interjected as resolutely as Tom was advancing upon the *Posada*, 'that I've been sleeping in goddamned fleapits in Mérida and that I *hitchhiked* all night, risking mugging and rape, to get to that site – so don't whine to *me* about how tired you are. Jesus Christ, what a wimp!'
'Must you always be so aggressive?' Tom asked rhetorically as he reached the front door of the *Posada* and parted the brightly-coloured bead curtains.
'I'm just telling you what I think, is all.'
'Keep your thoughts to yourself, thanks.'
Tom passed through the beaded curtains and entered the gloom of the *Posada*, which was considerably better than the previous joint, though hardly of luxury standard. There were, however, tablecloths on the tables, solid chairs of varnished wood, and a bar of similar wood with proper bar stools. The barman was swarthy, plump-cheeked and round-eyed, colourful in his long-sleeved, open-necked *guayabera*. A petite and pretty Yucateca, dressed in an equally colourful *huipil*, a loose-fitting shift flowered about the neck and hem, worn over a lace-trimmed underskirt, was wiping one of the tables. She glanced up when Tom and Molly entered and gave them a glorious smile.
'*Buenos días,*' she said.
'*Buenos días,*' Tom replied, placing his travelling bag by a chair at the nearest table and pulling up the same chair. '*Habla usted Inglés*?'
'*Sí, Seňor*. A little.'
Relieved that he would not have to resort to his Spanish phrase book, Tom asked Molly what she would like to drink and, being informed that she would take a coffee, ordered that and an orange juice for himself.
'Would you like breakfast?' he asked Molly.
'Are you treating me?'
'Yes.'
'Great.' Molly studied the menu at length, while the waitress was off fetching their first drinks, then, when the waitress returned, she ordered Eggs Mexicana with French toast, bread rolls, a grapefruit juice, a second coffee with cream, and a bottle of *aqua minerale*.
'For the road,' she explained, regarding the latter.

‘Naturally,’ Tom said. He ordered toast with honey for himself and sat back to drink his orange juice, his glance automatically taking in the pretty waitress as she headed back to the bar.
‘If your eyes were spiders they’d be crawling all over her,’ Molly said. ‘And her just a kid an’ all. God, you guys are pitiful!’
Blushing to his roots, Tom tried to hide his face with his glass of orange juice, but the drink didn’t last long enough. Placing the empty glass back on the table, he felt his cheeks still burning and tried to distract Molly from the sight of them by saying, ‘You don’t have to be so sexually obsessed. I merely glanced at her. She *is* quite pretty, after all, and extremely charming. I wasn’t exactly thinking of rape, which seems to prey on your mind.’
‘That’s all you guys ever think about,’ Molly retorted, ‘even when it’s *not* rape.’
‘Do you mind if we talk about something else?’
‘Not at all. Fire away, pal.’
Desperate to change the conversation and realizing that he was uncomfortably aware of how shapely *Molly* was, never mind the young Yucateca, Tom opened with: ‘Well, I must say your theory about how those men died is intriguing, if not quite believable.’
‘I’m not saying that my theory’s a fact, but something *very* strange went on back there and it wasn’t remotely natural, that’s for sure.’
‘I think we’re in trouble,’ Tom said. ‘That crystal skull is obviously a dangerous item, if only in the sense that someone wants it, which is why those men were there – to steal it. And *something* - some unnatural force, as you would have it – may be protecting it. Perhaps we should dump it.’
‘No way,’ Molly said. ‘I’m going to get that thing valued if it kills me.’
‘It just might,’ Tom said.
Molly grinned. ‘Scared, are you?’
‘Let’s just say that I have a healthy respect for my own skin, and that when three men get murdered over an ancient artefact, I’m inclined to be careful. Whoever sent those men to find that crystal skull might send another bunch to find us – so, yes, I’m concerned.’
‘We’re off and running,’ Molly said. ‘No way could they find us. They don’t know who we are. They don’t even know that anyone, apart from their own men, was there. So if they exist, and if they try to track us down, they’re not gonna find us.’

‘I truly hope not,’ Tom said.
Molly grinned again and then finished off her coffee. ‘So you study Mayan culture,’ she said. ‘You ever heard of this crystal skull before?’
‘A little,’ Tom said. ‘There are plenty of these artefacts floating about the world, but only two are considered to be genuine and of any real value.’
‘What are the others?’ Molly asked.
‘The Zulu Skull, sometimes, like this one of ours, called the Skull of Doom, which was stolen from the Zulus many years ago and has not been seen since. The Masai Skull, stolen from the Masais, is also still missing. A socalled Berlin Skull, in the possession of the Gestapo during World War Two, remained hidden in Berlin until the mid1980s and then was taken to Italy; though its present location has not been confirmed, many believe that it’s now held in the Vatican. The Paris Skull, also known as the Aztec Skull, is kept in a collection somewhere in France. The Amethyst Skull, so called because it’s made of pure amethyst, is in a collection in San Jose, California. Another, known as both the Southern France Skull and the Skull of the Light of Christ, is reported to have connections with the Knights Templar and to be in the possession of a secret society known as The Light of Christ and located somewhere in France. Finally, another Mayan skull, appropriately called the Mayan Skull, was looted from a tomb in Guatemala and is now in a private collection in Texas.’
‘And you think those skulls aren’t genuine?’ Molly asked.
‘Those in the know are convinced that they’re not. Most likely, they’re the fanciful products of old legends and myths, rather than actual ancient artefacts.’
‘So what about the two genuine ones?’
‘One is the Rose Quartz Skull, widely believed to be the finest and purest in the world. Though it’s rumoured to be hidden somewhere in Mexico or Guatemala, its exact location isn’t known.’
‘Somewhere in Mexico or Guatemala,’ Molly echoed him.
Tom sighed nervously. ‘Yes.’
‘Then we might have found the Rose Quartz Skull.’
Tom sighed again. ‘Yes.’
‘And the other genuine one?’
‘The other one’s on display in the Museum of Mankind in London. Known as the British Museum Skull, or the Aztec Skull – not to be confused with the

– its earliest known record is a listing with Tiffany's, the renowned New York jewellers, who had it in their possession in the 1890s. Eventually – I don't know when – it was sent to the British Museum in London. How it got to Tiffany's, I can't tell you, but now, as I've said, it's on display in the Museum of Mankind, London.'

'Anything special about those two skulls?' Molly asked.

'I'm a little vague on the details,' Tom confessed, 'but the skulls *are* of unknown origin, and are rumoured to possess unusual characteristics, including occult powers.'

'Including mesmerism?' Molly asked.

'I believe that power has been mentioned,' Tom said.

'Anything about seeing *stars* in them?'

Tom smiled. 'Lots of people have reported seeing lots of things in their crystal skulls – ancient buildings, dragons, underwater scenes, strange creatures, even extraterrestrials – but as only two of the skulls are known to be genuine, I think we can safely say that most of what was reportedly seen was wishful thinking.'

'But the two genuine ones are believed to possess magical powers?'

'Yes,' Tom said. 'Though their origins remain unknown, the little evidence we have about them indicates that they may have originated with the ancient cultures of Central America – either the Mayans, the Aztecs, or the Toltecs – and that they were used for rituals of worship or for esoteric rites. They are also believed to have been used to *will* death. Perhaps because of this – or *only* because of this – a widespread belief has arisen to the effect that the skulls possess magical powers that can be used either for good or for evil. This sounds like so much nonsense to me, but it's what is believed.'

'It could be possible,' Molly said, 'and I happen to think it is – 'cause what happened back there in Chichén Itzá was pretty damned weird.'

'Inexplicable, certainly.'

'So we'd better get this goddamned thing checked out.'

'I think we should,' Tom agreed.

They talked around the subject until the waitress returned with their food and drink. When the waitress had departed, Molly raised a forkful of Eggs Mexicana to her mouth, then stopped, placed the fork back on her plate, and thoughtfully pursed her lips.

‘New York,’ she said emphatically. ‘We could take the crystal skull to Tiffany’s in New York and have it checked out by them.’
‘That’s too far to travel with it,’ Tom said, distractedly spreading honey on his toast. ‘Also, I should remind you that you’re in possession of a *stolen* artefact and certainly cannot take it through Customs. My suggestion, therefore, is that we show it to a friend of mine, Professor Emilio Juarez, one of the world’s leading authorities on ancient artefacts, who’s presently working in the National Museum of Anthropology in Mexico City. We’ll let him examine the skull and base our decision on what he says. I think this would be wise.’
‘Wise, hell, he’s a friend of yours!’
‘I beg your pardon?’
Molly swallowed some of her Eggs Mexicana and gave Tom a beady-eyed, suspicious look. ‘This Mexican bastid’s a friend of yours,’ she said, ‘and will probably say what you want him to say. Such as, leave it with me, folks, and you, Tom, my friend, can sneak back later for your little cut on the sale… Well, thanks, but no thanks!’
Outraged, Tom hurriedly swallowed his bitten-off piece of toast with honey, washed it down with a slug of coffee, and said, ‘Professor Juarez is *not* a so-called Mexican bastard! He’s an eminent Mexican scholar, specializing in the ancient Maya. And I’m simply going to ask him to examine the crystal skull, tell us if it’s genuine, if it’s legal to keep it, and if it has any market value at all. After that, we’ll decide between us what to do with it. It’s as simple as that.’
‘Oh, yeah?’
‘Yes!’
‘Okay, but just remember that *I’m* the one who had the presence of mind to actually grab this damned thing and bring it down from the pyramid – so *I’m* the one who should be given priority regarding its fate.’
‘Which you will be,’ Tom snapped, though he was outraged by the very suggestion that he was being dishonest. ‘Now will you kindly drop the subject for now and let me finish my breakfast?’
‘Oh, oh,’ Molly whispered, freezing with her fork held to her lips and her eyes fixed on the front door, almost directly behind Tom’s back. ‘Don’t look over your shoulder.’
Tom twitched with nerves when he heard the beaded curtain rattling and then

footsteps coming over the wooden floor towards him. The footsteps stopped briefly behind him, then turned around to go past him. He looked up from his plate to see a man walking away from him and taking a stool at the bar. He was wearing a checkered shirt, faded denims and high-heeled boots, with a knife sheathed at the big-buckled belt around his thick waist.

After taking the stool, he ordered a beer in Spanish, then swivelled around until he was facing Tom. He stared malevolently at Tom with one eye, his other eye being made of glass.

'Oh, Lord!' Tom whispered.

Molly leaned across the table towards him, clenching her fists in front of her face, and whispered, 'It's that oneeyed guy we saw in the other bar! That bastid's been following us!'

'Nonsense,' Tom said, though his voice was shaky.

'Not nonsense,' Molly insisted. 'That bastid has his eye on our crystal skull and he's obviously been following us, probably intending to rob us.'

'Nonsense,' Tom repeated.

'Go challenge him,' Molly said.

'Pardon?' Tom responded in a panic.

'If you don't believe he's following us, go up to him and demand to know if he *has* been and let's see what he says.'

'Don't be ridiculous,' Tom said. He felt flushed and his heart was racing. 'I can't go up to a perfect stranger and ask him if he's been following us. He'll think I'm as mad a loon – and so will the barman.'

'He's followed us and you know it and so do I – so you go up there and tell him to get off our tail.'

'That man's a ruffian,' Tom said.

'That's why you've got to challenge him.'

'That man looks like the violent type and could explode if offended.'

'So offend him. Let's find out if I'm right. Go up and ask him if he's been following us, and then, no matter what the bastid says, tell him you don't believe him and that you want him to get off our goddamned tail, 'cause if he doesn't, you'll break his balls.'

'Pardon?' Tom repeated, burning up in a fever of fear as his weak stomach heaved. 'I can't possibly – '

'Goddamn it, you're scared!'

'I am not!'

‘Yes, you are!’
‘Alright, then, I’m scared. I don’t want my throat cut. I’m going to pay the check and get out of here - and that’s *all* I’m going to do.’
‘Christ, you goddamned English wimp!’ Molly snapped, then she grabbed her rucksack, pushed her chair back, and stomped out of the building.
Tom didn’t go to the bar. He didn’t have the nerve for that. Instead, he called the waitress over, quickly paid the check, and then, without waiting for his change, he pushed his chair back and stood up. He glanced briefly at the bar, saw the one-eyed man grinning at him, mockingly, malevolently, so he shivered, picked up his travelling bag, and followed Molly outside.
The man laughed hoarsely behind him.

Chapter Seven

As the *samlor* carried her back to Lu Thong’s mansion in the hot and humid early evening, Mai crossed her long legs, giving an eyeful of thigh to male passers-by, and gazed with her diamond-bright hard gaze at the sensuous feast of this most diverse of cities, with its golden-spired temples, *wats* with bell towers, canals shaded by drooping palms, towering skyscrapers of glass and steel, exotic, chaotic markets, beseeching sidewalk vendors, and dense, roaring, polluting traffic. Here beautiful prostitutes in revealing clothes, bare-footed, saffron-robed monks carrying alms bowls, distracted businessmen in shirts and slacks, bearded men wearing white prayer caps or turbans, and teenagers of both sexes in Westernized clothing, all walked casually side by side. Here Thais, Chinese, Indians, Burmese, Laotians, Vietnamese, Europeans and Americans – Buddhists, Muslims, Jews, and Christians of all denominations – lived in a harmony only broken by the impersonal crime and mayhem common to most major cities.

Mai knew all about crime. As she sat in the *samlor*, legs crossed and exposed, watching her world pass by, sniffing the heady aromas of roasting chicken, the sweet incence smoke spiralling out of Chinese shrines, the seductive scents from the garlands of orchids overhanging the canals, and the stench of human waste coming up from the canals themselves, she thought of the man she had just killed, the man who had ordered his execution, and the life she had led up to now.

It had been, for the most part, a life of profitable crime, really only

beginning when she was fourteen years old and hardly worth considering before that. Though Mai preferred not to consider it, she nonetheless recalled certain things about it, notably that she had been raised in a floating house in a badly depressed riverside village near Ayutthaya, north of Bangkok, and that her life there had been miserable and hard.

As Mai clearly recalled, she and her brothers and sisters (five in all, three girls and two boys) were made to work almost as soon as they could walk, usually helping their brutal father to gut and pack the fish he caught daily in his boat, then transport them in heavy loads to the nearest market town. Because of this, they never went to school, ran about barefooted and in rags, were often beaten black and blue, and harboured few hopes for the future.

Mai's only other recollection of the time before 'real life' began were that she, alone among her brothers and sisters, constantly burned with resentment and the need to escape; that before she was fourteen she was raped at least three times by strangers passing though the village, and that at some point she realized that the lust of men could be useful to her. She found this to be true when, at fifteen, she was abducted by some of Lu Thong's brigands and installed in one of his brothels in Bangkok. Her 'real life' began from that moment on and she never looked back.

Rather than being shocked at finding herself in a brothel, already sexually abused and generally hardened by experience, Mai viewed it pragmatically as the opportunity of a lifetime and decided to ruthlessly exploit it. Delighted to have escaped from her poor riverside village, informed by the *mamasan* of the brothel that she was exceptionally beautiful and irresistible to men, Mai soon had customers queuing at her door and could hardly deal with them all. Then Lu Thong stepped into the picture and her life changed again.

She had, of course, heard about her unseen boss long before he told his men to bring her to him. Lu Thong: the notorious Lothario who had been born with a silver spoon in his mouth, educated at Oxford, England, and returned to Bangkok to lend support to his father's criminal activities, including drug-running, organised prostitution, protection rackets, and a lucrative trade in stolen antiques and works of art, while furthering his sexual education in the fleshpots of Patpong and Sukhumvit Road. Lu Thong: the notorious criminal who came into conflict with his father, reportedly had that father murdered, and took over his deceased parent's criminal empire to become the most powerful crime baron in Bangkok. Lu Thong: the notorious

drug dealer and addict who had often been seen in the strobe-lit discos and videotheques off the Vipavadee Rangsit Highway or in the middle of the rice paddies by the Pechburi Road, personally dealing in Crack or Ecstasy or even more dangerous drugs, just as often seducing those he addicted into dealing for him. Lu Thong: the notorious devil incarnate who was rumoured to indulge in extraordinary sexual activities, both hetero and homo, with partners of all ages, and whose mansions in Bang Kapi was widely reported to be the scene of diabolical rites based on the most ancient and dangerous of the black arts… Yes, the notorious Lu Thong, who even owned the brothel that Mai was working in, and, having heard about her remarkable sexual talents, eventually had her brought to his home in order to check her out personally. So Mai went there, knowing exactly who he was, not knowing what to expect.

At that first meeting she was taken aback to see just how handsome he was and shocked at the harsh ascetism that she sensed lay behind his exquisite, oddly tormented features. His face was stripped almost to the bone, all angles and flat planes, with the inner luminescence often seen in the dying; and his body, though as languid as a cat's, was so undernourished that it seemed as insubstantial as a wisp of smoke. The unnatural glitter of his brown eyes was certainly due to drugs, but also sprang, Mai was convinced, from experiences so diabolical and extreme that few men would have even dared to consider them, let alone have survived them. In the event, when Mai came to know him better, she learnt that this was indeed the case: Lu Thong was so easily bored that only the most extreme experiences could arouse his interest. He was a man who lived on the very edge and dared himself not to fall off.

During their initial encounter, he told her that he had heard about her from the *mamasan* and wanted to see her with his own eyes. He told her that she was even more beautiful than he had imagined and that such beauty, if combined with her reported sexual talents, could gain her much more than she would ever have if she remained in the brothel. He wanted her to work for him, he told her, to do more than just whore, though certainly that would be part of it, albeit in an elevated manner. He wanted to use her for blackmail, for smuggling and dealing, for seductions that would have a greater purpose than mere sexual pleasure. She would have her own place, he told her, a magnificent apartment right here in Bang Kapi, and, if she did what he asked

of her, she would end up with more wealth than she had ever dreamed of.
'I'm your woman,' Mai told him.

But first she had to prove to him that she was as good as he had heard – she had to show him what she could do – and this she did for the next five days, rarely leaving his vast bedroom with its duvets of Chinese and Japanese silk, its exotic Indian carpets, its Laotian frog-drum tables, its bronze utensils stolen from the burial mounds of Ban Chieng, its erotic paintings and drawings smuggled in from the four corners of the globe, and its seemingly boundless supply of opium and cocaine. She performed in his bed, on the floor, in his *en suite* bathroom, first above him, then below him, in front of him, behind him, doing everything he asked, no matter how perverse, showing him some perversions that even he had not tried, and she did it all in a haze of opium dreams and cocaine fevers, until he was completely satisfied. By the end of that five days, she had turned into an addict – addicted not only to drugs, but also to extreme sensual experiences – and shortly after that testing, which she passed with flying colours, she moved into her own luxurious apartment located not far from Lu Thong's house. Lu Thong paid her rent.

Thereafter, he had used her for a wide variety of tasks, including the seduction of important men for the purposes of blackmail; the smuggling of cut jade from Burma, silver jewellery from Khmer, Lao and Shan, drugs from Cambodia and Columbia, and rare paintings, antiques and religious manuscripts stolen from ancient Thai temples; and, finally, the harsh disciplining of his prostitutes, drugpeddlers or dealers in the fake antiques that were sold in Chiang Mai and Chatuchak Market. Though Mai excelled at all of this and certainly enjoyed doing it, she didn't really discover her true nature until, at Lu Thong's request, she killed for the first time.

'It's a necessary part of our profession,' he told her, 'but that's not the only reason you must do it. To kill your fellow man in rage is a meaningless act; but to kill pragmatically, in cold blood, in full awareness of what you're about, is the ultimate high for creatures like you and me. As for you, with your lust for life, for the extremes of human experience, drawing blood and watching your victims breathe their last will set you free and exalt you. More than sex, more than drugs, the act of cold-blooded murder will offer you transcendence to a state of being beyond good or evil – a state of *pure* being. When you kill, when you see the fear in your victim's eyes, you will come

close to God.'

'Is that what you're seeking?' Mai asked him. 'Him or the devil,' Lu Thong replied.

'I think you *are* the devil,' Mai said.

'Who knows? Now go and kill for me.'

Mai's first victim was a Chinese drugs dealer who had

been falsifying his financial records in order to retain more of his cut than was normally allowed by Lu Thong. As this was a crime punishable by death, Mai was sent by Lu Thong to kill the offender in his office in Wongwienai. When the well-fed Chinaman, dressed in an immaculate grey suit with shirt and tie, fell to his knees before Mai, tearfully begging for his life, his hands clasped under his chin, she felt more powerful than she had ever felt before. She then found 'transcendence' – to use Lu Thong's terminology – when she ignored her sobbing victim's entreaties and shot him between the eyes.

That killing was only the first of many, each more exciting than the last, and over the years Mai became increasingly inventive, devising ever more novel ways of terminating her victims – by the gun and the blade, by smothering and strangulation, by the injection of lethal drugs and force-feeding and poisoning – often taking as long as she could, mercilessly toying with her victims, tormenting them with the knowledge of what their ultimate fate would be, frequently physically torturing them, in order to prolong her own pleasure. She learnt through this that her soul was as dark as night and that the fear she instilled in others, the pain and suffering she caused, gave her a satanic, sensual satisfaction. She orgasmed on blood lust.

'You're my most exquisite creation,' Lu Thong told her eventually. 'A perfect killing machine. You could surely cross the face of the sun and not leave a shadow. You're hardly human at all.'

'Just like you,' Mai said.

In truth, *he* was hardly human – or, at least, he didn't appear to want to be so – and the longer Mai worked for him, the more she came to understand him, seeing in his drug addiction, his bisexual extremism, his obsession with death and the occult, all the passions of a man whose ultimate high would come only through some form of suicide. His opium dreams came from the dark side of the moon and he would go there some day. In his heart that was where he wanted to be – in eternal darkness and silence. He would sell his soul to the devil for that - and he was working towards it.

When the *samlor* stopped in front of Lu Thong's home in Bang Kapi, Mai paid the driver, added a handsome tip, then pressed the bell on the electrified gates. Identified by the guard inside (he could view the grounds of the house, including the front gates, on the video-monitors installed in his security booth), she was permitted entry and the gates swung open to offer access.

Mai made her way up the driveway, under large drooping palms, passing rainbow-coloured orchids and other exotic fauna and flora, to the front door of the house, where a barrel-chested, grim-faced man, armed with a hidden Browning 9mm High Power handgun, was standing guard. This gorilla stepped aside to let Mai press the door bell, which automatically activated another video-monitor inside. When the guard recognised Mai for the second time, he spoke through the intercom, giving the gorilla permission to let her in. The gorilla opened the front door with his personal key. When Mai stepped in, he closed and bolted the door behind her.

Once inside the house, Mai went straight to the Oriental lounge. There she found Lu Thong seated at the glasstopped bamboo table, wearing only his dressing gown of shiny Thai silk and looking as frail as someone at death's door. Nevertheless, he seemed to glow with an inner radiance, a magical, perhaps diabolical energy, and though his brown eyes were, as usual, brighter than they should have been, his gaze was steady and searching.

The devil thinks he's God, Mai thought, as she sat on the cushions at the other side of the low table, curling her shapely legs beneath her, letting him see her perfect, golden thighs. And I'm his dark angel. Sooner or later, we'll turn against each other and then all hell will break loose. I look forward to it.

'Welcome,' Lu Thong said, his voice eerily sepulchral, yet as sensual and seductive as the unnatural glittering of his heavy-lidded, long-lashed, drugged eyes. 'What brings you back here, my pet? Have you some news to impart?'

'Yes,' Mai said. 'You can stop worrying about Professor Schwarz. He's just met with an unfortunate accident of a terminal nature.'

'Mmmm. Did you say "terminal"?'

'I did.'

'And am I allowed to ask how this unfortunate termination came about?'

'Professor Schwarz threw himself out of the window of his room on the sixth floor of the Oriental Hotel and ended up like English jam on the pavement below.'

‘Suicide, was it?’ Lu Thong sounded sardonic. ‘It could be viewed that way. After that kind of fall, it would be impossible to tell if he was damaged *before* he crashed onto the sidewalk or by the fall itself. Either way, Professor Schwarz is now out of the picture and your secret is safe.’

Lu Thong smiled bleakly. ‘I trust you enjoyed your brief visit with him. I wouldn’t like to think, my dear, that you were doing it *only* for me.’

‘I wasn’t,’ Mai said, taking note of the sarcasm and realizing that he was angry about something. When angry, Lu Thong was a dangerous man, so Mai spoke up quickly. ‘Is something wrong? Have I done the wrong thing?’ ‘No, my dear, you haven’t done the wrong thing. But something *is* wrong.’

‘Can you tell me about it?’

‘I’ve already told you about it and a man has just died because I did so.’

‘Professor Schwarz.’

‘Correct.’

‘That means you’re concerned about the Crystal Skull.’ ‘Correct again,’ Lu Thong said.

‘So what’s your concern? Professor Schwarz, being dead, can’t tell anyone what you told me. Your secret is safe.’

‘Not any longer. I’ve just had a call from a friend in Mérida, telling me that – ’

‘The American gangster you told me about,’ Mai interjected. ‘The one who was on his way to Chichén Itzá to dig out the Crystal Skull and bring it to you.’

‘No, not him,’ Lu Thong replied, his dreamy eyes now glittering not only with cocaine but with rage and what seemed like confusion. ‘Though certainly he’s part of the problem.’

‘What does that mean?’

Lu Thong sighed, as if wearied by life, which he often

was. ‘My American gangster friend is dead. A few hours ago, three corpses, all charred almost to a cinder, were found on the stone platform of the Shrine on the summit of the Castle, or El Castillo, in Chichén Itzá. As the platform of the Shrine is where Professor Schwarz insisted that the Crystal Skull was hidden, those three men – all burnt beyond recognition, thank God – were almost certainly my American gangster friend and his Mexican helpers.’ ‘And the Crystal Skull?’
‘The charred corpses were found scattered around a rectangular hole in the floor of the platform, where one of the stone slabs had been removed. That hole had to be where the Crystal Skull was hidden, but according to newspaper reports of the incident, nothing was found in the hole when the bodies of those three men were discovered by the guards opening the site a few hours after the fire was said to have taken place.’
‘What kind of fire?’
‘The newspapers didn’t say. But according to my friend in Mérida, there was something strange about it. Reportedly, though those three men were burnt to a cinder, no damage was done to the Shrine itself.’
‘That’s impossible,’ Mai said.
‘That’s the story,’ Lu Thong said.
‘And the newspaper reports made no mention of a crystal skull having been found at the scene of the accident?’
‘No. Not a word.’
‘Maybe it wasn’t there in the first place,’ Mai said.
‘Maybe Professor Schwarz lied.’
‘Professor Schwarz was too frightened to lie. If he said the Crystal Skull was there, then it was. Besides, someone obviously burned those three men to death and those murders must be related to the Crystal Skull. Whoever killed those men almost certainly did so in order to steal the artefact from them. So somewhere out there…’ Lu Thong languidly waved his wafer-thin hand to take in the world

outside his home… ‘Somewhere, I’d say, between Chichén
Itzá and Mérida, someone is trying to make his escape with our Crystal Skull.
I want that person, or those persons,
found. And I want you to find them.’
‘And if I find them?’
‘Kill them and bring me the Crystal Skull.’
‘I will,’ Mai promised.

Chapter Eight

‘I simply don’t like embarrassing scenes,’ Tom said, still trying to defend himself as he drove into the outskirts of Mérida. ‘That’s all there was to it. I mean, why make an unnecessary scene when one can simply walk out? Heroism is, after all, a fool’s virtue, and to confront that one-eyed bandit would have been tantamount to suicide.’

‘That’s a faggot Englishman’s excuse for cowardice,’ Molly retorted, then she turned her head away in disgust, letting Tom drive on in silence.

In truth, he appreciated the silence because they had been arguing about his so-called ‘cowardice’ for the past forty minutes, ever since leaving the *Posada*, and he now felt exhausted by her constant abuse. He also felt guilty because, despite his repeated denials, he *had* been terrified of that malevolently sneering one-eyed bandit. Finally, he was glad of the silence because he wanted time to think, to work out his confusions, which were composed of his excitement at finding the crystal skull, his fear of the danger the skull might put him in, his frustration at having to deal with this highly strung, foul-mouthed American girl, and his growing awareness that despite his own reservations, he was having sexual fantasies about her.

With regard to the latter, he was trying desperately to distract himself from his uncomfortable awareness of her close proximity, but each time he removed his gaze from the road ahead, his eyes automatically gravitated to the long, shapely length of her thighs as revealed in the tight denims, the fullness of her breasts as emphasized by her tucked-in shirt, and even the sensual lushness of her lips, which, though too often curved in a sneer of derision, made him burn in the lambent heat of lust. He had even found himself wondering, when glancing at the blonde hair piled up under her peaked cap, just what that hair would look like when it came tumbling down.

The very thought of it had given him an erection, and now, in the growing humidity of late morning, he felt drowsy and even more sensual, too close to her for comfort.

As if knowing what he was thinking and deliberately tormenting him, Molly crossed one long leg over the other and then ran her fingers lightly over the raised thigh. Instantly imagining his own fingers doing the same, Tom blushed and quickly averted his hungry gaze.

‘So where are we going?’ Molly asked him.

‘Pardon?’ he responded, as he often did with Molly, this being a sign of his increasing disorientation.

‘You deaf or something? I asked where we’re going. I mean, I assume we’re gonna spend the night here, before driving on to Mexico City.’

‘I suppose we must,’ Tom said.

‘Don’t sound so enthusiastic, pal. I could weep, I’m so welcomed.’

‘Sorry,’ Tom said, trying to concentrate on his driving and wondering how he could possibly lust after this girl, who was so obnoxious. ‘I was just a little distracted.’

‘So are we going to your hotel?’ she asked him.

‘*My* hotel?’ Tom was embarrassed. The very thought of waltzing Molly into the neo-colonial elegance of the de luxe Casa del Balam Hotel sent a tremor through him, though he wasn’t about to let her know this. Instead, he lied, practically stuttering, ‘I’m afraid I booked out of my hotel when I left for Chichén Itzá and I really don’t think I’ll get back in. So I suppose we’ll have to look somewhere else. Also, my hotel was rather expensive, and…’

‘You can’t afford to put me up there as well.’

‘Well, to be truthful… I mean, do you have *any* money at all?’

‘Hitchhiker’s money. Not much. Just enough for basic food and amenities. I couldn’t *afford* a decent hotel.’

‘Exactly. So – ’

‘So you’re going to treat me to a room, but you can’t afford to do it where you were staying before.’

‘That *would* be rather expensive,’ Tom managed, thouogh he was writhing with discomfort behind the steering wheel.

‘I understand that,’ Molly said understandingly. ‘So where were you staying, as a matter of interest?’

‘The Casa del Balam,’ Tom said.

Molly gave a low whistle of appreciation. ‘Oh, boy, that’s a real five-star joint. Real de luxe, so I’m told.’
‘I could only afford one week there,’ Tom said quickly. ‘A sort of treat, as it were, before I moved on to somewhere cheaper.’
‘Oh, yeah?’
‘Yes.’
He was heading for the Old City, downtown, having previously revelled in its remarkably clean pastel streets, its Spanish-Moorish-Mayan architecture, its red-tiled rooftops, and its many *veletas*, or windmills, while driving even more carefully than normal (and he *was* a nervous driver) to avoid the city’s many cars, pedestrians in *guayaberas* and *huipils*, and the ubiquitous pony-drawn buggies known as *calesas*.
‘You’ve got money, haven’t you?’ Molly said.
‘Money?’ Tom responded uneasily, since he had it but was careful with it.
‘Yeah, money. The stuff you put in your billfold. You stay in that hotel, even for a week, and that means you have bread. So what do you do in England, pal? You haven’t told me that yet. In fact, you haven’t told me a damned thing about yourself, though you’ve let *me* talk my head off. So tell me what you do for a living’. I mean, I’m dyin’ to know.’
Taken aback, once more, by the crass young lady’s assertion that he had somehow tricked her into talking about herself, when in fact he had not being able to stop her tongue from wagging, Tom replied, ‘Well, that’s rather difficult to explain. I mean…’
‘I can’t wait to hear it,’ Molly asserted, ‘so just spit it out.’
‘Well…’ Tom always felt vaguely embarrassed to be talking about himself, more so when he was dealing with someone like Molly, to whom his background would be virtually incomprehensible. ‘Well,’ he began again, ‘I’m a kind of… perpetual student. I don’t really have a job as such. I mean, I’ve spent the past few years studying ancient civilizations, mostly through archaeology, which is why I’m now touring the Yucatán. But I only do it as a kind of hobby… To give me something to do, as it were.’
Having become lost in Mérida’s dense traffic, he now found himself in the immense *zocalo*, or Plaza de la Independencia, lined with Indian laurel trees, dotted with conventional benches and Victorian love-seats, and dominated by the Casa Monteja, the palace constructed by the younger Monteja in 1549. As he had already done his standard tour of the city a couple of days ago, he did

not wish to repeat it and so kept driving until he came to the beautifully weathered colonial structures of the Old City. Once there, crawling at a snail's pace, he kept his eyes peeled for somewhere to stay.
'You don't have a profession?' Molly asked him.
Tom sighed. 'Alas, no.'
'But if you stayed in the Casa del Balam Hotel, you've obviously got bread and plenty of it. So how did you manage that?'
This was the part that Tom always hated, so he took a deep breath and let the words out as he exhaled. 'I inherited it,' he confessed. 'I don't like to talk about it, but my father and mother are English aristocracy. When my father died, which he did a few years back, I inherited his estate. We're not exactly the *crème de la crème* of the English upper classes, but I have to confess that we're rather well off, and so, once I'd completed my education at Oxford, I didn't have to work for a living. To you, this must sound terrible.'
'It sounds wonderful,' Molly said. 'But what do you mean when you say "we"? I thought you'd separated from your wife.'
'I did. By "we" I mean the family in general, including my mother, who is alive and well and still living in Reigate, Surrey.'
'You've got one of them big fancy English castles?'
Tom couldn't resist smiling at the remark, even though the recollection of home, given his last few years there, was still painful to him. 'Hardly,' he said. 'Though it's certainly a large Georgian house with extensive grounds.'
'You live there all the time?'
'My mother lives there all the time and the house is open to tourists, which is the only way we can maintain it properly. My wife moved out when we divorced and returned to her own family, which owns an even bigger estate in Windsor.'
'Is that where the Royal Family live?'
'Correct.'
'Gee, this is really too much. I'm travellin' with English aristocracy! Damn right, you pay.'
'Pardon?'
'For the hotel.'
'Oh… Of course.' Landed with this, Tom kept his eyes peeled for some decent accommodation, but set his sights, as it were, even lower, which meant even cheaper.

‘So where do *you* live? In the big house with your Ma?’
‘I go there most weekends,’ Tom said, ‘but when my wife moved out, I decided I didn’t want to stay there with only my mother, conducting tourists around the place, so I moved into a small apartment in Mayfair, London.’
‘I hear it’s a great city,’ Molly said, actually smiling and seeming to warm to him.
‘It is,’’
‘Is that why you moved there? To have a good time?’
‘For the distraction,’ Tom said. ‘I was alone and I wanted lots of people around me, including my old friends from Oxford, many of whom now lived and worked in the capital. Also, London is a wonderful place for research and as a jumping-off place for worldwide travel; so when I immersed myself in the study of ancient cultures, which also involves a lot of travelling, London seemed the sensible place to be.’
‘Hell, man, it must be incredible to have all that bread at your disposal and be able to do what you want and go where you want without worrying.’
‘It certainly has its advantages,’ Tom said.
He pulled into the parking lot of a small, relatively modernized hotel on the Parque Cepeda, downtown, facing a busy *calesa* stand. It was an old colonial building recently renovated, with Indian laurel trees on both sides of the short driveway lending it a rustic, romantic appearance. Sleepless, and having drunk beer on an empty stomach, Tom was feeling much warmer towards Molly and thinking dangerous thoughts, including the thought that she seemed much warmer towards *him*.
‘What do you think?’ he asked.
‘I think it’s fine,’ Molly replied. ‘It ain’t exactly the Casa del Balam, but I suppose you don’t wanna be embarrassed to be seen with me in a swanky joint like that.’
‘Not true,’ Tom diplomatically lied, as he applied the handbrake, clambered out of the jeep, and removed his travelling bag from the rear seat. ‘It’s just that I came here on a tight budget - ’
‘But you’re loaded!’ Molly said, getting out of the other side of the vehicle.
‘ – and having to pay for you, as well, will put a strain on it, so this place is a compromise.’
‘You English are known to be tight-fisted bastids,’ Molly said as she picked up the rucksack containing the crystal skull, ‘but that’s okay by me. I mean,

beggars can't be choosers, after all, so I'm not about to complain.'
'That's terribly decent of you,' Tom said, then turned away to lead her into the hotel.
He heaved a sigh of relief to note that the hotel was as pleasant inside as it was outside, with old colonial furniture, floors of fine Carrara marble, potted plants, and functioning air-conditioning. At the reception desk, which was manned by a genial Mexican wearing a brilliantly coloured *guayabera*, he ascertained that the place had a swimming pool, bar, and restaurant. Pleased, he asked for two single rooms.
'Sorry, *Seňor*,' the desk clerk responded, 'but we are almost booked out, being always extremely popular, and so only have one single room left. Cheaper for you, *si*?'
'I ain't sleeping in a fucking room with you, that's for sure,' Molly said.
Blushing to have such foul language spoken in front of the amiable, polite desk clerk, Tom coughed into his clenched fist and said, 'Really, we would *prefer* separate rooms. So if you could – '
'Please, *Seňor*,' the desk clerk interjected, shrugging and raising his hands pleadingly in the air, 'if I could help you, I would, but I only have one single room left.' He smiled seductively at Molly. 'And this young lady, I am sure, is understanding and will surely – '
'Share the single bed with him, right?' Molly responded, boldly staring the desk clerk down. 'Well, to hell with that, buddy. We're not here to have some hokeypokey together – I mean, this is a *business* trip – so you fix us up sharpish with two rooms or we'll go someplace else.' 'That would be difficult, Seňora – '
'*Seňorita*,' Molly firmly corrected him.
' – because this is the time of carnival and every other hotel in Mérida is booked out.'
'Except this dump,' Molly said. 'With its one remaining single room and single bed. Thanks a lot, pal!'
'Well, really,' Tom said timidly. 'I believe that this fine gentleman is merely trying to help us, and – '
'Get me into your filthy bed. Thanks, but no thanks!'
'May I suggest,' said the desk clerk, unperturbed and smiling, understanding that certain *gringos* could not be *seen* to be sleeping together, 'that we solve this little problem by putting an extra bed in the room? This, I fear, is all we

can do for now, so I trust it's agreeable.'
'Well…' Tom began, embarrassed, but also helplessly thinking, in the back of his mind, that perhaps he and Molly would actually…
'I'm not wearin' it,' Molly said firmly.
'Either this single room or we sleep in the jeep,' Tom said. 'It's up to you, my dear lady.'
'Don't call me "dear",' Molly said.
'Sorry,' Tom said.
Molly sighed and stretched herself, thus showing off the perfection of her large breasts and small waist, the exquisite curve to her long legs. 'Okay,' she said. 'If we have to, we have to. But don't get any fresh ideas, pal.'
'I won't,' Tom promised solemnly.
He signed the register. Then, having been informed that it would take half an hour for the room to be prepared and the extra bed moved in, he suggested that he and Molly retire to the restaurant for a spot of lunch.
'Great,' Molly said. 'I'm starvin'. I could eat a goddamned horse.'
As both were reluctant to give away their bags (in Molly's case, the rucksack), they carried them into the restaurant and placed them on the floor beside their chairs. The restaurant was a pleasant, spacious, Mexican-styled room, filled with tourists here for the carnival. Tom was actually too tired to eat properly and really just wanted a couple of drinks, but he dutifully ordered lunch – a filling *mucbil pollo* for Molly, a more modest *pollo pibil* for himself - and merely picked at his own food while managing to polish off a whole bottle of imported California red. By the time Molly had enthusiastically devoured her large *tamales* stuffed with pork and chicken and drenched in *anchiote* sauce, Tom was into his second bottle of wine and seeing Molly in a very different light. Though he couldn't see her shapely legs, which were tucked beneath the table, he was increasingly mesmerized by the tightness of her open-necked shirt (he saw the hint of cleavage there) and by her full, always-on-the-move lips. As for her blonde hair, still piled up beneath her peaked cap, which she still had not removed, he kept imagining it tumbling down around her bare shoulders, onto her bare breasts, and the thought of this almost made him swoon.
They talked throughout the meal. At least, Molly talked and Tom responded as best he could, until, when Molly had finished eating and Tom's second bottle was almost empty, she said, 'You sure know how to put away that

booze. You must be a sad sack.'
'Perhaps,' Tom said, hiccupping.
'So why did it break up?'
Tom shrugged forlornly. 'I don't know; it just happened. The marriage was practically arranged – in the sense that both sets of parents wanted it – and I guess we both slipped into it just to please our families. It wasn't that we weren't initially *fond* of each other – certainly, being childhood friends, we were – but we weren't really in love. So we were married and it didn't really work and we just drifted apart.'
'Lousy sex, eh?'
Even drunk, Tom was embarrassed. 'Not so bad,' he lied. In fact, the sex between him and Lucinda had been a disaster from Day One, which was why, he assumed, he was so sexually frustrated and presently lusting after the luscious Molly. 'It was more of an emotional problem. We simply didn't have much to say to each other, and the silences became longer, and, as it were, louder, until we just couldn't stand it. We separated – and later divorced – by mutual consent, though we still keep in touch.'
'Any kids?'
'No.'
'That was lucky,' Molly said. She finished off her glass of non-alcoholic *horchata*, glanced around the busy restaurant, then returned her gaze to him. 'How long will it take us to drive to Mexico City?' she asked.
'About twenty-two hours,' Tom said.
'Christ,' Molly retorted, 'that's a long drive.'
'Yes,' Tom agreed. 'And I'm really feeling rather tired. So I suggest that we try to sleep this afternoon, and then, if we feel up to it, commence the drive to Mexico City in the early hours of the morning. That way, we'll reach our destination in the daylight and find it easier to locate a hotel. We can then have a proper sleep tomorrow night and awaken refreshed the following morning. How does that sound?'
'Sounds fine,' Molly said, offering what seemed to be a warm smile.
'Excellent,' Tom said.
He signed for the meal, then, with Molly beside him, left the restaurant, swaying slightly, being extremely drunk, and humming happily to himself. He dangled the room key suggestively from his index finger, swinging it to and fro like a metronome, as, with Molly still beside him, he made his way

along the ground-floor corridors, squinting owlishly and grinning like a lucky man as he searched for their room. When Molly placed her hand lightly on his shoulder, obviously trying to keep him steady, he mistook her touch for affection and swelled up with emotion.
‘Thank you so much,’ he said.

Chapter Nine

The curtains had been drawn to keep out the sun and the room was in semi-darkness when Tom and Molly entered it. It was a pleasant room, sparse but comfortable, with two single beds along opposite walls, a couple of soft armchairs, and an antique writing desk by the window. Rather than open the curtains, Molly turned the lights on, then she placed her rucksack by the side of one of the beds, while Tom, given no choice, placed his dusty travelling bag by the other. Drunk, he was in a mood both amorous and mischievous, which was not his normal self, and so he threw Molly a big, flush-cheeked smile, and said, ‘Well, now, how cosy!’

‘It could’ve been cosier,’ Molly retorted, falling backwards to stretch out on the bed and gaze at the ceiling. ‘It could’ve been a de luxe hotel – the one you’d probably have returned to if I hadn’t been with you.’

‘Not fair,’ Tom said, smiling even more broadly, letting his bleary gaze roam fondly along the length of Molly’s slim body, from her feet in sandals to her flat, white belly (slightly exposed where the shirt had come out of her denims) and upthrust, intoxicating breasts, more prominent than ever under the tightly drawn shirt. ‘Unkind, my pet. I merely felt that since I came here on a strictly limited budget, I would have to make some cuts if I also included you in my expenditure. It’s as simple as that.’

‘You’re a tight-fisted English bastid,’ Molly said. ‘It’s as simple as *that*. Either that, or you’re embarrassed at the thought of being seen with me in a fancier joint.’
‘That, also, is untrue.’
‘Then you’re just a skinflint. You’re English

aristocracy, loaded, but your kind hates to spend it. I always heard the English were like that and now I believe it.’

‘That’s nonsense,’ Tom said, feeling desperately in need of sleep but unable to take his eyes off Molly’s supine body and therefore unable to bring

himself to lie down. ‘It’s true that I have a certain amount of money back home
– more than adequate, I confess – but, alas, it is there and not here. And I did, indeed, come here on a limited budget, so I have to be careful.’
‘You’re startin’ to sound like a pansy English actor,’
Molly said. ‘All florid and plum-in-the-mouth, like.’ ‘Well, I’m terribly sorry if my way of speaking offends
you, but that’s how one speaks where I come from and one simply cannot help oneself. Do I complain about *your* manner of speech?’
‘I speak perfectly fine, thanks. I don’t come out with all of your *one*-this and *one*-that horseshit. I say “me” or “I” like a normal person. I don’t talk like I’m in an English TV series, wearing top hat and tails. Anyway…’ She turned her head to stare at him from her supine position on the bed.
‘You’re just changing the subject – note how I’m pronouncing my words properly – and I still say you’re a skinflint and a disgusting lecher into the bargain, judging by the way you’re staring at me. Why don’t you stop ogling me, you poor bastid, and lie down and sleep?’
Now too drunk to be embarrassed and so opting for outrage instead, Tom straightened his shoulders, stared sternly at Molly, and said, ‘I wasn’t *ogling* you, my dear.’ ‘Don’t call me “dear”.’
‘I am not the kind to *ogle*. I was merely giving you my attention as we talked, to let you know I was listening.’ ‘You were ogling me,’ Molly said. ‘Admit it. Your eyes
were popping out of your head and crawling all over me like spiders. Legs, belly and boobs.’
‘That’s ridiculous,’ Tom said. ‘You have a rich imagination. I’ve noted before, and have informed you accordingly, that you suffer from certain sexual obsessions of an unhealthy, or possibly egotistical, nature. If you’re not feeling threatened with rape, you imagine you’re being ogled. Absolute codswallop!’
‘Just lie down and let us both sleep.’

‘Certainly,’ Tom said with dignity.
With a melodramatic sigh, he removed his shoes, switched off the light, and stretched out on the bed. The minute he closed his eyes, his head started swimming, so he instantly opened his eyes again and took a couple of deep breaths. That seemed to help. He closed his eyes again and this time his head didn’t swim, but he felt that he was suffocating in the humidity and so he opened his eyes again. Turning his head, he glanced sideways at Molly, whom he could just about discern in the semi-darkness, and noted that she had closed her eyes and was either sleeping or simply breathing deeply. He suspected the latter. Was it possible, he wondered, that she was thinking of him, just as he was thinking of her? No, of course not… But then, again, you never knew… She was a healthy young woman with normal desires and she had smiled at him a couple of times, which was certainly hopeful. Tom heard her even breathing, saw the rise and fall of her sweet breasts, and he filled up with drunken emotion, burned with sensual need. Sighing, he closed his eyes, hoping to find distraction in sleep, but instead her image swam around in his head to tease and torment him. She was silent in these visions, not whiplashing him with her tongue, and so he saw only what he wished to see, which was her soft, unclothed body. He saw himself on her bed, stretched out beside her, unbuttoning her shirt to expose the brassiere he had fleetingly glimpsed now and then. He saw her breasts in the brassiere, her denims slipping down over her broad hips, exposing her white, flat belly (also exposed only fleetingly now and then), and then he saw her spreadeagled beneath him, stark naked… voluptuous. Groaning, Tom opened his eyes again, staring blindly at the ceiling, gradually returning to his senses, and realized that he’d been sleeping and dreaming. Agitated, he glanced sideways to see Molly on the other bed, still outstretched, eyes closed, breathing evenly, almost certainly sleeping. Even more agitated,

feeling drunk and unreal, he swung his legs off the bed and stood up and went to the window. Standing there, he glanced sideways at the sleeping, evenly breathing Molly, at the mesmeric rise and fall of her breasts in the tight shirt, in the seductive semi-darkness. Then, in an attempt to distract himself, he pulled the curtains apart to look out.

He was surprised to see that it was dark out there. Realizing that he had slept a lot longer than he had imagined, he glanced again at the sleeping Molly and was consumed by the sight of her, so he gulped and looked out the window again, still seeking distraction. This room was on the ground floor, at the rear of the building, and pale moonlight was falling on a quiet road that ran alongside a park with trees silhouetted against a starry backdrop. As Tom was studying the road, distracting himself by staring at nothing in particular, a red Ford Escort came into view and stopped by the rear garden of the hotel. Its headlights remained on. The driver's window was rolled down and the indistinct blob of a human face appeared and seemed to be staring straight at the hotel, and, as Tom imagined it, straight at him.

The hairs on the back of Tom's neck stood up when he realized that the distant face was, indeed, staring straight at him – or, at least, at his room.

Even as he accepted this, the face disappeared back into the car, then the driver's door opened and the driver stepped out. Though Tom still couldn't discern the man's features, he could see that he was wearing a checkered shirt, faded denims and high-heeled boots, with a knife sheathed on the big-buckled belt around his thick waist. Tom knew then, without doubt, that he was looking at the one-eyed bandit who had smiled malevolently at him in the last two bars that he and Molly had been in.

Molly was right: the one-eyed man was following them. Shocked back to sobriety and instantly scared, Tom

watched the one-eyed man as he walked from his car to the fence at the rear of the garden. The man disappeared when he approached the fence, but a few seconds later his white knuckles, illuminated by moonlight, could clearly be seen where his hands had gripped the top of the fence as he prepared to haul himself up and over. Even as Tom guessed what the man was doing, the latter did indeed appear on the top of the fence, balancing precariously as he glanced left and right, checking that no one could see him.

'Oh, God help us!' Tom exclaimed involuntarily, his eyes almost popping out of his head as he stared at the man on the fence.

'What…?' Glancing sideways, Tom saw Molly sitting upright on her bed and rubbing her sleepy eyes. She blinked a few times and stared at him. 'What the hell's going on?' she asked.

'That man!' Tom exclaimed in a panic-stricken whisper that sounded, to him, like a scream.

'What man?'

'That one-eyed man who was following us!'

'You insisted he wasn't following us,' Molly reminded him.

'No, I didn't!'

'Yes, you did.'

'Well, he's following us!' Tom said, his whispering still resounding like a scream in his head. 'And he's come to this hotel and right now he's clambering over that fence out there, about to drop down into the garden. *He's coming for us*!'

'Stop shouting.'

'*I'm not shouting*!'

'Yes, you are.'

'What's the difference? I'm telling you that that oneeyed man's out there in the garden, and he's – '

'You said he was on the fence.'

'*What's the difference?*' Tom almost screamed properly

this time. ‘He’s on the fence and he’s about to drop into the garden and he’s coming for us!’
‘Not for us,’ Molly corrected him. ‘He’s coming for the crystal skull.’
‘WHAT’S THE DIFFERENCE?’ Tom screamed. He couldn’t believe how calm she was and shame made him lower his voice again. ‘If he’s come for the crystal skull, he’s obviously going to kill us to get it. He’s – ’
‘He won’t necessarily kill us,’ Molly said.
‘*What*?’ But he’s…’
Tom turned back to the window and looked out just as the one-eyed man dropped off the fence, into the garden, briefly disappearing into the darkness of the lawn, then reappearing in striations of moonlight as he made his way at the half-crouch towards the hotel in general and Tom’s room in particular.
He was holding a pistol in one hand.
‘*He has a pistol*!’ Tom hissed.
Instantly, Molly rolled off the bed, groped around in her rucksack, then rushed up to stand beside Tom and look out through the window.
She was holding a Browning 9mm High Power handgun in one hand.
‘That’s a gun!’ Tom exclaimed, staring, shocked, at the weapon.
‘Damned right, it’s a gun,’ Molly retorted. ‘So where is that bastid?’
‘You can’t shoot him!’ Tom exclaimed.
‘Wanna bet? Where *is* the bastid?’ She was staring intently down through the window, trying to catch a glimpse of the man who had vanished into another patch of darkness. ‘There he is!’ she said excitedly and started opening the window while holding the handgun up beside her head and releasing the safety catch.
‘Oh, my God!’ Tom exclaimed. Looking down through the opening window, he saw the one-eyed man emerging

again from darkness, crossing a pool of pale moonlight, and rapidly approaching the room.

When the one-eyed man saw the window opening, he stopped in surprise. Quickly recovering, and, more importantly, seeing that Molly was aiming her weapon at him, he swung his pistol up in the hope of firing first. ‘Don’t fire that thing!’ Tom bawled at Molly.

Molly fired. The sound of the shot ricocheted in Tom’s head. He closed his eyes in shock and opened them again to see that the one-eyed man had not been hit and was now running back towards the fence. Molly fired another shot. The noise almost split Tom’s head. He closed his eyes again, but felt compelled to open them once more and saw that the one-eyed man was now clambering back over the fence. Once straddling it, he twisted sideways, took aim with his pistol, and fired a single parting shot. The bullet ricocheted off the wooden window-frame, just beside Tom’s head, making him drop instantly to the floor in fear for his life. Molly fired a third shot. Tom stayed there on the floor, keeping his eyes closed, until he heard the roar of the Ford car racing away, followed by Molly speaking. ‘You can stop licking the tiles with your tongue,’ she said. ‘That bastid’s gone.’

Tom raised himself high enough to glance over the bottom of the chipped window-frame and confirm that the one-eyed man and his car had indeed vanished. When he stood up fully, though keeping well to the side of the window, Molly was sitting on the edge of her bed, putting more bullets into the magazine of her handgun. When she had finished, she applied the safety catch, then slipped the handgun back into its leather holster and carefully inched the complete package down through all her junk, to the very bottom of the battered rucksack. She patted something inside the rucksack and then straightened up again. She gave Tom a big grin.

‘Just thought I’d check,’ she said calmly. ‘The crystal skull’s still there and in one piece. Don’t know why I

bothered to check. Just instinct, I suppose. Thought it might have vanished *without* that bastid's help. I'm superstitious that way.'

Tom stared disbelievingly at her, aware of his racing heart, then said in a shocked whisper, 'You're carrying a loaded gun!'

'Not much use if it ain't loaded.'

'A loaded gun! That's dangerous!'

'Only to the bastid it's aimed at – and it certainly made that bastid run away.'

'I refuse to travel through this country with a woman carrying…' Tom began. But he was cut off by the hammering of knuckles on the door and a male voice telling them in Spanish to open up. Even more shocked, Tom glanced at the door, then back at Molly. 'Oh, my God! Is that him?'

'No,' Molly said calmly. 'It won't be him. It's prob'ly the manager. You better open the door.'

'*You* open it,' Tom said.

Rolling her eyes, Molly stood up and went to open the door. She was right. It was the manager. He spat a steam of Spanish at them, then reverted to English and demanded to know who had been firing a weapon in his respectable hotel.

'Weapon?' Tom said. '*I* didn't fire a weapon!' 'Me neither,' Molly lied, then she jabbed her finger at the open window behind her. 'But we heard the sound of gunfire from out back and opened the window to see what was happening. There was somethin' going on out there. We think it may have been a robbery. There was a police car and the cop was on the sidewalk, right by your rear fence, and firing at a man we could see running away from him. I guess that's what you heard.'

'The shots came from here, *Seňora*.'

'*Seňorita,*' Molly corrected him. 'And the shots didn't come from here, pal – they came from out there. I mean,

what kinda place are we staying in, if that kinda crap goes on at night? Is this a dangerous area?'
'No, no, *Seňorita*.' The manager, who was short in stature, with a face as round as his belly and large liquid brown eyes, waved his hands frantically in denial and took a couple of steps back. 'This is a respectable establishment in a *very* safe area. What you saw and heard rarely happens around here and I must apologize for it. Our local police force, which is excellent, will surely apprehend the criminal intruder, and in the meantime, *Seňor* and *Seňorita*, in recompense for your suffering, I offer you this room for free. I trust this is acceptable.'
'Most kind – ' Tom began.
'We could sue you,' Molly said. 'We've spent a fortune in your restaurant and were almost murdered in our beds by way of thanks. We could sue you for damages.'
The manager was aghast. 'I include the meal, *Seňorita*. I throw in all your drinks from the mini-bar and, of course, your breakfast. Also included will be a hamper of food to send you on your way in the morning. I trust *this* is acceptable.'
'Well…'
'We accept,' Tom said quickly. 'You're really too kind, Seňor. Thank you and good night.'
'*Buenas noches*, my friends.'
With a quick, graceful bow, the manager departed, and Tom just as quickly closed the door after him. He then turned to face Molly. His heart was racing and he felt his cheeks burning, but Molly was grinning triumphantly. 'Pretty neat, eh?'
'*What*?' Tom exploded.
'The way I took care of that greaser – *and* that bastid outside. Now we can stay here for free, eat and drink all we want, and then light out of here tomorrow morning with a hamper of food, before that one-eyed bastid comes back, which he surely will.'
'You're carrying a gun!' Tom repeated.

‘You’ve already said that.’
‘I refuse to travel with a woman, a mere slip of a girl, who’s carrying a dangerous weapon in her rucksack. That’s really too much.’
‘A girl from New York doesn’t travel alone through Mexico without some kinda protection. And if *I* hadn’t been carrying a gun, you’d be dead meat, *amigo*.’ ‘Nonsense! I can take care of myself. I don’t need some gun-toting American lunatic to come to my rescue. I could have dealt with the matter on my own, without causing mayhem.’
‘Oh, yeah? How? By having a civilized English chat while that bastid shoved the barrel of his pistol down your gullet and squeezed the trigger and ran off with our crystal skull? Don’t come it with *me*, pal! Besides, you were face down on the floor while that guy was advancing, practically shitting your pants, so don’t tell me you know how to protect yourself. I protected you and I got this room for free, so why not show some gratitude?’
Tom turned away from her to sit on the edge of his bed and put on his shoes.
‘What’re you doin’?’ Molly asked him.
‘If, as you insist, that one-eyed man’s going to return, I think we should get out of here right now and put as much distance as possible between us and him.’
‘He’ll be out there right now,’ Molly said.
Tom stopped tying his shoe laces. ‘What does that mean?’
‘He’ll be out there right now, watching the entrance to this hotel, and he’ll be delighted if we leave in the dark. In darkness, he can pick us off easier – and without being seen. So I suggest that we wait until morning and travel on in daylight. Of course, if you insist, we’ll leave right now, and…’
‘No, no,’ Tom said quickly, untying his shoe laces and kicking the shoes off again. ‘Why not stay, indeed? It’s not

that I necessarily agree with you, but why waste a perfectly good room when it's going for free?'
'You're scared,' Molly said.
'I am not,' Tom said stoutly.
'You're scared and you have a right to be, but you just won't admit it.'
'I'm really rather tired,' Tom said with a feigned yawn, 'and could do with another good sleep. Do you mind…?'
Without waiting for his rhetorical question to be answered, he lay down, still fully clothed, on the bed and closed his weary, bloodshot eyes.
'Well, fuck you,' Molly said.
Tom pretended to sleep. He didn't want another argument. He intended keeping his eyes closed, even if he couldn't sleep, but when he heard Molly rooting about in her rucksack, he sneaked a sideways glance at her. She was sitting on the edge of the bed, her gorgeous legs crossed, and rolling what looked like an unusually thick cigaret. After lighting it and inhaling deeply, she exhaled a cloud of smoke that Tom, though not a smoker himself, recognized by its sweet smell.
'Marijuana!' he whispered as he pulled his blanket up over his head. 'Dear God, what next?'
'What a wimp!' he heard Molly murmuring just before he did, indeed, slip off to sleep.
In his sleep, he had vivid erotic dreams… about Molly, of course.

Chapter Ten

The Thai and Chinese girls on the stage in the middle of the noisy bar in Patpong Road were wearing either G-strings or see-thru negligees, with black stockings and stiletto-heeled shoes. Their breasts were bare. All were slim, smoothskinned, long-legged, and, in the subdued crimson lighting, irresistibly sexy as they gyrated their hips, rolled their bellies, shook their naked rumps, and writhed up and down the steel poles that rose phallically

from the floor of the small, revolving, neon-lit stage, surrounded by tables packed with locals and tourists. The girls were dancing to a string of hit records and the volume was well up to challenge the din of wolf whistles, ribald remarks, drunken laughter, and bellowed conversation.

Observing them as she drank her flute glass of vintage champagne, Mai Suphar's eyes gleamed with a rapacious light that Lu Thong knew only too well. Earlier in the evening he had taken her to the Thai boxing tournaments in the Lumphini Stadium on Rama 4 Road and she had, as usual, been stimulated by the violent spectacle. Certainly one of the fiercest sports ever invented, Thai boxing had originated in ancient days as a martial art, then evolved into a competitive fight in which not only gloved fists, but elbows, feet, knees, and nearly every other part of the boxer's body could be used to kick, jab, chop and generally pummel an opponent into submission. Few things thrilled Mai more than to see two superbly fit, almost naked men inflicting ferocious punishment on one another over the five three-minute rounds of non-stop brutal combat – and certainly she was sexually excited by it.

Lu Thong wanted Mai to be sexually aroused when he took her to bed later that evening for a drug-heightened orgy. Knowing that Mai, being bisexual, was also aroused by the sight of scantily-dressed teenage girls performing erotic dances in the many strip joints and nightclubs of Patpong, he had deliberately brought her here straight from the excitements of the Lumphini Stadium. The combination of fierce Thai boxing between sweating men and the erotic dancing of these beautiful young women was having its effect, and Mai, who also loved vintage champagne, was clearly becoming even more excited and repeatedly licked her moist, lush lips.

Remarkably, even when compared to the lovely teenagers on stage, Mai, in her short black-silk dress held on by thin shoulder straps, her long legs in stiletto heels, and her ink-black hair hanging all the way down her spine, she was still the most attractive girl in the place, drawing many a hungry glance.

Lu Thong himself was hungry for her and pleased that he'd brought her here.

'Would you like one of those?' he asked, nodding to indicate the girls dancing on the revolving stage in visually enhancing crimson light.

Mai smiled. 'Why? Are you going to purchase one for me?'

'If you want one, I'll purchase one, my lovely. But, alas, not tonight. Tonight

you’re all mine.’
‘So why did you suggest it?’
‘Just curious.’
‘About what?’
‘Your preferences. Do you prefer men or women?’
‘Women are less trouble,’ Mai said, ‘particularly when young and tender like those dancers. But men have their uses as well. With regard to what I prefer, it really just depends on my mood and you’ll do for tonight.’
Lu Thong smiled wryly at her insolence. He admired it, but he was also wary of it, knowing that it could lead to rebellion and, from that, betrayal. Mai, he knew, was capable of both, and that made her dangerous. ‘So what would you do if you had one of those young girls instead of me?’
Mai studied the girls on the stage, then licked her lips and looked dreamy. ‘Assuming she was heterosexual – or at least thought she was – I’d take my first pleasure from seducing her and observing her initial shock and disgust change to rapture. Once she was mine, enslaved by my lips and hands, I’d take more pleasure from showing her everything that two women can do together, with or without my various aids, including dildos and drugs. Then, having pushed her to the edge, beyond guilt or shame, I’d make her pleasure *me* in every conceivable way, doing things she could not have imagined herself doing just a few hours before. Finally, when she was addicted to me, imagining me to be her whole world, I’d persuade her to let me tie her to the bed. Once she’d done so, once she was helpless beneath me, I’d embark on the final stage, from orgasm to death. So that’s what I’d do, my dear.’
‘You’d kill her?’
‘Slowly,’ Mai replied, licking her lips and trembling pleasurably at the very thought of it. ‘I’d tape her sweet mouth closed to prevent her from screaming and then work slowly and surely, with all the skill at my command, keeping her alive as long as possible, only ending when I could no longer bear my own excitement and had to release it through orgasm. She would die in agony as I was dying from pleasure. That’s my ultimate high.’
‘It would not be the first time, would it, Mai?’
‘No,’ Mai replied.
Lu Thong studied her thoughtfully, then he smiled and glanced around the crowded bar. The mostly male customers were seated at packed tables around the revolving stage, where the strippers and erotic dancers were still

performing to pounding rock music. They were sitting either with bar girls in miniskirts and hotpants or with handsome young Thai men in short-sleeved shirts and tight trousers. A lot of hands were roaming under those tables, a lot of deals were being made, and the young whores, male and female, were mostly desperate enough not to dwell on the awesome dangers of their profession. In fact, as Lu Thong knew, young whores of both sexes disappeared every day in Bangkok and either were not seen again or were next seen, torn and bloody, in some sleazy hotel room or found floating face-down in the Chao Phraya river: beaten to death in drunken frenzies, stabbed to death by psychopaths, tortured to death by sadists, or overdosed, either accidentally or against their will, on lethal drugs. Invariably, the perpetrators of such crimes were male clients, but certainly more than one death had been due to the most beautiful woman in this bar, Mai Suphan, who sought her highs in the most perverse ways. Now, turning back to his lovely companion, Lu Thong gazed steadily at her for some time, then said, ‘Don’t get similar ideas about me. I would not be amused.’

‘No, you’d be dead.’ Mai’s smile was as cold as ice. ‘But… who knows? It might be the best way for you to go. You’re a man drawn to death, possibly to suicide, certainly to the most extreme kinds of experience, so being taken from orgasm to death might be good for your twisted, immortal soul. Try imagining it as your ultimate adventure

– your last orgasm and your last breath simultaneously. Perhaps that’s what you secretly want, Lu Thing.’

‘The ultimate adventure – death’s doorway – yes, that’s what I want. But not your way, my pet.’

‘Then what way?’

‘Magic. The occult. Power beyond what we can imagine. Perhaps a power that can only be purchased with death, which would make the dying worthwhile.’

‘The kind of power said to be given to the one who possesses the Crystal Skull?’

‘Yes,’ Lu Thong said.

‘Which is why you want it.’

‘Yes.’

‘Are you sure the Crystal Skull has magical powers?’

‘I’m certain of it,’ Lu Thong said.

‘Why?’
‘Because of its history. Or, to be more precise, its strange lack of history, since in fact it’s an ancient artefact with no verifiable history and therefore no historical references from which we could assess what it really is or where it came from.’
‘But there must be clues.’
‘Mostly conjecture,’ Lu Thong said. ‘There are those who believe that all thirteen of the known crystal skulls have magical powers and originated in Atlantis at least 17,000 years ago. According to this theory, Atlantis had thirteen so-called *healing* temples and one skull was utilized in each temple. Tenuous evidence links the skulls to Sha-Tree-Tra, a priestess who was killed during one of the last earthquakes in Atlantis. The original skull of this priestess was transmuted into crystal through a process known as “morphocrystallic transformation”, and that skull is believed to possess the powers known to the priestess when she was alive.’
‘Atlantis!’ Mai exclaimed sardonically. ‘It probably never existed.’
‘Maybe not,’ Lu Thong said, ‘but the story is interesting in that it at least gives a rough date for the origin of the crystal skulls. That date, give or take a few hundred years either way, was confirmed when one Francis Joseph, an historical writer researching Mayan civilizations, attempted to identify the race of the person who modelled for the skull – or the priestess whose original head was used for the morphocrystallic transformation – by reconstructing the face from a plaster mould of a skull.’
‘I see,’ Mai said sceptically. ‘Please continue.’
After studying Mai through his cocaine-brightened, dangerously perceptive eyes, Lu Thong continued: ‘Francis Joseph called on the assistance of Peggy C. Caldwell, a consulting forensic anthropologist for the Smithsonian Institution, and Frank Domingo, a composite artist with the New York Police Department. Between them, using the plaster model and various photos of the skull, they came up with a drawing of the face of a young woman, seventeen to twenty years of age, with Oriental- Mongoloid features of a kind that linked her to early Mesaoamerican civilizations. Due to this, it’s now believed that the crystal skulls are, if not human skulls *transformed* into crystal, certainly replicas of the head of an ancient Mayan high priestess, or goddess. It’s also thought that they’re made out of pure rock crystal, because the Mayans believed that crystal has magical properties and used the skulls in

their esoteric rites. It may be no accident, therefore, that the various owners of the skulls have reported that the artefacts could send them into trances, possessed healing properties, revealed secrets about the origins of mankind, and helped them communicate with other worlds.'

All that cocaine has done his brains in, Mai thought, but I might as well humour him. Besides, the Crystal Skull, even if not remotely magical, is certainly valuable in the international marketplace, so it's well worth the having.

'Such powers could be dangerous,' she said.

'Yes,' Lu Thong said. 'Reportedly, the magical powers of the skulls can be positive or negative, used for good or evil, to bless or to curse. Indeed, more than one owner of a skull has committed suicide after allegedly being cursed by it. However, it's thought that the awesome energy of a genuine Crystal Skull, if harnessed correctly, could unleash the hidden powers of the cosmos, turning mortal man into Superman.'

'But you don't know how to release that energy.'

'No,' Lu Thong confessed.

'So why do you want this particular Crystal Skull?'

'First, because it's one of the most valuable artefacts in the world. Second, because once it's in my possession, I can experiment with it and hopefully learn how to arouse its forces or turn on its energy. Others have done so before me, so I don't see why I can't do the same.'

'And if you do, what then?'

'It's believed that he who attempts to arouse the sleeping powers of the Crystal Skull must accept that he is dealing with the unknown and gambling with his own life. It's that gamble – the ultimate gamble between life and death, between mortality and immortality – that I wish to make when I gain possession of the artefact.'

Mai glanced at the revolving stage, taking in the sight of the tender flesh – perfect buttocks, firm breasts, flat bellies, long legs – of the young, eager dancers. She visualized the thin blade of her knife making crimson traceries upon its youthful perfection. Almost swooning at the thought, she controlled herself and returned her attention to Lu Thong. Gazing at that beautiful, wasted face, into the glittering depths of his brown eyes where the cocaine madness held sway, she wondered if what he was telling her was true and what it could mean.

Limitless wealth and power, at the very least, and that made the risk worthwhile.

‘So what’s happening in the Yucatán?’ she asked.

Lu Thong sighed, shaking his head from side to side as if disgusted. ‘The three who died at Chichén Itzá were supposed to have taken the Crystal Skull, when they located it, only as far as a certain *Posada* located on Mex. 180, about thirty minutes drive from the site. There, the skull was to be passed over to a local hard man, a one-eyed former policeman and professional criminal named Emmanuelle Cortez, who was to take it in his own car to Mérida airport. There he would deliver it to another of my men, a Mexican working as a Customs official. Had he received the skull, that bent official would have smuggled it onto a flight to Los Angeles. From there, in the care of another bent official, it would have been flown on to me. In the event, my three men were burned to a cinder at Chichèn Itzá, and, as you know, the Crystal Skull wasn’t found with the charred corpses.’

‘Right,’ Mai said. ‘Someone took it. The question is: Who?’

Lu Thong nodded. ‘I can tell you that Emmanuelle Cortez was still in the *Posada*, wondering what had happened to the men who were supposed to bring him the skull, when he received a phone call from a friend, yet another bent cop, telling him about the bodies found at Chichén Itzá, and saying that no mention of a crystal skull had been made in the reports of the incident. Just as Cortez was about to leave the *Posada*, to pass on this information to my man at the airport, an Englishman about thirty years old and an American female about five or six years his junior, entered the *Posada*. They sat at a table, ordered drinks, and then proceeded to study a crystal skull that the girl had pulled out of her rucksack. This took place hardly more than an hour after my men dug up the Crystal Skull and then were fried to a crisp – and just after the skull went missing. And those two people – the Englishman and the American female – had been observed by my one-eyed friend in the *Posada* to have come from the direction of Chichén Itzá.’

‘So the Crystal Skull must have been there at the top of the pyramid, in the Shrine, when those two found the three dead bodies. They took the skull and fled.’

‘Correct,’ Lu Thong said.

‘Do you know who they are or *where* they are?’

‘Approximately. When they left the *Posada*, they took the Crystal Skull with

them, but Emmanuelle Cortez kept on their tail. They drove straight to Mérida and booked into a hotel in the Old City. Flashing his police identification at the desk clerk, Cortez learnt that the Englishman was called Tom Powell and that he was travelling on a British passport and driving a rented jeep. Powell signed himself and his female companion in as man and wife, though the desk clerk was adamant that they weren't married and that the girl was an American hitch-hiker. Cortez then asked what room they were staying in. It turned out to be a groundfloor room at the rear of the building.'

'Convenient,' Mai said.

'I would have thought so,' Lu Thong said, 'but when, that evening, Cortez tried to reach that room in order to kill those two and recapture the Crystal Skull, he was shot at by one of them and had to beat a hasty retreat. Returning to the hotel the following morning, again flashing his police identification, he was informed that the couple had already signed out, asking the desk clerk to book them into a hotel near the Zocala in Mexico City. The desk clerk did so. We have the name of the hotel. They left for Mexico City early this morning, taking a free hamper of food with them, obviously intending to drive there without stopping. The drive takes at least twenty hours, possibly longer, but Cortez is following them all the way, and, hopefully, will soon relieve them of the Crystal Skull.'

'And their lives,' Mai said.

'Yes… and their lives.'

'Let's hope so,' Mai said. 'Particularly given what you've just told me.'

'Meaning?' Lu Thong asked.

'If the skull has the powers you claim for it, those two could become more of a problem than you think.'

'You mean they could gain the powers of the Crystal Skull.'

'Exactly,' Mai said.

'They could, but it seems unlikely for now. The powers of the Crystal Skull have to be aroused somehow – and the "how" is the problem. If those two don't know that the skull has magical powers – if they're just running away with it because they assume it has fiscal value, which it certainly has – then the latent powers of the skull will remain dormant.'

Raising his eyes to the revolving stage in the middle of the crowded, noisy room, Lu Thong saw the flimsily-clad teenage girls dancing sinuously to pounding rock music, rolling their groins, shaking their breasts, wrapping

their legs around the phallic steel uprights and writhing against them. He was aroused by that sight, imagining them all in his bed at once, but he came even harder when he looked at Mai Suphan, at her exquisite, deadly beauty, and imagined her in bed with the same young girls, using her diabolical sexual artistry for pleasures beyond the pale. He almost gasped at the thought. He was on cocaine and his skin was burning. He wanted Mai Suphan, the young girls up on the stage, the male whores in the audience, anything and everything, but most of all he wanted the Crystal Skull and its hope of transcendence. Life was short and brutal, a sequence of couplings and disengagements, of petty desires and their disappointments, but the Crystal Skull could help him transcend the commonplace and replace it with magic. He needed that magic, the siren call of the otherworldly, and in the meantime, while he waited for the delivery of the Crystal Skull, he would try to lose himself in Mai's inventive, potentially deadly perversions.

Perhaps sensing what he was thinking, Mai leaned forward to slide her hand under the table and lay her calculating, expert, tormenting fingers on his pulsating erection.

'Let's go back to your place,' she said, her voice husky and sensual, and also slightly mocking. 'You can test *my* magical powers. Then we'll discuss the Englishman, this Mister Tom Powell, and the American bitch he's running with.'

'Yes, let's do that,' Lu Thong said, feeling breathless, sounding hoarse, then he stood up, not trying to hide what he was feeling, and left the bar with Mai by his side.

She's an angel from hell, Lu Thong thought, and that's where I'm heading.

The thought gave him comfort.

Chapter Eleven

Tom and Molly had formed an uneasy truce by the time they completed the drive from Mérida to Mexico City, leaving the former just after breakfast and arriving in the latter early in the morning of the following day, when the normally dense traffic was relatively thin. This time, when they booked into their hotel – medium-priced and near the Zocalo, or main square – they were able to obtain separate rooms, which saved them both further embarrassment, though Tom also felt a disappointment that he could not admit to, now being

tormented by sexual fantasies about this girl who annoyed him so much. He was also worried that she might lose the crystal skull or that it would be stolen from her in his absence.

'Perhaps I should look after the skull for you,' he suggested anxiously as he picked up his travelling bag at Reception, preparing to go to his room.

'No, thanks,' Molly said, slinging her rucksack over her shoulder and looking determined.

'I'm worried that we're still being pursued and that someone might attempt to take it off you.'

'I'm the one with the handgun,' Molly reminded him, 'so I'm the one who can look after myself *and* the skull. Fat chance of that with you, pal, given how you performed back there in Yucatán.'

'You don't have to be insulting,' Tom replied, 'just because I don't happen to travel with an offensive weapon on my person.' In fact, he was thoroughly ashamed of the way he had acted in that hotel in Mérida, when the oneeyed man had come at them with a pistol and Molly had so successfully put him to flight. He had been shocked, certainly, to find that Molly had a pistol, but was secretly grateful that this had been the case. He could not say that now, though. All he could do was fight to retain his dignity in the face of her onslaughts. 'Come to think of it,' he said, defending himself by taking the offensive, 'are you *licensed* to carry a loaded pistol?'

'That's none of your goddamned business,' Molly retorted. 'So what time do we meet?'

They agreed to sleep until lunchtime, then meet in the lobby for an early lunch and then, hopefully, a visit to Professor Emilio Juarez in the National Museum of Anthropology, taking the crystal skull with them. Thus, in accord for once, they entered their separate rooms, one adjoining the other.

In his attractive single room of Spanish colonial design, Tom slept uneasily, being tormented first by his fear that the one-eyed man would come crashing through the door, wielding his pistol as he had done back in Mérida, and, when he slept, by more erotic dreams about himself and a naked Molly in carnal embrace. He did, however, awaken feeling relatively rested, and, after freshening up with a shower, phoned Professor Juarez at the museum. The professor, an old family friend who had previously helped Tom with Mayan research, was delighted to hear that he was in town and gave him an appointment for four that afternoon.

As he had plenty of time to kill and only Molly to kill it with, Tom decided to be nice to her when he met her down in the lobby. She was wearing the same shirt and tight denims, but had a canvas bag slung over her shoulder instead of her rucksack.

‘Is the crystal skull in that bag?’ Tom asked anxiously.

‘What the hell do you think’s in it? My make-up?’

Tom tried to keep his cool, but their truce started breaking down, first when they both started coughing and developed watery eyes from the city’s notorious pollution, then when Tom suggested having Mexican food, and Molly, perhaps feeling wan from the unusual atmosphere composed of a dangerous mixture of lead, sulphur and ozone, responded by saying that she wouldn’t touch ‘that spicy greaser crap’ and recommended dropping into a Burger Boys instead. Appalled by the very thought, Tom insisted that he would not eat that ‘American filth’. They wrangled over it a bit and then compromised by having Italian in the form of a sit-down pizza in a Pizza Hut. Molly washed her ham-and-pineapple pizza (‘Nothing spicy, thanks!’) down with a strawberry milk shake, but Tom, disgusted at being forced to eat pizza in Mexico, insisted upon having a beer when the meal was finished.

‘Yeah, right,’ Molly said, ‘you just go ahead and poison your system with more of that alcohol. I won’t say a word.’

Forcing himself not to make any retaliatory comment about, for instance, her smoking of marijuana, Tom consulted his Fodor’s *Mexico* and then led her along densely packed sidewalks, past endless streams of traffic pouring out more eye-watering pollution, to the highly recommended La Opera, described as ‘a handsome turn-ofthe-century bar’ with ‘lush Victorian décor.’ His edition of Fodor’s, though a good few years out of date, did not let him down.

‘More authentic than a pizza parlour, don’t you think?’ he said to Molly while coughing to clear his throat, wiping his tearful eyes dry, and swigging his glass of cold Bohemia beer.

‘It’s not bad,’ Molly agreed reluctantly, also trying to clear her throat and dry her teary eyes while sipping her iced lemonade spiced with *chía* seeds.

‘It was one of Pancho Villa’s favourite hangouts,’ Tom informed her, having memorized this detail from his Fodor’s, ‘which may explain why, up until a few years ago, women weren’t even admitted.’

‘You’d have liked it better then, wouldn’t you?’ Molly sneered.

‘No, no,’ Tom spluttered hastily, to prevent another feminist tirade. ‘I merely

mean that this is a traditional establishment, well worth the visit.'
'Yeah, right,' Molly said. 'Filled with Mexican male chauvinist bastids. Their time will come, pal.'
Ignoring her remark, Tom deliberately checked his wristwatch. 'Well,' he said, looking forward to some serious sightseeing, despite the awful air, 'we still have a couple of hours to spend, so let's go exploring.'
'I don't wanna see any boring churches,' Molly warned him. 'I wanna look at the shops.'
'Quite,' Tom said, his enthusiasm for sightseeing instantly dampened, though he was too gentlemanly to refuse her. 'I think you'll find those in the Zocalo – the main square – and it's not far from here. So, let's get started.'
He had really wanted to visit the Metropolitan Cathedral, with its unique mixture of Ionic, Doric, Corinthian, and Baroque architecture, as well as the National Palace, formerly the Palace of Moctezuma, then the headquarters of Cortés, but Molly had eyes only for the many shops clustered together under the picturesque arches on the north side of the square. She depressed him even more by spending nearly an hour in the Monte de Piedad, or National Pawn Shop, known as the Mountain of Pity, telling him that it was the 'most terrific pawn shop' she'd ever seen, and adding, 'Not that *you'd* be interested in somethin' like this, being filthy rich and totally removed from the real fucked-up world.' When eventually Tom managed to drag her away from the hundreds of pawned items in the massive establishment, he tried sneakily to lead her across the great plaza to the Cathedral, but her voice, resounding grimly behind his back, stopped him dead in his tracks.
'No way!' she told him. 'We gotta get to the Zona Rosa. That's where it's all happening in this city and I wanna see it.'
'Of course,' Tom said obediently.
The walk to the Zona Rosa took only minutes and led them to a lively neighbourhood packed with boutiques, art galleries, artists' studios, hotels, bars, restaurants, discothèques, sidewalk cafés with colourful umbrella tables, and more shops selling everything from Mexican curios to eighteenth-century antiques. To his surprise, Tom actually enjoyed himself (the area was filled with pretty girls, most looking a lot happier than Molly) but eventually, with pollution exhaustion setting in, he insisted that they start off for the museum, even though they were still too early for his appointment.
'Yeah,' Molly said, 'right. Let's talk to this greaser friend of yours and find

out what we've got here.'

There were plenty of taxis and white *peseros*, or minibuses, passing by, but all of them were full, and after trying for about twenty minutes to wave one down, Tom decided that it would be quicker to walk. This turned out to be true, though the walk was quite dangerous, since the density of the traffic remained appalling, the fumes from its exhausts were dense enough to be sandwiched, and few drivers took any notice of pedestrians.

The museum was located in the handsomely forested Chapultepec Park, on the west side of the city, and it certainly lived up to its reputation as the finest in the world. A truly magnificent building, it was constructed as a series of halls built around a patio, with at least six of the chambers devoted to the major pre-Columbian civilizations of Mexico, including the Toltecs and the mysterious builders of the pyramids at Teotihuacán.

Passing the huge statue of Tialoc, God of Rain, which stood imposingly outside, they entered the building and spent the remaining twenty minutes studying murals and exhibits dealing with the history of Mexico and MesoAmerica, and, in particular, the Mayans. While Tom found all of this to be fascinating, Molly's face was a picture of monumental boredom, her jaws working relentlessly on gum, her pursed lips blowing bubbles.

'Nothin' here about the crystal skull,' she noted sourly.

'No,' Tom replied. 'There wouldn't be. The true origins of the crystal skulls aren't known – though they're widely believed to be Meso-American – so they wouldn't be included here. Nevertheless, Professor Juarez has a particular interest in them, believing them to be of early- or pre-Mayan origin.'

Molly impatiently checked her wristwatch, then looked up, relieved. 'Time's up,' she said.

Tom told one of the uniformed guides that he had an appointment with Professor Juarez and was promptly led downstairs, with Molly by his side, to a room in the basement. Entering, he found the professor seated behind a large, cluttered table surrounded by archaeological rarities, ancient ceramics, faded manuscripts covered in hieroglyphics, other desks piled high with books and papers, and walls covered with maps. Juarez had a thick thatch of healthy grey hair, a neatly trimmed grey beard, and a surprisingly youthful, good-humoured Spanish face. Standing up and coming around the desk to shake their hands, he revealed himself to be short and barrel-chested, almost

bursting out of his grey suit and buttoned-up waistcoat.
'*Buenas tardes*,' he said, vigorously shaking Tom's hand. '*Mucho gusto en*…' Then, breaking into perfect English, he continued: 'It is so good to see you, my friend. It's been so long… How long?'
'Five years,' Tom said. 'The last time you were in London.'
'Ah, yes, so it was. When your father was still alive. A good man, a great friend… But what can one say?' Seeing the shadow of remembered pain that flickered across Tom's boyish face, he emotionally threw his arms around his shoulders and hugged him, then turned to Molly and shook her hand also.
'And you are…?'
'Molly Beale.'
'*El gusto es mio*,' the professor said, eyeing Molly up and down with undisguised macho appreciation. 'The pleasure is mine.' Molly glanced at Tom, a cynical glint in her eyes, while the professor indicated the two wooden chairs facing the table. 'Please, take a seat.' When Tom and Molly were seated, the professor sat opposite them, then clasped his hands beneath his bearded chin, raised his bushy eyebrows inquiringly, and said, 'So! What is it you wished to discuss with me?'
Tom explained what he and Molly had found in the Shrine of the Great Pyramid at Chichén Itzá. When he had finished, the professor nodded thoughtfully. 'So those men obviously removed the crystal skull from that hole in the platform of the Shrine before being burnt to death.'
'Correct,' Tom said.
'Well,' the professor said, 'I can certainly confirm that most of us in the field believe that there are only two genuine crystal skulls. One of them is in the Museum of Mankind, London, and the other – the so-called Rose Quartz Skull, reportedly the finest and purest in the world – disappeared centuries ago and was rumoured to be hidden somewhere in Guatemala or Mexico. It would seem to me, therefore, that if this skull is genuine, it's almost certainly the long-lost Rose Quartz Skull and has been buried in the platform of the Shrine for centuries. If it is, then your find is truly astounding – and the skull will be priceless.'
'Great!' Molly exclaimed.
Offended by her mercenary attitude and hoping to receive something more from this than mere filthy lucre – perhaps his name in the history books – Tom asked of Professor Juarez: 'But can you prove if it's genuine or not?'

Juarez nodded. ‘Let me examine it properly,’ he said.
‘You mean we have to leave it here with you?’ Molly asked with bald suspicion.
‘No,’ the professor responded with a knowing smile and not without taking another eyeful of Molly’s crossed legs and pert breasts. ‘Naturally I understand your concern, but I can examine the skull right here, under your watchful gaze.’
Nodding and grinning, not remotely embarrassed that the professor was aware of her lack of trust, Molly removed the glittering crystal skull from her shoulder bag, balanced it on the base of its neck, and slid it across the table to him. Seeing it, he offered a low whistle of appreciation, then picked it up to turn it this way and that, studying it at length, causing the light from the overhead bulbs to flash on and off it. After probing the empty eye-sockets with his fingers, he opened the jaws as wide as possible and stared into the crystal throat.
‘Mmmm,’ he murmured. ‘Fascinating!’
When he had seen all that he could with the naked eye, he studied the skull with a large magnifying glass, then under what looked like a combination of giant microscope and telescope, lit up inside with tiny bulbs.
‘What’s that?’ Molly asked.
‘A binocular microscope that gives me a threedimensional view of the artefact. However, in order to see fully just how this skull was made, I have to complete another test.’
He carried the skull to a glass tank filled with milky liquid, lowered it carefully into the liquid, then turned on the overhead lights. Instantly, the submerged skull took on an eerie luminosity that showed its interior in startling depth, making it seem much bigger than it was, revealing the hidden hollows, curves and joinings of its formally unseen structure. It resembled, to Tom’s inexpert gaze, a large prism streaked with darkness and light.
‘This is a bath of index-matching benzyl alcohol,’ Professor Juarez explained. ‘By viewing the skull in the benzyl alcohol, under polarized light, I can determine whether it was cut from one chunk of quartz. I can also ascertain the angle it was cut relative to the natural axis of the crystal… Mmmm. Fascinating!’
Satisfied, he removed the skull from the benzyl alcohol, dried it, then placed it under what looked like an electric drill. However, the bit did not revolve

but merely applied electronically controlled pressure to the top of the skull and recorded some kind of measurements on an illuminated graph. Satisfied again, the professor returned to his chair and placed the skull on the table.
‘It’s certainly rock quartz,’ he said, ‘rating seven on Mohs’ Scale of hardness.’
‘Meaning?’ Molly asked.
‘That it’s very hard indeed. Diamond, for instance, is ten. So a Mohs’ rating of seven makes this skull remarkably hard – certainly harder than any rock quartz that we know of today.’
The professor gazed thoughtfully at the skull for some time, then again clasped his hands under his bearded chin. He took a deep breath and released it as he spoke.
‘The tests,’ he said, ‘confirm that both the skull and the jawbone were cut from one single chunk of quartz, albeit of a rare size and quality. Indeed, I think I can say with confidence that given a crystal of the same size, our foremost contemporary producers of cut quartz could not produce a skull of comparable quality. It is my carefully considered opinion that it would have taken centuries of work to produce a skull of this quality; and, as I’ve said, I don’t believe that it could be produced at all in this day and age. My deduction, therefore, is that this skull is genuine, ancient, remarkable, and absolutely unique.’
‘Why unique?’ Molly asked with a percipience that again took Tom by surprise while making the professor smile. ‘I mean, what makes it so different from the other crystal skulls you’ve examined?’
‘Well, apart from the quality of the cut, as I’ve just mentioned, it has a remarkable set of optical properties carved into it. Look here.’ He held the skull up, opened the jaw, and turned it in the artificial light, to let them see inside it. ‘Halfway back in the roof of the mouth, here…’ he indicated with his index finger… ‘there’s a broad plane that acts like a forty-five degree prism, directing light from beneath the skull, into the eye-sockets. This means, for instance, that if the skull was placed in front of some kind of fire or light – say, an altar with a light concealed behind it – that light would be visible through the eye-sockets as if it was actually inside them. This means, in turn, that a fire projected through the eye-sockets in that way would create an extraordinary flickering light-show that would impress, or even awe, the unknowing.’

‘Amazing!’ Tom exclaimed softly.
Molly threw him a sardonic glance, but turned her attention back on Professor Juarez as the latter continued: ‘Also, placed next to that prismatic plane, there’s a ribbonthin surface that acts like a magnifying glass. Finally, behind the prism, which to all intents and purposes that plane is, there are convex and concave surfaces that gather more light and direct it out through the eye-sockets. More ingeniously, the back of the skull also acts as a kind of camera lens, gathering light from behind itself and projecting it through the eye-sockets.’
‘Extraordinary!’ Tom exclaimed.
‘Weird,’ Molly said flatly.
‘I haven’t finished yet,’ Professor Juarez told them. ‘Another unusual aspect is the zygomatic arches carved next to the cheekbones.’
‘The *what*?’ Molly asked.
The professor smiled at her again. ‘Zygomatic arches. Arches formed by the joining of the malar bone and the temporal bone of the skull.’
‘Oh, right. Keep going, professor.’
‘The zygomatic arches carved next to the cheekbones have had a narrow space of crystal material removed from beneath them, to enable light from behind and underneath to flow into and through the eyes again. Even more ingenious effects are then produced when a light source behind the skull is moved about or flicked rapidly, repeatedly, on and off.’
‘What kind of effects?’ Tom asked.
‘All kinds of vague or ghostly images. Here, let me show you.’
The professor dimmed the lights in the room, plunging it into semi-darkness, then he turned on a small, brilliant light that was concealed behind the upright skull. His first adjustment of this light made dazzling striations pour out of the empty eye-sockets. When the hidden light was moved again, the striations pouring out of the eye-sockets flashed up and down the walls, floor and ceiling, then criss-crossed each other, and, being refracted off the different planes and lenses inside the skull, formed startling, shadowy images that changed constantly as he kept changing the position of the light behind it. Those shadowy shapes merged with faint colours to produce even more startling effects and shapes, with the latter looking in turn like the silhouettes of misshapen humans and bizarre animals, shadowy whirlpools, pools of silvery light, stars within patches of pitch darkness, and even enormous,

glistening spiders' webs formed by the play of light and shadow.
It was a bizarre, disorientating *son et lumièr*e spectacle that almost mesmerized Tom. In fact, he was starting to feel faint and dizzy when the professor turned the hidden light off and switched the room lights back on. Tom heaved a sigh of relief.
'Jesus, that was weird,' Molly said.
'Quite remarkable,' Tom said.
'Even more remarkable,' the professor said, 'is that there are two holes here…' He picked the skull off the table and then turned it left and right, to show them the barely visible holes, one at each side of the base. 'Both are invisible when the skull is stood upright. However, if you insert two thin rods into the holes – rods so thin they would not be seen in gloom or darkness – they support it at a perfect balance point that enables it to be rocked to and fro. So! Observe!'
He inserted two thin steel rods into the holes, dimmed the lights in the room again, then lifted the skull slightly off the table and tapped it gently to make it rock to and fro, thus throwing more fantastic, moving light images onto the walls, ceiling and floor.
'This, as you can see,' he continued, 'produces even more frightening effects.'
The remarkable combination of light-and-shadow effects did indeed produce even more lifelike moving images that grew and shrank dramatically as well as taking on many different shapes and oddly glowing colours.
When he was satisfied that they had seen enough, the professor turned the room lights back on and switched off the light hidden behind the skull. He then removed the steel rods.
'It's like having a bad dream,' Molly said.
'That was probably the intention,' Tom said. 'Can you imagine those effects working on the imagination of primitive, deeply religious Mayans who believed everything their priests told them? Certainly, they would have been very impressed.'
'And probably scared shitless,' Molly said.
The professor glanced at her, startled by her obscenity, then he quickly turned his gaze upon the embarrassed Tom.
'Finally,' the professor said, holding the skull close to them and vigorously working the jawbone, 'the jawbone fits perfectly into two polished sockets,

which means that the top of the skull can be moved up and down on the jaw, and vice versa. By turning on that light behind the skull – or, in the case of an ancient temple, some kind of fire or concentrated flame – the effects you've just seen would emanate from the jaw as well as the eye-sockets. And if the priests decided to produce vocal effects, the skull would appear to be speaking in a rather hollow, ethereal manner.'

'Oh, boy!' Molly exclaimed.

They were silent for a moment, watching the professor as he carefully placed the skull back on the table and then stared steadily at them. He smiled, but said nothing.

'So who do you think made it?' Tom eventually asked him, breaking the lengthy silence.

'It's my belief that this particular skull is, indeed, the long-missing Rose Quartz Skull, one of which is rumoured to have been carried by an ancient and mysterious race, before the Mayans or the Aztecs, in a legendary migration across the Earth, from the west to the east, at least 3,500 years ago.'

'What race?' Tom asked.

'Well,' the professor said tentatively, 'we only know that a chain of remains of ancient civilizations stretches between southern Asia, across various Polynesian islands and Easter Island, all the way to Meso-America – the name given to the ancient American cultural region that extended from Chichén Itzá in northern Yucatán to the southernmost outposts of the Inca civilization in what is now Chile.'

Obviously pleased to be talking about this, he turned away from them, picked up a wooden pointer, and tapped it against the large map of the world spread across the wall directly in front of them, indicating certain places as he talked.

'It's not known if that ancient civilization followed the trade winds from east to west, or whether the ancient cradle of humanity, Asia, sent emissaries of its culture with the seafaring Polynesians as far as Easter Island and still farther eastward.' He tapped the location with his pointer. 'However, it *is* believed that the forbidden city of Angkor, now in Cambodia, in the Khmer Republic, here…' he tapped the location with his pointer… 'would probably have been the first stop on the eastward journey. The oncesacred lagoon city of Ponape, in the Polynesian Islands, here, would have been a halfway house.

On barren Easter Island, here, the ancient mariners certainly left their fabulous monuments, in the shape of the giant sculptures still there today. The next stops, therefore, would have been Yucatán and British Honduras – here and here – which suggests that the mysterious travellers had to be preMayan.'

'What about the other crystal skull?' Tom asked. 'The one in the Museum of Mankind, London.'

'Since the other crystal skull was originally found in British Honduras, and since it's been assessed as approximately 3,500 years old, almost certainly it belonged to that same mysterious race of ancient Mayans. And with this second skull being found on top of the Great Pyramid in Chichén Itzá, it seems likely that both skulls were left behind by that same ancient race as it moved on from the Yucatán peninsula to Peru, where it finally came to rest, creating the holy city of Tiahuanaco.'

'Do we have a means of proving that?' Tom asked.

'Yes. By showing this skull to my British counterpart and friend, Professor Julian Weatherby, presently working for the British Museum, London. Julian's the foremost authority on the crystal skulls and can tell you all you need to know about this particular one.'

'Well, I'm on my way home, anyway,' Tom said, casting a nervous glance at the suspicious Molly, 'but I doubt that we can get the skull out of Mexico without being stopped by Customs officials.'

'Then let's make it official,' Professor Juarez said. 'To let this priceless artefact fall into the hands of Customs officials, Mexican or otherwise, would be tantamount to giving it away. May I suggest, therefore, that you let me send the skull with other artefacts from this museum to the British Museum in London, which is preparing an exhibition of rare Mayan treasures. Once in the possession of Professor Weatherby, the skull, accompanied by a formal letter from me, detailing your involvement, will be separated from the listed exhibits and kept under his personal supervision until your arrival. Once you've met him and talked, learning all you need to know about the skull, you can decide what you wish to do with it.'

'Excellent,' Tom said.

'How can we trust that Limey professor?' Molly asked.

Tom winced with embarrassment, but Professor Juarez merely smiled, obviously admiring a woman of spirit, and said, 'As Professor Weatherby

would have problems in explaining how he came to be in possession of this particular skull, I think we can take it as read that he won't try to keep it for himself. Apart from that, he's an honest man and dedicated academic, devoted to his work. He does not steal ancient artefacts of any kind, so your skull will be safe with him.'
'Okay, I'll buy that,' Molly said. Then, bold as brass, she turned to Tom, and said, 'But if you go to London, I go, too, and *you'll* have to pay. Otherwise, this skull goes with me to New York.'
'I won't be able to get it into New York,' Professor Juarez said, either telling the truth or slyly taking Tom's side.
'*I'll* get it in,' Molly said. 'At least, I'll damned well try
– I'll run the risk of being caught – rather than let him' (nodding at the embarrassed Tom) 'go to London without me, and maybe set up some deal between himself and your Limey professor friend. I mean, money talks, right?'
'Well, *really*!' Tom exploded. 'The very idea that I would stoop to – '
'I go to London with you,' Molly interjected bluntly, 'or the crystal skull comes to New York with me.'
'Oh, alright!' Tom snapped.
'Great,' Molly said.
'So you want me to ship the skull to London?' Professor Juarez asked.
'Yes,' Tom said.
'Yes,' Molly said.
They glared at one another, then Tom turned away to write down the contact details of Professor Julian Weatherby, as dictated to him by Professor Juarez. He then thanked his old friend, shook his hand and embraced him. Finally, gratefully, still burning up with embarrassment and leaving the crystal skull on the table, he led Molly out of the office, then out of the museum.
Though no longer in possession of the crystal skull, they still had each other.
'God help me,' Tom whispered.

Chapter Twelve

' *What's* that?' Molly asked as they left the museum and again tried in vain, while coughing and wiping eyes that were watering from the city's polluted atmosphere, to wave down a taxi.

‘Nothing,’ Tom said. ‘I was just thinking aloud.’ ‘You whispered “God help me”, right?’
‘Well, yes, but I just meant…’
‘Thinkin’ about bein’ stuck with me, right?’
‘Not really. I…’
‘Why are you stuttering?’
‘I’m *not* stuttering. I’m merely feeling a little…’ Hitching her almost empty bag onto her shoulder,
Molly turned to face him on the sidewalk. ‘Listen, you little prick, let’s get a couple of things straight *right now*.’

‘By all means,’ Tom said, desperately looking up and down the road for an empty taxi and feeling mortified by Molly’s fresh outburst. He hated scenes, and Molly sure knew how to create them, so now he was burning with embarrassment as well as suffering from the pollution – parched lungs, dry throat, watery eyes – and wanted to disappear in a puff of smoke.

‘First,’ Molly said, raising her index finger and burning holes in him with her bright gaze, ‘you can stop bein’ so superior just ‘cause I’m a woman and younger than you are and not too well educated. *I’m* the one who had the presence of mind to grab that crystal skull at Chichén Itzá when all *you* could think of doin’ was getting’ the hell out of there. I’m also the one who protected us from that oneeyed bandit when all *you* could do was fall on the goddamned floor and bury your head in the sand. Second,’ she continued, raising another finger, ‘I have more right to that crystal skull than you and that entitles me to speak my piece about what we should do with it. Third,’ she went on, raising a third finger, ‘the only reason you’re having to pay my expenses regarding hotels and our flight to London is that *you’ve* decided we’re going there instead of New York, and I don’t have the bread for that kind of trip. Fourth,’ she climaxed, raising a fourth finger, ‘I may not be as educated as you, but that doesn’t mean I’m not intelligent and can’t think for myself, so you can stop all this English condescension crap and talk to me like we’re equals, at least when it comes to decisions about the crystal skull – which is what we should be doin’ right now. Agreed?’

‘Agreed,’ Tom said. ‘Oh, look! There’s a taxi!’ Amazed to actually find an unoccupied taxi in Mexico City and relieved to see it pulling in towards him, he continued, ‘You’re absolutely right, Molly. I take all of that on board. I didn’t mean to be condescending – I was just overly anxious and said the

wrong thing – but I certainly feel that you're an equal in this matter and will treat you correctly in the future. I think we're in danger, Molly – *real* danger – and I'm concerned for the both of us. By all means, let's discuss this, but please bear in mind that I have my own sensitivities and that your constant abuse, including many obscenities, pains me deeply and has possibly caused what you believe to be my condescension. It's not that, really. I'm just trying to defend myself. And I'm easily embarrassed by scenes and don't know how to deal with them. I'm not used to women who talk like you do, and so I say all the wrong things. Can we forgive and forget?'

Molly stared at him, half touched, half amused, then, grinning, said with a shrug, 'Well… Okay, then.'

Like a gift from God, the taxi pulled in and they both clambered into the rear. After giving the driver the name of their hotel, Tom settled back in his seat and was instantly aroused by the closeness of Molly beside him: her long legs outlined in the tight denims, one crossed over the other, and the heat of her body, whether real or imagined, permeating his left arm and thigh. He distracted himself by gazing out the window, beyond the dense, chaotic steam of cars, streetcars, trolleybuses, motorcycles and *peseros*, at the city's extraordinary architectural mixture of old churches, Aztec ruins, and modern buildings of steel and glass. It was hot in the back of the taxi and he felt himself sweating.

'So,' Molly said eventually, breaking the uncomfortable silence, 'why do you think we're in danger?'

'Well, that's obvious, isn't it?' Tom replied. 'It's perfectly clear that we're being pursued by that one-eyed bandit – and that man had a pistol.'

'That was back in Mérida,' Molly said, 'and I don't think he'll have followed us all this way. He was probably just some local hoodlum who happened to see us examining the crystal skull in that bar, and decided to steal it. He didn't look to me like he was exactly rolling in bread, so I doubt that he'll have followed us to here, even if he knew where we were staying, which is highly unlikely.'

'I trust you're right, Molly, but he could have been *hired* by someone, in which case he's professional and could still be pursuing us. So that's one of the dangers.'

'And the other?'

'The crystal skull itself. If, as Professor Juarez suspects, we're in possession

of the Rose Quartz Skull, we could be in personal danger from its legendary magical powers.'

'*What*?' Molly glanced sideways at him, a sardonic grin on her face.

'The two genuine skulls,' Tom explained, 'including the one we possess, are believed to have remarkable parapsychological powers that can be used either for good or for evil. Those powers include the ability to mesmerize, to will illness or death, to look into the future, and to create all kinds of magical phenomena – spirit beings or the manifestation of creatures from the subconscious. I know it sounds crazy, but there are countless recorded examples of people going mad and committing murder or suicide after coming into possession of one of the two genuine skulls. Many examples, Molly. Many! And while I'm not saying that our skull *definitely* has those properties, I *am* saying that we should be especially careful when dealing with it or handling it.'

'Those stories are probably all bull… nonsense,' Molly said, making a decent attempt at not swearing. 'I mean, you saw what the professor did back there with the skull – all those incredible images he created just by playing with that light he placed behind it – and the stories you've heard probably came from people seeing similar effects. As the professor said, the effects produced by the skull were probably used by the priests of ancient times to scare the livin' daylights out of their subjects; but they *were* effects, no more and no less. So our skull won't be magical or dangerous – it's just incredibly valuable as an ancient artefact – and that's why we'll make a lot of bread once we've proved that it's genuine.'

As the taxi entered the Zocalo, Tom glanced out at the immense square dominated by the Cathedral and the National Palace. The shops under the arches were packed with tourists, shoeshine boys were vigorously polishing the boots and shoes of men seated at the outdoor bars and cafés, and people were cramming onto the trolleybuses, holding on for dear life. The sun was going down, though the light was still bright, and it created ever-changing, shifting shadows across the great plaza.

'Well,' Tom said, speaking with particular care as his admiring gaze took in the Cathedral's baroque mixture of architectural styles, reminding him of the glories of history, 'that *is* the question, Molly. Do we think of the skull in purely mercenary terms or do we consider its immense historical value?'

Molly threw him a glance of dark suspicion. '*What*?'

‘I merely meant – ’
‘You want to give it to some fuckin’ museum or art gallery,’ Molly interjected, quickly forgetting her resolve not to swear. ‘Is that what you mean?’
‘Well, it *did* occur to me that – ’
‘Oh, fucking great!’ Molly exploded. ‘You’re an English aristocrat and you’ve no money worries, so you’re gonna ask me to give up the only chance I’ve ever had in my life to make some real dough. Well, to hell with you, pal, I won’t do it. If that skull’s genuine, if it’s worth a lot of bread, I’m gonna get something out of it.’
‘But of course,’ Tom responded, backing off instantly, not relishing another foul-mouthed tirade. ‘I appreciate your concern and was merely suggesting that – ’
‘Forget it, Tom,’ Molly said, using his Christian name for the first time. ‘Just *forget* it! If that skull’s worth money, then I’m gonna make some and that’s all there is to it. We can *sell* it to a museum, for Chrissakes! I mean, those museums have bread to burn. So don’t even consider askin’ me to give our skull away. I won’t. And that’s it, man.’
‘Yes, Molly, of course. I understand your concern. If it’s worth something – ’
‘It is!’
‘ – then I’ll certainly ensure that you’ll profit from it. I only ask that you let me find a good home for the skull, rather than sell it to just anyone.’
‘A good home for it’s the one that pays for it. So you find that museum and I’ll sell it.’
‘Understood, Molly. Naturally.’
Fingering the collar of his sweaty shirt, Tom was relieved when the taxi pulled up outside their hotel. After paying the driver and giving him a lavish tip to avoid another argument, this time with the driver, who, being Mexican, would almost certainly be volatile, he started towards the entrance to the building. Then, drawn by an instinct that he could scarcely comprehend, he glanced across the car park, at his expensively rented jeep, and saw that it had been vandalized: all the tires punctured and the windshield smashed, with shards of broken glass glinting on the bonnet in the early evening’s dimming light.
‘Oh, God!’ he exclaimed forlornly.
‘What?’ Molly asked.

Tom pointed at the jeep. ‘It’s been vandalized,’ he said.
‘Those goddamned shits!’ Molly said.
They hurried across the tarmac to examine the jeep and confirm that it had indeed been thoroughly trashed by some person or persons using blunt instruments to do in the windshield, smash the headlights, batter all the doors, and, as they had previously observed, puncture all the tires.
‘Why the hell would they do that?’ Molly asked rhetorically, glancing at all the other, untouched vehicles. ‘I mean, they only attacked *our* car; they touched none of the others.’
‘Because they’re *not* commonplace vandals,’ Tom said, unable to prevent a sliver of fear from slithering icily through him. ‘Why pick this one vehicle out from all the others? It’s a jeep and it’s open and there was nothing in it to steal. It was picked *because* it’s our car; because the vandals *knew* it was ours. This jeep is now a mess, we can’t possibly drive it, and that must be exactly what they wanted. We’re still being followed.’
They stared at one another, locked together in fearful silence, and then, for the very first time, even Molly expressed her anxiety.
‘Shit,’ she said, ‘this is serious.’
‘I think I need a drink,’ Tom responded.
‘So do I,’ Molly said.
Hurrying into the hotel, they went straight to the bar. Tom ordered two whiskies and Molly didn’t argue. When they had received the drinks, they sat at a table near the windows and stared out at the descending evening where a blood-red sun was casting its crimson glow on the car park and on their vandalized jeep. They both sipped nervously at their drinks.
‘Maybe we’re just imagining it,’ Molly said eventually. ‘It *could* have been vandals and they *could* have picked our jeep at random. You know? A bunch of psyched-up kids wandering in and attacking the first vehicle they happen to see.’
‘My jeep would not have been the first vehicle they saw; it’s practically in the middle of the car park. So it can’t have been a random choice.’
‘Well, maybe…’
‘There’s no *maybe* about it. That jeep was smashed to render it unusable, and it was clearly chosen specifically. We’re being *followed*, Molly.’
‘Yeah, right, well…’ Her voice trailed off as her bloodshot eyes widened, focusing on the bar across the wide room. Following her gaze, Tom saw that

familiar, one-eyed, unshaven face turned in his direction. The Mexican was with some barrel-chested companions, all wearing worn denims and shirts, all grinning like hyenas.
‘Oh, my God!’ Tom whispered.
‘To hell with ‘em,’ Molly said, reaching up to tug automatically at the strap of her shoulder bag. ‘I’ve still got my handgun in here and I’m gonna challenge those bastids.’
‘No, you’re not!’ Tom said, almost shrieking.
‘We can’t let them scare us,’ Molly said, starting to rise from her chair and swinging the shoulder bag around to get at her handgun. ‘I’m gonna brace ‘em and if they make one false move, I waste the whole goddamned bunch.’
‘No!’ Tom exclaimed.
‘Yes!’ Molly insisted. ‘Either I do it or you do it, but one of us has got to face them down, so let’s get the ball rolling.’
‘No!’
‘Yes!’
‘That one-eyed man has a gun!’
‘*I’ve* got a gun,’ Molly reminded him, ‘and I know how to use it.’
‘You can’t!’
‘I can!’
‘I refuse to let you do this!’
‘Then *you* do it,’ Molly said, staring challengingly at him. ‘Let ‘em know you’re not scared of ‘em and threaten to call the cops if they look like givin’ you trouble.’
‘What good will *that* do?’ Tom asked.
‘Scared, are you?’
‘Yes.’
‘Then to hell with you. I’m going to challenge those bastids.’
But when Molly started to stand upright, Tom leaned across the table and jerked her back down again.
‘Alright, Molly, *I’ll* do it!’
‘Good. So get to it.’
Unable to ignore her challenge, Tom actually managed to stand upright in preparation for his march across the room. Just as he did so, however, the one-eyed man hooked a finger into his own eye-socket and popped out his glass eye, which landed, like a coloured marble, in the upturned palm of his

hand. As Tom turned pale and almost dizzy with disbelief, the one-eyed man placed the glass eyeball on the table in front of him, then made it spin like a top. When it stopped spinning, its gleaming glass pupil was staring directly at Tom.

Shocked, Tom grabbed Molly by the shoulder and ushered her out of the room while the hoodlums hooted with contemptuous mirth behind them.

'Godammit!' Molly exclaimed as they hurried across the lobby. 'I just don't believe this!'

'I do,' Tom said firmly.

'So what do we do now?'

'We go to our rooms and lock ourselves in,' Tom said, feeling positive for the first time in a long time, 'and then I'll book us on the first flight to London.'

'Right,' Molly said. 'Okay.'

Nervously hurrying upstairs, they went to the doors of their adjoining rooms.

'Make sure you lock the door,' Tom said, being manly. 'I'll call you as soon as I've booked the flight. In the meantime, stay in there.'

'Right,' Molly said.

Tom opened his door, stepped inside, then closed and locked the door behind him.

'Dear God,' he whispered, glancing around him.

His room had been ransacked. The contents of his travelling bag had been upturned on the floor, the bedclothes were scattered around the bed, the mattress had been slashed to ribbons, and every drawer in the chest-ofdrawers had been pulled out and also thrown on the floor, with their contents distributed wildly around the room. Tom thought of that bunch of men down in the bar and his stomach turned over.

Someone knocked on the door.

Almost jumping out of his skin, he turned back to the door and whispered, 'Yes? Who is it?'

'It's me! Molly! Let me in!'

Relieved, Tom let her. She entered quickly, brushing past him, carrying her rucksack, still packed, in one hand. Tom closed the door and turned around to face her. She was staring, wide-eyed, at the devastation of his room.

'You, too!' she exclaimed.

'They ransacked your room as well?'

‘Yeah, right.’ She stared directly at him and he melted in her gaze. ‘We’ve gotta get out of here right now. You understand? *Right now*!’
‘I agree,’ Tom said.
Decisive as he had never been before, he picked up the phone and called the Aeropeurto Internacional to book the first flight to London. He was offered the first flight out on the following morning and promptly accepted, booking it with his credit card. When he put the phone down, having completed his transaction, he turned to Molly and said, ‘We have to check in at eight in the morning, but I think we should leave here right now and spend the night in the relative safety of the airport.’
‘Fuckin’ A,’ Molly said, still forgetting her vow on non-obscenity in the heat of the moment. ‘Except your jeep’s clapped out. You’ll have to call ‘em and get ‘em to bring another car around here.’
‘Good Lord,’ Tom said, recalling the condition of the jeep and shaken by the thought of telling the rental company. ‘I can’t possibly do that. I mean, I can’t let them see what’s happened to their vehicle.’
‘Why not? It’s rented. That means those bastids are insured. Just call ‘em and tell ‘em you’ve been vandalised by their countrymen an’ need another car to get you to the airport.’
‘They certainly wouldn’t agree to that, Molly dear. In fact, they’re going to be extremely agitated when they see the state the jeep’s in.’
‘To hell with them,’ Molly said. ‘What’s their number?’
Tom gave her the number of the car rental company and commenced picking up his strewn clothes as she went to town on the unfortunate administrator at the other end of the line. Tom was impressed. Molly put on a great show of hysterics, wailing that the car had been vandalised and demanding to know what kind of town this was where any hooligan could walk into a hotel car park and vandalize a car rented by a tourist. She demanded compensation, threatened them with action from the American Embassy, warned them about possible repercussions from her lawyers, and then slammed the phone down and grinned broadly.
‘They’ll be here in twenty minutes with another car - and it’s on the house. Come on, let’s get out of here.’
Having finished his packing, Tom picked up his travelling bag and followed her out of the room, then back down the stairs. After glancing around the brightly-lit lobby to ascertain that the one-eyed bandit and his leering

companions were not present, he went to the reception desk and paid his check. Then he and Molly went outside to wait for the new rental car, free in this instance, which arrived twenty-five minutes later. It was a battered old Volkswagen Beetle. Tom took the driving seat, Molly sat beside him, they belted up, and then Tom started off, driving more recklessly than he had ever done before, feeling clammy with fear.

The sun had gone down and the town was lamplit, but the traffic in the city center was still dense and chaotic, with kamikaze motorcyclists weaving dangerously between other cars, taxis, streetcars, trolleybuses and the ubiquitous *peseros*. Though normally a nervous driver, Tom hardly noticed the clamorous chaos around him and weaved his way through it with surprising skill, hoping to make his escape as soon as possible.

The long road out of the city center took him past magnificent mansions built into landscapes of lava, rock, and windblown foliage, backed up by the *ciudades perdidas*, where the poorest of the poor lived in their thousands of cardboard and sheet-metal huts. Soon, however, he found himself on the long, straight highway that led to the airport, under a moonlit, star-filled sky, with the wind beating noisily against the car. The traffic here was less dense than in the center of the city, but it was still plentiful and potentially dangerous.

'I've never seen you drive so well,' Molly remarked.

'Fear's a wonderful incentive,' Tom replied. 'And right now, I'm fearful.'

'Why? We're well out of it.'

'I don't know. I just feel that we're not. It's probably my over-active imagination, but that's how I feel.'

'You're a real cute one, Tom.'

It was pleasantly reassuring to hear her using his first name at last, but the feeling of clammy fear persisted. As he drove along the highway, listening to the wind beating fiercely against the car, dazzled by the lights of the other vehicles racing up behind him to shoot carelessly around him, he was convinced that he was still being followed by… someone, or… *something*.

Certain that this was so, he repeatedly looked in the rear-view mirror, then up at the sky, and found himself wondering, in particular, why he was studying the latter. He lowered his gaze from the sky, concentrating on the road ahead, the rear lights of the other vehicles, then he glanced again in the rear-view mirror and saw the headlights of a car, a battered Mercedes Benz, that was

moving too fast even for this road… and it was catching up with him.
‘It’s them again!’ he whispered, sounding strangled.
Even as he realized beyond doubt that he was being followed, the Mercedes caught up with him, its main beams turned on to dazzle him, and then it bumped into the back of his Volkswagen, once, twice, a third time, making it jolt and almost go into a swerve.
‘What the hell…?’ Molly exclaimed, glancing over her shoulder but forced to squint into the main beams of the Mercedes that was repeatedly bumping them from behind. ‘Goddamnit…’
Though already driving faster than he had ever done before, Tom accelerated to get away from the Mercedes, but it repeatedly caught up with him and bumped him again, making the Volkswagen jolt dangerously. Tom swept into the other lane and the Mercedes then raced up beside him and kept pace with him.
Glancing sideways, Tom saw the one-eyed man staring at him. His three hoodlum friends were in the car with him, all grinning wolfishly.
‘It’s him again!’ Tom shouted. Then he saw the rear side-window of the Mercedes being rolled down and the barrel of a pistol aiming at him. ‘They’re going to shoot us!’ he bawled.
Pressing his foot down hard, he let the Volkswagen surge forward, temporarily leaving the Mercedes behind. But it accelerated immediately, racing to catch up, and Tom quickly pulled back out to the other lane, almost hitting the car ahead and causing a lot of drivers to hoot their horns.
Before he knew quite was happening, Tom found himself weaving desperately in and out of the fast stream of traffic, swerving and wobbling on screeching tires, causing more horns to honk and other drivers to start doing the same. This did not deter the one-eyed man, who drove with reckless abandon, still trying to catch up and let his gunman get off a shot. When that first shot was fired, ringing out loud and clear above the bedlam of the swerving, honking cars front and rear, Tom put his foot down to the floor and went barrelling onto the first slip road leading off the highway.
‘Oh, Christ!’ Molly wailed.
The car driven by the one-eyed man came barrelling down after them.
Still racing ahead, Tom kept going until he found himself on a dark road that ran up into the hills of the shanty towns known as *vecindades*. The road soon turned into a potholed track that made the Volkswagen rock and roll,

screaming and rattling dementedly. Another gunshot rang out and Tom glanced in his rear-view mirror to see that the Mercedes was catching up with him. With no choice, he kept driving, wrestling with the steering wheel, desperately trying to avoid the potholes and ditches, the car being constantly whipped and scratched by the branches of Montezuma cypress trees. Then he came over the brow of a hill and found himself racing through a *vecindade*, past shacks with tin roofs and cardboard walls and dirt gardens, scattering the adults and children who had been squatting by the roadside, the car's wheels running over campfires to send flaming debris flying, and then he plunged back into the moonlit darkness of another quiet road. He could see lights in the hills around him, the fires of other *vecindades*, and the streams of light of the vehicles on the highway, now far below him.

Suddenly, the narrow track broadened and the Mercedes raced up beside him to strike the Volkswagen broadside, trying to force it off the road. Tom clung grimly to the steering wheel and managed a quick sideways glance. He saw that glassy single eye staring at him and then the barrel of a pistol aiming at him from the lowered rear window of the Mercedes. That vehicle struck his Volkswagen again, making it lurch dangerously towards the edge of a ditch, and the pistol, now mere feet away, roared sharply, followed by the high, keening sound of the bullet as it ricocheted off the Volkswagen's wing-mirror and went whistling away into the dark night.

'Fuck 'em!' Molly snapped, then she whipped her handgun out of her rucksack and twisted sideways to take aim and fire a shot from behind Tom's head.

'Oh, God!' Tom cried out as the noise of Molly's shot reverberated through his head and the rear window of the Mercedes exploded in a glittering shower of spraying glass fragments. Molly fired twice more. Her bullets ricocheted noisily off the hood of the Mercedes, but it suddenly raced ahead to pull in, directly in front of the Volkswagen. Then it slowed down, braking steadily, forcing Tom to do likewise.

'They're gonna stop us!' Molly wailed.

At that moment, however, an eerie, circular light appeared low above the road just ahead of the Mercedes, a mere pinprick at first, then rapidly expanding – as if flying out of the distance at tremendous speed, growing bigger as it approached – and then abruptly it was an immense, glowing, circular shape, a ghostly, slightly transparent, flying saucer, about thirty feet

wide, that descended vertically just ahead of the Mercedes and then hovered in the air right in front of it.
Either blinded by the dazzling light, shocked by what he was seeing, or simply trying to avert a crash with that eerie object, the one-eyed man made the Mercedes swerve violently, then it went off the road, crashed down into a ditch, flipped over, bounced a few times, and then burst into flames.
Tom's Volkswagen was racing towards that hovering, weirdly glowing object, and he thought he was doomed.
His car crashed into the object – or so it seemed to Tom
– and he was dazzled by star-filled light and lost all sense of direction. But the Volkswagen kept going, as if travelling through the cosmos – a brief glimpse of distant worlds and double moons and pulsating suns – and then emerged to the darkness at the other side of the object, and raced on down the road.
When a disbelieving Tom and Molly glanced back over their shoulders, they saw the great, glowing, circular object shooting vertically skywards, shrinking rapidly as it ascended, and soon becoming no more than another star in the vast, star-filled sky. Then it simply blinked out.
Scarcely believing what he had seen, too speechless to speak, as was Molly, but now fully aware that they were both involved in a dangerous, possibly supernatural game, Tom glanced once more over his shoulder at the blazing car now far behind, and then turned to the front, slowed the Volkswagen down, and eventually made his way back to the highway, this time driving with care. When the lights of the Aeropuerto International came into view, he heaved a sigh of relief.
The next morning, he and an equally shaken Molly were flown to London.

Part Two
Chapter Thirteen

Tom and Molly did not speak much on the flight to London, being too overcome with disbelief about what had happened on the road to the Aeropuerto Internacional in Mexico City, and also trying to recover from the toxic fumes of the great but hopelessly polluted metropolis. Exhausted physically and mentally, they both slept throughout most of the flight, only

being awakened by the enforced conviviality of modern air travel with its movies, duty-free goods, and endless supply of meals that could not be refused.

More than once, just as they were both nodding off again, Molly would drift back to consciousness to find that her head was resting on Tom's shoulder, that she felt comforted by this fact, and that his snoring, his boyish face in the repose of sleep, made her feel soft and warm. He was a little English snob, born with a silver spoon in his mouth, but there was something touching about him and he secretly touched her. She was surprised by this feeling, though it was undeniable and growing steadily, yet her own background, that hell of rejection and poverty in New York, made her mistrust it. Nevertheless, as she drifted off to sleep again, she kept her head on his shoulder. She had sweet dreams about him.

They both felt a lot better when they arrived at Heathrow Airport, rejuvenated by air only marginally less polluted, and as they were driven to London in a taxi paid for by the grumbling Tom, along a busy road lined with suburban houses, their throats cleared, eyes dry, they fell into obsessive conversation about what had occurred.

'All I know,' Tom said, 'and I'll understand if you don't believe me, is that when driving us to the airport in Mexico City I was haunted by the feeling that we were being followed by someone, or… *something*. Yes, someone or some *thing*. That someone was the one-eyed man and the *something* was that weird light that came out of nowhere to make that Mercedes crash.'

'That thing, that light, looked like a flying saucer,' Molly said, recalling it vividly and instantly filling up with the kind of fear that she had not known since childhood. 'But I don't think it was physical. I mean, it was like something I saw before, when I gazed into the crystal skull. Remember? When I was hypnotized by it? That flying saucer was more like some kind of light and I noticed that it had stars and things inside it – big moons and stuff – like a scene from outer space. So I think it was some kind of… *substance*… maybe a spirit manifestation or something. Anyway, that's what I think.'

'Correct,' Tom said. 'I agree entirely. I thought we were going to crash into it, but the car just passed right through it, and, as it did so, I too saw what you saw: stars and great moons. A distant galaxy, maybe, or a parallel universe.'

‘God,’ Molly said. ‘Jesus.’

‘And whatever it was,’ Tom continued excitedly, ‘it certainly made that Mercedes swerve off the road; and then, when we drove right through it, it ascended and disappeared in the heavens. I still can’t believe it.’

‘Believe it,’ Molly said. ‘That light, that flying saucer thing, came down outta the sky and went straight back up into the sky once it had rescued us.’

‘Rescued us? You think that’s what it did?’

‘Yeah, right. No doubt about it. It rescued us and then it took off again.’

To distract herself from the fear and awe, to bring herself back down to Earth, she glanced out of the taxi and saw that the nice suburban houses with leafy lawns had given way to increasing traffic and visibly polluted air – exhaust smoke from leaded petrol, more black smoke from industrial chimneys – on a road that ran between prefabricated factories, warehouses of steel and concrete, rows of crumbling council houses with washed clothes flapping in back yards, garages and supermarkets on pavements strewn with rubbish, and stores with plate-glass windows that reflected the snarling traffic that was gradually slowing down to a snail’s pace. Molly had been enthralled for the first half hour of the drive into London, seeing in those comfortable middle-class houses with their leafy trees and green lawns all that she had thought England would be. Now, however, the scenery had changed dramatically and she recognized a more familiar environment: dense traffic, polluted air, and constant noise. It was just like New York.

‘Hell,’ she said, ‘I’m practically back home!’

‘Not quite,’ Tom replied. ‘Anyway, what I’m trying to say is that if that saucer-shaped… *manifestation*… truly came down to rescue us from those villains, then I’m convinced it was a manifestation created by the crystal skull, which means that we’re under its influence for good or for evil – and, frankly, that scares me.’

Molly didn’t want to believe any of this – she was a practical, street-wise woman – but when she recalled how the crystal skull had affected her when she looked into it, she, too, felt scared. She had been mesmerized by it, drawn into its darkly gleaming depths, and then found herself surrounded by unfamiliar stars and multiple moons, in a vast, teeming cosmos. It had been like a dream, a silent journey through time and space, and she had come out of it feeling distinctly strange, as if divorced from herself. Since then, she had relived the experience several times in dreams, and she felt haunted by it. So

maybe Tom was right
– just maybe – and this thought was disturbing.
‘Well, it scares me, too,’ she confessed, ‘but we may be imagining it. I mean, that manifestation *could* have been some natural, if unusual, phenomenon – note the big words I’m using – of the kind you read about in UFO stories. You know? They’re perfectly sane folk and they think they’ve been harassed by a UFO, or flying saucer, and it turns out to be Venus or ball lightning or some other optical illusion caused by the atmosphere. So that’s what it *could* have been in our case – I mean, we *did* drive right *through* it – and the driver of that Mercedes, the one-eyed guy, just panicked and swerved to avoid it. That seems more likely to me.’
‘Mmmm.’ Tom pursed his lips, deep in thought. Molly thought he looked real cute and attractive in his sensitive English way. ‘Perhaps. On the other hand, that one-eyed man and his friends were after the crystal skull – they assumed we still had it in our possession – and I think that may have something to do with it. Bear in mind, also, that those men on the platform of the Great Pyramid in Chichén Itzá were burnt to death in an unnatural manner – since nothing *around* them or *near* them was burnt – and that obviously happened when they unearthed the crystal skull. They were trying to steal it, Molly, and they were killed by an unnatural phenomenon to prevent them from doing so. From that we can assume that some mysterious force was indeed released by the crystal skull when it was unearthed
– and whatever it was, it killed those men in the Shrine.’
‘So how come it didn’t kill us? I mean, *we* stole the crystal skull when we found it, and we’re not dead yet. Not only that, but we are, according to you, being protected by that very same force. That doesn’t make sense, Tom.’
She liked uttering his name. It made her feel a lot closer to him, and that surprised her as well.
Tom sighed and glanced out the window. The taxi had now entered London proper and was passing an area that looked, to Molly’s urban eye, to be seedily sophisticated, with the houses, formerly grand, now decaying. However, they soon gave way to a busy high street, shops filled with fashionable clothes, then a sidestreet lined with restaurants and more shops, then another busy main road. The traffic was crawling lethargically in smoky air, but few drivers were honking their horns. Clearly, the English were, like Tom, as polite as reported.

‘I don’t know,’ Tom confessed. ‘It’s a mystery to me. All I can tell you is that the crystal skull is reputed to have unusual powers that can be used for good *or* evil. Perhaps, for some reason I simply can’t fathom, it favours us over the men who were trying to steal it. So maybe we *do* have to give serious thought to what we should do with it. Indeed, maybe what we decide to do with it will decide our fate. Please think about this.’
‘You mean that if we sell it just for gain, the powers could turn against us?’
Tom nodded affirmatively. ‘Perhaps.’
‘I think you’re tryin’ it on, pal.’ Molly still felt clinging fear, but she had too much to lose here. She was fearful because she felt that he might be right, but she couldn’t be swayed by that. ‘Listen,’ she said. ‘I’ve had enough hard times to last me a lifetime, and I want no more. So if you’re tryin’ to con me into giving the skull away, believe me, you’re gonna be disappointed.’
‘I’m not saying that, Molly. I’m simply saying that we have to be very careful what we do with it. If we sell it, we have to make sure it ends up in good hands. That’s all I’m saying.’
‘Well, we’ll see,’ Molly said. She glanced out of the taxi and saw that they were inching along a busy main drag packed with pedestrians and lined with elegant stores. As the taxi moved on, it passed the Ritz Hotel and then Fortnum & Mason’s. A uniformed doorman was standing outside the revolving doors of the latter, and an oldfashioned horse-and-carriage was stationary on the sidewalk with another uniformed man in the driving seat, holding the reins. ‘Wow!’ Molly exclaimed. ‘It’s just like in the movies! Where are we now?’
‘Piccadilly,’ Tom replied, lost in thought.
‘I thought that was a roundabout with a statue in the middle.’
‘That’s Piccaddily Circus,’ Tom explained. ‘This is Piccadilly.’
‘Are we staying near here?’
‘Yes, Molly. We’ll be at the hotel in a couple of minutes.’
‘Great,’ Molly said, though she was wondering if she dared enter those posh shops in the rags she was wearing. She turned to glance at Tom, dishevelled and sleepy in his traveller’s clothes, and she felt a slight trembling within, and a rush of warmth for him.
Godamnit, she thought, what’s happening here? I must be losing my mind.
The taxi turned off Piccadilly and went up a narrow sidestreet filled with Georgian buildings, black-spiked railings around them, and lined with

parking meters. A lot of the men on the sidewalks were wearing pinstripe suits and carrying briefcases and rolled umbrellas. The women all looked elegant.

‘I’m gonna feel like a fish out of water here,’ Molly said, ‘in this crap I’m wearing.’

‘No, you won’t,’ Tom replied. ‘The hotel you’re staying in is nice, but not that fancy, and it’s used by tourists who dress just like you. I *do* think, however, that you could do with some clothes more suitable to some of the places we’ll be visiting, so I’m going to buy you some.’

‘Ashamed of me, are ya?’

‘No,’ Tom said quickly. ‘Those clothes are perfectly suitable for running around town, but you’ll need more formal clothing for other occasions. Why feel like a fish out of water when you can feel perfectly comfortable?’

‘Damned right. That’s good thinkin’.’

She looked fondly at him, warming to his smile, and, yes, his consideration, as well as the knowledge that he had obviously been hurt by his broken marriage and was trying to heal himself as best he could while still retaining his dignity. She could respect him for that. She also knew, from the way he looked at her, that he found her attractive but didn’t quite know what to do about it. This, too, touched her secretly. In fact, given the kind of men she was used to, all the deadbeats she had known and suffered with, this nervous, rather formal English gentleman now struck her as being special and unexpected.

‘You know, you’re not bad at all,’ she told him as the taxi pulled into the curb in front of a small, Georgianfronted hotel that had steps leading up to its ornate entrance. ‘I don’t really deserve you.’

‘You’re too kind,’ Tom said.

He smiled nervously at her, then climbed out of the taxi. Molly slipped out behind him.

‘Where’s this?’ she asked him as the driver was removing her rucksack from the boot of his vehicle.

‘Mayfair,’ Tom said.

‘Swank territory,’ Molly said, glancing up and down the street, taking in the refined ladies and gentlemen meandering up and down under a leaden sky.

‘Let’s go in,’ Tom said, carrying her rucksack and leading the way.

‘Hey!’ she called out to him, stopping on the first step and glancing back at

the taxi, which was still parked by the curb with the driver perusing a newspaper, clearly not going anywhere. She turned back to Tom. ‘You’ve forgotten your bag.’

‘I don’t need it,’ Tom replied. ‘Now let’s get you signed in.’

Before she could say another word, he turned away and entered the hotel, which did not, Molly noticed, have a doorman. Hurrying up the steps after him, she passed through revolving doors and entered a narrow reception area of darkly varnished wood and brass fittings. It was very English in an old-fashioned way, but seemed modest enough to prevent her from feeling out of place. Tom was already at the reception desk, her rucksack on the floor by his feet, and he was removing his credit card from his billfold while talking to the desk clerk. The latter was wearing a normal grey suit, with a white shirt and striped tie. He was pale-faced, black-haired, very formal and as thin as a rake.

‘Hey,’ Molly said again when Tom had finished his lengthy negotiations with the desk clerk and was taking his credit card back. ‘What do you mean, you don’t need your bag?’

Looking embarrassed, his eyes flitting from her to the desk clerk and back again, Tom replied, ‘Well, I *did* say it was *your* hotel, Molly. I’m not staying here myself.’

‘*What*?’

‘I’m not staying here. I’m staying in my apartment around the corner and it’s too small for both of us.’

‘Oh, really?’ Molly said, burning up instantly.

‘Yes, really.’

‘You mean, you don’t want to share it with me.’

‘I told you: it’s too small.’

‘Only one bedroom, has it?’

‘Well, no, but…’ Blushing with embarrassment, Tom distracted himself by signing the credit slip placed before him by the bland-faced, but possibly intrigued, desk clerk.

‘So it has a spare bedroom.’

‘Well, yes, but…’ Tom finished signing the credit slip and slid it back to the desk clerk, who then pushed a registration form towards Molly.

‘Could you please fill this in, Madam?’

‘What?’ Molly glared at the desk clerk, then at the form on the glossily

varnished wooden counter.
‘The registration form. We require your passport number and other details.’
‘Yeah, right. Just a minute, bud.’ She turned back to Tom, who was visibly wilting before her wrath. ‘So it’s got a spare bedroom,’ she said, loud and clear, making sure that the desk clerk could hear her, ‘but you don’t want me in it. Is that it?’
‘Please, Molly, don’t make a scene,’ Tom said, squirming. ‘It *does* have a spare bedroom, but the apartment is rather small, fairly cramped, and so I thought…’
‘Oh, it’s too small, is it? Well, we shared a single room in Mérida and *that* wasn’t too small!’
The desk clerk coughed discreetly into his clenched fist, making Tom blush an even deeper crimson. ‘Well, I just thought, Molly, that we could both do with a little privacy, and my apartment, though having a *tiny* spare room, is too small for us to feel really comfortable together in it.’
‘Bullshit!’ Molly exclaimed.
The desk clerk, having already coughed discreetly into his clenched fist, now moved a little way along the counter, though not out of earshot.
‘*Please*, Molly,’ Tom said, ‘this is really most embarrassing.’
‘*Embarrassing*? Damned embarrassing for *me*, I can tell ya! You lettin’ that prick behind the counter know just what you think of me.’
‘I think highly of you.’
‘As long as I’m not in your goddamned apartment. Alright! *Alright*!’ she added as Tom turned away to walk out. He turned back to her, his face burning with humiliation, and that made her feel bad. ‘Okay, let’s forget it, Tom. Just tell me what we’re doin’ today and then I’ll go to my room. What’s the game plan?’
Relieved, though casting another embarrassed glance at the desk clerk, now studiously scanning some documentation on his desk, though his ears were clearly flapping, Tom said: ‘Well, I thought that perhaps we should catch up on our sleep, have a decent lunch, and then meet up again this evening for dinner.’
‘Great,’ Molly said. ‘So what time’s lunch?’
‘Pardon?’
‘Lunch! Are you deaf?’ She was angry again. ‘What time are we meeting for this goddamned lunch?’

Tom glanced self-consciously at the bland-faced, listening, desk clerk. ‘Well, actually,’ he said, running a finger around the collar of his shirt as if he was strangling, ‘that wasn’t the plan at all. I thought we’d have lunch separately, and then meet later for – ’

‘*What*? My first day in London and I have to have lunch alone? Christ, I’ve never been here in my fuckin’ life, I don’t know one street from the other, I don’t have any lousy English money, and – ’

‘You don’t need money, Molly, and you don’t need to know your way around. You can have lunch in the restaurant of this hotel, and just sign for it. Then I’ll pick you up this evening to show you around.’

‘Great. I eat alone in the restaurant. I sit here bein’ gawped at by the fuckin’ hoity-toity English, bein’ treated as a freak ‘cause I’m stayin’ all alone in this dump and so I must be a whore. Thanks a million, pal!’

Tom did not fail to notice how Molly’s vocabulary degenerated – words cut short, obscenities tripping off her tongue – when she was agitated. It deeply distressed him. ‘I have to go now,’ he said, and turned towards the front door, hoping to make his escape, though she instantly jerked him back around to face her.

‘So where are *you* havin’ lunch?’ she asked him. ‘Are you cookin’ for yourself in your nice apartment?’

‘No.’

‘So where are you havin’ lunch?’

‘Actually, I’m having it in my club.’

‘What club?’

‘A gentleman’s club, right here in Mayfair, just around the corner from my apartment.’

‘A *gentleman’s* club?’

‘That’s correct.’

‘So why can’t I at least have lunch with you there? Am I too common, or what?’

‘It’s not that, Molly.’

‘So what is it?’

‘My club, being a gentleman’s club, does not admit women as a matter of policy.’‘Christ!’ Molly exclaimed, almost exploding. ‘First I have to endure your snot-nosed English snobbery, now I’m suffering from your fuckin’ male chauvinism.’ The desk clerk coughed again into his clenched fist, this time

staring disapprovingly at both of them. Molly glared at him, and then turned back to Tom. ‘Well, go screw yourself!’ she said, loud and clear, making sure that the desk clerk could hear. ‘I’ll see you later this evening.’
‘Right,’ Tom retorted. He turned away to walk out, but Molly tugged him back again.
‘Do I at least get your phone number?’ she asked. ‘I mean, in case I get mugged, raped or murdered by some Limey psychopath.’
‘Of course,’ Tom said. ‘Naturally.’ Glancing despairingly at the disapproving desk clerk, blushing bright red, he pulled out his billfold, withdrew one of his personal cards, and passed it shakily to Molly. She snatched it violently from his hand.
‘Right!’ she snapped. ‘Have a good day!’
‘I will,’ Tom said.
He turned away and hurried out the front door, back to his waiting taxi and travel-bag, actually making it this time.
Filled with fury, Molly turned back to the reception desk, scribbled her details onto the registration from, handed it to the bland-faced desk clerk, and snapped, ‘So where’s my goddamned room key?’
‘Room twenty-four, second floor,’ the desk clerk said, handing her the door key.
‘Enjoying yourself?’
‘Pardon?’
‘Never mind.’ Molly lifted her rucksack off the floor. ‘You got a lift in this dump?’
The desk clerk nodded to the left-hand side of the lobby. ‘The elevator is over there, Madam. Just press the button.’
‘I think I can manage that much,’ Molly said. ‘Y’all have a good day now.’
‘Thank you, Madam. I’ll try.’
Without another word, Molly turned away, took the lift to the second floor, and let herself into Room 24. It was a very nice room with a good-sized double bed, a dressing very nice room with a good-sized double bed, a dressing inch TV set, all surrounded by the framed prints of English countryside landscapes that were hung on the walls. There was also a nice, recently renovated bathroom with a toilet and shower.
Still brimming over with anger and muttering dire threats against, ‘Mr Toffee-Nosed Tom Powell’, she showered and slipped naked into bed,

determined to have a good sleep. She was just getting cosy, dropping off, when the telephone rang.
Exasperated and perplexed, she picked up the phone beside the bed and gave the caller her name. There was a lingering silence, the sound of even breathing, then she heard Tom's soft voice.
'You know you really love me,' he said.
'Go to hell!' Molly snapped.
When Tom chuckled, she slammed the phone down and lay back on the bed, pulling the covers up to her chin. She stared grimly at the ceiling for a moment, wanting to kill the bastid… then she broke into a helpless smile and gratefully closed her eyes.
Tom was in her dreams when she slept, and so she slept like a baby.

Chapter Fourteen

The following morning, Tom escorted Molly to the British Museum in Great Russell Street. Molly was in good mood again. The day before she had caught up on her sleep, had an excellent lunch in the hotel's restaurant, albeit alone but treated with unexpected courtesy by the staff, and then, that evening, still amused by Tom's phone call, she had met him in the lobby, as planned, to be given a tour of the West End.

Even before they left the hotel, she had asked him if he had meant what he had said on the phone, and he had blushed, which he did easily, and confessed that he'd had a few brandies in his apartment, and those, combined with the lack of sleep, had made him drunk and mischievous. Nevertheless, she had sensed that if he didn't actually mean what he had said, he was certainly growing more fond of her and was even attracted to her, so she had gone with him into the West End in an upbeat mood.

He had given her a great time, taking her on a roundabout route from Piccadilly Circus to Leicester Square, then up into Chinatown and Soho, then back to Trafalgar Square, along the Strand and Fleet Street, then up into Convent Garden. Molly had loved it, especially as the weather had improved greatly since their arrival. While the tourist squalor of certain areas of the town had reminded her of New York, she had been enchanted with the outdoor cafés of Soho and the street performers in the Piazza of Convent Garden, where, in the evening's summery warmth and dimming light, the

outdoor tables of the restaurants had been packed. Later, Tom had taken her for a meal at Mr Kong's in Chinatown – an unpretentious restaurant where the food was divine – and followed it with a crawl through what he had assured her were the best pubs in Soho.

They had talked a lot throughout the evening, without animosity for once, and he had loosened up and told her about himself: his upbringing in his parents' stately old home in Reigate, Surrey; his education at Oxford; his marriage, virtually arranged, to a débutante, Lucinda ReesMannering, from Windsor, then the death of his father and his divorce from Lucinda eighteen months after the funeral, only two years ago.

It was clear from what Tom told her that he had, indeed, been born with a silver spoon in his mouth and, even luckier, to loving parents. While the family had neither a butler nor servants, as Molly had imagined they would, Tom had certainly been brought up with a variety of nannies and had never known the dread of insecurity. He had, however, been a delicate, nervous child – an only child
– and the death of his father, whom he had worshipped, had, in his own words, 'devastated' him.

'He was a lovely man,' Tom told her. 'An astronomer with the Royal Society of Astronomers, highly respected in his field. A bit dizzy, perhaps even a little eccentric, but he had a head buzzing with ideas and he taught me all about the stars and, incidentally, stirred my interest in the nature of time, and, subsequently, ancient civilizations. He gave me lots of attention and was always terrific fun, so when he died I took it very hard… and then my marriage broke up.'

The marriage, Molly deduced from what Tom told her, must have been doomed right from the start. While it had not actually been 'arranged' in the style of an Indian marriage, the young couple had clearly been pushed into each other's arms, and their union was viewed as mutually beneficial to both families. Shy and respectful, loving his well-meaning parents, Tom had simply let himself drift with the tide, and it had carried him straight to the altar.

Lucinda Rees-Mannering had indeed been a débutante, pretty and dim, addicted to socializing, and no spark of true passion had ever been struck between her and Tom. Their sexual union was a disaster from the beginning and did not improve with time. Within a year, they had virtually stopped

having sex and were living together more like brother and sister than husband and wife. For Tom, the relationship had been more than traumatic, shattering his fragile confidence; and then, when his father died unexpectedly of a brain tumour, what little self-esteem he had left rapidly vaporized. Having not yet decided what he wanted to do in life, having been cosseted and protected from the need to have gainful employment, he had started drinking heavily, practically living in his various gentlemen's clubs in London, often staying overnight, until eventually, when this happened once too often, Lucinda filed for divorce. They were divorced eighteen months after the death of Tom's father, and he was shattered again.

'Finally,' he told Molly, 'I managed to pull myself together by drinking a lot less and going back to my interest in ancient civilizations. In short, I became, as I believe I've already said, a perpetual student, and I remained far too timid for my own good. So while I then went to Mexico because of my continuing interest in ancient civilizations, particularly the Mayas, I also went because I knew that I was too timid for my own good, too protected by my sheltered upbringing; and I decided that travelling all alone might force me out of myself. Silly as it seems, and probably is, I wanted to test my courage with the trip – and given the experiences we've both had, I think I *am* being tested. Perhaps it was preordained.'

'Seems like it,' Molly said.

He had finally dropped her off at the hotel just before midnight, and she had slept like a baby for the second time. Now, as he walked her in the hazy light of late morning from Mayfair, back up through Soho to Tottenham Court Road and Great Russell Street, she found herself thinking back on what he had told her about his life, and comparing it with her own life in New York. For the first time she understood that she, too, albeit for different reasons, had been running away from her past. She had liked to believe that she was tough, that she didn't need anyone, but now she saw, in the mirror of Tom's similar set of problems, that she had buried the pain of her childhood behind a front of indifference.

Brooklyn now seemed far away, but she still remembered her parent's squalid apartment above their grocery store, her big, beefy father in his stained sweatshirt and loose pants, boozing, forever bellowing, beating up on her mother, sexually abusing his daughter, until, when she was sixteen years old, Molly had had enough and ran away for good, moving into that awful

dive in the Lower East Side with a lot of winos and junkies. She had learnt to defend herself, to hustle for what she needed, and every experience from then on had confirmed that she needed to do just that. She had seen life as a cesspit, men as brutes, herself the victim, and by the time she lit out for Mexico, she was as hard as a hammer.

But that hardness was a front, her armour and shield, and now she realized that her growing feelings for Tom, her awareness of his innocence, had filled her with maternal concern and the need to show him some love. He was the first decent man she had ever met and he filled her with wonder. He frustrated her and often made her mad, but her rage sprang from love. She sensed this, but could not yet accept it - though what she could not deny was that he was making her feel, for the very first time, like a natural woman. She was grateful for that. She could have loved him for that alone.

‘Is that it?’ she asked, as they walked past the art shops of Great Russell Street and the black railings in front of a majestic colonnaded building came into view on her left. ‘Is that the British Museum?’

‘Yes,’ Tom said, ‘that’s it.’

‘It’s Victorian, right?’

‘No, Molly, not quite. Construction of the building

began in 1823 and was completed in 1847. So it was *completed* at the beginning of the Victorian era, generally viewed as 1837 to 1903. A good try, though, my dear.’

Amused, he led her through the mass of tourists at the main gates, then across the crowded courtyard to the broad steps that led up to the museum. He had phoned the day before for an appointment, so once inside, he asked for Professor Weatherby and was directed through a series of hallways displaying antiquities of Egypt, Asia, the Orient, Greece and Rome, as well as the new and impressive Mayan exhibition, to an office located on an upper floor at the rear of the building. There they found Professor Julian Weatherby, another academic with grey hair and a shorttrimmed grey beard. Like his friend, Professor Juarez, he was seated behind a cluttered desk and surrounded by packed bookshelves, old parchments, maps, and graphs of hieroglyphics, many relating to Aztec and Mayan culture. When they had closed the door behind them, he came around the desk , introduced himself and shook their hands.

‘I’m so glad you could make it,’ he said when the introductions had been

completed. ‘I was rather worried about having your skull in my possession, and, frankly, surprised that Professor Juarez sent it with the other artefacts. He *is*, of course, Mexican, and though a dear friend tends to liberal interpretations when it comes to matters of legality.’

‘What’s that mean?’ Molly asked, taking an instant dislike to Professor Weatherby.

‘What it means, my dear, is that, technically speaking, we’re breaking the law by allowing such a valuable artefact to be shipped into this country, unregistered, with our other, perfectly legal, artefacts. No matter, please take a seat.’

Tom and Molly sat down. The professor then went back around his desk and sat behind it and stared at them.

‘You’ve got the skull here?’ Molly asked, feeling anxious.

The professor nodded. ‘Yes.’ He pointed to a large safe in one of the walls. ‘It’s in there,’ he said.

‘Undamaged?’

‘Yes. The skull is, after all, carved from quartz crystal and that’s next to impossible to damage. So what can I tell you before you take it away?’

Tom recounted what Professor Juarez had told him about the crystal skull, and then asked if the information could be authenticated.

‘Yes,’ Professor Weatherby said. ‘At my friend’s written request, in a letter that came with the skull, I examined it thoroughly and can confirm that it’s genuine in every respect. As we only know of two genuine crystal skulls, the others all being either fake or the products of wishful thinking, I must agree with my learned friend that this one is the long-missing Rose Quartz Skull. Therefore it would, as Professor Juarez informed you, have travelled with that ancient race, pre-Mayan or Aztec, on its great migration across the Earth, from the west to the east, including a period in Meso-America, and, of course, Chichén Itzá. Given that the second crystal skull – the one presently on display in the Museum of Mankind, here in London – was discovered in British Honduras and is approximately 3,500 years old, it seems likely that both skulls were left behind by that same mysterious race as it moved on from the Yucatán peninsula to Tiahuanaco in Peru. If this is so, I can confirm that your skull is an extremely valuable item – though I don’t want it here.’

‘Why not?’ Molly asked.

‘Because, as I said, it’s been brought in illegally. Professor Juarez should not

have sent it to me without proper clearance, but as he has, I'll simply return it to you and then conveniently forget that I ever saw it.'
'Before you conveniently forget it,' Tom said, sounding bolder than normal, 'can you tell us if you believe the skull has unusual characteristics?'
'It's unusual in every respect, as I believe Professor Juarez has already told you.'
'By unusual characteristics, I meant remarkable, possibly occult, powers. Do you think it has those?'
Weatherby smiled cynically. 'Ah, yes,' he said. 'The occult powers of the crystal skulls, reported to have been used in esoteric rites by their original owners.' He leaned back in his chair and clasped his hands under his chin, distractedly stroking his grey beard. 'I've heard all the stories,' he said, 'and find them amusing, but personally I place no credence in them, and certainly can't substantiate them. The skull is remarkable because we don't know how it was made – or, indeed, who actually made it – but that doesn't mean it's endowed with remarkable powers, supernatural or otherwise. My interest is antiquity, not magic.'
'What about the skull in the Museum of Mankind?' Tom asked.
'What about it?'
'Where did it come from?'
'I can only tell you that it was originally purchased, from an unknown person, by Tiffany's in New York, then brought back here by an Englishwoman, the daughter of Ronald Barratt-White, the famous, some would say notorious, explorer who found it in British Honduras in the first place. Lady Barratt-White gave it to the Museum of Mankind as a gift, and there it remains to this day.'
'Why was Ronald Barratt-White thought to be notorious?' Molly asked.
'Because he was more of an adventurer than an explorer,' Weatherby replied, 'and his interests were, to put it mildly, somewhat bizarre. He wanted to be taken seriously – and certainly he had a genuine interest in ancient cultures, particularly those of Central America, such as the Mayans, the Aztecs and the Toltecs. However, he was also a theosophist, a lover of mystical sciences, a member of various secret societies, and an open believer in the legend of Atlantis. For those reasons, and because Barratt-White liked to be seen as a swashbuckling character, there were many who believed that he did not in fact find his crystal skull in British Honduras, as he had claimed, but

purchased it from someone and planted it in the rubble of his excavation of the lost city of Lubaantun, in the jungle near Belize City, for his daughter to find.'

'Why would he do that?' Tom asked.

'In order to make himself famous and regain the legitimacy that he'd lost through his open support of outlandish theories.'

'Do you think that's true?' Molly asked.

'I've no idea,' Weatherby replied. 'I only know that the skull is genuine and that Lady Barratt-White, who was then seventeen and working on the site with her father, insists to this day that she was the one who actually found it and that the find was genuine.'

'Do you think there's a connection between the two skulls?' Tom asked.

'What kind of connection?'

'A connection in the sense that, though we don't know who actually made the skulls, it's now widely accepted that they almost certainly belonged to that mysterious pre-Aztec or pre-Mayan race, that they were both used in the esoteric rites of that ancient race, and that for unknown reasons they were both left behind in Meso-America, most likely in British Honduras and Yucatán. A connection in the sense that whatever they were used for, they might have been always used in Tandem.'

'That's certainly possible,' Weatherby said. 'But what's your point, Mr Powell?'

'My point is that the skulls might be a pair. Not just structurally similar, but somehow related to one another, perhaps working only in tandem.'

'Working?' Weatherby asked, looking bewildered.

Tom leaned forward in his chair, his gaze intense. 'If the crystal skulls *do* have unusual characteristics, or occult powers – and I appreciate that you don't believe this – they may communicate somehow with one another, and need one another to function fully.'

'That's ridiculous, Mr Powell. Whether separately or together, the skulls have no supernatural powers. I can't believe that a man of your background would even consider such a ludicrous possibility. Such theories belong to the realms of cranks, along with UFOs and zombies. This is the *British Museu*m, Mr Powell, so please treat it as such. We are interested in history, not in magic, so please desist from this particular line of reasoning, at least in my presence.'

‘Sorry,’ Tom said, though he did not, to Molly’s surprise, look even remotely apologetic. Indeed, rather than looking as if he had been reprimanded, he simply leaned back in his chair and offered a nonchalant smile.
‘Is Lady Barratt-White still alive?’ he asked.
‘Yes,’ Weatherby said. ‘She’s nearly ninety years old and seriously ill, but she *is* still alive. Why?’
‘I think I’ll pay her a visit,’ Tom said. ‘Can you give me her details?’
‘She’s in the phone book,’ Weatherby replied, clearly wishing to be involved no further in what he viewed as lunacy.
‘Good,’ Tom said, then he pushed his chair back and stood up. ‘Thanks very much for your assistance, Professor Weatherby. Can we have our skull now?’
‘My pleasure,’ Weatherby said. He went to the safe in the wall, opened it, and withdrew the skull, wrapped in cardboard and paper tied together with string. Placing the package in a British Museum shopping bag, he handed it to Tom. ‘I can’t believe you’re going to walk out of here with that priceless item in a shopping bag,’ he said, ‘but I’m glad to be rid of it.’
‘Thanks for looking after it,’ Molly said.
‘No thanks required,’ Weatherby replied. He then walked to the door and opened it for them, but stopped them just as they were leaving. He checked his wristwatch. ‘Good Lord!’ he said. ‘It’s lunchtime. Time for my pint. Let me walk you both down.’
Together, they made their way back through the grand hallways filled with the antiquities of many countries, then down the broad steps and across the crowded courtyard to the sidewalk. There, surrounded by milling tourists and snapping cameras, Professor Weatherby shooks hands with Tom and Molly, then wished them good luck. They thanked him and had turned away to leave when he called out Tom’s name. When Tom turned back to face him, Weatherby was looking very serious.
‘One final thought,’ he said. ‘Much as I’m glad to get rid of this particular artefact, I have to say it grieves me that it’s not in professional hands. Please be careful, Mr Powell. A lot of people would like to get their hands on that skull and some of them are the kind to be avoided. Be extremely careful about who you show it to, who you talk to, because otherwise you could find yourself in serious trouble.’
‘I’ll be careful,’ Tom said.
Professor Weatherby nodded, then he crossed the road to enter the Museum

Tavern on the opposite corner. Tom watched him entering the venerated old pub, then he led Molly back along the crowded sidewalk of Great Russell Street, carrying the precious crystal skull in the museum's shopping bag.
'Let's have a drink and a private talk,' he said.

Chapter Fifteen

Mai Suphar watched Tom and Molly until they disappeared along Great Russell Street, then, with a chilly smile, she crossed the road and entered the Museum Tavern, which was busy, smoky, and warm. Dressed in a long black coat over a skirt of black silk, with a snow-white blouse and red scarf setting off the golden skin of her lovely face, and high-heeled black boots emphasizing her long legs, she was a picture of sophisticated elegance and heart-stopping beauty. While not actually stopping, more than one male heart skipped a beat when Mai entered the pub, as she could tell by the widening eyes of those who looked at her. She also saw, as she walked to the bar, that Professor Weatherby, sitting there with his pint of English beer and sandwich, beneath a tinted-glass window and potted plants, was one of the gawkers.

Standing at the bar, with her leather bag slung over her right shoulder, she ordered a Campari with soda, speaking perfect English in a low, sensual tone of voice and lowering her brown eyes as if shy. When the barman had served her, trying not to ogle overtly, though clearly he found this difficult, Mai shyly thanked him and carried her drink to the helpfully empty table beside Professor Weatherby's. As she sat down, crossing her long legs to let the black coat fall off them, displaying them, she glanced sideways at the professor and caught him hastily lowering his gaze to the newspaper spread out on the table before him. He took another bite of his sandwich, as if distracted, though that distraction was caused by Mai, and she smiled slightly and then glanced about her, as if, just like any other tourist, she found this historical English pub fascinating.

In truth, she was enjoying herself. She had never been to London before, had always wanted to visit it, and when Lu Thong had ordered her to come here, to pursue Tom Powell and the American girl, she had been delighted to do so.

According to Lu Thong, Tom Powell and the American girl, now known

to be one Molly Beale, a nonentity from New York, a hitchhiker in Yucatán, had been pursued by the one-eyed criminal Emmanuelle Cortez all the way from Mérida to Mexico City. At that point, Lu Thong had been expecting a phone call from Cortez, informing him that the couple had been killed and the crystal skull regained; instead, he had received a call from another of his minions, informing him that Cortez and three of his hooligans had been found dead in their car, where it had crashed and exploded on a back road that ran above the highway leading to Mexico City's Aeropuerto Internacional. From this, Lu Thong had deduced that Cortez must have been pursuing the Englishman and his girlfriend to the airport, chased them off the highway, and then made some fatal error and crashed. Subsequent investigation by Lu Thong's minion had confirmed that Tom Powell and Molly Beale had boarded the first flight to London the following day.

'I have an informant at Heathrow Airport,' Lu Thong had told Mai. 'He checked the records of all those who had booked hotels through the tourist office at Heathrow during the morning of Powell's arrival, and learnt that his travelling companion, this Molly Beale creature, was booked into an hotel in Mayfair, London. Powell personally made that booking, but didn't book himself in, which suggested that he was staying elsewhere, presumably at his own place. A check of the London telephone directory revealed that he does indeed have an apartment in Mayfair, just around the corner from the hotel. So we have his address and the name of that American tart's hotel, which solves some of our problems.'

'What are the others?'

'It was not my belief that the Englishman or the American tart would have been able to smuggle the crystal skull through Customs and that they must have made other arrangements for its transportation to London. I therefore checked my taped conversations with the late Emmanuelle Cortez, who, when still alive and well, was phoning me regularly from Mexico City with precise details of the movements of the frustrating twosome, and noted that they had paid a visit to the National Museum of Anthropology in Chapultepec Park. Visitors to members of staff of that establishment have to sign the guest book. From that book we ascertained that Powell and his girlfriend had signed in for a visit to Professor Juarez, the museum's leading authority on Meso-American antiquities in general, and the Mayans and Aztecs in particular. Since Cortez, God rest his soul, is no longer with us, I

despatched another of my men to the home of Professor Juarez, and the good professor, having little resistance to pain, revealed, before dying in an unfortunate accident, that he had, with Powell's agreement, sent the crystal skull, along with other, legally cleared Mayan artefacts, to Professor Julian Weatherby at the British Museum, London, with a note informing him that Powell would eventually collect it and would be requesting further information about it. Your job, therefore, is to wait until Powell and his floozy have visited Professor Weatherby, then find out exactly what he told them and what fate has befallen the crystal skull. When you find that out, please get rid of Professor Weatherby – we don't want him talking to anyone else – and then collect the crystal skull, if he still has it, or, if it's back in the hands of Powell and Co., get it off them and then put out their lights. You leave for London tomorrow.'

It was a job that Mai could not refuse, and now, here she was in London, sitting beside Professor Weatherby, having had all of yesterday to enjoy herself – seeing the sights, buying more clothes, sampling the best restaurants – before getting back to work. To this end, she had conscientiously arisen early this morning and caught a taxi to Molly Beale's hotel. Taking a seat in the lobby while residents were still going into the restaurant for breakfast, she had waited patiently, chain-smoking cigarettes and offering a chilling, off-putting stare to all who glanced at her, until Tom Powell entered the lobby from the street. She recognized Powell from a blurry black-and-white photo taken off the video-film routinely recording the movements of all passengers at the Aeropuerto Internacional security gates. Eventually, when a young blonde woman emerged from the hotel's restaurant to greet Powell, speaking with an American accent, Mai knew that she had to be Molly Beale. Thus, when Powell and Beale left the hotel and commenced their walk to the British Museum, Mai knew exactly who she was following.

When they entered the museum, she followed them in. She lost them temporarily when they were escorted into an area forbidden to the general public, but she picked them up again when they emerged from that same area with the grey-haired, bearded Englishman, whom Mai could only assume was Professor Weatherby. Right now, the professor was still sitting beside her, chewing on the last of his sandwich and, when not glancing furtively, helplessly, at her, pretending to read his newspaper. He looked like an easy mark.

Mai waited until the professor had finished his sandwich and was sipping his beer while casting surreptitious glances at her. To hold his attention, she kept crossing and recrossing her fabulous legs, and eventually, when she sensed that he was already fantasizing about her, she turned towards him, as if to reach into her shoulderbag, now resting on the seat beside her, and deliberately knocked her glass over. When the drink spilled from the overturned glass and splashed onto her dress where it fell between her crossed thighs, she let out a girlish cry of despair and let her hands, with their exquisite fingers, flutter helplessly, as if in search of a napkin. Unable to find one, being a typical helpless female, she raised her gorgeous eyes pleadingly to the professor, and he promptly leaned sideways, to pass her his napkin.

'Oh, thank you,' Mai said. Uncrossing her legs, she dabbed delicately at the slight stain on her dress, pressing the damp patch down between her thighs, thus making the dress tighten across both legs. Then, while the professor was staring wide-eyed at those legs, Mai giggled like an embarrassed schoolgirl, and placed the damp napkin back on the table. Turning back to the professor, breathing nervously, therefore deeply, thrusting her breasts out, she gave the professor her most heavenly, though supposedly embarrassed, smile. 'God,' she said, 'what a silly thing to do. I feel such a fool. But thank you. That was kind of you.'

''Not at all,' Professor Weatherby said.

Mai sighed, breathed deeply, and stretched her body, once more thrusting out her breasts, then smiled again and shook her head ruefully, letting her long hair spill down her back like a shimmering black shawl. She fluttered her eyelashes a couple of times, spread her legs slightly to glance down at the small stain – which was now situated in the cleft between her thighs, precisely where the dress had tightened sexily across them – then giggled again, and said, 'Oh, well, it's not *that* bad. I suppose I'll just have to stay here for a while, until this stain dries out.'

The professor nodded agreement, but was too shy to speak, so Mai sighed again, then reached into her bag for a cigarette. She also groped around in vain for a lighter, then shook her head and exclaimed softly, 'Damn!' Smiling girlishly at the professor, though giving him the full effects of her luminous brown gaze, she added, 'I'm not getting anything right today. Now I've forgotten my lighter. Do you happen to smoke?'

'A pipe,' Professor Weatherby replied, 'though never in public, since most

people hate it. But I *do* have my box of matches.'
Pleased, Mai smiled at him, licked her luscious lips, slid the cigarette between them, then leaned closer to the professor, her breasts practically touching him as her coat fell open, to let him light the cigarette for her. As he did so, his eyes were glued to her lips and they had a glazed look. Mai inhaled, which forced her breasts out farther, then she sat back again, though managing, in so doing, to inch slightly nearer to her new friend.
'Thank you,' she said.
'Not at all,' the professor said, placing his box of matches back into his pocket. Then, feeling more confident, he asked, 'Are you a tourist, by any chance?'
Mai nodded and brushed the hair from one eye with languid, long-nailed fingers. 'Yes,' she said. 'I just arrived yesterday. It's a wonderful city.'
'You've never been here before?'
'No. But I've wanted to come here for years. Now, at last, here I am.'
She crossed her left leg over her right and the dress inched up her thigh, making the professor's eyes widen even more before he realized what was happening and graciously looked away. By the time he did so, however, Mai had moved even closer to him and was staring steadily, admiringly, at him, like a young girl on her first date.
'You're here alone?' the professor asked.
'Yes, that's the worst part. I was supposed to come with my father, a bank executive in Bangkok, but his business here was cancelled at the last moment and so he sent me on alone, rather than disappoint me. Of course, I like it in a certain way – he's normally far too protective – but it's difficult when one doesn't know anyone. I mean, I really haven't travelled all that much, and I'm shy of entering places on my own.'
'You speak wonderful English,' the professor said.
'Do I? I'm so pleased. I was educated in an English convent in Bangkok, which is why I speak the way I do. And, of course, most of my father's acquaintances are in business and speak mostly English.'
'Your father must be well off.'
Mai nodded. 'He is. I suppose that's why I'm overprotected. I always had English nannies, and later, when I was in the convent, the nuns were rather strict. So being here, I feel quite inexperienced, though I think it's good for me.'

‘I’m sure it is,’ the professor said, visibly warming to her for reasons both paternal and licentious. ‘Can I buy you a drink?’

Mai acted hesitant, as if pondering the proprieties of this delicate social situation. She glanced down at the stain on her dress, pressed it lightly with her fingertips, thus tightening the dress across her thighs even more, and finally, smiling, offering her innocent trust, she said, ‘Well, since I can’t leave until this stain has dried, I suppose I might as well have another drink. Yes, that *would* be nice, thanks.’

Two hours later, when the professor had downed three more pints of beer and Mai had accepted some more Campari- and-sodas, they were sitting close together, no longer inhibited, talking with a great deal of what the professor, at least, thought was encouraging intimacy. While conversing, Mai repeatedly giggled and let her hand come to rest on the professor’s wrist, as if doing it unconsciously, perhaps because of the alcohol, and the professor responded by doing the same to her in an avuncular fashion. Finally, when the professor had clearly forgotten that he was supposed to be back at work, Mai giggled like a naughty schoolgirl and confessed to her secret sin.

‘Oh, dear,’ she said, ‘now that we know each other, I suppose I should confess at last.’

‘Confess what?’ the professor asked, intrigued.

Mai giggled again, shyly covered her mouth with her hand, then removed the hand to let him see her flawless teeth, framed by lush lips.

‘I really can’t!’

‘Please do.’

‘Well… Alright, then,’ she said. ‘Actually, it’s no accident that I have an interest in the ancient Mayans and now find myself now sitting beside this lovely professor who works in the antiquities department of the British Museum. In fact, I saw your photograph in the catalogue of the Mayan exhibition and was struck by something in your appearance.’ She shook her head from side to side, giggling again, as if deeply embarrassed by her own words. ‘Don’t ask me! I don’t know what it was. I just saw something in your face that I seemed to recognize, and so I desperately wanted to meet you, to talk about the Mayans. Then, shortly after, when I saw you coming out of the museum with that young couple, I could hardly believe my eyes – or my good luck. So I have to confess…’ Again, she covered her mouth with her hand, ostensibly to stifle a giggle, only continuing when she had seemingly

managed to control herself. ‘So I have to confess that, bold as it may seem, when you parted from the young couple at the gate and then entered this pub, I couldn’t resist the temptation to follow you in and somehow arrange to meet you – which I did in the end… Now isn’t that terrible?’

The professor responded by leaning closer to her and patting the back of her hand, which now happened to be resting on his knee, the long-nailed fingers pressing gently, distractedly, as if the ravishing though seemingly immature young creature hardly knew, in her innocence, that she was doing it.

‘No, it isn’t terrible,’ the professor said. ‘It’s my pleasure, I’m sure.’

‘Anyway,’ Mai said, now practically breathing into the professor’s ear and occasionally lowering her head onto his shoulder, letting her jet-black scented hair tumble over him, as if she was drunk and about to fall asleep, ‘who *were* they? Friends or relatives?’

‘Just a couple interested in Mayan antiquities,’ the professor replied, reaching out without thinking to stroke Mai’s hair and run his hand down to her spine. ‘They wanted some information.’

‘About what?’ Mai asked sleepily, as if just making small conversation.

‘Oh, just some old artefact,’ the professor said, placing his index finger under Mai’s chin to raise her head and look into her dreamy eyes. ‘Nothing important.’

‘So what did they want to know?’

The professor smiled tenderly at her, breathing into her lovely face, then lowered his gaze from her eyes to her lips, which were opened ever so slightly, letting him see her pink tongue. ‘Frankly, my dear – and please don’t take offence – I spoke to the couple in confidence, and don’t feel I should break it.’

Mai pouted, disappointed, then gently poked her tongue out. The professor was mesmerized by that tongue as it trailed over her full, deliciously moist, upper lip.

‘Well,’ he said, breathing heavily and flushed more than he should have been, but clearly not wanting to disappoint her, ‘I suppose it hardly matters, what with you not being in the business and just here on a visit…’ Mai’s fingers were stroking his burning thigh in a touchingly innocent though certainly exciting manner. ‘They came to collect a crystal skull and obtain some information about it. I told them what they wanted to know, and then they left with the skull. That’s all it was, dear.’

‘A crystal skull?’ Mai said. ‘How fascinating! So what did they want to know?’
‘Oh, just some rubbish, dear.’
Realizing that the professor was still reluctant to discuss confidential matters, and was, indeed, becoming obsessed with the possibility of possessing her, Mai deliberately dropped her head onto his shoulder, seductively squeezed his upper thigh, and murmured huskily, ‘Oh, dear, I believe I’m drunk. I think I’m going to pass out.’
‘Good God, don’t do that, pet!’
‘I think I’d better go back to my hotel now. Don’t you?’
‘You can’t possibly go back alone in this state.’
‘It’s alright. I’ll get a taxi.’
‘You still can’t go back alone in this state. You’d better let me go with you.’
Mai sighed and wearily raised her head to give him a grateful smile. ‘Oh, would you? You’re so sweet.’
‘Come, my dear, hold on to me.’
More drunk than was Mai, though he wasn’t to know that, Professor Weatherby stood up with her, placed his arm around her waist, and led her out of the pub, to catch a taxi. Twenty minutes later, they were in Mai’s room in the Savoy Hotel, where (having been excited by the feel of her lying against him in the taxi, the skirt high up her thighs, her breasts pressing against his chest as she seemingly slept on his shoulder) the professor stretched out on the double bed beside her, still wearing his suit, and with Mai’s leather bag resting upon the pillow just above his head.
The professor seduced Mai – or at least he thought he was doing so. He could scarcely believe that he was doing it – being a respectable married man with a loving wife and two good children, an academic of some standing, not *au fait* in worldly matters – but before he quite grasped how it had happened, her coat had been removed, her blouse had been unbuttoned, and her hand was pressing his hand onto her bared breast while she ground her hot belly against him.
‘Just tell me,’ she whispered, sensually licking his ear, inflaming his hardened organ with her restless writhing. ‘I like to talk while I’m doing it. It’s just something to talk about. What did that couple want to know and what did you tell them?’
‘Oh, God,’ the professor groaned, pressing his lips to her golden breasts,

licking the nipples, gasping for breath, ‘they just wanted to know a lot of nonsense that I couldn’t really help with, so now they’re off to see an eccentric old woman who’ll probably tell them what they want to hear… Oh, God, Mai! Oh, my love!’

‘Yes, darling,’ Mai crooned. ‘Oh, Julian, that feels so good, so sexy, so exciting… What woman, darling? I’ve got to talk, dearest. Who were they going to see?’

Professor Weatherby gasped and groaned. He was now licking Mai’s navel. She was stretching out below him, one hand tugging his shirt open, the other flung in seeming abandonment above her tousled head, almost touching the leather bag on the pillow. ‘Oh, God, Mai, you’re so beautiful! It was Lady… *Christ...* Barratt… God, Lord, you feel wonderful! You’re sublime, I’ve never known… *No*, Mai! Oh, God , *yes*… They were going to see… God, Mai, *yes*… Lady… what’s her name? *Barratt-Whit*e! Yes, Lady Barratt-White. Another eccentric. Claims to have found the crystal skull that’s presently in the Museum of Mankind… Ah, God, Mai! Oh, God help me, that’s wonderful, my precious. Don’t stop, Mai! *Don’t stop*!’

‘Mmmm,’ Mai crooned. ‘Lady Barratt-White. Does she live here in London?’

‘Yes, Mai! *Don’t stop, Mai*!’

Mai stretched her fabulous body, raising her belly to his face, and as his tongue frantically slipped into her navel, she groped inside the leather bag on the pillow and finally found what she wanted. It was a hypodermic syringe, filled with poison, ready to use. She simply prodded the plastic cap with a sharp fingernail, and it silently popped off. She lowered the needle towards the professor as he rolled, groaning and gasping, between her legs. Then, as he cried out, ‘God, I want you!’, she plunged it into his neck.

Weatherby’s convulsions were not caused by orgasm, but by the spasms of death.

When he was dead, Mai kicked him off the bed and heard him thud to the floor. She then stood up, adjusted her clothing, fixed her hair and make-up. Finally, when she had picked up her suitcase, she left the room. She went down to the lobby and checked out (having signed in under an assumed name), and then, feeling pleased with herself, she caught a taxi to another hotel.

She was not finished yet.

Chapter Sixteen

Having phoned first for an appointment, Tom and Molly were greeted at Lady Barratt-White's front door by a maid almost as old as her mistress. The latter was, according to the data collected by Tom, eighty-seven years old this year. She lived in decaying elegance in a large apartment in Knightsbridge, not too far from Harrod's, and she received them in an expansive living room filled with Victorian furniture and an impressive collection of antiques from many parts of the world. She was seated on a fading floralprint sofa under a large framed black-and-white photograph of herself with her husband, the legendary explorer Roland Barratt-White, obviously taken when they were excavating the lost city of Lubaantun in the jungles of British Honduras, now known as Belize, in Central America. White-haired, her face deeply lined, she was wearing a loose-flowing Victorian floral-print dress that blended so perfectly with the sofa that it made her seem almost transparent, rather like a ghost.

The maid, also white-haired, wearing a black dress and white apron, stooping low as she walked, or, rather, inched forward step by painful step, served tea and biscuits, then departed, leaving them free to talk.

'I must say,' Lady Barratt-White said, sounding terribly posh, though her voice had the shakiness of old age, 'that it was pleasant to hear you on the telephone, Mr Powell – the perfect diction and proper grammar – instead of what I usually receive: occultists and flying-saucer fanatics with their working-class accents and vile colloquialisms. So what can I tell you?'

'We're in possession of a crystal skull,' Tom said, and then nodded to Molly, who carefully withdrew the gleaming skull from her shoulder-bag and set it on the coffee table between them. 'And I wondered if you could have a good look at it and tell me if it's the same as the one reportedly found by you in British Honduras.'

The old lady stared at the gleaming, macabre skull, and then raised her rheumy, though still perceptive, gaze to Tom.

' *Reportedly*?' she queried sharply. 'Don't disappoint me, Mr Powell. Surely you're not another of those tiresome creatures who has only come here to insinuate that I've been lying for most of my life. I found my crystal skull during the excavation of that lost city and my father swore to the day he

died that he had not planted it there for me to find.'

'I'm sorry,' Tom said. 'I didn't mean to insinuate anything. I merely wanted to hear the story from you personally, as I think it would help.'

Nodding, the old lady leaned forward to run her blueveined, trembling hands over the crystal skull on the table. She studied it silently for some time, and then sat back again, breathing heavily. Her eyes flitted from Molly to Tom, and then settled on the latter. She had a steady, bold gaze.

'Your skull is genuine,' she said. 'There is absolutely no doubt about it. Where did you find it?'

'It was buried in the platform of the Shrine on the summit of the Great Pyramid at Chichén Itzá. It must have been there for centuries.'

The old woman nodded again. 'The second skull, the lost skull, was known to have been buried somewhere in the land of the ancient Mayans, *somewhere* in Central America. What you have there is undoubtedly that lost skull – the so-called Rose Quartz Skull. You're a very lucky couple.'

'Is it the same as the one you found?' Molly asked. 'Yes, young lady, it is.'

'Can you remind me of how you found your skull?'

Tom asked, feigning ignorance in order to receive the unvarnished truth.

'I can,' Lady Barratt-White said, sinking back into the sofa, into the floral-print pattern, as if about to disappear into it. 'The word *Lubaantun* means "place of the fallen stones", and the existence of the lost city of Lubaantun, a true collection of fallen stones, was first reported to the British colonial government office in the late nineteenth century by inhabitants of the Toledo settlement, located near the site we excavated. We were not the first there, of course. The Governor of British Honduras initially commissioned Dr Thomas Gann to investigate the site. He began his excavations in 1903 and published his report in England the following year. In that report he stated that he had managed to excavate around the central plaza and concluded from his findings that the lost city had been very large indeed, with a substantial population. About ten years later, in 1915, Professor M. Merwin of Harvard University, picked up where Dr Gann had left off, and, after further excavations, uncovered a ball court and three carved stone markers depicting men playing ball games. My father arrived at the site almost ten years after that. Included in his expedition were the same Dr Gann, who had first opened the site nearly two decades earlier, Lady Fiona

Williams, my father's close companion and financier, and, finally, me, then only fourteen years old.'

The old lady fell silent, lost in her memories. She glanced back over her shoulder at the large framed photo on the wall behind her, as if using it to jolt her fading memory. The grainy monochrome photo showed the teenage girl and her famous explorer father, both wearing old-fashioned shirts, slacks, and floppy hats to protect them from the sun, both standing in the ruins and rubble of the excavation site in British Honduras, surrounded by beaming Mayan workers. Sighing with sadness for the loss of her best times, the old woman turned to face them again.

'We worked there for three years,' she continued, 'digging, sifting, and collating, gradually uncovering various parts of the ancient ruins. Then, on my seventeenth birthday, when I was helping to dig around a collapsed altar, I saw something glinting in the rubble. When I ordered my Mayan workers to dig it out, removing the last of the heavy stone slabs that were covering it, what I had in my possession was a life-sized crystal skull in perfect condition – the very same skull that is now on display in the Museum of Mankind, right here in London.'

'And this occurred on your seventeenth birthday?' Tom asked sceptically.
'I know! I know!' the old woman snapped, shaking her head from side to side in frustration and turning red in the face. Eventually calming down, folding one blue-veined, trembling hand over the other, she coughed to clear her throat, and continued. 'It was my seventeenth birthday, believe me. And that *is* an unfortunate
truth, since I'm convinced that it was this simple fact that led to all the stories about my father having planted the skull there just for me to find – either as a birthday present or to gain himself notoriety. But that's nonsense, Mr Powell. Believe me, it's rubbish. I repeat that to the very day he died, my father swore that this was not so – that he had never seen the crystal skull before and that the find was genuine.'
'What happened when you found it?' Molly asked.
The old lady picked up her cup and saucer, which rattled together in her trembling hands. She sipped some tea, then gently placed her tea cup back on the saucer and put both on the table. Leaning back, she gazed at the ceiling and into her distant past.
'The Mayan workers were ecstatic when they saw it. Some of them actually

performed a ritualistic dance around it and others bowed low to worship it. They stopped working on the instant and, instead, erected a crude altar to support the skull and insisted that they were going to pay homage to it every hour of every day. Realizing that work on the excavation would grind to a halt if the skull remained on the site, my father presented it to the chief of the local Mayans, telling them to keep it in the settlement. After that, when they had the skull in their possession, the Mayans returned to work. A few months later, when our expedition was preparing to return to England – this was in 1927 – the Mayans gave the skull back to my father as a sign of gratitude for all that he had done for them. So we returned to England, bringing the crystal skull with us, and my father kept it in our home in London until his death in 1959. He left it to me in his Will, and that, despite all rumours to the contrary, is how it came to be in my possession.'

'And eventually you donated it to the Museum of Mankind,' Tom said.

'Yes. I was growing old – as you can see, now I'm truly *very* old – and so I thought it should have a proper home, which I trust it now has.'

Tom glanced at Molly and saw that she was sitting up straight in her tall-backed Victorian chair, holding her cup and saucer in a steady hand and sipping more effetely than was her custom. Realizing that tight blue jeans and dirtsmeared tee-shirts were not quite the thing for a young lady to be wearing when visiting the likes of Lady BarrattWhite, let alone wining and dining in the kind of places that he was accustomed to, Tom had taken Molly on a shopping spree along the better end of Oxford Street, encouraging her to select clothes that were neither too adolescent nor too sophisticated. Right now, she was looking, if not quite sophisticated, then certainly welldressed and girlishly attractive in a thick bouclé shirt, cream-coloured, shaped satin blouse, dark trousers pleated into an elasticated waist-band, and low-heeled black shoes. The outfit showed off her fine figure without being obvious.

'Did you learn anything about the crystal skull,' Molly asked intelligently, 'while it was in your possession?'

'No. In fact, I made a point of *not* trying to learn anything about it because I believe that the two skulls, yours and mine, the only two *genuine* skulls, can haunt those who look too deeply into them, and have powers that can be unleashed in some as yet mysterious manner. Indeed, this is why I gave mine to the Museum of Mankind. And even there, so I am told, the skull is said to haunt those who clean the building. Indeed, whether right or wrong, the

members of staff are so convinced of this, they have insisted that each evening the crystal skull be covered with a black cloth – presumably to ensure that they don't accidentally look into its dreadful eye-sockets and possibly become mesmerized by them.'

'I saw stars in our crystal skull,' Molly said, speaking with more care than normal, avoiding swear words, clearly determined not to offend the aristocratic old dear.

'Stars?'

'Yes, stars. I looked into it and was hypnotized by it and saw stars all around me.'

'Well, that's certainly possible. I *have* received many letters and phone calls over the years from people, highly intelligent, academic, to whom I lent the crystal skull for the purposes of research. A lot of those people – indeed *most* of those people – had serious problems in conducting their research, because the skull affected them strangely. Some saw what you saw, others were hypnotized as you were, and still others became prone to tormenting hallucinations, suffered physical illnesses, or even became suicidal. For this reason, most of my researchers returned the skull to me before they could complete their work on it. One can only handle the crystal skulls for so long, before they start playing tricks on one.'

'What about flying saucers?' Tom asked.

'What about them, young man?'

Tom recounted his and Molly's adventures, beginning with their discovery of the dead men in Chichén Itzá and concluding with the saucer-shaped light that had seemed to come to their rescue on the road to the airport in Mexico City. When he fell silent, Lady Barratt-White stared thoughtfully at him, then sighed and nodded.

'I believe you,' she said. 'The powers of the skull were obviously protecting you, even as they were turning against the others. Why this is so, I can't say, though I would speculate that you're a good man with honourable intentions, whereas the others were mercenary gangsters, intent on using the skull for evil purposes. That may explain it.'

Tom felt a sliver of fear trickle down his spine as he thought of what he had already experienced because of the crystal skull and what might lie in wait for him in the near future. When he glanced at Molly and saw how pretty she looked, even with her prominent nose and slightly hardened, street-wise

features, he realized that he felt something for her, and was, despite his frequent frustrations with her, deeply concerned for her. He and she were in this together, and now it seemed almost preordained. Wondering just where this was leading, he turned back to Lady Barratt-White, who, blending perfectly with the sofa, seemed even more like a transparent ghost.

'Did your father also believe that the skulls had magical powers?' Tom asked.

'Most certainly,' Lady Barratt-White replied.

'What made him think that?'

'He had always been convinced that the original owners of the skulls were early Mayans – a most mysterious race, widely believed to have magical powers and to have practised esoteric rites. When he saw how the local Mayans behaved when we uncovered that crystal skull during our excavations of Lubaantun – how they seemed to recognise it and worshipped it – he took this as proof that the skull originated with that earlier, mysterious race of Mayans. Finally, because those early Mayans were said to have possessed magical powers, he came convinced that the two genuine crystal skulls – his own, and the legendary, longlost Rose Quartz Skull – could, when working in tandem, reproduce the magical powers of that ancient race.'

'Did you say *in tandem*?'

'Yes, young man.'

'What gave your father that idea?'

The old lady picked up her tea cup, gazed down into it, and saw that it was empty. Sighing, she placed it back on its saucer, then smiled sweetly at Tom.

'Mayan hieroglyphics found in my father's private collection of rare parchments suggest that the two crystal skulls were deliberately separated and hidden by the high priests of that ancient race with the intention that they would one day, in the distant future, be found and returned to their source. Why they did this we cannot yet say, but certainly the two skulls have been found – one by me, the other by you – and so they must soon be returned to their source.'

'But what source is that?' Molly asked, trying to sound well-spoken and academic.

'According to my father's reading of the hieroglyphics, they must be returned – and I quote verbatim – *to that majestic and long-hidden city that is linked to the stars* – unquote.' The old lady nodded affirmatively, her grey head

bobbing in the shadows that fell over the floral-print sofa and her floral-print dress, again making her seem faintly transparent. Thankfully, she then leaned forward a little, letting Tom and Molly see her face again. She looked terribly serious. ‘And until the skulls are returned to their source,’ she said, her voice trembling and ethereal, ‘the Earth’s so-called hauntings will not cease.’

There was silence for a moment, only broken by the regular ticking of the grandfather clock, deeply varnished and decorated with gold-leaf motifs, which stood like a sentinel by the door.

‘Hauntings?’ Tom eventually asked, to break the silence. ‘What hauntings would those be?’

The old woman shrugged. ‘Ghosts, evil spirits, various inexplicable calamities – yes, even flying saucers and extraterrestrials – everything that bewilders us or haunts us. Such manifestations will either come to an end or their mystery will be solved when the crystal skulls are returned to their source. Meanwhile, those who would seek to profit from the skulls will come to a bad end.’

Tom and Molly glanced at one another, both trying to be sceptical, yet both feeling uneasy. In that mood, Tom glanced around the museum-like living room, at the many antiques collected from the four corners of the globe, found in various excavations, some of them almost as macabre as the crystal skulls. He thought of the great mysteries of human history, and saw only a black hole.

‘To get back to their source,’ he said finally, breaking another lengthy silence. ‘You mentioned a city linked to the stars. What could that mean?’

‘According to the hieroglyphics, an ancient bridge between the east and the west – the legendary City of the Sun. In other words…’

‘Tiahuanaco!’ Molly exclaimed triumphantly, recalling what she and Tom had been told by Professor Juarez.

‘Of course!’ Tom said, also excited. ‘The holy city on the southern shore of Lake Titicaca in Peru. The site of the legendary Sun Gate.’

Lady Barratt-White smiled slightly and nodded, signifying agreement. ‘So may I ask what you intend doing about all this?’

‘Well…’ Too confused to answer immediately, Tom hesitated and glanced instinctively at Molly. Turning back to the old lady, he said, ‘Well, I don’t know. I’m not sure. Right now, I only want to solve the mystery of the skulls – find precisely what they are and where they came from.’

‘And this need obsesses you?’
‘Yes,’ Tom confessed, without thinking. ‘It’s come to obsess me.’
‘It’s obsessed me for years,’ the old lady said. ‘Alas, while all of my researchers were being foiled in *their* attempts to unlock the mystery, I grew too old to do anything about it myself. You’ve come to me as a godsend.’
‘What?’ From Molly.
‘Pardon?’ From Tom.
The old lady smiled sweetly at both of them, but then turned back to Tom. ‘You’re an honourable man, Mr Powell. I can see it in your face. You may have made a few mistakes in your life, but you’re one of the pure in heart. That’s why the skull has been protecting you while destroying the others. It senses the goodness in your heart and the purity of your intentions. You have a mission in life, young man, though you may not have realized it; and that mission is tied to the problem that’s concerned me for years.’
‘What’s that?’ Molly asked.
The old woman gazed steadily at her, assessing her, and eventually accepting her. ‘As it was me and my father who removed that crystal skull from where the early Mayans had buried it, and as that skull, like the other, must be returned to its source, I feel personally responsible for finding out precisely where both skulls came from and then returning them to that sacred source. However, as I am now too old to do this, you must do it for me. You can do it because you’re both pure in heart and the skulls will protect you.’
Tom glanced at Molly and saw the wonder in her face; the realization that this old lady thought highly of her, which no one, apart from him, of course, had ever done before. His heart went out to her, combined with guilt at his own omissions, yet he knew that he’d come as far as he wanted to go, that this was now far too dangerous. He was not pure in heart, as the old lady seemed to think; in fact, he was a pure coward at heart, and now his fears were returning.
‘It will cost a lot of money,’ Lady Barratt-White said, ‘but I’m dying and I have money to burn and want to put it to good use. I’ll finance all your trips, pay for anything you need, then finally pay you a handsome fee, if you finish this for me.’
‘I’m not in need of money,’ Tom said promptly.
‘*I* am!’ Molly declared. ‘Excuse me, ma’am,’ she went on, turning to Lady Barratt-White, ‘for sounding mercenary, but I’ve never had real money in my

life, and so this means a lot to me.'
'I know that, my dear. I knew it before you came here. I've been waiting for you both to come along, though I didn't know precisely who you'd be. But I've seen you in my dreams, felt you deep in my heart, and I knew that you would come here to resolve this mystery and let me go to my grave in peace. Do this for me and you'll be richly rewarded. Why not discuss it between you?'
Obviously understanding that they were in conflict, she stood up laboriously, balanced herself on her walking-stick, and, smiling sweetly, left the room. 'I'll be back in a few minutes,' she said as she closed the door behind her.
Tom and Molly stared silently at each other, neither smiling at all. The silence stretched out forever.
'God damn you,' Molly said eventually, to break the silence. 'I'm gonna do this. I'm gonna go on a real fancy trip and get paid handsomely for it. Then, when I get back, I'm gonna get paid even more and have a very nice future.'
'*If* you get back,' Tom said.
'I'm a born survivor,' Molly retorted.
'You can't do this, Molly. You'll be exploiting that dear woman. She's obviously as mad as a hatter, and you're taking advantage. I think it's shameless. Disgusting.'
'Mad as a hatter, Tom? Is that what you really think? No, it's not! You don't think that at all. You know she's as sane as we are, but you don't want to admit it. Yes, Tom, you believed her. Every last word. You're just scared and now you're tryin' to say she's mad 'cause that lets you off the hook. Well, to hell with it, get out! I'll do the rest of it myself. I'll take the two skulls back to where they belong – which should satisfy you, at least – and then that old bird will pay me for my labours and I can live my own life. But I'm goin' and then I'm gonna come back to see the shame in your face.'
Tom knew it was the truth and he could have hated her for it, but when he thought of what she might have to brave in the future, he knew that he could not desert her now, no matter how scared he was. Besides, she had challenged his manhood, and he couldn't let that pass.
'Alright,' he said, 'I'll do it. I think we're both crazy, but I'll do it. Now finish your tea.'
After staring haughtily at him, Molly picked up her cup and saucer, her little finger raised, and finished off the last of her tea. She was just setting the cup

and saucer down when Lady Barratt-White came back into the room, hobbling unsteadily with the aid of her walking-stick, to sit again on the sofa.
‘Well, have you decided?’ she asked.
‘Yes,’ Tom said, ‘we’ll do it.’
‘Excellent,’ Lady Barratt-White said. ‘Just get in touch with me when you need anything – plane tickets, money, introductions – and I’ll do the necessary.’ Looking flushed with excitement, she waved her hands before her face. ‘Oh, dear, I’m so thrilled! Alas, my heart is racing too fast, so I must have a lie-down. Is there anything else, dears?’
‘Yes,’ Tom said. ‘If the crystal skulls work in tandem, we have to take both of them with us. Do you think you can persuade the curator of the Museum of Mankind to hand over the other one?’
‘I’m *sure* I can,’ Lady Barratt-White said. ‘I shall phone him as soon as I’ve had my sleep, and tell him you’ll be calling in to collect it. Say…?’
‘Tomorrow afternoon,’ Molly said. ‘That should give him time to remove it from its pedestal and wrap it up. So let’s make it late afternoon.’
‘Wise thinking, my dear. And now I really must…’
The old lady started rising from the sofa, wanting to show them to the door, but Tom, a gentleman first and foremost, motioned for her to remain where she was.
‘We’ll let ourselves out,’ he said as he stood up, indicating that Molly should do the same.
‘Thank you, dear. You’re too kind.’
Molly stood up as well. She glanced at Tom, then smiled at the old lady and walked around the low table to shake her hand.
‘Thanks a million,’ she said, then she placed the crystal skull back into her shoulder-bag, and led Tom out of the apartment.
‘Goodbye, dears!’ Lady Barratt-White called out to them as they were closing the door.
It was raining outside.

Chapter Seventeen

‘Darling,’ she said sarcastically into her cell phone, speaking to Lu Thong in Bangkok from her new location in the Ritz Hotel. ‘It’s me, your beloved Mai Suphar, speaking from London, where it’s raining cats and dogs. How

are you, my revered lord and master?'

'In a good mood, are you?' Lu Thong replied, his voice sleepily sensual from drugs, and, no doubt, some other diabolical form of self-indulgence.
'Yes,' Mai said, 'I am.'

She was stretched out on her large double bed, wearing a dressing gown of sky-blue Thai silk, her delicate feet in furred slippers, her precious body warmed in the British cold by an electric blanket purchased personally from Harrod's, and was idly scanning that morning's edition of the London *Evening Standard*, the first edition of the day, while holding the cell phone to one ear.

The front-page story in the newspaper was about the mysterious death of the British Museum's leading authority on antiquities, Professor Julian Weatherby, who had been found lying on the floor beside the bed in a room in the Savoy Hotel, dead from an apparent heart seizure. Neither the professor's bereaved wife nor any of his associates could explain what he had been doing in a room in the Savoy, let alone at that time in the afternoon, though it was known that the room had been taken by a female tourist who had signed in under the name of Anna Chow from Singapore, Malaysia. Ms Chow had checked out some time before the body was discovered, and, the story's writer hinted, might simply have fled in embarrassment after Professor Weatherby, almost sixty years old, had his heart seizure during sexual intercourse. The Metropolitan Police were still trying to trace Ms Anna Chow, but so far no leads had come up. Though there was no suspicion of foul play, the case remained open.

'Mmmm,' Mai purred with satisfaction into her cell phone, stirred by a rush of sexual heat by being reminded of her terminal grappling with the late Professor Weatherby.

'You're definitely in good mood,' Lu Thong said, audibly inhaling, probably sniffing up a line of cocaine. 'So what's brought it on? Have you good news for *me*?'

'Yes,' Mai replied, reaching out to the bedside cabinet for her glass of bubbling Dom Perignon champagne, sipping it and then resting the glass on her flat belly. 'As requested, I tracked down Professor Weatherby, had a lengthy discussion with him, and ascertained from him that your Mr Tom Powell and his American tart, Molly Beale, are indeed in possession of the crystal skull. It was sent to the professor, as you rightfully suspected, and

they paid him a visit, squeezed some info' out of him, and then left, taking the crystal skull with them.'

'Do you know what the professor told them?' Lu Thong asked, his voice still sleepily sensual, though Mai knew that he was just as alert and deadly as ever.

'Yes,' Mai said. 'It wasn't much, but it was all that I need. He told me that they'd asked him a lot of crazy questions…'

'About the magical powers of the skull.'

'Correct… and that they had told him they were going to visit Lady Barratt-White, to find out more about it.'

'Lady who?'

'Barratt-White.'

'That name rings a bell.'

'She's the ageing daughter of Ronald Barratt-White, the famous, or notorious, explorer who discovered the crystal skull now on display in the Museum of Mankind.'

'Ah, yes,' Lu Thong said. 'And, in fact, it was the daughter, now Lady Barratt-White, who actually found the skull. Very good, Mai. So what's happening now?'

'I haven't finished yet,' Mai said.

'So sorry, my dark angel. Please continue.'

'Knowing that Powell and Co were going to see Lady Barratt-White, who is now nearly ninety and receives regular visits from social workers, I bought some downmarket clothes in that ghastly Camden Market – motheaten pants and jumper, a pair of shoes that looked like industrial boots, an old football scarf, and a hideous beret – and then, resembling your classic ethnic lesbian social worker, paid the old girl a visit before our friends could get there.'

'Beautiful,' Lu Thong said.

'Lady Barratt-White is so old, she's nearly blind, so I flashed my *old Carte Orange* from Paris, which she mistook for a Westminster Council identity card, and told her I was the new health inspector and wanted to check that the old-age pensioners in my care were being treated okay. She invited me in and we had a good talk and I made her a strong cup of tea. When her weak bladder gave out and she had to go to the toilet, as I knew she would, I planted a bug on her landline phone. When she returned, I kindly washed the dishes for her, and then took my leave.'

‘Pure genius, Mai, but from where did you listen in to her subsequent conversations?’
‘You gave me some names, remember?’
‘Ah, yes, of course. Including the names of some bent Scotland Yard detectives who once specialized in high-tech surveillance of diverse insurgents in Northern Ireland.’
‘Exactly,’ Mai said. ‘So they sat outside the old bird’s apartment block in an illegally equipped surveillance van and brought the resultant tapes to me this morning.’
‘I hear sweet music, my pet.’
‘Sweet it was. Mr Powell and Molly Beale duly paid their visit to Lady Barratt-White and had a good conversation with her. To paraphrase, she’s financed them to get hold of the other crystal skull, the one in the Museum of Mankind, and, once they have it in their possession, to take both skulls back to their original source.’
‘Which is?’
‘At this point, it appears to be the holy city on the southern shore of Peru – the site of the legendary Sun Gate.’
‘Is that what they think?’
‘So far,’ Mai said. ‘Naturally, that may change, but so far what they *do* know for certain is that the two crystal skulls can only be fully utilized when they’re used in tandem. So Powell and Beale are now going to try getting their hands on that other crystal skull, and, to this end, they have an appointment with the curator of the Museum of Mankind this afternoon.’
‘How do you know that?’
‘Because we recorded Lady Barratt-White making the appointment and then calling Powell to give him the details. He’ll be seeing the curator of the museum just after the museum closes for the day. That’s perfect for me.’
‘If I were capable of love,’ Lu Thong said, ‘I would love you, my sweet.’
‘Maybe some day,’ Mai said.
Lu Thong chuckled, then trailed off into a silence that lingered for a long time. It was not a complete silence: Mai could hear his distant breathing. He was breathing in and out, very deeply and slowly, inhaling cocaine or some other, possibly even more dangerous, substance, risking his life in order to feel alive, which is all he could do these days. He sighed, as if exhaling the fumes of hell, and then blew her a kiss.

‘I’m so weary,’ he said.
‘You have everything, Lu Thong.’
‘That’s why I’m so weary,’ he said. ‘I’ve had too much too soon. I’m jaded with sex, with money, with Earthly power; and now the only thrill I can imagine is braving the unknown.’
‘You’ve been doing that since childhood,’ Mai said. ‘Living on the edge. You’ve pushed yourself as far as any human being can go, and now, alas, you’ve nothing left to push against.’
‘I’ve got you,’ Lu Thong said.
‘You can’t be sure of that,’ Mai told him.
‘That’s exactly what I mean. I’m so powerful, I don’t even have an enemy who could put me at risk – only you, Mai. You can’t be trusted, you’re absolutely ruthless, you obtain your thrills from causing wreck and ruin – and you’d love to ruin me. I taught you everything you know, and you won’t be happy until you turn those skills against me. You’d orgasm on that, wouldn’t you? It would make you feel transcendent. You’re the only worthy opponent I have left, which is why I adore you… But you’re still not enough.’
‘Then what is, my hero?’
‘The ultimate risk. The only gamble worth the taking. The opportunity to see what lies on the other side of life – and maybe even return from there. That’s why I need the crystal skulls. It is *I* who must return them. Used together, they could release all the powers of heaven and hell. I have to know if that is so. To find out, I must risk all. I have to return the crystal skulls to their source and then see what transpires. So get those two skulls for me, Mai. I don’t care how you do it. Get them for me and then kill Mr Powell and his American floozy.’
‘I will,’ Mai said.
Lu Thong was silent for a moment, though Mai heard his heavy breathing, then he whispered, ‘Ah, God, I am drifting… drifting… drifting away…’ He went out on a lengthy, eerie sigh, and then the line went dead.
Realizing that Lu Thong had drifted into a drugged stupor, Mai switched her phone off and finished her champagne. Licking the last of it from her lips, she rolled off the bed, letting her dressing gown fall to the floor, and then, naked, she went into the bathroom to prepare for the afternoon.
Thirty minutes later, she emerged wearing a grey windcheater with bulging pockets, a dark-green woollen pullover, blue denims and flat, rubber-soled

black shoes. Her long hair was pinned up on her head and covered with a wrap-around scarf. She looked as commonplace as a woman with her beauty possibly could.

Seeing that the rain was lashing down outside, she removed a short-handled umbrella from her suitcase, and then left the room. Once outside the hotel, she remained in the doorway until the uniformed doorman had hailed a taxi for her, and, walking beside her, holding his own umbrella up over her, escorted her to the taxi and closed the door behind her.

'The Museum of Mankind,' Mai said curtly to the driver.

'It's only a five-minute walk from here,' the driver responded.

'Do you want my money or not?' Mai retorted. 'Take the long way around.'

'No skin off *my* nose,' the driver said.

Even the long way around was a fairly short distance, but the dense traffic ensured that the journey took nearly fifteen minutes. Mai enjoyed the trip, settling in and gazing out, seeing the lights of Piccadilly and then Mayfair through the glistening rainfall. It was only five in the afternoon but the evening darkness was falling early because of the heavy rain, with the lights of the streetlamps and shop windows falling over the sidewalks. Already Mai had decided that she liked London a lot and thought she might live here some day; find a nice house in Knightsbridge or Chelsea, and then marry a rich old man whose sudden death from an unexpected heart seizure would seem perfectly natural. A woman could have a good life here, picking her victims up off the streets. London was a glamorous, lonely city, where the missing were rarely missed. Mai thought of Professor Weatherby, of the sexual thrill that his death had given her, and she looked forward to repeating the experience with Mr Tom Powell.

'Here we are,' the driver said.

Looking out, Mai saw the entrance to the Museum of Mankind, drenched and still being lashed by rain. She paid the driver, told him to keep the change, then dashed for the museum without bothering to open her umbrella. Once inside, she strapped the umbrella to her belt and then walked to the reception, where she was warned that the museum would be closing in fifteen minutes.

'That's long enough for me,' Mai said.

Having already been given a map of the museum and informed of the crystal skull's whereabouts, Mai walked up to see where it was on display on one of the landings, at the top of the stairs, gleaming and looking suitably macabre

in the overhead lighting. Satisfied that it was actually still there, she explored the rest of the museum, checking where the doors where, including the emergency exits, and then she wandered around, ignoring the many wonderful exhibits, in search of one of the cleaning women. Taking it for granted that the domestic wing of the building would be on the ground floor, she went back down the stairs just as the attendants were calling out closing time and visitors were surging towards the exit. Fearless as always, Mai simply stayed out of sight, while keeping the exit in view, until she saw an attendant closing the doors behind the last of the visitors.

At that moment, she also saw a woman, obviously working-class and not here for the fun of it, passing around a wooden barrier at the end of the ground-floor hall, and disappearing through the doorway behind it.

Checking that the attendants now gathering around the exit doors to complete their last-minute duties and take their leave were not looking in her direction, Mai padded softly across the brightly-lit exhibition hall and them skirted around the wooden barrier to go through the doorway previously taken by the cleaning lady. The doorway led into a corridor that smelt of a wide variety of detergents, with a series of storage rooms running along both sides. Mai saw the cleaning lady enter one of those rooms, and, still padding quietly on rubber soles, she followed the woman into that room.

The room was filled with buckets, mops, dustpans, brushes, detergents, and all the rest of the woman’s cleaning paraphernalia. As Mai entered, treading as quietly as a mouse, the woman had her back turned to the doorway and was shucking off her overcoat, to put on the coveralls hanging from a hook on one of the walls. The woman didn’t hear a thing when Mai stepped up behind her, withdrawing a length of fine cord from one of the bulging pockets of her windcheater. Stretching the cord taut between both hands, she quickly looped it over the woman’s head and pulled it tight, before the woman knew what was happening.

Mai tugged hard on the cord, crossing it behind the woman’s neck and pressing her knee to the woman’s spine as she jerked even harder. The woman gasped briefly, quivering like a bowstring, bent backwards against Mai’s knee, but then the cord cut deeply into her windpipe and choked the life out of her. She quivered even more violently, but beyond that could not move, and soon her body went limp, started to sag, and then collapsed against Mai. The latter loosened the cord, but kept hold of the dead woman until she

had lowered her gently to the floor and could release her completely.
‘Sweet dreams,’ Mai whispered.
After carefully rolling up the cord and placing it back in her pocket, Mai removed the coveralls from the hook on the wall and put them on over her own clothing. Because she was still wearing her windcheater, the coveralls were tight, but apart from that she felt fine.
Needing a good-sized bag for the transportation of the crystal skull, she looked around the room and saw a large canvas bag hanging from the handles of a wheeled trolley piled high with more cleaning paraphernalia. Smiling, she removed the bag from the trolley and then went to the doorway. Inching her head out, she looked left and right. Seeing no one, she left the room and walked back the way she had come, out through the door at the end of the corridor, back around the wooden barrier, and then across the expansive hall filled with exhibits, only stopping when the entrance/exit doors came into view.
The doors had been closed and all the attendants had gone home, though a security man was sitting in a chair close to the front door. When Mai approached him, he glanced up in surprise, relaxed when he saw her cleaning woman’s coveralls, then frowned when he failed to recognize her, though by then it was too late.
Mai grabbed him by the hair, swiftly jerked his head down, brought her knee up into his face with remarkable speed and brutality, and then, before he could even fall over, she chopped him across the back of the neck with the hardened side of her open hand. The man grunted and started falling, but Mai held him upright, not wanting any noise, then lowered him quietly to the floor.
Reaching into another of her bulging pockets, Mai withdrew a hypodermic syringe of the kind she had used on Professor Weatherby. After glancing back over her shoulder, to ensure that no one was coming, she removed the protective cap from the syringe, then plunged the needle into the side of the unconscious man’s neck. When she removed the needle, the man went into violent convulsions, flapping his arms, kicking his legs, but then he died and was still.
Mai put the cap back on the needle, placed the syringe back into her pocket, picked up the canvas bag, then turned away and went through the doorway, which, according to the map given to her by one of Lu Thong’s informants,

contained the main switches and burglar alarm system.
The informant had not been wrong.
Having been trained in the criminal arts by Lu Thong's best men, Mai knew exactly what she was doing, and did it with speed. Removing an all-purpose knife from one of her bulging pockets, she used a small screwdriver to shortcircuit the electricity, plunging the building into darkness and aborting the burglar-alarm system.
Thankfully, no emergency back-up alarm bells started ringing.
Pleased, though knowing that there were other people still in the building, including other security guards and, possibly, Tom Powell and Molly Beale, Mai wasted no time in removing a torchlight from one of her pockets, turning it on, and making her way up the broad stairs until she came to the crystal skull, which had already been covered in a black cloth. Just to be sure, Mai removed the cloth.
The skull gleamed in the light coming in through the windows, making her think of her bad dreams.
At that moment, she heard the shouting of various men
– probably security guards – echoing around the darkened floors above her.
Being careful to avoid gazing into those gaping eyesockets, she slipped the black cloth back over the crystal skull, removed the skull from its tall pedestal, and carefully placed it inside the canvas bag. She then slung the canvas bag over her shoulder and made her way back down the stairs.
The dead guard still lay on the floor near the main doors, but otherwise the ground floor was deserted.
Satisfied, Mai made her way back across the darkened ground-floor hallway, guided by her torchlight, and then into the corridor at the rear. Once there, she started running, holding tightly to the canvas bag, shining the torchlight on the walls, until she saw the dully gleaming steel bars of an emergency exit. She tried to open the doors, but they were locked, though even that didn't stop her.
Moving swiftly, she took a small package from one of her bulging pockets. It was a simple, home-made bomb, consisting of Semtex explosive, an electric initiator, and a blasting cap with bridge wire, wired to a remote-control firing device.
Using black masking tape, Mai stuck the bomb to the lock of the door, ran the detonating wire out about fifteen feet along the corridor, attached it to the

remote-control device, and then pressed the button.
It was not a massive explosion, but it certainly sounded so in the confined space of the dark corridor, almost deafening Mai and dazzling her with a jagged sheet of flashing light that made her close her eyes briefly. When she opened her eyes again, she saw billowing smoke and the scorched, mangled lock clattering noisily to the floor to bounce off the opposite wall. While the shattered lock was still spinning on the floor, Mai made her escape.
She emerged to falling rain, to the early evening's gloom, to the bright lights and clamour of passing traffic and the many pedestrians passing by. Not wishing to take a taxi – the driver might recall her face – she unstrapped her umbrella, held it above her head, and then, with the canvas bag still slung from her shoulder, she strolled back to the welcoming grandeur of the Ritz Hotel.

Chapter Eighteen

Entering the museum ten minutes before closing time, Tom and Molly gave their details at reception and were escorted through the building to a small waiting room outside the curator's office. There they were told to take seats and assured that the curator would see them in ten minutes or so, just as soon as the building was closed for the evening and his other administrative tasks were completed. Thanking the young lady who showed them in, they watched her disappearing around the corner at the end of the corridor, then they sat there, side by side, on their hard wooden chairs, neither knowing quite what to say.

Finally, to break the silence, Molly said in her admirably blunt manner, 'Okay, admit it - you're scared.'
'Of meeting the curator?'
'No. Of getting even deeper into this. You're scared of that, and right now you hate me 'cause I won't let you out.'
'Not true, Molly.'
'Yes, it is, Tom.'
'I, too, want to see this through to the end, to return the crystal skulls to their original source, where clearly they were meant to be, and to see what happens when we do so. If I'm scared – and certainly we both should be – it's not only for myself, but also for you. I care for you, Molly, after my fashion, and

I feel concern for you. Those men who died at Chichén Itzá were undoubtedly criminals, and the ones who followed us were clearly dangerous men and almost certainly not working alone. Whoever wants our crystal skull wants it badly and may not have given up yet. I think we're both in real danger.'
Molly turned to stare at him with eyes widening and brimming over with emotion. 'You care for me?'
'After my fashion.'
'What does that mean?'
'I care for you more than you might think and I have concern for you.'
'So what does *that* mean?'
Tom was uncomfortable. He found it hard to discuss such matters. The emotional world was tricky and he wished to avoid it. 'I think you're cute,' he said. 'Too foulmouthed by far, but decent for all that. I believe the American word for it is "spunky" and I find that admirable. I've always lacked physical courage myself, but you have it in bagfuls. Also, I happen to know that you've grown fond of me. Now why don't you admit it?'
'Gee, whiz, the guy's in love!' Molly was grinning, but her eyes were moist.
'I didn't say that, Molly. I merely said I cared for you. And that's just what I meant.'
'Oh, yeah?'
'Oh, yes. But of course I know that you've grown fond of *me*, so why not admit it?'
'Pompous little shit, aren't ya?'
'You don't have to be foul-mouthed again.'
'I use the language I learnt in the streets. I can't talk with a plum in my mouth, but I get my meaning across.'
'You certainly do.'
'You love me,' Molly said.
'You love *me*,' Tom replied.
Molly chuckled and shook her head from side to side, filled with wonder and gratitude. 'The man loves me, but he's too fuckin' English to express his true feelin's. Come on, Tom, why not say it?'
'You say it first.'
'I love you.'
'Really?'

‘Yes, really.’
‘You’re a woman with surprisingly good taste.’
‘Go screw yourself, bud!’
Amused and blessedly distracted, Tom was about to offer a retort when the door to the curator’s office opened and a man with a long, pale face and no hair whatsoever stepped out to stare at them. He was as thin as the stem of a lamp-post, wearing a pinstripe suit with white shirt and striped old-school tie. He looked like a fairly decent man who had never smiled in his life.
‘Mr Powell?’ he asked of Tom.
‘Yes,’ Tom replied, rising to his feet and offering his hand.
‘William Postlethwaite,’ the curator introduced himself. They shook hands, and then Tom introduced Molly, who also shook the curator’s hand.
‘Please come in,’ Mr Postlethwaite said. When they were inside his office, seated in front of him, gazing at him across his surprisingly bare desk, he gave them the full blankness of his decent face, and said, ‘Before we go any further, may I just say that had it not been Lady BarrattWhite who called on your behalf, I would not have given you this appointment. I have a great deal of respect for that good Lady, but she *is* rather old now, not to say a little eccentric, and when she says she wants us to return the crystal skull to her, and, even worse, hand it over to two perfect strangers, I’m bound to say in response that this is something that I, representing this museum, simply cannot agree to do.’
‘So why give us the appointment?’ Molly asked tartly, before Tom could even open his mouth.
‘I gave you the appointment,’ Mr Postlethwaite replied bluntly, being a decent and honest man, ‘because I respect Lady Barratt-White, appreciate her great gift to this museum, and therefore felt obliged to at least see you.’
‘Did you tell her you wouldn’t let us have the crystal skull?’ Tom asked.
‘No, I did not. I didn’t wish to upset her. She’s a dear old lady with not too long to live, so I felt it best to humour her, and, I must confess, to find out just why she had the sudden urge to take the skull back and pass it on to someone else. May I ask who you are, why you want the skull, and how you came in contact with Lady BarrattWhite? The world of antiquities is a small one, and your name’s not familiar.’
Taking a deep breath, aware that he was in treacherous waters, and unwilling to let the upright Mr Postlethwaite know that he and Molly were in illegal

possession of the second crystal skull, Tom thought hard before exhaling. Then he plunged in: ‘Well, Mr Postlethwaite, while I’m not professionally involved in the world of antiquities, I’ve been studying the subject for many years and have a particular interest in early Mayan culture in general and your crystal skull in particular.’

As Mr Postlethwaite raised his left eyebrow progressively higher in increasing disbelief, Tom, hardly aware of what he was saying, but instinctively leaving out any mention of his experience at Chichén Itzá and his possession of the Rose Quartz Skull, managed to explain, with a few little embellishments, how he had come to see Professor Weatherby in the British Museum, was ‘recommended’ by him to Lady Barratt-White, and had been ‘encouraged’ by the latter to return her crystal skull, the one in this very building, to its source in Tiahuanaco, Peru.

When Tom had finished, wiping sweat from his brow with the white handkerchief that he always kept tucked into the breast pocket of the pinstripe suit had had worn since returning to London, Mr Postlethwaite raised his left eyebrow to its maximum altitude, then lowered it and practically quivered with outrage.

‘Are you some kind of crank, Mr Powell?’

‘Hey, watch your mouth!’ Molly exploded.

‘*Please*, Molly,’ Tom said, and then turned back to Mr Postlethwaite. ‘No, I certainly am not!’

‘Yet you believe that the crystal skull has to be returned to its original source in order that its magical powers might be released?’

‘That’s correct,’ Tom said.

‘That’s ridiculous,’ Mr Postlethwaite retorted. ‘I’m embarrassed to even hear it. I find it hard to believe that you can walk into this museum and tell me this rubbish straight-faced.’

‘Lady Barratt-White agrees with me,’ Tom said, ‘which is why she wants *me* to have the crystal skull.’

‘As I said before, *sir*,’ Mr Postlethwaite said, placing an emphasis on the ‘sir’ as if it was a dirty word, ‘I have the utmost regard for Lady Barratt-White, but she *is* rather old now and, like many people her age, perhaps not all there in the head, and so susceptible to the blandishments of charlatans.’

‘Hey, watch your mouth!’ Molly exploded again. ‘As for your supposed visit to my former colleague, the late Professor Julian Weatherby, I would like to

know why you made that visit, since Professor Weatherby, God rest his soul, was found dead in suspicious circumstances in a room in the Savoy Hotel, where, to the best of my knowledge, he had no business being in the first place. So when did you visit him?'

Shocked to hear this news, which really was news to him as he hadn't read a newspaper since returning to London, Tom felt himself falling into a deep well of fear. Glancing at Molly, he saw that she felt the same way. However, he managed to regain control of himself and boldly faced the curator's accusing gaze.

'If you're suggesting that I had something to do with Professor Weatherby's death,' Tom said, 'just because I happen to have paid him a visit, I would just like to say that

_ '

He didn't complete the sentence, because the room was suddenly plunged into darkness.

'What…?' Mr Postlethwaite's voice resounded eerily in the abrupt silence of the darkened room. Then Tom heard a clattering sound as something on the desk fell over, obviously knocked over by Mr Postlethwaite's groping hand, and then he heard the telephone being picked off its cradle, followed by the sound of it being dialled. 'This is the curator,' Mr Postlethwaite said. 'My lights have just gone out.' A brief silence was followed with: 'A power failure? The whole building? Surely that's not possible. We have override switches to avoid that kind of incident, so the lights should have come back on automatically.' He went silent again, obviously listening to bad news, then said, sounding shocked, 'The burglar alarm system as well? But surely *that* isn't possible! The system has its own override facility and can't just… Pardon? *What*? You believe that both systems have been… *sabotaged*? Oh, my God, then…' But instead of completing his sentence, he slammed the phone down, kicked his chair back and stood up. Tom's eyes were still adjusting to the darkness as Mr Postlethwaite groped frantically in a desk drawer, then the beam of a flashlight split the darkness and Mr Postlethwaite, holding the torchlight in one hand, ran from the office.

'Let's go!' Molly snapped.

Hurrying after the curator, they followed him along the darkened corridor to the stairs leading down to the lobby. As they followed him down the stairs, guided by the frantically wavering beam of the torchlight, they could hear the

panicky shouting of security guards echoing eerily around the other darkened exhibition halls. Mr Postlethwaite had just reached the bottom of the stairs when the lights came back on to reveal a body lying rigidly on the floor near the front doors. The man appeared to be dead.

'Oh, my God!' Mr Postlethwaite wailed, stopping near the dead man and glancing frantically left and right, his face pale with shock.

Tom and Molly stopped behind him, hearing footsteps running down the stairs, and more panicky shouting. Before Mr Postlethwaite could make another move, a security guard came running out of an open doorway, practically skidded to a halt, glanced down at the dead man on the floor, then turned to face the curator.

'He's dead,' the security man confirmed.

'Oh, my God!' Mr Postlethwaite repeated, blinking repeatedly like someone in deep shock.

'I've just been to check,' the security man said, flushed with too much excitement for one evening, 'and the mains electric and burglar-alarm systems have both been tampered with.'

'You mean… *sabotage*?'

'Yes, boss. I've just turned the back-up generator on, which is why we have lights now.'

'But my telephone was working!'

'A different system,' the security man said. 'That's British Telecom. I've already called the police and…' He nodded, indicating one of the front doors, which was being opened by another security man. 'We're opening the doors to let them in.'

'But what…?'

Another security guard came running across the exhibition hall to their right and stopped breathlessly in front of the curator.

'There's a dead woman back there,' he said. 'A cleaning woman – Mrs Branson. The poor creature's been strangled.'

'Oh, my God!' Mr Postlethwaite repeated yet again, obviously about to lose the power of speech, glancing about him as if expecting to be attacked by a gang of armed robbers. 'I just can't…'

Footsteps advanced behind Tom and Molly, then another security guard ran around them to stop breathlessly in front of Mr Postlethwaite.

'The crystal skull's been stolen,' he said.

‘*What*?’
‘I said…’
‘Let’s go!’ Molly snapped. Then she grabbed Tom by the hand and raced him to the open front door, where she rudely pushed the security guard aside and made her escape. ‘Keep running!’ she bawled.
Tom’s heart was racing as he followed Molly along the street, dazzled by the streetlights and the brightly-lit shop windows, drenched in slanting sheets of rain. When they had turned up a side street, out of sight of the museum, Molly slowed down to a walk, released Tom’s sweaty hand, and raised an umbrella over their heads.
‘Walk as naturally as possible,’ Molly said, ‘and stop lookin’ so scared.’
‘I can’t help it,’ Tom said.
At first, he didn’t know where she was leading him, and he didn’t really care, being too frightened to think straight, but he soon recognized the area that he lived in. Then they arrived at the hotel that he’d booked for Molly.
‘We’ve gotta talk,’ Molly said.
When they entered the hotel, she shook the rain off her umbrella, folded it up, went to the reception desk for her room key, then led Tom to the lift. Once upstairs, they entered her room, where Molly turned the light on and then carefully locked the door behind her. Tom glanced at her bed and then looked away, feeling oddly uncomfortable. His racing heart was gradually settling down, but he still felt fearful.
‘You want a drink?’ Molly asked.
‘Desperately,’ Tom said.
‘You don’t mind if I use this mini-bar at your expense?’
‘Of course not,’ Tom said.
Molly knelt in front of the refrigerated mini-bar to open the door and look inside. ‘We’ve got whiskey and brandy and – ’
‘Brandy. I could do with a brandy.’
‘I’ll try that,’ Molly said. ‘I’ve never had it before.’
After removing two tiny bottles of brandy from the mini-bar, she kicked the door shut and handed one of the bottles to Tom. As he was unscrewing the metal top, she fetched two glasses and handed him one of those as well. She sat on the edge of the bed while he took the only chair in the room. They both drank and then stared at one another, temporarily speechless.
Eventually, Molly brushed her wet hair from her forehead and crossed her

long legs. They were very nice legs.
‘Why did you run us out of there?’ Tom asked. ‘You shouldn’t have done that. Now they’ll think…’
‘That we had something to do with the theft of the crystal skull, and, even worse, with the death of Professor Weatherby? Yes, Tom, but they’ll be thinking that anyway. That’s *why* I ran us out of there. We were there when the lights went out, when the crystal skull was stolen. We also saw Professor Weatherby the same day he died, probably murdered, and that curator, already suspicious about that, was about to ask questions. Then the lights all went out and the crystal skull was stolen, so he’s bound to think his suspicions were correct. He’ll tell the cops about us – and about our visit to Weatherby – so the cops are gonna want to talk to us… We have to leave London, Tom.’
‘Leave London? You mean… *now*?’
‘If not now, pretty soon. Before the cops track us down. We might as well take our single skull to Peru and see what happens there.’
Tom finished off his brandy and helped himself to another. When he had poured it, he sat back in his chair and had a good slug. It warmed him and went to his head and made him feel a lot calmer, if a little unreal.
‘The police won’t have too much trouble finding me,’ he said. ‘I’m listed in the phone book, after all, and that’s the first place they’ll look.’
‘Then we have to leave as soon as we possibly can, preferably on the first flight out tomorrow.’
‘We can’t,’ Tom said. ‘We have to take *both* skulls with us. One skull may be useless without the other, so we have to find out who took the other one and then take that as well.’
‘That might not be possible,’ Molly said.
‘Perhaps, but we have to try at least.’
‘We have one day – maybe two or three at most – and then we have to go, even if we go with only one skull. Anyway, think about it, Tom. Whoever wants that skull wants it pretty badly – he’s willing to kill to get it – so he probably knows as much about it as we do. And if that’s the case, then he knows it’s got to be returned to its source if it’s to have any value. Given this, I say that if we take our own skull to Peru, the other guy – ’
‘It could be a woman, Molly.’
‘It’s a figure of speech, Tom… Anyway, the other guy, or gal, will probably

know that we've no choice other than to go to Peru, so either he'll follow us or he'll take his own skull to the same place. Either way, those two skulls are going to meet up, sooner or later.'
'Then we'll be killed and robbed of our own crystal skull.'
'Not necessarily. You heard what Lady Barratt-White said. For whatever reason, we're bein' protected by the magical powers of the crystal skulls while our enemies are bein' attacked by those same powers. Maybe it *was* destined to happen this way – so I say we've got to go.'
Tom thought about it, filling up with dread again, but realized that he didn't have a choice. 'Alright,' he said, 'we'll go. But I need a few more days. I need to find out more about the crystal skulls and I know just the man I want to ask – an old friend of mine. Also, since this old friend is in the business, he might pick up some info' about the whereabouts of the stolen crystal skull.'
'Fine,' Molly said. 'But you only have a few days. In the meantime, you've got to move out of your apartment and stay somewhere else.'
'I'll move into my club,' Tom said. 'It'll take the police some time to learn that I'm a member of that establishment.'
'Good thinking,' Molly said. She leaned sideways to place her glass on the bedside cabinet, then, with a sigh, she fell back on the bed, stretched out, breasts up thrust, with her legs dangling over the mattress and her feet on the floor. Lying there, she looked voluptuous and irresistible. Tom was embarrassed.
'God, I'm pooped!' Molly exclaimed.
Aware that he was sexually aroused, Tom felt even more embarrassed, so he stood up and placed his glass on the dressing table, saying, 'Well, I think I'd better get going.'
Molly sat up straight again. 'So what happens tomorrow?'
'Meet me in the Museum Tavern,' Tom said. 'The pub facing the main gates of the British Museum. We're going to visit that friend of mine at his very strange shop in Covent Garden. About noon?'
'Great,' Molly said, then she pointed to the bag containing the Rose Quartz Skull. 'What about that?'
'What do you mean?'
'Someone murdered Weatherby over that crystal skull, which means they must want it pretty badly. Is there anywhere safer than this room we can hide it?'

‘Yes,’ Tom said. ‘In the safe in my gentleman’s club.’
‘Then you’d better put it there.’
‘Right.’ Tom picked the bag up, hoisted it only his shoulder, and then, still embarrassed to see Molly on the bed, he turned away and opened the door, preparing to leave. Molly, however, jumped off the bed and rushed up behind him. Taking hold of his shoulders, she turned him around to face her. Before he knew what was happening, she kissed him full on the lips. When he stepped back, she grinned at him.
‘Ah, ha!’ Tom said, hoping to cover his embarrassment and pleasure. ‘It must truly be love!’
Before she could see the tenderness in his face, he turned away and hurried out of the room, closing the door behind him.

Chapter Nineteen

That evening, Tom moved into his elegant gentleman’s club in Mayfair where, as a guest from out of town (his formal address being his Reigate estate), he was allowed to stay a maximum of three nights each month. Though planning to go to bed early and be fresh for tomorrow when he would, he was convinced, be a bundle of nerves, waiting for the police to catch up with him, he was surprised to hear a knocking on his room door. Already in his pyjamas and dressing gown, he was embarrassed to open the door and even more embarrassed when he did so and found a beautiful Eurasian girl standing there. Taken aback, not expecting to find a woman, other than cleaning staff, in the building, he just stared at her in open-mouthed confusion.

‘Mr Powell?’ Her voice was low and sensual, but sounded desperate.
‘Yes,’ Tom said.
‘I know I’m not supposed to be here, but please invite me in. It’s really dreadfully urgent.’
Glancing nervously up and down the corridor, all varnished oak beams and dust-covered chandeliers, to check that no members of staff were in sight, Tom nodded and stepped aside to let the young lady enter his room. When she hurriedly brushed past him, he closed the door behind her, and then turned to face her.
Again, he was struck by how beautiful she was - and only then did he

recognise her as a native of Thailand. Her face was truly lovely, with large, luminous brown eyes, long black eyelashes, a perfect nose, and very full, crimsonpainted lips. She was wearing an expensive black gabardine, belted tightly at the waist, and high-heeled black-leather boots. Her hair, which was as black as her coat, hung to her waist.

'Since it's so late,' she explained before Tom could ask the obvious question, 'I just lingered outside the entrance to the building, where I could see the receptionist, and then, when he temporarily left his desk, I hurried in and managed to get up the stairs without being seen. I know it was an awful thing to do, but I'm absolutely desperate.'

She burst into tears.

'There, there, dear girl,' Tom said, instinctively reaching out to squeeze her shoulder in a reassuring manner. 'Please be seated and let me fetch you a glass of water. Here, take this chair.'

Still sobbing wretchedly, the girl sat on the wooden chair, dabbed her eyes with a handkerchief, and then, seemingly without thinking, untied the belt around her black gabardine and took a deep breath, just as Tom was hurrying back with the glass of water. When he handed her the glass, the gabardine fell open, hanging down to the floor, revealing a breath-taking figure in an elegant, tightfitting black dress. The gorgeous creature was wearing jewellery and clearly had class.

'Drink it up,' Tom said, indicating the glass of water. 'I'm sure it will help. Then tell me what you're doing here. I mean, I could get into trouble if you were found here, so…'

'I know! I know! That's why I feel so bad. But I just had to come. I *had* to!' And she started sobbing again.

'There, there,' Tom repeated, compassionately patting the distressed creature on the shoulder and, uncomfortably aware that he was wearing only his pyjamas and dressing gown, trying to stop himself from staring at her superb, trembling figure. When she had managed to control herself again and was dabbing the tears from her lovely, longlashed eyes, Tom sat on the edge of the bed and gazed sympathetically at her.

Returning his smile with one of her own – a smile so glorious that Tom, despite his new feelings for Molly, felt his heart lurching – she said, 'I'm a friend of Lady BarrattWhite, that dear woman, and I'm in trouble and went to see her this afternoon. When I told her the kind of trouble I was in, she

recommended that I come and see you immediately.'
'Me?' Tom responded, surprised. 'Why me? I've only met the dear lady once, and…'
'Yes, she told me – and told me why you had gone to see her. Which is why she sent me to you. My name, by the way, is Mai – Mai Suphar. I'm so pleased to meet you.'
Tom leaned forward to shake her hand. 'My pleasure, I'm sure.'
Mai smiled. It was a ravishing smile, but quite shy, which only made it all the more heartwarming. She dabbed at her moist eyes with the handkerchief, sniffed pitifully a few times, then confessed, 'I did a terrible thing.'
'Oh? What was that, dear?'
Mai took a deep breath and held it in, thus emphasizing her superb breasts. Then, like a woman in deep despair, she let her breath out again as she spoke, turning every word into a seductive sigh. 'Earlier this evening, under pressure from an extremely dangerous person, I stole a crystal skull from the Museum of Mankind.' And she burst into tears again.
Instantly, Tom jumped off the bed and took the two steps that carried him to her. He reached down with one hand to again squeeze her shoulder reassuringly. Seemingly without thinking, for all the world like a hurt child, she pressed her forehead against his belly and clutched the side of his dressing gown, to pull him protectively against her. Tom was shocked by the sensual warmth that flooded through him, but he was also filled with sympathy for her. Aware of these contradictory emotions, he squeezed her shoulder again and then gently disengaged to sit back on the bed. Mai managed to control her sobbing again, dabbed at her wet cheeks with her handkerchief, and then took another deep breath – Tom could not ignore those heaving breasts – and raised her head to stare solemnly at him, her lovely eyes filled with shame.
'You stole the crystal skull?' Tom asked incredulously.
'Yes,' Mai said. 'I stole it. I was given no choice. That's why I went to see my dear friend, Lady BarrattWhite, and why she then sent me to you. She said that you had an interest in that skull, desperately needed it, and that any information I could give you would be helpful to you. By giving you this information, she told me, I would make amends for my sins. That's why I'm here, Mr Powell.'
Hardly knowing what to say, feeling naked in his pyjamas, Tom ran his

fingers through his ruffled hair and managed, ‘Oh, dear. Well, what can I say? I mean… You *really* stole the crystal skull?’
Mai nodded, staring soulfully at him with her big brown eyes, drawing him to her like a moth to a flame, filling him with conflicting emotions, including compassion and lust.
‘I think you’d better explain,’ he said.
Mai nodded again, dabbed delicately at her wet eyes with the handkerchief, then she took another deep, breastenhancing breath, and looked up again.
‘Mr Powell, please understand that life in Bangkok, where I come from, is very different from life here in England.’
‘Well, I’m *sure* it is,’ Tom said, trying not to stare at her, but drawn helplessly to the soulfulness in her brown gaze, as well as to her perfect breasts and slim waist and broad hips and long legs and swan’s neck and delicate wrists and hands and fingers. The more he tried not to stare, the more he stared, not knowing where else to look.
‘For most poor people, Mr Powell,’ Mai continued, ‘life in Bangkok is very hard.’
‘I’m *sure* it is,’ Tom repeated.
Mai nodded affirmatively. ‘I come from a very poor family in Wat Dusit, near the railway station. As you probably know, Mr Powell, there are so-called red-light districts around the railway stations of most major cities, and it was in such a district that I was born and brought up.’
‘You poor thing,’ Tom said, feeling even more compassion for her.
‘Yes,’ Mai said, clearly grateful for his compassion. ‘And at a very early age, my mother was forced into prostitution. Then my sister, too, was forced into the streets, to the despair of my father, who then killed himself.’
‘How dreadful!’ Tom exclaimed.
‘Yes,’ Mai said, looking as if she was about to cry again, but managing, with some more dabbing at her moist, fluttering eyes, to control herself. ‘I only avoided the same fate,’ she continued, ‘by marrying a wealthy Chinese businessman and moving with him into the Bang Kapi district, where we lived happily for a short while.’
‘A *short* while?’ Tom asked.
The poor girl started sobbing again, though this time she did so silently, merely letting the tears roll down her golden cheeks while nodding and saying, ‘Yes, a short while. In marrying my dear husband, I angered a man

who had wanted me for his mistress: an evil brute named Lu Thong, the very same pimp, drug addict and murderer who controlled the red-light district around the railway station, and who had turned my mother and sister into prostitutes.'

'Oh, you poor thing. How horrible!'

Mai nodded her agreement, gave him an anguished, though still ravishing smile, dabbed at her wet eyes again, and continued: 'Yes, that same Lu Thong, that monster, was terribly angry when I married my dear, devoted husband, and swore that he would get me in his bed, one way or the other. Then…' But unable to control her grief, she burst into tears again and was only able to continue when had Tom jumped off the bed, fetched her another glass of water, given her a compassionate squeeze and returned to his awkward position on the side of his bed. 'Then,' Mai continued tearfully, 'only six weeks ago, my dear husband was killed in a hit-and-run accident. Though the driver of that vehicle was never traced, Lu Thong let it be known to me that he personally had organized the socalled accident. He then said that something similar would happen to me if I did not relent and become his mistress.'

'Dreadful!' Tom exclaimed, now positively overcome with compassion. 'Absolutely horrendous! You poor, haunted child. What on earth did you do?'

Mai raised her head to stare at him with a pride that went straight to his heart. 'I refused him,' Mai said. 'I told him that I would rather die than be his mistress – and I meant it, Mr Powell, I really did. I would have died first.'

'Most admirable,' Tom said. 'But then how come…?'

Mai burst into tears again, was comforted again by Tom, gave him what appeared to be a deeply emotional, grateful hug, and only continued when he had managed to wriggle free and sit back on the bed.

'Knowing that I would willingly die,' Mai continued tearfully, 'rather than become his mistress, Lu Thong did something even more dreadful.'

'No!' Tom exclaimed breathlessly.

'Yes!' Mai looked at him with luminous, shocked eyes. 'He told me that if I didn't become his mistress, he would kill my poor sister in the worst possible way – and I knew that he meant it.'

'The vicious brute!' Tom said.

'Yes,' Mai agreed.

‘And you…?’ Tom couldn’t bear to complete the question.
‘Yes, God help me – and to my eternal shame – I became that monster’s mistress… and that’s why I’m here.’
Thinking that this was the most dreadful story he had ever heard in his life, Tom wanted to step over to the poor child and embrace her and hug her. However, the knowledge that he was wearing only his dressing gown and pyjamas, coupled with his frustrated desire for Molly and helpless sexual attraction towards this astonishingly beautiful, tormented creature, prevented him from doing so. Instead, he listened with a breaking heart to the rest of her tragic tale.
‘It was Lu Thong,’ Mai explained, ‘who first told me about the crystal skull. He’s obsessed with it, Mr Powell, believing it to have magical powers, and determined to have those powers for himself and use them for his own evil purposes.’
‘Typical!’ Tom interjected passionately.
‘Yes, typical. Typical of such a monster! And so he told me that the crystal skull was in the Museum of Mankind and that he was sending me to London to bring it back for him. He did not tell me, however, until I arrived in London, that he had arranged for some of his thugs to sabotage the electrical wiring and burglar-alarm systems of the museum; and that I personally would have to enter the building as a tourist, hide myself away until the building was closed for the evening and the security systems had been aborted, then steal the crystal skull from its pedestal and somehow spirit it away. When I told him, by phone, that I was frightened of doing this, that I could go to prison for it, he put my sister on the phone. She sobbed and told me that he was had a hypodermic syringe filled with AIDs-contaminated serum and would plunge it into her neck if I didn’t do what he wanted. So I did it, Mr Powell. To my eternal shame, I did it. I stole the crystal skull from the Museum of Mankind and then made my escape by an emergency exit at the rear of the building. Now I’m a criminal, Mr Powell, and I feel like killing myself.’
‘Oh, don’t do that, my child!’ Without thinking, Tom jumped off the bed again and advanced the couple of steps that took him to her. When she burst into tears again, clearly moved by his compassion, he had no choice but to place his arms around her and let her rest her forehead on his belly while clinging to him and sobbing. Tom stroked her smooth, sweet-scented hair and

patted her trembling spine. ‘There, there,’ he said. ‘You poor child. But it’s alright, I’m here.’ Then the heat of her body flooded his loins and he stepped back again, though this time not as far as the bed. He just stood about a foot away from her, gazing down upon her. When she started up at him, her eyes widening even more, he almost drowned in their dark, beckoning depths.

‘But what can I do to help?’ Tom asked. ‘Why come to *me*?’

‘Because Lady Barratt-White, that dear woman, my good friend, told me about your interest in the crystal skull, insisted that you had to have it, and asked me to inform you of its whereabouts. She said you would attempt to get it back – ’

‘*Me*?’ Tom interjected.

‘Yes. And now that I’ve kept my part of the bargain with that monster, Lu Thong, thus saving my sister’s life, I’m happy to give you the information you need in order to gain the crystal skull.’

‘Really?’

‘Really. As Lu Thong won’t know that I gave you this information, when you manage to steal the crystal skull back from him, my sister won’t be endangered and I’ll have the pleasure of seeing his evil plans thwarted.’

Though his heart was racing with panic and the blood rushed to his head, Tom managed to croak, ‘I have to get the crystal skull back from Lu Thong?’

‘Yes,’ Mai said. ‘At this very moment, even as we’re talking, the crystal skull, secured in a Thai Embassy diplomatic bag, is being flown to Lu Thong in Bangkok.’ She reached into her black-leather shoulder-bag and pulled out a neatly folded piece of paper, which she handed to Tom. ‘This is Lu Thong’s address. The rest is up to you.’

Now feeling almost faint with fear, as well as dizzy with desire, Tom glanced at the piece of paper but was unable to focus upon it, so folded it again and placed it in the pocket of his dressing gown. When he gazed at the lovely Mai, his desire briefly overcame his fear, making him feel disorientated.

‘I have to tell you,’ he said, trying to get a grip on himself and not be swayed by tender emotions, ‘that tragic though your story is, and much as I would like to get my hands on that crystal skull, I really don’t think I’m equipped, either mentally or physically, to fly all the way to Bangkok and face up to a professional criminal and murderer like that swinish Lu Thong. No, my dear, I’m afraid not. Now, my friend, Molly – ’

‘Yes,’ Mai interjected. ‘Lady Barratt-White told me about her. Clearly she’s a

most admirable young woman.'
'Indeed,' Tom said. 'Admirable – absolutely. And certainly mad enough to do as you suggest. Molly would. I wouldn't. I'm sorry, but that's all there is to it. I simply won't do it.'
Mai lowered her pretty head and crossed one leg over the other. Those legs, in sheer black stockings, flowing down from the hem of the tight, shimmering black dress, were truly a spectacular sight. 'I understand,' Mai whispered.
Tom sat on the edge of the bed again, feeling cowardly, generally confused, and far too emotional. When Mai raised her head to gaze at him, he was mesmerized by her melting brown eyes.
'You really won't do it?' Mai asked softly.
'No,' Tom said. 'I'm sorry.'
'But you think Molly would?'
'Yes.'
'Would you mind if I went to see her?'
'That's your choice,' Tom said.
Realizing that this timid but rather cute Englishman meant what he said and would not fly to Bangkok, which meant that he was redundant, Mai decided to have a little pleasure by seducing him and then putting his lights out. To this end, she sighed mournfully, then pushed her chair back and stood up. Before Tom knew what was happening, she walked up to him where he still sat on the edge of the bed, and gazed sadly, yearningly down at him. His eyes were as large as two saucers when he raised his head to look up at her.
'I understand perfectly,' Mai said, speaking softly, caressingly, 'and would like to thank you anyway for your kindness. You're a good, thoughtful man.'
Leaning down, she placed her hands on his shoulders and kissed him on the cheek. Her lips lingered. She was breathing into his ear. Her body, she knew, was irresistible to most men, and Mr Powell was not immune to it. His breathing quickened. When she stroked his cheek, it was burning. Murmuring, 'You're so kind, *so* kind,' she kissed him full on the lips and pushed him back onto the bed, until he was stretched out beneath her.
Tom tried to protest, making groaning, gargling sounds, but when her body was stretched out on top of his, he was lost to the world.
Indeed, he could not help himself, being confused and overwhelmed, cast adrift on a tide of conflicting emotions compounded of rising guilt, growing

fear, and helpless desire. He hardly knew what was happening, was only dimly aware of it, consumed, as he was, in a heat that scorched all thought out of him.

He was crushed by Mai's body, trapped in her writhing limbs, deprived of will when her electric fingers stroked him, obliterated by feeling. He didn't know how they had managed it, could not even remember moving, yet somehow they had moved up onto the bed, his head near the pillow. Mai was still on top of him, her belly pressed on his belly, her breasts rubbing against his chest as she unbuttoned the top of his pyjamas and then tugged them open. Her tongue licked his bared skin, her teeth sank into his neck, and he heard someone groaning piteously – himself – as she pressed her groin against his throbbing erection and sucked the skin of his throat.

'Oh, God!' Tom groaned.

He had caught a glimpse of Molly somewhere out there in the ether, an accusing face floating in the cosmos of his disjointed, scattering thoughts. Guilt scorched him like a flame, making him open his eyes, and he saw Mai's hand groping across the crumpled bedsheet, as if searching for something. Her leather bag was lying there, not too far from Tom's head. Her fingers found it and managed to flip it open to grope deep inside it. Tom wondered what she was doing. That thought broke through his delirium. He saw something thin and glittering in her hand… and then the room lights blinked out.

The sudden darkness was startling, a shock to his whole system, and then he heard a rush of wind, or what seemed like rushing wind, and an eerie light materialized out of the darkness and surrounded the bed.

'What…?' Mai whispered, freezing on top of Tom and glancing about her. What the hell…?'

The eerie light around them brightened, illuminating the bed, and the rushing wind became a distant humming that seemed almost physical. Tom thought he could *feel* the humming, a kind of pulsating infrasound, and then he saw that the brightening light was pulsating rhythmically as it filled up with…*stars*.

'What the hell…?' Mai repeated in a whisper as she rolled off the bed.

Even as Tom tried to sit upright, in which he was not successful – as some invisible force was now pressing upon him – featureless, slightly transparent, possibly feminine figures materialized magically out of that eerie, pulsating

light, now forming a dazzling, star-filled haze. The figures seemed to be whispering, though no words could be heard, and they gradually encircled the bed, and then moved right up to it. They were figures of silvery light, weaving slightly like windblown reeds. They had normal-shaped heads and an odd kind of face. They had no eyes, no nose, no lips… no facial features at all.

Mai screamed in terror.

That screaming lashed Tom and also filled him with dread as the ghostly whispering turned into a roaring that made the bed shake and rattle. Tom tried again to sit upright, but he seemed to be paralysed, though Mai, who had stopped screaming, dropped something close to his head as she jumped off the bed. Instinctively grabbing her shoulder-bag, she raced to the room door, running right through the spectral, incorporeal figures and disappearing into the darkness beyond the dazzling light.

Tom was stunned and shaken. Mai had run straight *through* those ghostly, faceless figures, as if they did not exist.

Abruptly, the roaring receded and the dazzling light dimmed. Tom heard the door being jerked open, followed by the sound of Mai's footsteps as she ran off down the corridor. Even as the footsteps receded, the light dimmed and shrank rapidly, as if sucked into a vacuum, taking the ghostly figures with it, and then the figures were totally swallowed up in the expanding darkness and the light shrank to the size of a dime. That tiny light floated briefly in the darkness and then it blinked out entirely.

The room lights came back on.

Tom sat upright and this time had no problems in doing so. He was, however, sweating and shaking and the fear would not leave him. Eventually, when he felt that his senses had returned, he looked down to see what Mai had dropped on the bed. It was a hypodermic syringe.

Tom stared at it, terrified.

Chapter Twenty

'So I had the hypodermic syringe checked by a friend in the Pathology Department of the Royal Free Hospital, Hampstead,' Tom informed Molly the next day while they were having lunch in the Museum Tavern, 'and he told me it contained a toxin that would induce a fatal heart arrhythmia

without leaving any traces behind. In other words, that seemingly tragic young Thai lady was about to kill me.'

'Mmmm,' Molly murmured thoughtfully.

'And, of course,' Tom continued, perplexed by Molly's subdued response to his frightening news, 'when that strange light invaded the room, when those bizarre… *apparitions* materialized out of nowhere and moved in around the bed, forcing Miss Suphar to flee, they were obviously protecting me from her, just as that saucershaped light protected us on the road to the Mexico City airport.'

'Mmmm,' Molly murmured thoughtfully.

Frowning at her, wondering what was wrong with her, Tom continued doggedly: 'Then, just as you saw stars in the crystal skull and we both saw stars seemingly inside that great saucer-shaped light, I saw stars in the pulsating light in my room – *and* saw the stars either through, or inside, those incorporeal, faceless beings who surrounded the bed.'

'Mmmm,' Molly murmured.

Glancing in exasperation around the pleasant, oldfashioned pub, Tom was glad to see that it was busy with lunchtime diners and drinkers. Realizing that he was beginning to feel paranoid about being alone, he turned back to Molly's unusually thoughtful gaze.

'Finally,' he said, 'I don't suppose we have to speculate too wildly to reach the conclusion that the Miss Mai Suphar in my room and the Miss Anna Chow in that room of death in the Savoy Hotel are one and the same… Yes or no? Are you listening?'

As if startled out of a trance, Molly blinked repeatedly, glanced distractedly around her, then turned back to Tom and said, 'What *I'd* like to know is what you and the dropdown-dead gorgeous – according to you – Miss Suphar were doing together in your room.'

'I've just told you. She wanted me to fly to Bangkok and…'

'Yeah, yeah, I got all that,' Molly said impatiently. 'But what I want to know is what you were doing together on your *bed* before all that other business began.'

'I beg your pardon?'

'You heard me.'

Tom smacked his own forehead in melodramatic frustration. 'I can't believe my ears! I'm telling you the most amazing things and you're sitting there

being jealous of that woman. This is just too ridiculous!'
'That doesn't answer the question.'
'Molly, *please*!'
'Well? What the hell were you doing on her bed? I mean, didn't you have a *chair* in that room?'
'Yes, of course I had a chair and initially she sat on it, but then she… Well, what I mean is… Nothing to it, really… She seemed distraught - or she acted distraught – and then, just before she left, she came to sit on the bed beside me, and…'
'Yeah?'
'Nothing happened, Molly! She just happened to sit down for a second on the edge of the bed… and…'
'But you said that when those manifestations materialized, you tried to sit upright but couldn't.'
'Well, yes, that's true, but…'
'So you were *lying* on the bed when it all happened.'
'Well, yes, but…'
'So why were you lying on the bed?'
'I don't know.' Tom was practically stuttering now. 'I just happened to fall back on the bed when…'
'She got her hypodermic syringe out of her bag where it was lying on the bed near your pillow.'
'Agreed, but…'
'And then, if I recall correctly and I'm sure I do, she dropped the syringe on the bed beside you, grabbed her bag from where it was lying near the pillow, and then ran right through the apparitions around the bed - which means she had to be *on* the bed, right?'
'Right, but…'
'And to get the syringe out of her bag and then drop it beside you and pick up the bag, she had to be *stretched out* on the bed, right?'
'Well, alright, you're right,' Tom said frantically, 'but you're grossly misinterpreting the situation. The woman - '
'Black widow spider, more like.'
'Pardon?'
'You know? The black widow spider. Has sex with its mate and then kills him.'

‘Devours him, actually,’ Tom automatically corrected her.
‘Very fucking funny, I’m sure.’
‘Molly, please…’
‘So she was stretched out on the bed,’ Molly went on relentlessly. ‘Was she above you or beside you or below you? Just answer me that, Tom.’
Tom was mortified with guilt and shame, knowing full well what had been about to happen between him and Mai Suphar, but convinced that it hadn’t been his fault, though he couldn’t seem to explain that to Molly. ‘Listen, Molly, it wasn’t what you think. She just… we just… Well, what I mean is that…’
‘She seduced you, right?’
‘Yes – *no*! I mean, nothing happened, Molly. She just sort of pushed me back on the bed and even before I had time to resist her, the lights went out, and…’
‘You dumb shit,’ Molly said. She was really very angry. ‘That bitch just has to give you a smile and you jump into her knickers. That’s just fuckin’ pitiful.’
‘Alright, it was pitiful.’
‘As long as we’re in agreement.’
‘But I was thinking of *you*, Molly, believe me, and maybe that explains – ’
‘You thought of me and then you fucked that other woman. Well, that’s – ’
‘*We didn’t fuck, Molly*!’
‘Stop shouting, Tom. Everyone’s lookin’ at us. Let’s just change the subject, okay?’
‘Alright.’ Tom checked his wristwatch. ‘It’s time to leave anyway,’ he said, ‘so let’s get up and go.’
They had finished their lunch and drinks, so they stood up and left the pub, aware that a lot of customers were staring at them, some of them smirking. Once out on the sidewalk, Tom turned left and let Molly fall in beside him. They walked along in silence for a minute or two, then Tom said, ‘I just want you to know that what happened with Mai Suphar last night – and nothing sexual happened, Molly! – was not something that I planned or wanted to happen. Though I repeat, nothing sexual occurred. That’s all I’ve got to say.’
‘Fine, Tom. Go fuck yourself.’
Luckily, they did not have far to walk and soon came to the shop in Covent Garden. It was a very strange shop, its display window filled with books on

the occult, the paranormal, flying saucers and ancient civilizations; adorned with hideous ritual masks, shrunken heads, and other equally bizarre paraphernalia. Tom's friend was a tall, barrel-chested, blond-haired man with a handsome face flushed with too much drink and enlivened with a quick, mischievous grin. He embraced Tom emotionally when he entered the shop, then stepped back to examine him.

'Well,' he said, 'you don't look so bad after your trip to Yucatán. Maybe a little tense from too much travelling, yes? But then you always *were* the nervous type. So who's this you've brought to me?'

'Molly, this is my eccentric Dutchman, Paul van der Veer, who owns and runs this unique little shop. Paul, this is Molly.'

'Hi,' Molly said.

'Welcome,' Paul replied, kissing her on the cheek, then stepping back to add: 'So are you giving my friend Tom what he needs? A regular helping of the good old in-and – '

'We're here to get some information on the crystal skulls,' Tom interjected quickly, knowing that Paul enjoyed shocking the ladies.

'Then you've come to the right place, my friend. What would you like to know? Here… come back here.' He led them around the cash register and into a poky room in the back where, on an old card table, he kept an electric kettle, a carton of milk, a box of sugar cubes, and a well-attended bottle of whiskey. When they were seated around the table, he filled three cups with the whiskey and passed them around. 'So,' he said, 'shoot.'

'Is that your knee pressing my knee?' Molly asked him.

'Sorry,' Van der Veer said. 'I just couldn't resist it. So, Tom, the crystal skulls.'

'Well…' Tom began.

'What do you do?' Molly asked of van der Veer. 'I mean, what makes you an authority on the crystal skulls?'

'Didn't Tom tell you?'

'No.'

'He keeps my light under a bushel. This shop, which I own and manage, is the most famous of its kind in the world, with an unsurpassed collection of esoteric books, old manuscripts, prints, and other items relating to the occult, the paranormal, UFOs, and ancient civilizations. Apart from running the shop, I'm a practising white magician – we do good instead of bad – and an

explorer of some note, having visited most of the major so-called lost cities of the world. Regarding this, I've contemplated my navel in a monastery in the mountains of Tibet, explored the interior of the Sphinx, lived and worshipped with the Dogon, discussing the Sirius mystery with them. I've searched for Atlantis and visited every possible location for it. I'm also the author of *Lost and Found Again*, the classic text on ancient civilizations. Last but not least, I'm a wellknown, respected hypnotist who's placed many a young lady in a trance before screwing her until she was ecstatic. Is that enough for you?'

'That's fine,' Molly said, not impressed. 'Now if you'll get your elbow out of my left tit, we can all proceed further.'

'Molly!' Tom warned her. 'You're insulting my friend just to get back at me!'

'Damned right,' Molly said.

'Do I sense a little *fissure*?' van der Veer asked with a knowing grin. 'Can I be of assistance?'

'Let's concentrate on the crystal skulls,' Tom said. 'That's what we're here for.'

'Fire away, my good friend.' Van der Veer beamed at Molly while Tom, after clearing his throat by coughing into his clenched fist, said, 'We've been presented with the theory that the crystal skulls – the *genuine* crystal skulls – '

'Of which there are only two,' van der Veer interjected.

'Correct,' Tom said. 'Anyway, we've been told that they're the artefacts of an ancient, mysterious race, almost certainly pre-Mayan, which is believed to have made a great, centuries-long migration from west to east – a migration that took in the Yucatán peninsula and ended in Tiahuanaco, Peru, which of course you know well. Any truth to this theory?'

'What's your interest in this, Tom?' When Tom told him, van der Veer looked impressed. 'Sounds to me like you really *do* have the long-lost, priceless Rose Quartz Skull. That's some find, my friends.'

'We have it,' Tom confirmed. 'So what about it – and the other skull? What about that mysterious, pre-Mayan race?'

Van der Veer threw Molly a grin like the beam of a lighthouse, then he turned back to Tom, looking more thoughtful.

'Lady Barratt-White's contention,' he said, 'that the source of the skulls is a

city linked to the stars is certainly not strictly hypothetical. While not much is known about the ancient city of Tiahuanaco, it *is* on record as having been a sanctuary, a holy city like Mecca or Jerusalem, and, I quote, *a city linked with mythic conceptions of the creation of the stars*, unquote. And certainly the records, scant though they may be, indicate that this ancient race of pre-Mayans emerged from somewhere in Asia, the cradle of civilization, and travelled restlessly for centuries, from the west to the east, stopping first in Angkor, then in Cambodia, where they built the so-called Forbidden City. Following an eastern trajectory, the next stop would certainly have been the Polynesian Islands, where the once sacred lagoon city of Ponape was located, then on to Easter Island, where they were responsible for the fabulous monuments, then the Yucatá Peninsula and British Honduras where, of course, the two crystal skulls were found. The next stop, if we're to assume that they continued east, or by now south-east, would have been Peru, where they constructed the holy city of Tiahuanaco.'

'How did they get there?' Molly asked sarcastically. 'Flying by Pan Am?'

Grinning at her, van der Veer patted the back of her delicate hand with his extremely large, indelicate mitt. 'No, my dear, by boat.'

'Are you trying to tell us,' Tom asked, glaring at Molly until she surreptitiously removed her hand from under that of the attentive van der Veer, 'that before recorded history there was a centuries-old *maritime* civilization?'

'Correct,' van der Veer said, shifting restlessly in his chair to make Molly also shift restlessly, fidgeting with her feet. 'As I stated in my seminal work, *Lost and Found Again*,' he continued, nodding at Molly to remind her that he was, amongst other things, a well-known author, 'when I was exploring Tiahuanaco, I uncovered sufficient evidence to prove conclusively that it had once been a port with vast docks – one of them big enough to hold hundreds of ships. While there, I also learned about the local legend of Viracocha, which is the name of the white god of the sea, though he's usually known in Peru asThunupa. Also in Tiahuanaco is a seven-foot statue, carved out of red sandstone, and believed locally to be the statue of the same Thunupa. Finally, it's worth noting that above the Sun Gate itself, also known as the Gateway to the Sun, there's a figure holding a weapon in one hand and a thunderbolt in the other – another statue of Viracocha, or Thunupa. So certainly there's an abundance of evidence in Tiahuanaco that the ancient city was built and

inhabited by a maritime civilization.'
'There's somethin' crawlin' up my leg,' Molly said, 'and I wish it would drop off.'
'Sorry,' van der Veer said, unperturbed, but placing his hand back in full view on the table, studying his fingernails. 'I don't know how it got there.'
'What timescale are we talking about?' Tom asked, being used to his eccentric friend's antics, but still having to force himself to keep his cool.
'I believe the civilization that built Tiahuanaco predated dynastic Egypt by many thousands of years.'
'Really?' Molly asked, sounding sarcastic again, working her chair sideways a little, inching it away from van der Veer and bringing it closer to Tom, who noticed the movement and was gratified.
'Really,' van der Veer said, also noticing Molly's surreptitious movement and smiling with amusement before giving Tom his most solemn, thoughtful gaze – his serious author's gaze. 'The building blocks of Tiahuanaco weigh as much as four hundred and forty tons each – more than twice the weight of the blocks used in the construction of the Sphinx Temple at Giza in Egypt. Also, one of the friezes on the Sun Gate shows the rough form of an elephant, unknown on the South American continent, though a similar creature with tusks and trunk, the *Cuvieronius*, is known to have become extinct there about 10,000 BC. Another animal shown on the Sun Gate is a toxodon, a creature rather like a hippopotamus, which vanished from the Andes at about the same time as the *Cuvieronius*. In this regard, we should not forget that mathematical calculations based on Tiahuanaco's astronomical enclosure, Kalasasaya, the Place of the Standing Stones, produced evidence indicating that the observatory could have been constructed approximately 15,000 BC, when, according to orthodox historians, man was still a primitive hunter, pursuing mammoths with spears. This date was later amended by more authoritative research to 10,500 BC, which, interestingly enough, would place the destruction of Tiahuanaco and the Sun Gate in line with the most widely accepted date for the destruction of Atlantis.'
'So how was it destroyed?' Molly asked, now sitting closer to Tom and no longer fidgeting.
'Almost certainly by some great natural catastrophe,' van der Veer said.
'What makes you think that?'
'Located twelve miles south of Lake Titicaca and more than a hundred feet

above it, the port of Tiahuanaco is surrounded by a great number of huge, chaotically scattered blocks of stone, indicating that it was destroyed in some massive disturbance – an earthquake, most likely. Also, the available evidence indicates that the Sun Gate was split in two before it was actually completed, and the scattering of blocks around it indicates that this was *definitely* caused by an earthquake. It is the opinion of Professor Arthur Posnansky, our foremost authority on Tiahuanaco, that this earthquake took place in the eleventh millennium BC, that it temporarily drowned the city of Tiahuanaco, and that it was followed by a series of seismic disturbances that lowered the level of the lake and made the climate colder. In short, if the ancient Aztec legend stating that Viracocha, the white god of the sea, landed on the east coast of Central America, his influence certainly travelled to the other side of the continent and he clearly came from a vast, possibly worldwide maritime civilization that may have been destroyed when the agricultural revolution of Egypt was destroyed in a series of natural disasters, when Tiahuanaco was also destroyed, and when, according to the most widely accepted date, Atlantis sank into the sea. The approximate date for all of those disasters is 11,000 to 10,000 BC.'

Having completed his lecture, the amiable van der Veer leaned back in his chair, sipped a little whiskey, then smiled at Molly, his gaze clear and steady and inviting. Molly, who still trusted few men, stared stonily at him.

'That's all very interesting,' she said, 'but you still haven't explained why Tiahuanaco is supposed to be that ancient city linked to the stars.'

'Kalasasaya,' van der Veer responded unhesitatingly. 'The Place of the Standing Stones. That enclosure was an observatory with two observation points marking the summer and winter solstices.'

'The *what*?'

'The points at which the sun is directly overhead at the Tropic of Cancer and Capricorn.'

'So?'

'No matter what date we choose for the construction of that observatory – 15,000 BC, 10,500 BC, or even, as some would suggest, wrongly I believe, 4,000 BC – it was an extraordinary achievement for its day and almost certainly the only one of its kind. So given the existence of that observatory – our evidence that the ancient, mysterious race was, for religious reasons, observing the cosmos – we can take it as read that Tiahuanaco was indeed –

and I quote again – *that majestic and long-hidden city that is linked to the stars*. Unquote. Case proven.'
'Think you're smart, don't ya?'
'Molly!' Tom warned her.
But van der Veer was merely amused. 'The question, my dear, is: *Do you*?'
'I don't fancy men who fancy themselves.'
'My loss,' van der Veer said.
'But,' Tom said, determined to keep this conversation on an even course and prevent his eccentric friend from giving vent to his baser instincts, 'what makes so many believe that the crystal skulls originated there?'
'They did *not* originate there,' van der Veer said, 'though they may have been used there. Certainly they were used in esoteric rites, though that ancient observatory would not have been used as one would naturally imagine – to scientifically study the cosmos – but to act as a link between ancient man and the stars or, in his view, the gods. So Lady Barratt-White's contention that the two crystal skulls must be returned to their source – to that long-hidden city linked to the stars – *could* suggest Tiahuanaco: the final stop on that long migration, after Yucatán and British Honduras, now Belize, where the two skulls were actually found. However, Tiahuanaco was not the source of the skulls, but was, in fact, only the final resting place of that great, mysterious civilization.'
Ever more perplexed, Tom asked, 'So if Tiahuanaco wasn't the actual source of the skulls, where *did* they originate? And who, in fact, were those pre-Mayans? Were they Mayan at all?'
Van der Veer shrugged, now so lost in his thoughts that he had even stopped fooling around with Molly. 'The Mayas are a mystery. We don't know where they came from and, in a very real sense, we don't know where they went. All we really know is that they were an extraordinary race, that they built city-states in the jungles of Central America, and that in approximately AD 600, for reasons yet to be explained, they abruptly abandoned their cities, moved to new locations in the jungle, and went into a slow decline, gradually drifting into virtual primitivism. However, given the content of Olmec and Mayan legends, we have strong grounds for believing that they evolved from that mysterious race that came to South America, probably under the leadership of Viracocha, or Thunupa, the so-called white god of the sea, and that they could have originated in Asia, possibly in Cambodia, where they

built their first great city-state: the Forbidden City of Angkor.'
'So the skulls could have originated in Angkor,' Tom concluded.
'They could have… though this ain't necessarily so. Bear in mind that the journey from Angkor to Tiahuanaco took centuries, with many lengthy stops along the way. So the skulls could have originated in any of those places: Ponape, Easter Island, or even where they were actually found: Yucatán and British Honduras.'
'Which gets us back to where we started,' Molly said sardonically.
'My apologies,' van der Veer replied, offering a sly grin. The door in the shop out front squeaked open and then closed again. 'Ah!' van der Veer exclaimed, cocking an ear and looking pleased. 'I hear the sound of a customer! I must leave you now, dear friends, and attend to my business.'
They all pushed their chairs back and stood up. Van der Veer, after giving Tom another hug, kissed the back of Molly's hand.
'You're really *very* attractive,' he said. 'Should you ever tire of helping Tom with his exercises, please give me a call.'
'You'll be lucky,' Molly said.
Van der Veer bellowed with laughter, then led Tom and Molly back into the shop where a lone customer, longhaired and wearing a brightly-beaded kaktan, with thongs on his bare feet, was perusing a shelf of occult books. Just as Tom and Molly were about to leave, Van der Veer called out to the former, saying, 'I've got something rattling in the back of my head, but I can't quite dredge it up. Come and see me again.'
'I will,' Tom promised. Then he and Molly walked back out into the busy street where, unexpectedly, the sun shone warmly upon them, and Molly, as mysterious as all women and ancient races, shook her head slowly from side to side and smiled to herself.

Chapter Twenty-One

'Let's go for another drink,' Tom said as they walked away from van der Veer's shop, warmed by the sunshine and, in Tom's case, pleased to be surrounded by the denselypacked pedestrians, many of whom were tourists, either avidly snapping pictures with mostly digital cameras or studying breeze-blown maps of London. Tom preferred to be in a crowd these days. He felt safer when not alone.

‘You’ve already had two pints of that awful English bitter,’ Molly said. ‘You should be drunk already.’
‘Well, I’m not and I’m thirsty.’
‘You’re always thirsty when it comes to liquor, Tom. That stuff poisons your system.’
‘You drink your Coca-Cola and I’ll drink my beer. So why are you grinning?’
‘Nothing.’
‘You’re not the kind to grin over nothing, so I repeat: Why are you grinning?’
‘I was thinking of your friend van der Veer – what a card he is.’
‘Liked him, did you?’
‘Not at first, but then he kinda grew on me. He’s not as bad as he acts.’
‘He’s a dreadful womanizer,’ Tom said, feeling obscurely threatened, ‘and can’t understand why I’m not the same.’
‘Yeah, I gathered he’d like to corrupt you.’
‘He’s always trying,’ Tom said.
‘And of course he hasn’t a hope in hell of succeeding.’
‘What does that mean?’ Tom was affronted. ‘Are you suggesting that I’m some kind of puritan?’
‘Well, you certainly weren’t last night,’ Molly reminded him.
‘Don’t bring that up again,’ Tom said. ‘Particularly not after the way you behaved with that insatiable womanizer back there.’
‘Hey, hold on! I put the guy off!’
‘He certainly didn’t seem to think so. And now you have the cheek to tell me you like him. Why not go back and ask him for a date? I’m sure he’ll oblige.’
Molly grinned again. ‘What’s this I hear? Jealousy?’
‘I’m merely putting matters straight. If I’m not allowed to complain about you and van der Veer, you’ve no right to complain about me and that woman, Mai Suphar. She could have killed me, for goodness sake, and all *you* can think about is what we *might* have done on that bed. Now, after being groped by van der Veer, you have the cheek to tell me that you *like* him. Well, thanks very much!’
‘You’re jealous. That’s why you’re angry – and that’s why I’m grinning. You’re in love with me, Tom.’
‘Please don’t embarrass me, Molly.’
Grinning and shaking her head ruefully, Molly stopped when they came to

traffic lights and then turned to face him. ‘Okay,’ she said, ‘let’s change the subject.’
‘Yes,’ Tom said, ‘let’s do that.’
‘I don’t care what your friend says,’ Molly told him. ‘When I looked too deeply into that crystal skull, I saw stars inside it. Later, when we were rescued by that saucershaped light on the road to the airport in Mexico City, we *both* saw stars inside it. Finally, when you and that black widow spider – ’
‘Molly!’ Tom interjected as a warning.
‘When you and that Thai woman were surrounded in your room last night by that weird light, you saw stars either inside or through those ghostly creatures.’
‘Correct,’ Tom said. ‘So?’
‘*Stars*, Tom! The common denominator is *stars*! So I’m convinced more than ever that Lady Barratt-White was right and that the crystal skulls belong to that city linked to the stars. In short… *Tiahuanaco!*’
‘So?’
‘So I say that we should try to get our hands on that other crystal skull and then make a tidy packet by taking both skulls to Tiahuanaco, as requested by Lady BarrattWhite.’
Though the sun was shining, its light falling over the grey grandeur of the Victorian and Georgian buildings along the road, over the milling pedestrians, and over the jammed traffic that was belching acrid fumes, a chill, unseasonal wind was rising and Tom yearned more than ever for a cosy pub – for the warmth, if not the drink. Molly, however, was deeply engrossed in her thoughts and seemed extremely excited.
‘And how, pray,’ Tom asked, ‘do we get our hands on the crystal skull stolen by Mai Suphar, aka Anna Chow?’
‘Well, you *did* confirm that she was from Thailand and she said that she’d come from Bangkok at the behest – note the fancy word, Tom – of that criminal, Lu Thong. Now, given that she intended killing you anyway, to prevent you from repeating what she’d told you, my bet is that she told the truth about certain things and that Lu Thong is a real guy and that she *will* take the crystal skull back to him in Bangkok, where both of them live.’
‘So we fly to Bangkok and look up this Mr Lu Thong…?’
‘That’s right,’ Molly said.
Tom couldn’t believe his ears, but he tried to be patient with her. ‘So how do

we *find* Mr Lu Thong once we get to Bangkok?'
'He's probably in the phone book.'
'You think so?'
'Yeah. Why not? Most criminals in America have phones and most of them are listed. And if *they* are, Lu Thong probably is as well.'
'And if he happens to be a criminal who likes his privacy?'
'If he's as criminal as that bitch Mai Suphar says he is, then, even if he's not in the phone book, he's going to be known to practically everyone living around the Bangkok railway station. He won't be hard to track down.'
'So says the street-wise Brooklyn girl.'
'You don't have to be sarcastic, Tom. I *do* know more than you about certain things.'
'Criminal things.'
'Yeah, right.'
'But if he's as criminal as Mai Suphar says, my dear Molly, he's unlikely to hand the crystal skull back – not without a fight.'
'So we fight him. We outwit the bastid and get the crystal skull back, one way or the other.'
'You really think we can do that, Molly?'
'Yeah, I think so.'
'I think you're mad, Molly, truly demented, and I don't want to hear another word. Come on, let's go for that drink.'
They started walking again, but only managed to cover a few yards before Molly tugged him to a standstill and looked grimly at him. 'So what do you suggest, buddy?'
Tom took a deep breath and let it out nervously. 'What I suggest, Molly, is that we accept that we're out of our depth, that we could be in serious danger, and that we get rid of our crystal skull by giving it to the Museum of Mankind in return for the one that was stolen. Then we forget this whole nightmarish business and return to our normal lives.'
'You're scared.'
'Yes,' Tom confessed, 'I am. But for both of us, Molly. It's insane to think of flying to Bangkok to confront a notorious professional criminal who'd have no compunction about killing us. I'm not going. Forget it.'
'I'm not giving back my crystal skull,' Molly insisted, 'and if necessary, I'll go to Bangkok alone.'

‘Then you’ll go without your crystal skull,’ Tom said, ‘because I’ve got it in the safe in my club and I’m going to give it to the Museum of Mankind.’
Molly was furious. ‘You can’t do that! I gave it to you in good faith. You’ve got to give it back, Tom.’
‘No, Molly, I won’t. I refuse to help you with this. I know that in this instance I’m betraying your trust, but believe me, I’m doing it for your own good and I won’t change my mind.’
‘You bastid!’
‘Sticks and stones, Molly.’
‘Okay,’ Molly said, changing her tack. ‘Then just let me remind you that the minute you enter that museum, even with the crystal skull, they’ll have you arrested for the theft of *their* skull and probably thrown in jail. I hope to hell you rot there!’
With that, she turned away and walked off.
Tom watched her go, feeling indecisive, realizing that this situation was even more complicated and dangerous than he had previously imagined. He still felt like a drink, but didn’t want to drink alone, and then, recalling van der Veer’s parting words, he turned back to see him again. When he entered the shop, the hippie-styled customer had left and only van der Veer was present, sitting behind his cash register and reading a book. When he saw Tom, he grinned.
‘Back already!’ he said. ‘Where’s the lovely Molly?’
‘She said she couldn’t stand any more of your groping and wanted to go straight back to her hotel.’
‘She’s waiting for my phone call,’ van der Veer said, but he grinned again and spread his hands in the air, as if pleading for mercy. ‘I tried it on and was rejected,’ he said. ‘You should be proud of her, Tom.’
‘I am,’ Tom said decisively. ‘You said something was rattling about in your head. Do you recall what it was?’
Van der Veer nodded. ‘Yes, I think so.’ He came around the counter and showed Tom the book he had been reading. It was Carl Jung’s *Flying Saucers: A Modern Myth of Things Seen in the Sky*.
‘Know of him?’ van der Veer asked.
‘Of course I do. The famous Swiss psychologist and psychiatrist, a disciple of Freud, who happened to have an interest in UFOs.’
‘Right. And in this book he speculates that UFOs may either be psychic

projections resulting from our need to believe in a higher power, or, failing that, manifestations from the racial memory of the whole of mankind.'
'Is that what was rattling about in your head when you weren't too busy making advances on Molly?'
'Not quite,' van der Veer said, acknowledging Tom's sarcastic comment with a grin, but otherwise ignoring it. 'But it *is* part of it. Let's close the shop and go to the British Museum. I've got something to show you.'
Van der Veer put on his jacket, an old tweed with leather elbows, then locked the shop and led Tom along the crowded sidewalk, talking as they walked.
'I have to confess,' he said, 'that I was pretty intrigued by those stories you told me about what Molly saw in the crystal skull, what both of you experienced on the road to the airport in Mexico City, and what happened to you in that room in your club.'
'The common denominator, as Molly pointed out, being *stars*.'
'Well, that's true enough,' van der Veer responded. 'You two certainly see an awful lot of stars. You have stars in your eyes.'
'Does that mean we're in love?' Tom asked anxiously.
'I think so,' van der Veer said. 'However, what really fascinated me about the stories was the saucer-shaped light that you saw on the road to the Mexico City airport and the ghostly figures, also seemingly composed of light or some other incorporeal substance, in your room in the club. You said that the ghostly figures, though faceless, looked feminine.'
'That's right,' Tom said. 'I don't know why I thought that, because, as you reminded me, they had no features and their bodies were nothing more than thin blades of light. I had the impression that they had arms and maybe legs, but I can't even be sure of that. I only know that they struck me as being feminine. Something to do with them being so slim and the way they moved like reeds in a wind
– it was graceful and sensual. Does that sound mad to you?'
'It intrigues me,' van der Veer said, 'and it jolted my memory. So I've something to show you. After you left, I phoned a friend in the museum and he should have taken the item off the shelves by now. I think *you'll* be intrigued.'
They arrived at the museum in a matter of minutes and van der Veer led Tom straight to the manuscript department where he introduced him to his friend, William Claxton, the present head of the department. Claxton was short and

portly, with a round, pink, kindly face, two tufts of snowywhite hair above each big ear, and a bald head that shone like a polished eggshell in the bright strip-lighting. He was seated behind his desk with a finely bound antique book in front of him. When he had been introduced to Tom and shaken his hand, he pushed the book over to him and van der Veer, both seated at the other side of the desk.

'I've already been through it,' he said, 'and marked the pages you want with slips of paper. Now I'm off for a quick cup of tea. I'll be back in five minutes. Is that enough time for you?'

'That's enough,' van der Veer said. 'And thanks a hell of a lot.'

'My pleasure,' Mr Caxton said, then he left the office.

Tom glanced at the cover of the book. It was entitled *The Dresden Codex*.

'This is a reproduction,' van der Veer explained, 'of one of the only four surviving Mayan books. It is thus extremely rare and invaluable.' Sitting close to Tom, he opened the book where a paper slip had been inserted by Mr Caxton. Tom found himself staring down at the drawings and name glyphs of two women from ancient times. 'The young Moon Goddess and the old Moon Goddess,' van der Veer informed him. 'The hieroglyphics on these pages suggest a Mayan belief that at some stage in their earliest history, in a place, quote, *where the sun always sets* – the west, possibly Angkor – a light – and I quote again – *brighter than the sun* – brought to Earth the Old and Young Moon Goddesses – the only gods in the whole Mayan pantheon ever to take human form.'

Looking at the drawings of the ancient goddesses, Tom recalled the ghostly figures in his room in the club and felt that he was seeing their faces. A shiver ran down his spine.

'Are you suggesting,' he said, hardly knowing where to begin, 'that those ghostly figures I mentioned are…?'

'Wait!' Van der Veer raised his index finger for silence. Then he quickly flipped over more pages and scanned one intently. 'These hieroglyphics,' he said, pointing to the relevant place on the page, 'also indicate that the two goddesses, after inspiring the Mayans, or pre-Mayans, to their earliest great achievements, possibly including – I quote again – *that great migration to where the sun rises* – pined to return to their spiritual state, but eventually died an Earthly death. The high priests then made replicas of their skulls in crystal, in the belief that the crystal, containing magical properties, would

retain their souls.'
Van der Veer closed the book and turned to look directly at Tom. 'Therefore,' he said, 'the two crystal skulls are almost certainly the magical replicas of the two Mayan goddesses, designed to house their souls, and made either in Angkor, before the great migration commenced, or at some point during the centuries-long journey from Angkor to Tiahuanaco.'
Tom closed his eyes and tried imagining the two faces he had just seen as drawings in the *Dresden Codex* superimposed on the faceless creatures that he'd been haunted by in his room. When he did that, he then visualized arms and legs on those sensuously swaying, glowing, feminine forms. Shocked, he opened his eyes again.
'What are you saying?' he asked.
'What I'm saying is that flying saucers may indeed spring from a racial memory of mankind, and that as you and Molly were protected by a star-filled light shaped like a flying saucer, it could well have been a manifestation from the ancient past. What I'm saying is that the crystal skulls could have magical powers, because they do indeed house the souls of those two Mayan goddesses and they're protecting you because you are, in a sense, protecting *them*. Finally, what I'm saying is that the ghostly figures, filled with stars, that you saw in your room, struck you as being distinctly feminine, so they could have been the souls of the moon goddesses, incorporeal but made visible as star-filled light. Those crystal skulls, Tom, have magical properties and may form a bridge between Earth and the Otherworld, where the souls of the goddesses still reside. I don't exactly know what this means – I can't speculate – but there's certainly a great mystery to be solved here, and now you're part of it. You and Molly, of course.'
Reminded of Molly, Tom felt love and fear at once, but realized that he must now complete the journey that they had, accidentally, begun together. Given what he had just learned in this office – and what he had experienced in his room the previous evening – he had little choice.
'I'd better find that other crystal skull,' he said.
'It might be worth it,' van der Veer said. 'All you can lose is your life.'
Grinning, he pushed the *Dresden Codex* back across to Mr Claxton's side of the desk just as the latter came back into the office. 'Finished?' he asked.
'Yes,' van der Veer replied, pushing his chair back and standing up. Tom did the same. 'Thanks a million for that.'

‘That’s an odd thing to be studying,’ Mr Claxton said.
‘I’m an odd man,’ van der Veer replied, then he shook hands with Mr Claxton, as did Tom, and they both left the office and then made their way back out of the museum.
‘Fascinating,’ Tom said when they were about to take their leave from one another just outside the main gates. ‘I suppose I’d better go and see Molly, tell her all about this, and let her know that I’ve changed my mind about Bangkok.’
‘You do that,’ van der Veer said, ‘and also give her my warmest regards and phone number.’
‘No way,’ Tom said.
‘So what’s she like in bed?’ van der Veer asked. ‘That’s *my* business,’ Tom said.
‘You pitiful, inhibited English!’ van der Veer said with a grin, then he gave Tom an affectionate hug, bade him farewell, and hurried across the road to disappear into the Museum Tavern.
Longing for a drink himself, but now feeling compelled to see Molly as soon as possible, Tom caught a taxi to her hotel. Entering the building, he went straight to her room, intending to knock on the door and, when she opened it, kiss her full on the lips and finally confess that he loved her.
Her room door was open.
Surprised, then instinctively feeling nervous, Tom timidly called out her name, but received no response. Even more nervous, he opened the door farther and entered the room.
The first thing he saw was that the bed was unmade and looked unusually rumpled – as if a struggle had taken place upon it or around it.
The second thing he saw was a glittering hypodermic syringe, lying on the crumpled sheets near the pillows.
Shocked, Tom picked up the syringe to examine it and saw instantly that the serum had been ejected, indicating that the syringe had been used.
And Molly had vanished.

Chapter Twenty-Two

Heartbroken and shattered, convinced that Molly had been killed by Mai Suphar using the same toxin that she had tried to inject into him, Tom hurried

out of the hotel and made his way back to his club. Unable to bear the thought of being in his room alone, realizing that he was near to tears, and finding it impossible to shake from his head the thought that Molly had been murdered because Mai Suphar must have imagined that she still had the crystal skull, he asked the porter to conduct him to the communal safe in the basement, where he checked that the crystal skull was still there. It was. Relieved to know this, but trembling with grief and disbelief (the porter noticed his distress and asked if he was alright), he still avoided his room and instead went into the bar for a drink, hoping that it would settle him down and enable him to think more clearly.

The drink didn't help much.

He had another. He couldn't think clearly at all. He kept recalling his frightening experience with Mai Suphar and imagined Molly suffering the same, but without being rescued as he had been. All too vividly, he imagined Mai Suphar hiding in Molly's room (clearly as criminal as Lu Thong, she had probably picked the lock) and pouncing upon her as soon as she walked in. Drinking too quickly, aware that his heart was racing and seemed about to burst, he suffered shocking visions of Mai Suphar wrestling Molly to the bed and then plunging the needle of the hypodermic syringe into her neck.

Tom shuddered at the thought, felt revulsion and deep pain, but could not shake from his mind the ghastly vision of Molly quivering in the spasms of death as her heart raced too quickly. He even imagined Molly lying there, dead, before being spirited away by Mai Suphar, probably with the help of some equally vicious friends, all on Lu Thong's payroll.

Mai Suphar was a murderer and obviously professional, almost certainly working for Lu Thong and knowing just what to do. She would have used some of Lu Thong's men, all professionals as well, and Tom shuddered to think of how they might have disposed of Molly's body.

A body bag, probably. Tom saw it all too clearly. He saw Mai Suphar killing Molly, the men entering the room, their expert handling of Molly's body as they slipped it into the body bag, and then their removal of that body in some ghastly, cold-blooded way.

Tom had read about such things. Such things beggared belief. He had read about psychopaths killing their victims and then cutting them up into pieces and carrying the pieces out in suitcases and burying them somewhere. Of course that meant a lot of blood. Tom groaned and sobbed at the very

thought. Then he realized that there had been no blood in Molly's room and that the carpets had not been changed.

Perhaps Molly was still alive.

No, that wasn't possible. The toxin used had been poisonous. Molly had been killed by Mai Suphar and then her body disposed of. The question was: How?

Tom broke down in tears again and saw the barman staring at him. The barman was a long way away, but he could still see Tom crying. Embarrassed, Tom tried to control himself. He wiped his eyes and took deep breaths. Closing his eyes, wanting peace, he visualized the whole scene again: Mai Suphar killing Molly, the dead body on the bed, Lu Thong's hoodlums coming into the room, pushing a wheeled laundry trolley. They slipped the dead body into a body bag, then shoved it into the trolley, then wheeled the trolley out of the room and took it down to the basement garage. Once there, they put it into their car and drove away from the hotel. They buried the body somewhere outside London and then callously went off for a drink.

'Oh, Christ!' Tom sobbed.

The bar was filling up and people were starting to look at him, so he took himself up to his bedroom, despite his fear of being there. Feeling ill, he threw up into the toilet and then had a shower. Thus refreshed, though still feeling half demented, he lay down on the bed. He didn't think he could sleep – he was too tormented – but he fell asleep instantly.

In his dreams, he saw Molly being murdered, wrapped up in a body bag, then lowered with ropes to a car waiting below at the back of the hotel. Mai Suphar and her henchmen clambered into that car and then drove away.

Tom groaned and awakened.

Was he asleep or awake? He couldn't be too sure. He recognized his room, understood that he was in bed, and then saw that familiar light materializing to surround him with stars. Then the eerie figures materialized too, slim and swaying like reeds, featureless, composed of light and stars, but definitely feminine. They closed in on the bed, looking upon him, though eyeless, and he instantly filled up with fear and rapture. Then they faded away. There was a roaring far off in the cosmos, where the stars reigned supreme, and then it turned into a sibilance that soon became a loud, nerve-shattering ringing.

Tom awoke to the ringing of the telephone on the cabinet beside his bed.

'Oh, my God!' he said. 'Christ!'

His heart was racing when he picked up the phone and gasped his own name. He heard a soft, sensual voice.
‘This is Mai Suphar, Mr Powell. I think you’ll remember me.’
Shocked almost mindless, Tom just sat there, holding the phone, aware that his hand was shaking, wondering if he was still in his dream or if this was for real.
‘Are you still there?’ Mai Suphar asked.
‘Yes,’ Tom said, ‘I’m still here.’ He reached across to the lamp on the cabinet and turned the light on. ‘What do you want?’ he asked.
‘The question is: What do *you* want?’
‘I want Molly,’ Tom said.
Mai Suphar chuckled. ‘What a sweet man!’ she said, almost crooning. ‘But what makes you think Molly’s still alive?’
‘Just tell me,’ Tom said.
There was silence for a moment and he imagined that bitch smiling, taking her time to torment him some more, getting her kicks from his suffering. Eventually, after what seemed like an eternity, she said, ‘Yes, she’s still alive.’
‘You injected her,’ Tom said.
‘That’s correct,’ Mai Suphar replied.
‘I had that toxin checked out and it’s lethal, so Molly must be dead.’
‘Molly’s still alive, Tom. I used a different toxin. The one I used on Molly was something else altogether and is widely used in the slave trade for the transportation of unfortunate kidnapped children who must, while being abducted and travelling under false passports, be seen to be perfectly normal and travelling willingly with adoring parents.’
‘What does that mean?’ Tom asked.
‘It’s a mesmerizing drug, affecting certain parts of the brain. Molly’s still alive, her eyes are open and she can function normally, but she’s in a deep trance and will only respond to my commands. When she does so, when she does what I tell her, she seems perfectly normal – certainly normal enough to fly to Bangkok, which is where I am taking her.’
‘*What*?’
‘I think you heard me correctly.’
‘Yes,’ Tom said, ‘I did.’
Mai chuckled again, then went silent, though Tom knew she was smiling. He

could almost feel her sadistic pleasure coming down the line as she drew the silence out to torment him. He wouldn't give her that satisfaction.
'Where are you?' he asked.
'At Heathrow Airport. Molly's standing here beside me. She's in a trance, but she looks and acts normally. We've already been through Passport Control and are now in the departure lounge, preparing to board. The plane takes off in thirty minutes – and that's why I'm calling you.'
'You want the crystal skull,' Tom said, anticipating her.
'What a bright boy you are. I want you to bring it to Lu Thong's place in Bangkok. If you don't, we'll send your precious Molly back to you in a foul-smelling body bag.'
Tom winced at the very thought of that, but refused to rise to the bait. 'And what happens if I do? What guarantee do I have that you'll let me and Molly leave there alive once you have the crystal skull?'
'You don't,' Mai Suphar said, still managing to sound sensual and seductive. 'But what's love if it isn't a gamble? Will you gamble for her, Tom?'
'Yes,' Tom said, without hesitation.
'That's so touching,' Mai Suphar said. Then her soft, seductive voice turned to ice. 'You'll find Lu Thong's phone number and address in your mailbox downstairs. You have seven days to get to Bangkok. That's seven days, Mr Powell – not a second more. We look forward to seeing you. If we don't see you within the prescribed time, your beloved Molly will disappear for good. Is that understood?'
'Yes,' Tom said, 'I understand.'
Mai Suphar chuckled again and then the line went dead, leaving Tom to fester in a silence that seemed to stretch out forever.
He was more frightened now than he had ever been in his life, yet despite this, his heart was filled with joy because Molly was still alive.
That thought gave him courage.

Part Three Chapter Twenty-Three

Arriving in Bangkok, which should have terrified him, given what he had to do, Tom was calmer than he had ever been in his life. So calm, in fact, that he was able to relax in the back of the taxi taking him from the airport to the city centre and observe in fascination the exotic world passing by outside:

first the jungle around the city, then the broad agricultural fields and industrial areas, then sprawling squatters, camps of wood-and-thatch shacks. The latter merged gradually into welfare housing estates and hundreds of Chinese shop-houses five or six storeys high, so crowded together that no motor traffic could pass between them, their linked alleyways like great cobwebs and filled with citizens wearing the diverse costumes of various Asian countries. However, only when the taxi was approaching the city-centre, where the traffic was dense and chaotic, hemming in the three-wheeled *samlor* taxis, did Tom see the Bangkok he had imagined: Colonial-andThai-style office buildings, golden-spired temples and *wats* with bell towers, the many palm-shaded canals known as *khlongs*, sidewalk vendors with steaming bowls on their wheeled carts, and, on the crowded sidewalks, saffronrobed monks, ravishing Thai girls in local and Western clothes, a strikingly diverse mixture of Asiatics, including Thais, Chinese, Indians, Burmese, Laotians, Vietnamese and, of course, many Europeans and Americans. Even given the high-rise buildings of steel, concrete and glass, Bangkok was an exotic city, and Tom, perhaps *unnaturally* calm, was pleased to be here.

After checking into his hotel, a five-star monstrosity with every imaginable luxury and an almost total absence of human warmth, he decided to forget the latter and exploit the former by relaxing in his king-sized bath, stretching out on his king-sized be, and enjoying a meal fit for a prince, even though delivered by Room Service. He then dressed in an open-necked shirt and light tropical suit, both purchased earlier in New Bond Street, London, and poured himself an excellent whiskey from his overpriced mini-bar. Finally, feeling like a new man, he removed from his billfold the phone number and address of Lu Thong, which Mai Suphar had helpfully left for him in his mail box in his club in Mayfair. No longer frightened, he dialled Lu Thong.

‘Hello, Mr Powell,’ a familiar, seductive voice said, ‘this is Mai speaking. Having seen you arriving at your hotel, we were expecting your call. Do you wish to speak to Lu Thong?’

‘Yes, please,’ Tom said.

Mai chuckled, clearly amused by his politeness, and then there was silence. Tom waited patiently. He had nowhere else to go. He also knew that these people liked playing games and were probably testing him.

Well, as Molly would say, he found himself thinking, fuck you. Fuck the whole damned lot of you. This time I won't bend.

After an interminable silence (though he thought he heard Mai chuckling again) there was the sound of hollow breathing over the line. Then the walking dead spoke.

'Mr Powell?'

'Yes,' Tom said.

The voice he had just heard sent shivers down his spine because it sounded as ethereal as the whispering of the ghostly figures who had invaded his room in Mayfair. But this wasn't a ghostly voice: it was the voice of a living person – a male person, clearly not very old, and yet jaded beyond belief. It was the voice of despair, expressing dreams that could never be realized, and it came from the dark side of that moon where haunted souls languished. Tom could not put a face to that voice, but it reached deep inside him, resurrecting every lost hope of his childhood and somehow challenging him to make them come alive again. It was, in fact, the voice of a man who could never accept that there were things he could not have: the voice of a man who could not accept that God was actually greater than he was; the voice of a child, perhaps, who had refused to grow up. Tom listened and shivered.

'I am so pleased to be speaking to you,' Lu Thong said, speaking perfect, though rather formal, English in a dry, mocking manner. 'I've been dying to meet you. Of course, I'm dying anyway – we're all doomed, are we not, from the day we are born – but I'm keen to meet a man who loves a woman so much that he will even give his life for her.'

'Is Molly alright?' Tom asked.

'Ah, the man proves my point! I practically tell him that he has come here to die and he still expresses concern for his true love. Tom, I love *you* already.'

'Just cut the crap,' Tom said.

It was a phrase he had learnt from Molly. She had taught him an awful lot. She had been teaching him all those things that he badly needed to know and he hadn't had the sense to see it. Now he loved her even more.

'Come, come, Tom,' Lu Thing said. 'Such terminology doesn't suit you. It suits Molly – this much I have learnt already – but it trips unnaturally from your tongue. I fear that little Molly has corrupted you in the most dreadful way.'

‘Is she alright?’ Tom repeated.
‘Of course,’ Lu Thong said. ‘What good would she be to me if she were not? While Molly’s alive, you are mine.’
‘I’m not yours,’ Tom said.
‘Give it time,’ Lu Thong replied.
‘I’ve come here to make a straight trade, Mr Thong. The crystal skull for Molly.’
‘You brought it, then?’
‘Yes.’
‘You are wise as well as courageous. In my pitiful world, my cesspit, my hell on Earth, I meet few like you. Alas, I have been jaded by past experience and cannot trust even a gentleman such as your own good self. How did you get the skull into Bangkok? You must tell me this, Tom. If you don’t, I won’t believe that you have it and poor Molly will suffer.’
Tom thought he was hallucinating, hearing a voice from beyond the grave, but something in that eerie voice was calling to him, inviting him to find something in himself that otherwise he might never find. That voice was a siren call.
‘You know an awful lot about me,’ Tom said. ‘I’m surprised you know so much. You had me followed in Yucatán, you had me followed in Mexico, you have the phone number and address of my club in London – so you know all about me.’
‘How true,’ Lu Thong said.
‘So knowing all about me, you must know that I have friends in high places – my academic background, my good breeding – and therefore must also know that I could use those connections to bring the skull into Bangkok.’
‘Diplomatic courier, Tom. Was that it?’
‘Yes,’ Tom said. ‘It’s now in the safe of the British Consulate, where even you can’t get at it.’
Lu Thong chuckled and made an odd humming sound that tapered off into a lengthy silence. At least, Tom thought at first that it was silence, but it wasn’t… he could hear Lu Thong breathing.
‘Sublime,’ Lu Thong said eventually. ‘What an artful creature you are, Tom.’
He was silent again, expecting Tom to say something, but Tom, knowing that he was being toyed with, decided to hold his peace.
‘But what’s the point?’ Lu Thong asked. ‘You wish to trade the skull for

Molly. If you come here, you must bring the skull or poor Molly will suffer. Why the British Consulate?'
'You'll receive the skull,' Tom said, 'when I've personally met you and ascertained with my own eyes that Molly is safe.'
There was another lengthy silence filled with Lu Thong's heavy breathing, then that voice, which had the ring of rattling bones, said, 'I'll send my car for you.'
The line went dead at Lu Thong's end.
Tom sat on at his desk, holding the telephone in his hand, listening to the hollow buzzing of the dead line as if, in its eerily unsilent silence, he could still hear Lu Thong. He felt hypnotized, slightly divorced from himself, but eventually he managed to get his senses back, and then he put the phone down.
Pouring himself another drink, he went to his window and looked out over the great curve of the Chao Phraya River, with its wide variety of boats and, beyond it, the railway station, located close to Wat Dusit, where Lu Thong had supposedly been born and raised. A likely story, Tom thought. Before coming to Bangkok, he had done his homework – studied the maps and old newspaper cuttings – and now, given Lu Thong's address by Mai, he knew that far from running the sleazy district around the railway station, Lu Thong lived like a lord in the rich man's quarter of Bang Kapi. As for Mai, far from being Lu Thong's pitiful victim, she was almost certainly his willing accomplice and every bit as ruthless as her friend. Tom knew that they intended killing him, but even that didn't worry him any more.
Lu Thong was prompt. Fifteen minutes after the phone call, Tom received a call from Reception, informing him that a lady was waiting for him downstairs in the lobby. Fully aware of who that lady was, Tom made his way down to the lobby where he saw Mai Suphar in all her glory, as dazzlingly beautiful as she had been in London and possibly even more so with her shiny black hair hanging to her perfect rump and her ravishing body encased tightly in a Malaysian-style *cheongsam* of silvery-white Thai silk. Taking a deep breath and then letting it out slowly, Tom walked up to her and stared steadily, fearlessly, at her.
'So,' he said.
Mai offered her most dazzling smile. 'How nice to see you again, Tom. It's been far too long.'

‘Let’s go,’ Tom said.
Realizing that Tom was not as timid as he had been previously, but merely amused by this knowledge, Mai smiled at him again and then led him out of the hotel, her broad hips moving like a metronome under her slim waist and above those long, exquisite legs balanced neatly on high heels. A Chinese chauffeur wearing a black suit, black tie, white shirt and black peaked cap was standing by a metallic-grey Mercedes Benz, and when Mai and Tom approached, he bowed slightly, then opened the rear door to let them get in.
Sitting beside the murderous Thai beauty as the Mercedes moved off, Tom was uncomfortably aware of her presence and of the fact that she had deliberately sat as close as possible to him, her shoulder pressing against his shoulder, her hip touching his hip, meanwhile crossing one golden leg over the other to let her *cheongsam*, slit up both sides, expose a teasing length of smooth thigh. Still dangerously seductive, she was clearly toying with him, but he wasn’t about to fall for it this time and steeled himself to resist her.
‘I’m glad you came, Tom,’ she said, almost crooning, her voice like honey and yoghurt. ‘Mr Thong is looking forward to meeting you. I’ve told him so much about you.’
‘I’m looking forward to meeting him,’ Tom responded. ‘You’ve told me so much about him.’
Mai noted the sarcasm and smiled. ‘Why, Tom, I think you’re actually being wicked – and I *do* like wicked men.’
‘Is Molly really alright?’
‘Why shouldn’t she be? Any bad that befalls her will happen later, when she’s no longer of use to us.’
‘You said that drug had put her into a trance state. What state is she in now?’
‘She’s perfectly normal, Tom. The effects of the drug have worn off. I only needed her pacified for the flight, which was made without incident. Now, though our prisoner, she’s enjoying a life of luxury while pining to be rescued by her hero. Will you rescue her, Tom?’
‘I’ll certainly try,’ Tom said.
Mai uncrossed her legs, crossed them the other way, then turned her head to stare directly at Tom, breathing into his face. Her slight smile showed off her flawless white teeth and the pink of her wicked tongue. ‘Why bother with a little frump like Molly when you can have a woman like me?’
‘You’re a black widow spider,’ Tom said. ‘I’d end up being breakfast.’

Mai chuckled and that and tickled Tom's chin with her index finger, which had, he noted, an unusually long, crimson-painted nail that could have slashed his face open. He pulled his chin back, out of range.
'So what happens to Molly if I don't manage to get her out of there?'
'You won't get her out. When you hand over the crystal skull – and I'm sure you will, in the end – your dear Molly will either die or end up as one of Lu Thong's playthings, to be used personally by him before being handed over to one of his thugs and then sent into a brothel. She will just disappear, Tom.'
'You're an exceptionally nice crowd of people.'
'Survival is all. Life is hard in exotic Bangkok, so we must do as we have to do. Would you like a kiss, Tom?'
'No, thanks,' Tom said.
Clearly admiring Tom's new-found courage and insolence, Mai continued to flirt with him until the Mercedes turned into the driveway that snaked between expansive lawns and tropical foliage to the entrance of Lu Thong's large, secluded residence in Bang Kapi. As Tom emerged from the car, relieved to escape the close proximity of Mai Suphar, he noted that the electrified gates had closed behind him and that the house was protected by high-tech surveillance systems and well-armed security guards who could be seen even now patrolling the grounds. This did not augur well for him.
'You like it?' Mai asked, coming up to stand beside him at the wide steps leading up to the front door.
'Very nice,' Tom said, taking note of the many palm trees, rainbow orchids, and other exotic flora and fauna that enhanced the broad smooth green lawns. 'More modest than I'd imagined it to be.'
'Lu Thong is a modest man.'
There was a big ape by the front door, Chinese, wearing a black suit, but he stepped aside when Mai and Tom approached, letting the former press the door bell. When a tinny voice came out of the intercom, authorizing Mai's entry, the big ape opened the door with his personal key and then stepped aside to let them walk in. When the guard closed the door behind him, Tom heard the key turning in the lock and then being removed. He was now trapped inside.
'Nice, isn't it?' Mai said.
'Very nice,' Tom replied.
Mai led him across an expansive lobby with marble tiles, exotic carpets and

wall hangings, as well as a proliferation of what clearly were rare, doubtless stolen, Thai and Vietnamese antiques. Following Mai through a doorway off the lobby, Tom found himself in an equally expansive, luxurious, Oriental lounge with bamboo furniture, more exotic carpets and wall hangings, and a panoramic window overlooking the high-rise buildings of the city.

In front of that window, a man wearing a dressing gown of Thai silk was seated on velvet cushions on the floor, his black-haired head bowed over a glass-topped bamboo table on which tiny piles of what looked like baking soda were laid out in a straight line along the edge.

The crystal skull stolen from the Museum of Mankind was resting on the glass-topped table close to the man's head.

The man sniffed some of the powder up through one nostril, then raised his head to gaze at the ceiling and take a deep breath, before sighing with either relief or pleasure. The sigh turned into a loud gasp, then he lowered his head again to stare steadily at Tom, studying him at length.

'Well, well,' he said, after a long silence, his voice as soft as a breeze on dry sand, suggesting vast desolation. 'Who have we here?'

'This is Tom Powell,' Mai said. 'He's just *dying* to meet you.'

Lu Thong smiled, but that smile was ice and fire, striking Tom as the grimace of a man who was yearning for death. Tom was shocked by what he saw, though he didn't quite know why, since Lu Thong was very much like the voice that he had heard on the telephone… disembodied… not quite real. He was handsome, certainly, in a rather wan way, but his features, though unusually delicate, seemed oddly tormented, the face appearing to be stripped to the bone, all angles and flat planes. His brown eyes were beautiful, almost soulful, but also sleepy from drugs and imbued with that inner luminescence often seen in the dying. Undernourished, he seemed as insubstantial as a wisp of smoke. When he smiled again, the smile did not reach his eyes, which were focused elsewhere, almost certainly inward.

'And I've been dying to meet *you*,' he said to Tom, indicating with an airy wave of his hand that Tom should come to the table. 'Please, Mr Powell, be seated. We have so much to talk about.'

Tom sat on the velvet cushions that had been placed on the floor around the table. He sat directly facing Lu Thong, and Mai then sat beside him, tugging the *cheongsam* up over her knees as she curled her legs beneath her. Lu Thong studied Mai's lovely legs at length, and then smiled at Tom.

‘May I just begin,’ he said, ‘by saying how much I admire your courage in coming all this way to rescue dear Molly.’
‘Where is she?’ Tom asked.
‘She is here,’ Lu Thong informed him, ‘and perfectly safe. You will get to see her in due course.’
‘That’s why I’m here,’ Tom said.
‘And your crystal skull?’
‘You’ll get that when Molly’s back in my hotel. We’ll have to come to some kind of an arrangement.’
‘What makes you think that when you give me the crystal skull I won’t terminate you, not to mention dear Molly?’
‘I’ll worry about that when the time comes. Now let’s discuss how to do this.’
Lu Thong smiled again. He seemed genuinely amused. ‘Alas, Tom, we have to talk first. That’s really why I blackmailed you into coming here.’
‘What do we have to talk about?’
‘We’ve tried before to kill you, Tom.’ He nodded to indicate Mai Suphar. ‘We tried to kill you in Mexico City, we tried again in London, but in both instances some very strange things happened and your life was miraculously saved. We are talking about the paranormal, Tom, and that’s one of my many interests. You’re being protected by the magical powers of the crystal skulls and I’d like to know why. To understand it, or at least to attempt to do so, I have to talk with you.’
Tom shrugged. ‘Talk away.’
Lu Thong sighed. ‘You are being impertinent, Tom. but I admire that. It will not, I assure you, lengthen your life, but I still have to admire it.’
He bowed over the table, sniffed up another line of cocaine, put his head back to breathe it in, then let his breath out with a long sigh, ending with another gasp of relief or pleasure. Lowering his head again, he stared at Tom with his sleepy, yet oddly intent, gaze, looking out from somewhere deep within himself, where his demons resided.
‘Did you know, Tom,’ he asked, ‘that I have a particular interest in antiquity?’
‘No,’ Tom said, ‘I didn’t.’
‘In fact,’ Lu Thong continued in his quietly mesmerizing manner, ‘I possess one of the world’s greatest collections of illegally-gained antiques – one that

you, given your particular interests, would kill to have in your home.'
'I doubt that,' Tom said.
'There's nothing you would kill for?'
'No.'
'Not even Molly?'
'Perhaps for Molly,' Tom said.
Lu Thong smiled at Mai Suphar. 'Did you hear that, my dark beauty? Tom would kill for his little Molly. Such love is unknown to me and you. We may be the less for it.'
'We can live without it,' Mai said. 'I can assure you of that.'
Nodding, still smiling, Lu Thong turned back to Tom, and said, 'Anyway, dear Tom, to return to the subject at hand…One of my most prized possessions is an item so rare that even the specialists in this particular field have long argued as to whether or not it actually exists.' He waited for Tom to respond, but when Tom, wanting to slight him, resisted doing so, he continued, unperturbed: 'It is the famous lost book of early Mayan history: the legendary *Mérida Codex*, a book of pre-Pleistocene MesoAmerican history, which proves that the Mayans came from a mysterious, more ancient race. At the dawn of time, that particular race migrated over the centuries from their first holy city at Angkor, in what is now Cambodia, to Polynesia, Easter Island, the Yucatán peninsula, including what is now British Honduras, and, finally, to the area that's now divided into Bolivia and Peru. There, by the shores of Lake Titicaca, they built Tiahuanaco, also known as the great city of the stars.'
'I know all that,' Tom said.
Ignoring Tom's deliberate rudeness, refusing to be baited, Lu Thong stood up, moving with possibly deliberate weariness, and went to the bookshelves lining one of the walls. It was clear to Tom, from one glimpse of those bookshelves, that they contained a magnificent collection of rare books and parchments, most of them almost certainly stolen. After removing one of the books, a superbly bound antique volume, from the top shelf, Lu Thong returned to his place at the far side of the table, sitting again on the velvet cushions and opening the volume to gaze down at certain pages. He studied the pages as if in a trance of quiet delight, then raised his head and returned his sleepily intense gaze to Tom, who noticed, for the first time, that Lu Thong appeared never to blink. Tom found this disconcerting.

‘This,’ Lu Thong said, tapping the opened book with a delicate finger, ‘is the legendary *Mérida Codex*, so named because it was discovered in archaeological diggings in Mérida, which is, as you know, near Chichén Itzá. Now what the book tells us, Tom, is that at the dawn of Mayan history, when the Mayans were another race altogether, located mostly around the holy city of Angkor, disembodied alien beings materialized on or *in* Earth – *in* Earth in the sense that they may have accidentally tumbled out of another sphere of existence, or parallel universe, rather than from a distant galaxy.’

Lu Thong paused to let his words sink in, and Tom did, indeed, take them in, though deliberately he offered no response. Gazing steadily at him, as if taking his measure and finding him worthy of serious consideration, Lu Thong offered his diabolical smile and continued his monologue.

‘Those disembodied beings,’ he said, speaking softly, calmly, as if this were the most normal conversation in the world, ‘while being sexless as we know it, were of a female, or, rather, feminine nature and could inhabit the material bodies of human beings. However, two of them were trapped accidentally inside some Earthlings: priestesses of that ancient, mysterious race. Unable to escape from their physical prisons, the aliens turned their human hosts into the living embodiment of their formerly incorporeal selves. Which meant, in effect, that those two human beings, both female, looked perfectly normal, but had inherited the magical powers possessed by the aliens.’

‘This is ridiculous,’ Tom said.

‘It’s the truth,’ Lu Thong insisted. ‘Just think of what occurred on that road to the airport in Mexico City. We also know what took place when you and Mai, a naughty twosome, were in the bedroom of your club in Mayfair, London. A saucer-shaped, star-filled light – that was on the road to the airport – followed, later, by alien presences in the room in your private members’ club. Those were not hallucinations, Tom – you were protected – so please don’t treat this as foolishness.’

‘Alright,’ Tom said, vividly recalling both instances and shaken again by the recollections. ‘I am all ears. Continue.’

‘Oh, I will, Tom. I will…’

Lu Thong bowed his head to sniff up another line of cocaine, to put his head back and breathe deeply and sigh and gasp loudly with pleasure or relief. This task completed, he returned his sleepy, eerily penetrating gaze to Tom. His brown eyes were unblinking.

‘The two aliens in human form, being possessed of magical powers, were treated by the primitive pre-Mayans as goddesses, and eventually, since they had come from the sky in – you know the quote, Tom – *a light brighter than the sun* – were named the Old Goddess of the Moon and the Young Goddess of the Moon, both of whom are illustrated and annotated in the four rare Mayan Codexes.’

After staring steadily, thoughtfully at Tom, he studied his stolen Méridan Codex in a contemplative, dreamy manner, but eventually, with a sigh, looked up again.

‘Though pining to return to their spiritual, or, as we would have it, *alien* state of being,’ he continued, speaking and looking like death warmed up, ‘the two goddesses died a normal, Earthly death. Shocked by this loss, the high priests of that ancient, pre-Mayan civilization made replicas of the skulls of the two goddesses. Believing that crystal possesses magical properties, they carved the skulls from quartz crystal, thereby hoping to retain, or imprison, the souls of the aliens and, at the same time, turn the skulls into magical objects of worship. In this, they succeeded.’

Lu Thong glanced at Mai Suphar, still sitting beside Tom, her long, golden legs curled beneath her, displaying a good deal of teasing thigh. Lu Thong’s sleepy gaze travelled the length of those legs, all the way up to the crotch, then he sighed, as if saddened by his base, Earthly desires, and turned his gaze back on Tom.

‘However,’ Lu Thong continued, as if sermonizing in a temple, ‘the others in that essentially feminine, selfpropagating alien species – whose consciousness, incidentally, forms a single entity – could not rest while the souls of their two lost sisters were missing. Thus, they tried repeatedly over the centuries – time is meaningless to the disembodied – to break through to the space called Earth – though solid to us, a mere space to them – and draw their lost sisters back to their own sphere of incorporeal existence. Those failed attempts to cross over into the material world have been witnessed throughout the centuries by many disbelieving human beings… in the shape of ghosts, UFOs, and aliens – just like the ones seen by you and Molly, and, indeed, by Mai Suphar.’ He nodded at Mai to let her know that he had not forgotten her. ‘There the story ends, Tom.’

‘Or begins,’ Tom replied.

Lu Thong offered another deathly smile. ‘How perceptive you are, Tom.

Talking to you is certainly not a waste of time. So where does this lead us?'
'You tell *me*,' Tom said.
'Please humour me, Tom.'
'The crytal skulls,' Tom said, 'must be returned to their source, that majestic and hidden city linked to the stars – namely, Tiahuanaco, in Peru – in order that their magical powers can be united. When that happens, the two alien beings trapped in space and time will be released back to their own incorporeal world, where space and time have no meaning.'
'Very good,' Lu Thong responded. 'You're close, Tom, but not quite right. Why do you think I still live here in Bangkok, which I loathe to the depths of my weary bones?'
'I don't know,' Tom said. 'Why?'
Lu Thong bowed his head to sniff up another line of cocaine, before, with eyes ever more intense yet faraway, he could reveal to Tom the secrets of his blighted soul. 'Because, dear Tom, I've always wanted to experience *everything* – money beyond counting, prestige beyond imagining, sex beyond all moral restraints, and finally, limitless power on Earth. And now that I have all that, which I do - believe me, Tom, I have it all – there is only one thing left for me to do… To unravel the ultimate mystery of what lies beyond this mortal, seemingly meaningless, world.'
'Through the crystal skulls,' Tom said.
'Correct,' Lu Thong said. 'This is the knowledge that the crystal skulls will reveal if they're returned to their source.'
'Which isn't in Bangkok,' Tom said tartly.
'Nor in Peru, my insolent young friend. Tiahuanaco was the *end* of the pre-Mayans migration from west to east; but the *beginning* of that migration – the origin of the crystal skulls – was the forbidden city of Angkor, in what is now Cambodia, bordering Thailand.'
He straightened his spine, raised his hands above his head, clasped his fingers together and cracked his knuckles. Tom imagined those fingers crushing human bones, and was reminded of just how dangerous this extremely handsome, seemingly wasted man was.
As if reading Tom's mind, Lu Thong lowered his arms and leaned forward with a tight, challenging smile.
'Look at me, Tom.'
Tom stared steadily at him, trying to stare him down, but he felt that he was

being drawn into those brown eyes, which had the fires of hell in them. Tom had to forcibly shake himself out of this reverie and lower his gaze.
‘Could I mesmerize you with my eyes?’ Lu Thong asked him.
‘I think you could,’ Tom confessed.
‘Yes, Tom, indeed I could. Eyes can certainly mesmerize. Yet while Molly was mesmerized by the eye *sockets* of the crystal skulls, she was not mesmerized by its *eyes*, which, of course, are missing.’ He pointed to the macabre crystal skull on the table to make this point clear, then he turned back to Tom. ‘They’re missing, but they’re still there in spirit. So how can this be?’
‘Just tell me,’ Tom said.
‘Ah, Tom, you are impatient! This I like very much. You need to solve this mystery as much as I do – and this will make you my victim. But that, of course, is for later.’
‘Yes,’ Tom said impatiently, ‘of course. Now what about the missing eyes?’
‘It is said that the skulls’ eyes, which are also made of magically endowed quartz crystal, are located beneath a stone slab on the summit of Ta Keo, the first of the two great royal cities in the holy city of Angkor. Fearful that the power of the skulls would be exploited for evil, the high priests removed the eyes from them, which vastly reduced their powers, and buried them under a stone slab on top of Angkor’s first great temple mount. Only then did they begin their mass migration eastward, taking the eyeless skulls with them, leaving behind not only their magnificent holy city, but also the seeds of that city’s future Khmer civilization. Centuries later, near the end of their epic journey, for reasons now lost in the mists of prehistory, they buried the two eyeless skulls in separate places in the Yucatán Peninsula – one, as we now know, in Chichén Itzá, the other in British Honduras, now Belize – and then ventured forth to their final destination and ultimate destiny: to create the holy city of Tuahuanaco, Peru, and there, where the sun rises to mark the dawn, raise their great Sun Gate as a bridge between west and east, between the past and the future.’
‘And the crystal skulls?’
‘When the hidden crystal eyes are placed back in the empty sockets of the crystal skulls, another bridge between past and future, between the Here and the There, will be created, uniting the Earth to that other world of incorporeal, star-filled alien life.’ Lu Thong leaned forward again, to hold Tom’s attention

with his opaque, mesmerizing gaze. ‘Do you understand, Tom? That’s why I still live in this cesspit. Because Bangkok is the gateway to Cambodia – and there, in the jungle, in the once-holy city of Angkor, will be found… the true meaning of existence.’
‘You sound almost religious,’ Tom said sarcastically, though he felt the return of a fear that went beyond the fear of death.
‘My religion is limitless power,’ Lu Thong replied, ‘and the crystal skulls could make me omnipotent.’ ‘Oh?’ Tom remained sceptical. ‘How?’
Lu Thong was all too pleased to explain, and did so, though still speaking softly, with uncommon fervour. ‘The lost souls of the two aliens can only be released and returned to their own sphere of existence when the crystal eyes are placed back in the empty eye sockets of the skulls and then laid to rest at their source – in Ta Keo, the first royal temple of Angkor. I cannot be sure, but I think it very likely that whoever does that will gain the powers possessed by the aliens – the ultimate power on Earth.’
Lu Thong leaned back again, releasing Tom, smiling thinly at him. ‘So, my friend, you will die here in Bangkok, while I go to Angkor with the two crystal skulls… to either find unimaginable horror or become…’
His voice trailed off into a resonant, tingling silence… and at last his drugged eyes actually blinked. Leaning forward, he sniffed up some more cocaine, then he sat straight again. He shrugged and smiled knowingly, shaking his head in a weary manner, as if to say that the answer, though put in the form of a question, could not be refuted.
‘*God*?’ he softly suggested.

Chapter Twenty-Four

‘Oh, dear,’ Lu Thong said as if ashamed of himself. ‘I am being a very bad host. Tom, you must eat!’
‘Just let me see Molly,’ Tom said.
‘Well, of course, Tom. Of course! Molly must eat as well. In the excitement of our conversation, I simply forgot. Please attend to our lunch, Mai, and ensure that dear Molly is invited to join us.’
Clearly not a person to work herself to death, Mai performed her duties by switching on an intercom and calling the kitchen. When she had completed this task, she made another call, speaking in Siamese to the person at the

other end of the line. When she had finished, she switched the intercom off and gave Tom a mocking smile.
‘I told the guard to inform Molly of your arrival,’ she said, ‘and let her know that you wanted to see her. She should be here any minute now.’
‘Thank you,’ Tom said.
‘Tom, Tom,’ Lu Thong said, clearly enlivened by his lines of cocaine, ‘I can tell by your lack of conversation that you deeply resent us. You must not, my friend. Death comes to us all and yours will be quick, which is more than one can say for those unfortunates who die a natural, lingering death. Think of it this way. I am saving you from cancer or paralysis or multiple sclerosis or bloody incontinence related to painful bowel disorders – all the dreadful ailments that come to those who foolishly run their natural course. I should get an award, Tom.’
‘I have none to give.’
‘Very good, Tom. Your quick wit warms my soul. Yet I sense that behind your little jokes, you still deeply resent me. This is truly unfair. I’m not a cruel man, after all. You will not die just yet – you and Molly will be reunited – and before I release you from this vale of sweat and tears, I will feed you and let you fuck Molly and perhaps have a decent night’s sleep. Life begins and ends there, Tom – in the belly and in the bed – and there are many right here in Bangkok who would sell their souls to the devil to have either. Why resent me for merely relieving you of the burden of trying to live on this blighted Earth?’
‘You don’t have the crystal skull yet,’ Tom reminded him.
‘All in due course.’
Before Tom could ask Lu Thong what he meant by that, a door to his right opened and a Vietnamese waiter – white jacket, black bow tie, black trousers and black slippers – entered the room, wheeling a trolley the size of a coffin. Approaching the table, he bowed to Lu Thong, then to Mai Suphar, and finally to Tom, then proceeded to transfer from the many shelves and swinging drawers of the trolley a great number of *Bencharong*, mother-of-pearl, and lacquered bowls piled high with a variety of foods, some of which were steaming lightly and gave off a rich, mouthwatering aroma. When these bowls had been spread out on the glass-topped table, under the eyeless gaze of the macabre crystal skull, they made for a colourful mosaic composed of vegetables, peppers, noodles, rice, fruit, seafood, chicken and meats. Four

eating bowls with spoons and forks – not chopsticks, Tom noted – and, of course, finger bowls and napkins, were placed around the table, with one place set, presumably for Molly, beside Lu Thong. When the table had been prepared, the Vietnamese waiter bowed again to everyone, then wheeled the trolley back out of the room. No sooner had he disappeared than Molly entered.

Tom's heart skipped a beat.

Molly looked different from normal, though certainly attractive, in a high-necked, sleeveless, Chinese-styled blouse of finely-woven sky-blue Thai silk and matching pants, comfortably loose but not quite loose enough to hide her womanly figure, which, though not as voluptuous as Mai Suphar's, was certainly womanly enough for Tom. She had thongs on her bare feet, which were, Tom noticed keenly, as white as snow and surprisingly delicate. Her blonde hair was hanging loose, tumbling over her bare shoulders, and, although she was wearing no make-up, she looked, even with her prominent nose, as sexy as sin.

Tom's heart skipped another beat.

'You came,' Molly said to him with a smile. 'I always knew you'd come. I knew you wouldn't desert me.'

'No, I wouldn't,' Tom said.

Lu Thong turned to Mai Suphar. 'Did you hear that, my dark angel? Have you ever before witnessed such devotion? You and I could learn a lot from these two – and we might be better souls for it.'

'I'm sure,' Mai replied.

'Come, Molly,' Lu Thong said, waving a tissue-paper hand, beckoning her to his side. 'Please come to the table and be seated. Tom is dying to talk with you.'

Molly glanced at the bowl placed beside Lu Thong, then she turned to Tom.

'I don't wanna sit beside him,' he said. 'He gives me the creeps.'

'Come, come, Molly,' Lu Thong said. 'Please don't hurt my feelings. If you do, I might have to hurt *you* and the pain would be unimaginable. So be a good girl and sit beside me. The food's getting cold.'

Molly glanced doubtfully at Tom, but when he nodded in a reassuring manner, she sat beside Lu Thong.

'Did you see that?' Lu Thong asked of Mai Suphar. 'He just nods and she does his bidding. It isn't fear, Mai, it's love and trust, virtues that you and I

should adopt to enrich our poor souls.'
'Absolutely,' Mai said.
'Are you alright?' Tom asked of Molly.
'Yeah, Tom, I guess I'm okay. I can't remember coming here – that bitch drugged me, so I'm told – but apart from making me take a bath and eat and sleep like a regular gal, they haven't really bothered me much. They just wanted you here, Tom – that's all they wanted. I mean nothin' to them.'
'Untrue,' Lu Thong said. 'Unkind, my sweet Molly. It's been a pleasure to have you in my humble home, brightening up my stale life.'
'Hey, bitch,' Mai Suphar said.
'What?' Molly responded.
'You ever call me a bitch again and I'll cut your tongue out.'
'And she'd do it,' Lu Thong said.
'Go – ' Molly started to say.
'Molly!' Tom interjected fearfully. 'That's enough! Don't you dare say another word!'
Molly glared at him, then at Mai, but eventually she picked up her spoon and fork. 'Okay,' she said, 'let's eat.'
'That's the spirit,' Lu Thong said. Picking up his own spoon and fork, though holding them together between thumb and forefinger, he proceeded to point out the dishes one by one. 'This,' he said, 'is *Kuay Tiew*, or rice noodles, these are *Ba Mii*, which are noodles made from wheat flour, and this is, of course, simple boiled rice. Either dish goes well with the *Gaeng Khiao Waan Gai*, here, a chicken curry with chicken meat, coconut cream, eggplants, and a variety of fragrant herbs; or the *Tom Kha Gai*, here, another chicken dish, but with boned chicken, coconut cream and lemon grass. This one, which tastes divine when poured over the rice – not the noodles – is the *Plaa Krapong Thawd Krathiem Prik Thai*, a local salt-water fish, fried until crisp, then laced with garlic and black pepper. And this,' he continued, 'which looks like broccoli, which it is not, is *Phak Khanna Pha Nam Man Hoi Sai Hed Hawn*, a deliciously crunchy vegetable fried with oyster sauce and black Chinese mushrooms. The seasonings,' he droned on, 'are these small bowls of *phrik kii nuu*, known locally as *mouse-dropping chillies*, to be approached with caution unless you have a throat and stomach of cast iron. What more can I tell you?'
'You can tell me what's for afters,' Molly said, ''cause I can't eat this shit.'

‘Come, come, Molly,’ Lu Thong said, ‘be a little more adventurous. This is *Bangkok*, my dear, not Brooklyn. We do not serve hamburgers.’
‘What’s for afters?’ Molly asked again, looking sullen.
Lu Thong sighed. ‘We have papaya and watermelon and pineapple and banana and pomelo and sapodilla and lichee and mango - but, alas, no ice cream.’
‘I’ll kick off with the afters,’ Molly said, picking up a piece of peeled, cut pineapple and looking at it suspiciously. ‘At least I won’t get the runs.’
‘You darling girl,’ Lu Thong said.
They ate the magnificent repast in a silence only broken by the tinkling of forks and spoons against bowls. As the meal went on – and it certainly took a long time – Tom studied Lu Thong and realized that although he was only in his mid-thirties and had skin as smooth as butter, he looked truly ancient in some indescribable way, as if decadence and a surfeit of self-satisfaction had prematurely aged him. Nevertheless, Lu Thong’s eyes, though sleepy with drugs, possessed a glittering intensity contradicting the deceptive sleepiness, and they sometimes wandered up and down Mai Suphar, crawling like spiders over her golden limbs, but dispassionately, with academic curiosity. Seeing this, Tom realized that he was looking at the only man he could possibly imagine could be immune to Mai’s deadly charms. Lu Thong also studied Molly, again with no more than academic curiosity, as though she were some kind of insect under his microscope. Tom knew then, without a doubt, that Lu Thong was beyond the pale, that he’d done too much too soon, that he’d had too much too early, and had prematurely reached that point in life where he had little to live for. Only danger, the ultimate gamble, the throwing of dice with God to perhaps find the devil, would recharge his batteries. He was as frightened of the crystal skulls as was Tom, but the fear gave him life. Lu Thong would willingly go to hell if it offered him that – and he was, Tom sincerely believed, on the dark road that led there.
Eventually, when they had finished their main courses and caught up with Molly, still on her afters, making short shrift of the fruit, Lu Thong fastidiously dabbed his thin lips with his napkin and said, ‘So, Tom, to the business at hand. Make me tremble with fear.’
‘The deal is – ’ Tom began.
‘I do not deal, Tom. I dictate.’
‘The deal is,’ Tom repeated, ‘that I’ll walk out of here, unharmed, with

Molly. Once we're back safely in my hotel
– and your men can follow us there – I'll call you with the details concerning where the crystal skull can be picked up.'
'That's all there is to it?'
'Yes.'
'And how am I to know, Tom, that once you're back in that hotel you won't break your word and fly off with the crystal skull?'
'Because I know that if I try to do that, you'll send your men around to drag me and Molly back here.'
'Which indeed I would, Tom.' Lu Thong leaned forward to pick a mouth-scalding *phrik kii nuu* chilli out of the bowl, pop it into his mouth, and chew it as if it were as harmless as a green bean. When he had swallowed it, he dabbed fastidiously at his lips with his napkin, then sat back and smiled. 'Very good, Tom. I admire your little display of chutzpah. Unfortunately for you, no matter what we agree, I cannot let you or Molly continue to live. You know about the crystal skulls, about Angkor, about me, and for these reasons you must both disappear.'
'Then I can't let you have our crystal skull.'
'You can't *stop* me from having it.' Placing his napkin back on the table, right beside the crystal skull, which gazed at Tom out of hollow eye-sockets, Lu Thong raised his hands above his head, cracked his knuckles, thus making Molly wince, then lowered his hands to the table and offered Tom his most diabolical, deadly smile. 'Ah, Tom,' he said, as if speaking to a child to whom he had to give bad news, 'I can't decide if you're heroically courageous or simply naïve. Have you ever wondered, my dear friend, why, in this pestilent city, which is a veritable hotchpotch of nations and religions, the Thais and Chinese and Indians and Burmese and Laotians and Vietnamese and white expatriates manage to live and work together without strife? Do you know why that is, Tom?'
'No,' Tom said, 'I don't.'
'It's because we're all so deliciously corrupt, Tom, and I, being more corrupt than most, have exploited it beautifully. Bangkok is a heap of excrement and I squat on top of it, my tentacles reaching out to root about in even the smallest, darkest hole. I have people everywhere, Tom, and they all live in fear of me, and one of them works in the British Consulate as my mole and general fixer. He let's me know what's happening. He gets me false passports

and visas. He slips items into diplomatic pouches and has them transported worldwide for me. He has the key to the safe, Tom.'

Even before Lu Thong spoke again, Tom knew what was coming, and it sent a sliver of fear shivering through him, convinced, as he was at that moment, that he and Molly were doomed.

'Yes,' Lu Thong continued, 'unfortunately for you, you have told me little that I didn't already know. Indeed, you've simply confirmed what I suspected all along. There are only two ways you could have brought your crystal skull into Bangkok: either as an artefact hidden in a consignment of other, legal artefacts being transported from one museum to another – as you did when you had it transported from Mexico City to London – or in a protected diplomatic pouch. But I know Bangkok, Tom, and it has no museum of the kind that would have use of such an artefact, so clearly it was not shipped in that way. Which only leaves the diplomatic pouch, Tom, and so that's what I bet on. I repeat: you have simply confirmed what I suspected all along – so now your crystal skull will be mine. I will simply call my man in the British Consulate and ask him to confirm that the skull is there. When I receive that confirmation, I will order him to remove the skull from the safe – and then I will terminate you and Molly… Poor Tom. What a fool you've been.'

He turned to Molly, reaching out to pat the back of her wrist, but she jerked her hand away and glared at him. Lu Thong just smiled at her.

'Tom loves you, Molly,' Lu Thong said with dry, sly mockery, 'but, alas, love is not enough when it comes to living or dying. He failed you, Molly, and now you will pay the price, but I trust that this will not destroy your love for him, which is surely worth dying for.' He then turned to Mai Suphar. 'Let this be a lesson to both of us, my dark angel. The love that you and I have never known would not have taken us too far. This is a sad fact of life.' Finally, he turned his glittering, cocaine gaze upon Tom, whom he clearly admired and would solely miss. 'Do you know what it is, Tom, that Mai enjoys more than anything else in the world?'

'Killing,' Tom said.

'No, Tom, not just killing. She enjoys inflicting pain. Indeed, she enjoys it so much that she's devised countless highly inventive ways of doing it, all of them slow. I will now, with great reluctance, hand you over to my dark angel and then observe what diabolical form of torture she comes up with. As she is demonstrating her dark arts and cruel talents, I will hope to learn from your

suffering whether or not the love that you and Molly share can withstand hell on Earth. If it cannot, I'll be sorely disappointed and lose the last of my pitiful, worldly illusions.' He turned to Mai Suphar, who was smiling grimly at Molly. 'Make it exquisitely slow,' he told Mai. 'Let their pain become music to our ears.'

'That's guaranteed,' Mai replied, still smiling as she rose to her feet and advanced upon Molly.

'No!' Tom bawled.

That instinctive outburst of love and defiance seemed to move the very heavens.

There was a fierce rushing of air that quickly turned into a roaring, then the panoramic window behind Lu Thong exploded, showering him in shards of broken glass, and a dazzling silvery light filled the room to temporarily blind them all.

Battered by a howling wind, closing his eyes against the light, Tom threw himself to the floor and then opened his eyes again. The dazzling light still filled the room, but it was not a normal light: it pulsated and flickered rapidly and was broken up with streams of darkness, and there, between the light and the darkness, Tom saw ribbons of stars.

He crawled to Molly. She seemed immune to the whole experience. She was still sitting upright, staring about her with wide eyes, as Lu Thong and Mai Suphar, both being battered by the maelstrom, were picked off the floor and slammed into the bookshelves, then fell back to the floor. Mai screamed and Lu Thong cursed, both silhouetted in the unreal light, while ghostly figures materialized around them to look down upon them. The figures did so by simply lowering their heads, since their faces contained no features

– no eyes, nose or lips - and they formed a circle around Lu Thong and Mai, then reached down as if wanting to touch them.

Yes, they had arms and hands, though these appendages were formed by light, and as their fingers touched Lu Thong and Mai, streams of phosphorescence darted out of them to surround Lu Thong and Mai in an eerily glowing cocoon in which more stars could be seen. As if electrified, Lu Thong and Mai went into spasms, screaming like stuck pigs.

Tom completed his crawl to Molly, took her hand and tugged her towards him. She was on her knees and she fell into his arms and let him give her a hug.

‘Let’s get out of here!’ Tom bawled.
The roaring wind was like a tornado, devastating the whole room, as Molly grabbed the crystal skull off the table and then ran with Tom to the door, carrying the skull in the crook of her arm. Tom stopped briefly in the doorway, looking back, disbelieving, to see books and bowls and forks and spoons and wall hangings and rare paintings swirling in a great circle around the room as if caught in a whirlpool. The whole room was filled with stars, glowing even in that bright light, and in that light, which was still pulsating and flickering rapidly, creating a slow-motion effect on everything within it, Tom saw the eerie, silvery figures of the faceless aliens, still surrounding Lu Thong and Mai Suphar. The latter were still on the floor, trapped in that glowing cocoon of light, being jolted repeatedly by the bolts of phosphorescence shooting out from the fingers of the aliens, into their bodies. Tom bore witness to it, hardly believing his own eyes, then he turned away and tugged at Molly’s free hand, and they fled from the room.
‘We won’t get out of this building,’ Molly gasped.
‘Yes, we will,’ Tom said.
And indeed he was right. Racing across the broad hallway, they found the front door open, its scorched, twisted lock lying on the floor in a pile of still-smouldering wood splinters. Rushing outside, expecting to be faced with the Chinese guard, they were dazzled by more unnatural light and almost deafened by another howling wind.
Squinting into the light, Tom saw that the guard had vanished, though his Browning 9mm High Power handgun was there on the top step of the porch. Instinctively reaching down to pick up the weapon, Tom shoved it into his jacket pocket, and then, reminded that something very strange was still happening, he hurried down the steps with Molly, both leaning into the wind, and glanced up as they ran along the driveway.
Hovering directly above Lu Thong’s house, about a hundred feet above it, was an enormous, saucer-shaped, pulsating silvery light with stars gleaming in its dark, seemingly depthless, swirling base. That base, which was like a whirlpool viewed from underneath, like an inverted funnel, was creating the tornado now devastating the house while filling the air around it with flying foliage, soil, and other debris.
‘Good God!’ Tom exclaimed, slowing down and almost coming to a halt. ‘What on earth…?’

‘There’s a car!’ Molly bawled. ‘The door’s open! Come on, Tom, let’s go!’
She tugged Tom towards a black BMW that was parked by the edge of the driveway, down near the electronicallycontrolled gates. Those gates, Tom noticed, had either been opened by one of the fleeing guards or had been opened magically by that immense, saucer-shaped light still hovering over the house. The driver’s door of the BMW was hanging open and the key was still in the ignition, indicating that the driver had fled at the appearance of the saucer-shaped light and the sudden, unnatural storm. Realizing that he and Molly were being protected again, Tom slipped into the driver’s seat, waited until Molly had taken the seat beside him, holding the crystal skull firmly in her lap, then turned the ignition on and drove the car out through the gateway, turning into the road that led back to the centre of the city and the Chao Phraya River.
‘Look!’ Molly shouted.
Glancing sideways at the house, then raising his gaze to look above it, Tom saw that great whirlpool of light ascending vertically at high speed, shrinking rapidly as it ascended, taking the roaring wind with it. Within seconds, when it was the size of a single star, though clearly visible in broad daylight, in that vast sheer blue sky, it blinked out, letting the fierce wind die away altogether. The debris that had been swirling around the house suddenly fell to the ground.
Lu Thong and Mai Suphar rushed out of the house to glance wildly about them, obviously trying to ascertain what had happened while, at the same time, looking desperately for Tom and Molly.
Tom laughed and kept driving.

Chapter Twenty-Five

Checking repeatedly that he was not being followed, Tom drove through the achingly slow traffic of the city until he reached the British Consulate, located in the government district near the Grand Palace and Ratchadamnoen Boulevard. Parking a good distance from the building, he checked again that they were not being followed, saw no cars slowing down and no one approaching, so indicated to Molly that she should get out of the car and come with him.

‘What about this?’ Molly asked, indicating the crystal skull in her lap.

‘We can’t take it into the Consulate,’ Tom said, ‘so we’ll just have to take a chance that we haven’t been followed and leave it in the boot of the car.’
‘Lu Thong will know that we’ve come here to collect the other crystal skull and his hoods might recognize their own car.’
‘That’s why I parked so far away,’ Tom explained. ‘They’ll either look for their car in the Consulate car park or in the streets immediately surrounding the building. They’re not likely to find it tucked in here.’
‘Gee, you’re so clever,’ Molly said.
‘I have my virtues,’ Tom said.
‘Why don’t I wait here?’ Molly asked. ‘I’d feel better not leaving this crystal skull behind.’
‘I’d rather lose the skull than lose you,’ Tom replied. ‘And if Lu Thong’s men *do* find this car, there’s no way you could protect the crystal skull - and those bastards would kill you.’
‘That’s the nicest thing I’ve ever heard, Tom. I mean, you saying you’d rather lose the skull than me.’
‘My pleasure. Now let’s go.’
Molly slipped out of the car and joined Tom as he was raising the lid of the boot. It was cluttered with various tools, an old canvas bag, and a white sheet covered in dirt and what looked like blood stains.
‘Jesus!’ Molly exclaimed softly.
‘They must use it for the transportation of their unfortunate victims,’ Tom said. ‘That sheet might have been meant for us, Molly, so you’re *definitely* coming with me.’ Checking the canvas bag, he found it empty except for some spent cartridge shells. ‘They obviously use this for carrying weapons in,’ he said, ‘but we can put the skull in it.’ Molly carefully placed the crystal skull in the canvas bag and then Tom zipped it shut. Then he closed the lid of the boot, and said, ‘Now to the Consulate.’
The walk to the Consulate took about five minutes. Tom had to identify himself at the reception desk and ask for his friend, Leonard Clarke-Smith. Shown up to Mr Clarke-Smith’s office, they entered to find a tall, slim, impeccably-dressed Englishman – pinstripe suit, striped shirt and old-school tie – with a lean, pale face, thick auburn hair, and a rather languid way of moving, as they could observe when he rose from his chair. He came around the desk to take hold of Tom’s shoulders and shake him affectionately. Then he looked enquiringly at Molly.

‘Molly Beale,’ Tom said, by way of introduction. ‘A dear friend of mine.’
‘Pleased to meet you,’ Clarke-Smith said. ‘Any friend of Tom’s is a friend of mine, particularly when she’s as attractive as you are.’
‘Gee, thanks,’ Molly said, clearly meaning it this time.
Clarke-Smith turned to Tom. ‘I trust you’ve come to take that bloody awful artefact off my hands.’
‘Yes, Leonard, I have.’
‘Thank God. That thing gave me the shivers when I opened the package and saw those gleaming, empty eyesockets. What on Earth is it?’
‘A crystal skull,’ Tom said.
‘I gathered *that* much,’ Clarke-Smith retorted. ‘But what *is* it, Tom? I mean, what’s its significance?’
‘It’s just an old Mayan artefact,’ Tom said. ‘Quite rare and valuable.’
‘So where did you find it?’
‘Don’t ask,’ Tom replied.
Clarke-Smith gazed thoughtfully at him, then offered a slight, sardonic grin. ‘Well, Tom,’ he said, ‘you are surely a dear friend, but don’t ever ask this of me again. The next time, I’ll want to know what I’m dealing with.’
‘There won’t be a next time.’
‘Good,’ Clarke-Smith said. ‘’So let me get this damned thing brought up and then take it out of here.’
He started to pick up the phone, but Tom placed his hand on his wrist. ‘Wait,’ Tom said. ‘Are you phoning the man in charge of the basement safe?’
‘Of course,’ Clarke-Smith replied.
‘What nationality is he?’
‘Siamese… Thai. Why?’
‘Have you ever heard of a criminal named Lu Thong?’
‘God, yes. Who hasn’t? He’s the worst of a very bad bunch, and certainly the most powerful of them all. Why, Tom? What is this?’
‘I’ve good reason to believe that the man in charge of your safe is working for Lu Thong, acting as a mole, gathering confidential information and also supplying Lu Thong with false passports and visas, using, or misusing, the Consulate’s facilities. You’d better check him out, Leonard. In the meantime, I’d rather you personally went down there and brought the skull up yourself.’
Clarke-Smith had stopped smiling and was wrinkling his high forehead in disbelief. ‘Are you sure about this, Tom?’

‘Yes, I’m sure.’
‘From whom did you obtain your information?’
‘Directly from Lu Thong.’
‘*Pardon*?’
‘You heard me.’
‘You’ve had *personal* contact with Lu Thong?’
‘Yes, Leonard. Exactly.’
Exasperated, Clarke-Smith ran his fingers through his thick thatch of hair, and said, ‘I have to tell you, Tom, that while I appreciate this information, I’m seriously concerned about how you came by it. What on earth is your connection to the notorious, possibly insane, and certainly criminal Lu Thong?’
‘I’ve only met him once and it wasn’t pleasant. Now, given the nature of my conversation with him, I have to flee from Bangkok.’
‘Tom, this sounds wretched.’
‘Just fetch the crystal skull and I’ll be out of here, out of your hair. When I’m gone, have your Thai friend investigated. I’m sure you’ll discover that I’m right and that he works for Lu Thong.’
‘Wait here,’ Clarke-Smith said.
He left the office. Tom sank into the chair in front of the desk. Molly approached him, placed her hands around his face, raised his head and kissed him full on the lips. When she straightened up to look down upon him, she was wet-eyed and smiling.
‘You’re not an English wimp at all,’ she said. ‘You’re the man of my dreams.’
‘I hope so,’ Tom said.
‘What are you like in bed?’
‘Not very good.’
‘I’ll have to do something about that, when we have the right time and place.’
‘And where might that be?’ Tom asked.
‘God knows,’ Molly said. ‘So what happens when he brings you that other crystal skull?’
‘We return to my hotel, buy you appropriate clothing, pick up our travelling kit, then catch a train to Ubon Ratachathani, which is deep in Thailand. From there, we’ll make our way to Angkor in Cambodia. Do you still have your passport?’

‘As a matter of fact, I have,’ Molly said, looking triumphant. ‘That bitch Mai Suphar was so busy making fun of me when I came out of my trance and was being told where I was, that she didn’t notice me taking my passport out of my travelling bag and slipping it into the top of these pants, just over my ass. It’s there right now.’
‘You’re a very bright girl, Molly Beale.’
‘Not as bright as you, Tom, but I know how to survive. I learnt that on the streets of New York and I won’t ever forget it.’
‘I think you’ve a lot to teach me, Molly.’
‘And you, me,’ Molly said.
They fell silent after that, feeling comfortable with each other, united by love and mutual respect, taking confidence from it. About ten minutes later, Clarke-Smith returned, carrying a cardboard box under one arm. He placed the box on his desk and then turned to face them.
‘I’ve already checked the box,’ he said, ‘and the crystal skull is in it. My Thai friend wasn’t there when I collected it, so he doesn’t know it’s missing. I’ll have him checked out, as you suggest, but for now please take that gruesome object out of here.’
Tom stepped up to the desk and opened the flaps of the cardboard box. Looking into it, he saw the gleaming dome of the crystal skull. Satisfied, though still feeling a little paranoid, he closed the box again. ‘Yes,’ he said, ‘that’s it.’ He picked the box off the desk, tucked it under one arm, shook Clarke-Smith’s hand with his free hand, and said, ‘Thanks a lot for this, Leonard.’ When he started for the door, Molly rushed ahead to open it for him, but then Clarke-Smith called out to him.
‘Where are you going,’ Clarke-Smith asked, ‘when you leave Bangkok?’
‘It’s best you don’t know that,’ Tom said.
‘Is what you’re planning to do dangerous?’
‘I think so,’ Tom said.
‘Does it involve Lu Thong?’
‘Yes.’
‘Then the best of luck to both of you. You’ll need it.’ ‘Thanks, Leonard. Goodbye.’
‘Goodbye, Tom.’
Molly closed the office door. She and Tom then made their way back downstairs and out of the building. When they emerged, the sun was high in

the sky, the air hot and humid. As they hurried along the palm-lined street they both started sweating. A few minutes later, they reached the parked BMW, placed the cardboard box in the boot, beside the other crystal skull, then slipped into the vehicle and drove off, heading for Tom's hotel.

Tom drove carefully, nervously, inching along in the dense traffic, trying to avoid the thrust-and-parry of the expert *samlor* drivers, the crazy motor-cyclists, the scurrying, ignored pedestrians, constantly checking in his rear-view mirror for any car that might be following him. The drive seemed to take forever, but eventually they arrived at Tom's hotel, both sighing with relief. Tom drove down into the basement car park and, after circling around for a few minutes, found an empty space.

When he and Molly clambered out of the car, they both looked about them, automatically searching for Lu Thong's men. They didn't see anyone. Relieved again, they removed the crystal skulls from the boot, taking one each, and them made their way up to the lobby. Stopping at the reception desk, Tom collected his key, informed them that he was checking out, and asked for his itemized bill to be prepared. This done, he and Molly took the lift up to the fifth floor, then walked along the corridor to Tom's room.

Even there, Tom did not relax for a second.

He opened the door slowly, stepped tentatively inside, saw nothing, heard nothing, but still went, treading lightly, to check the bathroom. Only when he had fully accepted that there was no one in the room did he finally place his cardboard box on the bed and turn to face Molly. She had placed her canvas bag on the floor and was gazing lovingly at him.

'So what now?' she asked.

'Now I pack,' Tom said, going straight to the chest-ofdrawers near the bed and pulling open the top drawer.

'Immediately?' Molly asked.

'Yes,' Tom said, transferring the clothing from the top drawer into his travelling bag.

'Maybe we should sleep first,' Molly suggested. 'You know? Get some rest.'

'I don't think so,' Tom said, opening the other drawers and continuing to transfer his clothes from them to his travelling bag. Molly watched him in silence until he was finished and had zipped up the bag. Then she walked up to him, placed her hands on his shoulders, and nodded towards the big, double bed.

‘Let’s go to bed, Tom,’ she said. ‘We might never get the chance again. We don’t know what’s going to happen after this, so let’s at least have our moment together. To hell with all the rest of it. Let’s snatch this while we can. If you’re bad in bed, I wanna teach you to be good and we’ll both feel better for it. So come on, Tom, let’s use it.’

Tom choked up with emotion, with embarrassment and love and fear, but what moved him at that moment wasn’t the fear but his need to protect her.

‘No, Molly,’ he said, ‘we can’t. We simply don’t have the time. Lu Thong or Mai Suphar or their hoodlums will come here sooner or later - and I’d judge that to be sooner rather than later. In fact, they’re probably on their way here right now, so we have to leave straight away.’

‘Damn it, Tom, that’s an excuse.’

‘No, Molly, it isn’t. It’s my declaration of love. I don’t want us to be caught in that bed when those bastards burst through the door. I don’t want you humiliated or killed. What I want is a future for both of us, which we won’t have if we don’t get out quickly. So please pick one of those crystal skulls off the bed and let’s get the hell out of here.’

‘Okay,’ Molly said. ‘Yes, sir.’

She grabbed the canvas bag containing one of the crystal skulls, Tom picked up his travelling bag and the other skull in the cardboard box, then they both left the room. Once downstairs, Tom went straight to the reception desk, telling Molly to go to the shop in the lobby and pick out some clothes more appropriate to where they were going. After paying the check, Tom went to the shop where he found Molly with sensible clothing draped over one arm: denims and shirts and underclothes. She was also holding a pair of rubber-soled canvas boots and scouting for something to put them in. After settling on another canvas bag, a well-designed travelling bag, they went to the cash register, paid for the goods with Tom’s credit card, packed the clothes and boots in the bag, and then, still carrying their separate crystal skulls, made their way back down to the underground car park.

Tom looked about him again, checking for Lu Thong’s men. Seeing no one, he opened the boot of the car, placed his suitcase, the two crystal skulls and everything else in it, closed the boot and slipped into the driver’s seat. When Molly was strapped in beside him, he turned on the ignition and drove out of the car park, back into the chaotic traffic and bedlam of the teeming city.

It was now late afternoon, but the light was still bright, burning down through

the fumes of car exhausts that were belching out on all sides. Tom turned towards the Pracha Thipok Road, which would take him across the river, but no sooner had he straightened the car out than he saw, in his rear-view mirror, a silvery-grey Mercedes Benz – the same one used earlier by Mai Suphar – pulling out from the curb to slip in directly behind him.

'Oh, Christ!' he said. 'They're right behind us, Molly. *Now* what do we do?'

'Just keep drivin',' Molly said. 'They can't do much in this goddamned traffic, so just head for the station. We'll decide what to do when we get there. There's nothin' else we *can* do.'

Taking her advice, not really having any choice, Tom followed the flow of the slow-moving traffic while keeping his eye on the rear-view mirror and trying not to evacuate in his pants. Fighting to control the fear that he had thought was well behind him, but taking hope from the knowledge that he was more concerned for Molly than he was for himself, he checked out the car behind, Mai Suphar's Mercedes Benz, and saw enough to know that it was packed with passengers. All of those passengers, he knew, would be armed to the teeth and gunning for him. His heart started racing too quickly and he felt himself sweating.

'Can you see them?' he asked of Molly.

In fact, she had twisted around in her seat to look through the rear window. Turning back to her normal position, she said, 'No, I can't make 'em out, but I'd say they're his goons, 'cause Lu Thong's too smart to be caught in a firefight in the streets. I don't think Lu Thong or Mai Suphar are there. It's just the goons with the guns.'

'*Just*?' Tom retorted. 'What will we do if they attack us. We can't *fight* them, Molly!'

'Yes, we can,' Molly said. 'I don't have my handgun – Mai Suphar took that off me before we reached Heathrow Airport – but you've still got the Browning that you picked up from Lu Thong's drive. I can use that, believe me.'

'This isn't a movie, Molly! We can't have a shoot-out. We have to think of something else. Think, Molly! *Think*!'

'We dive into the river and drown ourselves. That's my thought for today. Now give me that handgun.'

Feeling that he was dreaming, or, more accurately, having a nightmare, Tom handed Molly the weapon and then concentrated on making his way around

the roundabout, chaotic and dangerous, to reach the bridge that spanned the Chao Phraya River. Surviving the roundabout, he turned onto the bridge and looked down upon the river, which was, as usual, crammed with boats of all kinds. Though possessed with the sudden urge to jump out of the car and dive into those muddy waters, Tom concentrated instead on his driving, seeing two parallel lines of traffic heading in both directions across the bridge in billowing clouds of exhaust fumes. Confident that even Lu Thong's men would attempt nothing here, he tried to relax enough to think straight… Then he saw a jet-black Honda Accord pulling out from the line of oncoming traffic, causing many horns to hoot in protest, and careening across the road to come between him and the cars crawling bumper-tobumper in front of him. Shocked, he braked to an abrupt halt.

'Jesus Christ!' Molly exclaimed, having been thrown forward by the sudden braking and then jerked back by the safety belt, but now raising the Browning 9mm Highpower handgun in her right hand and releasing the safety catch.

'Oh, my God!' Tom exclaimed.

Glancing in his rear-view mirror, he saw that the traffic had banked up behind him, the drivers angrily tooting their horns, and that Lu Thong's hoodlums were emerging from the stalled Mercedes Benz, now directly behind him, and were armed with a variety of weapons, including handguns and sub-machine guns. Appalled to see this, he looked straight ahead and saw more hoodlums pouring out of the jet-black Honda Accord, all of them also well armed.

'Sonsofbitches!' Molly exploded, winding her window down in order to lean out and fire her handgun.

'Molly don't!' Tom bawled. Then he glanced in the rear-view mirror and saw that Lu Thong's men were taking up firing positions behind the open doors of their car and taking aim with their weapons. As they did so, the drivers behind them started reversing or attempting impossible three-point turns to save their own skins.

'Oh, God!' Tom exclaimed again, without thinking, then he turned to the front and saw that the hoodlums who had poured out of the Honda Accord were also taking up firing positions behind the open doors of their vehicle and that the drivers in front of them, on both sides of the bridge, were doing exactly the same as the drivers behind, either reversing or trying to make impossible three-point turns that only caused them to crash into other cars.

‘*Molly*!’ Tom screamed as he twisted around, grabbed her by the shoulders, pulled her back from the open window and then forced her down onto the seat and threw himself on top of her, intending to use himself as her shield. ‘Stay down!’ he bellowed. ‘*Stay down*!’

As Molly wriggled frantically beneath him, he heard the simultaneous sounds of gunshots and bullets smashing the front and rear windows of the car, then ricocheting noisily off the metalwork. Shards of glass rained down upon him as the weapons continued firing – quickly repeated single shots from the handguns, sustained bursts from the sub-machine guns – and then he heard another sound, an ethereal bass humming, unreal, almost *physical*, an almost palpable sound that seemed to press down upon him, tightening his head as it gradually turned into a distant roaring – it seemed distant, but it was *here*, all around him

– and then the gunfire tapered off and was replaced with shouts and screams, men and women in panic, and he raised himself off Molly and looked out and saw what he had clearly seen before but could still not accept.

His car was surrounded by light – not sunlight: an unearthly light – and that light was spreading out in great, wavering striations that formed an immense fan across the bridge. Within that light were stars – their light was brighter than the other light – and within the stars, between the stars, where the light had made daylight darken, he saw a host of ghostly forms, with arms and legs, though faceless, not walking but somehow *drifting* across the road of the bridge, alighting here and there, touching the cars with fingerless hands, sending tiny bolts of lightning from those hands into whatever they touched.

The whole bridge was in chaos. Cars were swerving and crashing. Lu Thong’s hoodlums, front and rear, were throwing down their weapons and either falling to their knees, hands raised to their chins in prayer, or running away in both directions, some vaulting over cars in their determination to escape, others throwing themselves off the bridge to fall into the river far below, preferring death to the unknown.

‘Hold me, Tom!’ Molly wailed.

Seeing Molly’s fear and wonder, both unfamiliar to him, Tom pulled her into his arms and pressed her face to his chest. In doing this, he felt ennobled, raised above his weaker self, and he looked out at what was happening on the bridge, and understood, without a shadow of doubt, that it had been preordained. Released from fear, blessed with wonder, taken back to his

childhood, to the dreams that he had lost and finally found again, he cast his gaze upwards to the sky, knowing what he would see there.
An enormous, saucer-shaped, pulsating light, outlined with a silvery-white haze and filled with radiant stars, was descending slowly, inexorably, majestically, over the whole bridge. When it was mere feet above the bridge, its dazzling, unearthly brilliance obscuring the structure itself, making it melt into infinity, sending it back where it belonged – to Bangkok, in the present – the gently weaving, sinuous forms, those faceless beings of no known substance, surrounded Tom's car and closed in upon it to carry it off.
'Hold me, Tom!' Molly wailed again.
Tom fell upon Molly, kissing the back of her neck, holding her head with his loving hands, and then he felt the whole world turning – and turning him inside-out – and then time shrank, sucking space into itself, and sent him winging past suns and moons and all the stars of eternity. He saw himself, past and present, young and old, here and there, and then he returned, dazed and disbelieving, to a present that he could never have imagined.
When he opened his eyes again, raising his head, which required great courage, he realized that he had passed in an instant from childhood to manhood, regaining faith in himself.
He raised his head and looked out of the car, wondering what he would find out there.
White light.
Jungle mist.

Chapter Twenty-Six

Tom blinked repeatedly, bewildered. Molly was in his arms. They were still in the BMW, but it was parked at an unusual angle, practically turned over on its side, caught in a tangle of enormous branches and leaves at the foot of the soaring trees of an Oriental jungle.

And there, outside the car, stretching away for miles, was the once holy, now forbidden, city of Angkor. It was immense, magnificent, and covered in the rot of centuries. The mist drifted around the towering trees and great mountain-temples. The silence was frightening.
'Oh, my God!' Tom whispered.

Molly yawned and opened her eyes, then sat upright to look out of the

weirdly angled car. Her eyes went as wide as two spoons when she saw what was out there.

‘What the…?’

‘That’s Angkor,’ Tom said. ‘We’re in Cambodia. How on earth did we get here?’

‘I dreamt about stars,’ Molly said. ‘The same stars and moons – double moons – that I saw when I looked into the crystal skull. So maybe it wasn’t a dream, after all. Maybe…’

She didn’t complete her sentence, because what she was thinking defied reason and could not have happened.

‘’I dreamt about stars as well,’ Tom said. ‘Stars too large to be our stars and surrounding double moons. I remember us being on the bridge that spanned the Chao Phraya River in Bangkok, the light descending, the aliens, and then I lay across you and closed my eyes, and the world, either outside or inside my head, seemed to turn inside out. Then I fell asleep - at least I *think* I fell asleep - and saw outer space, the cosmos, stars I couldn’t recognize, double moons, and then I opened my eyes, or I woke up, and this is what I found. We’re still in the same car, the car seems fine, but here we are in Cambodia.’

‘Í’m scared, Tom,’ Molly said. ‘I’m really scared. Is that ruined city, that Angkor, in Cambodia or is it someplace else? Where *are* we, Tom? What *year* is this?’

‘We’re in Angkor,’ Tom insisted. ‘I know it intimately from books I’ve studied. We’re in Angkor, Combodia – that’s Cambodian jungle out there – but *when*, whether in the past or the future, well, I haven’t a clue.’ He checked his wristwatch. It showed five in the morning. He saw striations of weak sunlight breaking through the dark clouds, a hint of dawn light, and assumed that his wristwatch was now set to local time. He could not imagine how they had come to be here, still in one piece, his wristwatch set to local time, but he was certain that this was Angkor in Cambodia, and it was just before dawn.

‘Come on,’ he said. ‘Let’s clamber down.’

Overwhelmed, he and Molly lowered themselves out of the car and clambered down through the thick branches to the ground. Suddenly panicking, realizing that they had both forgotten what had actually caused them to be here, Tom climbed back up and, to his immense relief, found the two crystal skulls still in the boot of the car, one in its cardboard box, the

other in the canvas bag once used to hold weapons. He lowered both to Molly, then clambered back down until he was standing beside her.
‘I don’t really believe we’re here,’ he said, ‘but I think we’ll be alright.’
‘Let’s hope so,’ Molly said.
They embraced and kissed, then, carrying their separate packages, walked through the jungle’s mist, towards the soaring towers and minarets of Angkor. As they advanced carefully into the great complex, still surrounded by dense jungle wreathed in morning mist, Tom wondered if he and Molly were really alive, still in their mortal bodies, in the same year or time-frame, because the city was totally deserted, with neither tourists nor guards, and it gave off no sound, other than the cry of a distant bird or the eerie call of some unseen animal. Nevertheless, he kept walking, side by side with Molly, taking his faith from her love and trust, determined still to protect her.
As they advanced into the complex, heading north, Tom constantly looked about him, trying to take in what he was seeing and make some sense of it. Though struck by the chilling lack of humanity in the ancient temples, reservoirs and canals, their bleakly imposing profusion of almost identical grey sandstone gods, dancing girls, and various animals, some unrecognizable, he was awed at the very thought of how this immense complex, formerly the center of one of the largest kingdoms in South-east Asia, had been sacked and then abandoned by Thai armies over five hundred years ago. He was awed, too, by the knowledge that although this ‘forbidden city’ was known to have been the center of the magnificent Khmer dynasty, then extending from the tip of the Indochinese peninsula northward to Yunnan and, from Vietnam, westward to the Bay of Bengal, it was believed to have existed long before that, beyond the veils of recorded history, way back in the mists of prehistory, when it could, indeed, have been built by that ancient, mysterious race that had travelled from here to Meso-America.
‘Tom, I’m scared,’ Molly repeated.
‘Don’t be,’ Tom said. ‘Hold my hand. That should help you feel real again.’
Molly took hold of his hand and squeezed it. ‘Yeah, right,’ she said. ‘I feel real again. You and me, we’re an item.’
‘Aren’t we ever?’ Tom said.
He wanted to make her smile, though he was just as scared as she was, and did not feel any better when they completed the five-kilometre walk that eventually brought them to Angkor Wat, the greatest of all the sites, located

about three kilometres west of what he was looking for: Ta Keo, the first of the two royal temples, where, hopefully, the crystal eyes of the crystal skulls were hidden.

As they made their way through the labyrinthine pathways of the complex, walking under the towering walls, along the sides of the empty canals and moats, embalmed in deathly silence, Tom thought of how history had constantly been rewritten, and of how, before recorded history, the only constant was mystery. Angkor was itself a mystery, raised to foil time, widely believed to have been constructed as a symbolic universe based on imported Indian cosmology, but designed to concentrate the potency of the soil upon which the prosperity of that ancient kingdom had depended. Yet before that, before its history could be recorded and, thus, rewritten, it had existed, either in reality or as a dream, as the living center of the cosmological, star-filled universe, beyond Earth, beyond time; and its great pyramid-temples, some still standing, defying time, might have been raised, or conceived, as repositories for the hidden powers of that universe and all it contained… other worlds; alien beings.

Tom thought of this with wonder and awe until he and Molly, after hiking another three kilometres to the east, reached Ta Keo, the first of the pyramidal royal temples.

‘This is it,’ Tom said.

‘We have to climb to the top of it?’ Molly asked.

‘Yes,’ Tom said. ‘Don’t you want to?’

‘It looks creepy,’ Molly said doubtfully.

‘Just keep holding my hand.’

Ta Keo was indeed imposing, being over a hundred metres wide at its base and rising over twenty metres, on three separate levels, one containing a continuous, sealedin gallery, to a forty-six-metre-square terrace surmounted by five ornate sanctuary towers. Though the walls of each of the lower terraces were broken up with open doorways, each framing the darkness inside the unfinished temple, a flight of broad stone steps led upwards from the base of the building to the high terrace with the sanctuary towers.

‘I’m convinced that the eyes of the skulls are hidden in one of those sanctuary towers,’ Tom said. ‘So take a deep breath and let’s start climbing.’

Still carrying their separate crystal skulls, one in its canvas bag, the other in a cardboard box, Tom and Molly commenced the arduous climb to the top

terrace, taking the broad steps carefully, one by one, advancing from one terrace to the next, passing friezes of gods and the vague outlines of figures that might or might not have been girls, who might or might not have been dancing, might or might not have been human – indeed, as Tom noticed, who seemed not quite like girls, though they *were* distinctly feminine, reminding him of the alien beings formed out of light and swaying gently, sinuously, like windblown reeds.

Eventually, breathless, they found themselves on the top terrace, overlooking the vast complex of Angkor and the jungle surrounding it. The terrace was over forty metres square and grass was sprouting between the stone slabs. A tall sanctuary tower, raised to the sun, moon and stars, stood at each corner of the terrace, with a fifth tower, the tallest, in the middle.

'That's it,' Tom said, pointing to the central, and highest, sanctuary tower. 'The eyes of the crystal skulls, if they're here at all, will be hidden in that central tower. There are doorways around the base of that tower, so let's see what's inside.'

Entering, they found a square-shaped room of grey sandstone walls and dust-covered stone slabs, gloomily illuminated by the weak morning sunlight bleeding in from outside. The place was completely empty, offering not the slightest hint of where the crystal eyes might be hidden.

'Now what?' Molly asked, her voice reverberating eerily in that enclosed space.

Tom didn't know what to say. He felt unreal and disorientated. Looking out through the doorway, at the other pyramid-temples of the vast, jungle-enshrouded complex, trying to work out what time it really was – even what year it was or what planet he was on – he saw only a somnolent cloudy sky, a vast anonymity. Then, just as he was about to turn away, the sun broke through the clouds, one curved yellow rim sliding free. Striations of light fell upon the ruins and reached out to the temple.

Squinting, turning away, looking back down at the stone-slab floor, Tom saw a single ray of sunlight beaming in across his shoulder to illuminate a slab fixed into the far corner. That finger of light made Tom remember the aliens and the beams of sparkling light, some unknown form of energy, that had darted from their fingerless hands when they reached out to anything material. He knew then, without a shadow of doubt, where the eyes of the crystal skulls were hidden.

‘Put your bag down,’ he said to Molly. ‘We’re in the right place.’
As Molly did his bidding, Tom knelt on the floor near the illuminated stone slab and placed the cardboard box by his side. He studied the stone slab and was instantly elated to note that although it had supposedly been there for centuries, the cement surrounding its two sides, where it was not fixed tight against the two walls forming the corner, had turned to powder, and those two sides of the slab seemed to be loose. When he looked around him, he saw that the other stone slabs were firmly embedded.
‘This is it,’ he said with absolute conviction.
Molly knelt beside him, studied the stone slab, ran her finger around it, and then, as practical as always, said, ‘The cement may be loose on those two sides, but there’s still no way to lift that damned slab out. We don’t have any tools, we have nothin’, so we don’t have a prayer.’
‘Let’s unpack the crystal skulls,’ Tom said. ‘Let’s just see what happens. We’ll unpack them and place them beside the stone slab, one on each side of those two sides where the cement has been loosened.’
‘And then?’
‘We simply sit back and see what transpires.’
‘Oh, my hero,’ Molly said with affectionate sarcasm, then she opened her canvas bag and withdrew her crystal skull while Tom removed his from its cardboard box. They placed the skulls, as Tom had suggested, one to each of the two free sides of the slab forming the corner.
‘Move back,’ Tom said.
They sat together in the opposite corner, beneath the finger of sunlight beaming in and now falling – and eerily illuminating – the two macabre, eyeless, crystal skulls.
Nothing happened for some time. The only sound was their nervous breathing. Molly reached out to take hold of Tom’s hand and tug it onto her lap, where she squeezed it repeatedly. She didn’t say a word and he didn’t speak to her, but both of them were mesmerized by the crystal skulls which, illuminated in that eerie light, seemed to take on a magical sheen and odd, shadowy features.
The finger of sunlight brightened, then it moved as the sun moved, and eventually it fell directly upon the eyesockets of the two skulls, and those eye-sockets reflected the light to fill the gloom with criss-crossing, constantly shifting, striations. Those striations, in their turn, fell upon Tom and Molly,

forming a dazzling mosaic, distorting what they were seeing, making them both imagine that the stone slab was moving, rising out of the floor.
They blinked and rubbed their eyes, then squinted into the dazzling light. They heard a muffled rumbling, a louder grinding sound, and then, though they could scarcely believe it, they saw that the stone slab was, indeed, rising out of the floor, as if being pushed up by an unseen hand. Eventually, when its base was level with the floor, it fell over at an angle, falling between the two crystal skulls without actually touching them. When it struck the floor with a dull, reverberating thud, the finger of light blinked out.
'Jesus Christ!' Molly whispered.
Without thinking twice, Tom jumped to his feet and raced across the floor to look down into the hole in the corner.
Four eyes of clear crystal, embedded in loose soil, stared up through the gloom.
'Oh, Christ!' Tom whispered.
He fell to his knees and just stared down upon those awful crystal eyes as Molly also jumped to her feet and rushed over to join him. When she, too, looked down into the hole, she let out a soft gasp. They both stared at the gleaming crystal eyes for a long time, both too shocked and thrilled to speak, then Tom reached down and carefully picked them up, one by one, and then, just as carefully, placed them in the eye-sockets of the two crystal skulls.
The four eyes fitted perfectly, and the crystal skulls, with their crystal eyes back in place, looked even more fearsome.
'What now?' Molly said.
'We just sit back and wait again.'
At first nothing happened. Tom began to feel uneasy, turning numb with disappointment, but then, just as he was starting to think that this whole venture had been in vain, he heard a distant throbbing, growing louder, coming closer, and finally, when the throbbing had turned into a roaring, the floor of the temple shook slightly, making small clouds of dust boil up.
Realizing that the noise was not coming from the floor or walls of the sanctuary tower, Tom turned his head to look to the side, out over the spires of the other temples, that vast web of ancient ruins, the maze of canals and moats, the lush green jungle beyond. The noise was coming from over there… not from the ground… from the sky… and as it grew louder, it became more familiar… and then Tom saw what it was.

A helicopter descending.
Even as he saw it, hardly believing his own eyes, feeling crushed by disappointment, the helicopter dropped below the high canopy of the trees, into a clearing not far away, and Mai Suphar jumped out, wearing figureenhancing lime-green coveralls and holding a pistol in her right hand. She glanced up at the temple, obviously knowing just what it was, then she ran across the clearing to briefly disappear from Tom's line of sight. He heard her boots clattering up the broad stone steps that led to the terrace.
'Damn!' he exclaimed, turning to Molly. 'Where's the handgun?'
'I don't know. It must be back in the car. I probably dropped it when we both blacked out.'
'Damn!' Tom exclaimed again.
He glanced desperately left and right, across the broad expanse of the temple roof, but clearly there was no place to go, apart from one of the other sanctuary towers, where Mai would surely find them.
'What's happened to those crystal skulls?' he asked rhetorically, as he heard Mai's boots clattering up the stone steps and nearing the summit. 'Now we *really* need their magical powers!'
'Oh, fuck!' Molly exclaimed.
By now, the sun had moved out from behind the clouds and its light suddenly flared brilliantly in great striations that fell over the temple. At that moment, Mai Suphar emerged onto the roof and advanced carefully on the central sanctuary tower, holding her pistol at the ready. The wind was whipping her long black hair across her golden, gorgeous face, and her figure, emphasized in the tight, lime-green coveralls, was truly something to see.
Shocked to realize that even in these circumstances he could not ignore Mai's beauty and was, indeed, helplessly entranced by it, in danger of becoming its victim, of being *devoured* by it – by the salivating jaws of the black widow spider –Tom rescued himself by taking hold of Molly's hand and squeezing it reassuringly, thus reassuring himself. Then, heartened, though certainly not out of danger, he led her outside, where the sunlight, becoming brighter by the second, temporarily blinded him.
Squinting into that light, he saw Mai coming towards him, smiling triumphantly, raising the pistol in her hand, first aiming it at him, then, grinning even more broadly, turning the weapon on Molly. She stopped when she was mere feet away, keeping the weapon aimed at Molly.

‘I’m pretty fond of shy English gentlemen,’ she said to Molly, ‘and I want this particular one to play with, so you have to go first.’

With a fearful, choked sob, Molly turned to Tom and wrapped her arms around him. Disgusted by this display of unseemly emotion, not realizing that it was calculated, Mai took another step forward, to pull Tom and Molly apart. But when she grasped Molly’s shoulder, the latter spun around, springing out of Tom’s embrace, and chopped the side of Mai’s neck with the edge of her open palm - a brutal, expert blow that made Mai stagger backwards and drop her pistol. When the weapon clattered noisily to the floor, Tom picked it up and stared at it, bewildered, not knowing how to use it, then looked helplessly at Molly as she kicked and chopped at the stunned Mai, using the skills that she had resolutely picked up in the meaner streets of New York.

‘Shoot her, Tom!’ she bawled. ‘*Shoot the bitch*!’

But Tom, being a gentleman and having led a sheltered life, didn’t know how to cock the weapon, let alone fire it, so he just stood there, wondering what to do with it, as Molly took one final kick at Mai, then threw herself to the floor, rolled away, and then jumped to her feet again.

Eyes flaring with rage in the brightening sunlight, Mai whipped a dagger out of the belt around her waist and lunged viciously at Molly.

Molly ducked and cried, ‘Damn it, Tom, just fire that thing!’

‘I can’t!’

Mai slashed again. Molly ducked again. ‘Throw it to me!’ she shouted, waving her hand for the pistol.

Mai slashed and Molly feinted. Mai slashed again and Molly weaved. ‘God damn it, Tom, throw me that pistol!’

Tom threw the pistol. Molly ducked, caught the pistol, turned it on Mai, and fired. The bullet hit Mai in the chest, punching her backwards, soaking the front of her limegreen coveralls with a bright stain of crimson. She stopped staggering backwards, stared at Molly with surprise, managed to croak, ‘Beginner’s luck, bitch!’ and then sank to the floor, her lovely legs bending slowly, as in a dance, but tantalizing no more. Eventually, she fell onto her back, legs and arms akimbo, to stare up into the dazzling sunlight with wide-open, dead eyes.

Shocked by what she had done, Molly dropped the pistol and Tom instantly bent low to pick it up. Before he could do so, however, Lu Thong’s voice

rang out behind him: ‘Don’t bother, Tom!’
Tom straightened up as Lu Thong stepped onto the terrace and advanced languidly across the grass-sprouting stone slabs, holding his own pistol at the ready.
‘Nice try, my friend,’ he said, stopping a few feet away, still aiming the pistol at them while glancing down at Mai, who lay bloody and lifeless at his feet. Raising his gaze again, he shook his head from side to side, saying mournfully, ‘Dear, dear, what a dreadful thing to do. How *could* you, Tom?’
‘He didn’t. I did it,’ Molly said.
‘I might have known,’ Lu Thong said. ‘So, Tom, where are the crystal skulls? Inside that sanctuary tower behind you?’
‘Yes,’ Tom said. ‘Where else?’
‘And did you find the missing eyes?’
‘Yes,’ Tom said, sweating in the humidity and realizing that the sunlight was becoming so bright that it seemed unnatural.
‘And did you, dear Tom, place them back where they belong?’
‘Yes,’ Tom said, ‘I did.’
‘So what happened, Tom?’
‘Nothing,’ Tom said.
Lu Thong looked disappointed, then confused and disbelieving. He glanced past them, to the tower, his eyes narrowed against the brightening light, the dazzling light, an unreal light, then he nodded and waved his pistol up and down, indicating the tower. ‘Get back in there, the pair of you.’
Entering the base of the central tower, Tom noticed immediately that the sunlight was falling upon the crystal skulls, directly onto their crystal eyes, making them reflect that same light in a fan of phosphorescent striations that cast eerie shadows on the walls. Temporarily blinded, he blinked a few times, letting his eyes adjust to the light, though this did not prevent the feeling of unreality that was creeping over him.
‘Sit down in that corner,’ Lu Thong ordered. ‘The pair of you, back to back. And don’t try any nonsense.’
As Tom lowered himself to the floor, back to back with Molly, he heard more footsteps advancing across the terrace outside. Glancing sideways, he saw four of Lu Thong’s hoodlums, all armed with pistols, coming up behind Lu Thong. While one took up a position beside Lu Thong, holding a coiled rope in his big fist, the others spread out around the base of the tower to ensure

that Tom and Molly could not escape.
‘Tie them up,’ Lu Thong said.
While Lu Thong kept them covered, his henchman tied them back to back with the thick rope, pulling it tight and knotting it with a double loop. This task completed, he stepped back to let Lu Thong, attentive as always, kneel in front of Tom. He stared steadily at Tom with eyes no longer sleepy, but now glittering with cocaine-induced intensity. Though smiling, he seemed slightly deranged, adrift in his secret world, unreal in the unnatural, dazzling light.
‘We’ve both been fooled,’ he said. ‘We both pursued a vain dream. We’ve both gone to great lengths to find the lost eyes of the skulls, and although they’re now back where they belong, the world remains unchanged. I’m deeply disappointed, Tom. I’m also angry beyond belief. I came here to find revelation and now the crystal skulls, in doing nothing, tell me that I can’t. I could hate you for that, Tom, for building up my hopes, but unlike Mai, I’m not a vindictive person and I seek no revenge. Nonetheless, you two must die. Alas, you know too much about me. Besides, I saw what happened in my house and on that bridge in Bangkok, so I know that though nothing has happened here, the crystal skulls still have magical powers. How do we release those powers? Clearly not as we had imagined. We now have the crystal eyes in the crystal skulls, and yet the world, which is a meaningless cesspit, remains as it always was. Yet the skulls have magical powers. We have both seen that, Tom. We have seen it and so I still must have the skulls and you two must die, because I cannot have witnesses to my vile transgressions against God and man. The skulls are still priceless, Tom. They have powers that *can* be released somehow. So I’ll take them back with me, to examine them at great length, and sooner or later, preferably sooner rather than later, I’ll unravel their secrets. But you and Molly, my dear Tom, must stay here and watch the sunset with sightless eyes. The caretakers, when they come later, will find you, both as dead as these ancient stones.’
‘What caretakers?’ Tom asked out of some deep intuition that temporarily buried his fear and led his nose to sniff the wind of truth.
‘The ones who work here every day,’ Lu Thong replied. ‘It’s still early, Tom, not yet full daybreak, but they will come in due course.’
‘It’s not full daybreak yet?’
‘No.’
‘Then why is it so bright?’

Lu Thong stared at him, looking confused again, then he glanced about him with widening, disbelieving eyes, and finally stared at the crystal skulls.
The crystal skulls were shimmering in a radiant, unnatural light, their crystal eyes reflecting other, different rays of light that illuminated Lu Thong's wasted face and made it seem like a death mask.
'Good God, Tom, you're right!'
'How did you get here?' Tom asked.
'You saw that – by helicopter.'
'It was a perfectly normal flight?'
'More or less,' Lu Thong said. 'Though, come to think of it, maybe not… We flew through the night. At first it was dark and cloudy, the sky threatening rain, but then suddenly there was turbulence, a very peculiar kind of lightning… not normal lightning… *sheets* of light… we were surrounded by weird light… and then, where there should have been clouds, we saw only the stars. We thought we were lost. The stars seemed to be all around us… above and below and cascading on both sides… and then the engine of the helicopter cut out and we thought we were going to crash and die… Then, suddenly, the engine came back on, the stars blinked out, and abruptly we were back in stormy clouds. Shortly after, much sooner than we had expected, we were looking down upon Angkor in first light… Why do you ask, Tom?'
'Because I think the skulls are working,' Tom said, 'and they've transported us here.'
'Where's *here*, Tom?'
'I don't know.'
Frowning, Lu Thong crossed to the crystal skulls and reached down to pick one of them up.
When he touched it, his world turned inside out – and at last he found what he had been seeking.
Eternal life.
Hell.

Chapter Twenty-Seven

The instant Lu Thong touched the first crystal skull, its crystal dome flared into life, its mouth gave forth with a roar, and daggers of fierce light

shot out of its crystal eyes. Even as Lu Thong staggered backwards, temporarily blinded, his face scorched, the second skull, as if triggered by the first, also roared and exploded with light, sending the beams from its bulging crystal eyes in the opposite direction. The beams were hot and phosphorescent, pulsating, filled with sparks, like laser beams, and they fanned out to criss-cross each other and cast black-andwhite mosaics that had a life of their own. The skulls now seemed to be alive, being illuminated from within, that light reducing the normal daylight to darkness while burning in the depths of the skulls as globes of silvery fire. Darkness swirled around the skulls, a black whirlpool streaked with more lights, and as Lu Thong recovered, opening his eyes, staring downwards, that light broke up and turned into streaming stars that seemed, in their extraordinary brilliance, to be here and faraway at the same time, defying all reasoning.

Lu Thong stood there, transfixed, mesmerized by what he was seeing, as the beams of light around him, like the ones forming two great fans, first started bending in an unnatural manner, then, making whipping, whooshing sounds, arched and coiled through one another like snakes, rising up and coiling back down, sweeping around to form circles that imprisoned him and closed in upon him.

Startled, disbelieving, feeling fear for the first time, Lu Thong struck out at the beams of light with his pistol and saw the weapon go through them. He tried to step out of his prison, to escape the encircling snakes of light, but when he touched them he was scorched by a fierce heat that sent electric shocks through his body and made his every nerve sing.

The crystal skulls roared again and streams of stars shot from their mouths. Surrounded by those stars, losing all sense of direction, of space and dimension, confused between up and down, left and right, Lu Thong became disorientated and staggered this way and that, repeatedly striking the encircling streams of light with his body and limbs, being scorched and shocked repeatedly.

‘No!’ he bawled. ‘*Not this*!’

Tom saw this dreadful spectacle from where he sat on the floor, still tied back-to-back with Molly, who was wriggling and gasping in frustration. Yet he and Molly remained untouched, bearing witness, not involved, the swirling light streaming above them and past them, before, without touching them, rushing away to explode over the hoodlums outside, cocooning them in

a phosphorescent glowing that grew ever brighter. The hoodlums all screamed at once, dropped their weapons, went into spasms, and then the glowing cocoons exploded with a mighty roaring and set fire to those trapped inside. The hoodlums, screaming dementedly, suddenly burst into flames and within seconds were separate balls of fire that gave off a black, billowing smoke. Three collapsed and one tried to run away, still in flames, but then he, too, collapsed and was still, becoming no more than a heap of smouldering rags.

'Christ!' Molly said. 'Jesus!'

Tom was trying to wriggle free, but his bonds were too tight, and as he struggled, refusing to give in, Lu Thong, still trapped in swirling coils of phosphorescence, screamed out in terror – yes, even Lu Thong was terrified – and raised his pistol to fire upon the crystal skulls and blow them to pieces.

He never fired a shot. The crystal skulls roared again. Their mouths spewed twin streams of sparks that exploded against Lu Thong's hands, burning them instantly, turning the pistol into a piece of red-hot metal that forced his scorched fingers to release it. The pistol clattered to the floor where the light was drawn to it, spreading out to fall over it, covering it like translucent lava, and the gun, after turning red-hot again, melted into the stone.

'Push, Molly!' Tom shouted, trying to make himself heard over the roaring of the crystal skulls, above the whipping and whooshing of the swirling streams of light, as he struggled to loosen their bonds and set them both free. 'Push as hard as you can against the ropes! We might be able to break them!'

'It's impossible,' Molly replied, though she did as she was told, leaning forward, away from Tom, as the light swirled above her, going past her, streaming outside, and Tom continued wriggling frantically to loosen the ropes, refusing to give in.

'Don't stop, Molly! Try it!'

Yet even as he was struggling, he saw the crystal skulls changing, taking on ghostly features, turning into female faces, oddly beautiful, ageless, their full lips smiling ethereally, dark eyes radiant with the dawning awareness that they were being released from their Earthly prison. They found freedom in that instant, flaring up and fading away, and then the crystal skulls dissolved, sucked back into their own light, becoming mere clouds of dust, which, when

it settled, released an even greater light, a veritable explosion of silvery-whiteness, that swept away the streams of light that had been swirling around the room and then consumed them as it filled the whole tower and appeared to make the walls melt.

Tom saw stars on all sides, above and below, as Lu Thong, who could not see the floor, lost his balance and twisted wildly this way and that, then fell screaming disbelievingly into darkness. That darkness was below, where the floor should have been, and it looked like a bottomless pit with stars in its deepest depths. Lu Thong screamed as he looked down – he had the feeling that he was at least lying on something solid – 'The floor's still there!' Tom bawled, hoping to ease Molly's fears – and then, looking down, he saw exactly what Lu Thong was seeing…and was equally petrified.

Pools of lava glowed down there, illuminating banks of mud. Men and women, all naked, were either waist-deep in the lava, waving arms, wailing dementedly, or writhing in the mud, trying in vain to stand upright, their blistered bodies covered in serpents and spiders and scorpions and vermin. They, too, were wailing dementedly, or sobbing or groaning, and around them, in the putrefaction of eternal decay, wandered other members of the dead and the damned.

Lu Thong screamed in mortal terror, seeing what he would soon become. When he looked down, as did Tom, into that swooping, depthless darkness, seeing the damned and then seeing *through* them, he perceived, even farther down, in those depths beyond time and space, a mountain of bones covered in maggots, dismembered limbs filled with worms, wide-eyed faces, so far away and yet so near, wrapped in cobwebs and covered in slime, wailing throughout eternity for God's mercy.

Lu Thong also screamed for mercy, trying to raise himself from the deep, but as he broke free, jerking upright, gasping painfully for breath, a great roaring emanated from the dark pit beneath him, from the very bowels of the Earth, from the lowest basements of hell, and a blast of hot air enveloped him, sucking the breath from his lungs, and he was dragged down, protesting hysterically, wriggling frantically, screaming insanely, into a vortex of swirling flame and boiling blood and tripe and slime, into the belly of the beast created by him in his wild cocaine dreams.

Tom saw him down there, being offered what he had sought, but now that Lu Thong had what he had always sought – eternal life – he was horrified by

the price he would have to pay and screamed blasphemous insults. Thus, he was spewed back out, carried up on a bed of smoke, and reached where he had been before – that mere sliver of time – only to fall back into the darkness that still covered the stone-flagged floor.

Realizing that the floor was still there, he stood up and ran outside.

Tom broke free from his bonds – at least, he assumed that he had done so – but as the rope was torn apart and he felt the bonds around him loosening, he saw more streams of light spewing out of the far corner, rising from the hole where the stone slab had formerly been, covering up the crystal eyes, forming a triangle with two sides for the crystal skulls to be positioned by – the skulls that had vaporized, turning back into crystal powder, into the dust of centuries past – and then he saw those familiar figures materializing out of the light, slim, faceless, swaying sinuously, in silence, to surround him and bathe him in their light and lean down to touch him.

In fact, they could not touch him, but their power reached out to him: minute bolts of lightning filled with sparks that shot out of their fingerless hands to burn and sever his bonds.

Tom spread his hands in the air, free at last, and cast the severed ropes aside.

‘Yes!’ he cried. ‘*Yes*!’

‘Christ, let’s go!’ Molly snapped.

They jumped to their feet and ran outside, then stopped abruptly, seeing Lu Thong in front of them.

He looked like all hell, face blistered, hands scorched, but when he saw them, his cocaine eyes were further brightened with fury and fear. Reaching down to the ground, he picked up a pistol dropped by one of his hoodlums. He aimed it at Tom.

‘It’s all over for me,’ he said. ‘My life no longer has meaning. As it is for me, so it is for you, but you will go to hell sooner. First that tart and then you.’

He turned the pistol on Molly and cocked the hammer, preparing to fire, but Tom, without thinking, dived at him and crashed into him, sending him bowling backwards to the ground.

They struck the ground together in a tangle of arms and legs, but Tom pushed himself away and jumped back to his feet, and then, as Lu Thong also jumped to his feet, close to the edge of the broad terrace, Tom rushed at him and brought him down with a football tackle, once more crashing to the stone slabs. He rolled sideways as Lu Thong fell backwards over the edge.

Lu Thong offered his last sound on Earth – a long, drawn-out scream.
That scream seemed to reverberate for an exceptionally long time – it was not abruptly cut off by Lu Thong's contact with the ground – and as a vast, saucer-shaped light materialized directly above Ta Keo – a dazzling radiance filled with stars – and descended over the temple to obscure the five sanctuary towers in its pulsating, silvery haze, offering Tom and Molly protection, Tom crawled to the edge of the terrace and nervously looked down.
He saw a maelstrom of light and sound.
Lu Thong was down there, a mere puppet on a string, a silhouette in pools of phosphorescence, being turned this way and that, raised on high and then cast down again, before finally being turned inside-out, his soul released from his mortal body; and that soul, long corrupted beyond measure, turned back, like a black widow spider, to devour its own mate.
Lu Thong saw it coming – the monstrous beast of his own creation; his mirror image, his dominant dark side – and he screamed with the collected terror of all the damned of eternity as he was sucked again into the maelstrom, into the very jaws of hell, and then, his fate decreed, the unholy fires awaiting him, his Earthly body was allowed to continue its journey from the hard, unforgiving ground far below. He thudded into the timeless soil of the ancient city of Angkor, obliterated by its indifference, and remained there, his features crushed and erased, to make manure for the future.
'Well, well,' Tom whispered.
The maelstrom settled down, becoming a harsh wind, then a mere breeze, letting the normal daylight return, and Tom rolled away from the edge of the terrace to look directly above him. The great saucer-shaped light was dimming and shrinking as it ascended vertically, serenely, to the clouds, where it abruptly blinked out.
Tom climbed back to his feet.
'Day's work done,' he said.
Molly was staring at him. Though shell-shocked, she recovered quickly. Walking up to him, she cupped his face in her hands and then kissed him full on the lips. Her lips felt very nice.
'To hell with the money,' she said. 'To hell with it all. Why not marry me, Tom?'
'That would make you a respectable woman.'

‘I can live with that,’ Molly said. ‘Come on, let’s get out of here.’
They took the steps down to the bottom of the mountain-temple, then made their way back across the ancient city, past the dried-out canals and moats, the ruins shrouded in jungle mist, which had mysteriously returned, and on to where the BMW was still resting where they had left it, oddly angled over the tangled undergrowth around the base of the soaring trees. Without thinking, not speaking, they clambered up over the tangled roots, the rot of centuries, and climbed back into their respective sides of the car, where they sat side by side, in tingling silence, not fastening their safety belts.
When Tom glanced out of the car, he saw the caretakers of the site, all moon-faced Cambodians, piling out of an old wreck of a van and advancing into the complex, obviously assuming that this was just another day, not worth thinking about.
‘We’re in the real Angkor,’ Tom said to break the silence. ‘In Cambodia and clearly in the present.’ He checked his wristwatch. It still showed five in the morning. Time had stopped for him and Molly, though not for the real world, and the caretakers would get on with their work, not knowing what had taken place here. Tom and Molly were safe.
‘So how do we get home?’ Molly said.
‘Don’t ask me,’ Tom replied.
Molly turned into him, resting her hands on his shoulders, and gazed steadily into his eyes while smiling mischievously.
‘Tom?’
‘Yes?’
‘We might not get another chance like this. Have you ever fooled around in a car?’
‘I don’t believe so,’ Tom said.
‘Give me your hand, Tom.’
Tom let her hold his hand. She unbuttoned her Chinese blouse and pulled it off her shoulder, then placed Tom’s hand on her bare breast and sighed with deep pleasure. Tom closed his eyes.
‘Do you like the feel of me, Tom?’
‘God, yes, Molly, I do.’
‘There’s an awful lot more of me, Tom, and you’re a born explorer. Go exploring, Tom. Live a life.’
Tom kept his eyes closed. He let Molly be his guide. Together they went to

places that he had never been before, and the experience lifted him out of himself and offered transcendence. There were stars in his head. The cosmos unfurled before him. He was released from the inhibitions that had constrained him and he felt resurrected. Good spirits surrounded him. Though faceless, they smiled upon him. He felt their warmth and it poured down to his loins and let him melt into Molly. Entering Molly, he found a new life, a world beyond time and space, and he sensed that the world he had left behind, if still there at all, had been changed in some way he could not imagine; though the changes, he was convinced, were for the better and might bring peace on Earth.

Not that it mattered. Nothing mattered but his new feelings. He saw more stars and was raised on high by angels and surrounded by white light. The white light was benevolent.

‘God, I love you,’ Tom said.

Revelation

W.A.Harbinson

Without warning, after a night of terrifying disturbance, an event of unparalleled significance occurred to shake the foundations of civilisation.
It was an event so magnificent, so extraordinary, that it would alter forever the political structure and the spiritual beliefs of Western society.
Bringing, ultimately,
the peace that passes all understanding…
‘An extraordinary combination of love story, occult, horror and science fiction… an electrifying read.’
-Bookbuyer

‘It’s a great idea and Harbinson makes it work wonderfully. A book with a difference that teases the imagination with its ingenuity.’
-Sunday Tribune

‘It has the lot – love, horror, science fiction, political and religious intrigue involving the major religions and world powers, and an extraordinary story of the resurrection of a man hailed by those religions as the saviour of the world.’
-Bookseller

All at Sea on the Ghost Ship

W.A.Harbinson

In the year 2001 the son of bestselling novelist and biographer W.A.Harbinson offered his father a free trip as the sole passenger on a container ship that would sail from Shanghai to Haifa, with many other ports in between. Once on board the ship, Harbinson found that he was the only white face in a crew composed solely of Indian officers and Chinese seamen. He also realised that while he had previously sailed on passenger liners, he was ‘all at sea’ when it came to a working ship.

All at Sea on the Ghost Ship is Harbinson’s account of his unpredictable, always fascinating voyage. Rich in feeling, acute in observation, and often very funny, *All at Sea on the Ghost Ship* is a book to give us hope and make us smile. It is also an intriguing, rare glimpse into the mind of a writer.

The Writing Game

Recollections of an Occasional Bestselling Author W.A.Harbinson

The Writing Game is an autobiographical account of the life and times of a professional writer who has managed to survive the minefield of publishing for over thirty years.

Unlike most books on the subject, ***The Writing Game*** does not try to tell you how to write, or even how to get published. Instead, it focuses with gimlet-eyed clarity on the ups and downs of a unique, always unpredictable business.

On the one hand, a compelling look at a life lived on the edge, under the constant threat of failure, both artistic and financial, on the other, an unusually frank self-portrait enlivened with colourful snapshots of editors, fellow authors and show business celebrities, ***The Writing Game*** succeeds, as few other books have done, in showing how one professional, uncelebrated writer has managed to stay afloat in the stormy waters of conglomerate publishing.

Here, for the first time, a working author tells it like it really is.

Projekt UFO

The Case For Man-Made Flying Saucers W.A.Harbinson

W.A.Harbinson's groundbreaking non-fiction work, *Projekt UFO: The Case for Man-Made Flying Saucers*, was widely regarded as one of the most detailed and level-headed books ever published on this controversial subject. It was also considered by many to offer the definitive explanation for a mystery that had haunted the western world for the past sixty years. Now, at last, this revelatory book about 'the world's most fearsome secret' is available to a worldwide readership. *This new edition contains updated material written especially for it by the author*.

Into the world of Might Be

W.A.Harbinson

Two astronauts, a man and a woman, are taking part in a scientific experiment designed to gauge the effects of prolonged isolation and weightlessness on the human body. At first everything runs smoothly, but then things start going wrong. First, the Skylab inexplicably malfunctions, then the astronauts have magical, fearful experiences. But are their experiences real or imagined? Is the Skylab haunted or not? Or are both of them simply going mad?

Into the World of Might Be is a tour de force of prose writing, an astonishingly vivid evocation of the bewildering ‘new reality’ of quantum physics, alternate or parallel universes, black holes and the mysteries of Time. Uniquely combining hard scientific facts with a philosophical, metaphysical and, at times, deeply religious work of fiction, this could well be the ultimate short text for the New Age… for a new generation. Read it and take wing.

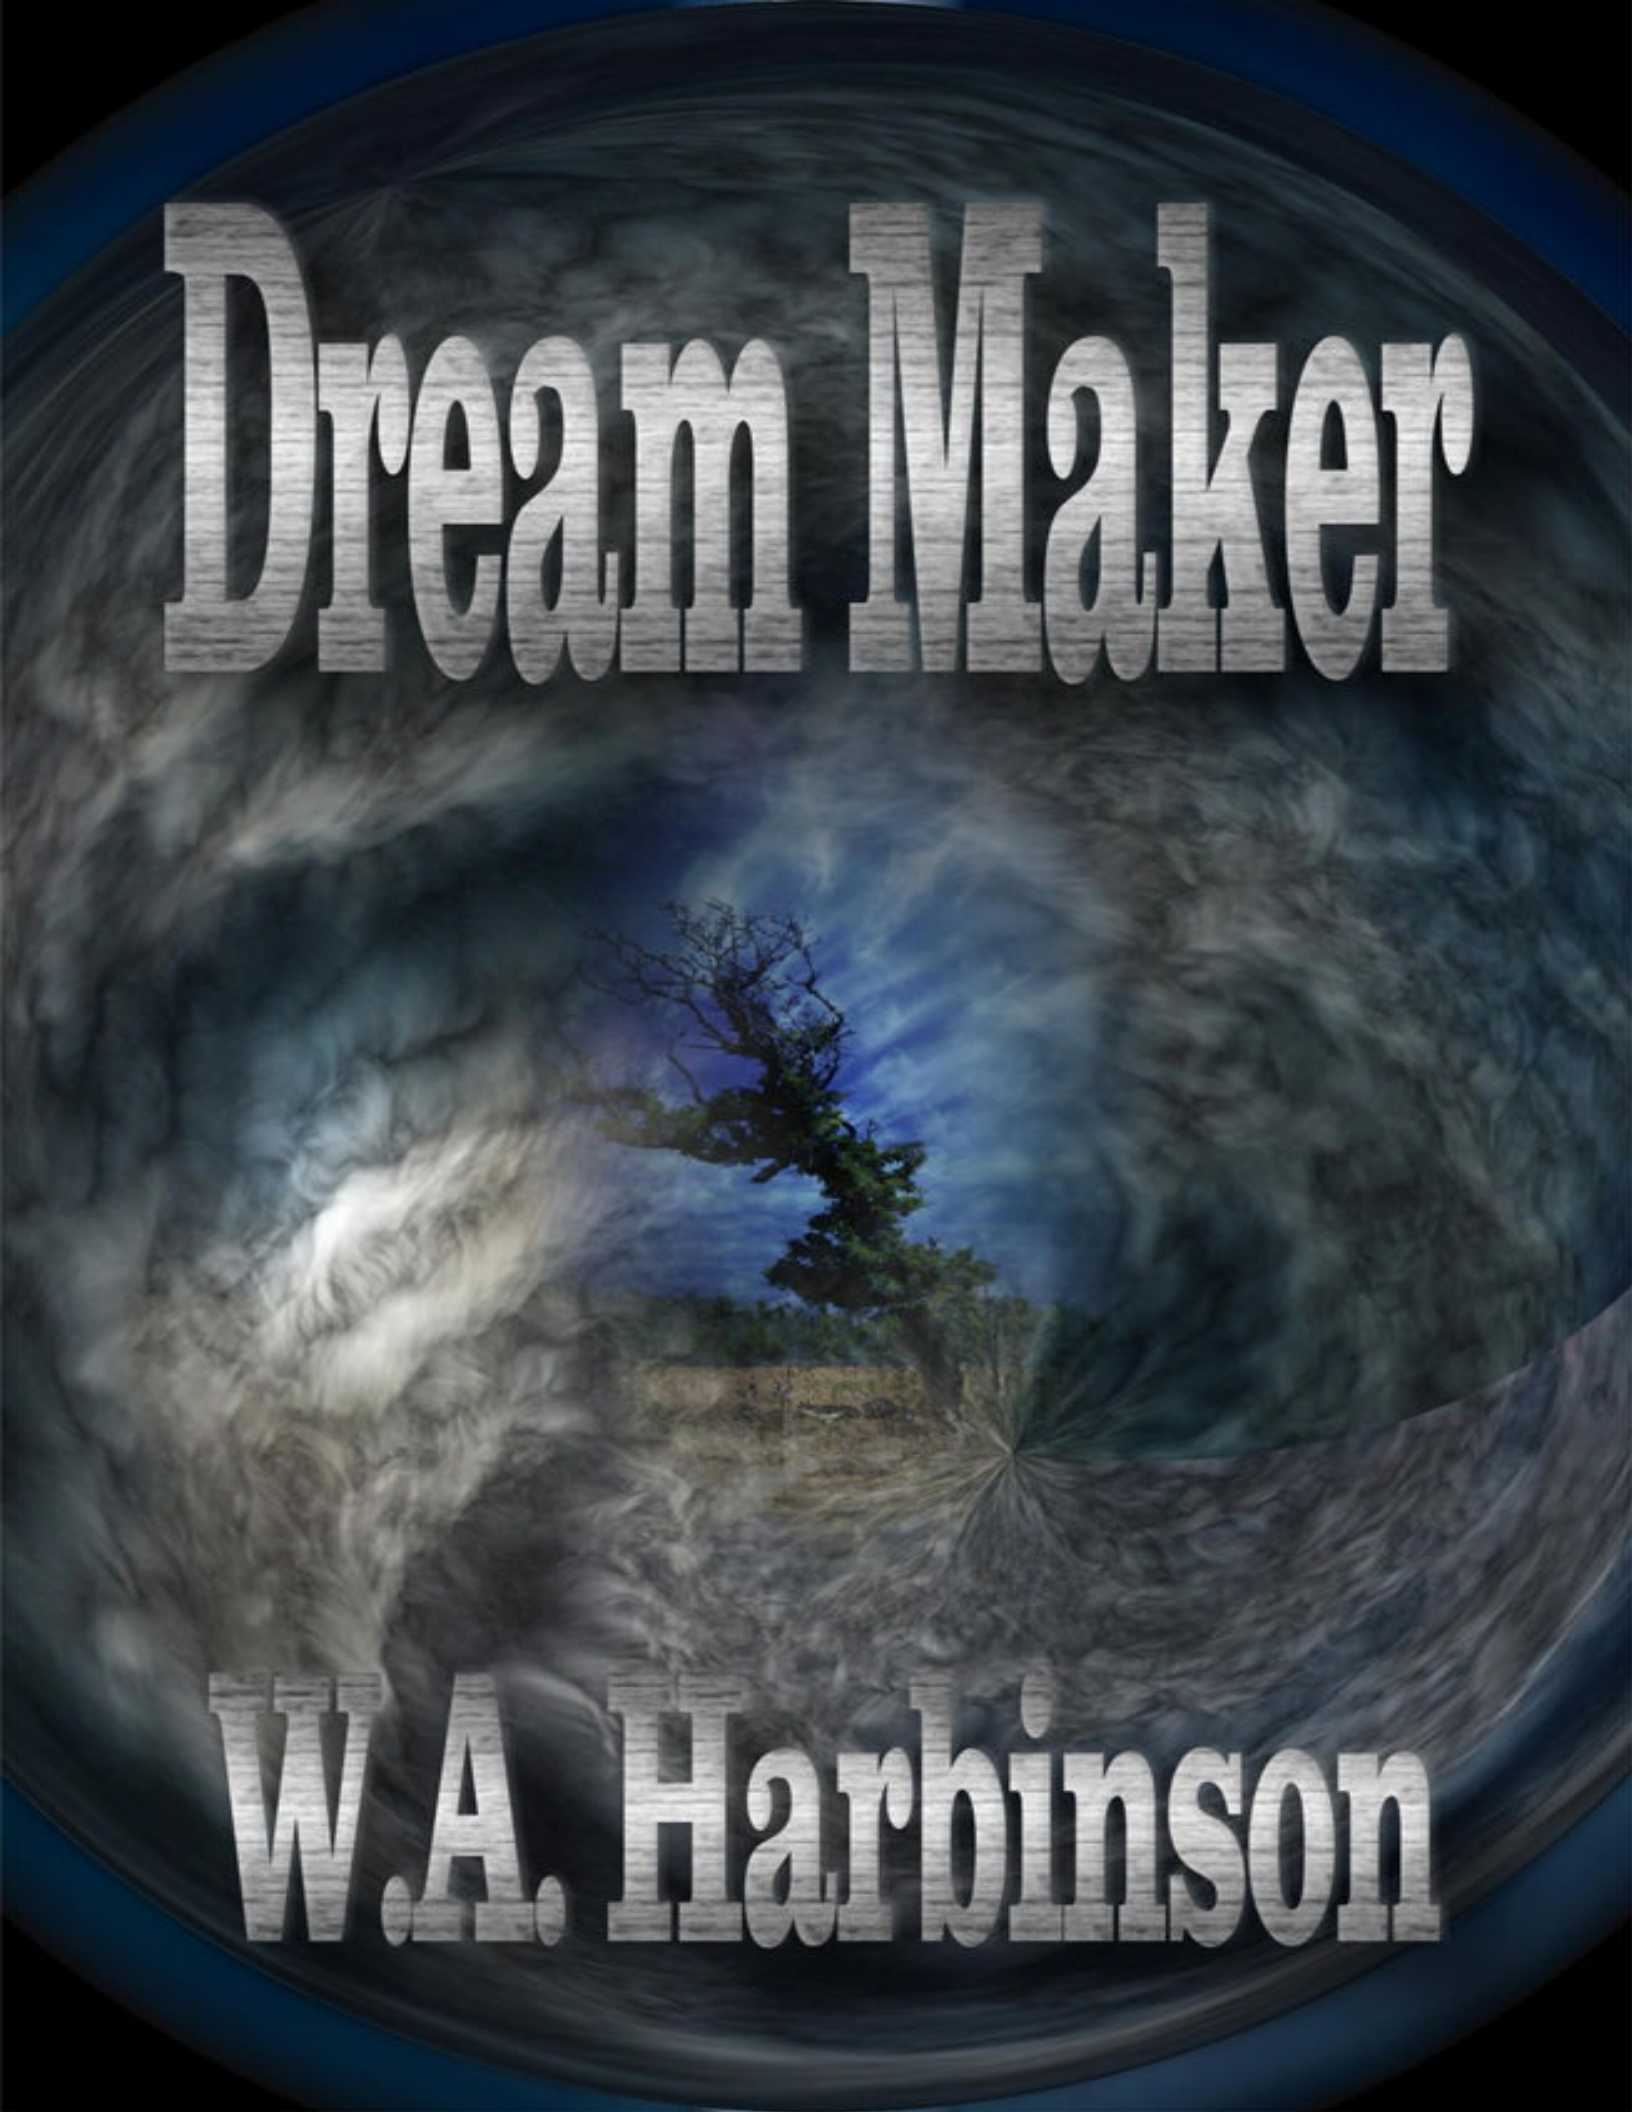
Dream Maker



W.A. Harbinson

DREAM MAKER

"The fires were burning in the darkness of America..."

The scientific community thinks it knows what's destroying the ozone layer until a brilliant, but overly emotional, NASA physicist, Tony Rydell, hits upon the truth in a terrifying and near fatal flight over Antarctica. But nobody will listen to what Tony has to say because neither the US government nor the military, with their short-term interests, can afford to do what has to be done.

Only Clare Holton, an attractive, strong-willed, but emotionally repressed government scientific liaison officer, is willing to give Rydell a hearing. However, her lover, the ruthless White House financial advisor, Jack Douglas, has the President's ear and is determined that *nothing* will undermine his plans to make the United States *the* world's dominant economic power - even if it costs the environment in the process.

So while the world's governments sit back and do nothing, Tony and Clare, initially antagonistic but gradually drawn together, emotionally and sexually, embark on a dangerous, magical quest: to save Earth from the Dream Maker - a mysterious force now growing stronger in the ever-widening hole in the ozone layer... a force that feeds off people's minds and sends them into an alien dream world filled with UFOs and ghosts, monsters and resurrected loved ones... a world where the line between dreaming and reality is gradually being eroded.

This in turn brings fire and flood, famine and disease... and America, the most powerful nation on earth, is being forced back to its pre-industrial age and facing total breakdown.

The race is on to prevent this...

DREAM MAKER is a fascinating combination of love story, horror story, science fiction and hard facts - a prediction of the world to come if we don't deal with today's terrifying environmental problems.

Part One

Chapter One

Tony saw it coming. At first it was just a pinprick in a vast sheet of darkness, then a gleaming white eye, but then it expanded, flaring out in all directions, and raced at him and exploded around him, obliterating the real world.

He was sucked through space and time, hurled into another dimension, then spiralled down through the cascading voices of history and returned to his constant dream.

Space folded into itself. The sudden silence was stunning. He looked up from Europa, across the valleys and frozen mountains, and saw the vast golden globe of Jupiter. It hung above the white mountains, which in fact were frozen ice, and it was streaked with yellow and gold, its Great Red Spot a bloody wound. Around it were the satellites, thirteen, maybe more, and all of them, the enormous apple and its seedlings, were drenched in the stars.

Tony knew where he was. Close to Jupiter... in his dreams. He knew it as he emerged from his dream to the dawn's pearly light...

Suzy was sleeping beside him, snoring softly, her body warm, and he wanted to stroke her blonde hair and roll gently into her.

'Godammit!' he whispered.

He rubbed the sleep from his eyes, returning reluctantly to the real world. Glancing around the small bedroom, sparsely furnished, untidy, he wished that he could *really* fly to Jupiter or some other world.

No arguments there, he thought.

Suzy murmured in her sleep, curling up tighter, pressing against him, and he felt a rush of heat, his helpless lust and hardening, and so groaning in despair at his mortal weakness, he pressed himself into her.

'Hon',' he whispered tentatively,

'Uh?'

'Come on, Hon',' he said, hopefully stroking the smooth arch of her raised hip and thigh, 'let's get it on.'

She groaned and tugged at her raised nightdress. 'Gawd, Tony! What's the time?'

'It's dawn,' he told her, pressing even closer to her. 'I'll be leaving soon, sweetheart.'

'Yeah,' she said. 'Right.'

'For four weeks.'

‘You volunteered.’

‘Four weeks is a long time, darling, so come on, turn around.’

‘I don’t feel like it, Tony.’

‘Jesus, Suzy, I’ll be gone for four weeks!’

‘You volunteered,’ she repeated.

Her sleepy resentment dampened his ardour, bringing him back to earth, making him aware again of the liquor on her breath and reminding him that she hadn’t come home until the early hours, after leaving him and the kids alone for most of the evening. She had done it, even knowing that he was leaving this morning to take part in a four-week National Ozone Expedition in Punta Arenas at the southern tip of Chile. And she hadn't even done it to spite him.

She did it all the time, these days.

Sighing in despair, he rolled away from her, gazed forlornly at the ceiling, then eventually slipped out of bed and hurried into the bathroom. He slammed the door behind him, letting her know what he felt, and by the time he had showered and returned to the bedroom, she’d aroused herself and could be heard in the kitchen, preparing breakfast and having words with the kids. She didn’t sound very happy.

‘Here goes,’ Tony murmured.

He walked into the kitchen-diner and smiled brightly at his kids, Don and Ronnie, twelve and ten respectively, who were having their breakfast cereal at the table. They both looked a bit scruffy - he was unhappy to see that - but Ronnie still had the face of a golden-haired angel and his elder brother, Don, was listening to him with his familiar expression of grave concern.

‘Spiders,’ Ronnie was saying, tapping his spoon on the table and automatically scratching his ribcage. ‘I dreamed about spiders again. I *always* dream about spiders these days. That’s ‘cause I hate ‘em.’

‘You shouldn’t hate ‘em,’ Don said helpfully. ‘They’re just living things, that’s all. I mean, spiders think they look perfectly natural, right? And to each other, they do. They probably think *we* look as ugly as we think *they* look. So, you know, you shouldn’t worry about ‘em. After all, they’re not dangerous like snakes. They give *me* the shivers!’

‘I still hate ‘em,’ Ronnie said.

‘Just try not to think of ‘em,’ Don said, ‘and you’ll stop dreaming about them.’

‘Stop talking about spiders,’ Suzy said wearily, not taking her eyes off the frying pan, making flapjacks and eggs. ‘I can do without spiders at breakfast, so

shut up and eat, kids.'

She was still slim and long-legged, her figure emphasised sexily by her figure-hugging denims, high-heeled boots and tight, open-necked checkered shirt. She was also blonde-haired and pretty, with oddly sensual-childish features, though this morning her cat's green eyes were puffy and bloodshot.

'Morning, kids!' Tony said. 'Morning, Suzy!'

'What's good about it?' Suzy replied automatically.

'I didn't say it was good. Merely mentioned its existence. Not feeling well, darling?'

'Ha, ha. You want flapjacks?'

'With ham and eggs, sunny-side up. If it's not too much trouble.'

'No trouble at all. That's what I'm here for. Just being a good little housewife. It's all in a day's work.'

'I dream about rats, too - ' Ronnie began.

'Shut up!' Suzy warned him.

'I was just saying - '

'Don't say anything, Ronnie. I don't like rats at breakfast either, so just finish your cornflakes.'

Tony poured himself some coffee. 'Let him talk,' he said to Suzy. 'He just wants to express his subconscious fears, and that can't be a bad thing.'

'He should just try to forget them, like Don told him to,' she replied, breaking eggs into the pan. 'All this talk isn't good for him.'

Nor for us, Tony thought, letting the coffee burn down inside him, smelling the frying ham and eggs, and gazing out at the other houses of Greenbelt, Maryland, which this morning were bathed in bright sunshine.

'It's all psychology,' Don said helpfully. 'I read that in one of your books, Dad. All these things that scare us come to the surface when we're dreaming. That's why Don dreams of spiders and rats.'

'One more mention of those things at breakfast,' Suzy said grimly, 'and you'll both end up starving. Why don't *you* make them stop, Tony? They're *your* kids, as well!'

'Okay, you two,' Tony said, grinning broadly at them as Suzy placed his plate on the table. 'You're *my* kids, as well, see? So stop all this talk about spiders, rats and snakes and get on with your breakfast.'

Both boys laughed at that, but Suzy just glared at him, and when he sat down to eat, he could feel her eyes boring like lasers into his spine.

‘Okay,’ he said, tucking into his breakfast, ‘let’s call it a truce. I’m going *away* today, kids.’

‘You’re *always* going away,’ they both said simultaneously.

‘Right,’ Suzy added.

She brought a cup of coffee to the table, sat down, lit a cigarette, exhaled a thin stream of smoke.

‘At breakfast?’ Tony asked sarcastically.

‘At least I’m home,’ she replied, then turned towards the kids. ‘Are you finished?’

‘Yeah,’ Don said.

‘The sun’s shining and it’s Saturday morning, so you can go out and play. Just keep the noise down, right?’

‘You got a hangover?’ Tony asked.

‘Yeah, I’ve got a hangover. What's that to you? Okay, kids, get going.’

The boys hurried from the kitchen, forgetting spiders, snakes and rats. Tony watched them disappearing through the door with a great deal of pleasure... But when he turned back to Suzy, she was staring accusingly at him, her face hazed in the cigarette smoke, making him wonder what had happened to the girl he’d once loved so much - and possibly still did.

They had both been born and raised in the high prairie plains of west Iowa, brought up by staunch Republican parents on neighbouring farms, and met for the first time at high school in Des Moines. Almost immediately they’d plunged into a passionate, blind, teenage romance that encouraged them to marry, probably too young, but certainly soon after leaving high school. Pregnant with Don, their first child, Suzy had remained in their small apartment in Ames, while Tony went on to study physics at Iowa State University. However, Suzy had soon become dissatisfied with being a housewife and mother, trapped at home all day, and her mood was not improved when Tony, having passed his exams, was offered a job as a junior physicist with the Manned Spacecraft center in Houston, Texas, which meant leaving Iowa, which Suzy loved, and moving to a tract house in Seabrook, a small town located in the dry flatlands between Houston and Galveston.

It wasn’t a particularly nice place to live. The winds from the Gulf of Galveston continually swept across the town, bringing with them the suffocating, unhealthy stench of natural gas, petrolium, sulphur, salt, and the various chemicals from the many oil fields and plants producing cement,

textiles, synthetic rubber and cotton. It was also hot and humid, prone to violent storms, and even the sleepy town they lived in seemed as mean as the weather.

Tony hadn't liked it much, but at least he had loved his work; whereas Suzy, who'd had a busy social life in Iowa, almost went mad with boredom. They had another child, Ronnie, and she started drinking shortly after, then got an itch for places like Gillie's bar and other noisy watering holes. Invariably she went out with her girlfriends, some married, others single, rarely returning until after midnight, usually red-eyed.

He kept waiting for her to stay out all night, but so far, to his surprise, she hadn't done that.

Yet things weren't too good between them. As Tony's workload at MSC had increased, as his work began taking him over and he became a workaholic like most of those at NASA, he and Suzy had grown even more distant to one another, she had started going out more, and the drink, even while making her irritable, had started making visible inroads in her appearance.

Like him, she was twenty-eight, but unlike him (he liked to think), she looked like someone in her early thirties - a hell of an age, really - a woman still sensual, even sexy, but no longer attractive.

At least, that's what he told himself.

Looking at her now, and convincing himself that she looked worn-out, he realised that he'd been hoping their recent move to here, to Greenbelt in Maryland, where he was working in the space environmental physics department of NASA'S Goddard Space Flight center, would have changed her - but it hadn't. She hated Greenbelt as much as she had hated Seabrook, complained constantly that he was away from home too much - which was true - and was drinking maybe even more than ever.

Tony felt that his marriage was dying, but he didn't know what to do about it.

'Look,' he tried, 'about this trip - '

'I don't wanna discuss it, Tony.'

'We *have* to discuss it. You're angry. I can tell that. So let's get it out in the open. It's healthier that way.'

'What is there to discuss? It's your goddamned *work*, after all. I mean, the trip's already booked - and as you said yesterday, it's part of the job and you couldn't get out of it if you tried. You *have* to travel a lot for your work, so why bother discussing it?'

In fact, he wanted to discuss it, but wasn't allowed to... He was going to the

Antarctic, as his boss and neighbour, Dwight Connors, had informed him, because a USAF pilot had recently crashed there, after becoming unaccountably hysterical in his aircraft. Even now, Tony felt shivery, unreal, when he recalled the pilot's hysterical shouting on the tape of his transmission: 'Something's out there! It's above me! Beside me! *Below me!* Jesus Christ, oh my God, I don't believe... Please, no! No, no, no... *Keep away from me!*' Then he'd started screaming dementedly as his airplane went out of control, eventually crashing into the Antarctic ice, where it burst into flames... It was a mystery, all right, and one that Tony wasn't allowed to discuss it, which was no help with Suzy.

'You want me to give up my job? Is that what you want? You want me to leave NASA and take a job where the money's a lot less and the work's not worth doing, but at least I'll be home all the time. Is that what you want?'

'At least we'd *see* each other now and then!'

'I'm not away that often, Suzy. I only make these trips four or five times a year. A month's the longest I've ever been away. I mean, I'd *like* to be at home a bit more, but what the hell can I do? The money's good and - '

'It's not the money and you know it. You stay there because you like it. You're fanatical about your work and you love making these trips and you don't give a damn that I'm rotting here while you have a good time.'

Tony was outraged. 'While you *rot* here?' he practically shouted. 'At least I go away to *work*! And when I'm home, at least I'm home! I'm not out every evening, getting drunk and making eyes at the ladies, like you do with those cowboys. Godammit, I - '

'Cowboys? *What* cowboys? We're not in Texas now, Tony. We're in Greenbelt, Maryland, in a dumb tract house in the boring suburbs, and our neighbours are pilots, astronauts, scientists and their godawful wives. I don't make eyes at *cowboys!*'

'You know what I mean, Suzy.'

'Right, I know what you mean! But since you're married to your work, I don't know why my activities should concern you. And without them, without getting out at nights, I'd go mad in this place.'

'You said that in Texas, too. You'd say it wherever we moved to. Other women would take pride in raising their kids and running a decent home, but all *you* want is to have a good time with those tramps you call friends.'

'And why not?' she retorted, blowing a cloud of smoke at him. 'You love your work, so *you're* having a good time. If you, why not me?'

She had him there and he knew it. He loved his work and always had. Even as a kid he had dreamed about being a scientist involved with space research - and since then, he had single-mindedly devoted himself to achieving his goal. Not sure as an adolescent just what branch of science he wanted to enter, he'd had no doubts at all about his obsession with outer space and to that end had read voraciously about the great rocket pioneers - Konstantin Tsiolkovsky, Hermann Oberth, Robert Goddard, Wernher von Braun - and built countless ingenious models of various airplanes and rockets while most of his friends were out cruising or at the movies. At one time toying with the idea that he might become an astronaut, he thought of joining the Air Force, but changed his mind because he didn't want to wear a uniform. Instead, he took flying lessons while studying physics in Iowa, and eventually, given his academic brilliance and dedication, he made it into NASA, eventually progressing to work with the Earth System Science program of the NASA-Goddard Institute for Space Studies, created to study the increasing dangers of the 'greenhouse' effect, caused by the widening hole in the Earth's protective ozone layer. Now, though still a physicist, he was more frequently called a climatologist and had, on behalf of NASA, worked with climate change models for a broad range of climatology organisations, including the National center for Atmospheric Research in Boulder, Colorado, the Geophysical Fluid Dynamics Laboratory at Princetown University, the Meteorological Office in Bracknell, Berkshire, England, the Beijer Institute in Stockholm, Sweden, the center for Applied Climatology and Environmental Studies in the University of Munster, West Germany, the TATA Energy Research Institute in New Delhi, India, and numerous other similar organisations in Europe, England, and the United States.

No wonder Suzy was mad at him. He *did* travel a lot. And if that was true enough, what was equally true is that he loved his work and couldn't give it up for anything - not even his marriage.

He felt guilty about that.

'Listen,' he said, as he had said once too often, 'I've got to go now. We'll discuss this properly when I get back. We'll work something out.'

'No, we won't, Tony. You always say that, but it never happens. You'll just go off for a month, leaving me alone with the kids, and when you come back, you'll be too busy writing your damned reports to have time to discuss our situation. Then, before you *get* time to do it, you'll be off on another trip.'

'It'll be different this time, Suzy.'

‘No, it won’t. Not at all. And I’m fed up listening to your goddamned stories each time you take off. To hell with you and your work. I’m sick of being left alone here. This time, I’m warning you, if you go, I won’t be here when you come back.’

Tony sighed and stood up, glancing down at his suitcase. ‘You’re just being melodramatic. I’m going to go while the going’s good.’

‘I won’t stay here! I swear it!’

‘You’ll leave home?’

‘Yes, I will.’

‘Don’t be stupid.

‘Just go to hell, Tony! You walk out that door and we’re finished. Do you understand, damn you?’

Startled, he stared at her, hardly believing her vehemence, gradually realising that she meant what she had said, feeling all hot and bothered.

‘Christ,’ he said, ‘this is crazy!’

‘It’s not crazy; it’s the truth.’

‘When I get back - ’

‘I won’t be here!’

‘Will you *listen* to me?’ Tony raised his hands as if in prayer. Though he hadn’t stepped outside to brave Maryland’s morning heat, he was already sweating. ‘Will you just goddamn *listen?*’

‘No!’ Suzy snapped. ‘Why should I? You *promised* you wouldn’t go away again and yet you’re going already. Damn you, Tony, I hate you!’

She had been saying that for months, but now he knew she was starting to mean it. He glanced through the window, trying to control his heavy breathing, then looked up at the brightening sky over Greenbelt and yearned to be in it.

‘I have to go and you know it,’ he said, ‘so I’m going right now.’ Picking up his suitcase, he took note of her flushed face, and convinced himself that he no longer cared for her, no matter how much he wanted to. ‘You’ll calm down as soon as I leave. You’ll think more clearly then. Do I get a goodbye kiss?’

‘No, damn you, you don’t.’

He shrugged, trying to shake off the hurt. ‘Okay, Suzy, goodbye.’

She inhaled on her cigarette, stubbed it out in the ashtray, blew a cloud of smoke and stood up and walked from the room.

That was her answer.

Tony sighed, then, not knowing what else to do, he picked up his suitcase,

walked out of the house, and found Don and Ronnie on the front lawn. They stopped playing when they saw him, both staring at his suitcase, then impulsively embraced him and stepped away to let him walk off.

Shaken by the fight with Suzy and deeply moved by the boys' impulsive display of emotion, he stopped before getting into his car and turned to look at them. They smiled and waved and he filled up with love for them. Then Suzy, smoking another cigarette, appeared in the doorway behind them and staring silently at him. Not knowing what to do, he just shrugged his shoulders, climbed into his car and drove off.

Chapter Two

Utilizing the will-power she had developed as one of the few female astronauts, Clare Holton slept like a log, awoke at 9.00 am precisely without the aid of a room call, slipped out of bed, showered and dressed herself, then had the light breakfast she had ordered from room service. Then she sat down at the desk overlooking Montreal's St. Lawrence River and proceeded to work.

As the scientific representative and public speaker for NASA's National Space Technological Laboratories, as well as liaison officer between NASA and the Department of Defence, she had spent the past seven days attending a meeting of the representatives of the technologically developed countries, being held under the auspices of the United Nations. Now, while the representatives of over thirty countries were individually deciding whether or not they should sign the first global treaty aimed at reducing worldwide atmospheric pollution, she reappraised the mass of detail she had soaked up over the past week. Later that afternoon she was going to speak to the assembled delegates on behalf of NASA, which in this instance was representing the US government's official stance on the matter.

Three hours later, she finished her task, folded up the notes and put them into her bag, then left the room and went downstairs to join Jack Douglas for lunch in the hotel's restaurant.

'*Bonjour*!' Jack exclaimed, raising his glass of Scotch to her as she approached his table. '*Comment allez-vous*?'

‘I’m fine,’ she replied, though her command of French was better than his. ‘I’m actually feeling bright and healthy - which is more than you’ll feel if you have another Scotch before the conference.’

He grinned wryly as she took the chair facing him.

‘A mere medicinal,’ he said. ‘Of course we know that Miss Holton, physicist and former astronaut, is not in need of artificial stimulation like most other mere mortals. Can I *tempt* you at least?’

‘I don’t think so,’ Clare replied. ‘I’ll have a Perrier water and the Caesar salad. And *you* should eat, too.’

‘I could eat *you*,’ he said.

‘I didn’t mean sex, I meant food. Have an omelette, at least.’

‘You’re so sensible, Clare.’

He called the waitress, ordered the food and drink, then leaned over the table to ask: ‘Have you prepared your speech?’

‘I wrote it this morning.’

‘Of course,’ he said, sipping his Scotch and grinning at her. ‘Your intellectual brilliance is renowned, your dedication much lauded. That’s why you intimidate so many men: they can’t be men in your presence.’

‘You mean they can’t look after me, feed me sugar, pat my head. They can’t have my blind adoration.’

‘That’s right,’ Jack said. ‘They’re frightened by your intelligence and independence. They lose their balls in your presence.’

Clare couldn’t help smiling. ‘I don’t seem to intimidate *you*, so what does that prove? That you’re a man amongst men?’

‘Not a man amongst men, but certainly more of a man than you are. Or, to be more precise, that I’m a man who’s not frightened of women who don’t fear me. But you’re so completely your own woman, most men can’t get to grips with you.’

‘And you?’

‘Not being frightened of you, I can treat you as an equal. And since that’s such a rarity for you, you were attracted to me, though not as much as I’d like.’

‘And how much is that?’

‘As much as it takes to make you marry me.’

‘That’s too much,’ she told him.

He didn’t flinch, and she admired him for that; it was the kind of strength, so rare in a man, that had drawn her into his bed.

Just short of forty years of age, which made him ten years her senior, he possessed matinée-idol good looks, was too bright for his own good, and had cynicism welded to his intelligence and rampant ambition. An economic advisor on environmental issues, he worked, where she also worked, in the Old Executive Office Building next to the White House, reported directly to the President, and was widely rumoured to be a mean man to mix with where work was involved.

Clare enjoyed his cynicism, though she didn't actually share it, but she was also wary of him because of his rumoured mean-streak. Just occasionally, when she had teased him about something, she had sensed him suppressing his anger... and that, at least in the past few weeks, had made her wary.

'*Why* won't you marry me?' he asked abruptly, as if reading her mind.

She sighed. 'I've told you before. I just don't want to be married.'

The waitress brought Jack's omelette, Clare's salad and Perrier water, placed them on the table and left.

'Why not? Were your parents unhappily married?'

'No, Jack, they weren't. They were very happily married. But they were also independent and gave themselves the kind of personal freedom that's so rare in marriage. They gave that to me as well, and told me to hold it dear. So I grew up aware of the clinging possessiveness of most people. And because my parents were both devoted to their work, they drilled discipline onto me, will power, and the belief that since work takes up so much of our time, we should work only at what we truly love and put nothing above it.'

'Not even personal relationships?'

'I doubt that I could get seriously involved with a man who didn't share my beliefs.'

'Such a man,' Jack said, 'would obviously have to love his work even more than he loved you. That's pretty unusual.'

Clare sighed. 'I suppose so.'

'Did your father love his work more than he loved your mother?'

'You're simplifying the issue,' Clare said. 'It wasn't as simple as that.'

She tried to explain it as they ate their meals. As she did so, she smiled, thinking of her parents with all the love of a single, cherished child.

Born and raised in an elegant town house just off Wisconsin Avenue, in Georgetown, Washington DC, she had nothing but loving memories of her childhood in a home that was always filled with people and, at least to her

child's perception, with optimism, good humour and hard work. Her father had been, and remained, a Professor of Astronomy Space Sciences, formerly at NASA, presently at the Center for Radiophysics and Space Research. Her mother, when alive, had been a distinguished analytical chemist and writer of numerous, now standard reference books.

Clare, raised and guided by two singular personalities, influenced by their philosophy and experience, had been filled forever, so she thought, with the absolute conviction that only people who first respected themselves could offer true respect and freedom to their loved ones. Certainly she had learned that her father and mother, both dedicated to their individual careers, had each, by putting their work first, given the other the freedom to do the same. She would never forget that.

'So when, six months ago, my mother died,' she told Jack, 'my father and I were able to deal with it because we had what even my mother thought was the most important thing: work that we loved. In other words: a reason to be. Not too many have that, Jack.'

He stared at her in an oddly intense, curious manner, though his smile, when eventually it came, was slightly sardonic. 'And it's that simple? That's why you still haven't married?'

'Yes,' she replied. 'I think I'm still single because I was taught to retain a strong sense of myself. And I haven't yet met a man who was so attractive to me that he made me want to surrender my independence. Not even you, Jack.'

'My God, you're one hard, direct lady. No wonder I like you.'

'You like me because you think I'm just like you, but I'm not. I'm not that cold.'

'You think I'm cold?'

'Yes. You're hot in bed, but you're calculating. You know how to please a woman sensually, but emotionally, you're not involved.'

'I am. I keep asking you to marry me and am constantly refused. Why would I take that if I didn't really want you?'

'If I'd said "yes" the first time, you'd have lost interest. You're a man who can't stand being refused. That's why you're in politics.'

Jack was about to reply when the ringing of his cellular phone distracted him. Clare had always been annoyed by the increasing use of such executive toys in public places, but she simply got on with her meal as Jack, merely nibbling at his food, conducted a lengthy conversation with his broker. He enjoyed playing

the market and had many investments. Now, while Clare ate and glanced around the crowded restaurant, taking note of the mostly male clientele, wondering how many of them realised just how quickly their world was changing, Jack was buying and selling shares in the very multinationals that she was trying to fight. The more she knew him, the more he annoyed her, though she still shared his bed.

'Sorry,' he said, putting the phone back on the table.

'Bad enough that you have to bring one of those ridiculous things into the restaurant; even worse is what you're using it for. Don't you realise that what you're doing represents a conflict of interests?'

'I'm not sure I get your drift, Clare.'

'You're the president's financial advisor on environmental issues and, according to rumour, might soon be his new chief of staff. You shouldn't be at this conference publicly lending your support while privately supporting the multinationals with your numerous investments. It's not only a conflict of interests: it's damned hypocrisy!'

'Only true if your suppositions about the ozone hole are also true - and that hasn't been proven yet.'

'That's semantics.'

Jack grinned. 'That's politics. And by the look on your face, I think I'll be safer at the conference.'

'Then pay up and let's go.'

When he had paid the check, they left the hotel, caught a taxi to the conference center, and took their places with the other delegates. The large room was packed and hot. After seven days of often acrimonious debate, most of the delegates had clearly made up their minds, one way or the other, and were merely enduring the closing summaries without showing any great degree of interest. Nevertheless, under the glare of the spotlights and in front of the massed TV cameras, boom-mikes and photographers, Clare spoke on behalf of NASA. Afterwards, she summarised her speech for those who would only see only an edited version, either on TV or in the newspapers.

In simple terms she explained that the ozone in the atmosphere protected the surface of the Earth from ultraviolet radiation produced by the Sun, which might otherwise destroy life on most of the planet. 'And ozone,' she said, 'is a form of oxygen, the active ingredient of the air we breathe, the gas that's essential for all forms of animal life on Earth.' She then reminded them that the ozone layer was

presently being destroyed at an ever-increasing rate by the fumes and gases of spray cans, insecticides, paints, polishes, disinfectants, and car and aircraft exhausts - destroyed, indeed, to the degree where it had finally formed an invisible 'hole' in the atmosphere - a hole the size of the United States and the height of Mount Everest.

'The complete destruction of the remaining ozone layer will result in increased skin cancer, cataracts and other diseases,' she told them. 'As well as blighting food crops and harming animals, it will upset the world's climate and life-support systems. Also, if the depletion of ozone isn't checked, it will cause a shift in the global average temperature, which would, in one direction, plunge us back into a full Ice Age or, in the other, melt the polar ice caps and inundate cities like New York, London and Leningrad.'

She paused to let her words sink in, then continued with: 'In short, if we do not vote, here and now, to take specific steps to reduce worldwide atmospheric pollution and protect the Earth's ozone layer, we'll be accepting the eventual destruction of human life as we know it. Ladies and gentlemen, thank you.'

She stepped down to enthusiastic applause.

Later that afternoon, when all the votes had been counted, nearly thirty nations had officially pledged to reduce the release of chlorofluorocarbons, or CFCS, by fifty percent by the end of the 21st century.

Clare was well pleased.

Chapter Three

'No,' Suzy said, wiping a tear from her eye, 'I won't listen, Maggie. I've had about as much as I can take, so this time I'm doing it.'

'For God's sakes, calm down,' Maggie said, 'and just think about it. You're upset, that's all. Give yourself time to think about it and I'm sure - '

'Are you gonna help me or not?' Suzy hauled more clothes out of the chest of drawers in the bedroom and threw them into a suitcase. 'If not, you can leave!'

Maggie was her neighbour and the wife of Tony's best friend, Dwight Connors. Luckily she had seen a lot of life and did not take offence. Plump and blonde, she simply shrugged, raised her hands and said, 'Okay! *Okay!* I'm here

to help, right? I'm gonna make you some coffee and give you a cigarette and try to calm you down and talk sense to you. That's what friends are for, right?'

'Wrong. I don't need that now. What I need is a friend who won't give me lectures, but'll help me carry this stuff out to the car. Now will you do that or not?'

Maggie sighed. 'Yeah, I'll do it. Dwight'll kill me when he gets back, but I'll do it. I just think you should sit down and have a drink and talk this thing through.'

'That's the best idea you've had,' Suzy said. 'At least pour me that drink. I can pack while I'm drinking it.'

She kept pulling clothes out of the chest of drawers and putting them into suitcases while Maggie left the room and returned with two glasses of bourbon. When Maggie gave her one, she sipped gratefully, then set the glass on the table and started zipping up the first suitcase.

'Why are you doing this?' Maggie asked.

'Because our marriage is finished.'

'It's not finished,' Maggie said. 'It's just going through a bad patch. Most marriages go through the same thing, but they often recover. Just give it a chance.'

'Give *him* a chance, you mean.'

'Yeah, give Tony a chance. I mean, the guy works for NASA. *All* those guys are workaholics. Even Dwight, for chrissakes, works all the time - but apart from that, he's okay, a good man - just like Tony. You're giving up a lot for a little, Suzy. It's all out of proportion.'

Suzy lit a cigarette, inhaled greedily, blew smoke rings. She could hear the boys packing in the next room and that made her feel worse.

She'd only told them an hour ago that she wanted a break from their dad, wanted to go live with her folks and take them with her, to go to a strange place and new school and different friends; and if that had shocked them enough, they'd been shocked even more when she told them they were leaving immediately, with no time to even say goodbye to their friends, let alone their own father. They'd asked why and she'd tried hard to tell them, but she couldn't explain it.

'I don't care what you say, Maggie. I think I'm doing the right thing. You've been living like this for years and maybe you even like it, but I can't stand being here all alone while Tony travels the globe and spends most of his time working

when he *is* home. I'm just not cut out for this. I've tried, but it isn't working. I'm not a scientist's wife, I never will be, and we don't love each other any more, which just makes it worse.'

'Love changes as you get older,' Maggie said. 'It's still there. It's just not the same.'

'Oh, yeah? What does that mean?' Suzy could still remember the feelings she'd had for Tony at high school - the blinding intensity, the all-consuming passion, the radiance that lit you up inside and made you feel magical. She hadn't felt anything remotely like that for years - only neglect and frustration - and the knowledge of what she had lost only made her feel worse. 'I mean, either it's there or it's not. If it's not the same, it's not there.'

'You're so romantic.' Maggie sighed. 'You still feel like an adolescent. But you're gonna have to learn to grow up, Suzy, and keep a check on your feelings.'

'I don't wanna be that way. It's not what I am, Maggie. I wanna live every day of my life and not get buried alive. He doesn't see me anymore. He only sees his goddamned work. I mean, even when I threatened to leave, he put his work first.' She shrugged, to hide her deep hurt. 'Well, to hell with him.'

After another slug of bourbon, she zipped up the second suitcase, hauled it off the bed, placed it heavily on the floor, then glanced wildly around her.

She was looking for Tony.

'You can't go home again,' Maggie said.

'What does that mean?'

'What the hell are you going to do in Iowa? I mean, what's there for you now?'

'My parents,' Suzy said. 'They still have the same farm. They live in the bread basket of America and they have a good life. So I'll stay with them. I might even help on the farm. The boys can attend a local school, breathe clean air for a change, and maybe even go to church once or twice. It'll work out fine, Maggie.'

'And that's it? You're set to go? You're just gonna leave a farewell note, get in the car, and drive off to Iowa with the kids?'

'Yeah, Maggie, that's right. And I'm taking all my CDs and those books and letting him have the rest. So come on, help me carry them.'

'Dear God,' Maggie murmured. But she did as she was told, picking up the box of books, which was all she could manage the first time, while Suzy resolutely took the suitcases and walked out of the bedroom. She put them down

in the living room, glanced into the boys' bedroom, and saw that they'd practically finished as well, though they weren't looking happy.

'Are you set to go?' she asked them.

'Yeah,' Don replied.

'Then bring your stuff out to the car.'

'Okay,' Ronnie said.

She ignored his wounded look, though was hurt by it all the same, knowing damned well that what she was doing was wrong, but not able to stop herself. She was too emotional, was why, and she'd always been that way, and when she felt neglected, as she had this past few years, she just couldn't handle it. She'd tried to, of course, but being here hadn't helped. She needed attention, was willing to give it, and so didn't feel comfortable in this scientific community, where everyone was so damned intellectual and obsessed with their work.

Tony was the same. He lived and breathed his goddamned work. And in doing that, he'd forgotten she existed, forgotten the love they'd shared in high school, and almost turned her into one of those wives who die quietly at home while still as fit as a fiddle, just dwindling away each day. He'd never treated her badly nor played around with other women, but he'd forgotten what had joined them together and she couldn't forgive that.

She still loved the little scatterbrained bastard, but he was too dumb to notice.

More resolute, she picked up the suitcases and followed Maggie out to the car.

Having just placed the box of books into the trunk, Maggie straightened up, breathing heavily.

She looked near to tears.

'I can't believe - '

'Believe it,' Suzy said. 'I'm really doing it this time.'

Maggie glanced over her shoulder. 'The boys are coming,' she said. True enough, they came down the lawn, carrying their gear. Don, the eldest, was grimly serious, whereas Ronnie looked wounded, but both of them gave Suzy their suitcases to be placed in the trunk.

'Are you okay?' she asked them.

'Sure,' Don replied.

'Look, I told you,' she lied again. 'It's not for a lifetime. We're just gonna give it a try. If you really don't like it after a time, I'll send you both home. Okay?'

'Okay,' Don said.

Ronnie didn't say a word, just glanced up and down the street. He hadn't even

said goodbye to his friends and that was obviously bugging him... That and the shock of leaving in general... Suzy choked up just seeing him.

'Okay, kids. Get in the car. We'll be off in a minute.'

They did as they were told, climbing into the back seats, and then Suzy led Maggie up the lawn and back into the house. She checked all the windows, the gas, the electricity, then sat down at the kitchen table to write Tony a short goodbye note.

Maggie started crying then. Suzy glared at her. Maggie went into the bedroom and returned with the CDs. 'I'll see you out at the car,' she said, and then hurried outside.

Suzy struggled with the note. She didn't know where to begin. She hardly ever had to write (like most people, she used the phone) and trying to put her feelings onto paper made her feel a bit threatened. She started a few times, tore the paper up, tried again, chewed her lower lip, sniffed back her tears and remembered their better days.

God, he used to be so cute! He'd charmed her immediately. A bit scatterbrained and most times dishevelled, but he'd had that little thing about him - a kind of childishness or innocence - and strangely, an awful lot of girls had liked it. He didn't threaten them, was why. He was too distracted to be a threat. If you wanted him, you practically had to rape him, though he'd never complain. In fact, that's what *she'd* done: come on real strong in the car. And they'd done it in the car - not too well, but with lots of feeling - and after that, he could fill her up with such tenderness, she just couldn't believe it.

Then they'd married and somehow lost it and she couldn't forget that fact.

She'd tell him that in this note.

But she couldn't do it. You had to touch someone to say that. So, touching only pen and paper, she wrote carefully:

> *'Dear Tony,*
> *I can't take any more. So I'm keeping my promise. I'm taking the kids with me to my folks in Iowa and I'm leaving you everything but my CDs and favourite books. Don't think you have to keep in touch. Goodbye and good luck. Yours sincerely, Suzy.'*

Leaving the note on the kitchen table, Suzy left the house for the last time. After

carefully locking the front door, she walked to the car.

Maggie, wiping tears from her eyes, said, 'Please, Suzy, just think about what you're doing. Just give it a - '

'No,' Suzy said. She smiled, feeling light headed, then suddenly brimming over with emotion, she embraced her good friend. 'You take care,' she said.

'And you.'

'Don't let Tony do anything too stupid.'

'I won't,' Maggie said.

They hugged emotionally again, then broke apart, embarrassed. Suzy climbed into the car, closed the door and turned on the ignition.

'Are you kids okay?' she asked.

'Sure,' Don said.

'Sure,' Ronnie added.

Suzy drove off as Maggie waved goodbye and both boys waved back.

Suzy kept driving, her vision blurred by tears. She turned the corner at the bottom of the street and said, 'Here we go, kids.'

'Aw, Mom!' Ronnie said. There were tears in his eyes as well.

Suzy slowed down, eventually stopped the car, and just stared straight ahead.

'Iowa!' Don said. 'What will *we* do in Iowa? We don't know a soul in Iowa. And what about Dad?'

'I told you: I'm leaving him.'

'It's not right,' Don said.

'I don't wanna leave home,' Ronnie said. '*Please*, Mom, don't go!'

'I've got to,' she told him. 'You don't understand, but I've got to. If you don't want to come, then don't come, but I've got to do this.'

'Would you be upset?' Don asked. Now he, too, was almost crying.

'No, Don,' she said. 'I understand. You two do what you have to do.'

The boys stared at one another, both with wet eyes. Then Don nodded and they opened the rear doors and climbed out of the car.

Suzy opened the trunk from inside. The boys removed their suitcases. After slamming the lid of the trunk closed, they both walked up to her. Don stuck his face down to the open window to show her his glistening eyes.

'Please don't go, Mom,' he said.

She smiled and kissed him. 'I have to.'

Don sniffed and sighed too loudly and stepped away as Ronnie stuck his face up to her. She kissed the tears from his cheeks.

‘We love you, Mom,’ he said.

‘I know. I love you too. But right now, I just can’t help myself. I’ll come and see you soon. I promise you that. In the meantime, you look after your Dad. Here,’ she added, handing Don her set of door keys. ‘Now get back to the house’

Don took the keys and nodded, but this time he couldn’t speak. Ronnie shuffled his feet uneasily, looked up at his elder brother, then tugged at his arm and made him pick up his suitcase and walked him away from the car, back towards their own street.

Suzy watched them turn the corner and disappear from sight. When they were gone, she just sat there, her heart beating like a drum, thinking of Tony in the Antarctic - working, always working - and surrendering inexorably to a pain that threatened to tear her apart.

She wanted him to feel what she felt, to know what she was feeling now, and tried to send those feelings leaping over the vast distance between them, to explode all around him.

Failing and frustrated, she burst into tears, hammered the steering wheel with her clenched fists, then eventually stopped her crying and drove off... all the way to Iowa.

Chapter Four

Entering the briefing room in the prefabricated building at the edge of the airstrip in Punta Arenas, Chile. Tony Rydell, normally bright, was instead feeling sleepy and distracted. While this Airborne Antarctic Ozone Experiment had been organised and was being managed by NASA, the National Science Foundation, the US National Oceanic and Atmospheric Administration and the US Chemical Manufacturers Association were also involved. The briefing room, Tony noted instantly, was filled with their representatives, as well as with the members of university and government research establishments in the United States, Britain, France, Argentina, Chile and New Zealand. Most of these men, like Tony, were looking Neanderthal in their flying suits, but none seemed as distracted as he was at that particular moment.

Taking a seat near the back of the crowded room, he felt slightly hungover, looked forward to taking some oxygen in his airplane, and had only vague memories of the previous evening when, in the bar of the Cabo de Hornos hotel, in the Plaza de Armas in downtown Punta Arenas, he had first thought long and hard about Suzy, then proceeded to get drunk with a vengeance. He *did* remember that at some point in the evening, he had left the hotel and staggered down to the shore to observe the sunset over the Strait of Megallan, with its spectacular view of Tierra del Fuego, the Land of Fire. He had fallen asleep on the beach, was drenched by a rainstorm, and awakened shivering with cold, ashamed of himself.

He had never acted like that before.

Still ashamed of himself and disturbed by his continuing lack of focus, he noticed the sudden hush in the room and tried to concentrate when Dwight Collins, the Energy and Environment program Director of the NASA-Goddard Institute for Space Studies, also Tony's good friend, walked up to the small stage at the front of the room to take his place behind the desk, in front of an enlarged image of the ozone layer over the South Pole, computer-processed from last year's Total Ozone Mapping Spectrometer (TOMS) data. It looked like a surrealistic painting of a globe, with the different coloured circles representing atmospheric readings.

The ragged black hole at its center was disturbingly clear.

Dwight, who would not be flying with the Airborne Expedition, but was looking ruggedly handsome in his air force pants and flying jacket, grinned laconically as he picked up a pointer and tapped the black hole in the computer-processed aerial view of the South Pole.

'Good morning, gentlemen,' he said. 'This,' he continued, tapping the black hole again with his pointer, 'is where you'll be spending the next six or seven hours - flying through the hole in the ozone layer over the Antarctic, to make what we hope will be, in combination with our unmanned balloon, satellite and land-based observations, the most complete examination yet made of the growing hole in the ozone layer. That hole is presently the size of the United States and the depth of Mount Everest. It's getting bigger all the time. And since it threatens to alter the face of the Earth, we have to ascertain what's causing it, then find a way to stop its growth. That's your mission, gentlemen.'

Putting the pointer down and leaning his hands on the table, he carried on. 'This immense hole in the ozone layer was first noticed by members of the

British Antarctic Survey team, working at Halley Bay, Antarctica, in 1982. Although those ozone readings were taken with a fairly primitive spectrophotometer, the data collected was later supported by the findings of our own satellite, Nimbus 7, whose Total Ozone Mapping Spectrometer, or TOMS, and Solar Backscatter Ultraviolet, or SBUV experiment, between them confirmed that the depletion of ozone over Halley Bay amounted to more than thirty percent, that it wasn't *just* happening over Halley Bay, and that the loss of ozone from the stratosphere was increasing rapidly, both upward and outwards, at a dangerous rate.'

Pausing dramatically, to let the fill import of his words sink in, he glanced around the room, caught Tony's eye, so gave him a nod and slight smile.

'By 1986,' he continued, 'we had discovered a definite link between high altitude clouds over Antarctica and the formation of the ozone hole. The clouds, called Polar Stratospheric Clouds, or PSCs, form in the lower stratosphere over Antarctica in the winter months, then dissipate in the spring. We believe that a series of chemical reactions within the clouds is releasing chlorine in an active form, leading to drastic destruction of the ozone. Certainly, we know that a link exists between extreme cold, the formation of Polar Stratospheric Clouds, chemical reactions on the surfaces of those cloud particles and the destruction of the ozone. This in turn has led to the great hole in the atmosphere over the South Pole. The purpose of this expedition, then, is to find out everything we can about this startling phenomena.'

Tony usually enjoyed his friend's scientific pep talks, but this morning he couldn't concentrate as normal. Sitting in a hut on the edge of an airstrip in the southernmost city in the world, he wished that he was, instead, in a briefing room in the Goddard Space Flight center in Greenbelt, Maryland, ten minutes drive from his home. He kept thinking of that home, of his problems with Suzy, turning over in his mind, with grief and self-pity, recollections of how he and Suzy had changed over the years, drifting further apart, until they hardly recognised each other as the people they had been. He also thought about his kids whom, in his view, Suzy had started to neglect; and about her threat to leave before he got back. He didn't want to believe that she would do that, but you never could tell.

Almost groaning aloud, but checking himself just in time, he tried to concentrate on what Dwight Collins was saying.

'For this particular expedition,' Dwight continued, 'we'll make about twenty

flights over the next month, using two aircraft filled with our instruments. One of the aircraft is a converted DC-8 airliner, which will hold up to forty passengers and their equipment, flying at an altitude of about 12 kilometres at the bottom of the ozone layer. The other aircraft is the ER-2, an updated, research version of Lockheed's U-2 spy plane, one of the best of its kind for high-altitude flights. However, since it's a single-seater aircraft, with its scientific payload packaged in two pods, one under each wing, those of you who can fly can take turns with the ER-2 while the rest of you will be together in the DC-8. And since Tony was instrumental in initiating this whole project, I think he should be the one to have the pleasure of the first flight in the ER-2 today. Any others who want to have a go, put your name down and you'll go in strict rotation. Okay?'

There was a general murmur of agreement and much shaking of heads while Tony, taking in what he had heard, felt even worse.

At least I'll get my oxygen, he thought, *without being seen.*

Which made him feel better.

'Right,' Dwight said. 'You've all got your separate instructions. Any queries during the flight you can put direct to me in the control tower. Now get going, and good luck. Tony, you wait here.'

Tony climbed to his feet with the others, but waited until most of them had left the room before approaching Dwight. Over six-foot tall, Dwight looked down at him with a broad grin.

'You like your birthday present?' he asked.

'You mean the ER-2?'

'Right.'

'Yeah, thanks,' Tony said without conviction. 'I really appreciate it, Dwight. I can't wait to get up there.'

Dwight's brow furrowed thoughtfully. 'You don't look so keen,' he said. 'In fact, you've been a bit distracted since you got here. What's going on?'

Tony shrugged. 'Nothing.'

'Don't bullshit me,' Dwight said, forthright as usual. 'Something's wrong. I can tell. Is it Suzy again?'

'Yeah,' Tony confessed. 'It's Suzy. She's threatened to leave me.'

Dwight sighed. Living not far from Tony in Greenbelt, he and his wife socialised a lot with their neighbours and knew them better then most. Certainly, Dwight had observed Tony and Suzy growing apart over the years. He had

flirted innocently with Suzy because he knew she liked the attention, but privately he disapproved of her and had said so to Tony.

'She's not the NASA kind,' he said, repeating what he had told Tony before. 'She's never understood that we're dedicated to what we do, that we have to work all hours, and that a NASA wife has to support that, even if she doesn't like it. Suzy comes from a small town, from a bunch of Iowa farmers, and she's more inclined to live for the moment than to think of the future. She can't see that we live for the future; it's what our work's all about. She just can't get to grips with that.'

'Yeah, I agree,' Tony said. 'But she's my wife and the mother of my kids. What the hell can I do?'

'Stop worrying, for a start. You've got a job to do here. She's gonna be there when you get back. She's just angry, that's all.'

'I think she meant it this time.'

'They *always* mean it,' Dwight retorted. 'At least when they say it, though that doesn't mean too much. How many times have you heard it before? How many times were you breaking up?'

'A lot, I suppose.'

'Damn right, so forget it this time. You'd do better to concentrate on your work, because this flight could be dangerous. You'll be flying at an altitude of about twenty kilometres, which is, as you know, about as high as you can go without a rocket-propelled spaceship. You're going right into the area where the unmanned balloon flights have shown the most ozone depletion. It's gonna be damned cold and the air's so thin up there that one fault in that single-engined baby could prove to be fatal. So forget Suzy, concentrate on the job and be very careful. Okay?'

'Okay.'

'Good. Let's get going.'

Leaving the quonset hut, they stepped into the wind blowing forcefully across the airstrip, lined mostly with the planes of the Chilean Air Force. The single-engined, single-seater aircraft with the payload pods beneath each wing had been prepared for take-off and was surrounded by wind-whipped engineers. Still not too happy, but now able to concentrate, Tony clambered up into the aircraft's cockpit, strapped himself in, then gave the thumbs-up to Dwight and watched him hurrying away. He called the control tower to request permission for take-off, received it, checked the wind speed and direction, the length of the runway,

then manoeuvred out of the parking bay and prepared for take-off.

With the plane roaring in his ears, he covered his face with the oxygen mask, took a deep breath and instantly felt better. Removing the mask, he checked the flying controls and instruments, ran through the appropriate take-off drills and finally, when the take-off clearance came, pushed the throttle forward with his right hand, controlling the nosewheel steering tiller with the other. He repeatedly called out his speed as he taxied along the runway, the white center-line markings rushing at him ever more quickly. When the plane reached the decision speed, Velocity one, he saw the nose rise and the ground fall away and was filled with irresistible, childish exhilaration as the landing gears moved back into their wells and the plane climbed steeply into silvery light.

The airport disappeared and was replaced with a widening landscape: the fjords, lakes and lagoons and great mountains of Patagonia suddenly sweeping out on all sides to the Earth's curved horizon. Tony felt better then, losing his cares in the joy of flight. He watched the land retreating, the rivers running into the sea, stippled with light and shadow, a great sunlit, reflecting bowl in which glaciers were drifting. Then he left it all behind, flying across a white-foam sea, in a trance of delight, hardly aware of passing time, until he saw a boot of land, the Antarctic Peninsula. Crossing the Antarctic Circle, over the Bellingshausen Sea, he finally saw, emerging out of a striated, silvery haze, the vast, overwhelming expanse of the Antarctic continent.

That sight took his breath away.

The ozone hole covered an area even greater than the whole Antarctic, so he realised that he was inside the hole when he saw the white wilderness.

Since the scientific instruments packaged in the two pods, one under each wing, operated manually once they were switched on, he switched them on as soon as he crossed over the snowy wastes of Ellsworth Land and began his careful ascent to an altitude of twenty kilometres.

The instruments in the pods beneath his wings were automatically measuring what the thirty-odd scientists in the DC-8 were also measuring at a lower altitude with their individual instruments: ozone concentrations, chlorine and bromine monoxides, nitrogen oxides and nitric acid, aerosol particles and water.

Looking down, Tony was fascinated by the spectacle, almost drunk on the awesome beauty of that most fabulous of Earth's continents, with its dry valleys of moss and lichens, green and brown, flecked with snow; gleaming white ice shelves and frozen mountain ranges and glittering lakes. There were brown

gravel canyons with glacier tongues licking at them; pack ice, sheet ice and alluvial ice falls; glaciated earthen ridges between polar plateaux where the mountain peaks towered majestically over the gleaming ice caps. The snow banks appeared jade-green because of the algae and plankton that survived on the rocky knolls between the plains of virgin snow. Piles of whalebones also lent their surrealistic contours to the otherwise immaculate sheen of the white-flowing wilderness.

It seemed to go on forever.

Tony flew high above it, farther into it as he ascended, taking the ER-2 to the very limit of its 5,500 kilometre range. There, in the polar vortex, where the circumpolar winds isolated the air inside from the rest of the atmosphere, he flew into the dangerous haze of Polar Stratospheric Clouds, or PSCs. Ignoring them, he stayed on course, trusting his automatic pilot. Glancing down, he saw nothing beneath him but deepening haze.

Then he saw the UFO.

He blinked and looked down again. He couldn't believe what he was seeing. The Antarctic had disappeared, there was only a silvery haze, and pacing his aircraft, almost directly below him, but gradually ascending, was what looked like an immense, magically glowing, disc-shaped craft, its light forming an even brighter haze around a swirling dark core.

Suddenly, Tony felt cold. Not from the atmosphere - from something else. It was an unnatural, numbing cold: a cold so real it seemed almost palpable, with a definite... *presence*.

He couldn't credit what he was thinking. *The cold*, he thought. *It's alive!* Then he glanced down again, saw the glowing, disc-shaped craft growing larger as it ascended: a silvery island surrounded by shimmering, pulsating light; a swirling darkness at its center. His heart raced as he turned on the radio and tried to contact the base camp.

He couldn't even hear himself talking.

There was nothing but static.

Frantic, he tried again. The static simply increased in volume. It was filling his head with demented crackling and ghostly voices. Glancing out of the cockpit, he saw that the silvery haze was spreading around him, felt that he was being swallowed by the glowing thing beneath him, and then...

Nothing.

Or so it seemed. It might have been an illusion. He had a recollection of

darkness, the spinning well of a black hole, imploding stars and antimatter, the past meeting the future in hellish fury and splendour; then a swift return to an even greater horror that threatened his sanity. Recovering, or more aware, he was filled with unholy terror, felt the cold deepening, and then, in the ghastly light of another world, he felt a weight on his legs.

Someone was sitting on his lap.

Opening his eyes, he saw Suzy.

Tony almost screamed, but he managed to choke it back. He felt that weight on his lap, someone's arms around his neck, then found himself staring again at Suzy, whose gaze was accusing.

He saw her and felt her. In fact, he even smelt her. Staring at her, *through* her, he saw her face and the clouds behind her. Filled with dread and guilt and a shocking awareness of his own mortality, he loved her, denied her, was terrified by her presence, as he heard the static, or the voices of his history, all around him, *inside* him.

His fear squeezed all sense out of him.

The plane started descending and he regained his senses. Taking hold of the controls, his hands passed *though* Suzy. She smiled with a slight trace of mockery and gradually disappeared.

Lack of oxygen! he thought. *Hallucination! It was no more than that!*

But he couldn't believe it.

He was cold, yet bathed in sweat, his hands too numb to grip properly, but he clawed at the controls, saw the silvery haze vanishing, and then, thank God, the frozen wilderness was beneath him, even though it was spinning wildly, making him dizzy, as it rushed up towards him.

His airplane, spinning down through the ozone hole, was going to crash.

He was numbed by the cold, with fear and disbelief, but he recalled that glowing UFO, his ghostly Suzy, the static's voices, then felt the warmth of Earth rush back around him, returning touch to his fingertips.

The white wilderness stopped its spinning, levelled out, came much closer, and he took control again - of the airplane and his pounding heart - then went winging back up towards the sky and its promise of life.

Though still shaken by fear and disbelief, he managed to fly back to Chile.

Chapter Five

The informality of the meeting took Clare by surprise. After a thirty-minute wait in the adjoining federal building, she was collected by a baby-faced, presidential aide, almost certainly armed, wearing a light-grey suit with shirt and tie, who led her through the North Entrance, along the marble floors of the Cross Hall and on to the Oval Office in the south-east corner of the West Wing. When the aide opened the door and waved her inside, she found the President of the United States seated behind the ornate oak desk that England's Queen Victoria had presented to President Rutherford B Hayes in 1880. The present incumbent was having an informal conversation with Jack Douglas, who had arranged this official meeting for Clare.

Both men stood up when she entered, smiling as Jack introduced her to the President.

'Hi,' the President said. 'Nice to meet you at last, Miss Holton. I've heard so much about you from various sources - not only Jack here - and all of it good.'

'Thank you, Mr President,' Clare replied, shaking his hand, instantly charmed that he seemed so natural with her. 'And thanks, also, for seeing me about this matter. It really is urgent.'

'So Jack's told me,' the President said. 'Here,' he added, indicating an antique velvet chair resting to one side of the Victorian desk on the turquoise-and-pale gold oval rug. 'Take a seat.' He even pulled the chair out for her to sit down. Jack took the chair at the other side of the desk as the President resumed his place facing them. He was framed by the presidential flag and the flag of the United States, which flanked a smaller desk upon which were displayed numerous photographs of his wife and children. There were potted plants in Chinese vases on either side of the french windows overlooking the Rose Garden. The presidential seal in low relief was set into the ceiling.

Clare lowered her gaze as the President sank back into his chair, clasped his hands on his lap, and gave her another easy-going smile.

'Do you like the office?' he asked her.

'I love it,' she replied sincerely. 'It's real cosy, as befits a democracy.'

He smiled warmly again. 'Yes, that's the point.' Then he glanced at his wristwatch - the first sign of formality - and said, 'Jack tells me you want to discuss this problem of the ozone layer on behalf of NASA. I'm not sure why you should come to me for this, but I'm willing to listen. Jack's filled me in on

your background and on the details of NASA's involvement, so feel free to get right to the point.'

'Thank you, Mr President.'

She glanced at Jack, who smiled reassuringly at her and then spoke to the President.

'Can I remind you, Mr President, that Miss Holton is officially the scientific liaison officer between NASA, its National Space Technology Laboratories and the Department of Defence, and that while defence is not the major issue in this case, the economic considerations raised by NASA's discoveries could have great bearing on matters of defence.'

'Well, that sounds like quite a mouthful, Jack, but I think I get your drift. Okay, Miss Holton, let me hear it.'

Realising that the President was not as soft as he seemed and aware that the baby-faced White House aide breathing evenly behind her was probably armed, Clare leaned forward in her chair and said, 'As you know, Mr President, earlier this month the first global treaty aimed at reducing atmospheric pollution was recently agreed between twenty-seven nations in Montreal.'

'Yes, and I know that you represented us most effectively. I also know, from Jack here, that you wanted this off-the-record meeting to reassure me that the countries who signed the agreement really *can* take the necessary steps to reduce the pollution that's causing the hole in the ozone hole.'

'I confess, that's why I've come, Mr President.'

'Well, you can try convincing me otherwise, but certainly, based on what I've learnt so far, the problem seems to be atmospheric, rather than environmental. And if that's the case, we simply have to pray that the winds will blow it away.'

'Unfortunately, Mr President, that *isn't* the case. Initial reports indicating that the hole in the ozone layer was being caused by natural chemical changes in the atmosphere were wrong. Chemical changes in the atmosphere *are* depleting the ozone layer, but the problem is environmental, it's caused by human intervention, and it can be solved if we take the appropriate action.'

The President stared thoughtfully at her, rubbed his chin, then smiled slightly, quizzically.

'What you say contradicts what I've been told, so you'd better explain yourself.'

'At the time of the Montreal meeting,' Clare told him, 'it was widely believed that man-made pollution of the atmosphere was having an effect on the hole in

the ozone layer. Since that meeting, however, a combined satellite, balloon, and land-based and airborne Antarctic Ozone Experiment, organised and managed by NASA with the support of the National Science Foundation and similar organisations world-wide, has come up with conclusive evidence that the hole in the ozone layer is being caused almost *exclusively* by man-made pollution of the atmosphere.'

'Man-made?'

'Yes. Put simply, the depletion of the ozone layer is being caused by the increasing release of chemicals called chlorofluorocarbons, or CFCs, into the ozone layer around the Earth. Those CFCs are caused by the fumes and gases of spray cans, insecticides, paints, polishes, disinfectants, and car and aircraft exhausts. Unless we can dramatically reduce the use of such products on a world-wide basis, that great hole over the Antarctic will become even deeper and wider, until the ozone layer is destroyed altogether, thus exposing the Earth to extremely harmful solar ultraviolet radiation. This isn't science fiction, Mr President, it's fact, and what it means is one of two equally frightening scenarios.'

The President smiled, then glanced again at his wristwatch. 'Please continue,' he said, returning his gaze to her.

'In both scenarios,' Clare said, deliberately meeting his gaze, 'the destruction of the ozone layer will result in increased skin cancer, cataracts, hepatitis, the herpes virus, and other infections of the skin caused by parasites. It will also cause a dramatic shift in the global average temperature. Given regional differences in the prevailing temperature, a shift in the global average temperature could either plunge us into another Ice Age or, just as likely, cause widespread famine through the destruction of agriculture. At the same time, the melting of the ice caps will lead to the flooding of many major cities worldwide, including New York. Either way, we'd be in for an unprecedented global disaster.'

The President glanced at Jack Douglas, whose expression was neutral, then he sank back into his chair and gazed up at the presidential seal set into the ceiling. Eventually, having gathered his thoughts, he sighed and lowered his gaze, giving Clare his political charmer's smile.

'It sounds serious,' he said. 'I've no doubt that it *is* serious. But I'm still not too sure that here, in the United States, the most technologically advanced nation on Earth, we can take the steps that were recommended in Montreal. If what you're

saying is true, motorised transport, aircraft, agricultural insecticides, chemical plants and oil fields are all contributing to the destruction of the ozone layer. It would require enormous sacrifices, both agriculturally and industrial, to save it, but I'm not sure that we can afford to make such sacrifices, let alone get support for them. What you're asking, in effect, is that we use less of the products that produce the CFCs, as you call them, and that means - at least, until we find other ways of doing without them - cutting down drastically on our industrial, chemical and agricultural growth. That's not what I see as the function of this presidency. Since our function is to create growth, not limit it, what you ask isn't feasible.'

'Because the President can't make unpopular decisions?'

'That's insulting, Miss Holton.'

Now she saw the steel in him and was briefly unnerved by it, but remembering what her parents had taught her, she said what she believed - despite the warning glance that she received at that point from Jack Douglas.

'I don't think it's insulting. I think it's a fact. You believe what I'm telling you - that the whole world is under threat - but since you think it won't happen during your own term in office, you're going to put off the problem in the hope that it'll resolve itself eventually without undue embarrassment.'

The President's face remained friendly , but his gaze became cool.

'No,' he said. 'You're wrong. You're misinterpreting my reasoning, which isn't based entirely on self-interest, as you seem to think. My reasoning, Miss Holton, is based *very much* on the present: on my belief that some of the countries who've signed your precious ozone-reduction agreement, particularly the European Community, might be doing so simply because they know that the only way the US can make its contribution would be through dramatic reductions in its industrial, chemical, technological and agricultural growth, which would be of significant value to those countries.'

'I'm sorry, Mr President, but I don't see how - '

'What the President is trying to explain to you,' Jack Douglas interjected, 'is that the economic realities of international politics can't be ignored.'

'Precisely,' the President added. 'The Soviet Union may be dead and Russia no longer a threat, but unfortunately we have the rest of the world to deal with and that world is at war with us. Notably Russia, Japan, and the European Community.'

'Pardon?'

‘I’m talking about a war in which industrial, chemical, technological and agricultural growth will decide who wins and who loses. And what you propose, Miss Holton - the drastic reduction of the very output that makes us strong - could threaten the economic superiority of the US. It isn’t purely self-interest that decrees what I can and can’t risk.’

Clare understood his reasoning, but she didn’t admire it.

‘And the hole in the ozone layer?’ she asked, ignoring Jack’s chastising glance. ‘Do you intend letting it grow and grow until there’s no ozone left and the world either freezes or succumbs to a combination of famine and flood?’

‘No,’ the President said, ‘I don’t. But I believe your sense of urgency is unwarranted. While I accept that the hole in the ozone is a serious problem - and one that can’t be ignored - I also believe that we’ve time to more carefully consider what should be done about it. I *have* taken note of what you’ve just told me. I also have the very thorough briefs on the subject written by Mr Douglas, whom I respect and trust, and I’ll ensure that the matter is placed on the agenda for immediate attention. But I *won’t* guarantee a reduction in our use of CFCs. I *will*, however, guarantee that the matter will not be ignored.’

Clare was just about to make an angry retort when the baby-faced aide stepped forward, placed a hand lightly on her shoulder, as if by accident, though clearly it was intentional, then said, ‘I’m sorry, Mr President, but I’m afraid you have another appointment and you’re already running late.’

‘Of course,’ the President responded, as if surprised. Then he shrugged apologetically, raised his hands in the air, and said, ‘I’m sorry, Miss Holton, but my time’s so limited. Maybe another time.’ Before she could reply, he had stood up and walked around the desk to bid her farewell. Even as the aide had subtly encouraged her to rise to her feet by tugging gently, insistently at her shoulder, the President was shaking her hand. ‘Believe me,’ he said, ‘your contribution has been invaluable. I’m sure we’ll meet again real soon.’

‘I hope so, Mr President.’

Stifling her anger, Clare forced a stiff smile, then walked through the door opened by the aide. Jack fell in beside her, taking hold of her elbow, guiding her back through the West Wing and eventually out of the White House altogether. Clare didn’t speak until she was outside. Then she exploded.

‘God!’ she exclaimed. ‘I’m so mad I could spit! I think I need a strong drink.’

‘It’s lunchtime anyway,’ Jack responded, unperturbed, ‘so let’s go to Maison Blanche where you can have something to eat while you drink, and hopefully

calm down.'

'No, thanks,' she replied ungratefully. 'Certainly not Maison Blanche. I've had enough of politicians for one day. Besides, I don't want a full meal. A snack would be fine. Can you take the afternoon off?'

'Of course.'

'Then let's go back to your place.'

Clearly amused, he grinned at her. 'I'll have to thank the President,' he said, glancing up and down Pennsylvania Avenue in search of a cab. 'I'm benefiting from the anger he caused. He should get an award.'

'He should get a psychiatrist,' Clare retorted. 'He's obviously paranoid.'

A cab pulled up beside them and Jack held the rear door open for her. 'Get in,' he said, even more amused, and then slipped in beside her. 'Dupont Circle,' he told the driver, letting his hand rest on Clare's thigh as the cab pulled away from the sidewalk. 'No,' he said, 'he's not paranoid. And he's not stupid, either. He just pulls that good ol' boy act for the folks. But don't under-estimate him, Clare. He's a match for you any day.'

'I'm not in competition with him. I just want some action taken. I want his support for what we're doing, not his paranoid politics.'

'What's paranoid about what he said?'

'All that crap about an economic war with the US up against the whole damned world, including the EC. It's paranoid nonsense!'

'No, Clare, it's not. He just phrased it a bit dramatically.' Jack squeezed her thigh as she gazed out at the Renwick Gallery. His touch made her feel a lot less angry and increasingly sensual. 'But what he said was essentially sound and can't be ignored. The world *is* at war and it *is* a war of economics. So we can't lower our industrial and agricultural production to reduce the level of CFCs while other countries, not bothering to do the same, gradually gain economic superiority over us. That's the President's major concern, Clare, and it's one that I share.'

He guided the cab driver to an imposing Georgian-styled building in a leafy street off Dupont Circle, paid him, then led Clare into his apartment. Though not especially large, it was elegant in a rather austere manner. The afternoon sunlight fell between plain, cream-coloured curtains onto black-leather armchairs, deep white pile carpet, and what were, to Clare, rather chilly, contemporary paintings. It certainly wasn't a woman's place.

'Home, sweet home,' Jack said.

Presently in the middle of an acrimonious divorce from his wife of fifteen years, Jack had rented the apartment only three months before, after moving out of his family house in Georgetown, not far from where Clare lived with her father. In fact, she had first met him at a party in her own home, given by her parents, and had later been invited to his house, where she had met his wife and teenage children. She had been impressed by their decency while being intrigued by his calculating charm, intelligence and urbanity; but had not, thank God, become involved with him until after his wife had sued for divorce and he had moved out, into this expensive bachelor apartment.

It was shortly after the break-up of his marriage that Jack had become the President's financial advisor on government scientific research expenditure. Once he had moved into his office in the Old Executive Building, Clare, due to her liaison work for NASA and the White House, had come into regular contact with him, eventually ending up in his bed, despite her reservations about his character. Even now, though she enjoyed him in bed, she didn't take him too seriously and was wary of his obvious need to manipulate people as well as events. Some people, she knew, would think her attitude cold, but she thought it was sensible.

'Why did your wife file for divorce?' she asked him as she unbuttoned her jacket and draped it over a sofa.

'Incompatibility,' he said. 'Which, translated, simply means that we'd been married too long and could no longer feel excitement with each other. It also means we'd both turned to other partners with increasing frequency.'

'In other words, a pretty normal marriage that had gone past its prime.'

'Yeah, you might say that.'

'She seemed such a nice woman.'

'She was and is,' he said honestly. 'But niceness has little to do with marriage when it starts turning sour. We were moving in different directions, seeing less of each other, and so, when the kids became old enough to be self-sufficient, the discipline that had held us together just slipped away.'

'Any regrets?'

'Not so far. I've never been too emotional. Like you, I've usually placed my work first and foremost. I'd like to feel nostalgia for our shared past, but I simply can't do it. I feel only relief.'

'You're a selfish bastard, Jack.'

'That's why you like me,' he said, grinning. 'It makes you feel safe. You think

that I won't get too close to you, and that's what you want. You're selfish enough to want your independence, so we're not all *that* different.'

Which was true enough, she acknowledged. It was her self-interest, her invincible pragmatism, that made her feel comfortable with him. Certainly, she didn't want involvement with the kind of man who would be hurt by her refusal to commit herself. Jack was intrigued by her refusals, even aroused by them, but certainly he wasn't hurt by them, and that made her feel at ease.

'Anyway,' he said, 'I'm not as selfish as the President. I'm just more *open* about my selfishness. Now that wily bastard, he has theatrical talents and can charm the birds from the trees when he wants to.'

'A politician to his fingertips.'

'Like little ol' me, right?'

'Right.'

'You're so honest, it destroys me.'

'I doubt that you'd be destroyed by honesty, Jack, since you wouldn't see it if it stared you in the face.'

She thought that she might have pushed him too far, but he just grinned laconically. 'So,' he said, removing his jacket and slinging it over the nearest armchair, 'let's have a drink and a snack. What would you like?'

'I'd like you to take your clothes off. We can have the snack later.'

He was amused more than surprised, being used to her by now. 'A woman who knows what she wants,' he said. 'How could I refuse?'

He started taking off his clothes, without batting an eyelid, and she watched him, saying nothing, appreciating his lean physique and tight muscles, his hard masculinity. When he was naked, she made him undress her, arousing him with her touch as he did so. She sank slowly to her knees, kissing down his burning body. Trembling, he followed her down, kissing, licking and stroking, until, when she was stretched out on the floor, he could sink himself into her.

She wanted to lose herself, to be out of control, even if only for a short time, and it happened when he played his tricks upon her and then burned up inside her. She heard her own sighs and moans, a distant sound, a receding plea, then felt herself tumbling backward, as if out of her own skin, to plunge into a deep, dizzying well of pure sensual feeling.

Not her: someone else. Not the scientist: the woman. And that woman, wanting freedom, clinging always to her pride, lost the latter and surrendered the former for what seemed an eternity.

When eventually she returned to herself, she felt breathless, exhausted and dazed, yet also strong and triumphant.

'Very good,' she whispered into Jack's ear. 'You did really well. Now I'll have a tuna salad and white wine - and I'll have it in bed.'

'Yes, Madam!' he gasped.

And as he walked barefoot into the kitchen to prepare her light lunch, she climbed into his bed, covering her lower half with the quilt, and thought of that great hole in the ozone layer, growing larger each day. She imagined the light of death burning through it while she burned with the lust for life.

She wanted life in a dying world.

Chapter Six

‘She’s gone!’ Tony blurted despairingly into the phone to Dwight, who had also returned that day from Punta Arenas. ‘She really did it this time! When I came home, I found this note she’d left on the kitchen table, telling me she was going back to her folks in Iowa and taking the kids. The kids are still here - they wouldn’t go with her - but goddammit, she’s *gone*, Dwight!’

He could hardly believe what he was saying. He had only been back an hour. Even now, though he was managing to control himself, he felt hurt and confused.

‘Yeah, I know,’ Dwight responded, sounding embarrassed. ‘Maggie’s just told me.’

‘What? *Maggie* told you?’

‘Yeah, Tony, that’s right. She didn’t know, you understand - it wasn’t *planned* or anything - but when Suzy decided to leave, she asked Maggie to help her.’

‘And Maggie did that? She actually helped her?’

‘Come *on*, Tony! They’re friends. I mean, what do you *do*, you know? The situation is difficult.’

‘What you do,’ Tony said, not believing what he was hearing, ‘is refuse to help your best friend’s wife walk out on him without warning. You don’t actually *help* her!’

‘Maggie tried to stop her. She just couldn’t do it. What did Suzy say in the note?’

Tony glanced at the note crumpled up in his free hand; then, glancing out the window, he saw that his two sons, playing on the front lawn, had suddenly started fighting one another. They didn’t often do that, so he took it as a bad sign and realised, reluctantly, that they would soon need a firmer hand than his.

‘She wrote that she couldn’t take it any longer,’ he said. ‘By which I assume she meant my work and this house and the whole of fucking Maryland. She also said that I needn’t keep in touch. I mean, Jesus, the nerve of her!’

Dwight chuckled over the phone.

‘This isn’t funny, Dwight! How the hell am I gonna handle this situation, look after the kids, and also get on with my work?’

‘Take some time off. I think you need a rest anyway. As I told you, that

hallucination during your flight was a sure sign of stress. That's why I grounded you.'

'It wasn't stress!' Tony was almost shouting, recalling his experience in that airplane with a deep chill of fear. 'Goddammit, Dwight, I've told you a thousand times: it was a genuine *experience*.'

'It was stress.'

'It was a phenomenon! It was caused by something in the ozone hole. *I didn't imagine it!*'

Dwight sighed in despair. 'It was imagination, Tony. If, as you say, it was a phenomenon caused by the ozone hole, how come none of the pilots who replaced you have experienced the same thing?'

'How the hell do I know? And how do *you* know they haven't experienced it? Since you grounded *me* for reporting the goddamned thing, they wouldn't be likely to tell you if they experienced the same thing, would they?'

'I've said it before and I'll say it again, Tony: You were worried sick about Suzy, you were thinking non-stop about her when you made that flight, and then, in the thin atmosphere near the top of the ozone hole, your anxiety made you imagine you saw her.'

Tony felt insulted. 'Oh, yeah? So what about the UFO? What the hell had *that* got to do with Suzy? Answer me *that* one, wise guy!'

There was a lengthy silence from Dwight, then: 'Let's talk about it some other time. Let's deal with this problem first. I think you should take some time off until you sort this mess out.'

'I *can't* take time off. I've got too much work to do. I want to help analyse that Antarctic data. I want a few answers, Dwight. So how the hell can I do all that and sort this mess out at the same time?'

'Call your mother,' Dwight suggested. 'Tell her to come right over. She'd probably be thrilled if you asked her to look after the kids. She'll be there in a flash.'

'Christ, Dwight, that's brilliant! Why didn't *I* think of that? I'll give her some work to do. She'll think she's in heaven.'

'Right. And I'll try to call around later in the day to see you. OK?'

'OK, buddy.'

Feeling less isolated and depressed, Tony put the phone down. Then he glanced through the window at his kids and felt depressed all over again. Things hadn't been working out, but he certainly hadn't expected Suzy to pack up and

leave. Now he felt really low.

Determined to be positive, or simply being selfish, he picked the phone up again, dialled the retirement home where his mother was staying and asked to speak to her.

'Yes?' his mother said, already sounding suspicious.

'Hi, Mom, it's me. Tony.'

'Tony?'

'Yes.'

'I thought you were away, son.'

'I'm back. So how are things in Menopause Manor?' he asked, using the name that she had jokingly given to the retirement home.

'Oh,' she responded, 'the same as always. They're all mad around here and getting worse.'

'Well, you can get away from that, Mom. You're gonna have to come home. Suzy's just left me - she said it was for good - and I'm gonna need help.'

'Suzy *left* you?'

'Yep.'

'Well, I know she's threatened that before, but I never thought she'd actually go and do it.'

'Well, she did it. She left this morning and said she wasn't coming back. Now I'm here all alone with the kids. So you have to come home, Mom.'

His mother coughed into the phone, clearing her throat, then said, 'I always knew that Suzy was a bad one.'

'No, Mom, she isn't really. She just got bored because I was away so much and then she finally blew her stack. Now I'm here all alone with the kids and too much work on my plate. I need you. I really do.'

'Well, if you really *need* me...'

'I do. I'm desperate.'

'It's nice to know I get these invites when you're desperate. It makes me feel really wanted.'

'I *always* wanted you here, Mom.'

'That Suzy of yours didn't.'

'Suzy isn't here anymore,' Tony said, almost sweating, 'and the kids and I really do need you.'

'Those kids need a firm hand. Suzy never raised them proper. If I told her once, I told her a thousand times: those two boys need more discipline.'

‘You’re right, Mom. So are you coming or not?’

She sighed, as if martyring herself. ‘Oh, all right. I’ll get this sadist of a nurse to pack my suitcase and call for a cab. I’ll be there this afternoon.’

‘Great, Mom. I love you.’

‘Bye, son.’

‘Bye, Mom.’

Intensely relieved, he put the phone down and glanced once more at the crumpled note in his hand. He folded it neatly, then, recalling his experience in the airplane over the Antarctic, he shivered with fearful incomprehension.

‘Fuck!’ he murmured despairingly.

Returning to the present, he stuck his head through the open window and bawled at the boys to come inside. They did as they were told, but with visible reluctance, dragging their feet. Tony made them sit together on the settee while he gave them his pep talk. He hardly knew where to start.

‘Look, kids, I want you to listen carefully, ‘cause I’ve got something important to tell you. Though your Mom’s left us temporarily, I’m really pleased that you decided to stay on. I mean, it must have been difficult.’

‘I just did what Don decided we should do,’ Ronnie said.

Hearing the pain in the boy’s voice made Tony’s cheeks burn. ‘Say, hey!’ he exclaimed with false brightness, ‘your big brother had to make a decision and it must have been hard on him, so stop fighting over it. OK?’

‘OK,’ Ronnie said in an unconvinced manner, his golden locks falling over lowered eyes.

‘Anyway, your Mom’s gonna come back soon, so stop worrying about it. I mean, when women get mad, which they do a lot, they do these crazy things. But they get over their moods fast and when your Mom gets over hers we’ll have a little talk and I’m pretty damned sure she’ll come back home. In the meantime, Grandma’s getting out of the rest home and coming here, for a short time, to look after us. So, all in all, there’s nothing to worry about.’

The boys glanced at one another at the mere mention of Grandma. Clearly, her coming here was a sign that things were worse than they thought. Not better, as their Dad was suggesting.

‘Any questions?’ Tony asked.

‘Why Grandma?’ Don responded.

‘Because she’ll look after you better than I can.’ Tony coughed into his clenched fist. ‘Any more questions?’

‘We can look after ourselves,’ Ronnie said.

‘Right,’ Don added. ‘We’re not kids.’

‘You *are* kids,’ Tony informed them, ‘and you need looking after, and right now, before Grandma gets here, I want you to tidy up the mess in your bedroom.’

‘Gee,’ Ronnie complained, ‘it’s startin’ already. We’re gonna get worked to death.’

‘You’ll get *beaten* to death,’ Tony threatened, ‘if you don’t tidy up that bedroom. Now go in and get started.’

They went into the bedroom, but they didn’t do much work, instead distracting themselves with a noisy pillow fight, followed by television, then a few more heated arguments at maximum volume, making Tony’s head ache. Still, he hadn’t the heart to stop them. Instead, he poured himself a beer. Feeling better, he had another, which exacerbated his jet lag, thus encouraging him to stretch out on the settee and have a siesta. It was not a restful sleep. He had bad dreams about Suzy. He was twisting and turning on the settee, groaning, when Grandma shook him awake.

‘What a welcome home!’ she whined. ‘You asleep in front of the TV with empty beer cans beside you and your children goin’ wild in the bedroom. I got here just in time, I see.’

‘Good to see you, Mom. Real good. Here, give me a kiss.’

‘Oh, all right, then.’

Tony kissed his mother’s cheek as she sniffed and wiped a tear from her eye.

‘I don’t know where to start,’ she said, glancing around the untidy, cluttered living room. ‘This place is such a mess. And those kids... just listen to the noise... they’ve gone to hell and highwater. I’m not criticizing, I’m not casting stones, but that Suzy had an awful lot to learn about bein’ a mother. I *definitely* got here just in time. The Lord works in mysterious ways.’

Tony sat up and rubbed the sleep from his eyes. ‘Listen, Mom,’ he said, ‘I’ve got to get to work. I won’t be there long, but I’ve really got to get there urgently. So do you mind if I leave right now?’

A self-made martyr, she sighed melodramatically. ‘You do what you have to, son. Suzy never understood you like I do. I tried to tell her, but she never listened. “Suzy,” I said, “that boy of mine has to work for those greenback dollars and that’s why he’s away all the time. It’s not pleasure to him,” I said. Of course, she never listened. Thought she knew it all, that girl. And now here we

are, in a right pretty mess, with two motherless boys and a man weighed down by his responsibilities. Suzy never understood that, son, but I do and always did. So you go to work and I'll sort the kids out and clean the house and prepare a decent meal. That's what mothers are for, son.'

'Thanks, Mom, you're a doll.'

Tony kissed her again, then he went to fetch his jacket, impatient to check the data from the expedition that had already given him so much trauma. He felt guilty, however, because his urge to check that data was as great as his concern over Suzy's departure. What had happened to him in that airplane over the Antarctic was something that he could neither forget nor ignore. No, he had to get to the NASA-Goddard Space Flight center and check out the data. He wouldn't sleep if he didn't.

'Right, Mom,' he said, 'I'm going now, but I'll be back by six. OK?'

'Back for dinner,' she emphasised, knowing his clever ways. Then she sighed. 'OK, son.'

Tony hurried out of the house as his mother headed for the boys' bedroom. She was shouting instructions as he clambered into his car. He drove away from the tract houses and bland prettiness of Greenbelt, heading for the architecturally bland administration buildings, laboratories, hangars and geometrically laid out concrete paths and lawns that formed the NASA-Goddard Space Flight center, five minutes away.

Once there, he hurried to the data-processing unit of the Institute for Space Studies, where he found Mike Esposito, fat, flabby and brilliant, surrounded by banks of computer monitors. Esposito, who smoked like a train, was coughing more than was good for him.

'I didn't expect to see you until tomorrow,' he said, 'or maybe even next week. You must be really steamed up, my friend.'

'What makes you say that?'

'I had a talk with Dwight Collins.'

'And?'

'He said you had a weird experience over the Antarctic and might not be yourself.'

'Did he tell you about Suzy?'

'Yeah,' Esposito said sheepishly. 'I'm real sorry she's left you.'

'Thanks. Did you tell you anything else?'

'No.'

‘I’m amazed,’ Tony said sarcastically. ‘Anyway, let’s get on with our work. Just what have we got here?’

Esposito surprised him by shaking his head from side to side in a gesture of bewilderment. Waving his hands languidly to indicate the many printers and their trailing reams of printouts, he said, ‘You tell *me*, old buddy.’

While the payload pods on Tony’s ER2 had been taking their measurements near the top of the hole in the ozone layer, a mass of other data had been accumulated by the forty scientists in the DC-8 flying through the lower area of the same hole, by the TOMS on Nimbus 7, by American and European satellites and balloons, and by numerous land-based information-gathering stations around the globe. Now, as Tony studied the data displayed on the various monitors, he found himself feeling as Esposito looked: dazed and disbelieving.

‘Jesus Christ!’ he said softly.

Chapter Seven

Suzy had forgotten just how beautiful Iowa was. She arrived at her old home in the evening, just as the sun was sinking, and the pink light that bled into the deepening azure sky, to bring out the stars as she had not seen them for years, made her think that she was in a fairytale world, where magical events might occur.

The fields of maize went for miles, all the way to the flat horizon, a green-and-yellow sea turning deep gold in the twilight’s soft darkening.

Even the breeze was soft.

As he had done in the evening for as long as she could remember, her father was sitting out on the porch of the house, in that same old rocking chair, wearing his dungarees with braces, his face hidden in the shadow of the overhang, his feet close to the railings. It was a lovely old house, bright white in the sea of gold, and the lights inside it were burning and beaming onto the porch.

The house was a long way from the road, but Suzy saw all that clearly.

She sat on in the car, wondering if her father had seen her. He wouldn’t know the car if he had, but he wouldn’t be worried. Her father was a calm man, at one with the seasons, and the faith by which he abided included trust in his fellow man.

Life was different in Iowa.

Feeling like a kid again, Suzy glanced about her, taking in the fields of maize, undulating and whispering, glorious under a vast, subtly changing sky in which the stars were emerging like crystals twinkling on velvet. It was so beautiful it seemed artificial - nature's own theatre.

She'd forgotten that view of things.

Starting the car, she turned off the road, went between white-painted fences and drove up to park in the driveway in front of the house. She turned the engine off, applied the handbrake, glanced up at her father, still rocking in his chair, and saw that he was gazing directly at her in a manner that suggested he couldn't see her. She smiled, even though he couldn't see her, then opened the door and climbed out.

The air was so clean, you could practically taste it. The breeze brushed her like feathers.

'Hi, Dad!' she called out, just loud enough for him to hear, closing the car door as he stopped rocking, removed his feet from the wooden railing of the porch and leaned forward, out of the shadow of the overhang, to get a good look at her.

'Suzy?'

'Yeah, Dad.'

He didn't get out of his chair when she walked to the house, but as she mounted the steps onto the porch, she saw his welcoming smile. He didn't even look surprised, just delighted to see her, and it made her feel a whole lot better after what she'd been through.

Leaning over him, she saw his thick grey hair and lined face, his eyes as blue as the Iowa sky at the height of the summer. Without embarrassment, she gave him a hug and kissed him full on the lips, then straightened up again.

'You look real good, she said.

'So do you, Suzy. You could probably do with a change of clothes, but otherwise you look fine.'

'I drove all the way, Dad.'

'From Virginia?'

'Right.'

His gaze shrewdly took in the empty car, then he looked up again.

'No husband, no kids,' he said. 'So what is it, darlin'?'

'I've left home,' she told him.

He didn't bat an eyelid - at least not in condemnation. He just stared steadily at

her, giving her time to take her breath, letting her know that whatever she had to say, he'd be willing to listen.

'Where's Mom?' she asked.

He tilted his head towards the house behind him. 'In the kitchen,' he said. 'You got here just in time for dinner. There's enough food for you as well.'

His grin was so damned warm, it made her feel good again. She'd driven a long time to get to here, drained by guilt and confusion: through West Virginia to Ohio, in tears half of the time, thinking of Tony and the kids and what she was running from. Cried again in Cincinnati, in a motel just outside of town, then back on the road at the break of dawn, right across Indiana, spending her second night in Peoria, Ilinois, in another lonely motel. She hadn't cried that night; instead, she'd practised self-justification. She'd spent the night condemning Tony (as his judge and jury, his hangman), and only cried when she hung him in her mind and got back in her car.

After that it was easy, another two or three hundred miles, past farms producing oats and hay and barley and soya beans, through a landscape that hourly became more familiar, with names that took her back to her adolescence and childhood - Galeburg, Rock Island, Davenport, Iowa City, then the final run through the cornbelt of Montezuma and Brooklyn and Little Red Rock - then across the river of Des Moines and right on to this rich, rolling farmland, where the working farms, including this one, were now on the tourist routes.

All the way from Maryland, Virginia, to the home of her childhood, near a place called Indianola, Ohio... She felt like a pioneer.

'I'll go in and say hello to Mom,' she said.

'No, don't,' her father replied. He pointed at the wooden chair beside him and said, 'Sit right here. Let her get on with the dinner. She'll come out to get me and to check how much beer I've drank and the expression on her face when she sees you will be worth the seein'. Come on, honey, sit down. And I always keep those extra glasses on the table in case someone visits, so quench your thirst with a beer. A long drive from Virginia to Iowa. You musta had a strong reason.'

He was too polite to ask, but was gently opening a doorway to the subject. Suzy sat down and poured herself a beer and felt a great weight fall off her. She looked across the land, a sea of green husks turning golden, and saw the crimson lava of the sun pouring along the horizon. As the sun sank, which it did with majestic ease, the stars became brighter.

‘God,’ Suzy said, ‘I love coming back here. Nothing’s changed at all, Dad.’

‘How long’s it bin?’ he asked.

‘About six years, I think. Ronnie was only four at the time, so it must’ve been six years.’

‘Things don’t change here that quick.’ He’d always cut his words off short. ‘The rain falls and the sun climbs high in the sky and then the rain falls again. It just goes on and on.’

‘The farm’s doing well, right?’

‘Why not? We do our work. If a man and woman do their work, they get rewarded an’ the land understands that.’

‘Not always, Dad.’

‘This is Iowa, the heartland of America.’

‘The bread basket of America.’

‘Right,’ he said with a grin. ‘The richest agricultural land in the world. If you work it, it works for you. You just have to respect it.’

‘The land can turn on people.’

‘Not this land. It goes on forever.’

The sun had almost disappeared, setting the whole damned world on fire. It was not a fire to scourge, but one that beautified all it touched: the gold-tinged green of the seas of corn, the odd silhouetted tree, the geometry of the fences criss-crossed on swells of land, the horizon which, though flat, seemed slightly curved, the sky drenched with stars. The sinking sun, which had a magical liquidity, poured its fire across everything, transforming the landscape, and making Suzy remember the dreams that had enriched her childhood.

‘It’s so romantic,’ she said.

‘Yeah,’ her father said. ‘I guess so. That’s why I like to sit in this old rockin’ chair and drink beer and just look at it. What the hell, it’s done me proud all my life - *and* my Dad - and *his* Dad. You think of that and you know you’ve got an anchor that no one can steal. Not too many can say that.’

Suzy raised her hand. She held the moon between her fingers. She’d wanted to give that moon to her kids, but she’d left them instead. Decent folk didn’t do that.

‘I won’t stay too long,’ she said.

‘As long as you like, Suzy.’

‘I’ll tell you all about it.’

‘If you want to.’

‘I wanna tell you. I need to.’

‘That’s important,’ he said.

Suzy sighed and poured more beer, filled her father’s glass as well, then she sat back in the chair and looked up at the brightening stars. She felt choked with love and grief.

‘What did you think of Tony, Dad?’

‘I kinda liked him. He amused me. Not a practical man, by any means, and not too good on the manners, but he didn’t have a nasty streak in him - just a tongue that was too quick. I think he got that from his mother. She was one sharp-tongued critter. That woman, she could make the devil grovel, though she did have her charms.’

‘What charms?’ Suzy asked.

‘That was quick, darlin’ girl.’

‘Tony’s mother never liked me at all. I could always tell that.’

Her father shrugged and grinned. ‘They were dirt poor - you know? Farmed a bit of land about forty miles from here. Nothing much to talk about - just a couple of acres - and they just struggled along, probably working themselves to the bone, but managed to send Tony to university, which was something to boast about.’

‘You mean that?’

‘Yeah. I respected them. I thought they had lotsa guts.’ He had a drink of beer, licked his lips, watched the sun going down. ‘Mostly *her* guts,’ he said as his face sank into shadow. ‘Tony’s dad was an honest man, but that don’t buy bread and butter. She was the one who did the pushin’ and shovin’ when it got down to business. He died early, of course - I think she exhausted him - but that woman, she did what she said she’d do... Got her boy off to college. That was part of her charm for me.’

Suzy watched the darkness building, shifting east and west, rising, as if painting itself quietly on the daylight, taking over the canvas. The beer tasted real good, as well.

‘And Tony?’

‘I told you. Not a farmer, but I liked ‘im. Shook his hand when you introduced him, looked into his eyes, and knew he didn’t belong in this world, but had a clean, kindly nature. Not a man to be organised. More than bright, but dizzy with it. You could tell he wouldn’t wanna hurt a fly, though he might aggravate it. A good kid, I thought. Drive you crazy, but okay. I always thought you coulda

done a lot worse and maybe never done better. You got a problem? It's up to you.'

'I walked out on him, Dad.'

'And the kids?'

'Them as well. I mean, I wanted them to come, but they wouldn't, and I had to respect that.'

'Sure,' he said. 'You did.'

'But you don't approve.'

'No. I think a woman stays with her kids, come hell or high water.'

Suzy put her glass down, closed her eyes, sank to her knees, then wearily laid her head on her father's knees.

'You think right and you always did,' she said. 'I feel godawful, Dad.'

He placed his hand on her head and stroked her hair with unbearable tenderness.

'You did wrong,' he said, 'but you're not alone in that. What you did has been done, but that ain't the end of things. Let's find out exactly why you did it and maybe try fixin' it.'

'That might take some time.'

'Sure,' he said. 'These things do. Everything worth doin' takes time and the sun is slow sinkin'. Look! There she goes!'

Suzy looked up. Her father's hand was like a warm hat. The last slice of the sun was being eaten by darkness and stars. Then the stars filled the velvet sky.

'I love him,' she said. 'I know that. But he just drives me crazy.'

'That sounds normal,' her father said. 'If it's something else, tell me. I can take it. Does he beat you, or what?'

'No, he doesn't beat me.'

'I didn't think he would.'

'He's just forgotten what we meant to each other. It's his work he loves - not me.'

'Men love their work,' her father said. 'If they don't, they shouldn't be doin' it. If they do it, but they don't love it, they die, though they're still on their feet. Say your thanks it's his work and not a woman. You always were a demanding child.'

'But you still love me, right?'

'Yes, Suzy, you know that.'

'You still love me and you've still got your work, but Tony just loves his

work.'

'That can't be too bad.'

'Yes, it is. I'm locked out.'

'A man's work is what he *is*, child. It's *him*. You just got to accept that.'

'I can't. It's just not in my nature, Dad. I need his attention and I'm willing to give him mine, but he thinks that if he's nice he's giving enough and otherwise I'm demanding. Also, he's crazy. You know that? He's the pits. He'll wear the same clothes for days, hates socialising, forgets the kids, can't bear to look at paperwork, never checks the car, but has the house wired up like a laboratory and keeps blowing the fuses. Our anniversary? Forget it! Birthdays? Forget them! I swear, I sometimes think he even forgets my name, though he always wants breakfast. I can't live with it anymore. I can't take not being noticed. I need magic in my life - what I had as a kid - and if I can't have my dreams in the flesh, then I don't want to know. Do you understand that?'

'I have to think about it,' her father said, 'and that might take some time. But we got lots of that in Iowa. Here comes your mother.'

The door creaked on rusty hinges and Suzy's mother walked out, wearing an old shirt and slacks and a gleaming white apron. 'I'm gonna let you finish off that beer,' she said, 'and then dinner is...'

Suzy stood up and saw her mother's eyes widen - dark eyes and dark hair and an ageing, still lovely face - then that smile, which had warmed her all her life, not failing her now.

'Lord have mercy, I do not believe...'

'Aw, God, Mom, I'm a mess!'

Feeling her mother's arms around her, a soft kiss, all that love, she collapsed into tears of relief and the spasms of grief and guilt.

'Let's have dinner,' her mother said.

Chapter Eight

Clare wet her parched throat with some more water, placed the glass back on the table, then squinted into the hot glare of the TV lights and flashbulbs that were turned upon her and the other members of the American Geophysical Union.

She hated press conferences in general, and this one, being held in Baltimore, was more crowded than any she had attended in a long time.

'Sorry,' she heard herself saying, 'I didn't mean to – '

'What you're saying,' said Art Tabori, the particularly aggressive reporter from the *Washington Post*, 'is that while just about every other technologically developed country has signed the first global treaty designed to reduce the pollution of the atmosphere, the US, though having signed the agreement, is expressing certain doubts about its feasibility.'

'Well, yes, I suppose - '

'Suppositions aren't answers, Dr. Holton. Is it true or not?'

Clare felt like a crooked lawyer, but was trapped by her official position. While not wanting to protect the President's stance, she was here representing NASA.

'I apologise for my supposition,' she answered more confidently than she felt, 'but it's a fact that the issue isn't as simple as you'd like it to be.'

There was a ripple of laughter, so Art Tabori changed his line of questioning to something less daunting.

'According to the latest NASA press release, the recent Antarctic Polar Expedition discovered that the hole in the ozone layer is growing bigger at an alarming rate, that it will eventually leave the Earth unprotected from ultraviolet radiation, and that this will in turn lead either to a new Ice Age or widespread destruction by famine or flood.'

'I wrote that press release,' Clare said, 'and I stand by its contents.'

'Would you also stand by your statement that the technological nations of the world must unite to drastically reduce the use of CFCs? Which means, of course, a possibly dangerous reduction in most of the products that support the US economy?'

Clare saw the trap, but could not avoid it. 'It's my personal belief,' she ventured without hope, 'that a limited restriction on the use or production of anything involving CFCs could be counteracted with other kinds of production. It is also my - '

'It may be your belief, Dr. Holton, but it's certainly not the belief of either the President or his scientific financial advisor, Jack Douglas, so the country is interested in the conflicts aroused by the recent ozone expedition. Are you willing to discuss the rumoured disagreements?'

And so it went on. Clare was greatly relieved when the press conference finally ended and she could head back to her room, where she intended having a

soothing drink. Instead, she was waylaid before she reached the elevator.

'Excuse me, Dr. Holton, I - '

'The press conference is over,' Clare said, cutting the speaker off in mid-sentence. 'I have no more to say.'

She started to brush past him, but he grabbed her shoulder, practically dragging her back and forcing her to turn in towards him.

He was a short man, slightly overweight, his blue eyes bright but darkly shadowed, his features hidden by an untidy beard under dishevelled brown hair. He was wearing dirty jeans, unpolished boots with too much heel, a tasteless checkered shirt unbuttoned at the neck, and an awful, old-fashioned, black-leather jacket. A small-town journalist, obviously.

'Hey, hold on a minute!' he exclaimed with a hint of anger. 'Gimme a break here! I'm not a goddamned journalist! I'm a physicist. A climatologist. I work for NASA and I was part of the Antarctic Ozone Experiment. I've just sat through your ridiculous press conference and now I want to talk to you. OK, lady? No crime?'

Clare could hardly believe her ears. 'You work for... NASA?'

'Yeah. And I'm a damned good scientist. Now can we sit down somewhere and talk?'

She was annoyed by his insolence. 'The fact that you work for NASA doesn't mean I have to - '

'No, you're right, it doesn't. At least, not under *normal* circumstances.'

She caught his emphasis, his uncommon intensity, and stepped back, releasing her shoulder from his grasp, staring more closely at him.

'*Normal* circumstances?'

'You don't know me personally,' he said, his gaze direct, 'but I'm one of your best physicists. When I flew through the hole in the ozone layer, I had a very strange experience. Back at NASA-Goddard, where I work, I analysed most of the data from the experiment. Came up with something that's even stranger than what I experienced. Now will you listen or not?'

'I was going for a drink,' she said.

'I won't argue with that.'

'Sorry, *what* did you say your name was?'

'Rydell. Tony Rydell.'

'Okay, Tony, I apologise for being rude. I've been under a bit of pressure over this business. Please let me make amends with lunch. You *do* eat, I take it?'

‘I’ll accept your apology *and* the lunch.’

She had to smile at that. ‘I really need to breathe some fresh air. Do you mind going to the harbour? It’ll only take five minutes in a cab.’

‘That’s fine with me, Miss Holton.’

‘Clare. Please call me “Clare”.’

‘No sweat,’ he said.

They had mussels and beer at Bertha’s, on Fell’s Point, overlooking the many boats in the Inner Harbour of the Patapsco River. The sun beamed in on their table, making the river look silvery, and that, with the light food and cold beer, soon made Clare feel refreshed.

Rydell also ate with relish and clearly enjoyed his beer. Though he looked uncouth and sometimes talked like a cowboy, it soon became apparent to her that he was bright, if possibly eccentric.

Over the meal, he told her in detail about the Airborne Antarctic Expedition, which she found fascinating, then about his computer analysis of the scientific data collected by his ER-2, the DC-8, and the numerous payload-carrying satellites and balloons.

‘What I’m trying to tell you,’ he summarised grimly, ‘is that nothing that anyone can do will stop the depletion and ultimate destruction of the ozone layer.’

‘Rubbish,’ she replied.

‘No, Clare, not rubbish. Your problem isn’t the President; it’s that a reduction in your dreaded CFCs won’t make the slightest difference in the rate of ozone depletion, since an immense disparity exists between how fast the ozone should be disappearing, according to our calculations, and how fast it’s *actually* disappearing, according to the computer analyses of NASA-Goddard.’

‘There can’t be such a gap. It’s impossible.’

‘But it’s happening. There’s no question about it. I didn’t check only my own ER-2 data; I also called in the data collected by the forty scientists in the DC-8 that was flying through the ozone hole at low altitude at the same time. Not satisfied with that, or not willing to believe my own computer analysis, I called in the TOMS data received from Nimbus 7, as well as the data received from the other satellites and balloons by every damned tracking station being used: Carnarvon Station and Honeysuckle in Australia; Goldstone in California; Corpus Christi in the Bermudas; Tananarive Station in the Indian Ocean; Hawaii, Madrid, Mexico, the Bahamas – you name it, I got it. And finally, when

I still couldn't believe what I was getting, I had my results cross-checked by Mission Control, Houston, to where the same data had been relayed by the tracking stations. And the answer was always the same – the ozone over the Antarctic is definitely disappearing much faster than the CFCs can account for. In other words, something - *something unknown* - is now destroying the ozone layer much faster than the man-made substances that originally began the process.'

'Something *unknown*?'

'You heard me.'

Her impulse was to laugh, but his intensity stopped her. Instead, she just studied him, trying to place him in her thoughts, aware that his name was tugging at her mind as if half remembered. He was a physicist for NASA, on the Earth System Science program, and that meant he had to be good, even one of the best. It also meant, of course, that she had almost certainly come across his name at one time or another, in one NASA file or another, but right now it was frustratingly vague, hovering just out of reach. She had heard about him – she didn't know why – but now she wished that she did.

'I'm afraid I remain sceptical,' she said eventually. 'There must be some kind of mistake. It just doesn't make sense.'

'I've just told you. I cross-referenced everything and there's definitely no mistake. Something unknown is eating away the ozone layer faster than the CFCs. And I'll tell you something even more scary...'

'Please don't,' she said with a smile, trying to make a joke of it.

'My analysis of the data received from around the globe reveals that the hole growing over the Antarctic isn't doing so all alone. The TOMS data and all other cross-referenced measurements show conclusively that another hole is forming in the ozone layer over the Arctic - '

'Oh, Christ!'

' - and there's recently been depletion of the ozone layer as widely spread as forty-five degrees south, to the southern tips of South America, New Zealand, and Australia. In fact, measurements from the SBUV instruments on Nimbus 7 have shown a rapidly increasing depletion in the concentration of stratospheric ozone right around the globe.'

He pushed his empty beer glass aside in order to lean across the table and stare even more intently at her.

'You hear me? I said a *rapid* increase – too rapid for CFCs. Something's up

there – and it isn't just exhaust fumes, insecticides or the gases from spray cans. It's something else altogether.'

Clare glanced at his empty beer glass because she couldn't meet his gaze. 'Let's be rational,' she said. 'The only thing that can possibly be up there is man-made pollution.'

'No,' he insisted. 'It's something else. When I flew through that hole, I saw an unidentified flying object. It was right below me, pacing me, then it ascended and seemed to surround me. It was blindingly bright, filled with noise, seemed incorporeal; and it made me pass out for a short while; then, when I awakened, I found what appeared to be my wife sitting on my lap. An apparition, right? Yeah, that's what I thought. But then I realised that I could *feel* her and even *smell* her – that her presence was palpable, almost physical. Then, when the light and noise of the UFO faded away, she faded away with it... There's something up there, believe me.'

Clare couldn't believe what she was hearing, could hardly accept that he was serious, but his blue eyes, which were bright with intelligence, displayed no sign of mischief.

'Let me get this straight,' she said when she had gathered her wits together. 'You saw a flying saucer - '

'I didn't say it was a flying saucer. I said it was a UFO – an unidentified flying object – and that's *all* I said.'

'OK. First you saw an unidentified flying object – which may or may not have been a physical entity – and it ascended toward your aircraft, seemed to dissolve around it, briefly rendered you unconscious, then made you hallucinate that your wife was there in the cabin with you.'

'It wasn't an hallucination,' Rydell insisted. 'I could actually *feel* her and *smell* her.'

'You could have hallucinated that as well.'

'I could, but I didn't.'

God, he was serious. Not joking at all. Maybe he was having a nervous breakdown or had already gone mad. And to think that he worked for NASA. She had better have him checked out... But even as she thought of doing that, she remembered what she had heard about him. She didn't know whether to laugh or cry.

'Excuse my scepticism, but aren't you the same Tony Rydell who caused NASA some embarrassment a few years back with your publicly stated belief in

the existence of flying saucers?'

He clenched his fists on the table, then opened them again, pursing his lips before speaking, obviously stifling his anger.

'Right and wrong,' he said. 'Before you start sniggering, let me remind you that it was my investigations of the environmental impacts of supersonic transport aircraft, or SSTs, that led to the whole damned ozone debate in the first place - '

'I'm aware of that,' Clare interjected impatiently.

'And it was shortly after my discovery of the link between SST operations and a reduction in the concentration of ozone in the stratosphere, and a further link between that ozone depletion and cancer, that I made my simple remark to the effect that UFOs - not flying saucers, as you so crudely put it - should be treated as unexplained phenomena and scientifically investigated without prejudice. Since my innocent remark was blown up out of all proportion and nearly destroyed my career, I think it's safe to say that my negative comments about supersonic transport aircraft must have hurt the vested interests of the airline companies. In short, I'm not a crank, Dr. Holton, so don't try it on.'

Embarrassed because he'd had to remind her of his revolutionary work with ozone depletion, but still unable to accept that what he was saying made sense, Clare tried to wriggle out of her discomfort by keeping up her attack.

Sighing loudly, as if weary, she said, 'Nevertheless, you *have* expressed a belief, or interest, in UFOs and that certainly makes your recent experience suspect. I'm afraid I can't - '

'And the data!' he said, his face flushed. 'Does that lie as well?'

'I didn't say you were lying. I merely suggested that your obsession with UFOs had some bearing on - '

He cut her off in mid-sentence by noisily pushing back his chair and standing up.

'It wasn't a goddamned *obsession*,' he said angrily and loudly, making some of the other diners turn and stare at them. 'It was scientific curiosity. At least I wasn't just sticking my head in the sand out of fear of what my colleagues might think of me - as you're doing right now!'

Clare was instantly outraged. 'I resent - '

'You resent being faced with something you can't comprehend and you haven't the guts to admit that my facts have you baffled. That's probably why you got moved up from the laboratory to administration: you're more of a

politician than a scientist. I should have guessed that immediately.'

'How dare you!'

'Good-bye, Dr. Holton - and thanks for a lousy lunch!'

He turned away and walked out of the restaurant without looking back.

Chapter Nine

Phoenix, Arizona, Tony thought, rendered sleepy by his flight from Washington DC and now driving from the airport to Scottsdale. *I need it like a hole in the head, but a man has his work to do*.

In fact, he was about to have what promised to be a pleasurable reunion with an old friend. The anger he was directing towards the city was really an expression of his guilt and shame, because a few days after installing his mother at home, he'd had to bid the kids good-bye again.

They hadn't been very happy and he couldn't really blame them. He was hardly ever at home these days and he hadn't improved since Suzy's departure. He knew they weren't keen on his mother, though she sometimes amused them. His mother wasn't all that bad - you just had to get used to her - but the boys were clearly hurting over Suzy's departure. They were sullen and resentful, fought each other all the time, and in general behaving like little horrors.

Not like his kids at all.

His mood had not improved during the flight to Phoenix. He had spent most of his time gazing intently out the window, thinking of UFOs, sneakily hoping to see one, and also brooding on his run-in with that arrogant bitch, Clare Holton.

He burned up just thinking about her, but also found himself dwelling helplessly on the fact that she was damned attractive.

The thought surprised him.

Thankfully, it didn't take him long to reach his destination on Pinnacle Peak Road in the recreated Western community of Scottsdale. Pulling into a parking space beside some hitching posts, thinking that perhaps he was on the lot of the movie *Westworld*, he climbed out of the car, into the scorching midday heat, and hurried along the street to a building that looked like a large nineteenth-century saloon, though it was, in reality, a restaurant owned by his friend Rick Polanski

and frequented mostly by tourists.

Tony entered the building, gratefully putting the heat behind him. Even this early in the day, the place was already frantic, with sexily dressed, pistol-packing waitresses serving a noisy bunch of tourists and some locals wearing Stetson hats and cowboy boots. When the cowgirl behind the desk asked Tony if he had a reservation, he told her that he'd come to see Rick. She smiled prettily and jabbed her thumb over her shoulder, indicating the bar. Tony saw Rick behind the counter, massive in all directions, face flushed and beaming beatifically under a white Stetson as he helped two barmaids serve a lot of customers. Seeing Tony approaching, he grinned and waved.

'Tony! You son of a bitch!' he hollered. 'Good to see you, old buddy!' He leaned across the counter, pushing two customers apart, to pump Tony's hand. 'You just off the plane?'

'Yeah, right.'

'Feel like lunch?'

'Terrific.'

'Good. We've got a bus-load of tourists eating here, but I kept us a table. Over there,' Polanski said, jabbing his index finger at the only empty table in the restaurant. 'You sit down and I'll bring us some beers and we'll talk about old times. Go on, put your ass down!'

Tony did as he was told and Polanski soon joined him, carrying a large pitcher of beer in one hand, two glasses in the other, holding them well out in front of him, away from his big belly, which flopped generously over his gold-buckled belt. It crossed Tony's mind that he probably ran a successful restaurant because he looked like someone who enjoyed his food and drink. He did *not* look like someone who had once been a NASA astrophysicist, had retired because of their refusal to finance his planned instrumented UFO research program, and now, in his spare time, was the head of what Tony thought was the most reliable UFO organisation in the whole country.

'Here,' Polanski said, taking a seat, pushing an empty glass towards Tony, and filling it up with beer from the giant pitcher, 'slake your thirst. So,' he added, touching Tony's raised glass with his own, 'what's been happening in Washington DC, apart from the usual mugging, rape and murder? Home and family in one piece?'

'Not quite,' Tony confessed. 'The home's still there, but Suzy's packed up and gone.'

‘That’s why you look so rested!’ Polanski cracked. ‘So what else is new?’

‘I have an interesting little mystery,’ Tony said. ‘You want to hear about it?’

‘Are you talking about the sky?’

‘Right.’

‘It sounds more interesting than marital discord. But let’s order first and talk while we eat. Since I own the joint, I recommend the food - and I eat a lot of it.’

After calling over a hip-swaying, blonde cowgirl, he squeezed her rump playfully, chauvinistically, while ordering the food. She didn’t seem to mind, in fact giggled and winked at Tony, then flounced back into the kitchen with her tightly-clad hips swinging like a metronome. Deciding that he was interested in Tony’s marriage, after all, Polanski enquired about Suzy’s reasons for leaving home. When Tony told him about his extensive travelling and Suzy’s boredom when home alone, Polanski, a divorced man, chuckled understandingly and said, ‘Sounds like the same old story. It’s what working for NASA does to marriages. Well, now you can get on with your work without being hassled. Can’t be *all* bad, buddy.’

Not sure about that, Tony was glad to change the subject and discuss what had happened to him in the airplane over the Antarctic. This he did at great length while devouring a broiled two-pound porterhouse steak, served with sourdough bread and pinto beans. He finished his story as Polanski finished his meal (Tony couldn’t get through his) and put down his knife and fork, looking thoughtful.

‘You say you could actually feel and smell the... apparition? That it was practically... *physical*?’

‘That’s just what I said, pal.’

Polanski gave a low whistle. ‘Weird!’ he exclaimed. ‘Really far out!’ After drinking some more beer, he wiped his lips with the back of his hand and looked thoughtful again. ‘You’re sure it wasn’t just the high altitude and cold? A sort of - ’

‘I’m sure,’ Tony interjected firmly. ‘I blacked out - I know that - but it was only for a few seconds and when I recovered I was totally aware, in command of my senses. That UFO was *something*, Rick, it wasn’t imagined, and if Suzy - the apparition - was some form of hallucination, she was certainly no ordinary one. She *was* practically physical, damn it, and the smell of her lingered in the cabin long after she’d vanished.’

‘And she vanished as the UFO disappeared?’

‘Yeah, Rick, that’s it. I think that Suzy, though not real, was some kind of

entity. I think she was produced by that UFO, though don't ask me how or why.'

Polanski gave another low whistle, shaking his head from side to side in bewilderment. 'Oh, boy,' he said, 'ain't that something? You've got my interest, for sure. So how can I help?'

'I want you to check your records to find out if there are other cases like this and, if so, if there's any kind of pattern to them.'

'I'm a man who loves his work,' Polanski replied, 'so let's get up and go.'

'Is it far?'

'Just a five-minute drive - on the outskirts of town. Five minutes through hell.'

He meant the heat. It clamped around Tony as soon as they left the restaurant, making him feel that he was suffocating. As they made the short drive to the eastern edge of Scottsdale, Tony tried to distract himself by recalling Polanski's work with SETI, or Search for Extraterrestrial Intelligence, the US government's attempt to locate extraterrestrial civilisations through the use of radio astronomy.

Initially frustrated by NASA's aborted Project Cyclops - which would have consisted of a circular array of about fifteen hundred antennas, each larger than a football field, covering about twenty-five square miles - Polanski had helped initiate a more successful SETI program between the Jet Propulsion Laboratory in Pasadena, NASA's Ames Research center at Moffett Field, and the existing antennas at the Deep Space Network in Goldstone, California, which between them had conducted a targeted study of selected stars within one thousand light years of Earth - an immense undertaking.

'You never found anything through SETI, did you?' Tony asked, now feeling almost groggy with the heat.

'Not so far,' Polanski replied, slipping sunglasses over his squinting eyes as he drove into the blinding sun. 'It was real damned frustrating. Of course that doesn't mean they're not out there. In fact, given that there are, for instance, three hundred thousand stars in only one such group of stars, Messier 13, in the Great Cluster of Hercules, the possibility of no intelligent life-forms existing there is extremely unlikely. On the other hand, you have to bear in mind that even if intelligent beings intercepted our communications, the distance of nearly twenty-four thousand light years from Earth means that it'd be at least forty-eight thousand years before we'd get an answer back. So, they're almost certainly out there. But contact with them, if it's to be made in our lifetime, is going to have to be made some other way - not through radio astronomy.'

‘What about the so-called UFOs?’

Shrugging his shoulders, Polanski pulled into the parking lot of a large prefabricated building in the parched flatlands just outside of town. The building was covered in glittering bowl-shaped antennas and a wide variety of aerials. ‘Who the hell knows?’ he asked rhetorically. ‘We can only assess them with our own technology, but if the UFOs are from a highly advanced extraterrestrial civilisation, our hardware would hardly be up to the task. Already Einstein’s Theory of Relativity is under attack - and if it falls, a lot of things thought to be impossible will suddenly be possible.’

‘Such as the need to actually travel those twenty-four thousand light years.’

‘Right,’ Polanski said, cutting off his engine and applying the hand brake. ‘It might be possible to go *through* that space or somehow avoid it. If quantum physics replaces our present understanding, *all* things become possible. So, here we are.’

When they were both out of the car, Tony let himself be led from the scorching sunlight into the air-conditioned coolness at the other side of the main door of the building, above which was a sign stating: *Project Skywatch International*. A non-profit organisation financed by the tax-deductible contributions of those who believed in the value of instrumented UFO tracking and monitoring, Project Skywatch was primarily housed in two linked laboratory buildings, but with many smaller facility houses, filled with state-of-the-art instruments, scattered widely about the surrounding hills and plains, from where they constantly monitored the sky to detect and record UFO activity.

Polanski, like a proud schoolboy, gave Tony a guided tour of the facilities, introducing him to the many volunteer scientists and technicians while showing him the vast array of technical equipment needed to monitor the sky, including radar, a laser system, magnometers, a gravimeter, a microcomputer, ambient and parabolic microphones, a multichannel sensor-activated chart recorder, video equipment, and every imaginable kind of camera.

‘If a UFO’s located,’ Polanski explained, stopping in front of a simulated UFO tracking program on a computer monitor, ‘the data from the instruments in the facility stations is fed in binary format into the computer, which then calculates and displays the distance, altitude and size of the object. The UFO then appears on a video picture superimposed over an image of the area beneath it. We can also display a three-dimensional model of the magnetic field around the UFO, showing each component of it in a different colour. And by using the latest

helium neon laser, we can even receive the UFO's voice, code, or television signals, should such ever be present.'

'Which they haven't been so far.'

Polanski sighed. 'No.' He led Tony away from the banks of computer monitors and into his office, which had its own complex computer system, 'But we're not wasting our time. So far, we've managed to obtain UFO light pulsation measurements by photographic analysis, instrumented recordings of UFO plasma emissions, shock-wave emissions and propagation, magnetic-field-effect Faraday-rotation rings, and instrumented data of precise UFO size determinations. We're getting somewhere, at least. Here, take a pew, pal.'

There were two swivel chairs in front of the working shelf along one wall of the office, facing three separate computer monitors. Polanski settled his large bulk into the chair facing the central monitor, indicating that Tony should take the chair beside him. Polanski turned the main computer on. While waiting for it to load, Tony studied the charts pinned up on the other walls.

One was an illustrated chart of the most commonly reported UFO shapes, grouped into flat discs, domed discs, Saturn, or double-domed, discs, hemispherical discs, flattened spheres, spherical, elliptical, triangular, and cylindrical. Another chart was broken into two illustrated sections, one showing the most commonly reported UFO formations, the other showing UFO manoeuvres both singly and in formation. Other charts showed the world-wide locations and flight directions of the major UFO waves from 1896 to the present; major UFO events in the United States and overseas; the major areas of alleged magnetic deviation around the world, including, as Tony noted, the North and South Poles; and the names and communication details of the world's major UFO organisations.

'OK,' Polanski said, starting to move the flickering cursor down the list of files displayed on the computer monitor. 'Just what are we looking for? After-images? No. Aliens? Not quite. Contactees? No. Close encounters of the third and fourth kind? No. Electromagnetic effects? Well, you *did* have those, didn't you?'

'Right,' Tony replied. 'Fading and loss of radio reception; static; odd noises; possibly even the brief stalling of the airplane's engine when that UFO practically swallowed it. But we won't learn anything new there, so keep searching.'

Polanski moved the cursor down again, then stopped and moved back up until

the cursor was illuminating '**Ethereans**'.

'Hold on,' he said. 'This could be interesting.'

He accessed the file and Tony leaned forward to read it.

Ethereans. *Hypothetical, invisible creatures who inhabit Etherea*.
Etherea. *Name given to a hypothetical, invisible world composed of ether, an invisible substance that has been postulated by physicists as pervading space and functioning as the medium for the transmission of radiant energy. UFOlogists who support the etheric hypothesis claim that UFOs are both inanimate craft and living aeroforms, propelled and sustained by orgone energy, which exist in the etheric realms. Inhabitants of Etherea are known as* Ethereans.

Tony studied the screen for some time, reading and rereading the short article and thinking with a shivery feeling of the eerily real Suzy he had found in the airplane with him. When he noticed Polanski staring at him in a questioning manner, he said, 'It's worth thinking about. An invisible substance pervading space and functioning as the medium for the transmission of radiant energy, which could be orgone energy. Remember Wilhelm Reich? He used the term to describe what he believed was the universal life-force that acts through the medium of magnetic current. He was convinced that the Earth, as well as all its living creatures, was surrounded by an aura of such energy. He also believed that energy to be the power source of Etherean craft, or UFOs. And UFOs, as we now know, are definitely related to magnetic current - which is why you have that chart on the wall, showing the world's areas of alleged magnetic deviation - all areas with a high incidence of UFO activity.'

'Right,' Polanski said. 'And accepting this hypothesis, we can then assume that the apparition of Suzy could have been created out of some form of Etherea: an invisible substance briefly rendered visible by that UFO, which also appeared to dematerialise. Another form of Etherea?'

'Shit,' Tony said, 'I don't know. Go back to the files.'

Polanski exited the file and again ran the cursor down the screen, stopping when he came to *Hallucinations*.

'OK,' Tony said. 'Retrieve that.'

The summary in the retrieved file told him what he already knew: that among the numerous cases of hallucinations were physical and emotional deprivation

or emotion disturbance ('That's you!' Polanski said with a chuckle) and that a great many UFO sightings had been encouraged by the use of hallucinogenic drugs. Tony perked up, however, when he read that a certain number of UFO sightings had been assessed as hallucinations 'induced by some unknown force or some unknown intelligence'.

'I think we're getting warm, Rick.'

It was a lengthy file, but Polanski kept scrolling down until he came to the heading: *UFO-Related Materialisations from the Subconscious*. He stopped scrolling and accessed the file. They both read in silence.

UFO-related materialisations from the subconscious have offered a novel addition to the UFO phenomenon – particularly since the first such report was recorded as late as 1979. In that report (Flying Saucer Gazette, Vol.3, No.9, September 1979), *New Zealand Air Force Capt. Harold Falke claimed to have almost crashed his C-130 cargo plane when, on August 4, 1979, during a flight from McMurdo Sound on Ross Island, Antarctica, to Christchurch International Airport, New Zealand, an apparition of his wife materialised inexplicably in the cabin. During his subsequent debriefing by the authorities at Christchurch, the subject insisted that he had not been hallucinating, that he had been aware at all times of where he was and what he was doing, that the so-called apparition had been 'almost physical' and that he had been able to touch it and even smell it. Since the subject had recently been through a traumatic divorce from his wife, his experience was felt to be an extremely vivid hallucination brought on by stress.*

A trickle of excitement rippled through Tony, followed by a distinct touch of fear and an eerily vivid recollection of his own experience in the ER-2 over Antarctica. He glanced at Polanski, who was grinning triumphantly at him, then nodded to let his friend scroll on down through the rest of the text.

There they were, one after the other: the many reports of similar hauntings, beginning in 1979, running up to the previous year, and linked together by a common theme: *All the reports had been submitted by professional pilots and every 'materialisation' had occurred over Antarctica*.

'Jesus Christ,' Polanski said, 'ain't this something? One: There was no report of this kind until 1979. Two: All reports since then confirm that the hallucinations, or apparitions, had an almost physical presence, as well as smell.

And, three: Every report was submitted by a professional pilot who had his experience when flying over the Antarctic.'

'Exactly,' Tony said, still excited and frightened at the same time. 'And what does that suggest, my friend?'

'Fucked if I know.'

'The hole in the ozone layer over the Antarctic,' Tony said, 'first appeared in 1979. The first report of this particular kind of materialisation was made in 1979. And that report, as well as all the others since, named the Antarctic as the location of the incident.'

'So that kind of materialisation is directly linked to the ozone hole over the Antarctic.'

'Correct,' Tony said. 'There *is* another agent eating away the ozone over the Antarctic... And whatever it is, it's also causing materialisations from the subconscious... *Not* hallucinations, *not* apparitions, but materialisations that have a physical reality... Those things are being *created*.'

'By what?' Polanski asked.

'You tell me,' Tony said.

Chapter Ten

Suzy started to unwind with her folks on the farm in Iowa. She'd almost forgotten what it was like to be looked after - cooked for, talked to, given some attention - and although she was still guilty over the kids, she felt something come back to her. It was like being a child again, secure again, taken in, and she surrendered to the routine of the household and let her heartbeat slow down.

'I just wish the kids had come,' she told her mother. 'That would make it all perfect.'

'You think so?'

'Sure.'

'And what about your husband, Suzy?'

'I feel better without him.'

'Do you?'

'I do.'

‘How long will that last? I wonder. You’ve been with Tony a long time, practically since you were teenagers, and to try and cut that out of your life could leave a big hole.’

‘I can live without him, Mom. I’ve *been* living without him. That man, he was never at home, so I don’t see the loss.’

‘He was only working, Suzy.’

‘I don’t see the difference.’

‘A man isn’t away from home if he’s out there doin’ work. He’s always there, right beside you, in spirit, if he’s not with a woman.’

‘There wasn’t another woman.’

‘It’s good that you can say that.’

‘Thing is, Mom, I gradually became invisible and that’s hard to take.’

‘You want too much attention.’

‘I’m too emotional, I know.’

‘You’re gonna have an awful big hole to fill - and I don’t think you’ll do it. You need the kids, Suzy, and your home and that man. Lord knows, he may be a bit distracted, but he’s better than most.’

‘He never beat me, that’s true.’

‘Never cheated on you, either.’

‘You’re just trying to make me feel bad, Mom, but I did what I had to do.’

‘Tell that to your kids.’

Her mother could talk that way without causing offence. She spoke out of a love that lent resonance to her voice, but she also had a fine wedge of honesty that could not be dislodged. Like her husband, she did not believe in saying what didn’t come naturally.

‘Some day I might,’ Suzy said.

They got up real early, when the sun was still rising, and had breakfast together in the big kitchen, around the pine table. Then Suzy’s father would go off to work, wearing his dungarees and battered hat, and Suzy and her mother would talk for hours while doing the chores. It was like life in the previous century, much slower, more orderly, and it helped her feel less hemmed in by the world and more in control of things.

‘He’s so brilliant,’ she told her mother, still talking about Tony, ‘but he just doesn’t look where he’s going or think about what he’s saying. He’s like a horse wearing blinkers - he always stares straight ahead - and if you don’t happen to be right in front of him, he’s blind to your presence. That’s why he forgot me. I

wasn't involved with his work. I shared his bed, cooked his food, washed and ironed his damned clothes - and like a rich man with his servant, he forgot that I was actually there, every hour, every day. He just ploughed his straight furrow.'

She helped around the house, did the shopping with her mother, and often went for long drives in the car, exploring what she had left behind. She took the long, straight roads, past fields drenched in green and gold, into the silvery haze of noon, under the vast, azure sky. It was where she'd grown up, blooming just like the flowers, and she recaptured her childhood during those journeys, filling up with old memories. She visited the old schoolhouse, the church and general store; went to Indianola to retrace her childhood footsteps, and even to Des Moines, where so many places reminded her of her adolescence with Tony: the high school, the university, the movie houses, the ice-cream parlour, and the streets they had cruised in his old car, which had suited his nature.

She often choked up when she saw those places, which just made her resent him more.

'He's so creative,' she told her mother, 'but he destroys things so easily. He knows all about things, but he doesn't understand people. Oh, he doesn't mean any harm, there's no malice in him, but he gets up their noses, rides rough-shod over them, and never stops to think about what he's saying or who he's saying it to.'

'I kinda like that aspect of him,' her mother said while beating dough on the table. 'At least it shows that he's honest.'

'But dumb with it, Mom. Never knows when to shut up. Like that flying saucer business last year, which almost cost him his job. I mean, he said he believed in 'em, that the government should investigate, and NASA, wanting money for other things, caught the flak from the media. Gawd, the humiliation! It was even on TV! They treated his off-hand remarks like an official NASA statement and the big boys at NASA and other places went out of their minds. They wanted to kick him out, to get rid of him for good, and if it hadn't been for Dwight Collins, they'd've probably done it. That's the kind of thing he *always* does, Mom. He just can't keep his trap shut.'

'Some men, they're just impulsive,' her mother said.

'Some men are just nuts.'

She even went to church, which she hadn't done for years. She'd forgotten what it was like to get up to the sound of church bells, say prayers over breakfast, and take the car along an empty road to a white-painted, packed

church. She felt real fine and dandy dressing up for the occasion, filing into the pew, smiling at the congregation, then opening her hymn book and letting loose with all the power of her lungs.

There were men in that church older than she was, but they still gave her glances. She was worshipped, as well.

'It's so hot,' her mother said.

'I love it,' Suzy replied.

'It's the hottest summer we've had for years. We'll have to be pretty careful. Are those from the kids?'

Suzy kissed both the letters, one from Don, the other from Ronnie. She had written to them and asked them to write back and they'd done so immediately.

Don's was real grown-up serious, the sentiment held in check, but Ronnie's was almost heartbreaking in its transparent grief. They both wanted her back, but they said it in different ways: Don saying that he missed her, but knew she must have her reasons; Ronnie saying that the house seemed too big, now that she wasn't there.

She read both letters repeatedly, first one, then the other, and soaked them with her tears and rubbed them ragged with the tips of her fingers - trying to touch them, to feel them. Then she put the letters under her pillow and had vivid dreams.

That's what love could do to you.

It sure made you love your bedroom and her's hadn't changed at all; her folks had left it exactly as she'd left it, not removing a thing. It was a small room with big windows, overlooking the back lawn, and between the lawn and the starry sky were dark fields that seemed endless. The room itself was a cosy mess, filled with teddy bears and toys, the walls covered with posters of David Bowie and Richard Gere, her dreamboat. She'd liked cuddling up in there, taking a teddy bear to bed, though she'd had to give it up when she got married and cuddled Tony instead. Now, not having him, and yearning more and more for the kids, she went back to her teddy bears, sometimes even giggling guiltily, and lay there in the darkness, looking out at the moon and stars, thinking about how wonderful life could be when things didn't press in on you.

It was heavenly being home.

'We should never've left here,' she said. Her mother stared at her, amused. 'We were neither of us cut out for the big time in Texas or Maryland. Or course, Tony didn't notice. He'd be happy in an igloo. Just give him a notebook and

pencils and tell him he's working! But *I* noticed, yeah. I always knew I didn't belong there. Those people, they were like Tony - they all lived for goddamned NASA - but me, I had too many emotions and needed folk who *felt* things. I lost all that in Greenbelt.'

'Surely not,' her mother said. She sounded so English sometimes.

'Well, not completely,' Suzy confessed. 'I mean, they weren't *all* workaholics. There was Maggie, my next-door-neighbour and the wife of Tony's best friend, and...' She could see the faces clearly, though not quite get their names. 'And... what I mean is, most folk stayed well clear because Tony was...'

'Unpredictable?'

'Yeah, Mom, that's right. I mean, he treated the kids swell and always tried to make me laugh, but - you know? - like, he'd *die* if you suggested a dinner party or drinks or a barbecue. It'd always be next week, next month, next year - and then, if you *did* get something going, he'd blow it by turning up late, or having a fight with someone, or saying something like, "Jesus! Where'd you get this steak? It crawls faster than I do!" You know? A real wise guy.'

'He could always make me laugh,' her mother responded. 'I guess that's why I liked him.'

Suzy couldn't believe that. Then she did, but didn't want to. She wrote back to the kids, told them how much she missed them. But she missed them even more in the telling and made a mess of her pillowcase. Still, she had the stars, that great moon, the silky dawns, and could soak in the sun of each new day and let the golden fields dazzle her.

She loved the long, lazy, loping hours.

'It was so frantic there,' she said, telling her mother about Maryland. 'It was folks coming and going and the telephone ringing and driving the kids to school and going shopping and collecting the kids and then making dinner. It was cleaning up after him - his computer disks and CDs and books and discarded clothes - and it was traffic jams and being home alone until he turned up, which wasn't that often. But here? It's completely different. Now I know what I missed. What I missed was the feeling of family and things that abide. I missed my man coming home at nights.'

Her father usually returned home in the early evening, swinging the front door open and entering from an explosion of striated, incoming sunlight, his broad shoulders covered in corn cobs, looking like some great living tree that couldn't possibly die.

He'd done that throughout her childhood, always filling her with faith in life, saying things like, 'The land will endure. You have land and you're safe.' He didn't say that any more, though in the light his hair was silvery; instead, he said, 'It's just too damned hot. It ain't natural, honey.'

That night they watched TV - a program about the weather. Great Britain was being devastated by terrible storms, the river Ganges, in India, was flooding her banks, normally sunny Spain was a sodden mess denuded of tourists, and Florida, though not yet like Siberia, was unusually cold.

'It's all them chemicals,' her father said. 'They're changing the weather.'

'*We* use chemicals,' Suzy's mother pointed out.

'We need 'em, honey. This hot weather breeds things. We need to keep the land healthy. Without that, we'd be finished.'

Suzy loved the land, too. It was all she possessed now. She'd left her old life behind - her husband and kids; her hopes and disappointments - and now she was taking refuge in the soil that had formed her in childhood.

In daylight, the corn was green and yellow. At twilight it turned golden. At night, when it was bathed in the light of the moon, it was a dark, constantly shifting, murmurous sea.

There was no land at night, just dark sea and starry sky. Suzy lay in her bed and looked out and knew those stars fell on Maryland.

They covered her whole life.

There was nowhere to hide. You had to admit that was true. She did, but didn't know what to do, since she'd burned all her bridges. So she slept and dreamed about them, awoke and blessed the new day, and tried distracting herself by spending more time with her father, standing side by side with him, shoulder-deep in corn cobs, looking out across a rippling sea of food, a great bread basket, into the iridescent light of a voluptuous summer.

'It's too hot,' her father said, sounding anxious.

'Yeah,' Suzy agreed. 'Hot as hell.'

Chapter Eleven

The sun was shining over Greenbelt when Clare drove through the guarded

gates of the NASA-Goddard Space Flight center, made her way through the maze of right-angled roads, past featureless office blocks and laboratories, and eventually stopped outside the building containing the Goddard Institute for Space Studies. Leaving the car in the parking lot, she entered the building, told the receptionist that she had an appointment with the institute's Energy and Environment program Director, Dwight Collins, and was escorted to his office in the environmental physics department.

The office had no windows, just four plain white walls, all covered with a mass of charts and graphs relating to atmospheric phenomena and worldwide pollution.

Dwight Collins, who had been informed that she was coming, stepped forward as soon as she walked in.

'Hi, Clare,' he said, shaking her hand and squeezing her shoulder. 'It's good to see you again. I just hope you're not bringing me money problems or some godawful paperwork.'

She smiled at his suspicions, but shook her head and said, 'No. I haven't come to see you on Department of Defence business. It's something else altogether - and right now, something private, a purely personal interest.'

'Well, *that's* a relief,' Dwight said with a pleased grin. 'You're a beautiful lady and were a wonderful astronaut, but since you became a liaison officer between us and the Department of Defence, your appearances here are usually the sign of bad news, most notably budget cuts. Now you tell me you're not here on official business, you look even more beautiful.'

'If I were that beautiful, you'd offer me a seat.'

'Whoops! Please allow me!' He pulled a chair up for her, then returned to his seat behind the desk. 'Coffee?'

'No, thanks, Dwight.'

'Tea? Whiskey?'

'Whiskey at *this* time in the morning?'

'Now you know where my budget goes. So, what's your problem?'

'One of your physicists, Tony Rydell.'

Surprised, Dwight rested his chin on his clasped hands and stared quizzically at her.

'Right,' he said. 'A physicist. A climatologist. Why is *he* bothering *you*?'

'Because of guilt,' she said bluntly. 'He waylaid me at the American Geophysical Union in Baltimore, Maryland, and told me about a fairly

extraordinary theory he's developed since returning from that Airborne Antarctic Ozone Experiment you headed earlier this year. Recalling that infamous UFO scandal he'd been involved in, I treated him like a crank and made him angry; but then I ran a check on his career and now I know he's one of our best physicists. So naturally, apart from feeling guilty, I'm wondering if his theory *could* be plausible. And so, and so...' She shrugged, feeling oddly embarrassed. 'I thought I'd have a quiet talk with you and sound you out about him *and* his theory.'

Dwight sat back in his chair, leaning his head against his clasped hands, and studied her with what seemed to be a cross between annoyance and suspicion.

'It must have been some theory,' he said carefully, 'if he went to see you about it. What did he tell you?'

Clare recounted Tony's story of his bizarre encounter inside the ozone hole over Antarctica, then outlined his theory that something unknown was gobbling up the ozone much quicker than the CFCs produced by man-made pollution of the stratosphere.

'And he therefore believes,' she concluded, 'that the Montreal agreement is an irrelevancy - that nothing we can do will halt the ozone depletion, since in fact it's being depleted by an unknown agent. It sounds crazy, but that's what he believes, and since meeting him, no matter my scepticism, I keep wondering about it. You were on that expedition with him. You're also his neighbour and good friend, so what do you think?'

Dwight leaned on the desk, now smiling slightly at her, as if amused by the incongruity of the conversation.

'Well,' he said, 'you've been through his records, so I don't have to tell you how bright he is.'

'Academically bright, yes, but also eccentric, so how far can we actually trust his judgement? He's already caused NASA embarrassment over that UFO business.'

'He was widely misinterpreted. He didn't say he believed in flying saucers, but that's how it came out. What he *was* trying to say is that if hypersonic vehicles were destroying great quantities of ozone, which was true, then unidentified flying objects, less scientifically known as flying saucers, could be doing the same and thus should be investigated officially and not just by amateur UFO groups. The media, more interested in a good scare story than in what a brilliant young physicist was actually saying, grossly misinterpreted him and turned him

into some kind of UFO freak. There's also no doubt in my mind that the media were encouraged in their activities by certain members of the commercial airline companies, who were none too well pleased with Tony's revelation that their passenger-carrying airplanes were responsible for a lot of our problems in the stratosphere. True, it embarrassed us and damaged him, but it wasn't his fault.'

'It was his fault for not choosing his words more carefully,' Clare said, feeling almost ashamed as she said it, wondering if she was deliberately doing him down because she couldn't get him out of her mind and resented him for that as well.

Yet Dwight just grinned at her. 'That may be so,' he said, 'but Tony is a physicist, not a politician, and he's always been a bit loose with his tongue.'

'So I gathered,' Clare said.
